Value Proposition

PSEG is positioned to expand its investment in PSE&G projects that provide reasonable, risk adjusted returns, in ways that meet customer needs and state goals, given strong cash flow of Power and growing cash contribution from PSE&G.

PSEG will maintain a strong financial profile that provides the opportunity to achieve our growth objectives and maintains our track record of returning cash to shareholders.

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-11065

Mickleton-Gloucester-Camden 230kV

consists of upgrading 10 circuit miles of overhead transmission, installing ~16 circuit miles of new 230kV underground, 10 circuit miles of new 230kV overhead, and modifications/upgrades at five existing stations

Project Estimate Up To	Through Year-end 2012	2013-2015E	Expected In-service Date
$435M	$24M	$411M	June 2015

- PJM RTEP project b1398
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-11066

State policy imperatives have been redefined by SuperStorm Sandy

Storm report issued by NJBPU focusing on:

- Preparedness Efforts
- Communications
- Restoration and Response
- Post Event Analysis
- Underlying Infrastructure Issues

Storm Deferral Filings:

- On December 19, 2012 the Board granted a PSE&G request for general authority to defer storm restoration costs, thereby making such costs potentially recoverable in future rate filings
- On February 20, 2013, at its open public meeting, the Board voted that the recovery of all such storm restoration costs would be reviewed in a generic (multi-utility) proceeding

SI-SSA-0015-11067

We have also responded with a plan focused on infrastructure hardening and resiliency

- PSE&G filed a petition on February 20, 2013, with the NJBPU seeking approval for the Energy Strong Program (ES) which will harden electric and gas distribution infrastructure and increase the resiliency of the electric distribution system
- The filing complements the NJBPU's recently issued order requiring all Electric Distribution Companies to take specific actions to improve preparedness and response to major storms
- ES program represents a potential investment of approximately $3.9 billion over the next 10 years. PSE&G has asked for initial funding approval of $2.6 billion during the first five years
- Additional Transmission investment of approximately $1.5 billion would be included in future FERC Formula Rate filings

SI-SSA-0015-11068

PSE&G is continuing to provide solutions to assist New Jersey in achieving its EMP goals

Solar 4 All extension (S4Ae)*

- Filed July 2012
- Investment up to $690 million and 136 MW
- The program will assist the state in developing solar for underserved market segments by installing solar systems on landfills, brownfields and other underutilized land

Solar Loan III (SL3)*

- Filed July 2012
- Investment up to $193 million and 97 MW
- The program will assist the state in meeting its solar policy objective by providing loans to solar developers and generation owners focused on residential, small non-residential and large non-residential customers

Energy Efficiency 4 All (EE4A)

- Investment up to $470 million
- The program will target four residential and three commercial and industrial segments
- To be filed

SI-SSA-0015-11069

*PENDING APPROVAL.

Lower commodity costs and expiration of certain transition charges are expected to fully offset the impact to customer bills

*2018 BGS/BGSS RATES AS WELL AS SBC AND DISTRIBUTION RATES HELD CONSTANT AT CURRENT 2013 RATES. RATES RELATED TO ELECTRIC RESTRUCTURING: SECURITIZATION (STC), NON-UTILITY GENERATION CHARGE (NGC), & TRANSITIONAL ENERGY FACILITIES ASSESSMENT (TEFA), ARE REDUCED TO ZERO BY 2018. THE RGGI RECOVERY CHARGE (RRC), SOLAR PILOT RECOVERY CHARGE (SPRC), AND CAPITAL ECONOMIC STIMULUS INFRASTRUCTURE INVESTMENT PROGRAM EXTENSION (CIP II) BILL IMPACTS ARE INCLUDED IN THEIR RESPECTIVE GAS AND ELECTRIC BARS AND FORECASTED IN 2018 BASED UPON LATEST ESTIMATE. THE 2018 BILL IMPACTS OF ES, EE4ALL, AND S4AEXT/SL3 IMPACTS ARE BASED UPON CURRENT ESTIMATES.

LONG ISLAND POWER AUTHORITY

SI-SSA-0015-11072

PSEG

LIPA T&D management contract

In December 2011, the Long Island Power Authority (LIPA) selected PSEG to manage its electric transmission and distribution system for 10 years starting in 2014

- Reasons for selecting PSEG included:
- Proven technical capabilities and track record of top quartile customer service and reliability
  - Commitment to cost control and investment optimization
  - Corporate culture of transparency and data-driven decision making
  - Transition activities on-track – successfully achieving all milestones through February 2013

- Evaluating impact of SuperStorm Sandy and recent LIPA management changes on the overall schedule and transition

Successful management of the LIPA transmission and distribution system may lead to additional growth opportunities

PSEG POWER

SI-SSA-0015-11081

PSEG

We make things work for you.

PSEG Power strategy

Focused on safety performance, unit reliability, competitive cost structure with control of maintenance costs, achieving operational excellence, and supporting market rules to maintain a level playing field

SI-SSA-0015-11082

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus

Fleet Diversity/Efficiency Focus

- Fleet diversity across the dispatch curve and fuel types provides flexibility
- Nuclear units continue to achieve strong operational results and are well positioned for the future
- Peach Bottom steam path retrofit completed
- Fossil fleet is suited for market dynamics
- CCGT achieved record output in 2012
- Installed 400 MW new peaking capacity in 2012

Financial/Economic Focus

- O&M cost control programs have delivered
- Sites offering competitive advantage suited for expansion

Regulatory Focus

- Strong regulatory performance
- Industry leadership in the changing regulatory environment

SI-SSA-0015-11083

PSEG Power delivered in 2012

Storm and weather challenges	Market challenges	Value delivered
• SuperStorm Sandy impacted our generating sites • Warm winter put pressure on demand and pricing for both electricity and gas • Hot summer weather created challenging operating environment	• Unit outages and transmission outages resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by weather and economy	• Cost control • Lower dispatch and fuel cost • Captured value through coal/gas switching, unit flexibility • Improved unit availability • Coal & oil sales optimized inventory • Expedited return from storm outages, restored margin opportunities • Optimized unit dispatch across fleet during storm recovery

SI-SSA-0015-11084

PSEG Power has generating assets

in three competitive markets

- Low cost portfolio
- Fuel flexibility
- Assets near loads
- Poised to benefit in real time markets
- Fleet will maintain diversity and efficiency in 2016 after HEDD
- Most sites suitable for expansion

SI-SSA-0015-11085

PSEG Power Nuclear fleet is a critical element of success

Hope Creek	Salem Units 1 and 2	Peach Bottom Units 2 and 3

• Operated by PSEG Nuclear
• PSEG Ownership: 100%
• Technology: Boiling Water Reactor
• Total Capacity: 1,174 MW
• Owned Capacity: 1,174 MW
• License Expiration: 2046
• Next Refueling
  • Fall 2013
	• Operated by PSEG Nuclear
	• PSEG Ownership: 57%, Exelon – 43%
	• Technology: Pressurized Water Reactor
	• Total Capacity: 2,326 MW
	• Owned Capacity: 1,335 MW
	• License Expiration: 2036 and 2040
	• Next Refueling
	  • Unit 1 -- Spring 2013
	  • Unit 2 – Spring 2014
		• Operated by Exelon
		• PSEG Ownership: 50%
		• Technology: Boiling Water Reactor
		• Total Capacity: 2,245 MW
		• Owned Capacity: 1,123 MW
		• License Expiration: 2033 and 2034
		• Next Refueling
		  • Unit 2 – Fall 2014
		  • Unit 3 – Fall 2013

SI-SSA-0015-11086

PSEG Power Nuclear is core to the fleet and has competitive advantages

- Continued strong nuclear operations – eight consecutive years of >90% capacity factor
- Significant earnings contributor
- Top quartile of cost performance/MWh
- One third new staff, recruitment of the best new and experienced talent and attractive training program
- Developing Fukushima action plan in response to NRC staff review
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

SI-SSA-0015-11087

PSEG Power's Fossil Fleet availability has shown steady improvement

EFORd improvement resulted in over 200 MW of additional capacity available

EFORp improvement and availability at peak demand times has resulted in performance payments in each of the last four years

SI-SSA-0015-11088

PSEG Power improvements achieved in combined cycle fleet efficiency

Actions Taken to Create Value	
• Heat rate improvement program • Operational Excellence Model	• Training programs • Unit testing initiative • Outage work to restore efficiency

SI-SSA-0015-11089

SuperStorm Sandy affected the fleet;

when the load returned, Power was ready

SI-SSA-0015-11090

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- Power is well positioned for HAPS

SI-SSA-0015-11091

PSEG Power's focus on costs has resulted in moderate increase in O&M for six years

Cost control actions taken:	
• Coal assessment • CCGT material condition assessment • Contract renegotiation	• Material management • Nuclear maintenance productivity study • Nuclear outage efficiency initiative

SI-SSA-0015-11092

PSEG

* INCLUDES IMPACTS FROM STORM RECOVERY COSTS AND POTENTIAL RELATED INSURANCE PROCEEDS.
E = ESTIMATE.

PSEG Power is well positioned for growth in the fleet when market conditions dictate

Available locations		Our sites possess infrastructure advantages
• Bergen • Burlington • Essex • Edison • Kearny	• Hudson • Linden • Sewaren • Bridgeport Harbor	• Electric Interconnection • Gas Pipeline Access • Sites/Space • Emissions

SI-SSA-0015-11093

PSEG Power will maintain diversity and efficiency after a realignment of the fleet in 2016

Objective
2012 → 2016E

- Maintain fuel diversity
- Maintain load serving capability
- Improve fleet heat rate by 6%
- Maintain low cost structure
- Environmental improvement

Fuel Diversity

13,226 MW 11,200 MW

Energy Produced

52.5 TWh 52-54 TWh

SI-SSA-0015-11094

SI-SSA-0015-11095

PSEG Power has added value with focus on operational excellence

2008		2012
3,622	Nuclear capacity (MW)	3,632
92%	Nuclear equivalent availability	93%
29.3	Nuclear generation (TWhrs)	29.8
55	Total generation (TWhrs)	53
3,157	CCGT capacity (MW)	3,176
12.1	CCGT generation (TWhrs)	16.2
8.9%	Fossil EFORd	6.3%*
87%	Fossil equivalent availability	90%
63	SO_2 (Ktons)	9
16	NO_x (Ktons)	10

SI-SSA-0015-11096

* EXCLUDES SANDY IMPACT.

PSEG POWER
ER&T

SI-SSA-0015-11097

PSEG

We make things work for you.

PSEG Power
ER&T strategy

Focused on optimizing the value of its asset portfolio and providing outstanding service to our customers, while prudently managing risk

SI-SSA-0015-11098

Diversified assets and flexible dispatch

High performing, baseload nuclear assets	3,632 MW
Fuel advantaged, baseload coal plants in PA	776 MW
Flexible combined cycle fleet	3,176 MW
Well leveraged intermediate & peaking assets	5,642 MW

Integrated trading and dispatch capability around fleet

SI-SSA-0015-11099

Fleet capacity has been advanced by:

Improved Heat Rate capability

Trading acumen to execute fuel switching opportunities

Reduced O&M and increased start-up success

Capturing new products opportunity with minimal investment

SI-SSA-0015-11100

Spark spread replaces dark spread as major value driver

- Spark spread has risen above dark spread in PJM markets
- Power's gas units operating at record throughput
- Gas operation provides much more operational flexibility
- Enhances the ability of trading organization to capture volatility

SI-SSA-0015-11101

2013 BGS Auction Results for PSE&G Zone

BGS sales account for about a third of our forward portfolio of hedges

SI-SSA-0015-11102

BGS PRICES REFLECT PSE&G ZONE; RESULTS FOR 2011-2013 WILL BE THE NEW BLENDED PRICES BEGINNING JUNE 1, 2013.

Our hedging mix has changed with the market but still captures the fleet's locational advantage

- 3 Year forward BGS sales comprise smaller percentage of Power's hedges
- Other full requirement load deals help capture additional locational and load shape premium

SI-SSA-0015-11103

NOTE: PERCENTAGES REPRESENT HEDGED VOLUMES IN PLACE AFTER BGS AUCTION.

Hedging strategy designed to protect gross margin and leverage the portfolio

Ratable Hedging on Baseload:

- 3 year ratable hedge tactics
- 3 year PJM hedge of capacity (not included in table)
- Load following sales (such as BGS) have strong correlation to our units for hedging basis and load shaping premium

Dynamic Hedging on Intermediate Coal, Combined Cycle and Peaking:

- Position fleet to take advantage of market volatility
- Gas and load-following fleet left open until prompt year to capture volatility
- Use all trading products to capture option value of assets and benefit from market dislocations

		2013	2014	2015
Baseload (Nuclear and Baseload Coal)	Volume TWh	35	35	35
	% Hedged	100%	80-85%	40-45%
	Price $/MWh	$50	$49	$51
Intermediate Coal, Combined Cycle, Peaking	Volume TWh	20	19	18
	% Hedged	30-35%	0%	0%
	Price $/MWh	$50	$49	$51
TOTAL	Volume TWh	53-55	53-55	52-54
	% Hedged	75-80%	50-60%	25-30%
	Price $/MWh	$50	$49	$51

SI-SSA-0015-11104

PSEG

* HEDGE PERCENTAGES AND PRICES AS OF FEBRUARY 11, 2013. REVENUES OF FULL REQUIREMENT LOAD DEALS BASED ON CONTRACT PRICE, INCLUDING RENEWABLE ENERGY CREDITS, ANCILLARY, AND TRANSMISSION COMPONENTS BUT EXCLUDING CAPACITY. HEDGES INCLUDE POSITIONS WITH MTM ACCOUNTING TREATMENT AND OPTIONS.

PSEG's locational advantage

and electric basis

- Basis (PS Zone to PJM West) will continue to trend downward for forward sales
- Volatility will remain significant in the prompt periods (especially summer/winter)
- Power maintains sufficient length to participate in upside volatility as well as a valuable 250MW transmission position into NYC
- Basis will continue to have a positive impact on PSEG Power profitability

SI-SSA-0015-11105

*AS OF FEBRUARY 14, 2013.

PSEG's locational advantage

and gas basis

- Lower cost supplies of shale gas have been beneficial to both PSE&G customers and PSEG Power
- Over 50% of our available pipeline capacity can access market area supplies of shale gas
- Power's generating units sit in close proximity to the Marcellus fairway
- Power buys approximately 350BCF/year of gas
- We have been able to arbitrage gas values from South to North and East to West using our storage and pipeline capacity

SI-SSA-0015-11106

PJM's capacity market continues to recognize locational value of our fleet

$/MW-day	2012 / 2013	2013 / 2014	2014 / 2015	2015 / 2016
Power's Average Prices	$153	$244	$162	$167
Rest of Pool Prices	$16	$28	$126	$136
Power's Capacity (MW)	10,400	10,600	10,300	9,000

2016/2017 RPM Auction Influenced By:

- Updated Demand Curve
- Environmental Retirements
- Minimum Offer Price Rule
- Updated Transfer Capabilities
- New Build/Cost of New Entry
- Demand Response

SI-SSA-0015-11107

Opportunity for modest and sustainable

dividend increases consistent with stable regulated growth and cash generation outlook at PSEG Power

SI-SSA-0015-11125

PSEG Summary

- Operating Earnings Guidance for 2013 of $2.25 - $2.50 per share with earnings mix shifting to 50% regulated
- Double digit operating earnings growth at PSE&G starting in 2013, and continuing through 2015 driven by transmission investments and approved programs
- Power's continued focus on operational excellence, market expertise and financial strength reduces risk in low price environment
- Strong Balance Sheet and Cash Flow support full capital program without the need for equity
- Long history of returning cash to the shareholder through the common dividend, with opportunity for further growth

SI-SSA-0015-11126

APPENDIX

PSE&G provides high reliability at below average cost which creates superior value to customers

SI-SSA-0015-11130

SAIDI = SYSTEM AVERAGE INTERRUPTION DURATION INDEX, A MEASURE OF AVERAGE OUTAGE DURATION FOR ALL CUSTOMERS SERVED.

PSE&G prioritizes public safety

while maintaining value to customers

LEAK RESPONSE RATE = PERCENTAGE OF UTILITY RESPONSES TO REPORTED LEAKS WITHIN ONE HOUR.

Formula rates for transmission make the process more predictable with contemporaneous returns

	Transmission (Federal)	Distribution Base Rate Case (State)
Current ROE	• 11.68% base • 12.93% with incentives on Susquehanna-Roseland • 11.93% with incentives on Northeast Grid	• 10.3%
Volatility of Returns	• Low – prospective recovery with annual true-ups for over/under recovery	• Higher – performance impacted positively/negatively by cost management, weather, customer demands, etc.
Process	• Formula – The rate template and specific elements like ROE are predetermined with annual updates and true ups	• Litigated case with each element (depreciation, ROE, O&M levels, Rate Base) scrutinized and settled
Intervenors	• State consumer advocates usually participate	• State consumer advocates • Large customers • Other parties affected by the case, e.g. Solar Developers
Test Year	• PSE&G has fully **forecasted** test year for both Capital and O&M	• **Historical** test year with pro-forma adjustments for known and measurable items, e.g. wage escalation
Time to resolve	• Annual Formula updates are filed in October with January 1 effective date	• Typically settled within 12-15 months

SI-SSA-0015-11132

New Jersey Board of Public Utilities (BPU)

- The Board of Public Utilities consists of five commissioners appointed by the Governor. These appointees are confirmed by the NJ Senate for six-year, staggered terms. The Governor appoints one of the five to serve as Commission President. Currently, the commissioners are:
  - Robert M. Hanna, Commission President
  - Jeanne M. Fox
  - Joseph L. Fiordaliso
  - Mary-Anna Holden
- Stefanie Brand, Director of the Division of Rate Counsel

SI-SSA-0015-11133

Slow economic recovery in NJ is constraining growth in all market sectors

Modest residential growth limited by housing market inactivity and the slow economic recovery

Consumer spending is trending with the slow economic recovery and impacting growth in the commercial sector

Industrial sales growth continues to be constrained by slow economic recovery

2013 - 2015 Projected Sales
Growth – Gas*

2013 - 2015 Projected
Sales Growth – Electric*

SI-SSA-0015-11134

* WEATHER NORMALIZED ESTIMATED ANNUAL GROWTH PER YEAR OVER FORECAST PERIOD

Key economic indicators forecast renewed growth over the 2012 to 2015 timeframe

The New Jersey economy increased by 0.3% annually from 2010 to 2012 and is anticipated to grow 2.3% per year from 2012 to 2015

New Jersey total non-farm employment increased by 0.6% annually from 2010 to 2012 and is expected to grow 1.4% per year from 2012 to 2015

Real personal income in New Jersey increased by 1.4% annually from 2010 to 2012 and is expected to increase 2.5% per year from 2012 to 2015

Single family housing starts declined by 2.6% annually from 2010 to 2012 and are expected to increase ~24% per year from 2012 to 2015

Forward-Looking Statements

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or ongoing low pricing of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulations, including market structures and transmission planning,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators, including prudency reviews, disallowances and changes in authorized returns,
- any deterioration in our credit quality or the credit quality of our counterparties,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations or increase the cost of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- delays or unforeseen cost escalations in our construction and development activities, or the inability to recover the carrying amount of our assets,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- increases in competition in energy supply markets as well as for transmission projects,
- changes in technology, such as distributed generation, storage and micro grids, and greater reliance on these technologies,
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- an extended economic recession,
- an inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce, and
- changes in the credit quality and the ability of lessees to meet their obligations under our domestic leveraged leases.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws. The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-11144

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Net Income. Operating Earnings exclude gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and material one-time items. Adjusted EBITDA excludes the same items as our Operating Earnings measure as well as income tax expense, interest expense, depreciation and amortization and major maintenance expense costs at Power's fossil generation facilities. The last two slides in this presentation (Slides A and B) include a list of items excluded from Net Income to reconcile to Operating Earnings and Adjusted EBITDA with a reference to that slide included on each of the slides where the non-GAAP information appears.

Management uses Operating Earnings and Adjusted EBITDA in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results. The presentation of Operating Earnings and Adjusted EBITDA is intended to complement, and should not be considered an alternative to, the presentation of Net Income, which is an indicator of financial performance determined in accordance with GAAP. In addition, Operating Earnings and Adjusted EBITDA as presented in this release may not be comparable to similarly titled measures used by other companies.

Due to the forward looking nature of Operating Earnings and Adjusted EBITDA guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility.

From time to time, PSEG, PSE&G and Power release important information via postings on their corporate website at http://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. The "Email Alerts" link at http://investor.pseg.com may be used to enroll to receive automatic email alerts and /or Really Simple Syndication (RSS) feeds regarding new postings. PSEG meeting materials and other financial releases can be found on the www.pseg.com website under the investor tab, or at http://investor.pseg.com.

Investment program delivering results

Operational Excellence: Maintaining reliability and improving performance as we control costs in low price environment

Financial Strength: Strong financial position supports investment program and dividend growth

Disciplined Investment:
- Balanced business mix
- Robust pipeline of opportunities

Results:
- 3rd year of Operating EPS* growth
- Continued dividend growth
- Best in class utility growth rate
- Addition of efficient CCGT capacity enhances market position

SI-SSA-0015-11148

* SECOND YEAR OF EPS GROWTH.

Delivering on commitments and realizing growth

Operational Excellence	• PSE&G: ReliabilityOne Mid-Atlantic Region's Most Reliable Electric Utility (14th consecutive year), Electric Light & Power's 2015 Utility of the Year, ReliabilityOne Outstanding Outage Response Time and Outstanding Customer Engagement • PSEG Power: Record output from combined cycle units • PSEG Long Island: Improved customer service and reliability while managing costs • PSEG: Cost-control benefits continue
Financial Strength	• Operating earnings for 2015 of $2.91 per share at upper end of guidance range • Cash flows and business mix support strong credit ratings and ability to fully fund robust investment pipeline without issuing new equity • Increased dividend in 2015
Disciplined Investment	• PSE&G capital program drives continued rate base growth over the 5-year period (2016-2020) with increased investment in Transmission, Energy Strong, Gas System Modernization Program, and Electric and Gas distribution • Power capital program focusing on growth investments including Keys, Sewaren and Bridgeport Harbor, Nuclear and Fossil uprates, PennEast Pipeline, and Solar Source

SI-SSA-0015-11149

SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/ NET INCOME TO RECONCILE TO OPERATING EARNINGS.

Focus on building a reliable, efficient, clean energy infrastructure

2011 → 2012 → 2013 → 2014 → 2015

Selected Accomplishments

2011
- Expanded investment programs focused on infrastructure upgrades, energy efficiency, and major transmission projects*
- Sale of Texas generating assets
- Nuclear license extensions and uprates

2012
- Award winning Superstorm Sandy storm response restoring 2.1M customers
- Final federal approval for Susquehanna-Roseland transmission project
- 400 MW of new peaker capacity**

2013
- Expanded Solar investment
- 90% nuclear capacity factor for 9th straight year
- Record output from Linden CCGT and Salem 2 Nuclear Unit

2014
- Energy Strong program approved
- Advanced Gas Path uprates (through 2018)
- PSEG Long Island management contract effective

2015
- Gas System Modernization Project (GSMP) and Energy Efficiency Extension II approved
- New generation build starts Power fleet transformation
- Solar Source portfolio reaches 277 MW_{DC}***

← Cost Control →

PSEG

* INVESTMENT CONTINUED FOR SUSQUEHANNA-ROSELAND, BURLINGTON-CAMDEN, NORTH CENTRAL RELIABILITY, AND STARTED FOR NORTHEAST GRID AND MICKLETON-GLOUCESTER. ** KEARNY AND NEW HAVEN. *** AS OF MARCH 2016.

Growth in capital spending aligned with customer needs

PSEG Capital Spending

2011 – 2015: ~$14.3 Billion | **2016E – 2020E*: ~$16.0 Billion**

*INCLUDES ALL PLANNED SPENDING. **POWER CAPITAL SPENDING EXCLUDES NUCLEAR FUEL. ***INCLUDES PENNEAST PIPELINE EQUITY INVESTMENT OF $0.1B. E=ESTIMATE.

SI-SSA-0015-11151

Building an efficient, clean, reliable energy platform

Timeframe	Actions taken
2011 – 2015: Transformed business mix	• Applied ~$14.3 billion towards investments • Improved credit ratings • Monetized Energy Holdings' portfolio • Strong balance sheet sustained during period of low power prices, while increasing the dividend
2016 – Forward: Strong financial position supports continued growth	• Continued dividend growth in 2016 • ~$16 billion investment program through 2020 • Utility investments focused on improving reliability and replacing aging infrastructure • Continued investment in reliable and efficient energy infrastructure at Power • Financial capability supports further expansion of the current capital plan

SI-SSA-0015-11152

PSE&G's investment program

Meeting public policy goals and customer needs

SI-SSA-0015-11153

PSEG

* DISTRIBUTION RATE BASE INCLUDES SOLAR AND ENERGY EFFICIENCY

Managing the total costs to customers while investing in the system

PSE&G Typical Residential Customer Bills*

- PSE&G customers' combined electric and gas bills declined 28% over the period
- Low gas prices and elimination of transition charges drove rate decreases

SI-SSA-0015-11154

PSEG

*FOR ALL YEARS THE BILLING ASSUMES 7,200 KWH FOR ELECTRIC AND 1,010 THERMS FOR GAS ANNUALLY. E = ESTIMATE

Transforming Power's fleet to maintain strong market position

Economic Drivers	Outlook	Combined Cycle	Nuclear	Scrubbed Coal	Peakers	Renewable
Energy Margins	• Low natural gas and energy prices • Robust portfolio of gas pipeline contracts	✓	✓	✓	n/a	n/a
Capacity Markets	• Tightened rules proposed for capacity performance	✓	✓	✓	✓	n/a
Environmental Regulations	• Tighter air emissions standards	✓	✓	✓	✓	✓
Location	• Assets in well-designed markets, premium regions • Opportunities on brownfield sites	✓	✓	✓	✓	n/a
2016 - PSEG Power Total Capacity 11.9 GW		3.3	3.7	2.4	2.3	0.2
2019 - PSEG Power Total Capacity 13.5 GW *		5.3	3.8	2.4	1.8	0.2

- **Largest nuclear site** in the eastern U.S. and ownership in **large, fully scrubbed coal facilities** at Keystone and Conemaugh provide **economies of scale** that enhance energy margins in current low market, and provide for upside potential if prices improve
- **Dual fuel peakers** meet reliability criteria in capacity markets and provide option value in energy market. Opportunity exists to repower peakers that do not meet NJ HEDD environmental regulations
- **Combined cycle units Keys and Sewaren expected to be operational in 2018, and Bridgeport 5 expected to be operational in 2019,** will enhance emissions performance and have a combined average heat rate of approximately 6,600

SI-SSA-0015-11155

*AS OF FEBRUARY 2016 APPROXIMATELY 1.8 GW OF CCGT GENERATION UNDER DEVELOPMENT – KEYS, SEWAREN 7 AND BRIDGEPORT HARBOR 5 , WHICH ARE TARGETED TO GO INTO SERVICE IN 2018/2019 ALONG WITH RETIREMENT OF OLDER SEWAREN UNITS.

Operating Earnings

Disciplined investment program and focus on operational excellence have supported growth

Power's diverse fuel mix and dispatch flexibility continue to generate strong earnings and free cash flow in low price environment

PSE&G's investment program has resulted in an increased contribution to PSEG's earnings

SI-SSA-0015-11156

PSEG

*SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. E=ESTIMATE ** 2016 PERCENTS USE MIDPOINT OF 2016 OPERATING EARNINGS GUIDANCE.

Focus areas over the business plan horizon

PSE&G
• **Operational excellence and cost control** • **Capital program execution** – Transmission, Energy Strong and GSMP program • **Regulatory framework** – Advocate for regulatory framework that provides support for long-term infrastructure programs • **Continue to develop incremental growth opportunities**

PSEG Power
• **Operational excellence and cost control** • **Timely and on budget construction of new growth opportunities** – Keys Energy Center, Sewaren 7 and Bridgeport Harbor • **Strong performance at Nuclear and Fossil** to maximize fleet value in dynamic markets • **Advocacy of constructive market rules** - Capacity markets and environmental regulations

PSEG Long Island
• **Continue execution** – Achievement of performance metrics

SI-SSA-0015-11158

PSEG's Value Proposition

- A stable platform with predictable earnings and a robust investment pipeline
- PSE&G – Best in class utility performance and growth profile
- PSEG Power – Efficient, low-cost, clean fleet advantaged by asset diversity, fuel mix and location
- Strong balance sheet – Supports stable credit rating, growth objectives and the potential for consistent and sustainable dividend growth

SI-SSA-0015-11159

PSE&G

PSE&G strategy

Building a sustainable platform that balances reliability, customer rates and public policy to ensure growth at reasonable returns

SI-SSA-0015-11162

PSE&G's focus on meeting customer reliability and policy objectives are key to our investment strategy

2011	2012	2013	2014	2015

Selected Accomplishments

2011
- NJ Capital Infrastructure Program 2
- Energy Efficiency extension
- Major Transmission capital projects*
- Hurricane Irene/ October Snowstorm
- Mid-Atlantic ReliabilityOne Award

2012
- Hurricane Sandy storm response (2.1M customers restored)
- Transmission: Final federal approval for Susquehanna-Roseland (S-R) project
- National ReliabilityOne Excellence Award
- Mid-Atlantic ReliabilityOne Award
- EEI's Emergency Response Award

2013
- Solar Loan III
- Solar 4 All Extension
- Energy Strong program filed
- Mid-Atlantic ReliabilityOne Award
- Award for Outstanding Response to a Major Event

2014
- Energy Strong approved
- Transmission: North Central Reliability and Burlington-Camden projects placed in-service
- Bergen-Linden Corridor Upgrade project investment started
- Mid-Atlantic ReliabilityOne Award

2015
- Gas System Modernization Project (GSMP)
- Energy Efficiency Extension II
- Transmission: S-R and Mickleton-Gloucester projects placed in-service
- Mid-Atlantic ReliabilityOne Award
- Recognized for customer satisfaction by J.D. Power for both large electric and gas business service in the East

← Cost Control →

SI-SSA-0015-11163

PSEG

* INVESTMENT CONTINUED FOR SUSQUEHANNA-ROSELAND, BURLINGTON-CAMDEN, NORTH CENTRAL RELIABILITY, AND STARTED FOR NORTHEAST GRID AND MICKLETON-GLOUCESTER

Building on our track record

Operational Excellence

- Strong reliability record, with plans for further improvement
- Cost control efforts

Financial Strength

- Meeting or exceeding earnings targets
- Maintain solid investment grade credit ratings

Disciplined Investment

- 14 investment programs approved over past seven years
  - ✓ Infrastructure focused
  - ✓ Policy alignment – across administrations – Solar, EE and other
- Win-Win: Job creation, environment benefits, low commodity prices, low interest costs, labor availability, federal tax benefits

SI-SSA-0015-11164

Operational Excellence

Reliability and Customer Service

- Named most reliable electric utility in the Mid-Atlantic region for 14th consecutive year
- Recognized by PA Consulting with the Outstanding Customer Engagement and Outstanding Outage Response Time awards
- Named 2015 Utility of the Year by Electric Light & Power Magazine
- Received Star of Energy Efficiency Award

SI-SSA-0015-11165

Achieved ~11% annual earnings growth

over the past four years through implementation of supportive rate mechanisms on our expanded capital program and cost control

SI-SSA-0015-11166

Receive contemporaneous recovery on over 70% of our investments

2011-2015 PSE&G Capital Spending by Recovery Method

We make things work for you.

SI-SSA-0015-11183

PSEG Power strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-11184

Focus on transforming Power's portfolio with reliable, efficient, and cleaner energy infrastructure

2011	2012	2013	2014	2015

Selected Accomplishments

2011
- Hope Creek set annual output record
- Nuclear license extensions and uprates achieved

2012
- Peach Bottom 3 set annual output record
- Additional 400 MW of new peaker capacity at Kearny and New Haven
- Superstorm Sandy recovery initiated

2013
- Record annual output from Linden CCGT and Salem 2 Nuclear Unit
- 90% + nuclear capacity factor for 9th straight year
- Bethlehem Energy Center, 2nd gas pipeline connection added

2014
- Record annual output from Bergen CCGT
- PennEast pipeline investment
- CCGT Advanced Gas Path (AGP) uprate investment completed at Linden 1 & 2, 63 MW
- Established PSEG Long Island fuel management operations for 2015 start-up

2015
- Record CCGT fleet annual output
- Continued growth in fleet with 1,300 MW new CCGT's announced
  - Keys
  - Sewaren 7
- Prepared successful bid for 485 MW Bridgeport Harbor 5
- Projects Completed:
  - Peach Bottom EPU, 130 MW
  - Bergen 2 AGP uprate, 31 MW
- HEDD retirement
- Solar portfolio reaches 277 MW_{DC} as of March 2016

Cost Control

SI-SSA-0015-11185

PSEG Power's value is advantaged

by asset diversity, fuel flexibility and location

2015 Actual

Fuel Diversity*
Total MW: 11,678

- Gas
- Nuclear
- Coal**
- Oil
- Pumped Storage

Energy Market Served*
Total MW: 11,678

- Load Following, 87% dual fuel
- Peaking
- Baseload

Energy Produced*
Total GWh: 55,213

- Gas
- Nuclear
- Coal**
- Oil
- Pumped Storage

SI-SSA-0015-11186

PSEG

* EXCLUDES SOLAR AND KALAELOA.
**INCLUDES NEW JERSEY UNITS THAT FUEL SWITCH TO GAS.

Power investing $2 billion of capital in new capacity

E=ESTIMATE. DATA AS OF MARCH 2016

Power's PJM assets are becoming more efficient

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape
- Readiness for Capacity Performance (CP), successful in CP auction

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel capability at 87% of load following and peaking units

SI-SSA-0015-11188

PSEG

* KEYS & SEWAREN 7 TO BE ADDED TO DISPATCH IN 2018E AND SEWAREN 1-4 WILL RETIRE.

PSEG Power has generating assets in three competitive markets

- Assets located near load
- Low cost portfolio with gas cost advantage
- Positioned to benefit from volatility in real-time markets
- Fleet meets new capacity performance standards
- 1,800 MW of new CCGT capacity under construction in PJM and ISO-NE

SI-SSA-0015-11189

PSEG Power developing 1,800 MW of new, efficient CCGT capacity in MD, NJ and CT

- Constructing the 755 MW CCGT Keys Energy Center in Maryland (SWMAAC*) at an estimated cost of $825 to $875 million
- Constructing a new 540 MW CCGT unit, Sewaren in New Jersey (EMAAC*) at a cost of $625 to $675 million which will replace older Sewaren units
- Constructing a new 485 MW CCGT unit, Bridgeport Harbor 5 (ISO NE), at a cost of $525 to $575 million
- Both Keys and Sewaren 7 are targeted to be in-service in 2018 and Bridgeport Harbor 5 in 2019
- Expanding civic stewardship roles and programs in neighboring communities

*SWMAAC = SOUTHWEST/EMAAC = EASTERN MID-ATLANTIC AREA COUNCIL
LOCATIONAL DELIVERABILITY AREA WITHIN PJM.

SI-SSA-0015-11190

Power's fleet to be transformed with addition of Keys, Sewaren 7 and Bridgeport Harbor in 2018-2019

Projected Fleet Comparison 2015 to 2020E

*EXCLUDES SOLAR AND KALAELOA E = ESTIMATE **INCLUDES NEW JERSEY UNITS THAT FUEL SWITCH TO GAS.

SI-SSA-0015-11191

PSEG Power's fossil fleet expected to see improvements in efficiency

- AGP (Advanced Gas Path) investments
- CCGT material condition assessment
- Unit testing and testing coordination initiatives
- HEDD retirements
- Keys/Sewaren Combined Cycle Development (2018)
- Bridgeport Harbor 5 Combined Cycle Development (2019)
- Heat Rate Improvement converts to potential savings of $60-$65M in fuel expense (assuming $3/MB gas price)

SI-SSA-0015-11192

PSEG Power's fossil fleet …

Among the lowest emitting in the industry

- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing
- With the addition of new units, emissions continue to improve

Expected to reduce its carbon footprint

- Carbon emission rates projected to steadily approach EPA national pollution standards for New and Reconstructed Natural Gas Combined Cycle (1,000 lbs CO_2/MWh-gross)

SI-SSA-0015-11193

E = ESTIMATE

Nuclear is a critical element of our success

Various	6 Solar Projects	$241	2016/2017E increase renewable capacity by 136 MW_{DC}/105 MW_{AC}	2016/2017E

Total New Capacity – 2,200 MW

E = ESTIMATE.

SI-SSA-0015-11195

A position in renewable energy – Power's Solar Source

Solar Source portfolio

- Utility scale solar projects in 12 states in operation or under construction
- Long-term PPA's with creditworthy counterparties
- Lump sum, full wrap EPC* agreements

Asset Optimization

- Maintain high equipment availability
- Minimize operating expenses
- Seek additional revenue streams

SI-SSA-0015-11196

* EPC = ENGINEERING PROCUREMENT & CONSTRUCTION. E = ESTIMATE.

PSEG Power has other attractive sources of revenues to round out a robust portfolio

Gas Asset Optimization

- Large wholesale provider to PSE&G and others
  - Storage capacity of approximately 75 Bcf (in the Gulf and market regions)
  - Firm transportation of 1.3 Bcf/day on seven pipelines
- Off-system sales margins shared with residential customers
- Commercial & Industrial gas sales

Ancillary Services – Black start, reactive power, area regulation

LIPA fuel and energy dispatch management – Began management of 10-year contract in 2015

Kalaeloa, HI – 50% equity interest in a 208 MW combined cycle oil unit

New Haven Peakers – 129 MW, rate based contract with ISO-NE

SI-SSA-0015-11197

PSEG Power has demonstrated ability to control O&M

Cost control actions taken:

- Fossil plant assessment
- CCGT material condition assessment
- Vendor contract renegotiations
- Nuclear security services brought in-house to control costs
- Nuclear maintenance productivity study
- Nuclear outage efficiency initiative
- Materials management
- Nuclear excellence initiative
- Nuclear staff – Right sizing

SI-SSA-0015-11200

PSEG

*SEE SLIDE A FOR ITEMS EXCLUDED FROM NET INCOME TO RECONCILE TO OPERATING EARNINGS. E = ESTIMATE.
UPDATED AS OF JULY 29, 2016.

PSEG Power – Delivering on priorities

Operational Excellence

- Fuel and technology-diverse fleet produced 55 TWh, 2% higher than 2014
- Nuclear capacity factor exceeded 90%; output of 30 TWh, close to 30.3 TWh is third best ever, record set in 2009
- Production records set at BEC, Linden and the CCGT fleet in total; Kearny 13 & 14 CTs
- Successful implementation of LIPA contract for fuel / generation dispatch.

Financial Strength

- Achieved earnings guidance in 2015
- Cost control programs held O&M to a 0.8% CAGR between 2011 and 2016
- Successful ongoing effort to influence outcomes in key markets showing success, e.g., price formation

Disciplined Investment

- Completed Peach Bottom EPU and AGP at Bergen 2; AGP planned for BEC in 2017/2018
- Repositioning the fleet with three new CCGTs:
  - Keys (2018)
  - Sewaren 7 (2018)
  - Bridgeport Harbor 5 (2019)
- Solar Source's portfolio is 277 MW_{DC}

PSEG POWER
ER&T

SI-SSA-0015-11202

PSEG

We make things work for you.

Market Review: Markets in 2015 were affected by abnormal weather conditions

Q1: Periods of extremely cold temperatures resulted in high gas prices, significant basis differentials, and higher energy demand

Q2-Q4: A normal summer and mild December, combined with increased supply of gas, reduced energy prices and basis

SI-SSA-0015-11203

Market Review: YTD 2016 impacted by weather but forward gas and electric prices retain seasonal volatility

SI-SSA-0015-11204

Market Review: PSEG's extensive gas asset portfolio provides unparalleled access to Marcellus Shale gas

- PSEG Power maintains a robust portfolio of pipeline and storage assets in the Mid-Atlantic
- Marcellus Shale gas production reached 18.8 BCF/day in 2015
- PSEG Power procured over 423 BCF in 2015 with approximately 50% going to PSE&G's utility gas customers
- PSEG Power's gas for generation was 150 BCF in 2015, of which >75% was supplied by Northeast Shale gas
- Severe financial stress among the natural gas producer industry is expected to reduce production growth until gas prices rebalance to higher levels
- Investment in the PennEast pipeline expected to provide more access to Marcellus for PSEG

SI-SSA-0015-11205

Market Review: Completion of new pipeline infrastructure expected to move significant quantities of Marcellus gas out of the region by 2018

Pipeline capacity grows significantly by 2018

- Significant amount of new pipelines have already been built and more are in the advanced planning and development stage through 2018
- Gas production and pipeline takeaway capacity estimated to reach equilibrium in 2018 timeframe based on new pipeline development

SI-SSA-0015-11206

Regulatory Framework: Market structures are evolving to appropriately recognize value of reliable, diverse and clean dispatchable generation.

	ISSUE /POLICY	OUTCOME
PJM	CAPACITY	• Higher payments for enhanced reliability (Capacity Performance); first purely CP capacity auction to be held in May 2017
	ENERGY PRICE FORMATION	• FERC is driving ISO's to improve their pricing constructs and rules – five minute settlements and shortage pricing improvements are on the horizon
	DEMAND RESPONSE RULES	• Stricter rules for eligibility and deployment following full deployment of Capacity Performance expected to limit participation in capacity markets
	STATE INTERVENTION	• Efforts in Ohio to subsidize uneconomic resources met with significant opposition and led to FERC finding that affiliate abuse standards would apply • PJM commenced process to develop rules for integrating public policy driven resources that would protect competitive markets; PJM also has commenced study to determine value of fuel diversity
ISO-NE	CAPACITY	• Zonal demand curves approved by FERC for FCA 11 • Nuclear and coal under pressure; closure of Pilgrim and Vermont Yankee • New initiative to incorporate state carbon goals in wholesale markets consistent with competitive outcomes
	ENERGY	• Proposed gas pipelines are stalled • Significant rule changes to improve price formation – five minute settlement and fast start pricing
NYISO	CAPACITY	• Retirement of upstate coal plants tighten market • NYPSC develops a clean energy standard that retains upstate nuclear and recognizes the value of zero emissions
	ENERGY	• Improvement in price formation during reserve shortage conditions
FEDERAL	ENVIRONMENTAL REGULATIONS	• CPP rules stayed by SCOTUS; oral argument before D.C. Circuit scheduled for September 27, 2016 • Some states will still prepare implementation plans for 2020+ timeframe • CSAPR update rule cuts ozone season NOx emissions

SI-SSA-0015-11231

PSEG Summary

- 2015 Operating Earnings of $2.91 were at the upper end of our upwardly revised guidance of $2.85 - $2.95 per share
- Forecast high single-digit rate base growth at PSE&G on five year basis from 2015 to 2020, driven by investment in transmission and approved programs
- Power's investment program and continued focus on operational excellence with financial strength delivers value in current price environment
- Strong Balance Sheet and Cash Flow support current capital program and investment in new opportunities without the need for equity
- Our indicative $0.08 dividend per share increase for 2016 is consistent with our long history of returning cash to the shareholder through the common dividend, with opportunity for consistent and sustainable growth

Start of Operations	1968	1960/1961

On September 1, 2016, PSEG Power submitted to the PJM Independent Market Monitor and the PJM Office of Interconnection a preliminary request for an exception to PJM's Reliability Pricing Model must-offer requirement for the Hudson and Mercer generating stations in connection with the 2020-2021 capacity auction to be held in May 2017. The two stations have not cleared the PJM capacity auction for the prior two years, and would need significant investment to achieve the performance standards associated with PJM's Capacity Performance construct. The submission provides PSEG Power the opportunity to fully analyze the market conditions and economics, among other factors, associated with maintaining station operations, including any necessary capital improvements, prior to making a final determination whether or not to bid in the 2020-2021 capacity auction by December 1, 2016.

PSEG FINANCIAL APPENDIX

SI-SSA-0015-11241

PSEG Financial Highlights

Maintaining full-year 2016 Operating Earnings guidance of $2.80 - $3.00 per share*

- ✓ Reaching the upper end of our guidance range in 2016 will be difficult even with improvements seen in the power markets, expectations for warm summer weather, normal operations and management of O&M
- ✓ Focused on meeting customer needs for clean, reliable, efficient delivery of energy

Infrastructure Spend

- ✓ PSE&G capital spending on T&D for 2016 expected to top $3 billion
- ✓ PSE&G's Gas System Modernization Program (GSMP) and Energy Strong continue
- ✓ Keys and Sewaren CCGTs construction is on schedule and on budget
- ✓ PSE&G has identified more than $500 million of additional infrastructure spend over the current capital spending plan of $12 billion in the 2016-2020 period

Financial position remains strong

- ✓ Positive cash from Power and increasing cash flow from operations at PSE&G supports dividend growth and funds capital spending program without the need to issue equity
- ✓ Debt as a percentage of capitalization was 45% at June 30

Forward-Looking Statements

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or ongoing low pricing of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulations, including market structures and transmission planning,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators, including prudency reviews, disallowances and changes in authorized returns,
- any deterioration in our credit quality or the credit quality of our counterparties,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations or increase the cost of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- delays or unforeseen cost escalations in our construction and development activities, or the inability to recover the carrying amount of our assets,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- increases in competition in energy supply markets as well as for transmission projects,
- changes in technology, such as distributed generation, storage and micro grids, and greater reliance on these technologies,
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- an extended economic recession,
- an inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce, and
- changes in the credit quality and the ability of lessees to meet their obligations under our domestic leveraged leases.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws. The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-11251

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Net Income. Operating Earnings exclude gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and material one-time items. Adjusted EBITDA excludes the same items as our Operating Earnings measure as well as income tax expense, interest expense, depreciation and amortization and major maintenance expense costs at Power's fossil generation facilities. The last two slides in this presentation (Slides A and B) include a list of items excluded from Net Income to reconcile to Operating Earnings and Adjusted EBITDA with a reference to that slide included on each of the slides where the non-GAAP information appears.

Management uses Operating Earnings and Adjusted EBITDA in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results. The presentation of Operating Earnings and Adjusted EBITDA is intended to complement, and should not be considered an alternative to, the presentation of Net Income, which is an indicator of financial performance determined in accordance with GAAP. In addition, Operating Earnings and Adjusted EBITDA as presented in this release may not be comparable to similarly titled measures used by other companies.

Due to the forward looking nature of Operating Earnings and Adjusted EBITDA guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility.

From time to time, PSEG, PSE&G and Power release important information via postings on their corporate website at http://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. The "Email Alerts" link at http://investor.pseg.com may be used to enroll to receive automatic email alerts and /or Really Simple Syndication (RSS) feeds regarding new postings. PSEG meeting materials and other financial releases can be found on the www.pseg.com website under the investor tab, or at http://investor.pseg.com.

PSEG STRATEGY: GROWING A HIGH-QUALITY, LOW-RISK ENERGY INFRASTRUCTURE COMPANY

Ralph Izzo

CHAIRMAN, PRESIDENT AND CHIEF EXECUTIVE OFFICER

Kathleen Lally

VICE PRESIDENT – INVESTOR RELATIONS

SI-SSA-0015-11253

PSEG

We make things work for you.

Two strong businesses

A stable platform, each with growth opportunities

PSEG

PSE&G	PSEG Power LLC
Electric & Gas Delivery and Transmission	**Regional Competitive Generation**
Strategy: Investments aligned with public policy and customer needs **Value Proposition:** A ~$12 billion infrastructure program producing high single digit rate base growth through 2020	**Strategy:** Investment program enhances competitive position with addition of efficient, clean, reliable CCGT capacity **Value Proposition:** Provides substantial free cash flow in current environment and upside from market rule improvements
2015 **Assets $24B** **Operating Earnings $787M**	2015 **Assets $12B** **Operating Earnings $653M**

SI-SSA-0015-11254

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2015. PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT AND PSEG LONG ISLAND ACTIVITY. SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS

PSEG's Strategy

Investment program delivering results

Operational Excellence: Maintaining reliability and improving performance as we control costs in low price environment

Financial Strength: Strong financial position supports investment program and dividend growth

Disciplined Investment:
- Balanced business mix
- Robust pipeline of opportunities

Results:
- 3rd year of Operating EPS* growth
- Continued dividend growth
- Best in class utility growth rate
- Addition of efficient CCGT capacity enhances market position

SI-SSA-0015-11255

* SECOND YEAR OF EPS GROWTH.

Growth in capital spending aligned with customer needs

PSEG Capital Spending

2011 – 2015: ~$14.3 Billion | **2016E – 2020E*: ~$16.0 Billion**

*INCLUDES ALL PLANNED SPENDING. **POWER CAPITAL SPENDING EXCLUDES NUCLEAR FUEL. ***INCLUDES PENNEAST PIPELINE EQUITY INVESTMENT OF $0.1B. E=ESTIMATE.

SI-SSA-0015-11256

PSE&G's investment program

Meeting public policy goals and customer needs

SI-SSA-0015-11257

PSEG

* DISTRIBUTION RATE BASE INCLUDES SOLAR AND ENERGY EFFICIENCY

Investment program combined with cost control drives growth in earnings

Bonus depreciation

- Lowered rate base and growth rate but growth still remains strong
- Investments are less expensive for customers, providing an opportunity for incremental cost-effective system improvements

SI-SSA-0015-11258

PSEG

* INCLUDES IMPACTS OF BONUS DEPRECIATION. E = ESTIMATE.

PSEG Power developing 1,800 MW of new, efficient CCGT capacity in MD, NJ and CT

- Constructing the 755 MW CCGT Keys Energy Center in Maryland (SWMAAC*) at an estimated cost of $825 to $875 million
- Constructing a new 540 MW CCGT unit, Sewaren in New Jersey (EMAAC*) at a cost of $625 to $675 million which will replace older Sewaren units
- Constructing a new 485 MW CCGT unit, Bridgeport Harbor 5 (ISO NE), at a cost of $525 to $575 million
- Both Keys and Sewaren 7 are targeted to be in-service in 2018 and Bridgeport Harbor 5 in 2019
- Expanding civic stewardship roles and programs in neighboring communities

*SWMAAC = SOUTHWEST/EMAAC = EASTERN MID-ATLANTIC AREA COUNCIL
LOCATIONAL DELIVERABILITY AREA WITHIN PJM.

SI-SSA-0015-11267

Focus areas over the business plan horizon

PSE&G
• **Operational excellence and cost control** • **Capital program execution** – Transmission, Energy Strong and GSMP program • **Regulatory framework** – Advocate for regulatory framework that provides support for long-term infrastructure programs • **Continue to develop incremental growth opportunities**

PSEG Power
• **Operational excellence and cost control** • **Timely and on budget construction of new growth opportunities** – Keys Energy Center, Sewaren 7 and Bridgeport Harbor • **Strong performance at Nuclear and Fossil** to maximize fleet value in dynamic markets • **Advocacy of constructive market rules** - Capacity markets and environmental regulations

PSEG Long Island
• **Continue execution** – Achievement of performance metrics

SI-SSA-0015-11268

PSEG's Value Proposition

- A stable platform with predictable earnings and a robust investment pipeline
- PSE&G – Best in class utility performance and growth profile
- PSEG Power – Efficient, low-cost, clean fleet advantaged by asset diversity, fuel mix and location
- Strong balance sheet – Supports stable credit rating, growth objectives and the potential for consistent and sustainable dividend growth

When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K. These factors include, but are not limited to:

- fluctuations in wholesale power and natural gas markets, including the potential impacts on the economic viability of our generation units;
- our ability to obtain adequate fuel supply;
- any inability to manage our energy obligations with available supply;
- increases in competition in wholesale energy and capacity markets;
- changes in technology related to energy generation, distribution and consumption and customer usage patterns;
- economic downturns;
- third-party credit risk relating to our sale of generation output and purchase of fuel;
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements;
- changes in state and federal legislation and regulations, and PSE&G's ability to recover costs and earn returns on authorized investments;
- the impact of pending and any future rate case proceedings;
- regulatory, financial, environmental, health and safety risks associated with our ownership and operation of nuclear facilities;
- adverse changes in energy industry laws, policies and regulations, including market structures and transmission planning;
- changes in federal and state environmental regulations and enforcement;
- delays in receipt of, or an inability to receive, necessary licenses and permits;
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry;
- changes in tax laws and regulations;
- the impact of our holding company structure on our ability to meet our corporate funding needs, service debt and pay dividends;
- lack of growth or slower growth in the number of customers or changes in customer demand;
- any inability of Power to meet its commitments under forward sale obligations;
- reliance on transmission facilities that we do not own or control and the impact on our ability to maintain adequate transmission capacity;
- any inability to successfully develop or construct generation, transmission and distribution projects;
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers;
- our inability to exercise control over the operations of generation facilities in which we do not maintain a controlling interest;
- any inability to recover the carrying amount of our long-lived assets and leveraged leases;
- any inability to maintain sufficient liquidity;
- any inability to realize anticipated tax benefits or retain tax credits;
- challenges associated with recruitment and/or retention of key executives and a qualified workforce;
- the impact of our covenants in our debt instruments on our operations; and
- the impact of acts of terrorism, cybersecurity attacks or intrusions.

All of the forward-looking statements made in this presentation are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business, prospects, financial condition, results of operations or cash flows. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this presentation apply only as of the date of this presentation. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even in light of new information or future events, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this presentation are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Management uses non-GAAP Operating Earnings in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results.

Operating Earnings is a non-GAAP financial measures that differ from Net Income. Non-GAAP Operating Earnings exclude the impact of returns (losses) associated with the Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting and material one-time items. The last two slides in this presentation (Slides A and B) include lists of items excluded from Net Income/(Loss) to reconcile to non-GAAP Operating Earnings with a reference to those slides included on each of the slides where the non-GAAP information appears.

Due to the forward looking nature of non-GAAP Operating Earnings guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility.

These materials and other financial releases can be found on the PSEG website at https://investor.pseg.com. From time to time, PSEG, PSE&G and PSEG Power release important information via postings on their corporate website at https://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. The "email alerts" link at https://investor.pseg.com may be used to enroll to receive automatic email alerts and/or really simple syndication (RSS) feeds regarding new postings at https://investor.pseg.com/rss.

PSEG STRATEGY: BUILDING A SUSTAINABLE, FINANCIALLY SOUND ENERGY INFRASTRUCTURE COMPANY

Ralph Izzo

CHAIRMAN, PRESIDENT AND
CHIEF EXECUTIVE OFFICER

Dan Cregg

EXECUTIVE VICE PRESIDENT AND
CHIEF FINANCIAL OFFICER

SI-SSA-0015-11274

PSEG

We make things work for you.

PSE&G Represents **65%** of Non-GAAP Operating Earnings

4.7% Increase in 2018 Common Dividend

Promoting Sound Energy Policy

115 Years Investing in NJ's Critical Infrastructure

5–Year Investment Program Provides Opportunity for **8%-10%** CAGR in PSE&G Rate Base

PSEG

Two strong businesses with a track record of success

Electric & Gas Distribution and Transmission

Strategy: Investments aligned with public policy and customer needs

Value Proposition: A $12 Billion - $16 Billion infrastructure program expected to produce 8%-10% annual rate base growth through 2022

2017	Assets $29B Net Income $973M Non-GAAP Operating Earnings* $963M

Regional Competitive Generation

Strategy: Investment program enhances competitive position with addition of efficient, clean, reliable CCGT capacity

Value Proposition: Provides substantial free cash flow and upside from market rule improvements

2017	Assets $12B Net Income $479M Non-GAAP Operating Earnings* $505M

SI-SSA-0015-11276

ASSETS AND NET INCOME ARE FOR THE YEAR ENDED 12/31/2017. PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO ENTERPRISE / OTHER ACTIVITY. PSE&G 5 YEAR CAPITAL SPEND FORECAST UPDATED FOR CLEAN ENERGY FUTURE PROGRAM FILED SEPTEMBER 26, 2018

*SEE SLIDE A FOR A RECONCILIATION OF NET INCOME TO NON-GAAP OPERATING EARNINGS, SLIDE B FOR RECONCILIATIONS FOR PSE&G AND PSEG POWER.

Strategic focus produced growth in non-GAAP Operating Earnings as regulated business contribution grew to ~65%

2012	PSEG 5-Year Capital Investment Program of $18 Billion*	2017

- ✓ Regulated annual Rate Base growth of 13% to $17 Billion
- ✓ Transmission has grown to 46% of Rate Base
- ✓ Efficient growth: O&M held flat
- ✓ Overall customer bill is down

$2.44	Non-GAAP Operating Earnings +4% per year	$2.93
43%	Regulated Net Income Contribution Increased	65%
$1.42	Common Dividend Per Share +4% per year	$1.72

*CAPITAL INCLUDES YEARS 2013-2017.

SI-SSA-0015-11277

Next Steps: Building on a successful and sustainable platform that meets the needs of customers and shareholders

2018	PSEG 5-Year Capital Investment Program $14B - $17.5B

- ✓ Investing $12 Billion-$16 Billion to upgrade New Jersey infrastructure and meet NJ's Clean Energy goals
- ✓ Minimizing risk/volatility of merchant generation
- ✓ Continued cost discipline in operations
- ✓ Maintaining high customer satisfaction levels
- ✓ Tax reform benefits customers and shareholders
- ✓ Financial strength remains a core operating principle

Rate Base	Expected 8%-10% Compound Annual Growth in Rate Base through 2022
$1.80	Opportunity for Consistent and Sustainable Growth in Common Dividend

SI-SSA-0015-11278

E=ESTIMATE

SI-SSA-0015-11282

PSEG

Regulatory/legislative policy initiatives strengthen foundation for providing clean, affordable and resilient energy supply

Base Rate Case Provides Opportunity for Long-Term Rate Stability

- Decision expected in Q4 2018

NJ regulators endorse streamlined process supporting long-term investment

- GSMP II Approved; ES II Filed in June 2018

NJ Advances Clean Energy Future

- PSEG Power will request NJBPU determination of eligibility for our NJ nuclear plants to receive Zero Emission Certificates
- PSE&G plans to accelerate investment in Energy Efficiency, Energy Storage, EVs and Energy Cloud - AMI

FERC/PJM Wholesale Market Reforms Underway

- Fast start pricing reform at PJM expected in 2019

SI-SSA-0015-11283

AMI = ADVANCED METERING INFRASTRUCTURE.

NJ Zero Emission Certificates (ZEC) support carbon free nuclear generation

- ✓ Legislation signed by New Jersey Governor Murphy on May 23
- ✓ 330-Day process underway – NJ Board of Public Utilities expected to determine eligibility and select nuclear plants to receive ZECs by mid-April 2019
- ✓ Hope Creek and Salem produce >90% of NJ's carbon free generation, support ~6,000 jobs, and benefit fuel diversity and grid reliability

SI-SSA-0015-11284

Zero Emission Certificate (ZEC) Process

2018	2019	2020

Enacted May 23 (Day One)

November 2018 (Day 180), BPU issues Order establishing ZEC program

April 19, 2019 (Day 330), BPU ranks applicants and selects plants to receive ZECs. Utilities begin purchasing ZECs for 'stub' period. Cash payment follows

During 'stub' period (end of energy year), ZECs earned through May 31

Within 90 days of May 31, cash payment occurs for ZECs earned during 'stub' period

June 2019, utilities purchase ZECs for new energy year, with cash payment within 90 days of the energy year ending May 31, 2020

Subsequent years work the same

Annual revenues estimated at ~$200 million, or ~$0.28 per share if all three NJ units are selected

SI-SSA-0015-11285

PSEG's future direction aligned with customer needs and NJ's Clean Energy agenda

2012-2017	2018 – 2022	Utility of the Future
Transmission expansion Storm hardening and resiliency New peaking generation and generation uprates Regulated & Unregulated Renewables	Upgrade aging infrastructure and Transmission Storm hardening and resiliency New, efficient CCGTs Clean Energy Legislation • Expanded Energy Efficiency • EV Infrastructure • Energy Storage • Energy Cloud – AMI Regulated & Unregulated Renewables	Clean Energy Legislation • Expanded Energy Efficiency • EV infrastructure • Battery storage Greater use of technology to enhance 2-way customer communication Regulated Renewables

AMI = ADVANCED METERING INFRASTRUCTURE.

NJ has advanced a new Clean Energy agenda

Energy Policy	Description	Investment Opportunity for PSEG
Energy Efficiency (EE)	• Requires electric utilities to reduce energy consumption by 2% and gas utilities to reduce energy consumption by 0.75% from average annual usage over prior 3-year period within 5 years • Allows utilities to recover "reasonable and prudent costs" including return of and on capital and revenue impact of lost sales	☑
Renewable Portfolio Standard (RPS)	• Increases percentage of energy to be supplied from renewable energy resources to 50% by 2030	☑
Solar	• Annual solar requirement increases to 4.8% in 2025 before declining to 4.5% in 2026 and 1.1% in 2033 as net metering cap increased to 5.8% from 2.9% • BPU must complete a study on how to modify/replace SREC program by 24 months after enactment	☑
Community Solar	• BPU must develop rules and regulations establishing a "Community Solar Energy Pilot Program"	☑
Offshore Wind (OSW)	• BPU to establish Offshore Renewable Energy Certificate (OREC) to support 3,500 MW by 2030 • Allows OSW projects to receive tax credits from the Energy Development Agency (EDA) • NJ Dept. of Labor directed to develop job training programs to support OSW development	☑
Energy Storage	• BPU to provide Governor and Legislature with analysis of "energy storage needs and opportunities" • BPU to initiate process within six months of delivering report that establishes a process and mechanism for achieving 600 MW of energy storage by 2021 and 2,000 MW by 2030	☑
EV Infrastructure	• Charging stations and related infrastructure for workplace, multi-family and travel corridors	☑

SI-SSA-0015-11287

Partnership for a Clean Energy Future:

~$3.6 Billion investment program to provide cost-effective and innovative solutions supporting NJ's clean energy goals

- **Energy Efficiency:** Residential and C&I programs to lower energy bills and combat climate change
  - Savings targeting 2% electric and 0.75% gas savings consistent with NJ Clean Energy Legislation
  - Customer benefits exceed costs
- **Electric Vehicles:** "Smart" electric vehicle infrastructure: residential, workplace, multi-family, travel corridors
- **Energy Storage:** Utility-scale systems to defer traditional distribution investment, enable additional solar, and enhance critical infrastructure resiliency
- **Energy Cloud: Advanced Metering Infrastructure (AMI):** Accelerated roll-out of 2.2 million electric meters and supporting infrastructure. Compelling customer benefits

Program Investment	$ Billion
Energy Efficiency	$2.5
Electric Vehicles	$0.3
Energy Storage	$0.1
Energy Cloud – AMI	$0.7
Investment Total	$3.6

- 6-year investment program starting in 2019
- Seeking contemporaneous recovery
- Contingent on approval of lost revenue recovery mechanism

SI-SSA-0015-11288

Customer's bills are materially lower, supporting needed investment in the system

PSE&G Combined Typical Annual Residential Customer Bills*

- Combined, typical residential electric and gas customer bills are ~30% lower since the highpoint in 2008 and >40% lower when adjusted for inflation
- Also provided BGSS bill credits totaling ~$680 per customer since 2012

- Regional price comparison** - Gas is 2nd lowest and Electric is lower than average
- Delivery revenue component is the lowest in the state for Gas and second lowest for Electric
- PSE&G's infrastructure and clean energy investment programs would increase rates by approximately 2% - 3% annually, aligned with inflation

SI-SSA-0015-11289

PSEG

*FOR ALL YEARS THE BILLING ASSUMES 7,200 KWH FOR ELECTRIC AND 1,010 THERMS FOR GAS ANNUALLY.
** COMPARED AGAINST 12 REGIONAL UTILITIES AS OF DECEMBER 1, 2017, FOR A CUSTOMER THAT USES 500 KILOWATT-HOURS AND 100 THERMS IN A MONTH.

Capital spending focused on regulated growth

PSEG
2018E – 2022E Capital Spending

$14B to $17.5B

Investment in regulated business represents ~90% of capital program

.HASHED PORTION OF THE CHART REPRESENTS EXTENSION OF ENERGY STRONG (ES2) AND CLEAN ENERGY FUTURE (CEF) FILING.

SI-SSA-0015-11295

PSEG Value Proposition

- PSE&G – Delivering on promise for rate base growth through disciplined investment, customer satisfaction and safety
- PSEG Power – Efficient, low-cost, clean fleet advantaged by asset diversity, fuel mix and location
- Focus on providing strong, sustainable returns of invested capital through operational excellence, regulatory and legislative mechanisms
- 111-year record of paying common dividends with opportunity for consistent, sustainable growth

SI-SSA-0015-11296

NOTE: PSEG 5 YEAR CAPITAL SPEND FORECAST UPDATED FOR CLEAN ENERGY FUTURE PROGRAM FILED SEPTEMBER 26, 2018

Sustainability is the hallmark of our 115 years of Public Service

- ✓ PSEG's climate goal is to eliminate 13 million tons of CO_2 equivalent emissions by 2030 from 2005 levels
- ✓ Named to the Dow Jones North America Sustainability Index for the 11th year in 2018
- ✓ Working to secure the economic viability of PSEG Power's nuclear fleet, which generates >90% of New Jersey's carbon free energy
- ✓ Invested approximately $1.7 Billion in the development of solar energy
- ✓ Proud sponsor of several sustainability and STEM programs including Montclair State's Institute for Sustainability Studies; the Andlinger Center for Energy & the Environment at Princeton; and the Stevens Institute of Technology's SURE House

SI-SSA-0015-11297

PSEG EXECUTIVE PROFILES

SI-SSA-0015-11298

PSEG

We make things work for you.

Ralph Izzo

CHAIRMAN, PRESIDENT AND CHIEF EXECUTIVE OFFICER

PUBLIC SERVICE ENTERPRISE GROUP INCORPORATED

Ralph Izzo was elected chairman and chief executive officer of Public Service Enterprise Group Incorporated (PSEG) in April 2007. He was named as the company's president and chief operating officer and a member of the board of directors of PSEG in October 2006. Previously, Mr. Izzo was president and chief operating officer of Public Service Electric and Gas Company (PSE&G).

Since joining PSE&G in 1992 Mr. Izzo was elected to several executive positions within PSEG's family of companies, including PSE&G senior vice president – utility operations; PSE&G vice president – appliance service; PSEG vice president - corporate planning; and PSE&G vice president - electric ventures. In these capacities he broadened his experience in the areas of general management, strategic planning and finance.

Mr. Izzo is a well-known leader within the utility industry, as well as the public policy arena. He is frequently asked to testify before Congress and speak to organizations on matters pertaining to national energy policy.

Mr. Izzo's career began as a research scientist at the Princeton Plasma Physics Laboratory, performing numerical simulations of fusion energy experiments. He has published or presented over 35 papers on magnetohydrodynamic modeling. Mr. Izzo received his Bachelor of Science and Master of Science degrees in mechanical engineering and his Doctor of Philosophy degree in applied physics from Columbia University.

He also received a Master of Business Administration degree, with a concentration in finance from the Rutgers Graduate School of Management. He is listed in numerous editions of Who's Who and has been the recipient of national fellowships and awards. Mr. Izzo has received honorary degrees from the New Jersey Institute of Technology (Doctor of Science), Thomas Edison State University (Doctor of Humane Letters), Bloomfield College (Doctor of Humane Letters), Rutgers University (Doctor of Humane Letters), and Raritan Valley Community College (Associate of Science).

Mr. Izzo is on the board of directors for the New Jersey Chamber of Commerce, the Edison Electric Institute (EEI), the Nuclear Energy Institute (NEI) and the New Jersey Performing Arts Center. He is also a member of the Board of Trustees of Peddie School and the Princeton University Andlinger Center for Energy and the Environment Advisory Council, as well as a member of the Visiting Committee for the Department of Nuclear Engineering at MIT. Mr. Izzo is a former member of the Columbia University School of Engineering Board of Visitors. In addition, he is a former chair of the Rutgers University Board of Governors and the New Jersey Chamber of Commerce.

SI-SSA-0015-11299

Daniel J. Cregg

EXECUTIVE VICE PRESIDENT AND CHIEF FINANCIAL OFFICER

PUBLIC SERVICE ENTERPRISE GROUP INCORPORATED, PUBLIC SERVICE ELECTRIC AND GAS COMPANY, PSEG POWER LLC AND PSEG SERVICES CORPORATION

Daniel J. Cregg was named executive vice president and chief financial officer for Public Service Enterprise Group Incorporated (PSEG) and its subsidiaries in October 2015.

Mr. Cregg is responsible for all financial functions, including Internal Audit Services, Investor Relations and Corporate Development. Given the array of financial instruments which serve as the primary means of selling wholesale energy to customers, Mr. Cregg also has responsibility for the Risk Management function, which provides independent oversight of the PSEG Power trading organization. In addition to finance, Mr. Cregg is responsible for the Strategy and Planning function. He is a member of PSEG's Executive Officer Group.

Prior to his current position, Mr. Cregg was vice president – finance for PSE&G, a role he assumed in June 2013. In 2006, Mr. Cregg was named vice president – finance for PSEG Power. In that capacity and in previous financial roles for Power, Mr. Cregg held leadership positions related to financial reporting and forecasting, investor communications, financings, rating agency interactions, external reporting, cash forecasting, financial valuations, competitive intelligence, and fundamental market modeling, with critical responsibilities in Power's development and strategic planning activities.

Previously, Mr. Cregg was director of PSEG corporate development. He joined PSEG in 1991 with overall responsibility for tax planning, strategy and compliance for PSEG Energy Holdings, including domestic and international tax structuring work for PSEG Global and PSEG Resources.

Before joining PSEG, Mr. Cregg spent five years with the accounting and consulting firm of Deloitte and Touche, providing consulting services to a wide range of clients with an emphasis on the energy industry.

Mr. Cregg holds a Master of Business Administration degree from the Wharton School of the University of Pennsylvania and is a graduate of Lehigh University, where he received a bachelor's degree in accounting.

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as competition for certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies and changes in customer behaviors, including energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Income from Continuing Operations/Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. Slides A and B at the end of this presentation include a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

PSEG OVERVIEW

PSEG

We make things work for you.

SI-SSA-0015-11306

PSEG's Strategy – delivering results

Our businesses' focus on cost-effective, reliable operations yields strong cash flow

We are funding growth-oriented investments aligned with customer needs and state energy policies

We are enhancing the competitiveness of our environmentally well-positioned generation business

The results of our financial strategy support a credit profile capable of meeting our corporate objectives and providing sustained dividend growth for our shareholders

SI-SSA-0015-11307

Two complementary businesses

Strong asset platform, performing well and positioned for the future

PSEG

PSE&G	PSEG Power LLC
Electric & Gas Delivery and Transmission	**Regional Competitive Generation**
Strategy: Positioned to meet customers' needs as we respond to state and federal energy policy and economic growth objectives	**Strategy:** Fuel diverse fleet is geographically and environmentally well positioned, with investments to enhance competitiveness
Value Proposition: An $11.3 billion infrastructure program – focused on transmission – that is expected to produce double-digit rate base growth through 2016	**Value Proposition:** Provides substantial free cash flow in current environment and poised for price recovery
2013 — Assets $20B; Operating Earnings $612M	2013 — Assets $12B; Operating Earnings $710M

SI-SSA-0015-11308

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2013.
PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT, PSEG LONG ISLAND AND ENERGY HOLDINGS ACTIVITY.
SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS.

Delivering on commitments and pursuing opportunities for growth

Operational Excellence	• Power: Record 2013 output at Linden CCGT and Salem 2; nuclear capacity factor greater than 90% for 9th straight year • PSE&G: Mid-Atlantic Reliability Award (12th consecutive year) • PSEG Long Island: Went "live" on January 1, 2014 • PSEG: Cost-control benefits continue
Financial Strength	• Strong cash flows supported credit rating increases • Pension more than fully funded • Dividend increased
Disciplined Investment	• PSE&G ✓ Transmission capital program execution and growth ✓ Energy Strong infrastructure program underway ✓ Solar 4 All Extension and Solar Loan III programs • Power: Investments to enhance the fleet's competitiveness – 130 MW Nuclear uprate, 150 MW CCGT uprate and efficiency improvement

SI-SSA-0015-11309

Maintaining PSEG 2014 Operating Earnings Guidance

Reflects increased level of utility investment, pension savings and assumes normal weather and unit operations for the rest of year

SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. E = ESTIMATE.

SI-SSA-0015-11310

Operating Earnings Mix

Long term investment program has driven increased earnings contribution from stable, regulated business

Power's diverse fuel mix and dispatch flexibility continues to generate earnings and free cash flow

PSE&G's investment in transmission has diversified its asset base and, coupled with other investments and cost controls, supported compound annual earnings growth of ~18% over 2009 – 2013

SI-SSA-0015-11311

PSEG

PSEG's business profile has been transformed through significant growth in utility capital spending

SI-SSA-0015-11313

Energy Strong Agreement recognizes benefits of system investments

- Energy Strong Agreement reached with all parties
  - ✓ Agreement recognizes the benefits of system investments that prevent or shorten outages
  - ✓ Supports $1.22 billion capital program over several years on reasonable terms: $1 billion recovered through accelerated, rate recovery mechanism
    - $820 million Electric
    - $400 million Gas
  - ✓ Allows PSE&G to earn a 9.75% ROE on the $1 billion recovered on accelerated basis
  - ✓ Requires PSE&G to file a base rate case by November 2017
  - ✓ Approved by the NJBPU in May 2014
- Over 100 New Jersey municipalities supported Energy Strong
- Energy Strong agreement clears path for PSE&G to begin the initial phase of this robust capital program

SI-SSA-0015-11314

PSEG Power – Value-advantaged through asset diversity, fuel flexibility, location and installed environmental controls

SI-SSA-0015-11315

PSEG Power – Our diverse fleet and flexible portfolio allow us to capture opportunities arising from market volatility

SI-SSA-0015-11316

PSEG

*AT THE BEGINNING OF EACH YEAR. **EXCLUDES BGSS.

Balance Sheet Strength

2009 – 2013: Reduced risk profile and transformed business mix

- Invested $8.4 billion in PSE&G
- Improved credit ratings
- Monetized and de-risked Holdings' portfolio

2014 – Forward: Strong cash flows and increasingly regulated business mix fully support:

- PSE&G's $11.3 billion approved investment program through 2018
- Consistent and sustainable dividend growth
- Additional investment capacity to deploy in opportunities beyond those in the current capital plan
- No need to issue equity

SI-SSA-0015-11317

PSEG Annual Dividend – A long history of growth and returning cash to shareholders with a financial position that provides opportunity for consistent and sustained growth

SI-SSA-0015-11318

*INDICATED ANNUAL RATE.
**2014 PAYOUT RATIO REFLECTS THE MIDPOINT OF OPERATING EARNINGS GUIDANCE. E=ESTIMATE

PSEG Q1 2014 Financial Highlights

- Strong Q1 Earnings

✓ Operating earnings of $1.01 vs. $0.85 per share in Q1 2013
✓ Power benefited from higher market pricing, market volatility and increased output
✓ Increased contribution to earnings from PSE&G's investment in transmission

- Maintaining 2014 operating earnings guidance of $2.55 - $2.75 per share

✓ Focused on maintaining operating efficiency and customer reliability
✓ PSE&G expected to grow at double-digit rate in 2014 and provide over 50% of operating earnings

- Executing existing 5-year, $6.8 billion transmission capital spending program on budget and on schedule

- Agreement on PSE&G's Energy Strong infrastructure program to invest $1.22 billion over 2014 – 2018

- Power recognized a liability in the quarter related to its discovery that it incorrectly calculated certain components of its cost-based bids for certain generating units in the PJM energy market, with resulting over-collection of revenues related to its fossil fleet. Power has notified FERC, PJM and the PJM Independent Market Monitor of this issue, which is still under review; we are unable to estimate the ultimate impact or predict any resulting penalties or other costs associated with the matter at this time

- Financial position remains strong

✓ Positive cash from Power and increasing cash flow from PSE&G supports dividend growth and funds capital spending program without the need to issue equity
✓ Increased common dividend to indicative annual rate of $1.48 per share in Q1 2014
✓ Debt as a percentage of capital was 41% at March 31, 2014

SI-SSA-0015-11319

Value Proposition

PSEG is positioned to **expand its investment in PSE&G** projects that provide reasonable, risk-adjusted returns, in ways that meet customer needs and state goals, given **strong cash flow of Power** and growing cash contribution from PSE&G.

PSEG will maintain a **strong financial profile** that provides the opportunity to achieve our growth objectives and maintains our **track record** of **returning cash to shareholders**.

SI-SSA-0015-11329

PSEG

E = ESTIMATE

Energy Strong Agreement supports customers' needs in the aftermath of Superstorm Sandy

- Settled with NJBPU Staff and all other parties in May 2014 for $1.22 billion; approved by the NJBPU in May 2014
- Program addresses system resiliency and hardening by:
  - ✓ $620 million to raise, relocate or protect 29 switching and substations that were damaged by water in recent storms
  - ✓ $350 million to replace and modernize 250 miles of low-pressure, cast iron gas mains in or near flood areas
  - ✓ $100 million to create redundancy in the electric system, reducing outages when damage occurs
  - ✓ $100 million to deploy smart grid technologies to better monitor system operations to increase our ability to more swiftly deploy repair teams
  - ✓ $50 million to protect five natural gas metering stations and a liquefied natural gas station affected by Sandy or located in flood zones

SI-SSA-0015-11330

Over 70% of PSE&G's $11.3 billion investment program will be recovered through contemporaneous mechanisms

2014-2018E PSE&G Capital Spending by Recovery Method

$11.3 Billion

Clause Recovery Mechanisms

ENERGY STRONG BILL IMPACTS ARE BASED UPON SETTLEMENT.

SI-SSA-0015-11332

PSE&G TRANSMISSION

PSEG

We make things work for you.

SI-SSA-0015-11333

Transmission has delivered, and has grown to represent ~36% of rate base

Transmission represented ~36% of rate base at YE 2013 up from ~15% at YE 2009

SI-SSA-0015-11334

PSE&G's existing major transmission

investment program remains on schedule and on budget

Major Transmission Projects

	Approved ROE	Inclusion of CWIP in Rate Base	100% Recovery of Costs Due to Abandonment	Project Estimate Up To ($ Millions)	Expected In-service Date
Susquehanna-Roseland	12.93%	✓	✓	$790	June 2014 / June 2015
Northeast Grid Reliability	11.93%	✓	✓	$907	June 2015
North Central Reliability	11.68%	✓	✓	$390	June 2014
Burlington–Camden 230kV	11.68%	✓	✓	$399	Completed
Mickleton–Gloucester–Camden 230kV	11.68%	✓	✓	$435	June 2015

SI-SSA-0015-11335

Susquehanna-Roseland consists of constructing 150 miles of 500kV circuit (46 miles in NJ) with two new 500kV GIS switching stations at Roseland and Hopatcong

Project Estimate Up To*	Through Year-end 2013	Expected In-service Date
$790M	$661M	June 2014 / June 2015

- PJM RTEP project b0489
- ROE of 12.93% (including 1.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Improves reliability and reduces congestion

Project Status: Major permitting & siting complete, outside plant construction in progress, inside plant construction is complete and commissioning is in progress

SI-SSA-0015-11336

PSEG

*PROJECT IS SHARED WITH PPL. PROJECT ESTIMATE REPRESENTS PSE&G'S CONSTRUCTION RESPONSIBILITY FOR THE NJ PORTION.

Northeast Grid Reliability consists of upgrading approximately 50 overhead circuit miles of 138kV transmission line to 230kV, constructing ~18 miles of new underground 230kV lines, and converting/upgrading 12 existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$907M	$228M	June 2015

- PJM RTEP project b1304
- ROE of 11.93% (including 0.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment
- Project estimate has increased ~$12M associated with hardening related scope changes as a result of Superstorm Sandy

Customer Benefit: Improves reliability and increases transfer capability

Project Status: Nearing completion of engineering/design and licensing/permitting phase. Outside and inside plant construction are in progress

SI-SSA-0015-11337

North Central Reliability consists of upgrading 55 circuit miles of 138kV transmission line to 230kV, and converting six existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$390M	$349M	June 2014

- PJM RTEP project b1154
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Improves power quality and increases transfer capability

Project Status: Major permitting & siting complete, outside and inside plant construction is essentially complete, commissioning is in progress

SI-SSA-0015-11338

Burlington-Camden 230kV consists of upgrading 37 circuit miles (30 miles of overhead and 7 miles of underground) of 138kV transmission line to 230kV, converting the existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$399M	$301M	Completed

- PJM RTEP project b1156
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Addresses voltage reliability and increases transfer capability

Project Status: In-service April 2014

SI-SSA-0015-11339

Mickleton-Gloucester-Camden 230kV

consists of upgrading 10 circuit miles of overhead transmission, installing ~16 circuit miles of new 230kV underground, 10 circuit miles of new 230kV overhead, and modifications/upgrades at five existing stations

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$435M	$122M	June 2015

- PJM RTEP project b1398
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Addresses thermal reliability and increases transfer capability

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-11340

Bergen-Linden Corridor is a recently approved project which will provide a double-circuit 345kV line to maintain reliability

Project Estimate Up To	Through Year-end 2013	Expected Completion Date
$1,200M	-	June 2018

- PJM RTEP project b2436
- 30 miles of underground cable
  - New ~ 23 miles
  - Reconductor (Upgrade of 138 to 345) ~7 miles
- 13 miles of double circuit overhead conductor (replacing double circuit 138 with double circuit 345)
- 11 station upgrades to 345kV

Customer Benefit: Addresses thermal and short-circuit reliability

Project Status: Engineering

SI-SSA-0015-11341

Planned transmission spend of $6.8 billion

is driven by PJM reliability projects, 69kV conversions and life-cycle replacement projects

PSEG LONG ISLAND

PSEG

We make things work for you.

SI-SSA-0015-11346

PSEG was selected to operate Long Island Power Authority's (LIPA) electric transmission and distribution system for 12 years starting in 2014

- Pursuant to the Operating Services Agreement (OSA), all expenses and capital costs to operate the system are pre-funded by LIPA and passed through to their customers
- Compensation consists of a fixed fee and an incentive fee
  - Fixed compensation fee for 2014 with scheduled increases in 2015 and 2016
  - Starting in 2015 PSEG Energy Resources and Trading (ER&T) begins managing fuel/energy contracts
  - PSEG Long Island expected to contribute $0.03 to operating earnings in 2014 increasing to $0.07 per share in 2016 including contribution at ER&T
- Potential for an 8-year extension of the OSA

SI-SSA-0015-11347

PSEG Long Island commenced operations

on January 1, 2014

Key elements of Operating Services Agreement

Increased PSEG scope and control	Use of PSEG brand as PSEG Long Island	3-Year rate freeze (2013-2015)
Performance metrics	NY Department of Public Service oversight	Potential for "Utility 2.0" investment

Early performance

Successful transition to PSEG Long Island	Stakeholder communication	Winter storm response

PSEG

We make things work for you.

SI-SSA-0015-11349

PSEG Power strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-11350

Agenda

- Delivering Value
- Fleet Advantage, Location, Flexibility and Fuel Diversity
- Nuclear Operation
- Fossil Operation
- Financial Performance
- Expansion Opportunities
- Regulatory
- Engaged Workforce

SI-SSA-0015-11351

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus Fleet Diversity/Efficiency Focus	Financial/Economic Focus	Regulatory Focus
• Nuclear units continue to achieve strong operational results, operating at over 90% capacity factors for the 9th consecutive year • Fleet diversity across the dispatch curve and fuel types provide flexibility to meet changing conditions • Linden CCGT and Salem 2 nuclear unit achieved record output in 2013	• "Getting the most out of existing fleet" • Locational advantage • O&M control programs have delivered a CAGR of 1.6% between 2009 and 2014 • Sites offer competitive advantage for expansion	• Strong regulatory performance • Industry leadership in the changing business environment

SI-SSA-0015-11352

PSEG Power Delivering on priorities

Operational Excellence	• Maximize value of existing generating plants through implementation of the Operational Excellence Model (OEM) • Workforce engagement and development	• OEM implemented and achieving measures • Resource sharing program initiated
Financial Strength	• Deliver on Business Plan Commitments • Maintain competitive markets and improve constituent communication on issues important to Power	• Exceeded earnings guidance in 2013 • Ongoing effort in key markets showing success • Successful court outcome against subsidized generation
Disciplined Investment	• Successfully complete the Advanced Gas Path (AGP) uprates • Seek new opportunities in target markets (PJM, ISO-NE, NYISO) • Develop our renewables business (solar) • Maintain new nuclear option by successfully managing the Early Site Permit (ESP) process	• Accelerated schedule for AGP to maximize opportunity • LIPA contract for fuel and generation dispatch • Completed 19 MW solar project, 4 MW project under construction, established robust pipeline • Nuclear ESP is expected in 2015

SI-SSA-0015-11353

PSEG Power met 2013 challenges

Storm and weather challenges	+	Market challenges	=	Value delivered
• SuperStorm Sandy impacted our generating sites • Cold and hot weather extremes created challenging operating environment, but also presented opportunities		• Unit outages and planned transmission outages resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by economy		• Optimized unit dispatch across fleet during storm recovery • Expedited return from storm outages, restored margin opportunities • High availability when needed • Achieved fuel cost savings • Captured value through coal/gas switching, unit flexibility • Coal & oil sales optimized inventory • Flexibility of portfolio captured real-time basis opportunities

SI-SSA-0015-11354

PSEG Power exceeded 2013's earnings guidance

OPERATING EARNINGS FOR PSEG POWER IN 2013; SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. *ASSETS TRANSFERRED TO POWER AT YEAR-END 2013.

SI-SSA-0015-11355

PSEG Power has generating assets

in three competitive markets

- Assets near loads
- Low cost portfolio
- Fuel flexibility with gas cost advantage
- Poised to benefit from volatility in real-time markets
- Fleet will maintain diversity and efficiency after HEDD
- Most sites suitable for expansion

SI-SSA-0015-11356

PSEG Power will maintain diversity and efficiency after a realignment of the fleet due to HEDD

Objective 2013 → 2017

- Maintain fuel diversity
- Maintain load-serving capability
- Maintain low cost structure
- Environmental improvement
- Peach Bottom (PB) uprate
- Advanced Gas Path (AGP)
- Kalaeloa and Solar transfer adds ~200MW of capacity

Fuel Diversity

Energy Produced

SI-SSA-0015-11357

Power's PJM assets along the dispatch curve reduce the risk of serving full requirement load contracts and can take advantage of volatile market conditions

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel flexibility for >60% of fleet

SI-SSA-0015-11358

PSEG Power Nuclear is a critical element of our success

Hope Creek	Salem Units 1 and 2	Peach Bottom Units 2 and 3

• Operated by PSEG Nuclear
• PSEG Ownership: 100%
• Technology: Boiling Water Reactor
• Total Capacity: 1,178 MW
• Owned Capacity: 1,178 MW
• License Expiration: 2046
• Next Refueling
  • Spring 2015
	• Operated by PSEG Nuclear
	• PSEG Ownership: 57%
	• Technology: Pressurized Water Reactor
	• Total Capacity: 2,365 MW
	• Owned Capacity: 1,358 MW
	• License Expiration: 2036 and 2040
	• Next Refueling
	  • Unit 1 -- Fall 2014
	  • Unit 2 – Spring 2014
		• Operated by Exelon
		• PSEG Ownership: 50%
		• Technology: Boiling Water Reactor
		• Total Capacity: 2,251 MW
		• Owned Capacity: 1,125 MW
		• License Expiration: 2033 and 2034
		• Next Refueling
		  • Unit 2 – Fall 2014
		  • Unit 3 – Fall 2015
		• Uprate: 130 MW in 2015/2016

SI-SSA-0015-11359

PSEG Power Nuclear is core to the fleet and has competitive advantages

- Continued strong nuclear operations: nine consecutive years of >90% capacity factor
- Significant earnings contributor
- Top quartile of cost performance/MWh
- One third new staff, recruitment of the best new and experienced talent, and attractive training program
- Fukushima action plan in response to NRC staff review
  - ✓ FLEX* plan submitted with implementation starting with Fall outage
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

*STRATEGY KNOWN AS THE "DIVERSE AND FLEXIBLE MITIGATION CAPABILITY" OR FLEX, ADDRESSES RECOMMENDATIONS OF THE NUCLEAR REGULATORY COMMISSION'S FUKUSHIMA TASK FORCE.

SI-SSA-0015-11360

Power's nuclear fleet is well positioned

with significantly lower-than-average US cost structure

*SOURCE: ELECTRIC UTILITY COST GROUP
** SOURCE: PSEG NUCLEAR

SI-SSA-0015-11361

PSEG Power's Fossil Fleet Performance

has shown improvement

- Fossil Capacity Factor rebounded with market
- Peaking Units maintain high start success

- Coal EFORp improving
- CC EFORp less than 1% in 2013
- Consistent recipient of EFORp payments

SI-SSA-0015-11362

PSEG

*LM6000 AND 7EA UNITS

PSEG Power improvements achieved in combined cycle fleet efficiency

Combined Cycle Operating Heat Rate

Actions Taken to Create Value

- Operational Excellence Model
- Training programs
- Unit testing initiative
- Outage work to restore efficiency
- Second gas line at BEC

- Heat rate improvement 2008-2013 translates to meaningful fuel savings at current market prices

- Advanced Gas Path (AGP) investments 2014 through 2018 to provide additional fuel savings

SI-SSA-0015-11363

Investing to expand CCGT capacity and improve efficiency

PSEG Power - CCGT Uprate Project

- Expand Power's CCGT fleet, one of the largest gas-fired portfolios in PJM, with incremental base and peaking MWs
- Retrofit Bergen, Linden and BEC with Advanced Gas Path (AGP) components at cost of ~$120M over 2014 - 2018

AGP Project Benefits

- ✓ CCGT capacity uprates of ~150 MW:
  - Linden (63 MW – Completed)
  - Bergen (31 MW – 2015)
  - BEC (58 MW – 2017-2018)
- ✓ Increases Efficiency - Combined Cycle (CC) heat rate improvement ~ 1.2%
- ✓ Upgrades technology and extends maintenance outage cycles

SI-SSA-0015-11364

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing
- Cost control through testing coordination program

SI-SSA-0015-11365

PSEG Power's capital expenditures for environmental requirements are essentially complete*

*BASED ON CURRENTLY KNOWN AND QUANTIFIABLE ENVIRONMENTAL REQUIREMENTS. E=ESTIMATE

SI-SSA-0015-11366

PSEG Power is well-positioned for growth when market conditions warrant

Available locations		Our sites possess infrastructure advantages
• Bergen • Burlington • Essex • Edison • Kearny	• Hudson • Linden • Sewaren • Bridgeport Harbor	• Electric Transmission Interconnections • Access to Gas Pipelines • Space • Emissions

SI-SSA-0015-11367

PSEG Solar Source owns 92 MW of operating solar facilities

Hackettstown (Mars)
New Jersey (2 MW)

SI-SSA-0015-11371

PSEG

We make things work for you.

Portfolio Management Strategy

Optimize value of assets

Manage risk vs. reward

Directly engage with regulatory agencies

SI-SSA-0015-11372

PSEG Power: Enjoys real and sustainable advantages in the merchant generation space

Market Review

- Gas, Power, Spark Spreads
- Regulatory construct

PSEG's Competitive Advantage

- Fuel flexibility
- Heat Rate diversity
- Access to Marcellus Shale gas
- Asset flexibility

PSEG's Sustainable Advantage

- Positive cash-flow hedging into the long-term
- Robust capacity market pricing in most concentrated load pocket in US
- Long-term access to discounted Marcellus gas

SI-SSA-0015-11373

Market Review: Prices have stabilized

- Energy and gas prices appear to have stabilized
- Environmental restrictions may tighten market
- Insufficient gas infrastructure continues to place upward pressure on fuel prices during seasonal peaks

SI-SSA-0015-11374

F=FORWARDS AS OF 12/31/2013

Market Review: New generation in PJM not keeping pace with coal retirements

Cumulative Generation Retirements*

Forecast Reserve Margin (PJM January 2014)

- PJM forecasts a declining Reserve Margin through 2018, which may improve forward prices
- Brattle estimates energy prices could rise at least $3-4/MWh from today's prices

SI-SSA-0015-11375

PSEG

*PJM AS OF FEBRUARY 20, 2014
SOURCE OF CHART DATA: PJM

Market Review: Regulatory framework showing signs of improvement

	ISSUE / POLICY	REGULATORY GAINS
PJM	SUBSIDIZED GENERATION (NJ and MD)	• Comprehensively defeated in federal court (appeals currently pending)
	DEMAND RESPONSE RULES	• PJM and ISO-NE enacted stricter rules of eligibility and deployment
	ENERGY PRICE FORMATION	• Concerted drive to improve price formation for generation and ancillary services • Waiver of price caps during extreme market conditions
NYISO	TRANSMISSION	• Significant progress made to relieve bottling of upstate generation
ISO-NE	CAPACITY	• Improvement in price formation to better reflect tight supply conditions • Implementation of sloping demand curve in Forward Capacity Auction (FCA) 9
	ENERGY	• Demand response required to participate in Day Ahead markets
FEDERAL	GAS to ELECTRIC	• Better coordination between pipelines and ISO's will promote efficiency
	ENVIRONMENTAL REGULATIONS	• HEDD, HAPS/MACT may lead to tightening of supply in 2015+ timeframe

SI-SSA-0015-11376

Competitive Advantage: Heat Rate Diversity & Flexible Dispatch

SI-SSA-0015-11377

Competitive Advantage: PSEG's extensive gas asset portfolio gives unparalleled access to Marcellus Shale gas

SI-SSA-0015-11378

Competitive Advantage: ~25% of Power's gas for generation comes from Marcellus

- Our combined cycle and peaking assets have been able to take advantage of locational gas price volatility driven by production and logistical constraints
- Lower cost shale supply provides additional savings during periods of lower residential gas demand

SI-SSA-0015-11379

Competitive Advantage: Locational advantage from short term basis volatility

PS Zone Annual Basis to PJM-W

PS Zone Day Ahead On Peak Monthly Basis to PJM-W

- Annual basis benefits baseload units
- Intermediate units flexible to seasonal opportunities
- Combined Cycle and Peaking units positioned to optimize daily and hourly volatility

PS Zone Real Time On Peak Hourly Basis to PJM-W

SI-SSA-0015-11380

ANNUAL FORWARD BASIS TO PJM-WEST AS OF 12/31/2013.

Competitive Advantage: Trading & Asset Flexibility

PSEG Zone LMP's on January 7, 2014

On Peak Basis to PJM-W on January 7, 2014

Hourly Generation and Load on January 7, 2014

- High gas market at $58/MMbtu setting power prices in PS zone on 1/7/14
- Higher basis to generation
- Base load and load following generation sufficient to cover load and hedge obligations
- Additional steam and peaking generation available above day ahead commitment to gain value from real time market
- Fuel flexibility with coal/gas/oil optionality among available units

SI-SSA-0015-11381

Competitive Advantage: Trading & Asset Flexibility

PSEG Zone LMP's on July 18, 2013

On Peak Basis to PJM-W on July 18, 2013

Hourly Generation and Load on July 18, 2013

- High demand in constrained northern NJ
- Base load and load following generation sufficient to cover load and hedge obligations
- Additional generation available above obligations to gain value from real time market spikes
- Gas advantage in procuring low cost shale supply to capture savings

SI-SSA-0015-11382

Sustainable Advantage: BGS Auction provides excellent opportunity to forward hedge our generation

BGS sales account for about a quarter of our forward portfolio of hedges

SI-SSA-0015-11383

PSEG

$/MWH; BGS PRICES REFLECT PSE&G ZONE; RESULTS FOR 2012-2014 WILL BE THE NEW BLENDED PRICES BEGINNING JUNE 1, 2014.

Sustainable Advantage: Hedging strategy designed to protect gross margin while leveraging the portfolio

		Apr-Dec 2014	2015	2016
Base Load (Nuclear and Base Load Coal)	Volume TWh	26	35	36
	% Hedged	100%	75-80%	35-40%
	Price $/MWh	$49	$51	$51
Intermediate Coal, Combined Cycle, Peaking	Volume TWh	18	21	19
	% Hedged	30-35%	0%	0%
	Price $/MWh	$49	$51	$51
Total	Volume TWh	42-44	54-56	54-56
	% Hedged	70-75%	50-55%	25-30%
	Price $/MWh	$49	$51	$51

Forecast output: Increased to reflect improvement in economic dispatch

SI-SSA-0015-11384

PSEG

HEDGE PERCENTAGES AND PRICES AS OF MARCH 31, 2014. REVENUES OF FULL REQUIREMENT LOAD DEALS BASED ON CONTRACT PRICE, INCLUDING RENEWABLE ENERGY CREDITS, ANCILLARY, AND TRANSMISSION COMPONENTS BUT EXCLUDING CAPACITY. HEDGES INCLUDE POSITIONS WITH MTM ACCOUNTING TREATMENT AND OPTIONS. EXCLUDES SOLAR AND KALAELOA.

Sustainable Advantage: PJM's capacity market continues to recognize locational value

RPM Auction Results					
($/MW-day)	2013 / 2014*	2014 / 2015*	2015 / 2016*	2016 / 2017*	2017 / 2018

PSEG

*PSEG POWER'S AVERAGE PRICES AND CLEARED CAPACITY (MW) REFLECT BASE AND INCREMENTAL RPM AUCTION RESULTS. DELIVERY YEAR RUNS FROM JUNE 1 TO MAY 31 OF THE NEXT CALENDAR YEAR.

Sustainable Advantage: Fuel advantage continues throughout the curve

Forward curve shows that Marcellus shale supply averages over $1.50/MMbtu discount year-round through 2018

SI-SSA-0015-11386

2013 AVERAGE 6/1/13-12/31/13; F= FORWARDS AS OF 12/31/13. LEIDY BASIS FROM ICE/BROKER QUOTES

PSEG Power's Value Proposition

- Well-positioned fleet of merchant generating assets concentrated in PJM market
- Advantaged by low cost structure, fuel diversity and dispatch flexibility
- Low environmental capital requirements
- Capacity uprates to enhance value of nuclear and combined cycle stations
- Consistent hedging strategy recognizes asset flexibility
- Continue to meet commitments and to provide free cash flow

SI-SSA-0015-11387

PSEG FINANCIAL REVIEW & OUTLOOK

PSEG

We make things work for you.

SI-SSA-0015-11388

Strong financial position to support our business initiatives

2013 Financial Position

- ✓ Exceeded upwardly revised 2013 earnings guidance
- ✓ Pension fully funded
- ✓ Strong balance sheet and upgraded credit ratings

2014 and Beyond

- ✓ Continued positive earnings trend in 2014
- ✓ Controlled O&M growth
- ✓ Balance Sheet and Cash Flow support investments without equity issuance
- ✓ Growth in PSE&G investments with contemporaneous returns
- ✓ Diversified Power assets with a balanced hedge profile
- ✓ Growth in PSE&G Cash from Operations, with continued significant Cash from Operations/FFO at Power
- ✓ Increased Dividend by $0.04 to indicative annual rate of $1.48 for 2014
- ✓ Opportunity for consistent and sustainable dividend growth

SI-SSA-0015-11389

Exceeded upwardly revised guidance

in both businesses

SI-SSA-0015-11394

PSE&G's Capital Program drives double-digit growth in rate base and earnings over the 2013 to 2016 period

SI-SSA-0015-11395

PSE&G's Cash from Operations and Power's Free Cash Flow support growth investments without the need for new equity

PSEG Sources and Uses

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$500M FROM 2014-2016
(2) OTHER CASH FLOW INCLUDES PSEG LI, HOLDINGS NET CASH FLOW, CASH, AND SHORT TERM DEBT
E = ESTIMATE

SI-SSA-0015-11396

Power's key credit metric supports incremental investment opportunities

- Increased contribution to earnings from the more stable regulated business allows us to reset Power's FFO/Debt threshold from 35% to 30%, providing additional financial flexibility
- Power's annual Cash From Operations and Funds From Operations each average ~$1.1B over the 2014 to 2016 period supported by:
  - Capacity Revenues
  - Hedged Generation
  - O&M Control
- Financial strength can be used to pursue future growth in both businesses beyond current plans

SI-SSA-0015-11397

Pension: Our Long Term Asset allocation strategy resulted in a ~17% increase in pension assets during 2013

PBO Funded Ratio	83%			Fully Funded Pension →	106%

SI-SSA-0015-11398

Our Pension Management is expected to result in pension income in 2014 and over the planning horizon

Forward Looking Statement

Certain of the matters discussed in this communication about us and our subsidiaries future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q an d Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to sufficiently obtain coverage or recover proceeds of insurance on such matters,
- increases in competition in energy supply markets as well as competition for certain rate-based transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology and customer usage patterns.

All of the forward-looking statements made in this communication are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this communication apply only as of the date of this communication. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this communication are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-11422

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. Slides A and B at the end of this presentation include a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

PSE&G's Energy Strong Capital Program addresses new reality

- New ten-year, $3.9 Billion Infrastructure Program filed February 2013 with the NJBPU to strengthen PSE&G's distribution system focusing on hardening and resiliency
- Plan to invest an additional $1.5 Billion in transmission grid over the ten-year period
- The 10-year Energy Strong proposal includes:
  - ✓ Protecting 40 utility installations from severe storms (**$1.7 Billion**)
  - ✓ Making the electric grid smarter and easier to repair (**$460 Million**)
  - ✓ Adding backup distribution lines and system redundancies (**$550 Million**)
  - ✓ Undergrounding 20 miles of overhead distribution lines (**$60 Million**)
  - ✓ Modernizing the gas distribution system (**$1.2 Billion**)

- PSE&G is seeking BPU approval to implement the first five years of the Energy Strong proposal, an investment of $2.6 Billion
- The proposed filing creates ~5,800 jobs and stimulates economic activity for New Jersey businesses

SI-SSA-0015-11431

68 local NJ towns and 6 counties support

- 68 municipalities and six counties (Bergen, Hudson, Mercer, Passaic, Somerset and Union) have approved resolutions in support of Energy Strong, PSE&G's infrastructure proposal to improve and fortify its electric and gas distribution systems
- The Energy Strong proposal is currently being evaluated by the NJ Board of Public Utilities
- Public hearings are scheduled for September and October 2013

SI-SSA-0015-11432

SI-SSA-0015-11435

PSEG First Half 2013 - Highlights

Maintaining 2013 operating earnings guidance of $2.25 - $2.50 per share

- Strong earnings: First half 2013 earnings of $1.33 per share vs. $1.28 in year-ago period
  - Power benefitting from higher capacity prices and asset location
    - PSE&G seeing results from increased investment in transmission
      - O&M under control {Continuing control of O&M supporting results}

- Capital investment on schedule
  - PSE&G received approval to invest $446 million in extensions of Solar 4 All and Solar Loan programs
    - PSE&G's existing $3.4 billion Transmission investment program remains on schedule
      - Hearings scheduled for Energy Strong, PSE&G's $2.6 billion, 5-year capital infrastructure program

- Financial position remains strong
  - S&P credit rating upgrade across Enterprise, Power and PSE&G
    - Debt represented 41% of capital at June 30, 2013
      - Dividend increased 1.4% to $1.44 per share, the 9th increase in the last ten years

Full year 2013 operating earnings expected to be at the upper end of guidance, assuming normal weather and unit operations

SI-SSA-0015-11436

2013 Operating Earnings*

Investment in the regulated business has changed the earnings mix

Our 2009-2013 investment focus has brought us to a 50/50 mix for 2013

PSE&G's 2013-2017 Energy Strong Program and ongoing transmission investments will support continued growth in PSE&G's earnings

- 100% recovery of prudently incurred costs due to abandonment

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-11458

Burlington-Camden 230kV consists of upgrading 37 circuit miles (30 miles of overhead and 7 miles of underground) of 138kV transmission line to 230kV, converting the existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2012	2013-2014E	Expected In-service Date
$399M	$169M	$230M	June 2014

- PJM RTEP project b1156
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-11459

Mickleton-Gloucester-Camden 230kV

consists of upgrading 10 circuit miles of overhead transmission, installing ~16 circuit miles of new 230kV underground, 10 circuit miles of new 230kV overhead, and modifications/upgrades at five existing stations

Project Estimate Up To	Through Year-end 2012	2013-2015E	Expected In-service Date
$435M	$24M	$411M	June 2015

- PJM RTEP project b1398
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-11460

State policy imperatives have been redefined by Superstorm Sandy

Storm report issued by NJBPU focusing on:

- Preparedness Efforts
- Communications
- Restoration and Response
- Post Event Analysis
- Underlying Infrastructure Issues

Storm Deferral Filings:

- On December 19, 2012 the Board granted a PSE&G request for general authority to defer storm restoration costs, thereby making such costs potentially recoverable in future rate filings
- On February 20, 2013, at its open public meeting, the Board voted that the recovery of all such storm restoration costs would be reviewed in a generic (multi-utility) proceeding

SI-SSA-0015-11461

We have also responded with a plan focused on infrastructure hardening and resiliency

- PSE&G filed a petition on February 20, 2013, with the NJBPU seeking approval for the Energy Strong Program (ES) which will harden electric and gas distribution infrastructure and increase the resiliency of the electric distribution system
- The filing complements the NJBPU's recently issued order requiring all Electric Distribution Companies to take specific actions to improve preparedness and response to major storms
- ES program represents a potential investment of approximately $3.9 billion over the next 10 years. PSE&G has asked for initial funding approval of $2.6 billion during the first five years
- Additional Transmission investment of approximately $1.5 billion would be included in future FERC Formula Rate filings

SI-SSA-0015-11462

Lower commodity costs and expiration of certain transition charges are expected to offset the impact to customer bills

*FOR THE TYPICAL COMBINED ELECTRIC & GAS RESIDENTIAL CUSTOMER, 2018 BGS (INCLUDING TRANSMISSION) / BGSS, AS WELL AS SBC, WNC, RAC AND DISTRIBUTION RATES HELD CONSTANT AS OF THE ES FILING DATE (FEB-2013). RATES RELATED TO ELECTRIC RESTRUCTURING: SECURITIZATION (STC), NON-UTILITY GENERATION CHARGE (NGC), & TRANSITIONAL ENERGY FACILITIES ASSESSMENT (TEFA), ARE REDUCED TO ZERO BY 2018. THE RGGI RECOVERY CHARGE (RRC), SOLAR PILOT RECOVERY CHARGE (SPRC), AND CAPITAL ECONOMIC STIMULUS INFRASTRUCTURE INVESTMENT PROGRAM (CIP I) AND THE CIP EXTENSION (CIP II) BILL IMPACTS ARE INCLUDED IN THEIR RESPECTIVE GAS & ELECTRIC BARS AND FORECASTED BASED UPON MAR-2013 ESTIMATES. THE BILL IMPACTS FOR ES PROGRAM BASED UPON THE PROPOSED FILING AND S4AEXT/SL3 IMPACTS ARE BASED UPON THE BPU APPROVED PROGRAM.

SI-SSA-0015-11463

LONG ISLAND POWER AUTHORITY

SI-SSA-0015-11465

PSEG

LIPA T&D management contract

In December 2011, the Long Island Power Authority (LIPA) selected PSEG to manage its electric transmission and distribution system for 10 years starting in 2014

- Reasons for selecting PSEG included:
- Proven technical capabilities and track record of top quartile customer service and reliability
  - ✓ Commitment to cost control and investment optimization
  - ✓ Corporate culture of transparency and data-driven decision making
  - ✓ Transition activities on-track – successfully achieving all milestones through February 2013

- Evaluating impact of Superstorm Sandy and recent LIPA management changes on the overall schedule and transition

Successful management of the LIPA transmission and distribution system may lead to additional growth opportunities

PSEG POWER

PSEG

We make things work for you.

SI-SSA-0015-11474

PSEG Power strategy

Focused on safety performance, unit reliability, competitive cost structure with control of maintenance costs, achieving operational excellence, and supporting market rules to maintain a level playing field

SI-SSA-0015-11475

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus

Fleet Diversity/Efficiency Focus

- Fleet diversity across the dispatch curve and fuel types provides flexibility
- Nuclear units continue to achieve strong operational results and are well positioned for the future
- Peach Bottom steam path retrofit completed
- Fossil fleet is suited for market dynamics
- CCGT achieved record output in 2012
- Installed 400 MW new peaking capacity in 2012

Financial/Economic Focus

- O&M cost control programs have delivered
- Sites offering competitive advantage suited for expansion

Regulatory Focus

- Strong regulatory performance
- Industry leadership in the changing regulatory environment

SI-SSA-0015-11476

PSEG Power delivered in 2012

Storm and weather challenges	Market challenges	Value delivered
• Superstorm Sandy impacted our generating sites • Warm winter put pressure on demand and pricing for both electricity and gas • Hot summer weather created challenging operating environment	• Unit outages and transmission outages resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by weather and economy	• Cost control • Lower dispatch and fuel cost • Captured value through coal/gas switching, unit flexibility • Improved unit availability • Coal & oil sales optimized inventory • Expedited return from storm outages, restored margin opportunities • Optimized unit dispatch across fleet during storm recovery

SI-SSA-0015-11477

PSEG Power has generating assets

in three competitive markets

- Low cost portfolio
- Fuel flexibility
- Assets near loads
- Poised to benefit in real time markets
- Fleet will maintain diversity and efficiency in 2016 after HEDD
- Most sites suitable for expansion

SI-SSA-0015-11478

PSEG Power Nuclear fleet is a critical element of success

Hope Creek	Salem Units 1 and 2	Peach Bottom Units 2 and 3

• Operated by PSEG Nuclear
• PSEG Ownership: 100%
• Technology: Boiling Water Reactor
• Total Capacity: 1,174 MW
• Owned Capacity: 1,174 MW
• License Expiration: 2046
• Next Refueling
  • Fall 2013
	• Operated by PSEG Nuclear
	• PSEG Ownership: 57%, Exelon – 43%
	• Technology: Pressurized Water Reactor
	• Total Capacity: 2,326 MW
	• Owned Capacity: 1,335 MW
	• License Expiration: 2036 and 2040
	• Next Refueling
	  • Unit 1 – Fall 2014
	  • Unit 2 – Spring 2014
		• Operated by Exelon
		• PSEG Ownership: 50%
		• Technology: Boiling Water Reactor
		• Total Capacity: 2,245 MW
		• Owned Capacity: 1,123 MW
		• License Expiration: 2033 and 2034
		• Next Refueling
		  • Unit 2 – Fall 2014
		  • Unit 3 – Fall 2013

SI-SSA-0015-11479

PSEG Power Nuclear is core to the fleet and has competitive advantages

- Continued strong nuclear operations – eight consecutive years of >90% capacity factor
- Significant earnings contributor
- Top quartile of cost performance/MWh
- One third new staff, recruitment of the best new and experienced talent and attractive training program
- Developing Fukushima action plan in response to NRC staff review
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

SI-SSA-0015-11480

PSEG Power's Fossil Fleet availability has shown steady improvement

EFORd improvement resulted in over 200 MW of additional capacity available

EFORp improvement and availability at peak demand times has resulted in performance payments in each of the last four years

SI-SSA-0015-11481

PSEG Power improvements achieved in combined cycle fleet efficiency

Actions Taken to Create Value	
• Heat rate improvement program • Operational Excellence Model	• Training programs • Unit testing initiative • Outage work to restore efficiency

SI-SSA-0015-11482

Superstorm Sandy affected the fleet;

when the load returned, Power was ready

SI-SSA-0015-11483

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- Power is well positioned for HAPS

SI-SSA-0015-11484

PSEG Power's focus on costs has resulted in moderate increase in O&M for six years

Cost control actions taken:	
• Coal assessment • CCGT material condition assessment • Contract renegotiation	• Material management • Nuclear maintenance productivity study • Nuclear outage efficiency initiative

SI-SSA-0015-11485

PSEG

* INCLUDES IMPACTS FROM STORM RECOVERY COSTS AND POTENTIAL RELATED INSURANCE PROCEEDS.
E = ESTIMATE.

PSEG Power is well positioned for growth in the fleet when market conditions dictate

Available locations		Our sites possess infrastructure advantages
• Bergen • Burlington • Essex • Edison • Kearny	• Hudson • Linden • Sewaren • Bridgeport Harbor	• Electric Interconnection • Gas Pipeline Access • Sites/Space • Emissions

SI-SSA-0015-11486

PSEG Power will maintain diversity and efficiency after a realignment of the fleet in 2016

Objective
2012 → 2016E

- Maintain fuel diversity
- Maintain load serving capability
- Improve fleet heat rate by 6%
- Maintain low cost structure
- Environmental improvement

Fuel Diversity
13,226 MW 11,200 MW

Energy Produced
52.5 TWh 52-54 TWh

SI-SSA-0015-11487

PSEG Power is an established leader

within the industry

INPO

- Board of Directors
- National Nuclear Accrediting Board

SI-SSA-0015-11488

PSEG Power has added value with focus on operational excellence

2008		2012
3,622	Nuclear capacity (MW)	3,632
92%	Nuclear equivalent availability	93%
29.3	Nuclear generation (TWhrs)	29.8
55	Total generation (TWhrs)	53
3,157	CCGT capacity (MW)	3,176
12.1	CCGT generation (TWhrs)	16.2
8.9%	Fossil EFORd	6.3%*
87%	Fossil equivalent availability	90%
63	SO_2 (Ktons)	9
16	NO_x (Ktons)	10

SI-SSA-0015-11489

PSEG

* EXCLUDES SANDY IMPACT.

PSEG POWER
ER&T

SI-SSA-0015-11490

PSEG

We make things work for you.

PSEG Power
ER&T strategy

Focused on optimizing the value of its asset portfolio and providing outstanding service to our customers, while prudently managing risk

SI-SSA-0015-11491

Diversified assets and flexible dispatch

High performing, base load nuclear assets	3,632 MW
Fuel advantaged, base load coal plants in PA	776 MW
Flexible combined cycle fleet	3,176 MW
Well leveraged intermediate & peaking assets	5,642 MW

Integrated trading and dispatch capability around fleet

SI-SSA-0015-11492

Fleet capacity has been advanced by:

Improved Heat Rate capability

Trading acumen to execute fuel switching opportunities

Reduced O&M and increased start-up success

Capturing new products opportunity with minimal investment

SI-SSA-0015-11493

Spark spread replaces dark spread as major value driver

- Spark spread has risen above dark spread in PJM markets
- Power's gas units operating at record throughput
- Gas operation provides much more operational flexibility
- Enhances the ability of trading organization to capture volatility

SI-SSA-0015-11494

2013 BGS Auction Results for PSE&G Zone

BGS sales account for about a third of our forward portfolio of hedges

SI-SSA-0015-11495

BGS PRICES REFLECT PSE&G ZONE; RESULTS FOR 2011-2013 ARE THE NEW BLENDED PRICES BEGINNING JUNE 1, 2013.

Our hedging mix has changed with the market but still captures the fleet's locational advantage

- 3 Year forward BGS sales comprise smaller percentage of Power's hedges
- Other full requirement load deals help capture additional locational and load shape premium

SI-SSA-0015-11496

NOTE: PERCENTAGES REPRESENT HEDGED VOLUMES IN PLACE AFTER BGS AUCTION.

Hedging strategy designed to protect gross margin and leverage the portfolio

Ratable Hedging on Base Load:

- 3 year ratable hedge tactics
- 3 year PJM hedge of capacity (not included in table)
- Load following sales (such as BGS) have strong correlation to our units for hedging basis and load shaping premium

Dynamic Hedging on Intermediate Coal, Combined Cycle and Peaking:

- Position fleet to take advantage of market volatility
- Gas and load-following fleet left open until prompt year to capture volatility
- Use all trading products to capture option value of assets and benefit from market dislocations

		Jul-Dec 2013	2014	2015
Base Load (Nuclear and Base Load Coal)	Volume TWh	17	35	35
	% Hedged	100%	90-95%	50-55%
	Price $/MWh	$51	$49	$49
Intermediate Coal, Combined Cycle, Peaking	Volume TWh	11	18	17
	% Hedged	30-35%	0%	0%
	Price $/MWh	$51	$49	$49
Total	Volume TWh	26-28	53-55	52-54
	% Hedged	70-75%	55-60%	30-35%
	Price $/MWh	$51	$49	$49

HEDGE PERCENTAGES AND PRICES AS OF JUNE 28, 2013. REVENUES OF FULL REQUIREMENT LOAD DEALS BASED ON CONTRACT PRICE, INCLUDING RENEWABLE ENERGY CREDITS, ANCILLARY, AND TRANSMISSION COMPONENTS BUT EXCLUDING CAPACITY. HEDGES INCLUDE POSITIONS WITH MTM ACCOUNTING TREATMENT AND OPTIONS.

SI-SSA-0015-11497

PSEG's locational advantage

and electric basis

- Basis (PS Zone to PJM West) will continue to trend downward for forward sales
- Volatility will remain significant in the prompt periods (especially summer/winter)
- Power maintains sufficient length to participate in upside volatility as well as a valuable 250MW transmission position into NYC
- Basis will continue to have a positive impact on PSEG Power profitability

SI-SSA-0015-11498

*AS OF MAY 15, 2013.

PSEG's locational advantage

and gas basis

- Lower cost supplies of shale gas have been beneficial to both PSE&G customers and PSEG Power
- Over 50% of our available pipeline capacity can access market area supplies of shale gas
- Power's generating units sit in close proximity to the Marcellus fairway
- Power buys approximately 350BCF/year of gas
- Availability of a robust gas portfolio of storage and pipeline capacity benefits PSE&G customers and Power's generating assets

SI-SSA-0015-11499

PJM's capacity market continues to recognize locational value of our fleet

$/MW-Day	2012 / 2013	2013 / 2014	2014 / 2015	2015 / 2016	2016 / 2017
Power's Average Price	$153	$244	$162	$167	$166
PS Zone					$219
EMAAC	$140	$245	$137	$167	$119
RTO	$16	$28	$126	$136	$59
Power's Capacity (MW)	10,400	10,600	10,300	9,000	8,637*

*PSEG Power's cleared megawatts split between PS Zone and EMAAC.

2016/2017 RPM Auction Influenced By:

- New Build and Higher Imports
- Updated Transfer Capabilities
- Updated Demand Curve
- Environmental Retirements
- Minimum Offer Price Rule
- Lower Demand Response

SI-SSA-0015-11500

Reserve margins in PJM declining with retirements

Generation Deactivation Notifications

Source: PJM TEAC, 8/8/2013

- PJM Pending Deactivation Requests of 13,340 MW as of August 13, 2013
- Approximately 5,000 MW of additional owner announced retirements in PJM through next auction

Forecast Reserve Margin (PJM June 2013)

- PJM forecasts a declining Reserve Margin through 2017

SI-SSA-0015-11501

Each 10 bp Change in ROE	$0.01	$0.01

SI-SSA-0015-11517

Opportunity for modest and sustainable

dividend increases consistent with stable regulated growth and cash generation outlook at PSEG Power

SI-SSA-0015-11518

PSEG Summary

- Maintaining 2013 operating earnings guidance of $2.25 - $2.50 per share -- based on financial results to date, we expect operating earnings for the full year to be at the upper end of our guidance range assuming normal weather and unit operations
- Double digit operating earnings growth at PSE&G starting in 2013, and continuing through 2015 driven by transmission investments and approved programs
- Power's continued focus on operational excellence, market expertise and financial strength reduces risk in low price environment
- Strong Balance Sheet and Cash Flow support full capital program without the need for equity
- Long history of returning cash to the shareholder through the common dividend, with opportunity for future growth

PSE&G provides high reliability at below average cost which creates superior value to customers

SAIDI = SYSTEM AVERAGE INTERRUPTION DURATION INDEX, A MEASURE OF AVERAGE OUTAGE DURATION FOR ALL CUSTOMERS SERVED.

PSE&G prioritizes public safety

while maintaining value to customers

LEAK RESPONSE RATE = PERCENTAGE OF UTILITY RESPONSES TO REPORTED LEAKS WITHIN ONE HOUR.

SI-SSA-0015-11526

Formula rates for transmission make the process more predictable with contemporaneous returns

	Transmission (Federal)	Distribution Base Rate Case (State)
Current ROE	• 11.68% base • 12.93% with incentives on Susquehanna-Roseland • 11.93% with incentives on Northeast Grid	• 10.3%
Volatility of Returns	• Low – prospective recovery with annual true-ups for over/under recovery	• Higher – performance impacted positively/negatively by cost management, weather, customer demands, etc.
Process	• Formula – The rate template and specific elements like ROE are predetermined with annual updates and true ups	• Litigated case with each element (depreciation, ROE, O&M levels, Rate Base) scrutinized and settled
Intervenors	• State consumer advocates usually participate	• State consumer advocates • Large customers • Other parties affected by the case, e.g. Solar Developers
Test Year	• PSE&G has fully **forecasted** test year for both Capital and O&M	• **Historical** test year with pro-forma adjustments for known and measurable items, e.g. wage escalation
Time to resolve	• Annual Formula updates are filed in October with January 1 effective date	• Typically settled within 12-15 months

SI-SSA-0015-11527

New Jersey Board of Public Utilities (BPU)

- The Board of Public Utilities consists of five commissioners appointed by the Governor. These appointees are confirmed by the NJ Senate for six-year, staggered terms. The Governor appoints one of the five to serve as Commission President.

  Currently, the commissioners are:

  - Robert M. Hanna, Commission President
  - Jeanne M. Fox
  - Joseph L. Fiordaliso
  - Mary-Anna Holden
  - Dianne Solomon

- Stefanie Brand, Director of the N.J. Division of Rate Counsel

SI-SSA-0015-11528

Slow economic recovery in NJ is constraining growth in all market sectors

Modest residential growth limited by housing market inactivity and the slow economic recovery

Consumer spending is trending with the slow economic recovery and impacting growth in the commercial sector

Industrial sales growth continues to be constrained by slow economic recovery

2013 - 2015
Projected Sales Growth – Gas*

2013 – 2015
Projected Sales Growth – Electric*

*WEATHER NORMALIZED ESTIMATED ANNUAL GROWTH PER YEAR OVER FORECAST PERIOD; PROJECTED SALES GROWTH FOR 2013-2015 GAS INCLUDES ONLY FIRM SALES.

SI-SSA-0015-11529

Key economic indicators forecast renewed growth over the 2012 to 2015 timeframe

The New Jersey economy increased by 0.3% annually from 2010 to 2012 and is anticipated to grow 2.3% per year from 2012 to 2015

New Jersey total non-farm employment increased by 0.6% annually from 2010 to 2012 and is expected to grow 1.4% per year from 2012 to 2015

Real personal income in New Jersey increased by 1.4% annually from 2010 to 2012 and is expected to increase 2.5% per year from 2012 to 2015

Single family housing starts declined by 2.6% annually from 2010 to 2012 and are expected to increase ~24% per year from 2012 to 2015

Forward-Looking Statements

Certain of the matters discussed in this presentation about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K. These factors include, but are not limited to:

- fluctuations in wholesale power and natural gas markets, including the potential impacts on the economic viability of our generation units;
- our ability to obtain adequate fuel supply;
- any inability to manage our energy obligations with available supply;
- increases in competition in wholesale energy and capacity markets;
- changes in technology related to energy generation, distribution and consumption and customer usage patterns;
- economic downturns;
- third party credit risk relating to our sale of generation output and purchase of fuel;
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements;
- changes in state and federal legislation and regulations;
- the impact of pending rate case proceedings;
- regulatory, financial, environmental, health and safety risks associated with our ownership and operation of nuclear facilities;
- adverse changes in energy industry laws, policies and regulations, including market structures and transmission planning;
- changes in federal and state environmental regulations and enforcement;
- delays in receipt of, or an inability to receive, necessary licenses and permits;
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry;
- changes in tax laws and regulations;
- the impact of our holding company structure on our ability to meet our corporate funding needs, service debt and pay dividends;
- lack of growth or slower growth in the number of customers or changes in customer demand;
- any inability of Power to meet its commitments under forward sale obligations;
- reliance on transmission facilities that we do not own or control and the impact on our ability to maintain adequate transmission capacity;
- any inability to successfully develop or construct generation, transmission and distribution projects;
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers;
- our inability to exercise control over the operations of generation facilities in which we do not maintain a controlling interest;
- any inability to maintain sufficient liquidity;
- any inability to realize anticipated tax benefits or retain tax credits;
- challenges associated with recruitment and/or retention of key executives and a qualified workforce;
- the impact of our covenants in our debt instruments on our operations; and
- the impact of acts of terrorism, cybersecurity attacks or intrusions.

All of the forward-looking statements made in this presentation are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business, prospects, financial condition, results of operations or cash flows. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this presentation apply only as of the date of this presentation. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even in light of new information or future events, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this presentation are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-11540

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Net Income. Non-GAAP Operating Earnings exclude the impact of returns (losses) associated with the Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting and material one-time items. Non-GAAP Adjusted EBITDA excludes the same items as our non-GAAP Operating Earnings measure as well as income tax expense, interest expense and depreciation and amortization. The last two slides in this presentation (Slides A and B) include a list of items excluded from Net Income/(Loss) to reconcile to non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA with a reference to those slides included on each of the slides where the non-GAAP information appears.

Management uses non-GAAP Operating Earnings in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results. Management believes non-GAAP Adjusted EBITDA is useful to investors and other users of our financial statements in evaluating operating performance because it provides them with an additional tool to compare business performance across companies and across periods. Management also believes that non-GAAP Adjusted EBITDA is widely used by investors to measure operating performance without regard to items such as income tax expense, interest expense and depreciation and amortization, which can vary substantially from company to company depending upon, among other things, the book value of assets, capital structure and whether assets were constructed or acquired. Non-GAAP Adjusted EBITDA also allows investors and other users to assess the underlying financial performance of our fleet before management's decision to deploy capital. The presentation of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA is intended to complement, and should not be considered an alternative to, the presentation of Net Income, which is an indicator of financial performance determined in accordance with GAAP. In addition, non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA as presented in this release may not be comparable to similarly titled measures used by other companies.

Due to the forward looking nature of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility. Guidance included herein is as of July 28, 2017.

These materials and other financial releases can be found on the PSEG website at www.pseg.com, under the Investors tab. From time to time, PSEG, PSE&G and PSEG Power release important information via postings on their corporate website at http://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. The "email alerts" link at http://investor.pseg.com may be used to enroll to receive automatic email alerts and/or really simple syndication (RSS) feeds regarding new postings at http://investor.pseg.com/rss

PSEG Policy and Regulatory focus

on mechanisms that provide customers clean, affordable, resilient energy supply

NJ Distribution Base Rate Proceeding

- True-up data from 2010 base rate case for known changes in customers usage, taxes, O&M and investments

Long-Term Infrastructure Investment Platform

- Seek extension of existing infrastructure programs, e.g., GSMP, and broaden investment platform

Preserve the Value of Nuclear Supply

- Pursuing legislative strategy to recognize the value of nuclear energy under terms and conditions that are affordable for customers and provide the proper incentives for long-term operation

Ensure Federal Regulatory and Policy Framework

- Advocate for rules that preserve benefits of competitive markets while also recognizing the value of clean energy, supply diversity and grid reliability

Forward-Looking Statements

Certain of the matters discussed in this presentation about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K. These factors include, but are not limited to:

- fluctuations in wholesale power and natural gas markets, including the potential impacts on the economic viability of our generation units;
- our ability to obtain adequate fuel supply;
- any inability to manage our energy obligations with available supply;
- increases in competition in wholesale energy and capacity markets;
- changes in technology related to energy generation, distribution and consumption and customer usage patterns;
- economic downturns;
- third-party credit risk relating to our sale of generation output and purchase of fuel;
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements;
- changes in state and federal legislation and regulations, and PSE&G's ability to recover costs and earn returns on authorized investments;
- the impact of pending and any future rate case proceedings;
- regulatory, financial, environmental, health and safety risks associated with our ownership and operation of nuclear facilities;
- adverse changes in energy industry laws, policies and regulations, including market structures and transmission planning;
- changes in federal and state environmental regulations and enforcement;
- delays in receipt of, or an inability to receive, necessary licenses and permits;
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry;
- changes in tax laws and regulations;
- the impact of our holding company structure on our ability to meet our corporate funding needs, service debt and pay dividends;
- lack of growth or slower growth in the number of customers or changes in customer demand;
- any inability of Power to meet its commitments under forward sale obligations;
- reliance on transmission facilities that we do not own or control and the impact on our ability to maintain adequate transmission capacity;
- any inability to successfully develop or construct generation, transmission and distribution projects;
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers;
- our inability to exercise control over the operations of generation facilities in which we do not maintain a controlling interest;
- any inability to recover the carrying amount of our long-lived assets and leveraged leases;
- any inability to maintain sufficient liquidity;
- any inability to realize anticipated tax benefits or retain tax credits;
- challenges associated with recruitment and/or retention of key executives and a qualified workforce;
- the impact of our covenants in our debt instruments on our operations; and
- the impact of acts of terrorism, cybersecurity attacks or intrusions.

All of the forward-looking statements made in this presentation are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business, prospects, financial condition, results of operations or cash flows. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this presentation apply only as of the date of this presentation. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even in light of new information or future events, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this presentation are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

United States

New Jersey

SI-SSA-0015-11557

PSEG

SOURCE: U.S. ENERGY INFORMATION ADMINISTRATION (EIA-923 REPORT) BASED ON PRELIMINARY 2017 MONTHLY DATA

NJ Zero Emission Certificates (ZEC) support carbon free nuclear generation

- ✓ Legislation signed by New Jersey Governor Murphy on May 23
- ✓ 330-Day process underway – NJ Board of Public Utilities expected to determine eligibility and select nuclear plants to receive ZECs by mid-April 2019
- ✓ Hope Creek and Salem produce >90% of NJ's carbon free generation, support ~6,000 jobs, and benefit fuel diversity and grid reliability

SI-SSA-0015-11558

Broad based benefits from properly valuing nuclear…

- Seeks fair compensation for the environmental attributes of at-risk nuclear generating plants
- Bill approved by NJ Legislature on April 12, and signed by NJ Governor on May 23; NJBPU has 330 days to determine eligibility and select which nuclear power plants have been chosen to receive Zero Emission Certificates (ZEC)
- Would require NJ utilities to purchase ZECs from eligible nuclear plants at $0.004 per KWh on retail distribution customers (approximately $300 Million/year)
- NJBPU will rank nuclear plants based on assessment of financial need in addition to its impact on fuel diversity, air quality, and other environmental attributes to determine ZEC eligibility
- Eligible nuclear plants must be licensed to operate beyond 2030 and be located in PJM
- Opportunity to preserve a highly reliable, zero carbon generation resource as part of a diverse energy grid

Forward-Looking Statements

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or ongoing low pricing of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulations, including market structures and transmission planning,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators, including prudency reviews, disallowances and changes in authorized returns,
- any deterioration in our credit quality or the credit quality of our counterparties,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations or increase the cost of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- delays or unforeseen cost escalations in our construction and development activities, or the inability to recover the carrying amount of our assets,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- increases in competition in energy supply markets as well as for transmission projects,
- changes in technology, such as distributed generation, storage and micro grids, and greater reliance on these technologies,
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- an extended economic recession,
- an inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce, and
- changes in the credit quality and the ability of lessees to meet their obligations under our domestic leveraged leases.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws. The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-11561

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Net Income. Operating Earnings exclude gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and material one-time items. Adjusted EBITDA excludes the same items as our Operating Earnings measure as well as income tax expense, interest expense, depreciation and amortization and major maintenance expense costs at Power's fossil generation facilities. The last two slides in this presentation (Slides A and B) include a list of items excluded from Net Income to reconcile to Operating Earnings and Adjusted EBITDA with a reference to that slide included on each of the slides where the non-GAAP information appears.

Management uses Operating Earnings and Adjusted EBITDA in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results. The presentation of Operating Earnings and Adjusted EBITDA is intended to complement, and should not be considered an alternative to, the presentation of Net Income, which is an indicator of financial performance determined in accordance with GAAP. In addition, Operating Earnings and Adjusted EBITDA as presented in this release may not be comparable to similarly titled measures used by other companies.

Due to the forward looking nature of Operating Earnings and Adjusted EBITDA guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility.

From time to time, PSEG, PSE&G and Power release important information via postings on their corporate website at http://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. The "Email Alerts" link at http://investor.pseg.com may be used to enroll to receive automatic email alerts and /or Really Simple Syndication (RSS) feeds regarding new postings. PSEG meeting materials and other financial releases can be found on the www.pseg.com website under the investor tab, or at http://investor.pseg.com.

We make things work for you.

SI-SSA-0015-11563

Two strong businesses

A stable platform, each with growth opportunities

PSEG

PSE&G	PSEG Power LLC
Electric & Gas Delivery and Transmission	**Regional Competitive Generation**
Strategy: Investments aligned with public policy and customer needs **Value Proposition:** A ~$12 billion infrastructure program producing high single digit rate base growth through 2020	**Strategy:** Investment program enhances competitive position with addition of efficient, clean, reliable CCGT capacity **Value Proposition:** Provides substantial free cash flow in current environment and upside from market rule improvements
2015 **Assets $24B** **Operating Earnings $787M**	2015 **Assets $12B** **Operating Earnings $653M**

SI-SSA-0015-11564

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2015. PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT AND PSEG LONG ISLAND ACTIVITY. SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS

PSEG's Strategy

Investment program delivering results

Operational Excellence: Maintaining reliability and improving performance as we control costs in low price environment

Financial Strength: Strong financial position supports investment program and dividend growth

Disciplined Investment:
- Balanced business mix
- Robust pipeline of opportunities

Results:
- 3rd year of Operating EPS* growth
- Continued dividend growth
- Best in class utility growth rate
- Addition of efficient CCGT capacity enhances market position

SI-SSA-0015-11565

* SECOND YEAR OF EPS GROWTH.

Delivering on commitments and realizing growth

Operational Excellence	• PSE&G: ReliabilityOne Mid-Atlantic Region's Most Reliable Electric Utility (14th consecutive year), Electric Light & Power's 2015 Utility of the Year, ReliabilityOne Outstanding Outage Response Time and Outstanding Customer Engagement • PSEG Power: Record output from combined cycle units • PSEG Long Island: Improved customer service and reliability while managing costs • PSEG: Cost-control benefits continue
Financial Strength	• Operating earnings for 2015 of $2.91 per share at upper end of guidance range • Cash flows and business mix support strong credit ratings and ability to fully fund robust investment pipeline without issuing new equity • Increased dividend in 2015
Disciplined Investment	• PSE&G capital program drives continued rate base growth over the 5-year period (2016-2020) with increased investment in Transmission, Energy Strong, Gas System Modernization Program, and Electric and Gas distribution • Power capital program focusing on growth investments including Keys, Sewaren and Bridgeport Harbor, Nuclear and Fossil uprates, PennEast Pipeline, and Solar Source

SI-SSA-0015-11566

Focus on building a reliable, efficient, clean energy infrastructure

2011 → 2012 → 2013 → 2014 → 2015

Selected Accomplishments

2011
- Expanded investment programs focused on infrastructure upgrades, energy efficiency, and major transmission projects*
- Sale of Texas generating assets
- Nuclear license extensions and uprates

2012
- Award winning Superstorm Sandy storm response restoring 2.1M customers
- Final federal approval for Susquehanna-Roseland transmission project
- 400 MW of new peaker capacity**

2013
- Expanded Solar investment
- 90% nuclear capacity factor for 9th straight year
- Record output from Linden CCGT and Salem 2 Nuclear Unit

2014
- Energy Strong program approved
- Advanced Gas Path uprates (through 2018)
- PSEG Long Island management contract effective

2015
- Gas System Modernization Project (GSMP) and Energy Efficiency Extension II approved
- New generation build starts Power fleet transformation
- Solar Source portfolio reaches 277 MW_{DC}***

← Cost Control →

SI-SSA-0015-11567

PSEG

* INVESTMENT CONTINUED FOR SUSQUEHANNA-ROSELAND, BURLINGTON-CAMDEN, NORTH CENTRAL RELIABILITY, AND STARTED FOR NORTHEAST GRID AND MICKLETON-GLOUCESTER. ** KEARNY AND NEW HAVEN. *** AS OF MARCH 2016.

Growth in capital spending aligned with customer needs

PSEG Capital Spending

2011 – 2015: ~$14.3 Billion | **2016E – 2020E*: ~$16.0 Billion**

*INCLUDES ALL PLANNED SPENDING. **POWER CAPITAL SPENDING EXCLUDES NUCLEAR FUEL. ***INCLUDES PENNEAST PIPELINE EQUITY INVESTMENT OF $0.1B. E=ESTIMATE.

SI-SSA-0015-11568

Building an efficient, clean, reliable energy platform

Timeframe	Actions taken
2011 – 2015: Transformed business mix	• Applied ~$14.3 billion towards investments • Improved credit ratings • Monetized Energy Holdings' portfolio • Strong balance sheet sustained during period of low power prices, while increasing the dividend
2016 – Forward: Strong financial position supports continued growth	• Continued dividend growth in 2016 • ~$16 billion investment program through 2020 • Utility investments focused on improving reliability and replacing aging infrastructure • Continued investment in reliable and efficient energy infrastructure at Power • Financial capability supports further expansion of the current capital plan

SI-SSA-0015-11569

PSE&G's investment program

Meeting public policy goals and customer needs

SI-SSA-0015-11570

PSEG

* DISTRIBUTION RATE BASE INCLUDES SOLAR AND ENERGY EFFICIENCY

Managing the total costs to customers while investing in the system

PSE&G Typical Residential Customer Bills*

- PSE&G customers' combined electric and gas bills declined 28% over the period
- Low gas prices and elimination of transition charges drove rate decreases

SI-SSA-0015-11571

PSEG

*FOR ALL YEARS THE BILLING ASSUMES 7,200 KWH FOR ELECTRIC AND 1,010 THERMS FOR GAS ANNUALLY. E = ESTIMATE

Location	• Assets in well-designed markets, premium regions • Opportunities on brownfield sites	✓	✓	✓	✓	n/a
2016 - PSEG Power Total Capacity 11.9 GW		3.3	3.7	2.4	2.3	0.2
2019 - PSEG Power Total Capacity 13.5 GW *		5.3	3.8	2.4	1.8	0.2

- **Largest nuclear site** in the eastern U.S. and ownership in **large, fully scrubbed coal facilities** at Keystone and Conemaugh provide **economies of scale** that enhance energy margins in current low market, and provide for upside potential if prices improve
- **Dual fuel peakers** meet reliability criteria in capacity markets and provide option value in energy market. Opportunity exists to repower peakers that do not meet NJ HEDD environmental regulations
- **Combined cycle units Keys and Sewaren expected to be operational in 2018, and Bridgeport 5 expected to be operational in 2019,** will enhance emissions performance and have a combined average heat rate of approximately 6,600

SI-SSA-0015-11572

PSEG

*AS OF FEBRUARY 2016 APPROXIMATELY 1.8 GW OF CCGT GENERATION UNDER DEVELOPMENT – KEYS, SEWAREN 7 AND BRIDGEPORT HARBOR 5 , WHICH ARE TARGETED TO GO INTO SERVICE IN 2018/2019 ALONG WITH RETIREMENT OF OLDER SEWAREN UNITS.

Operating Earnings

Disciplined investment program and focus on operational excellence have supported growth

Power's diverse fuel mix and dispatch flexibility continue to generate strong earnings and free cash flow in low price environment

PSE&G's investment program has resulted in an increased contribution to PSEG's earnings

SI-SSA-0015-11573

PSEG

*SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. E=ESTIMATE ** 2016 PERCENTS USE MIDPOINT OF 2016 OPERATING EARNINGS GUIDANCE.

Focus areas over the business plan horizon

PSE&G
• **Operational excellence and cost control** • **Capital program execution** – Transmission, Energy Strong and GSMP program • **Regulatory framework** – Advocate for regulatory framework that provides support for long-term infrastructure programs • **Continue to develop incremental growth opportunities**

PSEG Power
• **Operational excellence and cost control** • **Timely and on budget construction of new growth opportunities** – Keys Energy Center, Sewaren 7 and Bridgeport Harbor • **Strong performance at Nuclear and Fossil** to maximize fleet value in dynamic markets • **Advocacy of constructive market rules** - Capacity markets and environmental regulations

PSEG Long Island
• **Continue execution** – Achievement of performance metrics

SI-SSA-0015-11575

PSEG's Value Proposition

- A stable platform with predictable earnings and a robust investment pipeline
- PSE&G – Best in class utility performance and growth profile
- PSEG Power – Efficient, low-cost, clean fleet advantaged by asset diversity, fuel mix and location
- Strong balance sheet – Supports stable credit rating, growth objectives and the potential for consistent and sustainable dividend growth

SI-SSA-0015-11576

PSEG

We make things work for you.

PSE&G

SI-SSA-0015-11577

PSE&G is the largest electric and gas distribution and transmission utility, the largest investor in renewable and energy efficiency, and the largest HVAC and service contract provider in New Jersey

PSE&G strategy

Building a sustainable platform that balances reliability, customer rates and public policy to ensure growth at reasonable returns

SI-SSA-0015-11579

PSE&G's focus on meeting customer reliability and policy objectives are key to our investment strategy

2011	2012	2013	2014	2015

Selected Accomplishments

2011
- NJ Capital Infrastructure Program 2
- Energy Efficiency extension
- Major Transmission capital projects*
- Hurricane Irene/ October Snowstorm
- Mid-Atlantic ReliabilityOne Award

2012
- Hurricane Sandy storm response (2.1M customers restored)
- Transmission: Final federal approval for Susquehanna-Roseland (S-R) project
- National ReliabilityOne Excellence Award
- Mid-Atlantic ReliabilityOne Award
- EEI's Emergency Response Award

2013
- Solar Loan III
- Solar 4 All Extension
- Energy Strong program filed
- Mid-Atlantic ReliabilityOne Award
- Award for Outstanding Response to a Major Event

2014
- Energy Strong approved
- Transmission: North Central Reliability and Burlington-Camden projects placed in-service
- Bergen-Linden Corridor Upgrade project investment started
- Mid-Atlantic ReliabilityOne Award

2015
- Gas System Modernization Project (GSMP)
- Energy Efficiency Extension II
- Transmission: S-R and Mickleton-Gloucester projects placed in-service
- Mid-Atlantic ReliabilityOne Award
- Recognized for customer satisfaction by J.D. Power for both large electric and gas business service in the East

← Cost Control →

SI-SSA-0015-11580

PSEG

* INVESTMENT CONTINUED FOR SUSQUEHANNA-ROSELAND, BURLINGTON-CAMDEN, NORTH CENTRAL RELIABILITY, AND STARTED FOR NORTHEAST GRID AND MICKLETON-GLOUCESTER

Building on our track record

Operational Excellence

- Strong reliability record, with plans for further improvement
- Cost control efforts

Financial Strength

- Meeting or exceeding earnings targets
- Maintain solid investment grade credit ratings

Disciplined Investment

- 14 investment programs approved over past seven years
  - ✓ Infrastructure focused
  - ✓ Policy alignment – across administrations – Solar, EE and other
- Win-Win: Job creation, environment benefits, low commodity prices, low interest costs, labor availability, federal tax benefits

SI-SSA-0015-11581

Operational Excellence

Reliability and Customer Service

- Named most reliable electric utility in the Mid-Atlantic region for 14th consecutive year
- Recognized by PA Consulting with the Outstanding Customer Engagement and Outstanding Outage Response Time awards
- Named 2015 Utility of the Year by Electric Light & Power Magazine
- Received Star of Energy Efficiency Award

SI-SSA-0015-11582

Achieved ~11% annual earnings growth

over the past four years through implementation of supportive rate mechanisms on our expanded capital program and cost control

SI-SSA-0015-11583

Receive contemporaneous recovery on over 70% of our investments

2011-2015 PSE&G Capital Spending by Recovery Method

2016-2020E PSE&G Capital Spending by Recovery Method

FERC Formula Rates
- Transmission

Traditional Recovery Mechanisms

PSEG Power strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-11601

Focus on transforming Power's portfolio with reliable, efficient, and cleaner energy infrastructure

Selected Accomplishments

2011

- Hope Creek set annual output record
- Nuclear license extensions and uprates achieved

2012

- Peach Bottom 3 set annual output record
- Additional 400 MW of new peaker capacity at Kearny and New Haven
- Superstorm Sandy recovery initiated

2013

- Record annual output from Linden CCGT and Salem 2 Nuclear Unit
- 90% + nuclear capacity factor for 9th straight year
- Bethlehem Energy Center, 2nd gas pipeline connection added

2014

- Record annual output from Bergen CCGT
- PennEast pipeline investment
- CCGT Advanced Gas Path (AGP) uprate investment completed at Linden 1 & 2, 63 MW
- Established PSEG Long Island fuel management operations for 2015 start-up

2015

- Record CCGT fleet annual output
- Continued growth in fleet with 1,300 MW new CCGT's announced
  - Keys
  - Sewaren 7
- Prepared successful bid for 485 MW Bridgeport Harbor 5
- Projects Completed:
  - Peach Bottom EPU, 130 MW
  - Bergen 2 AGP uprate, 31 MW
- HEDD retirement
- Solar portfolio reaches 277 MW_{DC} as of March 2016

Cost Control

SI-SSA-0015-11602

PSEG Power's value is advantaged

by asset diversity, fuel flexibility and location

2015 Actual

Fuel Diversity*
Total MW: 11,678

- Oil
- Pumped Storage

SI-SSA-0015-11603

PSEG

* EXCLUDES SOLAR AND KALAELOA.
**INCLUDES NEW JERSEY UNITS THAT FUEL SWITCH TO GAS.

Power investing $2 billion of capital in new capacity

E=ESTIMATE. DATA AS OF MARCH 2016

Power's PJM assets are becoming more efficient

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape
- Readiness for Capacity Performance (CP), successful in CP auction

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel capability at 87% of load following and peaking units

SI-SSA-0015-11605

PSEG

* KEYS & SEWAREN 7 TO BE ADDED TO DISPATCH IN 2018E AND SEWAREN 1-4 WILL RETIRE.

PSEG Power has generating assets in three competitive markets

- Assets located near load
- Low cost portfolio with gas cost advantage
- Positioned to benefit from volatility in real-time markets
- Fleet meets new capacity performance standards
- 1,800 MW of new CCGT capacity under construction in PJM and ISO-NE

SI-SSA-0015-11606

PSEG Power developing 1,800 MW of new, efficient CCGT capacity in MD, NJ and CT

- Constructing the 755 MW CCGT Keys Energy Center in Maryland (SWMAAC*) at an estimated cost of $825 to $875 million
- Constructing a new 540 MW CCGT unit, Sewaren in New Jersey (EMAAC*) at a cost of $625 to $675 million which will replace older Sewaren units
- Constructing a new 485 MW CCGT unit, Bridgeport Harbor 5 (ISO NE), at a cost of $525 to $575 million
- Both Keys and Sewaren 7 are targeted to be in-service in 2018 and Bridgeport Harbor 5 in 2019
- Expanding civic stewardship roles and programs in neighboring communities

*SWMAAC = SOUTHWEST/EMAAC = EASTERN MID-ATLANTIC AREA COUNCIL
LOCATIONAL DELIVERABILITY AREA WITHIN PJM.

SI-SSA-0015-11607

Power's fleet to be transformed with addition of Keys, Sewaren 7 and Bridgeport Harbor in 2018-2019

Projected Fleet Comparison 2015 to 2020E

*EXCLUDES SOLAR AND KALAELOA E = ESTIMATE **INCLUDES NEW JERSEY UNITS THAT FUEL SWITCH TO GAS.

SI-SSA-0015-11608

PSEG Power's fossil fleet expected to see improvements in efficiency

- AGP (Advanced Gas Path) investments
- CCGT material condition assessment
- Unit testing and testing coordination initiatives
- HEDD retirements
- Keys/Sewaren Combined Cycle Development (2018)
- Bridgeport Harbor 5 Combined Cycle Development (2019)
- Heat Rate Improvement converts to potential savings of $60-$65M in fuel expense (assuming $3/MB gas price)

SI-SSA-0015-11609

PSEG Power's fossil fleet …

Among the lowest emitting in the industry

- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing
- With the addition of new units, emissions continue to improve

Expected to reduce its carbon footprint

- Carbon emission rates projected to steadily approach EPA national pollution standards for New and Reconstructed Natural Gas Combined Cycle (1,000 lbs CO_2/MWh-gross)

SI-SSA-0015-11610

Nuclear is a critical element of our success

Hope Creek

- Operated by PSEG Nuclear
- PSEG Ownership: 100%
- Technology: Boiling Water Reactor
- Total Capacity: 1,176 MW
- Owned Capacity: 1,176 MW
- License Expiration: 2046
- Next Scheduled Refueling
  - Fall 2016
- Uprate 18MW Spring 2018

Salem Units 1 and 2

- Operated by PSEG Nuclear
- PSEG Ownership: 57%
- Technology: Pressurized Water Reactor
- Total Capacity: 2,294 MW
- Owned Capacity: 1,317 MW

Total New Capacity – 2,200 MW

E = ESTIMATE.

SI-SSA-0015-11612

A position in renewable energy – Power's Solar Source

Solar Source portfolio

- Utility scale solar projects in 12 states in operation or under construction
- Long-term PPA's with creditworthy counterparties
- Lump sum, full wrap EPC* agreements

Asset Optimization

- Maintain high equipment availability
- Minimize operating expenses
- Seek additional revenue streams

SI-SSA-0015-11613

* EPC = ENGINEERING PROCUREMENT & CONSTRUCTION. E = ESTIMATE.

PSEG Power has other attractive sources of revenues to round out a robust portfolio

Gas Asset Optimization

- Large wholesale provider to PSE&G and others
  - Storage capacity of approximately 75 Bcf (in the Gulf and market regions)
  - Firm transportation of 1.3 Bcf/day on seven pipelines
- Off-system sales margins shared with residential customers
- Commercial & Industrial gas sales

Ancillary Services – Black start, reactive power, area regulation

LIPA fuel and energy dispatch management – Began management of 10-year contract in 2015

Kalaeloa, HI – 50% equity interest in a 208 MW combined cycle oil unit

New Haven Peakers – 129 MW, rate based contract with ISO-NE

SI-SSA-0015-11614

PSEG Power has demonstrated ability to control O&M

Cost control actions taken:

- Fossil plant assessment
- CCGT material condition assessment
- Vendor contract renegotiations
- Nuclear security services brought in-house to control costs
- Nuclear maintenance productivity study
- Nuclear outage efficiency initiative
- Materials management
- Nuclear excellence initiative
- Nuclear staff – Right sizing

Power's 2016 operating earnings range

adjusted to incorporate results from the first half of 2016

SI-SSA-0015-11617

*SEE SLIDE A FOR ITEMS EXCLUDED FROM NET INCOME TO RECONCILE TO OPERATING EARNINGS. E = ESTIMATE.
UPDATED AS OF JULY 29, 2016.

PSEG Power – Delivering on priorities

Operational Excellence

- Fuel and technology-diverse fleet produced 55 TWh, 2% higher than 2014
- Nuclear capacity factor exceeded 90%; output of 30 TWh, close to 30.3 TWh is third best ever, record set in 2009
- Production records set at BEC, Linden and the CCGT fleet in total; Kearny 13 & 14 CTs
- Successful implementation of LIPA contract for fuel / generation dispatch.

Financial Strength

- Achieved earnings guidance in 2015
- Cost control programs held O&M to a 0.8% CAGR between 2011 and 2016
- Successful ongoing effort to influence outcomes in key markets showing success, e.g., price formation

Disciplined Investment

- Completed Peach Bottom EPU and AGP at Bergen 2; AGP planned for BEC in 2017/2018
- Repositioning the fleet with three new CCGTs:
  - Keys (2018)
  - Sewaren 7 (2018)
  - Bridgeport Harbor 5 (2019)
- Solar Source's portfolio is 277 MW_{DC}

SI-SSA-0015-11618

PSEG POWER
ER&T

SI-SSA-0015-11619

PSEG

We make things work for you.

Market Review: Markets in 2015 were affected by abnormal weather conditions

Q1: Periods of extremely cold temperatures resulted in high gas prices, significant basis differentials, and higher energy demand

Q2-Q4: A normal summer and mild December, combined with increased supply of gas, reduced energy prices and basis

SI-SSA-0015-11620

Market Review: YTD 2016 impacted by weather but forward gas and electric prices retain seasonal volatility

SI-SSA-0015-11621

Market Review: PSEG's extensive gas asset portfolio provides unparalleled access to Marcellus Shale gas

- PSEG Power maintains a robust portfolio of pipeline and storage assets in the Mid-Atlantic
- Marcellus Shale gas production reached 18.8 BCF/day in 2015
- PSEG Power procured over 423 BCF in 2015 with approximately 50% going to PSE&G's utility gas customers
- PSEG Power's gas for generation was 150 BCF in 2015, of which >75% was supplied by Northeast Shale gas
- Severe financial stress among the natural gas producer industry is expected to reduce production growth until gas prices rebalance to higher levels
- Investment in the PennEast pipeline expected to provide more access to Marcellus for PSEG

SI-SSA-0015-11622

Market Review: Completion of new pipeline infrastructure expected to move significant quantities of Marcellus gas out of the region by 2018

Pipeline capacity grows significantly by 2018

- Significant amount of new pipelines have already been built and more are in the advanced planning and development stage through 2018
- Gas production and pipeline takeaway capacity estimated to reach equilibrium in 2018 timeframe based on new pipeline development

SI-SSA-0015-11623

Regulatory Framework: Market structures are evolving to appropriately recognize value of reliable, diverse and clean dispatchable generation

	ISSUE /POLICY	OUTCOME
PJM	CAPACITY	• Higher payments for enhanced reliability (Capacity Performance); first purely CP capacity auction to be held in May 2017
	ENERGY PRICE FORMATION	• FERC is driving ISO's to improve their pricing constructs and rules – five minute settlements and shortage pricing improvements are on the horizon
	DEMAND RESPONSE RULES	• Stricter rules for eligibility and deployment following full deployment of Capacity Performance expected to limit participation in capacity markets
	STATE INTERVENTION	• Efforts in Ohio to subsidize uneconomic resources met with significant opposition and led to FERC finding that affiliate abuse standards would apply • PJM commenced process to develop rules for integrating public policy driven resources that would protect competitive markets; PJM also has commenced study to determine value of fuel diversity
ISO-NE	CAPACITY	• Zonal demand curves approved by FERC for FCA 11 • Nuclear and coal under pressure; closure of Pilgrim and Vermont Yankee • New initiative to incorporate state carbon goals in wholesale markets consistent with competitive outcomes
	ENERGY	• Proposed gas pipelines are stalled • Significant rule changes to improve price formation – five minute settlement and fast start pricing
NYISO	CAPACITY	• Retirement of upstate coal plants tighten market • NYPSC develops a clean energy standard that retains upstate nuclear and recognizes the value of zero emissions
	ENERGY	• Improvement in price formation during reserve shortage conditions
FEDERAL	ENVIRONMENTAL REGULATIONS	• CPP rules stayed by SCOTUS; oral argument before D.C. Circuit scheduled for September 27, 2016 • Some states will still prepare implementation plans for 2020+ timeframe • CSAPR update rule cuts ozone season NOx emissions

*ON PEAK SPARK SPREADS FOR CALENDAR YEAR 2018 CALCULATED WITH 7.5 HEAT RATE USING FOLLOWING GAS SOURCES: PJM WEST = HH, PEPCO = TRANSCO Z6 NON-NY, MASS HUB AND ZONE G = ALGONQUIN, PS ZONE = LEIDY. FORWARDS AS OF JANUARY 18, 2016. CAPACITY IN MEGAWATTS

PSEG Power's Portfolio: New York and New England

New York (757 MW)

- Single state ISO
- Multiple gas supplies to BEC gives fuel flexibility and access to Marcellus
- Long Island Power Authority Management Contract

New England (976 MW plus 485 MW new build)

- Small but dynamic market
- Significant improvement in market construct
- Ongoing potential for volatility in extreme (winter) weather conditions
- PSEG Bridgeport Coal plant retirement in 2021
- Gas pipeline infrastructure poses supply challenges/opportunity

+INCLUDES 485 MW NEW BUILD
*SUMMER INSTALLED GENERATING CAPACITY AS OF DECEMBER 31,2015

PSEG Power's Value Proposition

Low cost fleet	Advantaged locations	Investing to grow

- Well-positioned fleet of merchant generating assets in attractive markets
- Portfolio transformed with addition of 1,800 MWs of new efficient CCGT
- Low capital requirements to meet capacity performance standards
- Growth in fast-growing DC area
- Hedging strategy has capably protected value of assets in declining price environment providing attractive returns and free cash flow

1 - BASED ON MID-POINT OF 2016 OPERATING EARNINGS GUIDANCE. E= ESTIMATE UPDATED AS OF JULY 29, 2016.

Strong financial position to support our business initiatives in 2016 and beyond

	2016 and Beyond
Earnings	✓ Continuing strong earnings trend in 2016 with guidance of $2.80 to $3.00 per share
Investment	✓ Deploying significant capital at PSE&G for projects with contemporaneous returns ✓ Pursuing Power projects that satisfy risk adjusted return targets
Cash Flow and Credit Metrics	✓ Continuing strong internal cash flow aided by bonus depreciation ✓ Funding investment program without equity issuance
Dividends	✓ Providing $0.08 per share dividend increase in 2016 with opportunity for consistent and sustainable growth

SI-SSA-0015-11637

Growth spend represents ~75% of total investment with new investment opportunities of ~$2.0B

E = ESTIMATE; CAPITAL INCLUDES AFUDC AND IDC

SI-SSA-0015-11638

We increased our Capital Program by $3B

since last year

PSEG 5-Year Capital Spending Forecast

2015E – 2019E ~$13.0B

Increased Capital Program by $3B

2016E – 2020E ~$16.0B

- During the common 4-year forecast period of 2016 to 2019, our capital spend forecast increased by $4.1B

SI-SSA-0015-11639

E = ESTIMATE; CAPITAL INCLUDES AFUDC AND IDC

PSE&G's spending drives high single-digit growth in rate base through 2020 with known investments

E = ESTIMATE.

SI-SSA-0015-11640

Bonus Depreciation adds $1.7B cash

through 2019

- **PSE&G cash benefit of $1.2B**
  - Identified additional growth opportunities to offset rate base decrease
- **PSEG Power cash benefit of $0.5B**
  - Power's strong financial profile allows monetization of tax benefits to more efficiently invest in new generation

SI-SSA-0015-11641

Utilizing our Strong Balance Sheet

and Cash Flow to support current capital program and new potential opportunities without the need for equity

1) INCLUDES FINANCING COST, TREASURY SHARES, AND SHORT TERM DEBT POSITION
2) INCLUDES FINANCING COST
3) INCLUDES FINANCING COST AND SHORT TERM INVESTMENTS E = ESTIMATE

PSEG's credit metrics remain strong

providing substantial investment capacity to pursue additional growth opportunities

Minimum Funds From Operations / Debt
2016E – 2018E

SI-SSA-0015-11648

PSEG Summary

- 2015 Operating Earnings of $2.91 were at the upper end of our upwardly revised guidance of $2.85 - $2.95 per share
- Forecast high single-digit rate base growth at PSE&G on five year basis from 2015 to 2020, driven by investment in transmission and approved programs
- Power's investment program and continued focus on operational excellence with financial strength delivers value in current price environment
- Strong Balance Sheet and Cash Flow support current capital program and investment in new opportunities without the need for equity
- Our indicative $0.08 dividend per share increase for 2016 is consistent with our long history of returning cash to the shareholder through the common dividend, with opportunity for consistent and sustainable growth

Fuel	Coal/Gas	Coal/Gas
Start of Operations	1968	1960/1961

On September 1, 2016, PSEG Power submitted to the PJM Independent Market Monitor and the PJM Office of Interconnection a preliminary request for an exception to PJM's Reliability Pricing Model must-offer requirement for the Hudson and Mercer generating stations in connection with the 2020-2021 capacity auction to be held in May 2017. The two stations have not cleared the PJM capacity auction for the prior two years, and would need significant investment to achieve the performance standards associated with PJM's Capacity Performance construct. The submission provides PSEG Power the opportunity to fully analyze the market conditions and economics, among other factors, associated with maintaining station operations, including any necessary capital improvements, prior to making a final determination whether or not to bid in the 2020-2021 capacity auction by December 1, 2016.

PSEG FINANCIAL APPENDIX

SI-SSA-0015-11658

PSEG Financial Highlights

Maintaining full-year 2016 Operating Earnings guidance of $2.80 - $3.00 per share*

- ✓ Reaching the upper end of our guidance range in 2016 will be difficult even with improvements seen in the power markets, expectations for warm summer weather, normal operations and management of O&M
- ✓ Focused on meeting customer needs for clean, reliable, efficient delivery of energy

Infrastructure Spend

- ✓ PSE&G capital spending on T&D for 2016 expected to top $3 billion
- ✓ PSE&G's Gas System Modernization Program (GSMP) and Energy Strong continue
- ✓ Keys and Sewaren CCGTs construction is on schedule and on budget
- ✓ PSE&G has identified more than $500 million of additional infrastructure spend over the current capital spending plan of $12 billion in the 2016-2020 period

Financial position remains strong

- ✓ Positive cash from Power and increasing cash flow from operations at PSE&G supports dividend growth and funds capital spending program without the need to issue equity
- ✓ Debt as a percentage of capitalization was 45% at June 30

Forward-Looking Statements

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or ongoing low pricing of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulations, including market structures and transmission planning,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators, including prudency reviews, disallowances and changes in authorized returns,
- any deterioration in our credit quality or the credit quality of our counterparties,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations or increase the cost of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- delays or unforeseen cost escalations in our construction and development activities, or the inability to recover the carrying amount of our assets,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- increases in competition in energy supply markets as well as for transmission projects,
- changes in technology, such as distributed generation, storage and micro grids, and greater reliance on these technologies,
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- an extended economic recession,
- an inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce, and
- changes in the credit quality and the ability of lessees to meet their obligations under our domestic leveraged leases.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws. The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-11668

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Net Income. Operating Earnings exclude gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and material one-time items. Adjusted EBITDA excludes the same items as our Operating Earnings measure as well as income tax expense, interest expense, depreciation and amortization and major maintenance expense costs at Power's fossil generation facilities. The last two slides in this presentation (Slides A and B) include a list of items excluded from Net Income to reconcile to Operating Earnings and Adjusted EBITDA with a reference to that slide included on each of the slides where the non-GAAP information appears.

Management uses Operating Earnings and Adjusted EBITDA in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results. The presentation of Operating Earnings and Adjusted EBITDA is intended to complement, and should not be considered an alternative to, the presentation of Net Income, which is an indicator of financial performance determined in accordance with GAAP. In addition, Operating Earnings and Adjusted EBITDA as presented in this release may not be comparable to similarly titled measures used by other companies.

Due to the forward looking nature of Operating Earnings and Adjusted EBITDA guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility.

From time to time, PSEG, PSE&G and Power release important information via postings on their corporate website at http://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. The "Email Alerts" link at http://investor.pseg.com may be used to enroll to receive automatic email alerts and /or Really Simple Syndication (RSS) feeds regarding new postings. PSEG meeting materials and other financial releases can be found on the www.pseg.com website under the investor tab, or at http://investor.pseg.com.

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or ongoing low pricing of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulations, including market structures and transmission planning,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators, including prudency reviews and disallowances,
- any deterioration in our credit quality or the credit quality of our counterparties,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations or increase the cost of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- delays or unforeseen cost escalations in our construction and development activities, or the inability to recover the carrying amount of our assets,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- increases in competition in energy supply markets as well as for transmission projects,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies,
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- an extended economic recession,
- an inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce, and
- changes in the credit quality and the ability of lessees to meet their obligations under our domestic leveraged leases.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.
The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-11680

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. The last page in this presentation includes a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings, with a reference to that page included on each of the pages where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS

Focus on transforming Power's portfolio with reliable, efficient, and cleaner energy infrastructure

Selected Accomplishments

2011

- Hope Creek set annual output record
- Nuclear license extensions and uprates achieved

2012

- Peach Bottom 3 set annual output record
- Additional 400 MW of new peaker capacity at Kearny and New Haven
- Superstorm Sandy recovery initiated

2013

- Record annual output from Linden CCGT and Salem 2 Nuclear Unit
- 90% + nuclear capacity factor for 9th straight year
- Bethlehem Energy Center, 2nd gas pipeline connection added

2014

- Record annual output from Bergen CCGT
- PennEast pipeline investment
- CCGT Advanced Gas Path (AGP) uprate investment completed at Linden 1 & 2, 63 MW
- Established PSEG Long Island fuel management operations for 2015 start-up

2015

- Record CCGT fleet annual output
- Continued growth in fleet with 1,300 MW new CCGT's announced
  - Keys
  - Sewaren 7
- Prepared successful bid for 485 MW Bridgeport Harbor 5
- Projects Completed:
  - Peach Bottom EPU, 130 MW
  - Bergen 2 AGP uprate, 31 MW
- HEDD retirement
- Solar portfolio reaches 277 MW_{DC} as of March 2016

Cost Control

SI-SSA-0015-11684

PSEG Power's Portfolio: Our fleet is well positioned in key markets

Right Location

with robust spark spreads

Right Technology

Plant	Heat Rate	Capacity
BERGEN 1	8.3	638
BERGEN 2	7.3	591
LINDEN 1	7.3	621
LINDEN 2	7.3	621
BEC	7.3	757
KEYS NEW	6.9	755
BRIDGEPORT HARBOR NEW	6.5	485
SEWAREN NEW	6.5	540
TOTAL COMBINED CYCLE	**7.2**	**5,008**

PSEG

*ON PEAK SPARK SPREADS FOR CALENDAR YEAR 2018 CALCULATED WITH 7.5 HEAT RATE USING FOLLOWING GAS SOURCES: PJM WEST = HH, PEPCO = TRANSCO Z6 NON-NY, MASS HUB AND ZONE G = ALGONQUIN, PS ZONE = LEIDY. FORWARDS AS OF JANUARY 18, 2016. CAPACITY IN MEGAWATTS

PSEG Power's Portfolio: New York and New England

New York (757 MW)

- Single state ISO
- Multiple gas supplies to BEC gives fuel flexibility and access to Marcellus
- Long Island Power Authority Management Contract

New England (976 MW plus 485 MW new build)

- Small but dynamic market
- Significant improvement in market construct
- Ongoing potential for volatility in extreme (winter) weather conditions
- PSEG Bridgeport Coal plant retirement in 2021
- Gas pipeline infrastructure poses supply challenges/opportunity

+INCLUDES 485 MW NEW BUILD
*SUMMER INSTALLED GENERATING CAPACITY AS OF DECEMBER 31,2015

SI-SSA-0015-11686

Power to invest $2 billion of capital in 1,800 MW of new, efficient CCGT capacity in MD, NJ and CT

- Constructing the 755 MW CCGT Keys Energy Center in Maryland (SWMAAC*) at an estimated cost of $825 to $875 million
- Constructing a new 540 MW CCGT unit, Sewaren in New Jersey (EMAAC*) at a cost of $625 to $675 million which will replace older Sewaren units
- Constructing a new 485 MW CCGT unit, Bridgeport Harbor 5 (ISO NE), at a cost of $525 to $575 million
- Both Keys and Sewaren 7 are targeted to be in-service in 2018 and Bridgeport Harbor 5 in 2019
- Expanding civic stewardship roles and programs in neighboring communities

*SWMAAC = SOUTHWEST/EMAAC = EASTERN MID-ATLANTIC AREA COUNCIL LOCATIONAL DELIVERABILITY AREA WITHIN PJM.

SI-SSA-0015-11687

Power's fleet to be transformed with addition of Keys, Sewaren 7 and Bridgeport Harbor in 2018-2019

Projected Fleet Comparison 2015 to 2020E

*EXCLUDES SOLAR AND KALAELOA E = ESTIMATE CCGT = COMBINED CYCLE GAS TURBINE
**INCLUDES NEW JERSEY UNITS THAT FUEL SWITCH TO GAS.

SI-SSA-0015-11688

PSEG Power's fossil fleet expected to see improvements in efficiency

- AGP (Advanced Gas Path) investments
- CCGT material condition assessment
- Unit testing and testing coordination initiatives
- HEDD retirements
- Keys/Sewaren Combined Cycle Development (2018)
- Bridgeport Harbor 5 Combined Cycle Development (2019)
- Heat Rate Improvement converts to potential savings of $60-$65M in fuel expense (assuming $3/MB gas price)

E = ESTIMATE

PSEG Power's fossil fleet …

Among the lowest emitting in the industry

- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing
- With the addition of new units, emissions continue to improve

Expected to reduce its carbon footprint

- Carbon emission rates projected to steadily approach EPA national pollution standards for New and Reconstructed Natural Gas Combined Cycle (1,000 lbs CO_2/MWh-gross)

E = ESTIMATE

PSEG Power has demonstrated ability to control O&M

Cost control actions taken:

- Fossil plant assessment
- CCGT material condition assessment
- Vendor contract renegotiations
- Nuclear security services brought in-house to control costs
- Nuclear maintenance productivity study
- Nuclear outage efficiency initiative
- Materials management
- Nuclear excellence initiative
- Nuclear staff – Right sizing

*EXCLUDES IMPACTS FROM STORM RECOVERY COSTS. E=ESTIMATE

  - Unit 1 – Spring 2016
  - Unit 2 – Spring 2017

Peach Bottom Units 2 and 3

- Operated by Exelon
- PSEG Ownership: 50%
- Technology: Boiling Water Reactor
- Total Capacity: 2,502 MW
- Owned Capacity: 1,251 MW
- License Expiration: 2033 and 2034
- Next Refueling
  - Unit 2 - Fall 2016
  - Unit 3 - Fall 2017
- Uprate: 130 MW (PS Share)
  - Unit 2 - March 2015
  - Unit 3 – December 2015

SI-SSA-0015-11692

Market Review: PSEG's extensive gas asset portfolio provides unparalleled access to Marcellus Shale gas

- PSEG Power maintains a robust portfolio of pipeline and storage assets in the Mid-Atlantic
- Marcellus Shale gas production reached 18.8 BCF/day in 2015
- PSEG Power procured over 423 BCF in 2015 with approximately 50% going to PSE&G's utility gas customers
- PSEG Power's gas for generation was 150 BCF in 2015, of which >75% was supplied by Northeast Shale gas
- Severe financial stress among the natural gas producer industry is expected to reduce production growth until gas prices rebalance to higher levels
- Investment in the PennEast pipeline expected to provide more access to Marcellus for PSEG

SI-SSA-0015-11693

Market Review: Completion of new pipeline infrastructure expected to move significant quantities of Marcellus gas out of the region by 2018

Pipeline capacity grows significantly by 2018

- Significant amount of new pipelines have already been built and more are in the advanced planning and development stage through 2018
- Gas production and pipeline takeaway capacity estimated to reach equilibrium in 2018 timeframe based on new pipeline development

SI-SSA-0015-11694

Regulatory Framework: New capacity and energy market designs in PSEG's core markets (PJM and New England) will better reward reliable generation units

	ISSUE /POLICY	OUTCOME
PJM	CAPACITY	• Higher payments for enhanced reliability (Capacity Performance) and lower energy revenues have raised absolute and relative value of capacity
	ENERGY PRICE FORMATION	• FERC is driving ISO's to improve their pricing constructs and rules – NOPRs addressing critical RTO issues
	DEMAND RESPONSE RULES	• Stricter rules for eligibility and deployment; focus returns to wholesale reliability/comparability after SCOTUS ruling
	STATE INTERVENTION	• LCAPP: Awaiting Supreme Court decision • Ohio PPA: Challenged at the local level by the IPP industry, PJM and FERC
ISO-NE	CAPACITY	• Continued tightness in capacity markets • Zonal demand curves ordered for FCA 11 (2021) • Nuclear and coal units under pressure; closure of Pilgrim nuclear plant
	ENERGY	• Proposed gas pipelines are receiving regulatory approvals slowly • 5 minute interval LMP settlements and fast start pricing expected Q2 2017
NYISO	CAPACITY	• Retirement of Fitzpatrick and Ginna and Western steam plants tighten market, but NYPSC directed to develop a clean energy standard that recognizes the value of nuclear
	ENERGY	• Improvement in price formation during reserve shortage conditions
FEDERAL	ENVIRONMENTAL REGULATIONS	• CPP rules stayed by SCOTUS • Some states will still prepare implementation plans for 2020+ timeframe

SI-SSA-0015-11695

Capacity Market Pricing: PJM's capacity market is transitioning to recognize operating performance as well as locational value

PJM's RPM Auction Results				
($/MW-day)	2015 / 2016*	2016 / 2017*+	2017 / 2018+	2018 /2019
Power's Average Prices	$168	$172	$177	$215
Rest of Pool Prices	$136	$59	$120	$165/$150 (CP/Base)
Power's Cleared Capacity (MW)	8,750	8,700	8,700	8,650
PJM Capacity Revenues ($M)	$537	$546	$562	$679

2019 Onwards RPM Auction Impacted By:

- Capacity Performance
- Convex Demand Curve
- Change in Net CONE
- Change in PJM Parameters
- Demand response rules
- Elimination of 2.5% Holdback
- Reduction in Load Forecast
- Environmental Retirement

ISO New England's FCA Auction Results				
($/MW-day)	2015 / 2016	2016 / 2017	2017 / 2018	2018 / 2019
Power's Average Prices	$113	$104	$232	$315
Power's Cleared Capacity (MW)	773	777	848	831
NEPOOL Capacity Revenues ($M)	$32	$29	$72	$96

2019/2020 FCA auction cleared at $231/MW-day resulting in $112M in capacity revenues for 1,333 MW

WOLFE RESEARCH – POWER & GAS 2014 DEEP DIVE CONFERENCE

HOUSTON, TEXAS – APRIL 2, 2014

Shahid Malik

PRESIDENT, PSEG ENERGY RESOURCES & TRADE

PSEG

We make things work for you.

We have the **energy** to make things better ... for you, for our investors and for our stakeholders.

SI-SSA-0015-11700

Forward-Looking Statement

Certain of the matters discussed in this communication about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com.

These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient coverage or recover proceeds of insurance with respect to such events,
- cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as competition from certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies and changes in customer behaviors, including energy efficiency, net metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws. The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-11701

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Income from Continuing Operations/Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. Slide A at the end of this presentation includes a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

PSEG Power has generating assets

in three competitive markets

- Assets near loads
- Low cost portfolio
- Fuel flexibility with gas cost advantage
- Poised to benefit from volatility in real-time markets
- Fleet will maintain diversity and efficiency after HEDD retirements
- Most sites suitable for expansion

SI-SSA-0015-11706

Agenda

About PSEG

PSEG Power's Operations

Wholesale Market Positioning

SI-SSA-0015-11707

Power's PJM assets along the dispatch curve reduce the risk of serving full requirement load contracts and can take advantage of volatile market conditions

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel flexibility for >60% of fleet

SI-SSA-0015-11708

PSEG Power's Fossil Fleet Performance

has shown improvement

- Fossil Capacity Factor rebounded with market
- Peaking Units maintain high start success

- Coal EFORp improving
- CC EFORp less than 1% in 2013
- Consistent recipient of EFORp payments

SI-SSA-0015-11709

PSEG

*LM6000 AND 7EA UNITS

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing
- Cost control through testing coordination program

SI-SSA-0015-11710

Investing to expand CCGT capacity and improve efficiency

PSEG Power - CCGT Uprate Project

- Expand Power's CCGT fleet, one of the largest gas-fired portfolios in PJM, with incremental base and peaking MWs
- Retrofit Bergen, Linden and BEC with Advanced Gas Path (AGP) components at cost of ~$120M over 2014 - 2018

AGP Project Benefits

- ✓ CCGT capacity uprates of ~150 MW:
  - Linden (63 MW – 2014)
  - Bergen (31MW – 2015)
  - BEC (58 MW – 2017-18)
- ✓ Increases Efficiency - Combined Cycle (CC) heat rate improvement ~ 1.2%
- ✓ Upgrades technology and extends maintenance outage cycles

SI-SSA-0015-11711

PSEG Solar Source owns 88 MW of operating solar facilities and has one project under construction

Hackettstown (Mars)
New Jersey (2 MW)
COD September 2009
Thin film panels – fixed tilt
Investment $13 million
15 year PPA with Mars, Inc.

Queen Creek
Arizona (25 MW)
COD October 2012
Polycrystalline - single axis tracker
Investment $79 million
20 year PPA with SRP

Wyandot
Ohio (12 MW)
COD May 2010
Thin film panels – fixed tilt
Investment $45 million
20 year PPA with AEP

Milford
Delaware (15 MW)
COD December 2012
Polycrystalline - fixed tilt
Investment $49 million
20 year PPA with DEMEC

JEA
Florida (15 MW)
COD September 2010
Thin film panels – fixed tilt
Investment $59 million
30 year PPA with JEA

Badger I
Arizona (19 MW)
COD November 2013
Polycrystalline - single axis tracker
Investment $50 million
30 year PPA with APS

Shasta
California (4 MW)
Expected COD March 2014
Polycrystalline - single axis tracker
Investment $13 million est.
20 year PPA with PG&E

- Continue to seek high quality projects with creditworthy off-takers.
- Solar portfolio delivers strong EBITDA post-construction period.

SI-SSA-0015-11712

Agenda

About PSEG

PSEG Power's Operations

Wholesale Market Positioning

SI-SSA-0015-11713

Market Review: Prices have stabilized

NYMEX Natural Gas Price

PJM West RTC

PJM West Spark Spreads

- Energy and gas prices appear to have stabilized
- Environmental restrictions may tighten market
- Insufficient gas infrastructure continues to place upward pressure on fuel prices during seasonal peaks

SI-SSA-0015-11714

PSEG

F=FORWARDS AS OF 3/24/14
2014F INCLUDES HISTORY AND FORWARDS AS OF 3/24/14

Market Review: New generation in PJM not keeping pace with coal retirements

Cumulative Generation Retirements*

Forecast Reserve Margin (PJM January 2014)

- PJM forecasts a declining Reserve Margin through 2018, which may improve forward prices
- Brattle estimates energy prices could rise at least $3-4/MWh from today's prices

SI-SSA-0015-11715

PSEG

*PJM AS OF FEBRUARY 20, 2014
SOURCE OF CHART DATA: PJM

Market Review: Regulatory framework showing signs of improvement

	ISSUE / POLICY	REGULATORY GAINS
PJM	SUBSIDIZED GENERATION (NJ and MD)	• Comprehensively defeated in federal court (appeals currently pending)
	DEMAND RESPONSE RULES	• PJM and ISO-NE enacted stricter rules of eligibility and deployment
	ENERGY PRICE FORMATION	• Concerted drive to improve price formation for generation and ancillary services • Waiver of price caps during extreme market conditions
NYISO	TRANSMISSION	• Significant progress made to relieve bottling of upstate generation
ISO-NE	CAPACITY	• Improvement in price formation to better reflect tight supply conditions • Implementation of sloping demand curve in Forward Capacity Auction (FCA) 9
	ENERGY	• Demand response required to participate in Day Ahead markets
FEDERAL	GAS to ELECTRIC	• Better coordination between pipelines and ISO's will promote efficiency
	ENVIRONMENTAL REGULATIONS	• HEDD, HAPS/MACT may lead to tightening of supply in 2015+ timeframe

SI-SSA-0015-11716

Competitive Advantage: PSEG's extensive gas asset portfolio gives unparalleled access to Marcellus Shale gas

SI-SSA-0015-11717

Competitive Advantage: ~25% of Power's gas for generation comes from Marcellus

- Our combined cycle and peaking assets have been able to take advantage of locational gas price volatility driven by production and logistical constraints
- Lower cost shale supply provides additional savings during periods of lower residential gas demand

SI-SSA-0015-11718

Competitive Advantage: Locational advantage from short term basis volatility

PS Zone Annual Basis to PJM-W

PS Zone Day Ahead On Peak Monthly Basis to PJM-W

- Annual basis benefits baseload units
- Intermediate units flexible to seasonal opportunities
- Combined Cycle and Peaking units positioned to optimize daily and hourly volatility

PS Zone Real Time On Peak Hourly Basis to PJM-W

-ANNUAL FORWARD BASIS TO PJM-WEST AS OF 3/24/2014.
-2014F INCLUDES HISTORY AND FORWARDS AS OF 3/24/14

SI-SSA-0015-11719

Competitive Advantage: Trading & Asset Flexibility

PSEG Zone LMP's on January 7, 2014

On Peak Basis to PJM-W on January 7, 2014

Hourly Generation and Load on January 7, 2014

- High gas market at $58/MMbtu setting power prices in PS zone on 1/7/14
- Higher basis to generation
- Base load and load following generation sufficient to cover load and hedge obligations
- Additional steam and peaking generation available above day ahead commitment to gain value from real time market
- Fuel flexibility with coal/gas/oil optionality among available units

SI-SSA-0015-11720

Sustainable Advantage: BGS Auction provides excellent opportunity to forward hedge our generation

BGS sales account for about a quarter of our forward portfolio of hedges

SI-SSA-0015-11721

PSEG

$/MWH; BGS PRICES REFLECT PSE&G ZONE; RESULTS FOR 2012-2014 WILL BE THE NEW BLENDED PRICES BEGINNING JUNE 1, 2014.

Sustainable Advantage: Hedging strategy designed to protect gross margin while leveraging the portfolio

		2014	2015	2016
Base Load (Nuclear and Base Load Coal)	Volume TWh	35	35	35
	% Hedged	100%	75-80%	30-35%
	Price $/MWh	$48	$51	$53
Intermediate Coal, Combined Cycle, Peaking	Volume TWh	20	19	19
	% Hedged	35-40%	0%	0%
	Price $/MWh	$48	$51	$53
Total	Volume TWh	53-55	53-55	53-55
	% Hedged	75-80%	45-55%	20-30%
	Price $/MWh	$48	$51	$53

HEDGE PERCENTAGES AND PRICES AS OF FEBRUARY 11, 2014. REVENUES OF FULL REQUIREMENT LOAD DEALS BASED ON CONTRACT PRICE, INCLUDING RENEWABLE ENERGY CREDITS, ANCILLARY, AND TRANSMISSION COMPONENTS BUT EXCLUDING CAPACITY. HEDGES INCLUDE POSITIONS WITH MTM ACCOUNTING TREATMENT AND OPTIONS. EXCLUDES SOLAR AND KALAELOA.

SI-SSA-0015-11722

Sustainable Advantage: PJM's capacity market is expected to continue to recognize locational value

RPM Auction Results*					
($/MW-day)	2012 / 2013	2013 / 2014	2014 / 2015	2015 / 2016	2016 / 2017
Power's Average Prices	$153	$242	$166	$166	$166
Rest of Pool Prices	$16	$28	$126	$136	$59
Power's Cleared Capacity (MW)	10,400	10,890	10,710	9,210	8,610

2017/2018 RPM Auction Influenced By:

- Updated Demand Curve
- Environmental Retirements
- Minimum Offer Price Rule
- Updated Transfer Capabilities
- New Build/Cost of New Entry
- Demand Response

SI-SSA-0015-11723

PSEG

*PSEG POWER'S AVERAGE PRICES AND CLEARED CAPACITY (MW) REFLECT BASE AND INCREMENTAL RPM AUCTION RESULTS. DELIVERY YEAR RUNS FROM JUNE 1 TO MAY 31 OF THE NEXT CALENDAR YEAR.

Sustainable Advantage: Fuel advantage continues throughout the curve

Forward curve shows that Marcellus shale supply averages over $1.50/MMbtu discount year-round through 2018

SI-SSA-0015-11724

2013 AVERAGE 6/1/13-12/31/13; F= FORWARDS AS OF 3/24/14. LEIDY BASIS FROM ICE/BROKER QUOTES.
2014F INCLUDES HISTORY AND FORWARDS AS OF 3/24/14

PSEG Power exceeded 2013's earnings guidance

OPERATING EARNINGS FOR PSEG POWER IN 2013; SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. *ASSETS TRANSFERRED TO POWER AT YEAR-END 2013.

SI-SSA-0015-11725

PSEG Power's Value Proposition

- Well-positioned fleet of merchant generating assets concentrated in PJM market
- Advantaged by low cost structure, fuel diversity and dispatch flexibility
- Low environmental capital requirements
- Capacity uprates to enhance value of nuclear and combined cycle stations
- Consistent hedging strategy recognizes asset flexibility
- Continue to meet commitments and to provide free cash flow

PLEASE SEE PAGE 3 FOR AN EXPLANATION OF PSEG'S USE OF OPERATING EARNINGS AS A NON-GAAP FINANCIAL MEASURE AND HOW IT DIFFERS FROM NET INCOME.

WOLFE TRAHAN 2013 POWER & GAS DEEP DIVE CONFERENCE

HOUSTON, TEXAS – APRIL 11, 2013

Shahid Malik

PRESIDENT, PSEG ENERGY RESOURCES & TRADE

PSEG

We make things work for you.

We have the **energy** to make things better ... for you, for our investors and for our stakeholders.

SI-SSA-0015-11729

Forward Looking Statement

Readers are cautioned that statements contained in this presentation about our future performance, including future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical, are forward-looking statements for purposes of the safe harbor provisions under The Private Securities Litigation Reform Act of 1995. When used herein, the words “anticipate”, “intend”, “estimate”, “believe”, “expect”, “plan”, “should”, “hypothetical”, “potential”, “forecast”, “project”, variations of such words and similar expressions are intended to identify forward-looking statements. Although we believe that our expectations are based on reasonable assumptions, they are subject to risks and uncertainties and we can give no assurance they will be achieved. The results or developments projected or predicted in these statements may differ materially from what may actually occur. Factors which could cause results or events to differ from current expectations include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units, delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers,
- increase in competition in energy supply markets as well as competition for certain rate-based transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and changes in technology and customer usage patterns.

For further information, please refer to our Annual Report on Form 10-K, including Item 1A. Risk Factors, and subsequent reports on Form 10-Q and Form 8-K filed with the Securities and Exchange Commission. These documents address in further detail our business, industry issues and other factors that could cause actual results to differ materially from those indicated in this presentation. In addition, any forward-looking statements included herein represent our estimates only as of today and should not be relied upon as representing our estimates as of any subsequent date. While we may elect to update forward-looking statements from time to time

SI-SSA-0015-11730

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. The last slide in this presentation includes a list of items excluded from Income from Continuing Operations to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

** TRANSMISSION LOAD GROWTH CAGR UTILIZES 2007 AS BASE YEAR.
*** SPECIFIC PROJECTS APPROVED FOR INCENTIVE RATE TREATMENT WITH ADDITIONAL ROE.

SI-SSA-0015-11734

PSEG Power has generating assets

in three competitive markets

- Low cost portfolio
- Fuel flexibility
- Assets near loads
- Poised to benefit in real time markets
- Fleet will maintain diversity and efficiency in 2016 after HEDD
- Most sites suitable for expansion

SI-SSA-0015-11735

Agenda

About PSEG

PSEG Power's Operations

Wholesale market positioning

SI-SSA-0015-11736

PSEG Power wholesale market strategy

built on a strong asset portfolio

Managing Risks & Creating Value

Consistent hedging strategy • Full load requirements • Capacity sales • Monetize optionality

Diversified Assets & Flexible Dispatch

Safety Performance Culture
Strong operational performance
Fuel switching
Ancillary services

Regulatory Advocacy

Supports competitive markets
Seeks a level playing field
Provides insight
Creates opportunity

SI-SSA-0015-11737

Fleet capacity has been advanced by:

Improved Heat Rate capability

Trading acumen to execute fuel switching opportunities

Reduced O&M and increased start-up success

Capturing new products opportunity with minimal investment

SI-SSA-0015-11738

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- Power is well positioned for HAPS

SI-SSA-0015-11739

PSEG Power delivered in 2012

Storm and weather challenges	Market challenges	Value delivered
• SuperStorm Sandy impacted our generating sites • Warm winter put pressure on demand and pricing for both electricity and gas • Hot summer weather created challenging operating environment	• Unit outages and transmission outages resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by weather and economy	• Cost control • Lower dispatch and fuel cost • Captured value through coal/gas switching, unit flexibility • Improved unit availability • Coal & oil sales optimized inventory • Expedited return from storm outages, restored margin opportunities • Optimized unit dispatch across fleet during storm recovery

SI-SSA-0015-11740

PSEG Power has added value with focus on operational excellence

2008		2012
3,622	Nuclear capacity (MW)	3,632
92%	Nuclear equivalent availability	93%
29.3	Nuclear generation (TWhrs)	29.8
55	Total generation (TWhrs)	53
3,157	CCGT capacity (MW)	3,176
12.1	CCGT generation (TWhrs)	16.2
8.9%	Fossil EFORd	6.3%*
87%	Fossil equivalent availability	90%
63	SO_2 (Ktons)	9
16	NO_x (Ktons)	10

* EXCLUDES SANDY IMPACT.

Agenda

About PSEG

PSEG Power's Operations

Wholesale market positioning

SI-SSA-0015-11742

Spark spread replaces dark spread as major value driver

- Spark spread has risen above dark spread in PJM markets
- Power's gas units operating at record throughput
- Gas operation provides much more operational flexibility
- Enhances the ability of trading organization to capture volatility

SI-SSA-0015-11743

PSEG's locational advantage

and electric basis

- Basis (PS Zone to PJM West) will continue to trend downward for forward sales
- Volatility will remain significant in the prompt periods (especially summer/winter)
- Power maintains sufficient length to participate in upside volatility as well as a valuable 250MW transmission position into NYC
- Basis will continue to have a positive impact on PSEG Power profitability

*AS OF FEBRUARY 14, 2013.

SI-SSA-0015-11744

PSEG's locational advantage

and gas basis

- Lower cost supplies of shale gas have been beneficial to both PSE&G customers and PSEG Power
- Over 50% of our available pipeline capacity can access market area supplies of shale gas
- Power's generating units sit in close proximity to the Marcellus fairway
- Power buys approximately 350BCF/year of gas
- We have been able to arbitrage gas values from South to North and East to West using our storage and pipeline capacity

SI-SSA-0015-11745

Broad Industry Expectations of price trends

- Dry Gas production in the US, while prolific, needs a $4+ Henry Hub price equivalent to maintain growth
- Coal prices appear to have stabilized and oil to gas delta maintains a historically high spread
- We anticipate strong gas consumption growth for industrial use
- Gas prices are under- valued and are trending upwards although there will be occasional downside volatility

- PJM plant retirements are showing up and Plant Replacement to Retirement ratio is low
- Electric demand growth, while muted, will continue at a 0 -1% pace
- Volatility will increase as companies spend less on preventive maintenance, particularly coal fleets
- Electric prices are under- valued and are trending upwards albeit at a moderate pace

SI-SSA-0015-11746

PSEG

* Prices as of 1/31/2013. Ranges based on Bloomberg survey of bank analysts' forecasts and/or three major advisory services

2013 BGS Auction Results for PSE&G Zone

BGS sales account for about a third of our forward portfolio of hedges

SI-SSA-0015-11747

PJM's capacity market continues to recognize locational value of our fleet

$/MW-day	2012 / 2013	2013 / 2014	2014 / 2015	2015 / 2016
Power's Average Prices	$153	$244	$162	$167
Rest of Pool Prices	$16	$28	$126	$136
Power's Capacity (MW)	10,400	10,600	10,300	9,000

2016/2017 RPM Auction Influenced By:

- Updated Demand Curve
- Environmental Retirements
- Minimum Offer Price Rule
- Updated Transfer Capabilities
- New Build/Cost of New Entry
- Demand Response

SI-SSA-0015-11748

Reserve margins in PJM declining with retirements

Generation Deactivation Notifications

Source: PJM TEAC, 1/10/2013

- PJM Pending Deactivation Requests of 12,634 MW as of January 22, 2013
- Approximately 4,000 MW of additional owner announced retirements in PJM through next auction

Forecast Reserve Margin (PJM January 2013)

- PJM forecasts a declining Reserve Margin through 2017

SI-SSA-0015-11749

Regulatory Advocacy

	ISSUE /POLICY	HOW ADDRESSED?
PJM	MOPR	Sufficiency/Exceptions before FERC and courts
	DEMAND RESPONSE RULES	Performance/eligibility/compensation issues before courts, FERC, and PJM stakeholder process
	ANCILLARY/ENERGY	Regulation/Black-start modifications under consideration in PJM stakeholder process before FERC
NYISO	CAPACITY	Jurisdictional dispute at FERC over retirement decisions; Impact of PSC approved Reliability Must Run arrangement on markets
NEPOOL	FCM	Market design issues pending at Court of Appeals, FERC and ISO-NE stakeholder process
FEDERAL	Gas/Electric Coordination	Participation in ISO/FERC/Industry forums

Current Issues

- PJM RPM rules for Capacity Markets
- PJM Energy/Ancillary Services Market
- New England Capacity Markets
- New York Energy Markets
- Trade Associations and ISO/RTO activities

Recent Rulings

- FERC approval of Cost of New Entry (CONE)
- PJM Area Regulation rules
- EPA RICE/NESHAPS rules
- FERC ruling imposing DR must offer requirement in ISO-NE

SI-SSA-0015-11750

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and transmission planning,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as for transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies, and
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-11753

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Income from Continuing Operations/Net Income. Operating Earnings exclude gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends.

The last slide in this presentation (Slide A) includes a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings with a reference to that slide included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

SI-SSA-0015-11754

PSEG POWER OVERVIEW

Shahid Malik
PRESIDENT
PSEG POWER ER&T

PSEG
We make things work for you.

SI-SSA-0015-11755

PSEG Power Highlights

Regional Competitive Generation

Strategy: Investment program enhances competitive position with addition of efficient CCGT capacity

Value Proposition: Provides substantial free cash flow in current environment and upside from market rule improvements

2014

Assets $12B
Operating Earnings $642M

Planned investment of $3.6B (2015-2019) focused on re-positioning fleet to enhance efficiency and reliability

New CCGT Project Development:
- Keys Energy Center (MD): 755 MW CCGT (2018)
- Sewaren 7 (NJ): 540 MW CCGT (2018)

Uprates and Other Investments:
- 151 MW of Advanced Gas Path uprates for a total investment of $157 million
- 130 MW of nuclear uprates for a total investment of $417 million
- Early site permit – NRC

Retired ~1,400 MWs of peakers in 2015 to comply with NJ HEDD rules, with plans to retire ~550 MW of older Sewaren units in 2018

12 facilities totaling 148 $MW_{(DC)}$ of utility-scale solar

SI-SSA-0015-11756

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2014.
SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS.

PSEG Power has generating assets

in three competitive markets

- Assets located near load centers
- Low cost portfolio
  - Fuel flexibility with gas cost advantage
- Positioned to benefit from volatility in real-time markets
- Readiness for capacity performance (CP) in PJM
- Sites suitable for expansion

SI-SSA-0015-11757

PSEG Power will improve diversity and efficiency as we invest in the fleet

Objective 2015 → 2018

Maintain
- Fuel diversity
- Load-serving capability
- Low cost structure

Complete
- Peach Bottom (PB) uprate
- Advanced Gas Path (AGP)

Invest
- Combined cycle units Keys and Sewaren 7 operational in 2018

Fuel Diversity

13,146 MW 12,600 MW

Energy Produced

54 TWh 57 - 59 TWh

E=ESTIMATE.

Market Review: PSEG's extensive gas asset portfolio gives unparalleled access to Marcellus Shale gas

Power's Gas for Generation in 2014

- PSEG Power maintains a robust portfolio of pipeline and storage assets in the Mid-Atlantic
- PSEG Power's gas for generation was ~100 BCF in 2014, of which >60% was supplied by Shale gas
- PSEG Power procured over 400 BCF in 2014 with ~75% going to PSE&G's utility gas customers
- When gas is surplus to customer needs, PSEG Power sells surplus to others; margins from such sales benefit PSE&G gas customers and PSEG Power

SI-SSA-0015-11759

PSEG Power developing 1,300 MW of new, efficient CCGT capacity in MD and NJ

- **Construction of 755 MW Keys Energy Center to begin this Fall** on a new, natural gas fired power plant in Maryland (SWMAAC*) at an estimated cost of **$825 to $875 million**
- Power cleared a new **540 MW CCGT unit, Sewaren 7 located in New Jersey (EMAAC*)**, in the recent 2018/2019 RPM auction; the unit is expected to cost ~$600 million and is targeted to be in service in 2018; older Sewaren units will be retired upon completion of the new unit
- **PSEG Fossil** will oversee the construction and operation of both PSEG Keys Energy Center and Sewaren 7

SI-SSA-0015-11760

PSEG

*SWMAAC = SOUTHWEST/EMAAC = EASTERN MID-ATLANTIC AREA COUNCIL LOCATIONAL DELIVERABILITY AREA WITHIN PJM.

PSEG Power increased capital spending

by $1.6 billion with addition of new generating capacity focused on improving efficiency and reliability

SI-SSA-0015-11761

*BASED ON CURRENTLY KNOWN AND QUANTIFIABLE ENVIRONMENTAL REQUIREMENTS. E=ESTIMATE.

PSEG Power initiatives result in

continuing improvement in combined cycle heat rate

*The weighted average Combined Cycle Operating Heat Rate in 2018, with the addition of Sewaren 7 and Keys Energy Center, will be approximately 7,250

SI-SSA-0015-11762

PSEG

E= ESTIMATE.

Capacity Market Pricing: ~98% of Power's PJM fleet that cleared the 2018/2019 RPM auction **met the new CP standards**

RPM – Auction Results				
Delivery Year	2015 / 2016*	2016 / 2017*+	2017 / 2018+	2018 / 2019
Power's Average Prices*($/MW-day)	$168	$172	$177	**$215**
RTO Prices ($/MW-day)	$136	$59	$120	$165/$150 (CP/Base)
Power's Cleared Capacity (MW)	8,750	8,700	8,700	**8,650**
PJM Capacity Revenues ($ Millions)				
Calendar Year	2016	2017	2018	Through 5/31/19
Capacity Revenues	$542	$555	$631	$281

… Recent capacity auctions provide for growth in capacity revenue into 2019

2018/2019 RPM Auction Highlights

- Cleared new 540 MW Sewaren 7 CCGT
- CP reflects cost to meet new performance obligation
- EMAAC separated
- CP construct favors portfolio approach

*PSEG POWER'S AVERAGE PRICES AND CLEARED CAPACITY (MW) REFLECT BASE AND INCREMENTAL AUCTIONS.
DELIVERY YEAR RUNS FROM JUNE 1 TO MAY 31 OF THE NEXT CALENDAR YEAR.
+ INCLUDES CP TRANSITION AUCTION RESULTS FOR '16/'17 AND '17/'18 AS OF SEPTEMBER 10, 2015.

SI-SSA-0015-11763

NJ default service provides Power the ability to forward hedge generation and protect energy basis

NJBGS sales account for approximately 20% of our forward portfolio of hedges

SI-SSA-0015-11764

PSEG

$/MWH; BGS PRICES REFLECT PSE&G ZONE; RESULTS FOR 2013-2015 ARE THE NEW BLENDED PRICES BEGINNING JUNE 1, 2015.

Regulatory Framework: Significant reforms implemented and new rules being promulgated to improve energy and capacity market designs

	ISSUE /POLICY	OUTCOME
PJM	CAPACITY	• Higher payments for enhanced reliability (Capacity Performance) • Tighter performance obligations for Demand Resonse

	ENERGY	• FERC directed improvements to energy price formation:
		  • 5 minute settlement (FERC Notice of Proposed Rulemaking)
		  • Developing day-ahead hourly offers/real-time reoffers in Q4 2016

ISO-NE	CAPACITY	• Implemented two settlement capacity market (Pay for Performance) • Higher prices in recent auction better reflect tight supply conditions in concert with implementation of sloped demand curve in FCA 9 • Supply and demand near equilibrium • Zonal demand curves expected in FCA 11
	ENERGY	• Implemented day-ahead hourly offers/real-time reoffers in Q4 2014 • Reserve market prices better reflect scarcity prices • 5 minute settlement expected implementation Q1 2017
NYISO	CAPACITY	• New Capacity Zone (LHV) leads to more accurate price signals • FERC directed NYISO to develop RMR Rules in place of NYPSC rules
	ENERGY	• Improvement in price formation during reserve shortage conditions
FEDERAL	DEMAND RESPONSE	• *FERC v. EPSA* before Supreme Court and national implications • DC Circuit RICE NESHAPs decision affecting diesel engines pending
	ENVIRONMENTAL REGULATIONS	• HEDD, CPP, HAPS/MACT will lead to tightening of supply in 2015+ timeframe

SI-SSA-0015-11765

Energy Price Formation -- Getting Prices Right

- The energy market provides the primary economic signal to all commercial entities in the market
- FERC Notice of Proposed Rulemaking (RM15-24)
  - ✓ Addresses two issues for all FERC jurisdictional RTOs/ISOs:
    - Alignment of settlement pricing with dispatch intervals
    - Shortening the timeframe for recognizing scarcity pricing
  - ✓ These two items are the start of a series of steps the Commission plans to take on price formation

SI-SSA-0015-11766

Power – Growing value by improving market rules and developing investment opportunities

Value Source	Opportunities and Actions Taken
Improving rules will better recognize value of our fleet	• PJM's Capacity market – 2014 limits on demand response and August 2015 Capacity Performance auction • Demand response treatment at U.S. Courts / FERC • Energy price formation at FERC • Increasing air quality standards via Federal and State regulations
Our footprint provides growth opportunities	• Nuclear and Combined Cycle plant uprates underway • New build Keys CCGT in SWMAAC* (MD) and Sewaren 7 in EMAAC* • Brownfield expansions at existing sites ➢ New peakers built at New Haven and Kearny sites ➢ Continue to explore further opportunities • PennEast pipeline - equity investment and gas portfolio enhancement • ~148 MW** of utility-scale solar, with significant project pipeline • Continue to seek opportunities to expand the fleet

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, capacity market design, transmission planning and cost allocation rules, including how transmission projects are planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as competition for certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies, and
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. The last slides in this presentation include a list of items excluded from Net Income to reconcile to Operating Earnings, with a reference to those slides included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

EXECUTIVE VICE PRESIDENT AND
CHIEF FINANCIAL OFFICER

Kathleen Lally

VICE PRESIDENT
INVESTOR RELATIONS

PSEG

We make things work for you.

SI-SSA-0015-11772

PSEG's Strategy – delivering results

Our businesses' focus on cost-effective, reliable operations yields strong cash flow

We are funding growth-oriented investments aligned with customer needs and state energy policies

We are enhancing the competitiveness of our environmentally well-positioned generation business

The results of our financial strategy support a credit profile capable of meeting our corporate objectives and providing sustained dividend growth for our shareholders

SI-SSA-0015-11773

Two complementary businesses

Strong asset platform, performing well and positioned for the future

PSEG

PSE&G	PSEG Power LLC
Electric & Gas Delivery and Transmission	**Regional Competitive Generation**
Strategy: Positioned to meet customers' needs as we respond to state and federal energy policy and economic growth objectives **Value Proposition:** An $11.3 billion infrastructure program – focused on transmission – that is expected to produce double-digit rate base growth through 2016	**Strategy:** Fuel diverse fleet is geographically and environmentally well positioned, with investments to enhance competitiveness **Value Proposition:** Provides substantial free cash flow in current environment and poised for price recovery
2013 — Assets $20B Operating Earnings $612M	2013 — Assets $12B Operating Earnings $710M

SI-SSA-0015-11774

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2013.
PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT, PSEG LONG ISLAND AND ENERGY HOLDINGS ACTIVITY.
SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS.

Delivering on commitments and pursuing opportunities for growth

Operational Excellence	• Power: Record 2013 output at Linden CCGT and Salem 2; nuclear capacity factor greater than 90% for 9th straight year • PSE&G: Mid-Atlantic Reliability Award (12th consecutive year) • PSEG Long Island: Went "live" on January 1, 2014 • PSEG: Cost-control benefits continue
Financial Strength	• Strong cash flows supported credit rating increases • Pension fully funded • Dividend increased
Disciplined Investment	• PSE&G ✓ Transmission capital program execution and growth ✓ Energy Strong infrastructure program underway ✓ Solar 4 All Extension and Solar Loan III programs • Power: Investments to enhance the fleet's competitiveness – 130 MW Nuclear uprate, 150 MW CCGT uprate and efficiency improvement

SI-SSA-0015-11775

Operating Earnings Mix

Long term investment program has driven increased earnings contribution from stable, regulated business

Power's diverse fuel mix and dispatch flexibility continues to generate earnings and free cash flow

PSE&G's investment in transmission has diversified its asset base and, coupled with other investments and cost controls, supported compound annual earnings growth of ~18% over 2009 – 2013

SI-SSA-0015-11777

PSEG's business profile has been transformed through significant growth in utility capital spending, and we have consistently identified attractive opportunities for additional investment

SI-SSA-0015-11778

Energy Strong Agreement recognizes benefits of system investments

- **Energy Strong Agreement reached with all parties**
  - ✓ Agreement recognizes the benefits of system investments that prevent or shorten outages
  - ✓ Supports $1.22 billion capital program over several years on reasonable terms: $1 billion recovered through accelerated, rate recovery mechanism
    - $820 million Electric
    - $400 million Gas
  - ✓ Allows PSE&G to earn a 9.75% ROE on the $1 billion recovered on accelerated basis
  - ✓ Requires PSE&G to file a base rate case by November 2017
  - ✓ Approved by the NJBPU in May 2014
- **Over 100 New Jersey municipalities supported Energy Strong**
- **Energy Strong agreement clears path for PSE&G to begin the initial phase of this robust capital program**

SI-SSA-0015-11779

PSEG Power – Value-advantaged through asset diversity, fuel flexibility, location and installed environmental controls

Fuel Diversity

- Base load

SI-SSA-0015-11780

PSEG – Year to Date 2014 Highlights

- **Operating Earnings YTD up 9% to $2.27 per share from $2.09 for YTD 2013**
  - ✓ PSE&G on track to record double-digit growth in earnings on expanded capital investment program
  - ✓ PSEG Power expected to earn at upper level of expectations for the full year
  - ✓ Narrowed 2014 full–year, operating earnings guidance to $2.60-$2.75 per share, from $2.55-$2.75 per share prior

- **Executing on our capital program**
  - ✓ Replacement of PSE&G's gas cast-iron pipe underway as part of $1.22 billion Energy Strong capital program
  - ✓ Major transmission projects under $6.8 billion capital program are on-time and on-budget

- **Market developments**
  - ✓ PJM proposed changes to its Reliability Price Model, Demand Curve Adjustment and pending Demand Response (DR) issues supportive of price formation

SI-SSA-0015-11781

PSEG – 2014 Another Year of Growth

2014 operating earnings guidance narrowed; forecast full-year at upper end of range, assuming normal weather and unit operations for rest of year

Balance Sheet Strength

2009 – 2013: Reduced risk profile and transformed business mix

- Invested $8.4 billion in PSE&G
- Improved credit ratings
- Monetized and de-risked Holdings' portfolio

2014 – Forward: Strong cash flows and increasingly regulated business mix fully support:

- PSE&G's $11.3 billion approved investment program through 2018
- Opportunity for consistent and sustainable dividend growth
- Additional investment capacity to deploy in opportunities beyond those in the current capital plan
- No need to issue equity

SI-SSA-0015-11783

Investment opportunities exceeding $1 billion

Focused on providing our customers with access to low-cost gas and cost-effective technologies that reduce emissions as they also improve system reliability

Potential Investment	Description	Amount ($ Millions)
Bridgeport Harbor Station	New 450 MW CCGT Unit	$500 -- $700
PSEG -- Long Island	Utility 2.0 Energy Efficiency Filing	$200 -- $345
Artificial Island	FERC 1000 Project*	$250 -- $300
PennEast Pipeline	Equity Interest	$100 -- $120
PSE&G Energy Efficiency	Program Extension	$100 -- $100
Total		$1,150-$1,565

*Artificial Island Project includes amount for related compensator which has been assigned to PSE&G.

SI-SSA-0015-11784

PSEG Annual Dividend – A long history of growth and returning cash to shareholders with a financial position that provides opportunity for consistent and sustained growth

SI-SSA-0015-11785

E = ESTIMATE. DATA AS OF MARCH 31, 2014.

Energy Strong Agreement supports customers' needs in the aftermath of Superstorm Sandy

- Settled with NJBPU Staff and all other parties in May 2014 for $1.22 billion; approved by the NJBPU in May 2014
- Program addresses system resiliency and hardening by:
  - ✓ $620 million to raise, relocate or protect 29 switching and substations that were damaged by water in recent storms
  - ✓ $350 million to replace and modernize 250 miles of low-pressure, cast iron gas mains in or near flood areas
  - ✓ $100 million to create redundancy in the electric system, reducing outages when damage occurs
  - ✓ $100 million to deploy smart grid technologies to better monitor system operations to increase our ability to more swiftly deploy repair teams
  - ✓ $50 million to protect five natural gas metering stations and a liquefied natural gas station affected by Sandy or located in flood zones

SI-SSA-0015-11795

Over 70% of PSE&G's $11.3 billion investment program will be recovered through contemporaneous mechanisms

2014-2018E PSE&G Capital Spending by Recovery Method

$11.3 Billion

The Energy Strong impact to customer bills is expected to be fully offset

OUT-YEAR BGS/BGSS, SBC, AND DISTRIBUTION RATES HELD CONSTANT AT CURRENT 2014 RATES.
RATES RELATED TO ELECTRIC RESTRUCTURING: SECURITIZATION (STC), NON-UTILITY GENERATION CHARGE (NGC), & TRANSITIONAL ENERGY FACILITIES ASSESSMENT (TEFA), ARE REDUCED TO ZERO BY 2017. THE RGGI RECOVERY CHARGE (RRC), SOLAR PILOT RECOVERY CHARGE (SPRC), AND CAPITAL ECONOMIC STIMULUS INFRASTRUCTURE INVESTMENT PROGRAM EXTENSION (CIP II) BILL IMPACTS ARE INCLUDED IN THEIR RESPECTIVE GAS AND ELECTRIC BARS AND FORECASTED IN OUT-YEARS BASED UPON LATEST ESTIMATE. ENERGY STRONG BILL IMPACTS ARE BASED UPON SETTLEMENT.

SI-SSA-0015-11797

PSE&G TRANSMISSION

PSEG

We make things work for you.

SI-SSA-0015-11798

Transmission has delivered, and has grown to represent ~36% of rate base

Transmission represented ~36% of rate base at YE 2013 up from ~15% at YE 2009

SI-SSA-0015-11799

PSE&G's existing major transmission

investment program remains on schedule and on budget

Major Transmission Projects

Project Roster	Approved ROE	Inclusion of CWIP in Rate Base	100% Recovery of Costs Due to Abandonment	Project Estimate Up To ($ Millions)	Expected In-service Date
Susquehanna-Roseland	12.93%	✓	✓	$790	June 2014 / June 2015
Northeast Grid Reliability	11.93%	✓	✓	$907	Jun-Dec 2015
North Central Reliability	11.68%	✓	✓	$390	Completed
Burlington–Camden 230kV	11.68%	✓	✓	$399	Completed
Mickleton–Gloucester–Camden 230kV	11.68%	✓	✓	$435	June 2015
Bergen—Linden Corridor 345kV	11.68%	✓	✓	$1,200	June 2018

SI-SSA-0015-11800

Susquehanna-Roseland consists of constructing 150 miles of 500kV circuit (46 miles in NJ) with two new 500kV GIS switching stations at Roseland and Hopatcong

Project Estimate Up To*	Through Year-end 2013	Expected In-service Date
$790M	$661M	Phase 1 – **Completed** Phase 2 – June 2015

- PJM RTEP project b0489
- ROE of 12.93% (including 1.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Improves reliability and reduces congestion

Project Status: The eastern part of line from Hopatcong to Roseland, NJ in service April 2014; NJ construction phase completed in 2014. PA portion outside plant construction in progress. Western portion in NJ and the PA portion is planned to go in service June 2015.

SI-SSA-0015-11801

*PROJECT IS SHARED WITH PPL. PROJECT ESTIMATE REPRESENTS PSE&G'S CONSTRUCTION RESPONSIBILITY FOR THE NJ PORTION.

Northeast Grid Reliability consists of upgrading approximately 50 overhead circuit miles of 138kV transmission line to 230kV, constructing ~18 miles of new underground 230kV lines, and converting/upgrading 12 existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$907M	$228M	Jun - Dec 2015

- PJM RTEP project b1304
- ROE of 11.93% (including 0.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment
- Project estimate has increased ~$12M associated with hardening related scope changes as a result of Superstorm Sandy

Customer Benefit: Improves reliability and increases transfer capability

Project Status: Nearing completion of engineering/design and licensing/permitting phase. Outside and inside plant construction are in progress

SI-SSA-0015-11802

North Central Reliability consists of upgrading 55 circuit miles of 138kV transmission line to 230kV, and converting six existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$390M	$349M	Completed

- PJM RTEP project b1154
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Improves power quality and increases transfer capability

Project Status: In service April 2014

SI-SSA-0015-11803

Burlington-Camden 230kV consists of upgrading 37 circuit miles (30 miles of overhead and 7 miles of underground) of 138kV transmission line to 230kV, converting the existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$399M	$301M	Completed

- PJM RTEP project b1156
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Addresses voltage reliability and increases transfer capability

Project Status: In service April 2014

SI-SSA-0015-11804

Mickleton-Gloucester-Camden 230kV

consists of upgrading 10 circuit miles of overhead transmission, installing ~16 circuit miles of new 230kV underground, 10 circuit miles of new 230kV overhead, and modifications/upgrades at five existing stations

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$435M	$122M	June 2015

- PJM RTEP project b1398
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Addresses thermal reliability and increases transfer capability

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-11805

Bergen-Linden Corridor is a recently approved project which will provide a double-circuit 345kV line to maintain reliability

Project Estimate Up To	Through Year-end 2013	Expected Completion Date
$1,200M	-	June 2018

- PJM RTEP project b2436
- 30 miles of underground cable
  - New ~ 23 miles
  - Reconductor (Upgrade of 138 to 345) ~7 miles
- 13 miles of double circuit overhead conductor (replacing double circuit 138 with double circuit 345)
- 11 station upgrades to 345kV

Customer Benefit: Addresses thermal and short-circuit reliability

Project Status: Engineering

SI-SSA-0015-11806

Planned transmission spend of $6.8 billion

is driven by PJM reliability projects, 69kV conversions and life-cycle replacement projects

E= ESTIMATE. DATA AS OF MARCH 31, 2014.

PSE&G's processes and culture are the foundation for project execution success

People

- Diverse, well-rounded team
- Culture with a focus for on-time, on-scope and on-budget execution
- Successful recruitment, development and retention strategies
- Strong unions and supplier relationships

Process

- Cradle to grave project execution organization
- Processes designed to be scalable, repeatable and improvable
- Emphasis on best practices and lessons learned sharing
- Improvements driven by performance metric management

Environment

- Collaborative relationship with regulatory agencies
- Innovative design and construction practices to minimize environmental impacts
- Robust environmental compliance system

SI-SSA-0015-11808

PSE&G's demonstrated ability to successfully execute large projects leaves us well positioned to pursue new opportunities

- Future RTEP as identified by PJM
- Near-term participation in RTO competitive open planning windows
  - PJM
  - MISO
  - NYISO
- Participating in competitive solicitations under FERC 1000 -- Artificial Island recommendation

SI-SSA-0015-11809

PSE&G's 2014 operating earnings

to benefit from increased investment in transmission and on-going cost control

PSEG LONG ISLAND

PSEG

We make things work for you.

SI-SSA-0015-11811

PSEG was selected to operate Long Island Power Authority's (LIPA) electric transmission and distribution system for 12 years starting in 2014

- Pursuant to the Operating Services Agreement (OSA), all expenses and capital costs to operate the system are pre-funded by LIPA and passed through to their customers
- Compensation consists of a fixed fee and an incentive fee
  - Fixed compensation fee for 2014 with scheduled increases in 2015 and 2016
  - PSEG Energy Resources and Trading (ER&T) began managing LIPA's fuel/energy contracts on January 1, 2015
  - PSEG Long Island expected to contribute $0.03 to operating earnings in 2014 increasing to $0.07 per share in 2016 including contribution at ER&T
- Potential for an 8-year extension of the OSA

SI-SSA-0015-11812

PSEG Long Island commenced operations

on January 1, 2014

Key elements of Operating Services Agreement

Increased PSEG scope and control	Use of PSEG brand as PSEG Long Island	3-Year rate freeze (2013-2015)
Performance metrics	NY Department of Public Service oversight	Utility 2.0 – Expanded program filed ~$345 million

Early performance

Successful transition to PSEG Long Island	Improved stakeholder communications	Achieving reliability and customer satisfaction metrics

SI-SSA-0015-11813

PSEG POWER

PSEG

We make things work for you.

SI-SSA-0015-11814

PSEG Power strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-11815

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus Fleet Diversity/Efficiency Focus	Financial/Economic Focus	Regulatory Focus
• Nuclear units operated at over 90% capacity factors for the 9th consecutive year through 2013 • Fleet diversity across the dispatch curve and fuel types provide flexibility to meet changing conditions • Linden CCGT and Salem 2 nuclear unit achieved record output in 2013	• "Getting the most out of existing fleet" • Locational advantage • O&M control programs have delivered a CAGR of 1.6% between 2009 and 2014 • Sites offer competitive advantage for expansion	• Strong regulatory performance • Industry leadership in the changing business environment

SI-SSA-0015-11816

PSEG Power Delivering on priorities

Operational Excellence	• Maximize value of existing generating plants through implementation of the Operational Excellence Model (OEM) • Workforce engagement and development	• OEM implemented and achieving measures • Resource sharing program initiated
Financial Strength	• Deliver on Business Plan Commitments • Maintain competitive markets and improve constituent communication on issues important to Power	• Exceeded earnings guidance in 2013 • Ongoing effort in key markets showing success • Successful court outcome against subsidized generation
Disciplined Investment	• Successfully complete the Advanced Gas Path (AGP) uprates • Seek new opportunities in target markets (PJM, ISO-NE, NYISO) • Develop our renewables business (solar) • Maintain new nuclear option by successfully managing the Early Site Permit (ESP) process	• Accelerated schedule for AGP to maximize opportunity • LIPA contract for fuel and generation dispatch began January 1, 2015 • New Rockfish solar project brings Solar Source's portfolio to 123 MW • Nuclear ESP is expected in 2015

SI-SSA-0015-11817

PSEG Power met 2013 challenges

Storm and weather challenges	+	Market challenges	=	Value delivered
• SuperStorm Sandy impacted our generating sites • Cold and hot weather extremes created challenging operating environment, but also presented opportunities		• Unit outages and planned transmission outages resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by economy		• Optimized unit dispatch across fleet during storm recovery • Expedited return from storm outages, restored margin opportunities • High availability when needed • Achieved fuel cost savings • Captured value through coal/gas switching, unit flexibility • Coal & oil sales optimized inventory • Flexibility of portfolio captured real-time basis opportunities

SI-SSA-0015-11818

PSEG Power exceeded 2013's earnings guidance

OPERATING EARNINGS FOR PSEG POWER IN 2013; SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. *ASSETS TRANSFERRED TO POWER AT YEAR-END 2013.

SI-SSA-0015-11819

PSEG Power has generating assets

in three competitive markets

- Assets near loads
- Low cost portfolio
- Fuel flexibility with gas cost advantage
- Poised to benefit from volatility in real-time markets
- Fleet will maintain diversity and efficiency after HEDD
- Most sites suitable for expansion

SI-SSA-0015-11820

PSEG Power will maintain diversity and efficiency after a realignment of the fleet due to HEDD

Objective 2013 → 2017

- Maintain fuel diversity
- Maintain load-serving capability
- Maintain low cost structure
- Environmental improvement
- Peach Bottom (PB) uprate
- Advanced Gas Path (AGP)
- Kalaeloa and Solar transfer adds ~200MW of capacity

Fuel Diversity

Energy Produced

E=ESTIMATE.

SI-SSA-0015-11821

Power's PJM assets along the dispatch curve reduce the risk of serving full requirement load contracts and can take advantage of volatile market conditions

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel flexibility for >60% of fleet

SI-SSA-0015-11822

PSEG Power Nuclear is a critical element of our success

Hope Creek	Salem Units 1 and 2	Peach Bottom Units 2 and 3
• Operated by PSEG Nuclear • PSEG Ownership: 100% • Technology: Boiling Water Reactor • Total Capacity: 1,178 MW • Owned Capacity: 1,178 MW • License Expiration: 2046 • Next Refueling ➢ Spring 2015	• Operated by PSEG Nuclear • PSEG Ownership: 57% • Technology: Pressurized Water Reactor • Total Capacity: 2,365 MW • Owned Capacity: 1,358 MW • License Expiration: 2036 and 2040 • Next Refueling ➢ Unit 1 – Spring 2016 ➢ Unit 2 -- Fall 2015	• Operated by Exelon • PSEG Ownership: 50% • Technology: Boiling Water Reactor • Total Capacity: 2,251 MW • Owned Capacity: 1,125 MW • License Expiration: 2033 and 2034 • Next Refueling ➢ Unit 2 – Spring 2016 ➢ Unit 3 – Fall 2015 • Uprate: 130 MW (PS Share) Unit 2 - 2015/Unit 3 - 2016

SI-SSA-0015-11823

PSEG Power Nuclear is core to the fleet and has competitive advantages

- Continued strong nuclear operations: nine consecutive years of >90% capacity factor through 2013
- Significant earnings contributor
- Top quartile of cost performance/MWh
- One third new staff, recruitment of the best new and experienced talent, and attractive training program
- Fukushima action plan in response to NRC staff review
  - FLEX* plan submitted with implementation starting with Fall outage
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

*STRATEGY KNOWN AS THE "DIVERSE AND FLEXIBLE MITIGATION CAPABILITY" OR FLEX, ADDRESSES RECOMMENDATIONS OF THE NUCLEAR REGULATORY COMMISSION'S FUKUSHIMA TASK FORCE.

SI-SSA-0015-11824

Power's nuclear fleet is well positioned

with significantly lower-than-average US cost structure

*SOURCE: ELECTRIC UTILITY COST GROUP
** SOURCE: PSEG NUCLEAR

SI-SSA-0015-11825

PSEG Power's Fossil Fleet Performance

has shown improvement

- Fossil Capacity Factor rebounded with market
- Peaking Units maintain high start success

- Coal EFORp improving
- CC EFORp less than 1% in 2013
- Consistent recipient of EFORp payments

SI-SSA-0015-11826

PSEG

*LM6000 AND 7EA UNITS

PSEG Power improvements achieved in combined cycle fleet efficiency

Combined Cycle Operating Heat Rate

Actions Taken to Create Value

- Operational Excellence Model
- Training programs
- Unit testing initiative
- Outage work to restore efficiency
- Second gas line at BEC

- Heat rate improvement 2008-2013 translates to meaningful fuel savings at current market prices

- Advanced Gas Path (AGP) investments 2014 through 2018 to provide additional fuel savings

SI-SSA-0015-11827

*E= ESTIMATE.

Investing to expand CCGT capacity and improve efficiency

PSEG Power - CCGT Uprate Project

- Expand Power's CCGT fleet, one of the largest gas-fired portfolios in PJM, with incremental base and peaking MWs
- Retrofit Bergen, Linden and BEC with Advanced Gas Path (AGP) components at cost of ~$120M over 2014 - 2018

AGP Project Benefits

- ✓ CCGT capacity uprates of ~150 MW:
  - Linden (63 MW – Completed)
  - Bergen (31 MW – 2015)
  - BEC (58 MW – 2017-2018)
- ✓ Increases Efficiency - Combined Cycle (CC) heat rate improvement ~ 1.2%
- ✓ Upgrades technology and extends maintenance outage cycles

SI-SSA-0015-11828

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing
- Cost control through testing coordination program

SI-SSA-0015-11829

PSEG Power's capital expenditures for environmental requirements are essentially complete*

*BASED ON CURRENTLY KNOWN AND QUANTIFIABLE ENVIRONMENTAL REQUIREMENTS. E=ESTIMATE. DATA AS OF MARCH 31, 2014.

PSEG Power: Enjoys real and sustainable advantages in the merchant generation space

Market Review

- Gas, Power, Spark Spreads
- Regulatory construct

PSEG's Competitive Advantage

- Fuel flexibility
- Heat Rate diversity
- Access to Marcellus Shale gas
- Asset flexibility

PSEG's Sustainable Advantage

- Positive cash-flow hedging into the long-term
- Robust capacity market pricing in most concentrated load pocket in US
- Long-term access to discounted Marcellus gas

SI-SSA-0015-11835

Market Review: Long-term fundamentals remain sound

NYMEX Natural Gas Price

PJM West RTC

PJM West Spark Spreads

- Market influenced by increased gas supply and capacity retirements
- Insufficient gas infrastructure continues to place upward pressure on fuel prices during seasonal peaks
- Market liquidity remains weak beyond 2015

SI-SSA-0015-11836

PSEG

F = FORWARDS AS OF DECEMBER 17, 2014; 2014F INCLUDES HISTORY AND FORWARDS.

Market Review: New generation in PJM not keeping pace with coal retirements

Cumulative Generation Retirements*

Forecast Reserve Margin (PJM October 2014)

- PJM forecasts a declining Reserve Margin through 2018, which may improve forward prices
- Brattle estimates energy prices could rise at least $3-4/MWh from today's prices

SI-SSA-0015-11837

PSEG

*PJM AS OF DECEMBER 23, 2014
SOURCE OF CHART DATA: PJM

Competitive Advantage: Heat Rate Diversity & Flexible Dispatch

SI-SSA-0015-11838

Competitive/Sustainable Advantage:

PSEG expanding supply of low-cost Marcellus gas

Proposed PennEast Pipeline Project

- PSEG plans to invest $100 - $120 million in the to-be-constructed PennEast Pipeline, a 105.5 mile pipeline that would bring gas from eastern Pennsylvania to New Jersey
- PSEG ER&T would contract for approximately 125mmcf/day of PennEast's 1 bcf/day capacity under a 15-year contract; other project sponsors have committed to offtake ~500mmcf/day
- PSEG and its customers would benefit from the displacement of higher-cost, Gulf Coast gas supply
- Targeted in-service date is November 2017

SI-SSA-0015-11839

Industry infrastructure build through 2018

to meet demand growth

New investment will increase pipeline takeaway capacity from low-cost Marcellus and Utica shale basins to meet demand in the South and Midwest

SI-SSA-0015-11840

Sustainable Advantage: Forward power curves indicate PSEG Zone retains premium price

Growing importance of the winter peak has influenced PJM reliability planning … with supportive implications for price formation

SI-SSA-0015-11841

PSEG

* MARKET AS OF DECEMBER 17, 2014
SOURCE: ICE/BROKER QUOTES

Competitive Advantage: PSEG's extensive gas asset portfolio gives unparalleled access to Marcellus Shale gas

SI-SSA-0015-11842

Competitive Advantage: In 2014, ~40% of Power's gas for generation comes from Marcellus

- Our Combined Cycle and Peaking assets have been able to take advantage of locational gas price volatility driven by production and logistical constraints
- Lower cost shale supply provides additional savings during periods of lower residential gas demand

SI-SSA-0015-11843

PSEG

* AS OF DECEMBER 17, 2014

Competitive Advantage: Locational advantage from short term basis volatility

PS Zone On Peak Annual Basis to PJM-W

PS Zone Day Ahead On Peak Monthly Basis to PJM-W

PS Zone Real Time On Peak Hourly Basis to PJM-W

- Annual basis benefits baseload units
- Intermediate units flexible to seasonal opportunities
- Combined Cycle and Peaking units positioned to optimize daily and hourly volatility

SI-SSA-0015-11844

PSEG

ANNUAL FORWARD (F) BASIS TO PJM-WEST AS OF DECEMBER 17, 2014, 2014F INCLUDES HISTORY AND FORWARDS.

PSEG FINANCIAL REVIEW & OUTLOOK

SI-SSA-0015-11850

PSEG

We make things work for you.

Strong financial position to support our business initiatives

2013 Financial Position

- ✓ Exceeded upwardly revised 2013 earnings guidance
- ✓ Pension fully funded
- ✓ Strong balance sheet and upgraded credit ratings

2014 and Beyond

- ✓ Continued positive earnings trend in 2014
- ✓ Controlled O&M growth
- ✓ Balance Sheet and Cash Flow support investments without equity issuance
- ✓ Growth in PSE&G investments with contemporaneous returns
- ✓ Diversified Power assets with a balanced hedge profile
- ✓ Growth in PSE&G Cash from Operations, with continued significant Cash from Operations/FFO at Power
- ✓ Increased Dividend by $0.04 to annual rate of $1.48 per share for 2014
- ✓ Opportunity for consistent and sustainable dividend growth

SI-SSA-0015-11851

Exceeded upwardly revised guidance

in both businesses

Bill Spence *PPL Corporation - Chairman, President & CEO*

Caroline Dorsa *Public Service Enterprise Group Inc. - EVP & CFO*

CONFERENCE CALL PARTICIPANTS

Steve Fleishman *Wolfe Trahan & Co. - Analyst*

PRESENTATION

Steve Fleishman - *Wolfe Trahan & Co. - Analyst*

Okay, we're going to get started with our next panel. So I think this will be a really interesting panel. This is a question -- I title the question I think about a lot, can the integrated model work? So we'll see the answers to that question, but I think it's one of the issues we've been wrestling a lot over the last year.

We're going to start off with Entergy with Leo Denault. Leo is the Chief Executive Officer of Entergy. Then we'll go to PPL with Bill Spence. Bill is the Chairman and CEO of PPL. And then finally, we'll end with Public Service Enterprise Group, better known as [Peggy], with Caroline Dorsa, who is the Chief Financial Officer.

So let me give it to Leo to kick us off. Thanks.

Leo Denault - *Entergy Corporation - Chairman & CEO*

Thanks, Steve, and thanks to all of you who have come out to listen to us this morning. I'll leave it to them to answer the question yes or no. We leave the suspense up for Steve for a little while.

As you know, some of what I say is going to be forward-looking, so I'd just encourage you to look at -- to read this word for word. And then to look at our website for more information. And also, I will mention a few things about the ITC transaction. There are some disclosures out there, filings by ITC and by Transco that I would encourage you to look at as well as read this page word for word in addition to that.

As you know, the way the Company sits today is, I guess, a hybrid model in terms of ownership of merchant generator as well as integrated electric utilities in the Gulf South. For our part, we do believe that there is a rationale behind separation of those businesses, but I won't go into that today. Just suffice it to say that at the moment, this is the way the Company sits.

The merchant business is predominantly nuclear plants in the Northeast, some fossil units in the Gulf South, as well as a district energy business that we just announced the sale of. And then we have utilities in the Gulf South; fully integrated model continues to be a generation transmission and distribution, at least for the time being. And two gas LDCs.

As we've been saying for the last several months this year, one of the objectives of the Company going forward into 2014 and beyond is to try and simplify what we have going on. We have a significant amount of activity, significant amount of initiatives that are geared towards improving our lot in life as a relates to the improving results, improving cash flow, reducing costs, making our rates lower. But in addition to those efforts that are geared towards improving results, and those all -- each one of these imperatives is designed to improve results -- that is increase earnings, increase growth, increase cash flow.

At the same point in time, we're trying to limit the amount of uncertainty that goes around with the Company to limit, basically, the discount rate associated with that value proposition as well. So if you go through each imperative that we have today or anything that we may come up with in

THOMSON REUTERS

SI-SSA-0015-11882

the future, you can ask yourself the question is how does this benefit the customers, how does this benefit the shareholders, how does it benefit our employees and the communities we serve. That's improvement results part. But also you'll notice that we've got a significant effort towards reducing the amount of activity that's going on within the Company so that we're easier to follow, we're easier to value, we're easier to talk about -- that the story is little bit simpler going forward.

And I'll just give an update on some of these imperatives. I won't go into too much detail, given time for the panel and provide more time for other panelists. But one of the biggest initiatives we've had going on for the last several years is our transmission -- transition into MISO.

A big benefit to customers, estimates of $1.4 billion of savings to customers, which will result in lower rates over the course of the next 10 years. In addition to providing savings to customers in lowering rates, it obviously reduces risk. Reduces risk of our operations around the transmission system. It improves transparency around the transmission system, and it provides less regulatory overhang of our transmission system and how that integrates with the rest of the utility as we move forward into the future.

We've been working on not only the regulatory conditions that we have to get through to get ourselves transitioned into MISO, but we've also been working quite diligently on practicing operations within MISO -- going through testing, making sure systems are in place, making sure that everyone knows their role in the changing market as we get into the day-two market that is what MISO provides for us going forward.

In addition to the transition to MISO, it's timed around its initiation as we exit the system agreement with Entergy Arkansas. As you all know, in 2015, we will also exit the system agreement with Entergy Mississippi. And part of our conditional approval in Texas is for us to also file, within the next month or so, the exit of Texas from the system agreement and provide that eight-year notice. In addition to that, we are seeking a way to get Texas out of the system agreement earlier than the eight-year notice that both Arkansas and Mississippi have had to deal with.

What you'd see as you go through -- for the system agreement, once Texas exits, all you have left in the system agreement is the Louisiana companies. Entergy Gulf states, Louisiana, Entergy Louisiana, and Entergy New Orleans. So you have to question the necessity of the agreement going forward or whether there's some sort of changed agreement that we can provide benefits to the system as designed by just the Louisiana companies.

As you know, the system agreement has been a very complicated beast for us for quite some time. It's been the source of over 30 years of issues in litigation. And, again, getting ourselves to some resolution around the system agreement and eliminating that uncertainty is, again, something that we believe provides real value to all of us as we go forward, as we can get ourselves out of some of that litigious nature of what's kind of gotten us caught in the middle from time to time. It makes things a little bit difficult for all of you to follow.

The next step with the transmission business is the ITC transaction. Significant benefits, we believe, in four areas for our customers there. We believe that improved reliability will result from a singular focus transmission enterprise. We believe that we'll have reduced congestion in a day-two market, where congestion has a visible cost. We'll be able to reduce that through the singular focus in planning model of a transmission-only company managing that system. We believe that there'll be access to different generation than we provide today. Just by virtue of the fact that ITC will plan across a region, and not just for the Entergy customer base but for a much broader region that goes beyond just merely MISO but would also include other regions around MISO. That could provide benefits.

And we also believe that that appearance of a different model with a singularly focused non-generator managing that system that it's likely that new generation will show up in the footprint that otherwise wouldn't, and access to that generation will also reduce costs to our customers.

Again, the ITC transaction will reduce costs to our customers, provide through better reliability, lower congestion, and access to more generation that's lower-cost going forward in addition to what we would see just out of MISO.

As you know, we filed in Texas -- or refiled in Texas yesterday. Our filing in Texas is, in many ways, the same filing that we had already made but with some additions. The additions of the rate mitigation plan and the other commitments that have been made that were not allowed on the record in Texas.

THOMSON REUTERS

SI-SSA-0015-11883

If you observed the August 9 meeting and read Commissioner Anderson's memo at that point time, they were in a due process box in their point of view, that they could not consider the rate mitigation plan. So the rate mitigation plan is now on the record. In addition, we put in some testimony around some benefits that are associated with economies of scale and scope from a combination of the two transmission businesses, the synergies associated with that. And we addressed all of the 26 conditions that were put in Commissioner Anderson's memo to the Chair. And we believe that we've gone -- we've basically been able to address each of those with a positive outcome through the commitments that have been made and the rate mitigation plan and the filing as we had it originally.

We've also asked for an expedited process to try and get this approval before the end of the year. And it is our desire that we would be able to get the commission themselves to preside over the hearings; that's something they brought up in the open meeting August 9. And by doing that and by the predominance of the record that we already had, the discovery that we already had, the RFIs that we already had being part of this record at the outset, we believe that it's reasonable to think that we should be able to get that done. But we'll see what their procedural schedule is as the process goes forward. And as we do that, we've got filings tomorrow in Mississippi, and then we will have to reinvigorate the process in the other jurisdictions that suspended their processes once we got into the situation of withdrawing our filing in Texas. All of that geared towards trying to get approval before the end of the year.

The other thing that we've got on the utility side is moderate growth, as we've always had within the Entergy service territory. It's not a straight line, but typically we see ourselves in the 1% to 2% growth rate. We believe that just left alone, the service territory would have about a 1% to 1.25% growth rate going forward.

We, like other people, have seen the impact of energy efficiency. Seen that impact our residential customers. We've also seen some of that in some of the other customer classes as well. And on the horizon, we are making sure that we prepare ourselves to look at what distributor generation may or may not do to us as we proceed into the course of the next five to 10 years of our story.

But we also have a unique situation at the moment in terms of economic development activity that presents itself within the footprint that we serve in the Gulf South. Manufacturing, whether it be at LNG terminals, steel mills, the chemical base, all driven by what's going on in the natural gas markets, the oil markets, and the business-friendly nature of what we have in the Gulf South.

There's a significant amount of projects out there already that we know about. About $50 billion worth of investment. We've got a significant number of jobs associated with this, about 45 projects. Only about 10% of which have actually come to fruition at this point. It's our objective to reinvigorate the economic development process to make sure that we not only get as much of these projects that are already out there as we can, but also to look forward to trying to get additional projects.

The benefit of that -- spread our fixed costs over more megawatt hours is going to result in lower costs to our customers, which will, again, make us more competitive. And to the extent that we can provide the vehicle for which we can make productive investments, investments in things that actually add customers, that add rate base and growth at the same point in time, we think that that's going to be beneficial to us.

As opposed to what we see across the industry today -- and we have our share of this as well, where you have cost structure increases that aren't really providing one more megawatt hour, they're not adding one more customer; whether it be environmental compliance around coal units, whether it's Fukushima, cost around nuclear units, critical infrastructure protection, reliability requirements. Some of those that don't actually add another megawatt hour of load or another megawatt hour of production. Some of the environmental costs reduce the amount of production that you have in terms of parasitic load and things like that.

We'd like to gear ours more towards growth to the extent we can. And this is something we have to make sure that we take advantage of as much as we can.

We also are geared toward trying to keep our costs low and the business more efficient through our human capital management program. There's a significant amount of that [that's] at the utility that we've talked about. And certainly we have our share of investments going forward, either with or without transmission.

SI-SSA-0015-11884

Turning our focus to EWC, EWC is a little bit different situation with the decline in gas prices, that it made our service territory. And our rates, very competitive, have certainly taken their toll as it relates to what's going on with the merchant fleet, particularly the nuclear plants in the Northeast. With HCM process, we spent a lot of time trying to make sure we get as efficient -- cost efficient as we can in that business. We are trying to simplify the story. I know many of you didn't know we owned District Energy till we announced the sale. But the fact of the matter is that things like that, that we need to pare down to give Bill some time to work on the more important things like relicensing of Indian Point and what to do with the rest of the fleet up there.

The announced closure of Vermont Yankee should provide incremental cash flow over the next five years. Be neutral-to-positive to earnings as we go through the next five-year period. Difficult decision in the fact that it impacts the community, it impacts our employees, but certainly it was a decision that the economics drove and nothing else.

The other thing that we are working on is market design. Obviously, one of the contributing factors to the closure of Vermont Yankee was not only the gas market, but it also had a lot to do with the cost structure and it had something to do with the way the markets are designed. Not adequately compensating assets for the benefits that they provide to the region, and that's something that we're working on.

Lower Hudson Valley capacity zone in New York is a step in the right direction. We've been working on that quite a bit. That should provide some benefit, some uplift for Indian Point, and should actually provide some incentive for people to bring capacity into that region, but more work needs to be done. Just as an example, when we announced the closure of Vermont Yankee, the next day prices for the next three years rose -- you would say moderately -- but the overall impact into the market of the incremental costs caused primarily by gas basis differentials on that day was about $1 billion over the 15-, 16-, 17-year timeframe. Those three years right after we closed Vermont Yankee. That's the kind of impact that retirement of that asset looks like it might have had on the market. Between that and the things we saw go on in the New England market at the beginning of the year, there are certainly some things that need to be done to market design to improve not only the investment decisions of the people who are already there to bring new capacity in, but also to provide reliable service in those regions.

So I guess to summarize, the utility is someplace that we continue to focus -- that we're going to continue to put more and more focus on in the coming years. The simplification of the story between now and 2014 will allow us to really work on the growth aspect of the utility, both through more efficiency, reduction of costs, improving our results that way, but also trying to take advantage of the growth opportunities that we have on the load side as well, and to make sure that we can push out any of those negative impacts in terms of bottom-line results that we would see otherwise from energy efficiency distributor generation.

On the EWC side, focusing again on simplification to the extent we can improve the results and making sure that we make the right calls around assets, whether it be the sale of District Energy or the close of Vermont Yankee, so that we really get our focus on what is important going forward. And, again, by this time next year, we should be a much simpler, easier Company to talk about. It doesn't mean we won't have interesting things going on, we just hope to have fewer of them going on at any one point in time.

Thank you, yes, Bill?

Steve Fleishman - *Wolfe Trahan & Co. - Analyst*

Turn it over to bill.

Bill Spence - *PPL Corporation - Chairman, President & CEO*

Thanks, Leo, and good morning, everyone. Before I start today, let me just, as Leo did, remind you of the fact that I'm going to be talking about future events and forward-looking statements under the Safe Harbor provisions, and actual results may vary. And, again, as Leo stated, please look at our appendix and read those words carefully. I'm also going to be talking about ongoing earnings which -- and other non-GAAP financial measures. So a description of those can also be found and reconciliations in our appendix today.

THOMSON REUTERS

SI-SSA-0015-11885

Let me start this morning with just a brief overview for those of you that may not be familiar with the PPL story, and looking at kind of where our assets reside. Our legacy assets are in Pennsylvania, with not only our PPL electric utilities, the regulated TND wires business; but also our competitive [gen] fleet, which is comprised primarily of coal, nuclear, and hydro assets; but also complemented by some very flexible oil and natural gas assets. And we also deliver electricity to about 1.4 million customers in Eastern and Central Pennsylvania, as highlighted by the properties shaded in blue on the state there.

The pins in blue represent about 9000 megawatts of generation that we own and operate in Pennsylvania, as well as the 1200 megawatts of competitive coal and hydro generation assets that we have in the state of Montana. With the acquisition of Louisville Gas and Electric in Kentucky utilities in 2010, we also operate fully integrated regulated utilities in the states of Kentucky and Virginia, serving over 1.2 million customers and operating a gen fleet there of over 8000 megawatts.

As far as our international operations, they consist of our the WPD South Wales, Southwest, as well as the East and West Midlands properties that we picked up from E.ON back in 2011. Our four UK-regulated businesses are actually the largest in the UK, as measured by the combined regulated asset base. And there in the UK, we serv over 7.8 million customers. And, interestingly, we've been operating actually for quite some time since 1996 in the UK. So a lot of experience there.

The next slide really shows what I would consider as our investment thesis, where we believe were very well positioned for the future, based on our rate-regulated businesses that are going to drive our earnings and cash flow for the foreseeable future, and providing stability and security to our earnings forecast as well as benefits to our dividend and credit ratings. In fact, over 85% of our projected earnings this year, 2013, will be coming from our regulated businesses.

These businesses are projected to grow significantly. We have a lot of organic growth opportunity in these businesses with our planned CapEx programs driving a compound annual growth rate in our regulated businesses of nearly 8% over the next five years. Much of this rate-based growth comes from planned CapEx that's already been reviewed by regulators, with little lag in earning return for share owners. The business improvements that we've made over the past few years have resulted in an excellent business risk profile rating from Standard & Poor's, putting us in a category with only a handful of other companies.

This more stable earnings mix also makes our dividend more secure and gives us a platform for continued growth, even in pressured commodity cycles as evidenced by the increase in our dividend that we announced earlier this year. And while wholesale electricity prices remain a bit challenging, our high-quality competitive fleet provides upside once those markets improve in the longer-term.

Our efficient environmentally competitive coal plants at PJM are complemented by flexible mix of gas-fired, nuclear, and hydro units that position us very well in one of the largest markets in PJM in the world. This fuel mix also differentiates our Company from a number of our competitors, providing us some competitive advantages in a variety of market conditions.

And last, we've consistently proven our operational excellence in our ability to make and execute on the right strategic and tactical calls in our view as we continue to grow share owner value. For example, our UK team is performing best in class now among our UK peers, as shown by our outperformance in cost and customer service metrics. And in our domestic regulated operations, our teams have been working very hard through general rate cases last year that awarded increases of 10.25% in allowed ROE in Kentucky, and 10.4% distribution ROE in Pennsylvania.

This next slide shows our CapEx spending over the next several years, and I did want to mention that much of this expenditure is subject to real-time -- or nearly real-time returns on enough capital, significantly reducing the regulatory lag that would otherwise occur. Especially in the slow load growth environment. In fact, over two-thirds, or more than $10 billion, of our CapEx will be in this category through the year 2017.

On our WPD operations, we're allowed real-time returns of and on every dollar of capital we spend, based on the real-time constructive regulatory framework there in the UK.

In Kentucky, we operate under regulation that allows for the near real-time return of and the majority of capital that we spend on environmental control equipment for our coal combustion generation, which is the bulk of the capital we're going to be spending in the next several years.

THOMSON REUTERS

SI-SSA-0015-11886

In Pennsylvania, PPL Electric Utilities has a significant and growing transmission business aimed at improving regional reliability through capital projects that received FERC formula rates. In addition, beginning in July of this year, we are allowed to recover reliability-based distribution CapEx through a disk mechanism as a result of the bill that was passed and signed into law last year.

Moving on to the UK, let me look at each of the businesses and starting with the UK. This is a highly attractive rate-regulated business for us, distribution only. The system there provides for, as I mentioned, pre-approved, five-year, forward-looking formula revenues which are inflation-adjusted, taking into account capital spending, O&M costs, financing needs; and we face no volumetric risk, given the revenue requirement nature of the model there.

We've got the ability to earn, in addition, some incentive revenues that can be quite substantial, based on the quality of customer service and by determining how efficient we are as an operator. As shown here in the chart on the lower left-hand side, you can see that -- or the lower right-hand side -- we've earned over $185 million in annual revenue bonuses based on performance over the past eight regulatory years for exceeding specific metrics. This also reflects the great work of our management team there in being able to turn around the two acquired Midland operations, formally central networks, into very high-performing companies in a very short period of time.

We have taken that same low-cost operating model that exists in South West and South Wales, integrated it into the East and West Midlands, and are achieving strong results there as demonstrated through the level of bonus revenues that you see. I think Ofgem is very supportive is very supportive of the work we've been able to accomplish in such a short time frame. And, as many of you know, we're currently in the process of a regulatory review for the next price control period called REO ED-1, which would extend for an eight-year period through March of 2023.

We filed our business plan early in the third quarter and remain confident that our focus for companies can be fast-tracked in this process, providing incentive awards, and certainly much earlier than companies that go through the extended review process. So we look forward to November when Ofgem is expected to issue their initial assessment of the business plans and letting us know whether we're fast-tracked or not.

Moving on to our domestic businesses, let me start with our Kentucky regulated operations. These are efficient, well-run utilities that project significant rate-based growth in the coming years. Indicative of the construction regulatory climate there, we've got mechanisms in place that provide for a timely recovery of a substantial portion of the CapEx plans over the next five years. And, as I mentioned, we get recovery of an on-capital projects to retrofit legacy coal plants with modern technology to meet new EPA regulations and receive real-time recovery at a 10.25% ROE.

We currently estimate compound annual growth in our Kentucky rate base of almost 9% over the next five years, which would put us at over $10 billion in rate base by the end of 2017.

Moving on to Pennsylvania, we're also forecasting significant rate-based growth in both our [T&D] operations. On the transmission side, we estimate annual growth rate of roughly 22% through 2017, driven by a couple of very large projects to improve aging transmission facilities in Pennsylvania. The 145-mile Susquehanna Roseland transmission project that we're in partnership with PSE&G is a good example. We also have the Northeast/Pocono Reliability Project; again, a very large project that we expect to drive that transmission growth. We expect the Susquehanna Roseland to be fully energized in June 2015, with the majority of the construction to occur this year and through the end of next year. You'll find additional information on the project in the appendix of today's presentation.

We're also continuing to upgrade the aging infrastructure in our Pennsylvania distribution system that covers 29 counties in the state of Pennsylvania. Our distribution improvement efforts are expected to result in a 5% compound annual growth rate base over the next five years. The state is very supportive of these efforts, and as I mentioned, we were able to have approved the Act 11 to provide a more timely recovery mechanism in the state.

On the supply side of our business, while the energy industry continues to face the challenge of low wholesale power prices, our diverse competitive fleet continues to be well-positioned in our view. On the operational front, in PJM, we have more than 1200 -- 2400 megawatts of low-cost nuclear and hydro assets. We've also got about 2800 megawatts of efficient, supercritical coal units that are substantially in compliance with new emission standards; and we're not looking at any major capital investments for compliance.

THOMSON REUTERS

SI-SSA-0015-11887

In addition, we've get 2400 megawatts of gas-fired plants at PJM that have been running at near baseload levels, given the low gas prices. And that fleet has benefited from those gas prices and will help offset some of our unhedged stark spread risks associated with the coal assets.

And this is one of the benefits of the fleet diversity, in addition to the fuel types we have, the dispatch response that we can deploy, as well as technology that helps us in a variety of different market conditions.

On the cost side of the business, the team has done a great job of responding to the more challenged commodity prices. And we've taken a lot of cost out of the business already. In fact, in the last two business planning cycles, we've taken out over $1 billion of CapEx, and we've also been successful with controlling O&M spending. And we plan to eliminate an additional $25 million to $50 million in O&M by 2015. In fact, I think we'll be at the high end of that range.

Of course, we're trying to be judicious and balance the needs to keep the cash flow and the earnings positive across the enterprise, with the belief that ultimately we're going to see a recovery in energy and capacity prices. And we want to make sure our units are able to perform when we get to that point.

Last slide, I just wanted to mention our dividend profile. I've highlighted the business segments, each with unique opportunities to provide strong share owner returns. But we know that the dividend is an important component of our share owner returns, and an important piece of the total share owner returns. So this chart shows the security of our current dividend, in that projected ongoing earnings per share from our regulated businesses more than covers our current dividend. The projected rate-based growth, our expectations regarding earned ROEs, and the timing of general rate case position us very well to continue to grow that dividend.

Finally, we are delivering on the commitments we made to our investors over the past several years, providing a stable and growing investment for share owners coupled with the securing, growing dividend. That concludes my prepared remarks, Steve. And I'll look forward to the questions in a little bit.

Steve Fleishman - *Wolfe Trahan & Co. - Analyst*

And I'll turn it over to you, Carolyn.

Caroline Dorsa - *Public Service Enterprise Group Inc. - EVP & CFO*

Okay, thank you, Bill. Thank you, Steve. Good morning, everyone. I look forward to talking a little bit now about PSEG, and then will have our conversation and I guess try to answer the question that we haven't answered yet, right?

So I'll start off by also citing -- consistent with the theme, what's consistent across our presentation is good forward-looking statements. So I encourage you, of course, to reference ours and of course our materials and our 10K filings as well. And also our GAAP disclaimer, since we will be discussing GAAP and non-GAAP numbers, as we typically do, when we cite our earnings.

So starting with our strategy -- and I think those of you who are familiar with PSEG are familiar with this page, but I think it's always worth repeating. We really look at our business and manage our entire business, whether it is the power business or the utility business, under three key principles. Disciplined investment, rigorous review of our investment opportunities to ensure that they create not only value for our customers but value for our shareholders, operational excellence in everything we do, very rigorous metric assessments for everything that we engage in to ensure that we are always pushing toward top-quartile performance, and then financial strength. As you know, we have a very strong balance sheet, and I'll talk a little bit about how that positions us well for our growth in the utility as we go forward as a result of our filing for Energy Strong. And of course, an engaged workforce is what makes this all happen.

THOMSON REUTERS

SI-SSA-0015-11888

So those have been the tenets of our strategy, our financial business and operational strategy. They have been consistent for quite a number of years, and we think they do provide the best opportunity for value for our customers, reliability for our customers and regulators, and results for our shareholders.

In terms of our Company and businesses, we are an integrated, as are the other companies here this morning. You know our three businesses, but let me just review briefly for you. Under the PSEG umbrella is PSE&G, our regulated gas and electric utility, all situated in New Jersey. Assets of just over $19 billion at last year's year-end, and you can see the operating earnings for last year as well.

We are, we think, a premier utility in the state of New Jersey and positioned well for additional investment opportunities, which I'll talk a little bit more about in a moment or two. But they are both on the transmission side as well as on the distribution side; in a contemporaneous return framework on the distribution side, and in a formulary framework on the transmission side. So good opportunities, and I think a lot more for us there, which I'll talk about.

PSEG Power, our wholesale energy generation Company, about $11 billion in assets. And you can see last year's operating earnings there as well. We think we operate a low-cost, environmentally friendly, and diverse fleet that has some advantages based on its location and also the diversity of its fleet.

And then Energy Holdings, a smaller business for us; assets of about $1.5 billion, you can see the earnings there. And in that business, we are really focused on growing our renewable profile with solar investments that we have made there. Other things that we used to have there, for example, international investments are now totally gone. And so while we're cleaning up some of the rest of that portfolio, the focus is really growing that renewable business all with PPAs, so not merchant exposure.

So just a moment on PSE&G in terms of our footprint. So the map of New Jersey -- as you can see, the light-blue is the gas territory and the shaded area is the electric territory. A little more or a little less than two million customers, depending on whether electric or gas, counting each customer for each business once in each column. You can see that in terms of our mix, we are highly commercial, relative to residential on the electric side; and very light on industrial, not a lot of manufacture in the state of New Jersey. And that flips around, of course, when you get to the gas business, which is predominantly residential and then flips around to commercial there.

We have an approved ROE from our last distribution rate case in 2010 of 10.3 on a 51.2% equity ratio, and we are earning that authorized return. On the transmission side, we have a formulary rate of 11.68 on our base formula rate, and then we have some incentives on some programs, Susquehanna-Roseland, as Bill mentioned, for us is a 12.93% ROE, again, under a formula rate basis. We have no current plans to go back in for a rate case. We don't need to do so in the near term. And as we talk about incremental utility investments, they come on top of -- and with incremental clause recovery, on top of our base distribution rates. And I'll talk more about those in a moment.

In terms of some of the things that we have gotten approval for in addition to our base distribution rates, you can see some of the initiatives we have made under the state's energy master plan in terms of solar. We have a pretty significant program, as you can see by the number of megawatts for the total program. Both a loan program to incent third parties, but also a Solar for All program wherein we own the actual solar assets. And you can see a pretty significant amount of total megawatts for those programs.

And then some energy efficiency programs which we've also undertaken to improve the efficiency of energy utilization for our customers. All of these programs have been done with incremental ratemaking mechanism sitting on top of our distribution; so contemporaneous clause recoveries, no regulatory lags. So we support some of the state's social goals in terms of promoting renewables and promoting energy efficiency in ways that we think work for our customers, but also don't cause any regulatory lag for our shareholders. And have all been approved with essentially the 10.3% return post our rate case, everything that was approved there. Our most recent solar program was approved with 10.0%.

In terms of the power business, we do like our power profile. And you can see the location of our units here on the map. Most of our units are in New Jersey, as you know, but we do have units in Pennsylvania, in Connecticut, and in New York.

THOMSON REUTERS

SI-SSA-0015-11889

The things that we think characterize this portfolio well is fuel flexibility; so we are about 57% nuclear, if you looked at actual generation. And then the next biggest piece is gas, and then coal. And of course gas has been running more than coal. So we have fuel flexibility across all fuel types. Our two major New Jersey coal plants actually also run on gas, so we have inherent fuel flexibility even in our largest coal plants in the state of New Jersey. So a lot of opportunity, we think, to take advantage of the best fuel mix for our profitability.

Our assets are obviously located near load centers. And we have a diversity that is baseload, intermediate, and peaking, so we're able to serve full requirements contracts like BGS. We will retain that diversity and efficiency in 2016. We have already announced, and I know many of you are familiar with, some of the deactivations in of [HEDD]-related units, but we still retain a full fleet all the way up through [peaking] and have some opportunities for expansion. So we like the reliability of this fleet, we like its cost profile, it does not need significant capital investments. All of our coal plants already have the investments needed to meet the MATS rules. And the only significant spend that we have is for the Peach Bottom site, which we co-own with Exelon and they manage for actual up rates. So an NPV-positive transaction.

So we think a nicely situated fleet of assets near load with nice diversity and flexibility. And also, as some of you have been asking us recently, with nice access to low-cost Marcellus gas. So we do access Marcellus gas for some of our fleet in addition to Henry Hub gas. And you can see the statistics there give us the opportunity to utilize that low-cost gas both to benefit our customers in terms of utility, but also in their gas supply but also our power plants.

In terms of where we're going going forward, this is a nice picture of some key metrics, if you look at from 2008 to 2012, and then from 2012 to 2015, what we've been able to accomplish. Good control on actual O&M growth from 2008 to 2012, versus the planned O&M of 2.4, but the actual was less than a percentage point. Our current forecast, about 2.2 on a CAGR basis going forward.

In terms of rate base, I think a really good story there. You can see how much money we have put into our rate base growth from where we were in 2008 to where we are in 2012 and where we expect to be 2015. And, again, that transmission and energy master plan growth is all contemporaneous or formula rate. And then we have new filings underway for Energy Strong, which I'll talk about a moment, that can give us even incremental rate-based growth. On power, you can see the statistics there in terms of what we've been able to do in terms of generating incremental terawatt hours and managing key metrics like our E4D rate.

Solar, you see how we've grown it from really nothing in 2008 in holdings and then LIPA earnings, something many of you are aware of we start in 2014. Under our current existing contracts, should add about $0.03 a share.

In terms of our guidance, our guidance we are maintaining at $2.25 to $2.50 a share this year. But we did note at the end of the second quarter that if -- with normal weather and normal operating performance, we expect to be at the upper end of that guidance, driven by power being at the upper end of its guidance.

In terms of the mix of our businesses -- so you can see over time, it's a rate base that's grown for PSE&G. PSE&G is becoming close to 50% of our operating earnings, versus where it had been just a few years ago, more like a quarter of our operating earning. And we do anticipate double-digit growth in PSE&G's operating earnings through 2015, based on already approved programs and the opportunity to grow our rate base both on the transmission side as well as the new approvals for things like solar as well.

In terms of the two businesses and contributions in the integrated models, what we were able to do in terms of our balance sheet -- if you look at this chart, which is 2012 actual data, you can see that both of our businesses are actually significant cash flow generators, in terms of looking at cash from ops from about sort of a cash flow statement kind of view.

Both businesses, significant cash flow generators. We also started the end of the year with net cash on the balance sheet. The net debt issuances are all utility net debt issuance to support the growth in our rate base. But you can see going to the uses side that it's PSE&G that has the majority of the capital investment. And, again, that's consistent with growing our rate base.

THOMSON REUTERS

SI-SSA-0015-11890

As a result of this picture, and if you were to roll this picture forward, we have the opportunity to support everything we are looking to do at PSE&G, both approved and filed for Energy Strong without the need to do any equity issuance at all because both businesses are significant cash flow from operations generators.

In terms of capital investment opportunity, here you can see the capital investments based on approved programs between now and 2015 is $6.3 billion at the utility. You can see the growth is $4.2 billion out of that $6.3 billion, so the majority of our capital is growth, and the majority of our capital is utility growth with that contemporaneous or formula rate type treatment. We have the opportunity for new transmission investments over the same period of time beyond that base amount, based on additional hardening of the system that we identified post-Sandy. And then new distribution of $1 billion represents our -- the three-year period for Energy Strong, the filing that we have made with the BPU for as much as $3.9 billion over a 10-year period, for which we've asked for $2.6 billion over the first 60 months or five-year period, all with contemporaneous return as well. That would give us an even greater opportunity to grow the PSE&G growth investments from $4.2 to over $5 billion over this period. So we think a lot of opportunity there for even better rate-based growth utility, again, serving our customers' needs for reliability.

In terms of our balance sheet, given the strength that we start with and the opportunity to make these investments with just keeping the utility's debt structure at a 51.2% equity, there is opportunity for us to do that without any need for equity issuance because we ended last year with almost 60% equity and our capital structure.

And then in terms of dividend, also to focus on that for a moment. Well, you can see the growth in our dividend over the past few-year period. You can also see with the growth anticipated in PSE&G, you can see that PSE&G becomes a very significant contributor. If you just took its income and looked at its income relative to our dividend, it would be about an [80%] in terms of the percentage sourcing of our dividend, if you looked at it just from PSE&G's earnings. So good safety and security from the dividend; but of course, in terms of the place that we're putting money back to work, it is PSE&G because we have those good contemporaneous returns.

So overall, we think our value proposition is straightforward; strong, good, reasonable, risk-adjusted rates of return, contemporaneous in nature; opportunity to grow the utility by double digits based on approved programs with opportunities for upside based on our energy strong program. Continuing to manage our costs at power and running a lean, low-cost fleet that is a net access cash flow generator without significant capital investments gives us the opportunity to make those investments at the utility without having any dilution or equity issuance needs and support a solid dividend with the opportunity for future dividend growth.

So with that, I'll stop and turn it over to Steve.

Steve Fleishman - *Wolfe Trahan & Co. - Analyst*

Great. Thanks, Carolyn. So maybe just to kick off with an initial question. I'm sure you guys have all -- and actually, I guess, Entergy -- actually tried to do some kind of review of separation scenarios of the Company. And at this point, none of you have actually done it.

Maybe you could give us a little sense of when you have looked at it, what are some of the pros and cons that you've seen through that analysis? And why are you kind of where you are today? Bill, do you want to kick us off?

Bill Spence - *PPL Corporation - Chairman, President & CEO*

Sure, I'll go right ahead. So I think whenever you talk about a separation in today's environment, looking at the utility business stand-alone and the supply business, for example, stand-alone I think on the pro side of the opportunity for kind of pure play multiples, probably is one of the stronger, more compelling reasons why you might want to consider some type of separation between the two businesses. I think -- you know, there are benefits to -- perhaps on the supply side, if you believe in critical mass and the need to grow the competitive generation fleet to a size in a low-commodity market condition like we have seen now, and spreading some of your overhead cost, that's going to be a significant driver of some synergies perhaps you can get. So bigger, probably in this case, might be better in the current environment. It's not always the case, but perhaps now it is. I think that's probably a pro.

THOMSON REUTERS

SI-SSA-0015-11891

On the con side, I think sometimes unraveling the supply business from what, in many of our cases, were formally integrated utility companies, has some challenges. So there are some internal cost structural challenges with that. You have to be careful when you unwind that that you don't leave the utility holding company, let's say, with some stranded costs. That's a potential that you have to look out for. I think, you know, how you finance the two companies is a key consideration, too. And, again, whatever you're left with, depending on the business mix you start with, could be a factor. And then there's some -- there could be some tax complexities to it as well, depending on what kind of tax basis you have in the legacy utility company and how you choose to kind of separate.

So those are just kind of some preliminary thoughts on some of the pros and cons.

Leo Denault - *Entergy Corporation - Chairman & CEO*

Obviously, we think it's a good idea if we separated them because we tried to do that. For us it's a little bit different than either of my co-panelists in that there's a couple of thousand miles of geography between the majority of our merchant fleet and our utilities. They did not grow up together. They are a function of acquisitions that we made that were geared toward operational improvements around nuclear plants that were underperforming for the most part, and so we were able to turn around those operations.

But just because Indian Point and River Bend are two nuclear plants does not make the merchant fleet and the fully integrated utility anything alike as far as business goes. So for us, it's a little bit easier to make that distinction because we didn't grow up with those being in the same place. So all the pros are around starting with their just two different businesses. They have two different value propositions. They have two different skill sets in terms of the commercial viability of them, even though the assets that you upgrade are identical. And so there's a myriad of benefits that I won't really go into. Mostly they are commercial, analytical, financial, etc., but the businesses really in our case don't belong together.

The two cons that I would mention that are I guess philosophical not specific to us is one, the operations are economies of scale, the operations of 11 or 12 units versus five or six. So I think that that is we tried to actually address that through how we were going to operate the fleets when we're going to look at the spend. But that is certainly something that's been worthwhile for us as we've grown the fleet of nuclear plants to be able to operate across a much larger fleet from an operations standpoint. You know, commercially the businesses are not the same and, again, the other comment that we weren't able to do it.

Caroline Dorsa - *Public Service Enterprise Group Inc. - EVP & CFO*

I'll add just really echoing what Bill said, I think there are the potential for some of the dissynergies of costs that you have to re-create to support service organizations, so that's a little bit of a challenge. We do like the integrated model in terms of the kinds of efficiencies it gives us in terms of capital redeployment. That's not to say investors couldn't do it on their own separated. But we do think it's very efficient for us to be able to put money into the regulated utility during times of power price really being lower than they have been before when the power company doesn't need the capital investment.

We do like the ability to have for a cross-pollination of our people in terms of training and development. We do think that that makes a lot of sense. So we do like the model, and I think everything that Bill said I would echo. There can be tax issues and all sorts of other things, but we do think our ability to look at each business and think about what's the best opportunities for growth. And one that might be at a different time that there is growth, and another gives us nice opportunities.

Steve Fleishman - *Wolfe Trahan & Co. - Analyst*

Okay. One other related question. None of you mentioned the rating agencies, at least specifically. And I guess in theory, it would be very hard to have a generation business on its own that's investment grade. So maybe you will give that up. But you will also then have a pure distribution business or pure utility that maybe is a lot easier requirements to meet. So maybe just get some perspective on it. Would there be a lot of embedded capital freed up separate because of that than the requirements you have to meet today to keep your solid investment grade? Any perspectives on that?

SI-SSA-0015-11892

Bill Spence - *PPL Corporation - Chairman, President & CEO*

Sure. Well, in PPL's case, with the lower gas prices and some of the challenges we face in the capacity markets, we have really pared back a lot on the capital that goes towards generation fleet. And with the size of PPL today versus where we were with 85% of our earnings coming from the regulated side of the business, the allocation of capital issue isn't probably as significant as it would be maybe in other cases.

So we really are not deploying that much capital in towards the generation business at this time. And most of the big capital needs that we had for compliance type activities on the EPA front are behind us. So we don't face a significant level of new capital that needs to be deployed through that business. So it's really not a terribly important issue for us at this time.

So I think it's a good question because it does you point out a good issue there around the rating agencies and the financeability of a pure merchant company. It would be sub-investment grade. I mean that's the nature of the business, and sitting inside a holding company like we have it may not be on its surface the most ideal, but there are some benefits as Caroline mentioned as well. So it's -- again, it is a bit of some pros and cons.

Caroline Dorsa - *Public Service Enterprise Group Inc. - EVP & CFO*

Yes, I would say similar to Bill, I mean clearly there could be some pros and cons. Similarly to what Bill mentioned, we don't have a lot to invest in the merchant business, as I mentioned, other than things that have a positive NPV. We do like -- frankly, at the end of the day, we like the strategic flexibility of having an investment grade, solid investment grade rating as we do as you know when our power company gives us in terms of opportunities to use the balance sheet. There are opportunities that present themselves. If we were separated, obviously it would be very, very different. But we do think that financial strength gives us options as we can look at more opportunities to grow either company because we start with the balance sheet that has room and we like that.

Steve Fleishman - *Wolfe Trahan & Co. - Analyst*

Okay. I'll take one more question, and then we'll open it up to the audience. Just on the -- one more question I guess on the unregulated businesses. Just your perspectives on potential for power recovery. And just I think all of you to some degree think it will get better. Is that a view on your views on natural gas? Is that a view on just basic supply/demand in your regions? You know, kind of what are your point of view thoughts there, or do you just not have a point of view and you are just going to kind of eek it out?

Unidentified Participant

(multiple speakers) (laughter) We're not going to eek it out.

Leo Denault - *Entergy Corporation - Chairman & CEO*

Again, I guess from our perspective, we do think things are going to get better. It's a combination of factors. We do think that we're going to see some constructive moves in the gas market. That's going to be driven, I think, a little bit what we're seeing in some areas. In our utility business, for example, a lot of the economic growth and economic development opportunities we see are demand-related factors. Doesn't mean that we believe that gas is going to get to back to where it was in 2007 and 2008, but we do think there is some reasons that gas will recover somewhat from where it is today.

We also -- it depends on what you talk about. As of today, we also see that there's some things that just structurally are in the power markets where our units are that underplay heat rate in the forward market. So we think the power prices themselves given the lack of liquidity and power longer-term versus gas, you see what is an implied heat rate that is not necessarily what we see when things come to term. And then we are diligently working to help the capacity markets as much as we can to actually perform the way they're supposed to to both compensate people for the capacity that they currently own, but also to be in a position where they themselves letting the market run as opposed to some other form

THOMSON REUTERS

SI-SSA-0015-11893

or fashion of capacity will actually encourage new capacity. In the open market, the way most of them work today, it's difficult to see how a lot of that's going to happen, just in the purely competitive nature of the capacity market itself as opposed to things that come around the periphery and some sort of special deal as it were.

Bill Spence - *PPL Corporation - Chairman, President & CEO*

In PJM, I think from a PPL perspective, we see some maybe what I would say is improving -- I wouldn't say it is a trend, but some improving signals from PJM management that suggests they're going to deal with a couple of things hopefully before the next capacity auction in early next year, and those things are import limitations. There was, I think, a surprise in the last auction with how much capacity was allowed into the auction from imports. I think they're going to deal with that. I think there were some issues around individual, minimum offer price requirements, MOPR exceptions, if you will. I think they're going to deal with that.

There were some concerns about the level of demand response; I think there are some things underway with that. And then finally, there's this issue of the incremental capacity auctions and the potential for people to gain that with maybe not enough penalties in that structure.

So I think to Leo's point around market design, I think the ISOs are trying to address some of the concerns that they see coming down the pike to make sure that they maintain enough capacity in the system to meet all the reliability requirements, and we think that's a good thing. And obviously with the last incremental auction that just went off last week came in at $111, that's a very significant number. That's higher than any other incremental auction in the history of these incremental auctions. So that's a positive.

On the energy side, you know I think to answer your question specifically, I see it more on the supply and demand fundamentals, Steve, than I do on improving gas prices. I think gas prices will improve somewhat, but I think the power recovery is going to be driven more by demand and retirements, more retirements than are perhaps in the system for prices today and maybe the cost of compliance, particularly with maps may not be fully embedded in the forward prices.

Caroline Dorsa - *Public Service Enterprise Group Inc. - EVP & CFO*

I'd say, Steve, on the capacity side for us, for us for the last three years given where we are in Eastern PJM, our capacity price results are actually pretty steady in that $160 per megawatt range. So that's been pretty consistent given the strength of where we are. We do very much support on the PJM front the design issues getting the rules right, things that Bill mentioned.

Things like demand response having to have the right rules around what it can bid and, if it's going to be paid like a generator, being more treated in terms of having to show up like a generator and demonstrate its viability like a generator. We support those things. We do support things that assist in thinking carefully about the amount of imports and MOPR and having a stronger kind of MOPR message there.

On the energy side, we do observe that there does appear to be less liquidity in the forward curve than there had been before, and you've seen some announcements of institutions indicate exit there, which obviously does have issues for liquidity in the out years. That being said, very important for us always internally that we run the business, and we plan the business on the forward curve.

So in terms of how we think about our OEM, in terms of how we think about capital deployment between the businesses, in terms of how we look at opportunities in the power markets, we always look at the forward curve as opposed to assume it's wrong because, while it probably won't be exactly where prices turn out to be in a few years, we don't think it makes sense to bet against that and pay money upfront for that.

So while there may be some liquidity pressures there, we're assessing that. We still run the business and certainly plan our costs and expenditures on the assumption of the forward curve.

THOMSON REUTERS

SI-SSA-0015-11894

Steve Fleishman - *Wolfe Trahan & Co. - Analyst*

Let me open it up to the audience, any questions? We've got Stephen in the back there and then Rob.

QUESTIONS AND ANSWERS

Unidentified Audience Member

With all of the coal to gas switching that's going on, you hear a lot about how power flows have changed substantially on the grid maybe in different ways than they have been planned for 10 years ago, say. I was just sort of wondering what kind of opportunity does that give you for transmission investments, new constraints suddenly come up in the system, and how do those opportunities may be compare to lost power sales from your generation business, and how much maybe does one side offset the other?

Caroline Dorsa - *Public Service Enterprise Group Inc. - EVP & CFO*

So, I'll kick it off. For us, in terms of transmission investments, our investments are reliability driven by identify things in PJM in terms of reliability issues. So not transfer capacity type of issues, but really more reliability issues, and we have a multibillion-dollar program underway there.

That is at PSE&G under the formula rate. Obviously, the opportunity for more investments under Energy Strong are something else that we're looking at up to $1.5 billion over 10 years. So opportunities there really present themselves because of the reliability issues that have been identified by PJM. We are not really in the business of looking at large scales or energy transfer type transmission investment opportunities.

Leo Denault - *Entergy Corporation - Chairman & CEO*

I'd probably echo what Caroline just said on the PPL side. And I think with the large transmission projects, they take so long to put into the planning process that by the time you get there, those anomalies, if you will, or those opportunities to arbitrage between gas and coal units may have gone away. So I don't think we would probably take that risk on that type of a project in light of how fickle some of these markets can be.

Steve Fleishman - *Wolfe Trahan & Co. - Analyst*

Want to go, Steve?

Unidentified Audience Member

The Marcellus shale by 2020 is expected to basically fully supply the Northeast gas demand. If the Utica is developed, there will be even more gas in the Northeast. We've already seen pretty significant basis differential. If you assume like a $0.80 or $1.00 basis differential to Henry Hub, how will this affect power markets in your territories? How do you plan the business around this kind of scenario?

Steve Fleishman - *Wolfe Trahan & Co. - Analyst*

That's such a tough one, I think Leo should answer that. (laughter)

Leo Denault - *Entergy Corporation - Chairman & CEO*

Well, I mean the -- there's a significant number of scenarios out there in terms of where gas markets may go and where power markets may go. I think the short answer to that is that, as we are looking at where things are, we've got to run a lot of scenarios around where they might be. To the

THOMSON REUTERS

SI-SSA-0015-11895

extent that some of those things show up and to the extent that we start to see actual reductions in gas prices versus where we are today or if we see real -- I mean I hate to say have the base -- Henry Hub to Northeast basis crash, like it hasn't already. But the fact of the matter is, that as those things continue, it's going to make it tough for those of us who have assets that are driven by some other fuel like nuclear power, for example.

That phenomenon was a major driver in the decision to close Vermont Yankee was the fact that gas prices are now much lower than they were before than the power markets that we're in. Not a lot of coal to gas switching in the Northeast where we are because there's not a lot of coal. It is mostly gas already. What if the gas was oil?

So the fact of the matter is that is just the kind of thing that we need to make sure that we keep our eye on and we keep on top of, and you know to the extent that you're running a coal plant or a nuclear plant and things get worse before they get better, that just means you've got to keep an eye on your cost structure. You've got to keep an eye on your investment profile. You've got a make some tough calls like what we already did with Vermont Yankee where it's actually a better economic decision not to run the plant and then to continue to run the plant. Some of that is gas driven, some of that is cost driven, and some of that is market design driven. But, you know, the fact of the matter is when you say, how do you plan your business around that? Well, we already do plan our business around that as a potential outcome of where things are today. And just like with what Caroline said, everything we do marks our plan to market.

Because, as we all know, particularly if you've ever been around the competitive trading side of the business, particularly as it was developed in the phase of the 90s and the early part of 2000s, that's what the price is. If you want to sell something in 2015 today, there's a price for it, and that's the price. Just because I think it should be higher or I believe it will go higher doesn't change that.

Now the decision I make might be informed by whether I think it's going to go higher or lower, and we make those bets all the time. We not only make those bets as it relates to the merchant fleet, we make those bets as it relates to the integrated utility fleet as well. When we decide to build a gas plant versus nuclear plant versus a coal plant versus some other technology, we are making a bet on the cost of all commodities that go into that whether it's copper, whether it's natural gas, whether it's uranium. And we're making a regulatory bet on what's going to happen whether it's environment controls or consumer costs or whatever. We have to make those all the time.

So how we look at it is we kind of do a statistical analysis of spreading what those potential outcomes might be, and while we mark the plan to market, we are going to make our decisions based on, well, how do we think that's going to turn out then? And if the market is -- there's one way to look at it is where we are all say the markets here and we believe it's going to be higher, we wouldn't make one decision based on that. If you are looking at the market here and you think it's going to be lower, you make a different decision while you have the opportunity. You can hedge it out so it doesn't hurt you or to make some sort of call, so it is not going to close the plant now or something like that.

Caroline Dorsa - *Public Service Enterprise Group Inc. - EVP & CFO*

I think one thing I would add to that, when you think about that question, right, you are taking one variable -- albeit an important one and albeit one that seems to be in a sea change from where was -- but as we think about planning the business, right, we have to think about the multiple variables. We have to think about what's going on there.

What might be happening with the actual implementation of EPA regulations? What's going to be happening with the CO2 related regulations? What's going to happen to loan growth? What's going to happen to renewables? What will be the government's policy around all of those things? Where might there be new builds? Where might there be plant closures?

So a single shot variable, albeit a really important one, right, how does it find its way into power prices, and what's going to happen in different regions? We look at all of those together, and so we can't isolate one out and say, if this happens, what will be the result? Because then you'd say, what happens to the other 20 things and then how far out should you plan for that?

And that's kind of the way we try to look at them on an integrated basis. What are the interactions between one or the other, right, and then how do we think about what that means for what we commit to, put in the ground versus how we run what we are doing today and things like that? So it's a little hard to disaggregate one and say on that vector, it would be this. We really just don't build the business model that way.

THOMSON REUTERS

SI-SSA-0015-11896

Steve Fleishman - *Wolfe Trahan & Co. - Analyst*

A question upfront.

Unidentified Audience Member

Leo, one of the drivers that you didn't mention is the political one, and I wonder particularly in Texas if you could comment at all on the appointment of new Commissioner? The Commissioner has sort of been impossible to act on anything the way it was structured for the last year or so, and we now have a third Commissioner, which is hopefully going to do something. Do you have any insight at all on her and where she might be going and whether she's close to Chairman Nelson or not, etc.?

Bill Spence - *PPL Corporation - Chairman, President & CEO*

You know, our view is that she's going to be a very solid Commissioner. She's going to do a good job. Certainly she's got to come up a learning curve on a variety of issues in Texas, and it's somewhat complicated by Texas' structure versus [Urquhart] versus not Urquhart. And so I think there's a learning curve there that she will be more than capable of getting up, and I think that she's going to be constructive in a lot of ways coming out of the Governor's office like she has and the kind of things she's been involved in. And I think that it will just add to -- you know, it will add to the Commission, and it has probably been difficult for them with just two Commissioners to work their way through that process more than anything else and to understand the implications of what happens when they don't agree, more so than when they don't or when they do agree.

So I think it will be helpful. It will be a new source of ideas coming with a different perspective. She certainly has a good background. Our view is that she's going to be very constructive. She is very intelligent, all of the things that you like to see in a Commissioner, and that they should probably all three work well together.

And my guess is that I wouldn't say that any Commissioner aligns with any other Commissioner on any -- I think they all are really well-versed in the issues. They all get up to speed on themselves and make their own calls in a really informed way, and I don't think she's going to be any different. I think she's going to do a really good job.

Steve Fleishman - *Wolfe Trahan & Co. - Analyst*

Great. Well, I think we've run out of time. Thank you very much to the panel.

Forward-Looking Statements

Certain of the matters discussed in this presentation about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K. These factors include, but are not limited to:

- fluctuations in wholesale power and natural gas markets, including the potential impacts on the economic viability of our generation units;
- our ability to obtain adequate fuel supply;
- any inability to manage our energy obligations with available supply;
- increases in competition in wholesale energy and capacity markets;
- changes in technology related to energy generation, distribution and consumption and customer usage patterns;
- economic downturns;
- third party credit risk relating to our sale of generation output and purchase of fuel;
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements;
- changes in state and federal legislation and regulations;
- the impact of pending rate case proceedings;
- regulatory, financial, environmental, health and safety risks associated with our ownership and operation of nuclear facilities;
- adverse changes in energy industry laws, policies and regulations, including market structures and transmission planning;
- changes in federal and state environmental regulations and enforcement;
- delays in receipt of, or an inability to receive, necessary licenses and permits;
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry;
- changes in tax laws and regulations;
- the impact of our holding company structure on our ability to meet our corporate funding needs, service debt and pay dividends;
- lack of growth or slower growth in the number of customers or changes in customer demand;
- any inability of Power to meet its commitments under forward sale obligations;
- reliance on transmission facilities that we do not own or control and the impact on our ability to maintain adequate transmission capacity;
- any inability to successfully develop or construct generation, transmission and distribution projects;
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers;
- our inability to exercise control over the operations of generation facilities in which we do not maintain a controlling interest;
- any inability to maintain sufficient liquidity;
- any inability to realize anticipated tax benefits or retain tax credits;
- challenges associated with recruitment and/or retention of key executives and a qualified workforce;
- the impact of our covenants in our debt instruments on our operations; and
- the impact of acts of terrorism, cybersecurity attacks or intrusions.

All of the forward-looking statements made in this presentation are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business, prospects, financial condition, results of operations or cash flows. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this presentation apply only as of the date of this presentation. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even in light of new information or future events, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this presentation are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-11899

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Net Income. Non-GAAP Operating Earnings exclude the impact of returns (losses) associated with the Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting and material one-time items. Non-GAAP Adjusted EBITDA excludes the same items as our non-GAAP Operating Earnings measure as well as income tax expense, interest expense and depreciation and amortization. The last two slides in this presentation (Slides A and B) include a list of items excluded from Net Income/(Loss) to reconcile to non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA with a reference to those slides included on each of the slides where the non-GAAP information appears.

Management uses non-GAAP Operating Earnings in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results. Management believes non-GAAP Adjusted EBITDA is useful to investors and other users of our financial statements in evaluating operating performance because it provides them with an additional tool to compare business performance across companies and across periods. Management also believes that non-GAAP Adjusted EBITDA is widely used by investors to measure operating performance without regard to items such as income tax expense, interest expense and depreciation and amortization, which can vary substantially from company to company depending upon, among other things, the book value of assets, capital structure and whether assets were constructed or acquired. Non-GAAP Adjusted EBITDA also allows investors and other users to assess the underlying financial performance of our fleet before management's decision to deploy capital. The presentation of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA is intended to complement, and should not be considered an alternative to, the presentation of Net Income, which is an indicator of financial performance determined in accordance with GAAP. In addition, non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA as presented in this release may not be comparable to similarly titled measures used by other companies.

Due to the forward looking nature of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility. Guidance included herein is as of July 28, 2017.

These materials and other financial releases can be found on the PSEG website at www.pseg.com, under the Investors tab. From time to time, PSEG, PSE&G and PSEG Power release important information via postings on their corporate website at http://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. The "email alerts" link at http://investor.pseg.com may be used to enroll to receive automatic email alerts and/or really simple syndication (RSS) feeds regarding new postings at http://investor.pseg.com/rss

ASSETS AND NET INCOME ARE FOR THE YEAR ENDED 12/31/2016. PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO ENTERPRISE / OTHER ACTIVITY. *SEE SLIDE A FOR A RECONCILIATION OF NET INCOME TO NON-GAAP OPERATING EARNINGS AND SLIDE B FOR RECONCILIATIONS FOR PSEG POWER AND ENTERPRISE/OTHER.

PSEG Policy and Regulatory focus

on mechanisms that provide customers clean, affordable, resilient energy supply

NJ Distribution Base Rate Proceeding

- True-up data from 2010 base rate case for known changes in customers usage, taxes, O&M and investments

Long-Term Infrastructure Investment Platform

- Seek extension of existing infrastructure programs, e.g., GSMP, and broaden investment platform

Preserve the Value of Nuclear Supply

- Pursuing legislative strategy to recognize the value of nuclear energy under terms and conditions that are affordable for customers and provide the proper incentives for long-term operation

Ensure Federal Regulatory and Policy Framework

- Advocate for rules that preserve benefits of competitive markets while also recognizing the value of clean energy, supply diversity and grid reliability

SI-SSA-0015-11903

PSE&G expected to grow to represent ~66%

of 2017 operating earnings

PSEG's Value Proposition

- A stable platform with a $15 billion infrastructure investment pipeline providing opportunity for growth
- PSE&G – Delivering on promise for rate base growth through disciplined investment, customer satisfaction and safety
- PSEG Power – Efficient, low-cost, clean fleet advantaged by asset diversity, fuel mix and location
- Focus on providing strong, sustainable returns of invested capital through operational excellence, regulatory and legislative mechanisms
- 110-year record of paying common dividend with opportunity for consistent, sustainable growth
- Strong balance sheet – Financial strength supported by stable credit rating and investment profile

CONFERENCE CALL PARTICIPANTS

Steve Fleishman *Wolfe Research - Analyst*

PRESENTATION

Shahid Malik - *Public Service Enterprise Group Incorporated - President, PSEG Energy Resources and Trade*

Good morning, everyone. Thank you, Steve, for inviting us to your conference again. Appreciate the opportunity to just come across the Hudson, rather than fly all the way down to Texas. This is good for us.

Before I start, I'd just like to remind you of the forward-looking statement.

And then -- so I'm here today really to talk about our deregulated business that we call PSEG Power. Our strategy is very simple; actually it's to operate a regionally focused, highly efficient generation fleet in hopefully the nation's premium power markets. We have approximately $12 billion worth of assets, consisting primarily of 12,000 megawatts of power generation in the Northeastern part of the US. And we're in the process right now of upgrading our generation fleet. We have an investment scheduled of approximately $3.5 billion over the next five years, investing in both existing as well as in new generation.

And like others in the industry, we have retired older units to comply with some of the environmental regulations out there. But we're also investing to grow our existing nuclear, and our existing and new gasifier generation. In addition, we own about 12 utility-scale solar facilities in six states that total about 150 megawatts.

So I mentioned that we're regionally focused. And really we think that's the one distinguishing factor we have -- one of the distinguishing factors we have. The primary one of those is location, and we sit next to this really big electric demand region in North America, with New York City and Philadelphia on one side. And on the other side, as you heard the previous panelist talk about, the largest natural gas supply region in North America, the Marcellus.

So we benefit from that cheap gas, and we also have that consistent load and volatility as a result of being close to New York and Philadelphia. And there's other northern New Jersey power markets.

So important these days to have a well performing and flexible [gasified] assets, especially with the CP product that Joe just talked about. And we have a solid base of high-performance nuclear units, too. And that allows us to cover our base load sales with those nuclear assets while having our gas assets really take advantage of the volatility. That's inherent in being the constrained [serves] up in the Northeast.

So, with respect to additional investments, what we plan to do is upgrade our existing fleet with more efficient combined cycles, and I'll talk about those in just a second. And you'll see that our mix will be changing a little bit over the next few years. And principally, however, you'll note that our megawatt output, despite a slightly lower owned capacity -- megawatt generated will still be a little bit higher than we are currently, between the 54 to the 58, 59 terawatt hour range. That's principally because we're replacing some of our older, less efficient megawatts with new, efficient combined cycles, which will run on more of a baseload basis.

I mentioned gas earlier on. Fuel costs are among the lowest in the US. We have also, fortunately, one of the largest gas trading and procurement operations in this region. And last year, we bought over 400 Bcf of gas. That allows us to leverage those prices further down and benefit our utility

THOMSON REUTERS

SI-SSA-0015-11912

customers. The orange and the blue slices show that we've bought over 60% of our gas directly from the Marcellus and from the Utica. And the green slice, which is what we buy on a delivered basis from other customers and producers, I would bet that a lot of that comes from the Marcellus, as well.

So we're getting a lot of gas at cheap prices. And because of our extensive network of gas contracts on the pipelines, we're able to get the gas delivered to our assets at a pretty good price; certainly better than, we think, a lot of our competitors.

On the development side, we've been actively seeking ways to grow our portfolio and to improve our efficiency, as I mentioned earlier. So we are very happy, then, to be building two new combined cycle power plants, both of which are targeted to come online in the 2018 time frame.

The Keys Energy Center is close to Washington, DC, and it's located in the constrained Pepco [zone]. We believe there's strong load growth in the region and also easy access to Marcellus gas. That really is a nice growth story for us, we believe. The Sewaren plant in New Jersey that we've also announced is a redevelopment of an existing site. So, essentially, we're trading old and inefficient megawatts for new, efficient megawatts.

And since it's a brownfield site, we have the ability to lower our costs by using existing infrastructure, as well as benefiting from the strong local natural gas position that we have. Importantly, these new plants really improve our overall heat rate, or our efficiency. And in a competitive market, as you've heard the panelists talk about earlier, pennies matter. And if we can shave off a few cents from our cost of production by having those most efficient power plants in the marketplace, then we'll get dispatched first.

We have additional growth investments going on right now. I mentioned the combined cycles and some uprates that we have on the gas side. That will cost us about $1.6 billion over the next five years. And as you can see from this profile, our capital spend for new investments, in blue, will peak next year, and then we'll see the earnings impact from 2018 onwards. We have a small amount of spend that's required for environmental reasons, which is the orange segment there. And the gray segments reflect capital for maintenance and for improvement.

But even after these investments, our intention is to have a very strong balance sheet and to have a strong credit rating. We will retain that strong balance sheet, and that will allow us to keep looking for additional high-value opportunities as this market goes through a period of consolidation.

And our capital investments are being made to increase our output, but also to increase their efficiency. And as you can see, the average heat rate of the fleet is going down. We believe that leading technology these days is between a 65 to a 7,000 heat rate. And we're investing in our fleet to get down to those levels as well, so we can be the cheapest unit on the block.

Just briefly, Joe also talked about capacity markets; we have two additional advantages by virtue of being where we are. The first is the capacity market. That's present in each of the three Northeastern markets that we operate in. This chart shows you how over the last four capacity cycles, stretching through May of 2019, our assets have generally enjoyed a significant premium over the rest of the RTO in PJM. And our guaranteed capacity revenue of $540 million to $630 million each year really allows us to invest in existing and new units to improve their reliability and to improve their effectiveness.

And a second advantage is our ability to sell long-term electricity to New Jersey's customers. This forward sales construct is available for pretty much all of our generation in that part of the world. And it's very helpful at a time when forward liquidity is lower than in prior years, and also provides us a visible stream of earnings for the next three years. So you add the energy visibility we have with the capacity market visibility, we have a pretty good benefit from our locations in the Northeast.

Just quickly, then, on the regulatory side: although we can't control or influence energy prices -- which by the way, Steve, are lower than we would like, as you pointed out -- we do have the ability to influence the regulatory environment, which we are actively doing. And I might add that the industry has had some considerable success, actually, in the last couple of years in improving both capacity and energy markets from a regulatory standpoint and a market development standpoint. And we've already seen significant uplift from improved capacity markets, and we also expect improvements in capacity in energy market price signals, as well.

THOMSON REUTERS

SI-SSA-0015-11913

And you may have heard that last week FERC signed off on and issued a NOPR, a Notice of Proposed Rulemaking. And they challenged the RTOs to address the two issues that I have on this slide here. And they indicated that other items, such as operator transparency, are also in the works. And that's very encouraging for those of us in this industry, because it will help the industry obtain fairer and more accurate pricing, we believe, for our assets.

So to wrap up, in summary, we've been very active in helping shape and improve rules in the markets that we operate in -- whether it's in new capacity market construct in New England or in PJM, stricter rules for how demand response participates, as well as those recent moves I mentioned to improve price signals in the market by FERC -- we think we've been a leading player, together with Exelon and others, in this marketplace.

And this regulatory backdrop for PSEG, coupled with our strong balance sheet, has really allowed us to start growing our footprint again, but we're doing it in a highly selective manner. We're doing it with -- where we anticipate strong projected financial returns in a very disciplined way. So, we believe we have a good story. That gives us the ability to be successful now and in the future.

So with that, I'll wrap up, and I'll be happy to take any questions with Joe in a bit.

QUESTIONS AND ANSWERS

Steve Fleishman - *Wolfe Research - Analyst*

Great. Thanks, guys. We're solidly back on schedule. Maybe just to kick off the questioning, I guess first for Joe, you mentioned very much that NIHub is very cheap. You don't really mention PJM West, so maybe view the differences there. And I guess if the issue is a lack of forward liquidity, why is that okay at PJM West, not NIHub? I guess that's a bigger hub. But maybe just some views there.

Joe Nigro - *Exelon Corporation - EVP of Exelon and CEO of Constellation*

I think, Steve, there's a couple of things. First is, PJM West Hub, we think, is more fairly priced than NIHub. I would add, though, there's a tremendous amount of seasonality associated with that. And what I mean by that is we believe the winter periods are probably fairly priced and carry the right premiums, and some periods in the off-peak hours in the non-winter months at West Hub actually we still see upside -- the market relative to our fundamental view.

I think the big thing, though, is you do have more market liquidity at West Hub. But as you go beyond a year or two years, let's say, 2017, now the liquidity falls off quite substantially. I think the other thing to note is most of the new generation that's being built is more impactful to West Hub than it would be, for example, to NIHub. And I think what we see is more of the coal retirements have happened or are happening in the western part of PJM.

So when you overlay the new generation on the eastern side with the retirements on the western side, we actually see the basis between those two locations becoming closer together, and the market currently isn't reflecting that. That's part of the reason we see the increased value at NIHub. And then you just have less liquidity on the forward curve at NIHub compared to West Hub. So I think all of those things factored together drive what we're saying. It's not just one variable.

Steve Fleishman - *Wolfe Research - Analyst*

Okay. And Shahid, just maybe a question on the new build question. So in the panel before, which you weren't listening to, but one of the comments was just that -- don't see the economics for new build. But then you just bought a new build plant, and so do you see that differently? Or was that just a special situation in terms of opportunity, and generally you don't see the new build economics?

THOMSON REUTERS

SI-SSA-0015-11914

Shahid Malik - *Public Service Enterprise Group Incorporated - President, PSEG Energy Resources and Trade*

So it's always preferable if you can buy a combined cycle or a unit that's been operating for a while. You have less construction risk and you're able to earn earnings from day one. Those assets are pretty competitive. Then you compare that with building new and you look for specific opportunities. For us we felt -- and we've been looking for some time, frankly -- to grow our portfolio, and we haven't found the right asset to do that.

This one came along. We are very excited by it, because actually we think there is good load growth in that area. It's a constrained zone. We believe it will have a strong spark spread because of the cheaper Marcellus gas and the low growth that we expect in that region.

So actually, we do think it's a good asset. We think that we'll be successful in constructing it, and we think it's going to be well located. Plus it also helps in how we manage our portfolio with respect to the other parts of our business. Yes, we feel pretty good about that, Steve.

Steve Fleishman - *Wolfe Research - Analyst*

Well, let me ask that question just another way, which is just that at a high level, would you be interested in doing more of those at, let's say, the same rough valuation?

Shahid Malik - *Public Service Enterprise Group Incorporated - President, PSEG Energy Resources and Trade*

So, when we look at our investments, we clearly look at what are the alternatives for those dollars. Do we spend on the regulated side, the deregulated side? Do we give money back to our shareholders? So we have a very stringent internal hurdle, the metrics that we look at in order to make the investments. As you can tell for the last couple of years, we haven't made a lot of investments in the power side. We've had a lot of uprates. We've had some improvements in our base lid, but haven't stepped out to build new generation.

These circumstances looked very favorable to us. They passed all our internal hurdles and our internal metrics. And so, yes, if the right opportunity came along, Steve, we would certainly look at it.

As a mentioned, though, we're now in the process of building two new combined cycles. Sewaren power plant in New Jersey is a slightly different animal for us in that it's replacing all megawatts with new, efficient megawatts. It's replacing megawatts on an existing brownfield site, which makes it cheaper from an infrastructure standpoint. And so that's a different animal.

So yes, I would say that we would look at them. But generally our preference right now would be to look at those assets that are currently running, probably offered at a discount to new build.

Steve Fleishman - *Wolfe Research - Analyst*

Okay. I'll ask one more question, then I'll open up to the audience. I think as you guys know, we put out a report last week that talked about supply/demand work that we do. And in PJM, one of the more controversial conclusions we came to was that supply/demand is loosening. And I'm just curious -- I'm not sure how much you've had a chance to look at what we did. But just overall, would you agree that's true, or not? And if you had views that were different than ours, what would they be?

Joe Nigro - *Exelon Corporation - EVP of Exelon and CEO of Constellation*

Yes, I did look at it briefly, Steve. And I think -- like I said, I think in general when you look at it, we expect a fair amount of new generation to be built as well. We saw, I think, in the previous three capacity auctions, about 5 gigawatts of new combined cycle plants clear each year. I think this year is a little less than that, so call it close to 20 gigawatts in total that we expect. We retired about 25 gigawatts of coal. You're repowering some assets. There is continued -- I would say continued development of renewables. And load growth is probably somewhere -- it's less than 1%, clearly, when you look at it.

THOMSON REUTERS

SI-SSA-0015-11915

So I think when we put all that together, I think the big driver is you have a changing composition in the dispatch stack. I think this summer, quite frankly, was a little bit of an anomaly. We had obviously very, very low M-3 gas prices. And if gas prices are sustained at $1.50 in perpetuity, we're going to be having a very different conversation, obviously. I think also we didn't see, let's call it, the peak loads that we would have expected in the coincident peaks across the power pool that we've seen in years past. So I think some of the volatility got masked.

I think it's fair to say, though, when you put all that together, as we said, we think the West Hub is generally fairly priced with the seasonality I mentioned, and there's upside at NIHub. But I think the other relevant point is, with that, you're going to get increased volatility. And we serve a pretty big book of load in PJM, as you saw in the slide I presented, and we're comfortable with that, given our generation backstop and our ability to do that. And I think you're going to see that; and I think there's opportunity to capture value both when the market is volatile to the high side, like it was in the winter of 2014, but also to the downside, like we saw this past summer.

Shahid Malik - *Public Service Enterprise Group Incorporated - President, PSEG Energy Resources and Trade*

And I'll just add a little bit to what Joe said. And I wouldn't dream of contradicting my friend here; but Steve, we did look at your report yesterday, and the one previously, and I think you fairly accurately represent potential new builds. The spark spreads are very strong, particularly if you have access to that cheap gas, which I think is very helpful.

Perhaps there might be some more retirements, not necessarily because of environmental, but also because of economics. And you had the previous panelists talk about some of the pressure on some of the baseload units, the old nuclear -- the small, single-site nuclear units that are out there, as well as some of the disadvantaged coal that, frankly, we don't expect to be around that much longer.

So, I think on the retirement side you might see some more of those, primarily for economic reasons.

Steve Fleishman - *Wolfe Research - Analyst*

Any questions from the audience? Making it very easy on me. Maybe just on capacity. Obviously the auctions overall, I think, were a success. And whatever has gone on with supply/demand, the capacity side obviously gives you a lot of cash visibility. What do you see beyond this? It seems like next year we go to more full CP, and demand response still a question. Do you think this is just beginning -- continue of higher auction pricing?

Joe Nigro - *Exelon Corporation - EVP of Exelon and CEO of Constellation*

I think one thing you know is, expect the unexpected. We've seen a line of volatility in capacitor results, but I think the point you made is a relevant one. As we transition from -- into the 80% procurement for the recently completed 2018-2019 auction, by the time we get out to it, I think it's 2021. I think there's a lot of puts and takes that will be associated with that. There's talk about how PJM is going to forecast load in the future, its changes to the DRR curve.

I think the jury is out on how demand response is going to be able to participate with the capacity performance product. I'm not sure it will be quite the quantity we've seen in years past. But I think, at the end of the day, there's two elements that are really important. I think the first is recognizing to ensure reliability the penalty structures needed to change. And I think folks recognize that, and we saw that in the prices that cleared in 2018-2019.

And then the second element is the bidding behavior of the participants really matters. And I think they recognize that with the increased volatility or the risk of higher penalties and associated with nonperformance, you had to prepare your plants to perform in those hours when they're most needed. And I think the prices need to reflect that, and we would expect that to continue.

THOMSON REUTERS

SI-SSA-0015-11916

Shahid Malik - *Public Service Enterprise Group Incorporated - President, PSEG Energy Resources and Trade*

So, I was a little surprised in the 2018-2019 auction, frankly, that there was such a small discount between the base product and the competing product, the CP product. And I would attribute that to being a relatively new market construct. And I believe, and I think others in our Company believe, that some folks in the industry that did bid underpriced risk relative to the base. And we could see some continued widening of that spread over the next few years. I'm not sure what it means for the absolute price of capacity, and I wouldn't want to predict that, but I would say that's one element that we're keeping an eye on.

And the other element, in addition to the puts and takes that Joe mentioned, is that if electric prices stay low, then the way the formula in PJM works, is that capacity prices have to rise. Because the net of the two adds up to a number that provides incentives for generators to maintain their power plants and to build new power plants. So there's a constant dynamic between energy price and capacity price, particularly in those Northeastern markets. So if one is weak, then the other one should be strong.

Generally, I feel pretty good about the construct. I think that there's still some more learning that participants will have to go through to get comfortable with it, maybe some refinements of people's bidding tactics. But I think PJM made a good start, and I think the industry responded.

Steve Fleishman - *Wolfe Research - Analyst*

Okay. Questions in the audience?

Unidentified Audience Member

(inaudible - microphone inaccessible)

Shahid Malik - *Public Service Enterprise Group Incorporated - President, PSEG Energy Resources and Trade*

Yes, it was a pretty good-sized move for us. And as you know, over the last few years we've focused a lot of our attention and development dollars on our utility business, which has performed pretty well. But we still have a pretty strong balance sheet, good opportunities on the power side. It's not that we haven't wanted to spend on the power side; we haven't found the opportunities that really work for us.

So to answer your question, and to follow up on what Steve said, it's unlikely that we'd want to build a whole bunch more right now. We'd certainly for selective assets that we could pick up to add to our portfolio, either to improve our diversity, to improve the efficiency, or to increase the amount of base capacity that we have.

With respect to consolidation, the reason I mentioned that is because I believe that the economics in the industry today are causing some companies some financial problems, particularly those companies that have high debt and are highly leveraged, and the cash flow isn't coming in as they might have expected since power prices are relatively low. And so I think some companies are going to be forced to make a decision: do I continue funding the leverage that I've put on with the lower cash flows? Or do I exit? And I think we're seeing signs of folks, particularly smaller portfolios, smaller power plants, looking to exit.

And Paul Farr mentioned that in the previous panel -- that they're seeing every opportunity that's out there, and so are we; and there does seem to be quite a lot out in the market right now. Whether we'd be interested in buying another portfolio our size or not, I guess probably not. But we'd certainly look for selective assets rather than a big portfolio.

Does that answer your question? Thank you.

Joe Nigro - *Exelon Corporation - EVP of Exelon and CEO of Constellation*

I would just echo similar comments. We have seen consolidation on the power generation side, and I would expect that we continue to see consolidation. I think another important element for Exelon is in 2014 we acquired two retail companies. And I think you're going to see continued consolidation on that side of the business, as well. And I think that would be an area where we would have interest in acquiring assets on the retail side, given the nice match with our generation output.

Steve Fleishman - *Wolfe Research - Analyst*

On that topic, I know, Shahid, that Ralph almost gave a little bit of a hint to potentially having interest in the retail business. So be curious where your thoughts are there right now, because that was definitely new for PEG.

Shahid Malik - *Public Service Enterprise Group Incorporated - President, PSEG Energy Resources and Trade*

Right. So, I run a retail company; I'm comfortable with the retail business and operational risks, I believe, and there are operational risks around retail businesses -- and I'm sure Joe will be happy to describe -- principally for companies in our space, it's credit risk and getting your bills out on time, and getting paid. So, generally, PSEG has always considered different vehicles for getting its output to market, and the one that's worked best for us in the past has been the wholesale market.

As the market and the industry develops, you're seeing less liquidity in the out years, and you're definitely seeing more -- and less liquidity out there. And as a result of that, whatever vehicle is working on it to get your megawatts out would be a good potential option. So we've considered it in the past; we are considering it right now; and we'll see whether it makes sense for us in the future.

If we do it, it would be a defensive strategy, something that basically helps us sell megawatts in our territory. I don't expect it to be significant in any way or to move the needle from an earnings standpoint, but more of a vehicle for us to move megawatts from our power plants.

Steve Fleishman - *Wolfe Research - Analyst*

Okay. Want to make sure we had a chance, since Jack is here, to maybe talk a little bit about Exelon's news last night with Pepco.

So maybe, Jack, if you could just address that and --.

Jack Thayer - *Exelon Corporation - EVP and CFO*

(inaudible - microphone inaccessible)

Steve Fleishman - *Wolfe Research - Analyst*

Well, maybe just to use on -- the chances that a settlement can get done; are there other important parties involved, like the Public Council, which is in opposition? And how long would you let this -- if there's not something happening -- how long would you let this go before you'd say it's over?

Jack Thayer - *Exelon Corporation - EVP and CFO*

(inaudible - microphone inaccessible)

THOMSON REUTERS

SI-SSA-0015-11918

Steve Fleishman - *Wolfe Research - Analyst*

Okay. Anybody else have questions for Jack on this, before we go back? You guys are being easy.

Okay, maybe just one more question for the panel on just -- Joe, you touched on this a little bit on natural gas prices, because obviously those are very important, that you expect it to get better. And it sounds like you expect gas basis to moderate as well. Could maybe each of you give your views there, and a little more define what you expect it to get better? And how do you know the LNG is actually going to leave the country, for example, in your view?

Joe Nigro - *Exelon Corporation - EVP of Exelon and CEO of Constellation*

I'll start it with what I think the easier one is, first. I think from a gas basis perspective -- and I'm talking about M-3 -- we see the market improving already. When you look at 2016, you're at a slight discount to Henry Hub, and by the time you get out to 2018-2019, you're at our premium. And I think that's really predicated on the buildout of takeaway capacity from that area to other parts of the country. I don't think we differ from that in any way. I think we think the market structure, the way it's priced, is right.

When I talk about our upside fundamentally on the power side, at NIHub we're using market fuel prices, so we're not adding to that anything that overlays a view. We do believe, though, on the Henry Hub side of it, there is some upside to natural gas prices. And I don't think anyone can debate, we continue to get more and more efficient on the supply side. The technology is getting better and better, increasing the efficiency. And I think the cost of drilling, given all the capital cuts both on the oil and gas side, come down.

But I do think when you look at the prices, we see that there will be a small supply response to that. And I think if you dial back the clock, call it 12 to 24 months, you would expect it to continue to grow production. And I think just given where prices are, we think that that may flatten some.

But, more importantly, I think it's on the demand side. I think the LNG, the 7.5 to 8 Bcf that has been contracted, will get exported. We've seen a pickup of power generation as the consumption of natural gas with the turnover to more of a gas stack.

You are seeing increased exports to Mexico, and we think that will continue. And when you look at it over the four- or five-year horizon, there's probably an additional somewhere between 16 and 20 Bcf of additional demand in all these different buckets, and we think that will be a driver. We're not talking about material upside here in the near term, but as you go out through time I don't think it's unreasonable to think we could see some upside to price. And that would be in addition to what we're saying on the power side.

Shahid Malik - *Public Service Enterprise Group Incorporated - President, PSEG Energy Resources and Trade*

I would echo a lot of what Joe said. I think the wild card, frankly, though, is what are the producers going to do? And you probably have a good handle on that. Other panelists are going on tomorrow, Steve. As I was preparing for this presentation and the conference today, I looked back at the last time I did this, a year and a bit ago in Houston. And at the time, the predictions for Marcellus production for 2015 were about 16 Bcf a day. Well, today, we're at 20 Bcf, so the production guide really gone on a binge in the last couple of years.

And the question we have is, when the hedges are [aloft], what will they do with production? And will they reduce production, not just because gas prices are low, but because oil prices are low? And certainly we've seen signs of that. And Joe alluded to the supply side being important as well. So, I think that's bit of a wild card. But I think the trends, both domestically and internationally, are for less drilling, less production at these low prices.

So, on the demand side, though -- which I think is something that we have a reasonably good handle on as a utility -- we're seeing a lot more use by our customers for natural gas as a result of lower prices. So they're switching from oil; they're switching from electricity; they're using more gas. So customers are using -- or power companies are using a lot more gas to generate than they were previously, so there's demand growth there, as well.

THOMSON REUTERS

SI-SSA-0015-11919

We're seeing industry come back in a significant way, particularly in the South, but also increasingly here in the Mid-Continent and the Northeast. And chemicals industries in particular are big consumers of natural gas. We expect that to happen.

The other wild card of course is exports, and contracts have indeed been signed to export gas, LNG. And the question is, will those physically leave these shores, or will they be replaced by purchases elsewhere to cover those short sales? And I think the jury is out on that. It depends a lot on what world crude oil prices do. If OPEC has its way, and is able to take some producers out of business and then raise the price, then I think you could see LNG prices and gas prices rise, as well.

I also think we're at this -- this business is cyclical, and I remember 10 years ago when gas prices were $2. Well, guess what? We're at $2 again, and the power industry hasn't gone out of business. In fact, the power industry in many ways has gotten better and better. And so I think that you will see these cycles. And the challenge for companies like ours is, how do you manage through these cycles, and how do you have the most efficient machines? How do you have the lowest cost? And how do you invest so you can be successful in the markets that you choose to be in?

Steve Fleishman - *Wolfe Research - Analyst*

I'm going to ask one more question to close it up. So, in our panel before, I guess Bob Flexon talked about -- with a 20% free cash flow yield, I'd rather buy my stock than necessarily buy other companies right now. Both of your stocks, at least relative to the pure independent generators, have held up relatively well.

So, given that there's a lot of assets and portfolios out on the markets, do you have interest in growing the generation side of your businesses, still? Do you have room to do it? You are both pretty big in PJM, at least. And do you see maybe more of a competitive advantage to actually win these days?

Joe Nigro - *Exelon Corporation - EVP of Exelon and CEO of Constellation*

Steve, I think we are investing in two new state-of-the-art, efficient, combined cycle plants in Texas, and they're both being built on existing sites. We think they provide a competitive advantage; match very well to our load business. I think from our perspective, though, we would have to think long and hard about adding additional merchant generation. I think you mentioned in PJM, in a lot of instances, it's going to be difficult for us to do that.

To the extent we can keep our book of business balanced between our load and power generation business, we may have some interest. But I think right now, where we are, we're very comfortable with the portfolio we have. And we would continue to look to consolidate retail entities and acquire retail entities; and to the extent, then, we need it to backstop that with generation we would look to add as necessary.

Shahid Malik - *Public Service Enterprise Group Incorporated - President, PSEG Energy Resources and Trade*

I think that from PSEG's standpoint, we would like to grow the Company. We would like to grow it on the regulated side as well as the deregulated side. The alternative, of course, is to give money back to our shareholders in the form of dividends or share buybacks, or whatever companies like that do with their cash. Firstly, we intend to maintain a strong balance sheet. We intend to maintain a very strong credit rating, because we think it helps us.

Actually, I think were able to take advantage of that in periods like this. We start seeing some assets come on the market that are good, strong assets that you previously wanted to own, but didn't want to pay the price for. So, we think that there will be opportunities, Steve. We will certainly look at them all. Whether we execute on them really depends on the situation at the time and the particular asset. But we have room to grow.

As I said, I think we prefer existing generation, unless there's a unique situation, such as in New England where there's a seven-year capacity [lock], we might think differently. But we'd evaluate each asset or each portfolio of assets -- likely not big, probably very small -- in the context of, how does it fit our portfolio? And can it add value, long-term, for our shareholders?

THOMSON REUTERS

SI-SSA-0015-11920

But we're in this business for the long haul. It's not like we intend to come out of it in the next two or three years. So we have to figure out how we deploy our capital. Letting our fleets run down and be inefficient and ineffective is not an option for us. We've got to figure out how we invest smartly to improve our efficiency so we can be effective in the marketplace.

Steve Fleishman - *Wolfe Research - Analyst*

Great. Well, Joe, Shahid, thank you very much. Great panel. Appreciate it.

PRESENTATION

Operator

Ladies and gentlemen, thank you for standing by. My name is DeTamyra and I am your conference operator today. I would like to welcome everyone to today's conference call, Public Service Enterprise Group first-quarter 2013 earnings conference call and webcast.

At this time all participants are in a listen-only mode. Later we will conduct a question-and-answer session for members of the financial community. (Operator Instructions). As a reminder, this conference is being recorded today April 30, 2013 and will be unavailable for telephone replay beginning at 1 p.m. Eastern Time today until 11.30 p.m. on May 8, 2013. It will also be available as an audio webcast on PSEG's Corporate website at www.PSEG.com.

I would now like to turn the conference over to Kathleen Lally. Please go ahead.

Kathleen Lally ***- Public Service Enterprise Group Inc. - VP of IR***

Thank you, operator. Good morning. We appreciate your participation in our call this morning. As you are aware, we released our first quarter 2013 earnings statements earlier this morning. The release and attachments can be found on our website at www.PSEG.com under the investor section. We have also posted a series of slides that detail operating results by company for the quarter. Our 10-Q for the period ended March 31, 2013 is expected to be filed shortly.

As you know, the earnings release and other matters that we will discuss in today's call contain forward-looking statements and estimates that are subject to various risks and uncertainties and although we may elect to update forward-looking statements from time to time we specifically disclaim any obligation to do so even if our estimate changes unless we are required to do so.

© 2013 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. THOMSON REUTERS

SI-SSA-0015-11923

Our release also contains adjusted non-GAAP operating earnings. Please refer to today's 8-K or our other filings for a discussion of the factors that may cause results to differ from management's projections, forecasts and expectations and for a reconciliation of operating earnings to GAAP results.

I am now going to turn the call over to Ralph Izzo, Chairman, President and Chief Executive Officer of Public Service Enterprise Group, and joining Ralph on the call is Caroline Dorsa, Executive Vice President and Chief Financial Officer. At the conclusion of their remarks, there will be time for your questions.

Ralph Izzo ***- Public Service Enterprise Group Inc. - Chairman, President and CEO***

Thank you, Kathleen, and thank you everyone for joining us today.

Earlier this morning we reported operating earnings for the first quarter of 2013 of $0.85 per share which equaled the operating earnings from 2012's first quarter. We are very pleased with our results. The current quarter's results compared to operating earnings in the year ago period which benefitted from IRS tax settlements at PSEG Energy Holdings and PSE&G by contributing $0.13 per share to consolidated operating earnings.

We also achieved these strong results despite a decline in the average price of our hedged energy. The quarter's earnings demonstrate the locational value of PSEG Power's assets which along with the strong performance of PSEG Power's nuclear fleet and Power's open position on its intermediate and peaking generation, allowed us to take advantage of a favorable price environment in the energy market place while managing downside risk through the hedges on our base load fleet.

Our results also reflect the steady increase in the earnings contribution from PSE&G's capital investment in transmission. Mostly the quarter's results are an affirmation of our focus on operational excellence and disciplined investment through maintenance of a strong balance sheet to meet the core objectives of our customers and shareholders for reliability and growth.

The performance of Power's nuclear fleet was enhanced by record quarterly generation from the Salem station. An upgrade of the equipment and the design of the circulating water intake structure at Salem greatly aided its performance.

Power also worked tirelessly to restore critical generating stations to operation in the aftermath of the damage created by Superstorm Sandy. The Linden gas-fired generating station was returned to service on January 11 and was available to meet the increase in demand during the winter months.

The Hudson coal facility was also returned to service in January. However, given the dual fuel flexibility at Hudson, this station was able to run on gas until higher gas prices and demand favored its dispatch on coal.

Regulatory recovery of PSE&G's investment in transmission under its FERC formula rates increased the earnings contribution from this critical enhancement to PSE&G's infrastructure. PSE&G's investment in transmission will help drive our forecast for double-digit growth in PSE&G's operating earnings in 2013.

PSE&G is expected to invest $3.4 billion in transmission from 2013 through 2015. This investment will increase transmission as a percent of PSE&G's rate base to approximately 40% and continues to drive our expectations for double-digit earnings growth at PSE&G over this multiyear period.

We benefited from excellent operating performance and an increase in our capital investment this quarter but as focused as we are on meeting our short-term goals, we are equally committed to delivering on the long-term promise associated with our proposed 10-year $3.9 billion Energy Strong distribution investment program. This program along with plans to invest $1.5 billion to harden our transmission system over the same period is a natural extension of our strategy to maintain PSE&G as one of the nation's most reliable utilities.

THOMSON REUTERS

SI-SSA-0015-11924

We are seeking approval from the New Jersey Board of Public Utilities for the initial five-year distribution related capital program associated with Energy Strong which would occur during a period of time when some major charges on the customer electric bill are scheduled to expire.

On a separate matter, we have reached an agreement with the staff of the New Jersey BPU and certain other parties to expand our investment in solar under the Solar Loan and Solar 4 All programs. The BPU is expected to act on the agreement at its meeting on May 29 and issue a final order on May 31. We believe the agreement recognizes the importance of the solar industry to New Jersey and will allow the BPU to focus on our infrastructure filing to make New Jersey Energy Strong.

In the meantime, we are responding to the BPU staff's request for additional information on our Energy Strong proposal. We can't provide you with a schedule but expect the program to receive careful consideration giving the opportunity to improve the resilience of the distribution system with little net impact on the customer's bill.

Our financial condition is strong. This was recently affirmed by Standard & Poor's upgrade of the credit ratings for each of PSEG's principal subsidiary companies as well as the Company's consolidated credit worthiness. The upgrade is an endorsement of the strategy we have been focused on which allows us to leverage the strength of our balance sheet to invest primarily in our stable regulated business in ways that meet customer needs and state goals as we protect the upside of the merchant business and provide growth for our shareholders.

We remain on track to meet our objectives for full-year 2013 operating earnings of $2.25 to $2.50 per share. Our success as always is driven by the hard work and dedication of our employees and was amply demonstrated in the first quarter's operating results.

With that I will turn the call over to Caroline who will discuss our financials in greater detail.

Caroline Dorsa *- Public Service Enterprise Group Inc. - EVP and CFO*

Thank you, Ralph, and good morning, everyone. As Ralph said, PSEG reported operating earnings for the first quarter of 2013 of $0.85 per share equal to operating earnings of $0.85 per share in last year's first quarter. We provide you with a reconciliation of operating earnings to income from continuing operations and net income for the quarter on slide four.

And as you can see on slide eight, PSEG Power provided the largest contribution to earnings. For the quarter, Power reported operating earnings of $0.49 per share compared with $0.39 per share last year. PSE&G reported operating earnings of $0.35 per share compared with $0.39 per share last year and Energy Holdings and Parent together contributed operating earnings of $0.01 per share compared with operating earnings of $0.07 per share during the first quarter of 2012.

We provided you with a waterfall chart on slide nine to take you through the net changes in quarter-over-quarter operating earnings by major business and I will now review each company in more detail starting with Power.

PSEG Power reported operating earnings of $0.49 per share for the first quarter compared with operating earnings of $0.39 per share for the first quarter last year. Power's first quarter operating earnings benefited from strong market prices for energy, higher capacity prices and an increase in output.

Normal winter weather conditions experienced this year compared to the abnormally mild weather conditions you will recall in the year-ago quarter, higher market prices for natural gas, and market volatility all contributed to stronger energy prices during the quarter in Power's primary PJM market.

The improvement in wholesale market pricing quarter-over-quarter offset the impact of an approximately $10 per megawatt hour decline in average contract prices on energy hedged through the Basic Generation Service contract, or BGS, as well as other wholesale contracts. As a result, we saw a net increase in earnings quarter-over-quarter attributable to price of $0.02 per share.

THOMSON REUTERS

SI-SSA-0015-11925

An increase in capacity prices on June 1, 2012 to $153 per megawatt day from the $110 per megawatt day price in the first half of 2012 improved Power's quarter-over-quarter earnings by $0.05 per share. Power's output increased 7.7% during the quarter as a result of the higher market prices for energy and more favorable weather. The increase in generation added $0.02 per share to earnings quarter over quarter. The improvement in pricing and output together led to a $2.00 per megawatt hour increase in Power's gross margin in the quarter to approximately $48 per megawatt hour.

The weather experienced in the first quarter also had a favorable impact on off-system gas sales. The increase in send-out aided recovery of the fixed expenses associated with Power's gas supply and storage operations. These two items together improved quarter-over-quarter earnings by $0.04 per share.

The improvement in revenue and margin was somewhat offset in the quarter by an increase in operating and maintenance expense exclusive of storm-related activity which I will mention later and other items which reduced earnings by $0.02 per share.

Higher depreciation expense related to the placing in service of the new peaking capacity and low-pressure turbines at the Peach Bottom Nuclear Station reduced earnings by $0.01 per share.

During the quarter, the nuclear fleet operated at full capacity slightly in excess of its rated capacity or 101% and provided 57% of Power's output. The fleet's performance was enhanced by the absence of any forced outages and record first-quarter generation from the Salem station.

The economics of operating Power's coal units -- on coal -- improved in the first quarter. Performance was supported by an increase in demand associated with more normal weather conditions and higher gas prices than experienced last year. Generation from Power's coal fleet nearly doubled from the year-ago quarter and provided approximately 16% of Power's output. The increase in output was experienced at all of our coal stations with the largest improvement at our New Jersey and Connecticut based coal units which operated on a very limited basis in the year-ago quarter.

Although the dispatch economics of the coal fleet have improved with higher gas prices, gas prices have not reached the level necessary to sustain the dispatch of fully scrubbed coal ahead of our gas-fired combined cycle fleet.

Power's gas-fired combined cycle fleet operated at an average capacity factor in the quarter of 52% compared to 56% in the year-ago quarter. Output at the Linden facility continued to be affected early in the quarter by repair activity in the aftermath of Superstorm Sandy. The station was returned to service in January.

The Bergen station, which was not affected by the storm, operated at an average capacity factor of 56% in the first quarter versus 53% in the year-ago period.

Slide 16 outlines Power's hedge profile through 2015. Power continues to forecast output for 2013 of 53 to 55 terawatt hours; output for the remainder of this year is approximately 70% to 75% hedged at an average price of $50 per megawatt hour.

For 2014, output is forecast also at 53 to 55 terawatt hours and is approximately 50% to 55% hedged at an average price of $50 per megawatt hour. Power has hedged 25% to 30% of its forecast generation in 2015 of 52 to 54 terawatt hours in total at an average price of $50 per megawatt hour. The results include the impact of the February 2013 auction of BGS load in New Jersey. A price of $92 per megawatt hour for the three years beginning on June 1, 2013 will replace the expiring contract for approximately $96 per megawatt hour.

Our assumption on the percentage of output hedged and the price of the output continued to reflect BGS volumes of the approximately 12 terawatt hours in 2013 and approximately 10 terawatt hours in 2014.

The percentage of generation hedged reflects expectations for the full year across a portfolio of assets consisting of base load, intermediate and peaking capacity. As you can see in slide 16, our low-cost base load generation is more fully hedged in any one year with our intermediate and peaking facilities more open to the market.

THOMSON REUTERS

SI-SSA-0015-11926

This profile is very consistent with our practice and we believe it reduces Power's downside risk, recognizes the need to meet the full load requirements of the BGS contract during the important summer months, and minimizes the potential risk of a unit not being available daring critical periods. It also provides the opportunity for Power to optimize the portfolio under the right set of market conditions as we did in the first quarter.

Forecast of Power's operating earnings for 2013 remains unchanged at $535 million to $600 million. Results for the remainder of the year will continue to be influenced by a decline in the average price of our hedges of approximately $10 per megawatt hour and higher capacity prices. Remember that the average price for Power's capacity in PJM is scheduled to increase to $244 per megawatt day on June 1, 2013 from $153 per megawatt day.

We also want to point out that Power's full-year expectations reflect the impact of an increase in O&M during the second half of the year associated with plans for the Bethlehem, New York and Bergen combined cycle facilities to undergo major maintenance programs as part of normal planned maintenance cycles. This will increase O&M expense for the year above what was incurred during the second half of 2012 and above the expected trend for O&M growth over the long term. But all of this is consistent with and baked into our guidance.

The forecast for Power's operating earnings as we have indicated does not include the costs associated with storm related repair. Power expensed approximately $28 million pretax on storm recovery activity in the first quarter of 2013 bringing total pretax storm-related expenditures to $113 million and of this amount, Power has received initial insurance proceeds of $19 million in the fourth quarter of 2012 to return its facilities to service.

Let's now turn to PSE&G. For PSE&G, as shown on slide 19, we reported operating earnings for the first quarter of 2013 of $0.35 per share compared with $0.39 per share for the first quarter of 2012. PSE&G's first-quarter results reflect the absence of $0.06 per share in the tax settlement in the year-ago quarter which more than offset the contribution to earnings in the quarter from PSE&G's increased level of transmission investment.

As we mentioned in February, the Federal Energy Regulatory Commission, or FERC, authorized PSE&G's request for an annual increase in transmission revenue under our formula rate filing. The increase in revenue which was effective on January 1, 2013, supported a quarter-over-quarter increase in the net bottom-line earnings contribution from transmission of $0.03 per share.

Electric and gas demand in the quarter was influenced by whether which was close to normal but significantly colder than a year ago. The favorable weather comparison added $0.02 per share to earnings.

An increase in distribution related operation and maintenance expense quarter over quarter was influenced in part by storm-related repair but more significantly by normal weather.

PSE&G focused on O&M related work in the quarter as opposed to a year ago when the abnormally mild weather conditions supported an acceleration of capital related work. The increase in distribution O&M reduced quarter-over-quarter earnings by $0.02 per share and an increase in depreciation expense and other miscellaneous items reduced earnings quarter-over-quarter by $0.01 per share.

Electric and gas sales grew in the quarter at a rate of 0.9% and 23% respectively given the more normal weather conditions versus 2012. We estimate weather normalized electric sales declined by about 2% in the first quarter from year-ago levels as weather normalized gas deliveries increased by about 6/10 of 1% quarter over quarter.

As Ralph mentioned, PSE&G has reached an agreement on its proposed solar capital investment programs. Under the agreement, PSE&G will invest up to $199 million on 97.5 megawatts of new solar as part of the Solar Loan III program. The agreement also provides for PSE&G to invest approximately $247 million to develop 45 megawatts of new solar capacity with 42 megawatts of this amount developed on landfills and brownfield sites as part of the Solar 4 All extension program.

The agreement represents approximately 50% of PSE&G's original request to invest up to $883 million on the two programs and provides for a return on equity of 10%.

THOMSON REUTERS

SI-SSA-0015-11927

This capital investment is expected to occur over a three-year period of time instead of the five-year program we initially proposed. Keep in mind if approved this investment of up to $446 million is incremental to the base spending of $4.9 billion for 2013 to 2015 that we discussed on March 1 and appears in our 10-K for PSE&G. The settlement, which is for a three-year period, provides for essentially the same amount of spending over the 2013 to 2015 period as we included in our upside case on March 1 for Solar.

So this continues to support a potential 12% compound annualized growth rate in rate base through 2015 if you include all of our new programs.

We are maintaining our forecast for double-digit growth in PSE&G's operating earnings of $580 million to $635 million. Results for the full year will continue to be influenced by growth in the earnings contribution from PSE&G's investment in transmission and our forecast also assumes that the full-year growth rate for distribution related O&M will be lower than the rate of growth seen during the first quarter as we don't assume a similar level of storm-related repair work as we experienced at the end of 2012.

I am sure you will recall that Superstorm Sandy related repair work reduced earnings by $0.05 per share during the 2012 fourth quarter.

Let me now turn to Energy Holdings and Enterprise. Energy Holdings and the parent together reported operating earnings of $4 million or $0.01 per share compared with operating earnings of $39 million or $0.07 per share during the first quarter of 2012.

The results for Holding and Enterprise aren't really a surprise. If you recall, operating earnings for the first quarter reflect the absence of the $0.07 per share tax benefits received in the first quarter of 2012 related to the settlement of the 10 years of IRS tax audits.

We are maintaining our estimate of full-year operating earnings for PSEG Energy Holdings and Parent at $25 million to $35 million. The results will include the contribution from Holdings' legacy investments, a full year of operation at the Milford and Queen Creek solar facilities of 40 megawatts which entered service in the fourth quarter of 2012, as well as the forecast commercial operation of a 19 megawatt solar facility located in Arizona which is expected to enter service in the fourth quarter at a cost of approximately $50 million.

We are very pleased with S&P's recognition of the strength of our balance sheet and the balance provided by the mix of growth and stability incorporated in PSEG's financial strategy. S&P raised its corporate credit ratings on PSEG, PSE&G and PSEG Power to BBB+ from BBB and the rating on PSE&G's senior secured debt was raised to A from A-, and the rating on all three issuers is stable.

As we said, we can finance our capital program without the need to issue equity given the strength of Power's cash flow and our already strong balance sheet. At the end of March 2013, debt represented 41% of our consolidated capital and we ended the quarter with $420 million in cash. Overall, we continue to forecast operating earnings for the full year of $2.25 to $2.50 per share.

That concludes my comments and I will now turn the call back over to the operator to open the line for questions. Operator?

QUESTION AND ANSWER

Operator

(Operator Instructions). Paul Fremont, Jefferies.

Paul Fremont *- Jefferies & Co. - Analyst*

Thank you. I guess the first question I have is why did the New Jersey BPU believe that your Energy Strong filing was incomplete? I guess what should we assume is the timeframe where you would I guess resubmit a more detailed plan?

© 2013 Thomson Reuters. All rights reserved. THOMSON REUTERS

SI-SSA-0015-11928

Ralph Izzo - ***Public Service Enterprise Group Inc. - Chairman, President and CEO***

Hi, it is Ralph. Obviously you can tell my voice apart from Caroline's hopefully. We put something in that we believe makes a lot of sense in the point of view of the number of customers that would be affected in a future storm. Over 800,000 fewer would be out but what the Board is now probably more deeply into (which makes perfect sense given the vast size of the program) $3.9 billion over 10 years with half of that in the first five, a little bit more than half in the first five, what is the cost benefit associated with each aspect of the program.

So they are asking more detailed questions about -- okay, what does it cost to harden a substation versus to underground certain lines? What is the cost benefit associated with enhancing systems on the distribution network versus raising some of the inside plant and the substations?

So it is a fair set of questions for the Board staff. We received them I think it was about April 15 and last I checked with Ralph LaRossa, he was reading the draft final response to them yesterday and we expect him to go back to the Board staff sometime this week.

So I view this as normal course of business and prudent regulatory due diligence by the Board staff and we are ready to answer as I said this week, their questions.

Paul Fremont - ***Jefferies & Co. - Analyst***

And my follow-up question would be -- interveners seem to have reacted negatively to the tracker clause recovery mechanism part of your proposal. Would the Company consider moving forward without that as part of your Energy Strong program?

Ralph Izzo - ***Public Service Enterprise Group Inc. - Chairman, President and CEO***

So let me break that question into two pieces because I respectfully will disagree with the characterization of interveners broadly defined. Some interveners have. We have 37 towns and counties that have passed resolutions supporting this. We have countless number of unions and trade associations supporting this. We have the New Jersey Chamber of Commerce supporting this. We have regular letters to the editor supporting this. We have over 5000 people who are a blend of employees and customers who have signed up on our advocacy site who realized the cost of losing power far and away exceeds the cost of doing this.

Now having said that, a microcosm of interveners have said yes, we don't want this to be done -- using a tracker but let me be very clear, we will not do this without a tracker. These are extraordinary investments taking the most reliable electric utility in the nation to a higher level of reliability and we are not doing this with retroactive rate making.

Paul Fremont - ***Jefferies & Co. - Analyst***

Thank you.

Operator

Julien Dumoulin-Smith, UBS.

THOMSON REUTERS

Julien Dumoulin-Smith *- UBS - Analyst*

First question on the Power side, could you just talk to what drove the positive basis in the quarter, just the various factors? And then sustainability of those factors if you wouldn't mind?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President and CEO*

Sure, Julien. It seems to be largely the changing gas dynamics in the marketplace. So as the increased build of gas gathering and transportation infrastructure, some of that volatility will be diminished in the future.

Julien Dumoulin-Smith *- UBS - Analyst*

So what would you expect going forward just to be clear because I know there are a lot of different projects, some of which are going to bring gas to your neck of the woods.

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President and CEO*

I will let Caroline respond but we would expect to $2.25 to $2.50 a share this year.

Caroline Dorsa *- Public Service Enterprise Group Inc. - EVP and CFO*

In terms of basis, Julian, you know we don't forecast that and for sure we don't see bases levels on a continuing basis the way we saw them years ago. We are still looking at single-digit type basis.

But I think the important thing to recognize, as Ralph was mentioning, is when we have seen demand and when we have seen higher prices and when we have seen the weather that we saw, you see basis spike up and because we are not 100% hedged, we get to take advantage of that and that is what we did in the first quarter.

So long term similar lower levels like we have talked about before but when there are spikes we see them in our region, the locational value is still there and because of the way we operate the units as you know and how we sell them in, we try to take advantage of that as much as possible.

Julien Dumoulin-Smith *- UBS - Analyst*

Then perhaps a quick clarification or follow-up. Does this relate at all to some of the dynamics that are going on in New England and the very high gas prices we are seeing there? Is there any kind of export opportunity shall we say?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President and CEO*

No, I wouldn't see that at all. At an 80,000 foot level, it relates to the rising dominance of natural gas and the infrastructure being a little bit lagging in terms of the dominance. But I wouldn't go any more specific than that.

THOMSON REUTERS

SI-SSA-0015-11930

Julien Dumoulin-Smith - ***UBS - Analyst***

Great. Back on the utility if you don't mind, again I appreciate that it is dynamic right now but at the end of the day what kind of timeframe are we talking to getting across the finish line on some sort of approval for Energy Strong? I mean what is the timeline from now if you will?

Ralph Izzo - ***Public Service Enterprise Group Inc. - Chairman, President and CEO***

We don't have a schedule but yes, there is a six-month anniversary of Sandy. The Board staff turned around their questions very quickly and they did in it in I think 10 or 15 days. Our response is very quick 15 days. I will simply say that I would be disappointed if we didn't have something by the end of the year and I know everyone is working real hard to do something in the fourth-quarter timeframe.

It is a complicated set of issues but one that there has been no diminution of recognition of the importance of it. In fact, I think it grows with every passing day.

Julien Dumoulin-Smith - ***UBS - Analyst***

Great, thank you.

Operator

Ashar Khan, Visium.

Ashar Khan - ***Visium Asset Management - Analyst***

Good morning and congrats on great results. So one thing that is clear from the remarks if I heard them correctly that positive basis in the first quarter was not anticipated and hence the Power's good results were better than expectation for the first quarter. Is that a fair commentary?

Ralph Izzo - ***Public Service Enterprise Group Inc. - Chairman, President and CEO***

No, I think maybe you missed the --. But could you just repeat what you said in the beginning, was it something about congratulations on your good quarter or something like that?

Look, if we go back to ancient history of about 36 months ago, you would see basis numbers of about $10 to $20 and if you look at more recent history, you would see consistent basis numbers of about $3 or $4 and we just had higher bases than that low single-digit number in the first quarter driven by a myriad of factors. And I think all Caroline was saying is that our locational advantages remained. We always have some power plants open and we are never 100% hedged to take advantage of those occasional spikes, increases in basis whenever you get these kind of dislocations in gas deliverability.

Ashar Khan - ***Visium Asset Management - Analyst***

Okay. I understand, Ralph, but could you just give us a little bit more what the basis has been January, February, March and I don't know if there is any data for April?

THOMSON REUTERS

Ralph Izzo - ***Public Service Enterprise Group Inc. - Chairman, President and CEO***

I was about to and then like three people sat on my head and said no, I'm not allowed to do that. So no, we won't -- we don't give the specifics on a basis, competitive information.

Ashar Khan - ***Visium Asset Management - Analyst***

Okay, okay.

Operator

Dan Eggers, Credit Suisse.

Dan Eggers - ***Credit Suissse - Analyst***

Just on the -- congratulations on getting the Solar settlement done. I was wondering if you guys could kind of share kind of where the conversation went kind of to scale and to the size you guys ended up with, and then accelerating the timeline, both what it means to maybe the future of Solar in New Jersey? And then is there a cost or a rate threshold that you are finding amongst interveners that could potentially be reflective in the Energy Strong project?

Ralph Izzo - ***Public Service Enterprise Group Inc. - Chairman, President and CEO***

Sure, Dan. That is a series of excellent questions that I will try to do justice in a brief response. So remember, we filed Solar in July of last year, and then we had a major event that occurred just three months later in the form of Sandy. So one of the things I think we and the Board are always mindful of is what are the rate effects of investments and what are the benefits associated with those investments?

In the case of solar we have never, ever shied away from the fact that solar is not the competitive cost alternative for energy supply. This is an industry that we believe has a future. The State Energy Master Plan says it believes it has a future, and we are constantly struggling with how do you nurture it in its infancy to bring about that hope for and successful future?

So given some of the promises made by panel manufacturers and people who are prominent in the industry about how the cost curve continues to decline, I think the Board really said look, in light of the other investments we need to make, does it make sense to have a five-year program where the regulated utility is a big participant?

Let's look out three years and let's keep this going in those market segments where the market clearly is shying away from, that being landfills and brownfields. So you have an investment rate on the settlement that matches the investment rate that was anticipated in the original program, but over a shorter time period, and that seems fair and reasonable to us.

I guess the best demonstration that the settlement seems fair and reasonable is that the people who didn't sign on have one of two opinions; either the program is not big enough or the program is too big, which suggests that the board and we and those who did sign on have hit a reasonable compromise on it. So I do think you have a situation where we have an ongoing industry that people have confidence in and believe in but has not achieved the kind of competitive level that it needs to from the point of view of price competition.

THOMSON REUTERS

SI-SSA-0015-11932

And then you have a recognition that given the changing weather patterns over the last 18 months has really driven home four months after the Solar filing that something more needs to be done in terms of grid resiliency. And then that has kind of dominated the regulatory landscape since the Solar filing was done.

Dan Eggers - ***Credit Suissse - Analyst***

Do you think this is just a prioritization of capital so you don't think it is a reflection of there is more resistance to another meaningful but important CapEx program in Energy Strong?

Ralph Izzo - ***Public Service Enterprise Group Inc. - Chairman, President and CEO***

Yes, I think that is correct. I think there is just a recognition that you cannot have three to four and depending on how you count weather events in the last 18 months knocking out millions of customers and that is where capital needs to flow first and foremost.

I do think over the long term and long term is beyond three years, that you will see increased scrutiny to the level of subsidization needed to renewable technologies. I mean that is just -- cannot continue in perpetuity.

Dan Eggers - ***Credit Suissse - Analyst***

And I guess just changing topics on Salem's better performance with the mechanical fixes, should we be thinking about kind of a sustained higher utilization rate effectively for the nuclear fleet going forward with these fixes in place? Or is this a bit of a seasonal benefit that works slow when the weather is cold?

Ralph Izzo - ***Public Service Enterprise Group Inc. - Chairman, President and CEO***

Well, it is a seasonal benefit insofar as this is the season where we had our biggest problems. The units I think are running if you take out the last quarter at 91.3% or thereabouts. If you just put in 18 month re-fueling outages that last 25 days, we maybe have an additional forced loss rate of anywhere from 1% to 3%. So I hope none of the folks at the nuclear fleet are listening to me say this but I don't know how much harder I can push them.

But we are constantly seeking to continuously improve. I just don't know how much more upside you can expect out of it. The 101% capacity factor is pretty darn good performance.

Dan Eggers - ***Credit Suissse - Analyst***

Great. Thank you, guys.

Operator

Paul Patterson, Glenrock Associates.

Paul Patterson - ***Glenrock Associates - Analyst***

Just to sort of follow back upon Energy Strong and it makes a lot of sense what you are saying in terms of the track and what have you, just sort of wondering though -- I mean you mentioned retroactive rate making which I generally think of being not really legally

© 2013 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

SI-SSA-0015-11933

possible in most jurisdictions. I mean if for some reason you were required to engage in a major CapEx program let's say outside of Energy Strong, is there some particular retroactive rate making risk or something we should be thinking about?

Ralph Izzo - ***Public Service Enterprise Group Inc. - Chairman, President and CEO***

So, Paul, I am glad you asked that question because I use the word retroactive in the Merriam-Webster's dictionary sense of the word. You are seizing upon it in a term of art that is used in our industry whereby people go back and change rates that were previously approved. That is not what I'm talking about here. I was talking about a traditional rate setting where we would deploy hundreds of millions of dollars in capital and after watching our returns collapse, we would go in and see great increases subject to prudency review.

And what we have said consistently is that PSE&G for the last 11 years in a row was the most reliable electric utility in the mid-Atlantic region. Five out of the last eight years, it is the most reliable in the country by one set of measures and we cannot put forth a $4 billion capital program to take what is arguably one of the most if not the most reliable utility in the nation up to a higher level and then later on ask whether or not that was prudently incurred.

These are extraordinary investments that we believe are necessary and our customers are demanding but we are going to get approval up front for that and we are going to understand the way in which we are going to get compensated up front for doing that.

It doesn't mean we will get paid up front. That means we will get paid over the next 40 and 50 years over the depreciable lives of the assets at a fair return. But we are not going to do it with the kind of regulatory lag that is typical of traditional rate setting.

Paul Patterson - ***Glenrock Associates - Analyst***

Okay. And then just a follow-up on what -- I think you guys indicated that you hope to have a decision by the fourth quarter. Is that sort of the timeframe we should be thinking about when there might be an actual decision coming out of the Commission?

Ralph Izzo - ***Public Service Enterprise Group Inc. - Chairman, President and CEO***

I said two things. I said number one, we don't have a schedule and number two, I said that we would be disappointed if we didn't have something by the end of the year. No one wants to have another major storm whether it is this summer or next summer and then have to answer the question what did you do about it and the answer be nothing.

Paul Patterson - ***Glenrock Associates - Analyst***

Okay and just really quickly the 2% decline in electric sales, has that got to do with Leap Year and it just seems like there is a big difference between gas usage, weather adjusted and electric usage. Is there some sort of strange thing happening there or just any quick thought on that?

Caroline Dorsa - ***Public Service Enterprise Group Inc. - EVP and CFO***

Sure, Paul. It is Caroline. No, it is nothing to do with Leap Year. We don't make any of those kinds of adjustments. I think what you see in the weather normalization which as Ralph has always said is more art than science, so it is not a terrific economy in the state right now. We struggle like many other states so economic growth has been a little bit weak and of course there is some energy conservation under way. We think those are more of the driving factors nothing related to calendar like events, nothing like that.

© 2013 Thomson Reuters. All rights reserved. THOMSON REUTERS

SI-SSA-0015-11934

Paul Patterson - ***Glenrock Associates - Analyst***

So the fact that we had one day less this quarter did not lower -- the 2% takes that into account? In other words without that if you didn't have that, it takes into account the fact that we have one year less in this quarter, is that correct?

Caroline Dorsa - ***Public Service Enterprise Group Inc. - EVP and CFO***

It takes a look at the total over the prior quarter so whether there is any adjustment for that I don't know. That is de minimis. I think the fundamental driving factors are some of the economic challenges in energy conservation which is in fact what we have been saying in prior quarters so this is really consistent with how we have talked about some of the weather normalization in prior quarters.

But again, weather normalization is obviously a difficult thing to know with any certainty but I would not attribute it to a Leap day.

Paul Patterson - ***Glenrock Associates - Analyst***

Okay, thank you.

Operator

Andy Levi, Avon Capital.

Andy Levi - ***Avon Capital - Analyst***

Good morning and I will pat you on the back again, Ralph.

Ralph Izzo - ***Public Service Enterprise Group Inc. - Chairman, President and CEO***

Thanks, Andy. So what did you say?

Andy Levi - ***Avon Capital - Analyst***

Just on Energy Strong, just a couple more questions on that. Could you maybe just discuss kind of where Governor Christie's position is on this given his desire to have lower energy prices in New Jersey?

And then just also I guess last week there was a budget committee hearing at the assembly where Chairman Hanna discussed Energy Strong and his concerns that I guess there would be an 8% increase. So I'm just trying to politically find out kind of what is going on?

Ralph Izzo - ***Public Service Enterprise Group Inc. - Chairman, President and CEO***

Obviously I can't speak for the governor. What I can paraphrase because I don't remember the exact words was some of his early comments that were quoted in the press which was clearly we need to do something but I'm counting on the BPU to take a careful look at the cost of benefits associated with this. And that I think is as best a response as we can expect from a governor who is dealing with everything from pension reform to education reform to a whole host of other issues to trust his agency to do the work.

© 2013 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

With respect to President Hanna, I can't -- we're struggling a little bit to tie to the exact 8% number that he put out there. I am sure there is a sound basis for it but the confusion tends to stem from the fact that we have some charges rolling off the distribution bill over the next three years. And depending upon the customer class you fall into, those charges can be as low as 4% to as high as 14%. And the average residential bill would come down by about 8.7% than they would be under the current bill.

So if you do our program, you don't see that rolling off of the charge showing up in your bill. You see it being offset by the increase to our program so we of course say your bill will be flat. Others say no, no, no they are increasing your bill by 6% to 8% and then they're just going to chew up the discount. That is true but I would rather use less derogatory terms and say that what we are trying to do is save 800,000 customers from losing power in another Sandy like event and this is the right time to do it.

We have got an improvement in our credit rating. We are borrowing money at 30 years for 3.65%. We have labor available and we have some charges from restructuring that are rolling off.

So no one is saying things that are inaccurate. It is just you need to be careful about how you are rolling off of charges and a layering in of the increases that would have come from these programs.

Andy Levi *- Avon Capital - Analyst*

So we shouldn't be concerned that based on his testimony last week that the President may have some issues with Energy Strong?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President and CEO*

No, I think that the President will give very, very careful scrutiny to the cost of benefits associated with what we are doing and I have got a lot of confidence in our team proposing things that make sense to do.

Again, I can't speak for President Hanna. I don't think you should conclude that he doesn't think anything needs to be done or that we should put capital at risk without knowing how we are going to be compensated for it.

Andy Levi *- Avon Capital - Analyst*

Thank you very much. And again, a great quarter.

Operator

Stephen Byrd, Morgan Stanley.

Stephen Byrd *- Morgan Stanley - Analyst*

Good morning. I wondered if you could just talk a little bit out the coal dynamics you see, you use a number of different types of coals. I wonder if you are seeing any trends broadly in terms of coal pricing, types of coal that is being consumed, changes over time? Just curious what you are seeing on the coal side of things?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President and CEO*

While Caroline digs out some of those numbers, Stephen, you forgot to mention congratulations on the first quarter. But what we have seen generally speaking is that our fuel flexibility in terms of the Hudson and Mercer stations being able to switch has been a big

THOMSON REUTERS

plus for us right now and we do tend to run them on gas whenever it is $5 or less. But when we have seen some of the spikes in prices that we saw in the first quarter, we did run on coal fairly extensively I think probably about half the time those units ran on coal.

But Caroline, you may want to talk about it.

Caroline Dorsa *- Public Service Enterprise Group Inc. - EVP and CFO*

Sure. Absolutely, Stephen, just as Ralph said, so we did have the New Jersey coal units running on coal a little bit more than half the time and in fact the Mercer unit ran on coal almost all of the time. Hudson a little less so just as it was getting through some Sandy-related repairs. So we have seen the economics and the coal dynamics improve in terms of the ability to run coal particularly as the prices moved up and gas prices moved up in the winter period.

But as we said earlier as I mentioned in my remarks, we are still not at the point for gas prices where you are seeing our coal with all of the scrubbing that we have from the back-end technologies dispatch ahead of the gas-fired units. That would be more like gas prices of about $5.50 and we are not there as you well know. But in those periods where we have had that increased demand, higher near-term prices, higher near-term power prices, the coal units have dispatched and nicely in terms of dispatching on coal.

Now of course, Bridgeport Harbor doesn't run on gas, it only runs on coal and that was running as we mentioned and as I think you saw in the attachment, that was running more as well.

Also keep in mind of course the Pennsylvania units only run on coal and they were running well.

In terms of the types of coal, now this is not news, these are things that I am sure you know once we finish the back-end technologies at Hudson, it no longer had to run on Adaro coal so it is running on Cap coal so that is cheaper. Bridgeport Harbor only runs on Adaro, as you know, that continues as we have always had it.

Keep in mind about two years ago, we changed that contract so it no longer has volume requirements for us to build and then Mercer after its back-end technology still runs on met coal but a less expensive met call than prior.

So through our back-end technologies, we have reduced really the kinds of coal in terms of cost that we need at those facilities, Bridgeport Harbor being the exception. And then as these market dynamics have come back, we have been pleased to see those units run on coal.

We are still very well hedged with coal in terms of what we have in inventory but it is nice to see that coal being burned. So I think we are in a pretty good position again not yet for coal dispatching ahead of gas but obviously our back-end technologies were done sooner than others who may have to do that in the future as they make decisions about their units.

Stephen Byrd *- Morgan Stanley - Analyst*

Okay, thank you. Just a follow-up on LIPA, just curious if there is any developments there, any evolution of your thinking regarding LIPA?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President and CEO*

Yes, Stephen, so 90% of our efforts right now in terms of personnel are getting ready for the contract that goes into effect on January 1 of next year. However, we have been approached by the state to have a broader and more expanded role and we are in conversations with them on what that might look like but it would be premature to say anything more specific than that at this point.

Stephen Byrd - ***Morgan Stanley - Analyst***

Understood. Thank you.

Operator

Travis Miller, Morningstar.

Travis Miller - ***Morningstar - Analyst***

Thanks. I wanted to keep going on the utility here. If we ignore the Energy Strong program and look at just core distribution, how are you thinking about or seeing the next distribution rate case on a base level particularly as they are recovering some of those Sandy costs?

Ralph Izzo - ***Public Service Enterprise Group Inc. - Chairman, President and CEO***

Okay, so two different things there, Travis. In terms of base rate case, what we have said is that we don't see it in the next three years in terms of our kind of expectations for capital deployment and our projections of O&M increases and where demand is going.

Now what the Board has initiated is a separate proceeding for all of the utilities as they pertain to recovery of already incurred expenses associated with Irene and Sandy and we have deferred about $242 million I believe which would be part of that proceeding but we are in the very early stages of that generic proceeding at this point in time.

Travis Miller - ***Morningstar - Analyst***

Okay, great. Thanks a lot.

Operator

Neel Mitra, Tudor Pickering.

Neel Mitra - ***Tudor Pickering - Analyst***

Good morning. Congratulations on the quarter. A follow-up on Stephen's question with kind of the coal costs and what it takes to switch back to coal. So you put out a number of really need $5.50 gas and what is driving that? What are some of the levers that you can pull? Could you turn off some of the scrubbers or the back-end equipment to lower operating costs? Could you renegotiate some of the Cap coal contracts? I mean is $5.50 something that you think is the long-term price that we need to see switching or could it come down?

Caroline Dorsa - ***Public Service Enterprise Group Inc. - EVP and CFO***

Sure. So I think the fundamental way to think about this, Neel, is it can move around the $5.50 -- and it has been that number for a while -- we have talked about as the cost where -- the gas price where we would see based on our units, the back-end technologies and there heat rate, they would dispatch ahead of combined cycle. Remember that would be different depending on your region but also

THOMSON REUTERS

different depending on your unit and our units have the back-end technologies that have been in service a while now. We can't run them without that. That is our commitment is we only run the coal when we run the back-end technology and they have incremental marginal costs that come with running the BET for the inputs that we use for scrubbing so therefore they are marginally factored into the price.

That is the fundamental thing that drives the differential. My comment earlier on something to keep in mind if you think about that price and it might sound different from other coal units in terms of what their costs would be relative to switching and dispatching ahead of gas, two factors to keep in mind. One of course every region is different but also we have completed all of our back-end technologies to be in compliance with the upcoming match rules and not everyone else has done that.

So think of us as a little bit sort of a bellwether of where economics for coal would move directionally not perfectly but directionally as others make the remediations that they might need.

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President and CEO*

Neel, just to add, this may sound a little strange. So while we have limited flexibility on our variable costs, we have worked hard to manage our fixed costs and I said that specifically the way I did even though one would normally not assume that fixed can be variabilized and the variabilized have to stay fixed.

And what we do is we basically take plant personnel and move them to other outages specifically at our nuclear fleets when we anticipate protracted periods of no operation of the coal.

Neel Mitra *- Tudor Pickering - Analyst*

Got it, okay, great. Thank you. As a follow-up on the utility, Ralph, you mentioned that you wouldn't go through with Energy Strong without a tracker. How would you approach a compromise where you could possibly maybe go in for a base rate case which in this environment could maybe lower your ROE and get approval for the spending and replacement of a tracker?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President and CEO*

I would rather not get into a telephonic negotiation with the BPU on what is the best way to implement Energy Strong. So I think we would be open to any kind of discussion that protected our investors while we delivered the value that customers are begging us to deliver.

Neel Mitra *- Tudor Pickering - Analyst*

Got it, great. Thank you very much.

Kathleen Lally *- Public Service Enterprise Group Inc. - VP of IR*

We have time for one more question if there is anyone that remains on the line.

Operator

Greg Gordon, ISI Group.

THOMSON REUTERS

Greg Gordon *- ISI Group - Analyst*

Quick question. What is the schedule -- the comparable schedule or expected timeline at the FERC to get validation of your desire to spend more in storm hardening in transmission?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President and CEO*

So that would just be rolled into our annual formula rate treatment, Greg. That would not be any special rate case or any special event.

Greg Gordon *- ISI Group - Analyst*

So you don't have to get a formal approval from any regulatory agency to decide to spend more?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President and CEO*

No, remember most of that if not all about $1.5 billion was what we call kind to the business as usual, the no harm at PJM so once PJM says okay, if you think that makes sense that is not part of the (inaudible) go ahead with it and we just file on an annual basis in our formula rate (inaudible).

Greg Gordon *- ISI Group - Analyst*

Okay, so PJM then is the critical path?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President and CEO*

Yes, but it is a different path. These are small projects mostly and internal to our service territory and some less complicated type of analysis goes into it.

Greg Gordon *- ISI Group - Analyst*

Okay. Thanks, Ralph. Congratulations on the quarter.

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President and CEO*

Thanks for mentioning that. So look, hopefully you realize that every day we strive to do better around here. But I have got to tell you I couldn't be more proud of our employees and the leadership team which right now is firing on all cylinders. Our plants are running better than ever. Our utility reliability remains best in class. We have the biggest capital program in our history under way, more keeps getting added to the Solar Loan, the Solar 4 All. I do believe we will see more in Energy Strong. I know we are going to see more in transmission.

All of the equity needs for these programs are internally funded. We are still telling you that despite all of that we have the opportunity for growth in our dividend and at the end of the day the rating agencies upgraded us for our very healthy balance sheet.

April 30, 2013

PSEG ANNOUNCES 2013 FIRST QUARTER RESULTS

Earnings from Continuing Operations of $0.63 Per Share; Operating Earnings of $0.85 Per Share

Results Reflect Increased Investment at PSE&G and Strong Performance from PSEG Power

PSE&G Reaches Agreement on Solar Investment

Company Maintains 2013 Guidance of $2.25 - $2.50 Per Share

Public Service Enterprise Group (PSEG) reported today Income from Continuing Operations and Net Income for the first quarter of 2013 of $320 million or $0.63 per share as compared to Income from Continuing Operations and Net Income of $493 million or $0.97 per share in the first quarter of 2012. Operating Earnings for the first quarter of 2013 were $433 million or $0.85 per share compared to Operating Earnings for the first quarter of 2012 of $432 million or $0.85 per share.

"PSEG delivered for shareholders in the first quarter of 2013, and remains on track to meet its objectives for full year operating earnings of $2.25 - $2.50 per share" said Ralph Izzo, chairman, president and chief executive officer. He went on to say, "the results for the quarter demonstrate the locational value of Power's assets which, along with the strong performance of PSEG Power's nuclear fleet and Power's open position on its intermediate and peaking generation, allowed us to take advantage of a favorable price environment in the energy marketplace while managing downside risk through the hedges on our base load fleet. Our results also reflect a contribution from PSE&G's increased capital investment in transmission and the continued benefit from our focus on operational excellence. Our success, as always, is driven by the hard work and dedication of our employees."

PSEG believes that the non-GAAP financial measure of "Operating Earnings" provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. Operating Earnings excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. The table below provides a reconciliation of PSEG's Net Income to Operating Earnings (a non-GAAP measure) for the first quarter. See Attachment 10 for a complete list of items excluded from Income from Continuing Operations in the determination of Operating Earnings.

PSEG CONSOLIDATED EARNINGS (unaudited)
First Quarter Comparative Results
2013 and 2012

	Income ($millions)		Diluted Earnings Per Share	
	2013	**2012**	**2013**	**2012**
Operating Earnings	$433	$432	$0.85	$0.85
Reconciling Items	(113)	61	(0.22)	0.12
Income from Continuing Operations/Net Income	**$320**	**$493**	**$0.63**	**$0.97**
		Avg. Shares	**507M**	**507M**

“We are very pleased with our results”, said Ralph Izzo. “We benefited from excellent operations this quarter, but, as focused as we are on meeting our short-term goals, we are just as committed to delivering on the long-term promise associated with our proposed 10-year $3.9 billion Energy Strong investment program. The program, along with plans to invest an additional $1.5 billion to harden our transmission system over this period, is a natural extension of our strategy to maintain PSE&G as one of the nation’s most reliable utilities, and would occur during a period of time when major charges on the electric bill are scheduled to expire. The combination of growth at PSE&G with PSEG Power’s free cash flow and our strong balance sheet provide the diversification and financial flexibility to help us weather various market conditions and meet the long-term goals of our customers and shareholders.”

The following table outlines continued expectations for operating earnings in 2013 by subsidiary:

2013 Operating Earnings Guidance
($ millions, except EPS)

	2013E
PSEG Power	$535-$600
PSE&G	580-635
PSEG Energy Holdings/Parent	25-35
PSEG Operating Earnings	$1,140-$1,270
Earnings Per Share	$2.25 - $2.50

Operating Earnings Review by Subsidiary

See Attachment 5 for detail regarding the quarter-over-quarter reconciliations for each of PSEG’s businesses.

PSEG Power

PSEG Power reported operating earnings of $250 million ($0.49 per share) for the first quarter of 2013 compared with operating earnings of $196 million ($0.39 per share) for the first quarter of 2012. Power’s operating earnings exclude the impact of Super Storm Sandy related restoration costs given the unusual nature of the storm’s impact on Power.

Power’s first quarter operating earnings benefited from strong market prices for energy, higher capacity prices, and an increase in generation.

Normal winter weather conditions this year compared to abnormally mild weather conditions in the year-ago quarter, higher prices for natural gas and an improvement in basis all had a favorable influence on spot market prices for energy in the first quarter. Power’s results also benefited from higher market prices on its unhedged intermediate and peaking generation. The improvement in wholesale pricing quarter-over-quarter offset the impact of lower contract prices on energy hedged through the Basic

Generation Services Contract (BGS) and other wholesale contracts resulting in a net increase in earnings quarter-over-quarter of $0.02 per share. An increase in capacity prices on June 1, 2012 to $153 per MW-day from $110 per MW-day improved Power's quarter-over-quarter earnings by $0.05 per share.

PSEG Power's output increased 7.7% during the quarter as a result of higher pricing and more favorable weather which had a positive influence on the dispatch of Power's fossil fleet. The increase in generation added $0.02 per share to earnings quarter-over-quarter. Normal weather conditions compared to abnormally warm conditions in the year-ago quarter also had a favorable impact on off-system gas sales. The improvement in send-out also supported recovery of Power's fixed expenses associated with its gas supply and storage operations; these items together improved quarter-over-quarter earnings by $0.04 per share. An increase in operating and maintenance expense (exclusive of storm-related activity) and other items reduced earnings by $0.02 per share. An increase in depreciation related to the in-service of new peaking capacity and low pressure turbines at Peach Bottom reduced earnings by $0.01 per share.

PSEG Power expensed approximately $28 million pre-tax on storm recovery activity in the first quarter of 2013, bringing Power's total pre-tax storm related expenditures to $113 million. Of this amount, Power has received $19 million in initial insurance proceeds to return its facilities to service.

The nuclear fleet operated slightly in excess of its rated capacity in the first quarter, or at 101%, and provided 57% of Power's output. The fleet's performance was enhanced by record quarterly generation from the Salem Station. An upgrade of the equipment and the design at Salem's circulating water intake structure strongly aided plant performance. The economics of operating Power's coal units improved in the first quarter. Performance was supported by higher demand under more normal winter weather conditions and higher gas prices. Generation from Power's coal fleet nearly doubled from the year-ago quarter and provided approximately 16% of Power's output. Power's gas-fired combined cycle fleet operated at an average capacity factor in the quarter of 52% compared to 56% in the year-ago quarter. Output at the Linden facility was reduced due to repair activity following Super Storm Sandy. The facility was returned to full-service on January 11, 2013.

Power continues to forecast output for 2013 of 53 – 55 TWh. Output for the remainder of the year is approximately 70% - 75% hedged at an average price of $50 per MWh. For 2014, forecast output of 53 – 55 TWh is approximately 50% - 55% hedged at an average price of $50 per MWh. Power has hedged 25% - 30% of its forecast generation in 2015 of 52 – 54 TWh at an average price of $50 per MWh. The results include the impact of the February 2013 auction of Basic Generation Service (BGS) load in New Jersey. A price of $92 per MWh for the PSE&G zone in the latest auction will replace BGS auction prices of $96 per MWh for the three-year period beginning June 1, 2013. Average hedge prices also continue to reflect assumed BGS volumes of 12 TWh in 2013 and 10 TWh in 2014.

The forecast of Power's operating earnings for 2013 remains unchanged at $535 million - $600 million.

PSE&G

PSE&G reported operating earnings of $179 million ($0.35 per share) for the first quarter of 2013 compared with operating earnings of $197 million ($0.39 per share) for the first quarter of 2012.

PSE&G's first quarter results reflect the absence of the $0.06 per share tax settlement in the year-ago quarter which more than offset the contribution to earnings from the increased level of transmission investment.

The Federal Energy Regulatory Commission (FERC) authorized PSE&G's request for an annual increase in transmission revenue under the company's formula rate filing. The rate increase, which was effective on January 1, 2013, supported a quarter-over-quarter increase in the net earnings contribution from transmission of $0.03 per share. Electric and gas demand in the quarter was influenced by weather which was only slightly colder than normal, but significantly colder than a year ago. Electric and gas sales increased in the quarter by 0.9% and 23% respectively. We estimate weather normalized electric sales declined by 2.0% in the first quarter from year-ago levels as weather normalized gas deliveries increased by 0.6% quarter-over-quarter. The favorable weather comparison added $0.02 per share to earnings.

An increase in Distribution Operation and Maintenance (O&M) expense quarter-over-quarter was influenced by the continued impact of storm related repair, and the more normal weather experienced in the current period which resulted in O&M related work versus the warm weather in the year-ago period which supported an acceleration of capital related work. The increase in Distribution O&M reduced quarter-over-quarter earnings by $0.02 per share. The full year growth rate for O&M is expected to be lower than the rate of growth seen during the first quarter. An increase in depreciation expense and other miscellaneous items reduced earnings quarter-over-quarter by $0.01 per share.

The forecast of PSE&G's operating earnings for 2013 remains unchanged at $580 - $635 million.

Solar Agreement

PSE&G has reached an agreement with the Staff of the New Jersey Board of Public Utilities (BPU) and certain other parties on its proposal to increase spending on renewable energy under its Solar Loan and Solar 4 All investment programs. Under the agreement, which will now be subject to comment by all parties, PSE&G will invest up to $199 million on new solar (97.5 MW) as part of the Solar Loan III program. The agreement also provides for PSE&G to invest approximately $247 million to develop new solar capacity (42 MW) on landfills, brownfields and 3 MW in smaller pilot programs as part of the Solar 4 All extension. The investment would represent 50% of PSE&G's original request to invest up to $883 million on the two programs. The capital investment would occur over a 3-year period of time as compared to the original 5-year request. A decision by the New Jersey BPU is anticipated no later than May 31.

PSEG Energy Holdings/Enterprise

PSEG Energy Holdings/Enterprise reported operating earnings of $4 million ($0.01 per share) for the first quarter of 2013 compared with operating earnings of $39 million ($0.07 per share) during the first quarter of 2012. First quarter operating earnings reflect the absence of $0.07 per share of tax benefits received in the first quarter of 2012 related to the settlement of IRS tax audits.

The forecast of PSEG Energy Holdings/Parent full year operating earnings for 2013 is unchanged at $25 million - $35 million. The results will reflect the full year operation of the Milford and Queen Creek solar facilities (40 MW) which entered service in the fourth quarter of 2012 as well as the commercial

operation of a 19MW solar facility located in Arizona expected to enter in-service in the fourth quarter at a cost of approximately $50 million.

Credit Ratings

Standard & Poor's Ratings Services (S&P) raised its corporate credit ratings on PSEG, PSE&G and PSEG Power LLC to BBB+ from BBB on April 23, 2013. S&P also raised the rating on PSE&G's senior secured debt to A from A-. The rating outlook on all three issuers is stable.

FORWARD-LOOKING STATEMENT

Certain of the matters discussed in this report constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in Item 1. Financial Statements—Note 8. Commitments and Contingent Liabilities, Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations, and other factors discussed in filings we make with the United States Securities and Exchange Commission (SEC). These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to sufficiently obtain coverage or recover proceeds of insurance on such matters,
- increase in competition in energy supply markets as well as competition for certain rate-based transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology and customer usage patterns.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws. The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

PSEG Earnings Conference Call

1st Quarter 2013

April 30, 2013

SI-SSA-0015-11958

Forward-Looking Statement

Certain of the matters discussed in this report constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management’s beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in Item 1. Financial Statements—Note 8. Commitments and Contingent Liabilities, Item 2. Management’s Discussion and Analysis of Financial Condition and Results of Operations, and other factors discussed in filings we make with the United States Securities and Exchange Commission (SEC). These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to sufficiently obtain coverage or recover proceeds of insurance on such matters,
- increase in competition in energy supply markets as well as competition for certain rate-based transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology and customer usage patterns.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws. The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-11959

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. The last slide in this presentation includes a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

PSEG
2013 Q1 Review

Ralph Izzo

Chairman, President and Chief Executive Officer

SI-SSA-0015-11961

Q1 Earnings Summary

Quarter ended March 31

$ millions (except EPS)	2013	2012
Operating Earnings	$ 433	$ 432
Reconciling Items, Net of Tax	(113)	61
Income from Continuing Operations/Net Income	$ 320	$ 493
EPS from Operating Earnings*	$ 0.85	$ 0.85

* See Slide A for Items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings.

SI-SSA-0015-11962

PSEG – Q1 2013 Highlights

- **Strong Earnings**
  - ✓ Operating earnings of $0.85 vs. $0.85 per share in Q1 2012
  - ✓ Power benefited from higher pricing and increased output
  - ✓ Increased contribution to earnings from PSE&G's investment in transmission

- **Operational Excellence**
  - ✓ PSEG Power output up 7.7% in quarter; nuclear capacity factor at 101%
  - ✓ Diversity and location of Power's fleet provided flexibility to participate in market
  - ✓ PSE&G's O&M on track to meet full-year expectations

- **PSEG Disciplined Capital Investment**
  - ✓ BPU decision pending on Solar 4 All extension and Solar Loan III agreement
  - ✓ 33 local NJ governments have approved resolutions in support of PSE&G's Energy Strong proposal to fortify its electric and gas distribution systems
  - ✓ Credit ratings upgraded by Standard & Poor's for PSEG, PSE&G and Power
  - ✓ Increased common dividend to indicative annual rate of $1.44 per share in Q1

SI-SSA-0015-11972

PSEG Power – Gross Margin Performance

- ✓ Return to normal weather and higher spot power and gas prices offset declines in average hedge price
- ✓ Q1 spot prices higher across PJM, ISO-NE, and NYISO
- ✓ Capacity prices higher year-over-year
- ✓ Market support for dispatch of NJ coal units on coal
- ✓ Continued strong portfolio output enables Power to participate in market opportunities

PSEG Power Gross Margin ($/MWh)

Q1 2013 Regional Performance		
Region	**Gross Margin ($M)**	**2013 Performance**
PJM	$638	Higher market pricing and higher volumes offset lower pricing from roll off of higher priced hedges. Higher capacity pricing versus a year ago.
New England	$20	Higher volume and higher pricing.
New York	$15	Higher pricing.

SI-SSA-0015-11973

Hedging Update…

Contracted Energy*

		Apr-Dec 2013	2014	2015

	% Hedged	70-75%	50-55%	25-30%
	Price $/MWh	$50	$50	$50

* Hedge percentages and prices as of March 28, 2013. Revenues of full requirement load deals based on contract price, including renewable energy credits, ancillary, and transmission components but excluding capacity. Hedges include positions with MTM accounting treatment and options.

SI-SSA-0015-11974

PSEG Power – Q1 2013 Operating Highlights

Operations

- ✓ Q1 output up 7.7% on strong portfolio production; nuclear capacity factor at 101%
- ✓ Salem station posted record generation
- ✓ Equipment and design upgrades contributed to excellent nuclear performance
- ✓ Output of NJ coal units was 54% coal, 46% gas fueled

Regulatory and Market Environment

- ✓ Improved spot power prices reflected normal winter weather and higher natural gas prices; basis in the quarter improved from Q1 2012 lows
- ✓ MOPR settlement decision pending at FERC
- ✓ Decision in Federal Court on NJ LCAPP case expected after May RPM
- ✓ 2013 anticipated base load output hedged at an average price of $50/MWh

Financial

- ✓ S&P upgraded Power's senior unsecured debt rating from BBB to BBB+ (Outlook Stable)
- ✓ Superstorm Sandy cost estimates: $28 million O&M in Q1; $113 million storm-to-date; $300 million in total over two-year period (excluding insurance recoveries)
- ✓ Power's total debt as a percentage of capital at March 31 was 30%

SI-SSA-0015-11975

PSE&G
2013 Q1 Review

SI-SSA-0015-11976

PSE&G – Q1 Earnings Summary

$ millions (except EPS)	Q1 2013	Q1 2012	Variance

PSE&G EPS Reconciliation – Q1 2013 versus Q1 2012

* See Slide A for Items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings.

SI-SSA-0015-11978

PSE&G – Q1 Operating Highlights

Operations

- ✓ Q1 weather was significantly colder than a year ago but about normal
- ✓ Heating degree days 26% above Q1 2012, flat versus normal weather
- ✓ Residual impacts of Sandy and a still-slow economy continue to weigh on demand
- ✓ More normal O&M spend in Q1 2013; expect O&M to even out over balance of year

Regulatory and Market Environment

- ✓ BPU decision pending on agreement to spend up to $247 million on Solar 4 All extension and up to $199 million on Solar Loan III program
- ✓ PSE&G pursuing Energy Strong infrastructure proposal with the NJBPU to invest $3.9 billion over the next ten years on electric and gas system hardening and resiliency
- ✓ Advancing plans for Transmission hardening program of $1.5 billion over 10 years
- ✓ NJBPU initiated two generic proceedings with the NJ EDCs on storm response
- ✓ Construction of major transmission lines progressing on schedule

Financial

- ✓ S&P upgraded PSE&G's senior secured debt rating from A- to A (Outlook Stable)
- ✓ PSE&G earned its authorized return in the quarter

PSEG

PSEG Financial Highlights

- **Maintaining 2013 operating earnings guidance of $2.25 - $2.50 per share**
  - ✓ Focused on maintaining operating efficiency and customer reliability
  - ✓ PSE&G expected to grow at double-digit rate in 2013 and provide ~50% of operating earnings

- **Executing existing $3.4 billion transmission capital spending program on schedule**

- **PSE&G pursuing Energy Strong, its $3.9 billion, ten-year infrastructure spending program to strengthen electric and gas distribution, communications, and customer reliability and resiliency. In addition, PSE&G plans to invest $1.5 billion during this time-frame to harden its transmission system**

- **Financial position remains strong**
  - ✓ S&P upgraded PSEG's corporate credit rating from BBB to BBB+ (Outlook Stable)
  - ✓ Positive cash from Power and increasing cash flow from PSE&G supports dividend growth and funds capital spending program without the need to issue equity
  - ✓ Debt as a percentage of capital was 41% at March 31, 2013

- **Long history of returning cash to the shareholder through the common dividend, with opportunity for future growth**
  - ✓ Increased common dividend to indicative annual rate of $1.44 per share in Q1

EDITED TRANSCRIPT

PEG - Q2 2013 Public Service Enterprise Group Inc Earnings Conference Call

EVENT DATE/TIME: JULY 30, 2013 / 11:00AM ET

OVERVIEW:

PEG reported 1H13 operating EPS of $1.33 and 2Q13 operating EPS of $0.48. Expects full-year 2013 operating EPS to be at upper end of $2.25-2.50.

PRESENTATION

Operator

Ladies and gentlemen, thank you for standing by. My name is Nick and I'm your event operator today. I would like to welcome everyone to today's conference call, Public Service Enterprise Group's second-quarter 2013 earnings conference call and webcast. At this time all participants are in a listen-only mode. Later we will conduct a question-and-answer session for members of the financial community. (Operator Instructions).

As a reminder, this conference is being recorded today, July 30, 2013 and will be available for telephone replay beginning at 12 PM Eastern today until 11.30 PM Eastern on August 8, 2013. It will also be available as an audio webcast on PSEG's corporate website at www.PSEG.com. I would now like to turn the conference over to Kathleen Lally, please go ahead.

Kathleen Lally ***- Public Service Enterprise Group, Inc. - VP of IR***

Thanks very much, Nick. Good morning, everyone. Thank you for participating in our earnings conference call this morning. As you are aware, we released second-quarter 2013 earnings statements earlier today and, as mentioned, the release and attachments are posted on our website, www.PSEG.com under the Investor section. We also posted a series of slides earlier this morning that detail operating results by Company for the quarter. Our 10-Q for the period ended June 30, 2013 is expected to be filed shortly.

I'm not going to go through the full disclaimer statements or the comments we have on the difference between operating earnings and GAAP results, but, as you know, the earnings release and other matters that we will discuss in today's call contain forward-looking statements and estimates that are subject to various risks and uncertainties. And although we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if our estimate changes, unless we are required to do so.

Our release also contains adjusted non-GAAP operating earnings. Please refer to today's 8-K or our other filings for a discussion of factors that may cause results to differ from management's projections, forecasts and expectations and for a reconciliation of operating earnings to GAAP results.

THOMSON REUTERS

SI-SSA-0015-11989

I would now like to turn the call over to Ralph Izzo, Chairman, President and Chief Executive Officer of Public Service Enterprise Group. Joining Ralph on the call is Caroline Dorsa, Executive Vice President and Chief Financial Officer. At the conclusion of their remarks there will be time for your questions. Thank you.

Ralph Izzo *- Public Service Enterprise Group, Inc. - Chairman, President & CEO*

Thank you, Kathleen, and thank you, everyone, for joining us today. Earlier this morning we reported operating earnings for the second quarter of 2013 of $0.48 per share compared with operating earnings of $0.43 per share in 2012's second quarter. The results for the quarter bring operating earnings for the first half of 2013 to $1.33 per share and that's compared with operating earnings of $1.28 per share earned in 2012's first half. Slides 4 and 5 contain the detail on the results for the quarter and the first half.

We are very pleased with our results; all of our businesses performed well and, once again, demonstrated the ability to succeed against the background of slow growth in the economy at large and lower power prices. Our earnings results for the quarter were once again based upon our employees' efforts. We are realizing the benefits of earnings from the expansion of our investment in transmission which remains on time and on budget.

Our earnings are also supported by our employees' focus on controlling the growth in operating expenses. Lastly, our financial results were aided by the restoration; post Sandy, of most of our peaking generating stations to assure their availability during the key summer period.

But strong execution above all means providing the level of service expected by our customers. We would not be able to deliver this level of service at all times, and especially during periods of extreme weather as we have experienced, without our daily focus on maintaining as well as improving through ongoing investment our electric and gas system.

Earnings for the second quarter also continue to be supported by the locational advantage enjoyed by Power's assets, the dispatch capability of Power's portfolio of assets and Power's open position on its intermediate and peaking generation. As a result of PJM's latest auction of capacity, that is the RPM auction, Power's assets will receive an average price of $1.66 -- $166 -- that would be terrible -- $166 per megawatt day for the 2016-2017 year.

The results for the latest auction are essentially in line with the average price of $167 per megawatt day received in last year's auction. But it remains above the average price received for capacity within the PJM region. The price for capacity in our zone will stay at a similar level from mid-2014 through mid-2017.

Auction results yielding prices for that period have incorporated many pushes and pulls including the impact of new transmission transfer capability, the addition of subsidized generation, the impact of environmental rules on capacity and the tightening of regulatory oversight over new options such as demand resources.

Over the past few years we have all seen administrative design elements within the capacity market create some volatility in pricing as PJM continues to address improvements in market efficiency. But upon more careful scrutiny it is quite clear that stable capacity-related parameters exist in our zone and have for the past three years.

We also benefit from our close proximity to low-cost shale gas in the Marcellus basin, which has resulted in lower gas cost to PSE&G's customers and provides our large fleet of gas-fired combined cycle generating assets with a source of low cost fuel supply. This profile allowed us to capture value by managing volatility in the energy marketplace while minimizing downside risk to the hedges on our baseload fleet.

In short, this past quarter the combination of returns on new investment and the capable management by our employees of each business demonstrated PSEG's ability to perform well even against a backdrop of slow economic growth and low power prices. But we remain equally focused on meeting our long-term growth objectives.

THOMSON REUTERS

SI-SSA-0015-11990

The New Jersey Board of Public Utilities, the BPU, approved our plans to invest up to an additional $446 million in renewable energy through our Solar Loan and Solar 4 All programs. This investment will fund up to 143 MW of new solar capacity. We are making progress with key stakeholders on explaining the importance of strengthening our infrastructure and improving system resiliency through our proposed Energy Strong program.

Nine months have passed since Superstorm Sandy devastated New Jersey, but it remains very much on our minds and on the minds of regulators and other policymakers. Public support for Energy Strong has grown since we proposed the investment program back in February. As of today 55 municipalities and five county governments have passed resolutions in support of our investment program.

The BPU has appointed a lead commissioner and we are in discussions regarding the scope and timing of the work to be performed. As a reminder, we have asked the BPU to approve spending for the first five years of the 10-year program. This would amount to $2.6 billion of the $3.9 billion program. It would represent approximately $2.2 billion of capital spending to strengthen the distribution through 2017, which is the timeline we've outlined previously for our capital program.

All of these statistics are independent of additional transmission investments we would make. So we expect the program to receive careful consideration given the opportunity to improve the resiliency of the distribution system with little net impact on the customer's bill due to the coincidental expiration of various other charges.

Separately, in New York State we are discussing the final terms of a renegotiated contract to operate the Long Island Power Authority's distribution system at the start of 2014. These actions will strengthen the infrastructure and improve our system reliability throughout the region. In the true spirit of how PSEG has operated for a century, this will enable us to serve customers better while providing reasonable returns to our shareholders.

We aren't changing our guidance for full-year operating earnings of $2.25 to $2.50 per share. However, given the strength of our results for the second quarter and the first half of the year, we do expect our full-year operating earnings to be at the upper end of our guidance assuming normal weather and normal unit operations for the remainder of the year.

So with that I will turn the call over to Carolyn who will discuss our financial results in greater detail and then I will join her at the end for Q&A.

Caroline Dorsa - ***Public Service Enterprise Group, Inc. - EVP & CFO***

Thank you, Ralph. Thank you, everyone, for joining us today. As Ralph said, PSEG reported operating earnings for the second quarter of 2013 of $0.48 per share versus operating earnings of $0.43 per share in last year's second quarter. We provide you with a reconciliation of operating earnings to income from continuing operations and net income for the quarter on slide 4.

We've also provided you with a waterfall chart on slide 10 that takes you through the net changes in quarter-over-quarter operating earnings by major business, and a similar chart on slide 12 provides you with the changes in operating earnings by each business on a year-to-date basis. And I will now review each Company in more detail starting with Power.

PSEG Power reported operating earnings of $0.22 per share for the second quarter of 2013 compared with operating earnings of $0.22 per share for the second quarter of 2012. Power's second-quarter earnings benefited from higher 2013 realized PJM capacity prices and a quarter-over-quarter improvement in the market price for energy with an increase in the price of gas from last year's second-quarter levels.

Market prices for energy were influenced by a higher price for natural gas quarter over quarter and an improvement in the premium on power sold in the PS Zone, which of course we know is basis. These conditions were similar to, but not as extreme as, the market conditions Power experienced in the first quarter and you would expect that moderation in a shoulder quarter.

The market price for Power is influenced by the movement in the price of gas; it's also influenced by constraints on generation and on the transmission system. This upward movement in realized wholesale market pricing quarter over quarter increased Power's earnings

THOMSON REUTERS

SI-SSA-0015-11991

by $0.04 per share. An increase in the average price received on PJM capacity to $183 per megawatt day from $124 per megawatt day improved Power's quarter-over-quarter earnings by $0.07 per share.

And as a reminder, PJM capacity prices increased to $244 per megawatt day on June 1 of this year and that price factors into one month of the average price realized in the second quarter, but that $244 price will be in place through May of 2014. This improvement in wholesale market pricing offset the impact on earnings of an approximately $9 per megawatt hour decline in average contract prices on energy hedged through the BGS, Basic Gas Generation, service contract as well as other wholesale contracts.

PSEG Power's operations and maintenance expense was unchanged from year-ago levels. An increase and O&M at Fossil associated with planned outage work was offset by a reduction in outage-related work at Nuclear. An increase in depreciation expense related to the installation of 400 MW of new peaking capacity and low pressure turbines at Peach Bottom was offset by a decline in interest expense.

PSEG Power's output during the quarter was basically unchanged from the 12.7 terawatt hours generated in the year-ago quarter. An increase in output from Power's baseload nuclear and coal fleet offset a decline in production at Power's New Jersey-based coal units.

The Nuclear fleet operated at an average capacity factor in the quarter of 87.9% bringing the capacity factor for the fleet in the first half of the year to 94.4%. The fleet's performance in this quarter was influenced by a refueling outage and main generator repair work at Salem 1, which as you know is 57% owned by us and operated by PSEG Power, versus a refueling outage in the second quarter of 2012 at Power's 100% owned and operated Hope Creek unit.

Power's baseload coal units in Pennsylvania increased their generation. The combined cycle gas fired fleet ran at levels equivalent to their strong performance in the year-ago period with a 57% capacity factor. The location of PSEG Power's generating and natural gas assets provide it with access to low-cost gas supply in the Marcellus basin to partially fuel the combined cycle fleet. The combination of price and operating performance supported gross margins of $43 per megawatt hour, similar to the level realized in the year-ago period.

Power continues to forecast output for 2013 of 53 to 55 terawatt hours. Output for the remainder of the year of 26 to 28 terawatt hours is 70% to 75% hedged at an average price of $51 per megawatt hour. For 2014 forecast output of 53 to 55 terawatt hours is approximately 55% to 60% hedged at an average price of $49 per megawatt hour. Power has hedged 30% to 35% of its forecast generation in 2015 at total forecast generation is 52 to 54 terawatt hours at an average price of $49 per megawatt hour.

The increase over the last quarter in the percentage of generation hedged for 2014 and 2015 reflects an increase in the level of hedges on our baseload generation, consistent with our ratable hedging program. Power's intermediate and peaking generation remains open and the data by year is provided for you on slide 20. Average hedge prices continued to reflect assumed BGS volumes of 12 terawatt hours in 2013 and 10 terawatt hours in 2014.

Power's hedging profile is very consistent with our prior practice and, as we have demonstrated, ratably hedging our baseload while some intermediate and peaking remains open, even in the current year, reduces Power's downside risk by recognizing the need to meet demand requirements of full load contracts like BGS while minimizing the risk of a unit not being available. It also provides Power the opportunity to optimize the portfolio under the right set of market conditions.

The forecast of Power's operating earnings for 2013 remains unchanged at $535 million to $600 million. However, given Power's strong results in the first half of the year, we expect operating earnings for the full year to be at the upper end of Power's guidance. Results for the remainder of the year will continue to be influenced by a decline in the average price of our hedges and higher capacity prices. Remember that the average price for Power's capacity in PJM increased to $244 per megawatt day on June 1 from the prior $153 per megawatt day.

We also continue to forecast an increase in Power's O&M in the second half of the year given major maintenance planned at two of the combined cycle units and a fall refueling outage at Hope Creek.

The forecast for Power's operating earnings, as we've indicated, doesn't include the cost of storm-related repair. Power expensed approximately $22 million pretax on storm recovery activity in the second quarter of 2013. This brings the total pretax storm-related

© 2013 Thomson Reuters. All rights reserved. THOMSON REUTERS

SI-SSA-0015-11992

expenditures to $135 million. Of this amount Power recognized an additional $25 million of insurance proceeds in the second quarter for a total of $44 million in insurance proceeds to date.

Let's now turn to PSE&G. PSE&G reported operating earnings for the second quarter of 2013 of $0.24 per share compared with $0.20 per share for the second quarter of 2012 and results for the quarter are shown on slide 23. PSE&G's second-quarter results reflect the contribution to earnings from the increased level of transmission investment. The execution of our transmission program added $0.04 per share quarter over quarter.

PSE&G experienced weather conditions in the second quarter which were favorable both relative to normal conditions and in comparison to weather experienced in the year-ago quarter. As compared with normal temperatures weather was colder than normal in April, normal in May and warmer than normal in June. Electrical kilowatt hour sales declined approximately 2.5% in the quarter.

Demand for electricity from the residential sector grew by about 0.8%. However, demand from the commercial and industrial, or C&I sectors remained weak. Demand for electricity continues to be affected by customer conservation in the face of a slowly improving economy. PSE&G's margin on electric sales was flat quarter over quarter despite the decline in sales as margin from C&I customers is based on demand levels more than on volume.

Sales of gas increased 17% quarter over quarter reflecting primarily more normal winter weather versus 2012. Consumers of gas after years of responding to high commodity prices by reducing consumption appear to have adjusted their behavior to reflect an expectation of lower commodity prices and we see a small uptick in the weather normalized gas sales.

The net impact on PSE&G's earnings from weather and the change in sales was a reduction in quarter-over-quarter earnings of $0.01 per share. The earnings comparison reflects an increase in weather-related demand for gas of $0.01 per share which was offset by the absence of $0.02 per share of revenue accrued under the gas weather normalization clause in the year-ago quarter.

PSE&G implemented cost controls throughout the quarter in response to lower demand growth. As a result, distribution-related O&M expense was unchanged quarter over quarter. For the remainder of the year distribution-related O&M is expected to be lower than levels realized in the prior year given expectations for a decline in storm-related restoration expense.

Recall that PSE&G incurred approximately $0.05 per share of O&M in the fourth quarter of 2012 related to Superstorm Sandy related restoration work. These expenses, unlike the treatment for Power storm restoration work, are reflected in operating earnings as, you recall, we discussed last year.

PSE&G's tight control of operating expenditures continues to allow it to earn its authorized return. As Ralph mentioned, the New Jersey BPU approved the settlement authorizing an increase in PSE&G's spending on solar by up to $446 million. We have as a result adjusted our forecast level of capital spending.

PSE&G is projected to spend approximately $215 million over the 2013 through 2015 period on the Solar 4 All extension and solar programs resulting in total capital expenditures over this period for PSE&G of $5.1 billion versus the prior forecast of $4.9 billion. Spending on these two newly approved programs will continue beyond 2015.

Slide 26 outlines the updated capital expenditure program for 2013 through 2015. These new programs will bring PSE&G's investment in solar to $1.1 billion. Our forecast of PSE&G's operating earnings for 2013 remains unchanged at $580 million to $635 million. Results will be influenced by a full year increase in transmission revenue and the absence of the negative impact of Superstorm Sandy on both sales and O&M.

Let me now turn to PSEG Energy Holdings and parent. Operating earnings for PSEG Energy Holdings/Enterprise in the second quarter of 2013 were $8 million or approximately $0.02 per share versus operating earnings of $4 million or $0.01 per share earned during the second quarter of 2012. These results were in line with expectations and reflect a gain on the sale of a commercial office complex in the second quarter.

THOMSON REUTERS

SI-SSA-0015-11993

Holdings remains focused on monetizing key assets as it also builds a portfolio of solar projects. The expected fourth-quarter operation of a 19 megawatt solar project in Arizona will bring Holding's portfolio to six solar projects with a total capacity of approximately 90 megawatts.

We continue to forecast full-year operating earnings for PSEG Energy Holdings/Enterprise of $25 million to $35 million. The results will include the contribution from Holding's legacy investments, a full year of operation at the Milford and Queen Creek solar facilities which entered service in the fourth quarter of 2012 and the commercial operation of the 19 megawatt facility in Arizona in the fourth quarter at a cost of approximately $50 million.

Our forecast level of consolidated capital spending has increased by approximately $215 million over 2013 through 2015 related to the solar approval to bring us to $6.4 billion. PSE&G's capital program represents approximately 80% or $5.1 billion of our planned investment.

We are in a strong position to finance our capital program. PSE&G issued $500 million of 10-year medium-term notes at 2-3/8 and retired $150 million of 5% medium-term notes in the quarter. At the end of June debt represented 41% of PSE&G's consolidated capital with debt at Power approximating a 28% of the capital base. Power's cash flow remains strong and PSE&G's cash generation has improved with its ability to earn return on increased levels of capital investment.

As we have said, we can finance our existing capital program without the need to issue equity. And we can finance an expanded capital program that includes spending on Energy Strong related projects without the need to issue equity. And this still leaves us with the opportunity for modest and sustainable growth in the dividend as we look out to the future.

We continue to forecast operating earnings for the full year of $2.25 to $2.50 per share and, as Ralph indicated, we expect results for the full year to be at the upper end of our guidance, assuming normal weather and unit operations in the remainder of the year. With that we are now ready to take your questions. And I will turn a back over to Nick to introduce the Q&A.

QUESTION AND ANSWER

Operator

(Operator Instructions). Greg Gordon, ISI Group.

Kathleen Lally *- Public Service Enterprise Group, Inc. - VP of IR*

We can go on to the next one. Greg can call in again.

Operator

Travis Miller, Morningstar.

Travis Miller *- Morningstar - Analyst*

I wonder if you can talk a little bit about the coal to gas switching environment. And how much of this increase in coal and flat at least gas gigawatt hours was related to economic switching? How much was just related to how the load distribution fell out?

THOMSON REUTERS

SI-SSA-0015-11994

Ralph Izzo - ***Public Service Enterprise Group, Inc. - Chairman, President & CEO***

So, Travis, we will team up on that one. Good morning. Our New Jersey coal units need gas to be at about $5.50 to $6 to be dispatched on coal. So they have year to date run probably two thirds more often on gas than they have on coal, so that low teens capacity effect that you see for the year is probably running a two to one gas to coal for our Hudson and Mercer units.

Having said that, our Keystone/Conemaugh base-load have been dispatched quite a bit more this year than they were last year given the slightly higher gas prices as compared to the 2012. But you recall, 2012 we had zero winter and gas at one point was down to $1.90. So, Caroline, if you want to supplement that.

Caroline Dorsa - ***Public Service Enterprise Group, Inc. - EVP & CFO***

Right and you recall as we talked about in the first quarter we had our units, Hudson and Mercer, running on both gas and coal, Mercer actually more on coal than gas. Hudson wasn't ready to run on coal given the Superstorm Sandy related remediations that were coming online in the first quarter. In this quarter the units ran but they ran entirely on gas given those economics that Ralph just mentioned.

So, the good news for us is the ability to have those units which are now available -- available to run on coal and, of course, all the environmental spend already done, but having that inherent fuel flexibility to move between coal and gas has provided us with value as we look at those assets.

Travis Miller - ***Morningstar - Analyst***

Was there any kind of weather impact year over year on your fleet in terms of generation?

Caroline Dorsa - ***Public Service Enterprise Group, Inc. - EVP & CFO***

No, not second quarter in terms of generation. Remember we talked about much stronger generation in the first quarter because we had a real winter this quarter as opposed to last year. Generation this quarter was essentially flat at a little more than 12 terawatt hours, as I mentioned on the remarks, versus last year's second quarter. So kind of pretty much normal in terms of how to think of quarter over quarter for this quarter.

Travis Miller - ***Morningstar - Analyst***

Great, thanks so much.

Operator

Brandon Blossman, Tudor Pickering.

Brandon Blossman - ***Tudor, Pickering, Holt - Analyst***

Kind of a follow-up question on the New Jersey gas units. You had mentioned, Ralph, in your prepared comments about taking advantage of less expensive Marcellus gas. And we've seen some pretty dramatically low pricing kind of day-to-day in the Marcellus

THOMSON REUTERS

SI-SSA-0015-11995

at certain trading hubs. Are you able to take full advantage of that? And is there any kind of plan for kind of going forward to be able to maybe contract for some of that gas at below NYMEX prices?

Ralph Izzo - ***Public Service Enterprise Group, Inc. - Chairman, President & CEO***

Well, I will let Caroline chime in on this one there.

Caroline Dorsa - ***Public Service Enterprise Group, Inc. - EVP & CFO***

So good question. As we said, we are positioned to be able to access Marcellus gas and we do access some of our gas through Marcellus, and obviously we have some storage capability that enables us to do that. Then of course we bid the units into the market in the normal bidding process.

So we are always looking for the best sources of gas relative to our units; we follow all the normal practices in terms of how we bid into the market in terms of how those units are compensated. Of course it's a very competitive sort of situation so I don't want to give too much detail here. But you are right to point out we do have access to both sources of gas as we bid the units in.

Brandon Blossman - ***Tudor, Pickering, Holt - Analyst***

Okay, helpful and very interesting as we go forward. And then kind of as a follow-up, last couple of PJM/RPM auctions we have seen some new build CCGTs clear. Do you guys have any insight on whether or not those get built and the financing available for those projects?

Ralph Izzo - ***Public Service Enterprise Group, Inc. - Chairman, President & CEO***

So our focus has been primarily in the Eastern MAAC zone and, to the best of our knowledge, there is a new unit that is being built in Eastern MAAC owned and operated by LS Power, a consortium of companies. All indications are that a Hess proposal for a power plant in northern PS Zone is moving ahead.

There are two other plants that we know a little less about; as a matter of fact we believe that a plant that was proposed in the Somerville area is not going forward, that would have been in the Eastern MAAC zone as well. As a matter of fact it was a filing made by PSE&G about -- with that developer regarding the terms and conditions of their standard offer contract agreement. And in fact that developer agreed that they were no longer going to honor the conditions of that standard offer contract agreement.

One other plant had cleared the auction last year and that one we simply have been told through public comments that it is that at least a year delayed, but it is still intending to go forward. So everything I just told you is out in the public domain and is the best information we have at this point.

Brandon Blossman - ***Tudor, Pickering, Holt - Analyst***

Useful summary nevertheless. Thank you, Ralph; thank you, Carolyn.

THOMSON REUTERS

Gregg Orrill - ***Barclays Capital - Analyst***

I was wondering if you'd talk a little bit more about the process at the New Jersey BPU around the energy hardening program that you have proposed. And when you will be able to update us on a more accurate CapEx forecast over the next few years versus the one that doesn't include elements of your proposed program?

Ralph Izzo - ***Public Service Enterprise Group, Inc. - Chairman, President & CEO***

Sure, Gregg. So from where things stand right now as Commissioner Fiordaliso has been named the hearing officer for the filing. The filing is complete, although we do keep getting some additional discovery questions and are responding to them. Hearing dates have been announced for September and October.

Now what happens after that is a little bit flexible, we have proposed a schedule that would result in a fully litigated decision at the December 18 meeting of the BPU. Others are proposing a different schedule and Commissioner Fiordaliso hasn't ruled on that. We anticipate his ruling on the scheduled to be imminent. I'm less worried about the schedule because, as you know, we tend to try to move on this and other issues in a settlement, which is what we did with solar and what we have done in prior infrastructure programs.

So I still remain hopeful and optimistic that we will have something resolved by the end of the year. It's pretty clear we have missed taking any action for this storm season, that doesn't mean I'm expecting or hoping for any storms, but quite the contrary. Our hope though is to be able to get things resolved by the end of the year so that we can begin the engineering and design work to get some infrastructure hardened prior to next year's storm season. But we just don't have anything more definitive on that.

Rest assured, Gregg, we will tell you and everyone else everything we know as soon as we know it and the BPU will release information. None of that has any impact on our plans to spend an additional $1.5 billion on transmission over that 10-year period with about $500 million of that taking place over the first five years.

Gregg Orrill - ***Barclays Capital - Analyst***

Okay. And on -- separately on the insurance proceeds at Power, what are you expecting in terms of the timeline to get that recovered? And I guess that -- the comment on guidance?

Caroline Dorsa - ***Public Service Enterprise Group, Inc. - EVP & CFO***

sure.

Gregg Orrill - ***Barclays Capital - Analyst***

Yes.

Caroline Dorsa - ***Public Service Enterprise Group, Inc. - EVP & CFO***

So this is Caroline, Gregg, good morning. So relative to the insurance, as we mentioned, we had an additional $25 million recovered this quarter. So total recoveries under the insurance for Power are $44 million and there is about $6 million for the utility. So total recoveries for the Company about $50 million.

THOMSON REUTERS

In terms of timeline, we don't have a timeline for anything for future. As you know we have filed a litigation relative to the parties -- the underwriters relative to coverage terms. And of course since we are in litigation we can't comment on the progress or status of litigation and of course that means that the timeline is really subject to the outcome of that litigation.

What I can tell you is that we continue to make the repairs that we have discussed and we'll continue to report them on an actual basis as Power's O&M below the line for operating earnings purposes as we have updated this quarter. Just a reminder, that was $135 million for Power in the aggregate that was spent. And from that you subtract the $44 million for recovery that we received from the insurance companies for a net $91 million. So can't forecast exactly how that will play out given litigation; we will of course report it to you on an actual basis.

Gregg Orrill *- Barclays Capital - Analyst*

Thank you.

Operator

Michael Lapides, Goldman Sachs.

Michael Lapides *- Goldman Sachs - Analyst*

Can you talk a little bit when you look across the fleet and really look across not just your fleet but the industry, kind of think about the competitive positioning of your Company versus others, in terms of the economics for some of your coal units whether it is Bridgeport up in Connecticut or even Hudson and Mercer over a long period of time, as well as there has been a lot of discussion about the economics of nuclear -- of existing nuclear. And just kind of talk about what you are seeing and how it impacts your Company as well as how it impacts the industry as a whole?

Ralph Izzo *- Public Service Enterprise Group, Inc. - Chairman, President & CEO*

Sure, Michael. So we talked a bit about the dispatch curve, right, and the fuel flexibility we have and the technology flexibility we have. I think by and large the nuclear units dispatch ahead and except for that one anomalous situation we had our baseload coal is always called upon to run. But then the Bergen and Linden units swap places with the Hudson and Mercer units for the past few years and who knows what the future will bring.

So I feel good about the fuel and technology flexibility we have as it pertains to the dispatch curve. And I think one obviously needs to consider any capital improvements that need to be made when thinking about the overall economics of plants and really that comes in two forms for all of us. One is just sort of clean air capital investments. And as you know, all of those are behind us with some SCR that has to be put on our Conemaugh plant being the one exception.

So we are in great shape from a HAPs/MACT compliance point of view and you can expect us to continue to operate and run our plants based on just a marginal cost basis here because there is no additional sunk cost that needs to be made.

The post-Fukushima drivers for the nuclear plants are still undetermined at this point. However, we do have quite a few design differences in our plants that are different from the typical design of other units. For example, all of our spent fuel pools have hardened concrete reinforced buildings. So we don't have butler buildings, stainless steel buildings that are protecting our spent fuel pools.

We have different designs on our vents that we're going to argue before the NRC are already hardened. So we are in good shape from the point of view of CapEx going forward. As a matter of fact we're still going ahead with Exelon on our Peach Bottom upgrade, we

THOMSON REUTERS

SI-SSA-0015-11998

feel that strongly about the dispatch ability and the economics of our nuclear units. So I don't know what to say about others, they can speak for themselves, but I feel pretty good about the fleet that we have.

Michael Lapides *- Goldman Sachs - Analyst*

Okay. And this may be one for Caroline, an unrelated question. When you think about the lease exposure at the end, the Edison Mission bankruptcy, how should investors quantify the potential risk to PSEG whether it is from a tax perspective or kind of other perspective in terms of your being one of the lessors?

Caroline Dorsa *- Public Service Enterprise Group, Inc. - EVP & CFO*

Right, so, thanks, Michael. So relative to the lease exposure, we've talked about that and of course disclosed that for a pretty good amount of time in our financial statements. I think the way to think about it is when you look at the exposure amounts typically think of that total exposure as we talk about and for Edison Mission it is about $220 million. Think of that as the pretax amount of the maximum amount of a write down.

But also remember that that is not cash, right, that is the write down amount. We have always talked about the cash exposure related to the taxes. But I think one thing to keep in mind for this is this has been deferred again in terms of any decisions related to rejection of the lease until September. And we are obviously representatives for our share and our rights in that process. The deferral continues which apparently is obviously from the lessee's perspective on their decisions on what to do in that regard.

In terms of the other leases that we have, they continue to be current on payments. Obviously the Edison case is different, but that is why we are in this process right now. So if we can think about the write-off exposure, it is that amount, as I mentioned, on a pretax basis and then you'd put it on an after-tax basis.

Michael Lapides *- Goldman Sachs - Analyst*

And is the tax exposure -- I'm just trying to think about going back and thinking about leases and kind of back taxes and that type of stuff. Is the tax exposure -- could it any way be more significant than the $220 million?

Caroline Dorsa *- Public Service Enterprise Group, Inc. - EVP & CFO*

No. The tax exposure is less than that, I can tell you that for sure. And then of course that would be processed relative to our rights from the lessee in terms of any recapture.

Michael Lapides *- Goldman Sachs - Analyst*

Understood. Thanks, Caroline.

Anthony Crowdell - ***Jefferies - Analyst***

A question on I guess the Energy Strong initiative. I think your comments earlier, Ralph, you had said that you have kind of missed a window to maybe reinforce the system for this storm season. Is it the weak industrial load and it looks like weak demand maybe a headwind of getting a large project approved by the state?

Ralph Izzo - ***Public Service Enterprise Group, Inc. - Chairman, President & CEO***

No, I don't think so, Anthony. This is a big capital program and the BPU staff understandably is doing a very thorough job of trying to assess from their point of view whether or not we've prioritized things the way they think maximize benefits for customers. Not surprisingly the consumer advocate wants us to do it for free and that's kind of a tough thing for our shareholders to accept and for us to accept.

So it really doesn't have anything to do with demand at all. As a matter of fact, all of our infrastructure programs --transmission, Energy Strong - are completely decoupled from demand growth and really have much more to do with either a replacement of an aging infrastructure or the desire to move from best in class reliability, which I can truthfully say we possess to just greater resiliency. And in fact probably no one has felt the damages associated with storms more so than our commercial and industrial sectors.

Anthony Crowdell - ***Jefferies - Analyst***

When do expect I guess the final decision on approval, is that this calendar year or does it potentially carry over to 2014?

Ralph Izzo - ***Public Service Enterprise Group, Inc. - Chairman, President & CEO***

Yes. No, I mean we are hopeful and still confident it will be this calendar year. But you never say never. So it could spill over into next calendar year, I just cannot imagine it spilling deeply over into next calendar year if it were to do so.

Anthony Crowdell - ***Jefferies - Analyst***

Great. Thanks for taking my question.

Operator

Shahriar Pourreza, Citigroup.

Shahriar Pourreza - ***Citigroup - Analyst***

Most of my questions have been answered, but maybe I can just ask a question on gas. Over the past several weeks we have seen a negative basis with gas in the East relative to the Henry Hub. How is this -- have you seen an impact with Power's hedges especially if you hedge gas which is tied to Henry Hub and you hedge the heat rates or power on using Eastern prices? Have you seen an impact in any of your hedges at Power?

THOMSON REUTERS

Ralph Izzo - ***Public Service Enterprise Group, Inc. - Chairman, President & CEO***

We deliberately keep our load following and intermediate assets open certainly out beyond the current year. We've seen tremendous volatility in basis, the $3 or $4 number that we see in the future has a little bearing on the day-to-day or the day-ahead of real-time basis differential. And so we don't make a habit of hedging the fuel separate and apart from the electric output, we match that. And from that point of view sparks have been pretty robust and basis has been pretty robust for us.

And you have seen an effort two quarters in a row, right, for different reasons. And that is one of the themes we are trying to highlight in our discussions with investors and here on this call that it goes to the question that Michael asked before, our competitive positioning is one of having good assets and good locations that could take advantage of the volatility in the market through our natural long position. And it's not just a simple as okay, power prices at the western hub are $39 and PEG has got this amount of open position and let's multiply it by those two numbers. Caroline will chime in here as well.

Caroline Dorsa - ***Public Service Enterprise Group, Inc. - EVP & CFO***

One other thing to keep in mind, we have talked about this you may recall earlier this year. When you look at and try to estimate approximate forward bases you can get to some numbers that we see as well in the low single-digits. But when the demand has been there and there have been issues of congestion, we have seen that basis be higher in the closer to real-time. And so by having the assets open in our positioning we have been able to capture some of that volatility in basis.

And we have a slide in some of our investor materials that talks about that in terms of seeing how volatile that basis has been, our ability to capture that volatility as we make our assets available is something else that our team is very focused on.

Shahriar Pourreza - ***Citigroup - Analyst***

Got it, got it. And just -- maybe just one last question on that. If you get to a period where Marcellus just keeps producing and you don't really get a lot of gas being shipped from the Gulf and that basis of what you are seeing sort of expands because we have seen an expansion over the past several weeks. Is there a potential impact that you can see on [quarks] and some of the nuclear economics if you get to a period where the foreword curves continue to trade at a discount?

Ralph Izzo - ***Public Service Enterprise Group, Inc. - Chairman, President & CEO***

Yes, I think there is no denying that. Clearly our gas fleet will do better, but to the extent that overall prices come down and [corks] compress then you will see an impact on our nuclear fleet.

Shahriar Pourreza - ***Citigroup - Analyst***

Perfect. Thanks very much.

THOMSON REUTERS

Ralph Izzo - ***Public Service Enterprise Group, Inc. - Chairman, President & CEO***

Okay, thank you, everyone, for joining us. So just to recap, another strong quarter, we believe. Power actually eked out a couple million dollars improvement over last year, which is a nice change in the trend line at Power and utility right on track with the double-digit earnings growth that we have talked about largely driven by great progress on the transmission construction program.

And looking longer-term we are pleased with the dialogue we have with BPU staff on the Energy Strong proposal. We are pleased with the dialogue we are having with folks over at LIPA and how we might be able to enhance that relationship even before it begins. And with that we look forward to seeing many of you in several of the upcoming conferences that we will be at an August and in September. So we will see you in person very soon. Thanks, everyone.

Caroline Dorsa - ***Public Service Enterprise Group, Inc. - EVP & CFO***

Thank you, operator.

PSEG ANNOUNCES 2013 SECOND QUARTER RESULTS

Earnings from Continuing Operations of $0.66 Per Share; Operating Earnings of $0.48 Per Share

Results Reflect Increased Investment at PSE&G; Continued Solid Performance from PSEG Power

Operating Earnings Expected to be at Upper End of Full Year Guidance of $2.25 - $2.50 Per Share

July 30, 2013 (Newark, NJ) (NYSE- PEG) Public Service Enterprise Group (PSEG) reported today Second Quarter 2013 Net Income and Income from Continuing Operations of $333 million or $0.66 per share as compared to Net Income and Income from Continuing Operations of $211 million or $0.42 per share reported for the Second Quarter of 2012. Operating Earnings for the Second Quarter of 2013 were $243 million or $0.48 per share compared to the Second Quarter of 2012 Operating Earnings of $215 million or $0.43 per share.

"Our earnings reflect strong performance for all our businesses" said Ralph Izzo, chairman, president and chief executive officer. He went on to say "our results continue to benefit from employees' execution of our strategic goals as well as the locational value enjoyed by our merchant generating fleet of assets. PSEG again demonstrated the ability to perform against a background of slow growth in electric demand and low prices. Based on our performance thus far in the year, and assuming normal weather and operations in the remainder of the year, we expect operating earnings for the full year to be at the upper end of our guidance of $2.25 - $2.50 per share."

PSEG believes that the non-GAAP financial measure of "Operating Earnings" provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. Operating Earnings exclude the impact of returns/(losses) associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting and other material one time items. The table below provides a reconciliation of PSEG's Net Income to Operating Earnings for the second quarter. See Attachment 12 for a complete list of items excluded from Income from Continuing Operations/Net Income in the determination of Operating Earnings.

PSEG CONSOLIDATED EARNINGS (unaudited)
Second Quarter Comparative Results
2013 and 2012

	Income ($millions)		Diluted Earnings Per Share	
	2013	**2012**	**2013**	**2012**
Operating Earnings	$243	$215	$0.48	$0.43
Reconciling Items	90	(4)	0.18	(0.01)
Income from Continuing Operations*	$333	$211	$0.66	$0.42
		Avg. Shares	**507M**	**507M**

*Income from continuing operations is equal to net income in both years.

Ralph Izzo went on to say "we remain on track to meet our capital investment and operations-related goals. PSE&G's $3.4 billion transmission construction program remains on schedule. Post-Superstorm Sandy Power has restored operations sufficiently at its peaking units in time to support summer demand, and Holdings continues to monetize non-essential assets in its portfolio. We also remain focused on building support for PSE&G's $3.9 billion "Energy Strong" proposal, meeting our commitment to operate the Long Island Power Authority's transmission and distribution system at the start of 2014, and controlling our cost structure. These actions will strengthen our infrastructure and improve system reliability."

Operating Earnings guidance by company for the full year (which is unchanged from prior disclosure) is as follows:

Operating Earnings
($ millions, except EPS)

	2013E	**2012A**
PSEG Power	$535 - $600	$644
PSE&G	$580 - $635	$528
PSEG Energy Holdings/Parent	$25 - $35	$64
Total	$1,140- $1,270	$1,236
Earnings Per Share	$2.25- $2.50	$2.44

Operating Earnings Review and Outlook by Operating Subsidiary

See Attachment 6 for detail regarding the quarter-over-quarter reconciliations for each of PSEG's businesses.

PSEG Power

PSEG Power reported operating earnings of $114 million ($0.22 per share) for the second quarter of 2013 compared with operating earnings of $110 million ($0.22 per share) for the second quarter of 2012.

Power's second quarter earnings benefited from higher PJM capacity prices and an improvement in market prices for energy with an increase in the price of gas.

Higher prices for natural gas and an improvement in basis in the PS zone had a favorable influence on spot market prices for energy. The improvement in pricing on Power's un-hedged generation added $0.04 per share to earnings quarter-over-quarter. An increase in capacity prices improved Power's quarter-over-quarter earnings by $0.07 per share. These items together offset a reduction in average prices on Power's hedged volumes.

PSEG Power's operation & maintenance (O&M) expense (exclusive of storm-related restoration activity) was unchanged from year-ago levels. An increase in O&M at fossil associated with planned outage related work was offset by a reduction in outage related O&M at nuclear. An increase in depreciation expense related to the installation of new peaking capacity and low pressure turbines at Peach Bottom was offset by a decline in interest expense.

Power expensed approximately $22 million pre-tax on storm related activity in the second quarter, bringing Power's total pre-tax storm expenditures to $135 million. Of this amount, Power received an additional $25 million in insurance proceeds during the second quarter for a total of $44 million in insurance proceeds to return its facilities to service.

Power's output was unchanged in the quarter from year-ago levels. The nuclear fleet operated at an average capacity factor in the quarter of 87.9% versus 87.2% last year bringing the capacity factor for the first half of the year to 94.4%. The fleet's performance in the quarter was influenced by a refueling outage and main generator repair work at Salem 1 (57% owned and operated by PSEG Power) versus a refueling outage in the second quarter of 2012 at PSEG Power's 100%-owned and operated Hope Creek unit. Output from our baseload nuclear and Pennsylvania coal units in the quarter offset a decline in production at Power's NJ-based coal units.

Power continues to forecast output for 2013 of 53 – 55 TWh. For the remainder of the year output of 26 – 28 TWh is 70% - 75% hedged at an average price of $51 per MWh. For 2014, forecast output of 53 – 55 TWh is approximately 55% - 60% hedged at an average price of $49 per MWh. Power has hedged 30% - 35% of its forecast generation in 2015 of 52 – 54 TWh at an average price of $49 per MWh. The increase in the percentage of generation hedged for 2014 – 2015 reflects only an increase in the level of hedges on base load generation. Power's

intermediate and peaking generation remains open. Average hedge prices continue to reflect assumed BGS volumes of 12 TWh in 2013 and 10 TWh in 2014.

The forecast range of Power's operating earnings for 2013 remains unchanged at $535 - $600 million. However, based on Power's performance year-to-date, results for the full year are expected to be at the upper end of the range.

PSE&G

PSE&G reported operating earnings of $121 million ($0.24 per share) for the second quarter of 2013 compared with operating earnings of $101 million ($0.20 per share) for the second quarter of 2012.

PSE&G's second quarter results reflect the contribution to earnings from the increased level of transmission investment. An increase in PSE&G's transmission revenue, effective on January 1, 2013, supported a quarter-over-quarter increase in the net earnings contribution from transmission of $0.04 per share.

Weather conditions for electric and gas demand were favorable relative to normal and in comparison to the weather experienced in the year-ago quarter. Sales of gas increased 17% quarter-over-quarter, however, continued weakness in electric demand from the commercial and industrial sectors resulted in a 2.5% decline in the sale of electricity. After several years of declining prices, gas customers appear to have adjusted their consumption to reflect an expectation of low commodity prices. Electric demand, however, continues to be affected by customer conservation in the face of a slowly improving economy.

The net impact on earnings from weather and the change in sales was a reduction in quarter-over-quarter earnings of $0.01 per share. The earnings comparison reflects the absence of revenue accrued under the gas weather normalization clause, which amounted to $0.02 per share to earnings in the year-ago quarter offsetting lower sales in the year-ago quarter.

The implementation of cost controls in response to lower than expected demand resulted in no change in distribution related O&M expense quarter-over-quarter. For the remainder of the year, distribution related O&M is expected to be lower than the levels realized in the prior year given expectations for a decline in storm related restoration activity. An increase in depreciation expense was offset by lower interest expense and other minor items.

The forecast of PSE&G's operating earnings for 2013 remains unchanged at $580 - $635 million. Results will be influenced by a full year increase in transmission revenue and the absence of the negative impact on sales and O&M expense in the fourth quarter of 2012 from Superstorm Sandy.

PSEG Energy Holdings/Enterprise

PSEG Energy Holdings/Enterprise reported operating earnings of $8 million ($0.02 per share) for the second quarter of 2013 versus operating earnings of $4 million ($0.01 per share) during

the second quarter of 2012. The improvement in operating earnings for the quarter reflects a gain on the sale of a commercial office complex.

The forecast of PSEG Energy Holdings/Parent full year operating earnings for 2013 is unchanged at $25 - $35 million. The results will reflect the full year operation of the Milford and Queen Creek solar facilities (40 MW), which entered service in the fourth quarter of 2012, as well as the commercial operation of a $50 million (19 MW) solar facility located in Arizona, which is expected to enter service in the fourth quarter.

Other Items

The NJ Board of Public Utilities (BPU) on May 29 approved a settlement authorizing an increase in spending on renewables through the Solar 4 All Extension ($247 million) and Solar Loan III ($199 million) investment programs.

######

FORWARD-LOOKING STATEMENT

Certain of the matters discussed in this report constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management’s beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in Item 1. Financial Statements—Note 9. Commitments and Contingent Liabilities, Item 2. Management’s Discussion and Analysis of Financial Condition and Results of Operations, and other factors discussed in filings we make with the United States Securities and Exchange Commission (SEC). These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,

- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to sufficiently obtain coverage or recover proceeds of insurance on such matters,
- increases in competition in energy supply markets as well as competition for certain rate-based transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology and customer usage patterns.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws. The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

PSEG Earnings Conference Call

2nd Quarter 2013

July 30, 2013

SI-SSA-0015-12021

Forward-Looking Statement

Certain of the matters discussed in this report constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management’s beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in Item 1. Financial Statements—Note 9. Commitments and Contingent Liabilities, Item 2. Management’s Discussion and Analysis of Financial Condition and Results of Operations, and other factors discussed in filings we make with the United States Securities and Exchange Commission (SEC). These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to sufficiently obtain coverage or recover proceeds of insurance on such matters,
- increases in competition in energy supply markets as well as competition for certain rate-based transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology and customer usage patterns.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws. The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-12022

GAAP Disclaimer

PSEG presents Operating Earnings in addition to Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. The last slide in this presentation includes a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

PSEG – Q2 2013 Highlights

- **Strong Earnings**
  - ✓ Operating earnings of $0.48 vs. $0.43 per share in Q2 2012
  - ✓ Power benefitted from higher PJM capacity prices and an improvement in market prices for energy
  - ✓ Increased contribution to earnings from PSE&G's investment in transmission

- **Operational Excellence**
  - ✓ PSEG Power output was flat in Q2 despite extended refueling at Salem 1
  - ✓ Diversity and location of Power's fleet provided flexibility to participate in market
  - ✓ PSE&G's O&M on track to meet full-year expectations

- **PSEG Disciplined Capital Investment**
  - ✓ BPU approved Solar Agreement to extend Solar 4 All and Solar Loan III investment
  - ✓ 54 NJ municipalities and five counties have approved resolutions in support of PSE&G's Energy Strong proposal to fortify its electric and gas distribution systems
  - ✓ Transmission construction program continues on schedule

- **Market Developments**
  - ✓ 2016/2017 RPM auction again recognized the locational advantage of Power's assets
  - ✓ US District Court decision on LCAPP litigation awaited in both NJ and MD
  - ✓ New LIPA agreement under consideration would broaden and extend original contract terms

SI-SSA-0015-12027

PSEG – Maintaining 2013 Guidance

Based on our performance year-to-date, we expect operating earnings for the full year to be at the upper end of guidance assuming normal weather and unit operations

* See Slide A for Items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings. E = Estimate.

Total Generation (GWh)	25,849	26,875
$ / MWh	16.09	20.24

PSEG Power – Gross Margin Performance

- ✓ Locational advantage of generating portfolio offset lower prices in hedged products
- ✓ Q2 spot prices higher across PJM-W, PS Zone, ISO-NE and NYISO
- ✓ Margins stable with higher capacity pricing offsetting lower net pricing
- ✓ Migration volumes in line with expectations

Regional Performance		
Region	**Q2 2013 Gross Margin ($M)**	**2013 Performance**
PJM	**$523**	Roll-off of higher priced hedges offset higher capacity prices versus a year ago and flat generation output.
New England	**$15**	Higher pricing on flat volume.
New York	**$12**	Higher pricing on flat volume.

	% Hedged	70-75%	55-60%	30-35%
	Price $/MWh	$51	$49	$49

* Hedge percentages and prices as of June 28, 2013. Revenues of full requirement load deals based on contract price, including renewable energy credits, ancillary, and transmission components but excluding capacity. Hedges include positions with MTM accounting treatment and options.

SI-SSA-0015-12041

PSEG Power – Q2 2013 Highlights

Operations

- ✓ Q2 output was flat year-over-year, reflecting Salem 1 extended refueling and a 6 day forced outage at Hope Creek
- ✓ Nuclear capacity factor was 87.9% for Q2 and 94.4% for the YTD
- ✓ Equivalent availability factors for CCGT units restored to pre-Sandy levels near 90%
- ✓ Output of NJ coal units was 38% coal, 62% gas fueled for the YTD

Regulatory and Market Environment

- ✓ Capacity auction results continue to recognize the locational advantage of Power's assets: For the 2016/2017 RPM auction, Power cleared 8,637 MW of capacity at an average price of $166/MW-day
- ✓ Higher spot power prices across PJM, NYISO, and ISO-NE continued in Q2
- ✓ Remainder of 2013 anticipated base load output hedged at an average price of $51/MWh
- ✓ Decisions in Federal Court for NJ and MD LCAPP cases pending

Financial

- ✓ Storm related spending was $22 million pre-tax in Q2, $50 million YTD, and $135 million storm-to-date (before insurance recoveries thus far totaling $44 million)
- ✓ Power's total debt as a percentage of capital at June 30 was 28%
- ✓ Power paid at maturity a $300 million, 2.5% senior note in April

*E=Estimate; Updated 2013-2015 Capital Spending revisions do not reflect the Energy Strong filing, or the $1.5 billion of Transmission hardening.

SI-SSA-0015-12047

PSE&G – Q2 2013 Highlights

Operations

- ✓ Q2 winter weather was significantly colder than Q2 2012 but only slightly colder than normal
- ✓ Q2 summer weather was warmer than Q2 2012 and warmer than normal
- ✓ A still-slow economy continues to weigh on electric demand; gas demand improving
- ✓ O&M expected to moderate in second-half 2013

Regulatory and Market Environment

- ✓ BPU approved Solar Agreement to spend up to $247 million on Solar 4 All extension and up to $199 million on Solar Loan III program
- ✓ Continuing regulatory process on Energy Strong infrastructure proposal to invest $3.9 billion over the next ten years on electric and gas system hardening and resiliency
- ✓ Advancing plans for Transmission hardening program of $1.5 billion over 10 years
- ✓ Construction of major Transmission lines progressing on schedule

Financial

- ✓ PSE&G is earning its authorized return on equity
- ✓ PSE&G's capital budget for 2013-2015 revised to $5.1 billion from $4.9 billion, to reflect approval of expanded investment in solar
- ✓ Issued $500 million, 10-year secured MTNs at 2.375% due May 2023

PSEG Energy Holdings/Enterprise – Q2 2013 Highlights

Financial

- ✓ Expanded LIPA management agreement under consideration
- ✓ Edison Mission Energy agreement to defer lease decisions until late September
- ✓ Badger 1 (19 MW) solar farm scheduled to be in service this Fall
- ✓ Continuing to monetize non-core assets

SI-SSA-0015-12052

PSEG

PSEG Financial Highlights

- **Maintaining 2013 operating earnings guidance of $2.25 - $2.50 per share**
  - ✓ Based on financial results to date, we expect operating earnings for the full year to be at the upper end of our guidance range assuming normal weather and unit operations
  - ✓ Focused on maintaining operating efficiency and customer reliability
  - ✓ PSE&G's operating earnings expected to grow at double-digit rate in 2013, and provide ~50% of consolidated operating earnings

- **Executing PSE&G's existing $3.4 billion Transmission capital spending program on schedule – fueling double-digit growth in PSE&G operating earnings through 2015, based on approved programs**

- **PSE&G pursuing Energy Strong, its $3.9 billion, ten-year infrastructure spending program to strengthen electric and gas distribution, communications, and customer reliability and resiliency. In addition, PSE&G plans to invest $1.5 billion during this time-frame to harden its Transmission system**

- **Financial position remains strong**
  - ✓ Positive cash from Power and increasing cash flow from PSE&G supports dividend growth and funds capital spending program without the need to issue equity
  - ✓ Debt as a percentage of capital was 41.2% at June 30, 2013

- **Long history of returning cash to the shareholder through the common dividend, with opportunity for future growth**

PRESENTATION

Operator

Good morning, my name is Brian and I will be your conference operator today. At this time I would like to welcome everyone to the Public Service Enterprise's third-quarter 2013 earnings conference call. All lines have been placed on mute to prevent any background noise. After the speakers' remarks there will be a question-and-answer session. (Operator Instructions). Thank you. Ms. Lally, you may begin your conference.

Kathleen Lally ***- Public Service Enterprise Group Inc. - VP of IR***

Thank you, Brian. Good morning, everyone. Thank you for participating in our call this morning; we understand it is a very busy day for earnings. But as you are aware, we released our third-quarter 2013 earnings statement earlier today. Both the release and attachments are posted on our website at www.PSEG.com under the investor section. We also posted a series of slides that detail the operating results by Company for the quarter and our 10-Q for the period ended September 30, 2013 is expected to be filed shortly.

I won't go through the full disclaimer statement or the comments we have on the difference between operating earnings and GAAP results. But, as you know, the earnings release and other matters that we will discuss in today's call contain forward-looking statements and estimates that are the subject to various risks and uncertainties.

Although we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if our estimate changes, unless we are of course required to do so. Our release also contains adjusted non-GAAP operating earnings. Please refer to today's 8-K or other filings for a discussion of the factors that may cause results to differ from management projections, forecasts and expectations and for a reconciliation of operating earnings to GAAP results.

I would now like to turn the call over to Ralph Izzo, Chairman, President and Chief Executive Officer of Public Service Enterprise Group. And joining Ralph on the call is Caroline Dorsa, Executive Vice President and CFO. At the conclusion of their remarks there will be time for your questions. I'm not going to ask that you limit yourself to one question and one follow-up, but please take note of others who may be on the call ready to ask a question. Thank you. Ralph?

THOMSON REUTERS

Ralph Izzo - ***Public Service Enterprise Group Inc. - Chairman, President & CEO of PSEG***

Thank you, Kathleen, and thank you, everyone, for joining us today. It is hard to believe that it was a year ago when we were reporting results for the third quarter of 2012 while we were responding to the damage to our system caused by Superstorm Sandy. Our utility, PSE&G, restored service to 2.1 million customers within 10 days and PSEG Power's assets, you will recall, were severely tested as well, but performed so as to ensure that electricity was available to every one of those 2.1 million customers as they were being restored.

Now both companies in the past year have embarked on programs to strengthen their systems. But enough of the past. It is with a great sense of satisfaction, and in fact it is somewhat remarkable when looking back at what we faced at that time, that I can report to you strong operating earnings for the third quarter 2013 and in fact the nine months of 2013. And on top of that I can report to you this morning an increase in our operating earnings guidance for the full year from what had initially been $2.25 to $2.50 per share to our new guidance range of $2.40 to $2.55 per share.

So earlier this morning we reported operating earnings for the third quarter of 2013 of $0.76 per share compared with operating earnings of $0.75 per share earned in 2012's third quarter. We have delivered solid results that are consistent with our operating objectives. And once again it is due to the tireless efforts of a dedicated workforce that we are on track to meet our near- and long-term targets for capital investment and operational efficiency. And that we can raise our guidance for full-year operating earnings.

Our shareholders continue to realize the benefit to earnings from the expansion of our investment in transmission and distribution, while our customers enjoy the improvement in reliability that come along with it. PSE&G's $3.4 billion transmission investment program includes five major transmission lines that require substantial citing and logistical support, yet all projects are on time and on budget and scheduled to be operational during 2014 through 2015.

Since PSE&G began its transmission expansion program in 2009, its investment in transmission has grown to represent 28% of rate base at the end of 2012. This represents a net investment of $2.5 billion and expected to grow to represent approximately 40% of PSE&G's rate base at the end of 2015, or an investment approximating $4.8 billion. As I've already mentioned, the investment in these major transmission projects will further enhance reliability for our customers.

Shifting our attention to PSEG Power for a moment, Power made an impressive comeback restoring operations at most of its peaking generating stations to pre-Sandy levels to assure their availability during the critical summer months. And Power continues to benefit from its favorable location.

Now in the past when we referred to Power's locational value it was typically a reference to the benefits associated with assets in the east located close to load and of course this remains true. But now Power is also benefiting from our location which gives us access to low-cost gas in the Marcellus basin through our gas pipeline and storage contract.

PSE&G's residential customers are the primary beneficiaries of this contracted position. And for that reason PSE&G announced last week that it would be providing a two-month bill credit for its residential gas customers that will reduce the typical monthly bill by 33% in both November and December of this year.

However, to the extent that we have firm pipeline capacity in excess of the need for serving residential customers, this firm transportation capacity may be used, and in fact is used, to supply power generation fleet under a BPU approved agreement. Power configured as firm gas transmission capability over the past 15 years with the objective of building a network at the most liquid supply hub to support the needs of its customers. PSEG Power as a result is one of the largest shippers of gas from the Marcellus basin.

As new interstate pipelines become operational later this year they will provide an additional outlet for some of the Marcellus supply. We believe, however, that Power should continue to experience periods of higher spark spreads given PSEG Power's gas transportation condition.

Power's earnings are currently benefiting from favorable prices it receives on capacity located in PJM. We were very pleased that the US District Courts in Maryland and New Jersey ruled an amendment that preserves competitive wholesale generation markets. We

THOMSON REUTERS

believe that a competitive market is the best approach for ensuring there is a sufficient supply of electric capacity to meet customer demand at the lowest cost.

The Court's position is not expected to have an impact on markets over the near-term. PJM has and will continue to address improvements in market design. It's important, however, that the market rules are understood and the playing field is level to support new investment when needed over the long-term.

Now as I have stated already, our strong operating performance is due to the dedication shown by our employees to meeting our corporate objective. This dedication has been recognized with the recently approved enhancement to our contract to operate the Long Island Power Authority's transmission and distribution system.

The contract enhancement will allow Power's energy resources and trade group to manage LIPA's electric dispatching fuel procurement needs in 2015 and provide for an increase in our management fee in 2016. The agreement remains contingent on LIPA receiving a private letter ruling from the IRS on the continued tax exempt status of its debt.

We also remain focused on securing approval for PSE&G's Energy Strong proposal. At this moment 74 municipalities and seven county governments have submitted resolutions to the Board of Public Utilities in support of our proposal. Public hearings have been held and we expect the proposal to receive careful consideration given the opportunity to improve the resiliency of the distribution system with little net impact on the customer's bill due to the coincidental expiration of various other charges.

And for the year PSE&G is on track to provide double-digit growth in earnings on increased investment in transmission as PSEG Power's results benefit from the strong locational advantages I have already described.

We made a move several years ago to use the strength of our balance sheet to invest primarily in our more stable regulated business in ways that meet customer needs us we also sought to protect the upside of our strong merchant business. Our focus is yielding returns and we are well positioned to meet the needs of our customers and to perform for our shareholders.

I will turn the call over to Carol to review our operating results in greater detail and then I will rejoin her at the end to answer your questions.

Caroline Dorsa - ***Public Service Enterprise Group Inc. - EVP & CFO***

Thank you, Ralph, and good morning, everyone. I will review our quarterly operating earnings as well as the outlook for full-year operating results by subsidiary Company. As Ralph said, PSEG reported operating earnings for the third quarter of 2013 of $0.76 per share versus operating earnings of $0.75 per share in last year's third quarter. For the nine months ended September 30 we reported operating earnings of $2.09 per share versus $2.03 per share last year.

Slides 4 and 5 in our webcast deck provide a reconciliation of operating earnings to income from continuing operations and net income for the quarter and the year to date. We've provided as always a waterfall chart on slide 10 that takes you through the net changes in quarter-over-quarter operating earnings by major business and a similar chart on slide 12 provides you with the changes in operating earnings by each business on a year-to-date basis. I will now review each Company in more detail and I will start with Power.

As shown on slide 14, PSEG Power reported operating earnings for the third quarter of $0.43 per share compared with $0.43 per share a year ago. Power's third-quarter earnings benefited from higher PJM capacity prices, an improvement in the market price of energy, a decline in the supply cost of gas and strong operating performance. Before reviewing the earnings in detail I want to spend some time on Power's gas position.

Power currently sells wholesale natural gas under a full requirement basic gas supply service, or BGSS, contract with PSE&G to meet the gas supply requirements of PSE&G's residential customers. Power has configured its contractual arrangements with interstate

THOMSON REUTERS

pipelines over the years which amount to 1.3 billion cubic feet per day of firm transportation capacity to meet its obligations under the BGSS contract.

Approximately 46% of PSE&G peak daily gas requirement is provided from Power's firm transportation capacity, which is available every day of the year. Power satisfies the remainder of PSE&G's requirements from storage contracts, LNG, seasonal purchases and other sources of supply. The transportation contract stores gas from both from the Marcellus basin at about 0.6 Bcf per day and the Gulf Coast at about 0.7 Bcf per day. This supply is supplemented with 0.9 Bcf per day of storage deliverability from a total storage capacity of about 76 billion cubic feet.

So the primary beneficiary of these contractual arrangements, as I mentioned, is the firm utility customer. When capacity beyond daily demand and storage injections is available it may be used to serve the gas supply needs of Power's generation fleet under a BPU approved agreement.

Over the years having firm transportation contracts for gas has provided Power with direct and indirect market benefits. The firm gas contracts and Power's electric hedging strategy have allowed Power to take advantage of market volatility created by weather and supplier positions. Gas market volatility also has an impact on the electric market and can affect the value of [bases] as well as the value of ancillary services provided by Power's generation fleet.

We experienced this favorable impact on earnings of the volatility earlier this year as we have in past years in varying degrees. And you will recall we discussed this on the first-quarter call. Because production from the Marcellus basin has increased faster than the availability of infrastructure to move the gas the cost of gas from the Marcellus relative to other basins has declined in 2013, particularly since July of this year.

The cost decline has occurred at a time of low heating demand while storage was being filled to meet the needs of residential customers and the upcoming winter heating season. Excess supply is normally available in the third quarter and this year was available to meet the needs of our generating fleet.

So you should think of Power's firm transportation contracts providing benefits in the following order -- utility customers are first in line, including the need to build storage in the summer months; then to the extent supply exists in excess of these firm customer needs, Power would be able to make off system sales, a large portion of which benefit the utility customer and, lastly, provide gas for its generation fleet. Customer demand and the use of these gas assets will differ by season of the year and is largely dependent on the weather.

The ability of generation to access the low-cost Marcellus supply is more likely to occur during the summer months and the shoulder periods for the reasons I just noted. So now I will provide you with more detail behind Power's third-quarter operating earnings.

During the third quarter Power's combined cycle fleet realized spark spreads which were approximately 40% to 45% greater than what it realized in the third quarter of 2012, the direct benefit of its Marcellus position. Power's result also benefited from the favorable impact with higher overall market prices for natural gas and an improvement in PS-zone basis had on spot market prices for energy.

So combined the improvement in the wholesale price of energy and a decline in fuel cost added $0.04 per share to earnings quarter over quarter with the majority of the benefit coming from the Marcellus impact.

An increase in capacity prices improved Power's quarter-over-quarter earnings by $0.11 per share. The improvement in capacity revenue and wholesale energy margins more than offset the $0.10 per share decline from quarter-over-quarter earnings from a reduction in the average price on hedged volumes. A reduction in generation volumes as a result of more normal weather and the maintenance related outage at that gas fired Bethlehem Energy Center, or BEC, reduced Power's quarter-over-quarter earnings comparison by $0.2 per share.

The major maintenance outage at the BEC, which concluded in October, resulted in an increase in Power's operating and maintenance expense exclusive of storm-related activity and reduced quarter-over-quarter earnings comparisons by $0.04 per share. Taxes and other items added about a penny per share to quarter-over-quarter earnings comparisons.

THOMSON REUTERS

Volume declined by 5.4% in the quarter. There were more normal weather conditions and the BEC maintenance outage reduced output from the fossil fleet by 10% in the quarter. The nuclear fleet maintained its strong operating performance with an average capacity factor of 91% in the quarter and 93.2% for the nine months ended September.

While volumes were lower overall performance was strong including excellent summer availability. The combination of higher capacity prices and lower fuel costs resulted in gross margins for Power of approximately $51 per megawatt hour in the third quarter versus gross margins of $47 per megawatt hour in the year-ago period. Remember capacity prices increased to an average of $244 per megawatt day from $153 per megawatt day on June 1 of this year and those higher prices remain in effect through May 31 of 2014. Slide 19 in your deck provides detail on Power's realized gross margins.

Power continues to forecast output for both of 2013 and 2014 of between 53 and 55 terawatt hours. Output for the fourth quarter of approximately 13 to 14 terawatt hours this year is 70% to 75% hedged at an average price of $50 per megawatt hour. Of 2014's forecast output Power has hedged approximately 65% to 70% at an average price of $48 per megawatt hour.

Power has hedged approximately 35% to 40% in 2015's forecast generation of 52 to 54 terawatt hours at an average price of $48 per megawatt hour. Power's forecast of total generation output in each of the next two years is unchanged from prior guidance. The percentage of generation hedged in each of the next two years is greater than our prior forecast and the average price of energy hedged has declined by $1 per megawatt hour. The changes reflect both an upward adjustment to the forecasted BGS-related hedges as well as an increase in the percentage of energy hedged at PJM-West prices.

The data for 2014 now assumes BGS volumes of about 11 terawatt hours versus prior guidance of 10 terawatt hours as customers switching to third-party suppliers has slowed during the year. Power continues to assume BGS-related load and hedges in 2013 will represent about 12 terawatt hours of generation for this year.

Results for the remainder of the year will continue to be influenced by higher capacity prices as well as a decline in the average price of our hedges. We also continue to forecast an increase in Power's quarter-over-quarter O&M expense given a refueling outage at over 100% owned Hope Creek nuclear facility currently underway as well as the maintenance work at BEC which concluded, as I mentioned earlier, and October.

Based on the performance of Power through the year including the third-quarter we have raised the forecast range of Power's operating earnings for 2013 to $630 million to $685 million from $535 million to $600 million.

Let's now turn to PSE&G. PSE&G reported operating earnings for the third quarter of 2013 of $0.33 per share compared with $0.30 per share for the third quarter of 2012. The utility's third-quarter earnings reflect increased revenue associated with an increased level of investment. Higher transmission revenue effective on January 1 of 2013, increased quarter-over-quarter earnings by $0.04 per share.

Revenue from investments made under PSE&G's distribution capital infrastructure investment program contributed $0.01 per share to earnings in the quarter. Electric demand in the third quarter was influenced by whether, which was hotter than normal, but cooler than the weather conditions experienced in the year-ago quarter. Also demand for electricity continues to be impacted by customer conservation in a slowly improving economic environment.

Weather normalized electric sales led by the decline in the residential sector are estimated to have declined by 2.3% in the third quarter. Sales of gas, although not as important in the third quarter as the demand for electricity, increased 10.4% from year ago levels and year to date are 1.9% higher than last year. This continues the pattern we've seen this year and talked about earlier and could be reflective of customers' adjustment to an overall lower cost of gas.

You will note PSE&G announced last week that it would be providing its residential customers with a two-month bill credit that will reduce the typical monthly bill by approximately 33% in both of November and December. And this is on top of the ongoing 39% reduction in BGSS rates that have been announced over the past four years.

The net impact on earnings from weather and the change in sales was a reduction in quarter-over-quarter earnings of $0.02 per share. A slight increase in distribution related O&M and depreciation expense was offset by a decline in interest expense and other items.

THOMSON REUTERS

SI-SSA-0015-12063

PSE&G is investing $3.4 billion in transmission-related programs over the period from 2013 through 2015. This program, which as Ralph mentioned, includes five major transmission lines, remains on time and on budget. All five lines are expected to be operational over 2014 to 2015.

And PSE&G filed an annual update of its revenue requirements associated with the transmission investment program with the Federal Energy Regulatory Commission in mid-October. If accepted transmission revenue in 2014 would increase by $176 million at the start of next year. PSE&G's control of its operating expenses and recovery of its transmission investment capital on a formula rate basis should continue to allow the Company to earn its authorized return.

We're tightening our forecast of PSE&G's operating earnings for 2013 from $585 million to $600 million from the prior $580 million to $635 million. Results from the year will be influenced by a full-year increase in transmission revenue, weaker demand in the absence of the negative impact of Superstorm Sandy on sales and O&M in the fourth quarter.

We continue to anticipate double-digit growth in PSE&G's operating earnings this year and through 2015 based on approved programs. And we will update you on expectations for 2014 through 2016 in February on our fourth-quarter call. Let me now turn to Energy Holdings and Enterprise.

PSEG Energy Holdings together with the parent reported operating earnings of $1 million for the third quarter of 2013 versus operating earnings of $10 million or $0.02 per share during the third quarter of 2012. Results for the quarter reflect continued monetization of assets within Holdings' portfolio and the absence of a gain on an asset sale that occurred in the year-ago quarter.

As many of you are aware, the terms of NRG Energy's recent announcement to acquire Edison Mission Energy, or EME, as part of an EME Chapter 11 reorganization would protect the entirety of Holdings' equity value in the Powerton and Joliet leverage leases. The transaction is expected to close in the first quarter of 2014.

We've adjusted our forecast of PSEG Energy Holdings and Enterprise full-year operating earnings to zero to $10 million from the prior $25 million to $35 million.

The updated guidance reflects the impact of revised estimates for legacy Holdings' portfolio and related taxes completely separate from merchant energy leases, which are expected to more than offset the benefit to operating earnings from the commercial operation of Holdings of six solar facilities in the fourth quarter.

Recall that our strategy in Holdings is to wind down the portfolio, reduce risk and sell off assets and we think we've been very successful to date in achieving this strategy.

Next I would like to briefly mention PSEG Long Island. The Board of Directors for the Long Island Power Authority, or LIPA, recently approved amendments to PSEG Long Island's original operating services agreement for LIPA's transmission and distribution system. When all regulatory approvals are received we will begin to operate under the new contract.

The revised terms are expected to add an estimated $0.04 to $0.05 per share to PSEG's earnings when fully effective in 2016 versus the original agreement which provided a run rate of earnings of about $0.03 per share.

Lastly on the financing front, we continue to be in a strong position to finance our capital program. At the end of September we had approximately $448 million in cash on hand, debt represented about 41% of PSEG's consolidated capital with debt at Power approximating 28% of its capital base. Power's cash flow remains strong and PSE&G's cash generation has improved with its ability to earn its authorized return on increased levels of capital investment.

As we've said before, we can finance our existing capital program without the need to issue equity. And we can finance and expand a capital program that includes expanding on Energy Strong related projects also without the need to issue equity. And that still leaves us with the opportunity for modest and sustainable growth in the common dividend as we look to the future.

THOMSON REUTERS

SI-SSA-0015-12064

So finally, just to reiterate, as Ralph said earlier, we are pleased to be raising our guidance for the forecasted operating earnings for the full year of 2013 to $2.40 to $2.55 per share. That concludes my remarks. And, Brian, I will now turn it over to you to introduce the Q&A.

QUESTION AND ANSWER

Operator

(Operator Instructions). Kit Konolige, BGC Financial.

Kit Konolige *- BGC Financial - Analyst*

A couple of areas -- on the decline in demand, 2.3% in the third quarter, can you give us what that is year to date? And a little color maybe on what you think is going on there and what the outlook is going forward from here?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President & CEO of PSEG*

Yes, so year to date it was 2.7%, remember these are weather normalized numbers. And I think I have done 26 of these quarterly calls and I always get the same caveat, which is weather normalization is as much art as it is science. We had some extreme weather conditions, so trying to back that out is not always easy.

The big change this quarter was in the residential sector, that was down 2.9%. The good news, if you will, is we primarily driven by the commercial sector -- and that was down 1% in the third quarter which is a little bit stronger than -- which is less of a down than it had been prior year to date.

It is a combination of a slowly recovering economy, the unemployment levels in New Jersey are well published at about 8.2% to 8.3%. We have seen some modest recovery in housing starts but the status didn't go down as far as others in 2008 and hasn't sprung back as quickly as others, but it is a combination we think of economic factors and just greater use of energy efficiency.

Kit Konolige *- BGC Financial - Analyst*

And, Ralph, Is there some kind of structural change going on here where the new normal is going to be that there is negative sales? Or do you expect this to be cyclical and bounce back? And what do you see as the say three to five year growth rate?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President & CEO of PSEG*

Yes, so what we have told regulators is that we think that certainly the old days of load growth being proportional to GDP are gone and the more recent era of load growth being half of GDP are likely to not be the case anymore. And that is an important part of why we are so insistent upon contemporaneous returns on our significant investment approach in the utility.

Remember, as you well know, Kit, PSE&G's earnings growth is not driven by load growth. Our earnings growth is triggered by reliability enhancements, infrastructure replacement and enhanced resiliency. And the old system of regulatory lag giving you some load to growth to kind of carry you until the next rate case is one that doesn't work when you have zero-ish load growth as we have been experiencing. And zero-ish is obviously being a little bit kind when we have just reported negative numbers.

THOMSON REUTERS

So whatever the future holds in terms of load growth, which looks to be something that is less than it has been in the past, I think that buttresses our argument for the need for the clause recovery mechanism while we are making significant and necessary capital investment. So PSE&G is not about load growth, it is about rate base growth and the regulatory system has to reflect the new load growth paradigm.

Kit Konolige *- BGC Financial - Analyst*

Great, and one other area if I could. Can you just give us a little more color -- obviously you mentioned on Energy Strong the resolutions that have been passed by the local governments. Clearly you're getting a lot of support there. Has it become -- been mentioned at all in the gubernatorial race? And assuming it is not going to get done until after the election, what kind of timing do you think we have on getting approval?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President & CEO of PSEG*

Sure, Kit. So you'll remember that two of the last three major storms occurred within one week of Election Day, they were Superstorm Sandy and the Halloween snowstorm of 2012 and the third storm I am thinking of is Irene, which was in August. So mayors and elected officials know only too well the inconvenience and problems associated with local residents being without power.

So as a result we have had these 81 jurisdictions, a combination of counties and municipalities rally to show up at public hearings which went extremely well I would characterize it in the month of September and early October. But it wasn't limited to local jurisdictions that showed up in support; we had strong support from a myriad of business associations, hospital associations and labor unions.

The schedule now calls for evidentiary hearings to take place, I believe it is in February or the beginning of March. So on a fully litigated track this won't be resolved until the end of March, end of first quarter. But we remain hopeful that we can settle this because the conversations with the staff have been very, very reasonable. I mean this is a big investment and they are asking good questions about engineering studies and expectations for what might be the range of costs associated with some of the proposals we have made.

I am not aware of comments that have been made by the candidates. I think early on the governor said he expects the BPU to give this a full and thorough review, kind of the sort of reasonable or rational [project] that you would expect from this governor, just in light of the complexity of it, and the fact that he has a full BPU that is supposed to look after this. And I don't believe it has hit the radar screen of his opponent I am looking around the room here and everyone is shaking their head no. So I don't think I missed the article that might have mentioned it.

So seeing that -- we are still hopeful that we will come to some settlement agreement around the end of the year. And as long as you allow me to define the end of the year as possibly including January, I feel very confident of that. That is where things stand right now.

Kit Konolige *- BGC Financial - Analyst*

Great, thank you.

'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

Dan Eggers - *Credit Suisse - Analyst*

I guess thanks for all of the detail on the gas positioning and kind of the benefit you guys are seeing from basis differentials. But, Caroline, I prefer to think about this a little more. What is the full-year benefit you guys are seeing if you got about $0.04 in the third quarter if you look at kind of the basis over the year? How much cumulative benefit have you guys seen this year?

Caroline Dorsa - *Public Service Enterprise Group Inc. - EVP & CFO*

Thanks, Dan. So you remember some of the things I said in my remarks. Because of the way in which our contract structure works and the primary benefit goes to the PSE&G residential customer, you are going to see us get these benefits when they are available in those sort of shoulder seasons or seasons where the residential customer doesn't need a lot of heat, like the summer. So we saw the Marcellus prices really come down this summer. That was sort of the single biggest drop we saw, and that lies immediately right into our shoulder summer period.

So the $0.04 I just described in this quarter, the majority of it is coming from the Marcellus, is the quarter in which you saw the gas to electric benefit from Marcellus have the biggest impact on us this year. So that is the way to think about it from sort of a gas to electric has primarily been this quarter. And you wouldn't expect to see on the gas to electric a lot of benefit in the winter because the benefit is going -- is going to the residential customer.

That being said, remember, in the first quarter we talked about the fact that some of the volatility that was happening in gas given our position and given our ability to sell off system sales when there isn't need actually contributed $0.04 per share quarter over quarter in the first quarter, but that was not the gas to electric.

That was the BGSS itself in terms of the ability to recover our fixed cost, which we hadn't in the first quarter of 2012, because you may remember it was so mild that winter. So the way to think about it going forward, the way I will encourage you to think about it is you will see us to the extent that this differential persists -- and again, we don't know how long it will persist but we have probably the single best positioning to garner it when it persists -- it is going to be in shoulder period or summer period where the residential customer doesn't have that gas demand.

We didn't see it as much this spring because that Marcellus price drop really happened in July. So going forward I would encourage you to look for it in the sort of spring and fall periods, so shoulder period. But from gas to electric it has been this quarter that you have really seen it come through the P&L.

Ralph Izzo - *Public Service Enterprise Group Inc. - Chairman, President & CEO of PSEG*

I think one of the other things we have noticed, Dan, that has been quite favorable, and is difficult to quantify, is that to the extent that that benefit is not available to Power that is because residential gas demand is high, which would tend to mean that we have some severe weather conditions which benefit Power and the utility in other ways.

And to the extent that there is not strong demand, which would suggest that there is a weather condition that is not beneficial to Power and the utility, then the basis differential seems to expand, which offsets that negative outcome. So there is also this kind of natural hedge phenomenon taking place that seems to work to our favor.

Dan Eggers - *Credit Suisse - Analyst*

Okay so just a $0.04 benefit if spreads stayed where they are today, kind of in the second quarter we could replicate something like we saw in the third quarter of this year because that would be another low gas demand period. Is that a reasonable way of thinking about things?

© 2013 Thomson Reuters. All rights reserved. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

SI-SSA-0015-12067

Caroline Dorsa - ***Public Service Enterprise Group Inc. - EVP & CFO***

I don't want to forecast a specific, right, because it depends on what happens to that differential. And of course recognizing, as we said, there are some lines that are coming in, right, into the New York region, the Spectra line, the Williams line. So not certain how that basis will actually move in the future, but to the extent the basis is there we think we are well positioned to capture it. But I wouldn't want to get specific on a number because that all depends on weather conditions and everything else.

Dan Eggers - ***Credit Suisse - Analyst***

Okay, that is fair. And I guess just along those lines, is that going to -- with this opportunity or maybe more obvious if not an opportunity -- are you guys going to reevaluate how you hedge the gas generation in the future, maybe the structuring of the hedges or the magnitude of the hedges?

Caroline Dorsa - ***Public Service Enterprise Group Inc. - EVP & CFO***

I don't think so, Dan, for this reason, right, because you think about where I was citing the benefit, it is the spark spreads widening that we received, the realized spark spread at that 40% to 45% level. Remember as we look at our hedged table, as we always break out for you, the base load versus the intermediate, this combined cycle, that is a part of the stack that you see as do very little hedging in advance of the current year.

So, for example, it is about 10% hedged, that whole category right now for next year. That is typically what you see us optimize in the year. So to the extent that we see combined cycle has opportunities here, those opportunities are still going to be available to us and we are going to hedge in essentially the same way for that part of the stack, which is in the year. And in the year is where we tend to have some visibility.

Dan Eggers - ***Credit Suisse - Analyst***

Okay, great. Thank you for clarifying that, I appreciate it.

Operator

Neel Mitra, Tudor Pickering.

Neel Mitra - ***Tudor, Pickering, Holt - Analyst***

I just wanted to understand the contract structure of the Marcellus gas at Power. Is the way to look at it that the firm pipeline capacity cost is borne by the PSE&G rate payers? And the off system sales, when the gas isn't needed for them, kind of accrues to Power as a variable cost with no operating cost associated with it?

Caroline Dorsa - ***Public Service Enterprise Group Inc. - EVP & CFO***

Good question. So the cost of the pipeline is passed through to the residential customer, so it is not a net cost of Power. So the residential customer is covering the full cost of distribution, as you would expect. Nor is the pass through of the gas to the residential customer a profit center for Power. It simply goes through to the residential customer.

© 2013 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

SI-SSA-0015-12068

When there is excess beyond what the residential customers need then we have the ability to make off system sales. And when we make those off system sales the value that is garnered there is shared with the PSE&G customer, in fact the majority goes to the PSE&G customer and then there is a small amount that is left for Power.

So think of Power as providing this on a pass-through basis to the customer, customer covers the cost, Power doesn't make money on the actual throughput. Then to the extent there is excess there is value garnered from the off system, the majority goes to the residential customer and a minority of that comes to the bottom line for Power.

Neel Mitra *- Tudor, Pickering, Holt - Analyst*

Okay, great. So is the way we should think about it is that as these contracts kind of roll off you will re-contract them just from the perspective that PSE&G needs Marcellus gas to supply at LDC and customers? Or is it more of a kind of a speculative bet that Marcellus pricing is lower?

Caroline Dorsa *- Public Service Enterprise Group Inc. - EVP & CFO*

No. So a good question as well. It's not a speculative bet. So if you remember I think Ralph said this in his remarks, we set up this network of our contracting over a 15 year period and it was designed and developed to cover the PSE&G load from liquid sources. So it is not speculative but it is also not short-term, these are actually very long-term Evergreen like contracts that we have rights to together with the contracts we have for storage. The entire design was to support our PSE&G customers.

The real story and the story we have been telling this quarter is, as has always been the case, when the customer needs are lower, and the excess can be used for PSEG power, we do that. It turns out this summer to be very beneficial because of Marcellus. But the original design and purpose, which has been for many years and will continue to be for many years, is to pass this value through to our customers and then if there is excess, and only then if there is excess, we use it for PSEG Power.

Neel Mitra *- Tudor, Pickering, Holt - Analyst*

Okay, great. Thank you very much.

Operator

Julien Dumoulin-Smith, UBS.

Julien Dumoulin-Smith *- UBS - Analyst*

So switching topics a bit, if you will, I wanted to focus quickly on this switching phenomenon you described. And I suppose the question is, is it that just fundamentally the offers out there are just less competitive and there is less headroom in a rising capacity price environment? Or is it rather that we are reaching some sort of floor and customer migration and there is something of customer lethargy?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President & CEO of PSEG*

Julien, as you know, we are not in the retail business, but our response would be that this is probably a combination of those two. That your most price-sensitive customers are the first to go and now just having folks switch is a bit more of a challenge. A decline in BGS prices, so our headroom has been single-digit delta throughout the year. And that headroom has to be something that your cost of

THOMSON REUTERS

customer acquisition lives under. So that is not a business, as I said, we are in. But I think it is a combination of two things you mentioned.

Julien Dumoulin-Smith *- UBS - Analyst*

And just to be clear, what level of switching did that correspond to for 2014; I'm not sure I caught that.

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President & CEO of PSEG*

As a percentage basis?

Julien Dumoulin-Smith *- UBS - Analyst*

Yes, if you don't mind.

Caroline Dorsa *- Public Service Enterprise Group Inc. - EVP & CFO*

Yes, a percentage basis, we don't forecast that any longer. But I can tell you the numbers that we see in terms of this is the overall aggregate switching from BGS, right, or in that sort of mid/high 30 percentage point range and that has not really changed in the past few quarters.

So, we used to try to track it every quarter and give you targets for it. What we think makes more sense is to give you those targets we now give you for BGS, which, as you may remember from my remarks, we just raised by 1 terawatt hour for next year. So it is just not coming through to be that much more switching.

And the reason really is, as Ralph said, the headroom just isn't that large. Whatever the retailers are doing on those dynamics and their profitability obviously a question for them. But it appears to have leveled out and, of course, as BGS prices have come down, right, the average price came down $1 when we started this year's BGS season given what was rolling off and rolling on. There is just not that much difference.

Julien Dumoulin-Smith *- UBS - Analyst*

And then looking at the Long Island opportunity here, just to think about perhaps beyond the fees that you could receive here. Could you be a little bit more explicit about the investment opportunities, perhaps rate based-like or otherwise, that you could earn on?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President & CEO of PSEG*

Sure. So, Julien, so as Caroline and I tried to point out, the $0.03 in 2014 grows to $0.07 or $0.08 by 2016. And then there is a provision in the contract that requires that we propose a concept -- and it really is just a concept -- by July 1 of 2014 on utility 2.0.

But what is interesting about it is that it describes in the contract in words that are similar to many of the things that PSE&G has done successfully in New Jersey under various clause mechanisms. And those are renewable energy resources, energy efficiency and behind the meter services.

So we have a team of people looking at that. That is not something that we can forecast a number right now or even a timeframe. But a proposal is due from us to the LIPA Board by July 1 of next year. And we are excited about that because there are some good things

THOMSON REUTERS

we've been able to do for customers in New Jersey that we would like to do for customers on Long Island and I'm sure they get fair treatment from the competition for doing so.

Julien Dumoulin-Smith *- UBS - Analyst*

Great, and then lastly, not to beat up the subject one more time. But on the gas issue looking towards 2014 rather than 2013, I presume a full year of wider gas basis to positive. But meanwhile you could have some offsets from new gas infrastructure reducing that basis, is that the right -- a fair way to characterize a full year impact in 2014?

Caroline Dorsa *- Public Service Enterprise Group Inc. - EVP & CFO*

Yes, I think that is very fair, Julien. I guess the way that I think about this all in is don't know what the basis will turn out to be, obviously that is determined by the market. Obviously we serve our residential customers first. But we have a large position, as you saw from what we put in this slides here, right, of 0.6 Bcf per day of shale supply. So we have nice opportunity.

And to the extent that that opportunity presents itself in terms of a differential, we think we're actually pretty optimally positioned to take advantage. And so, in those periods where the customers needs at PSE&G are low, to the extent that basis is still there we are going to be able to capture it.

So I think all in that is the way I would encourage you to think about it. We can't predict it anymore than you can predict it. But when it is there to be garnered we garner it, we garner it first for our E&G customers but after that we garner it for Power and we are pretty pleased about that opportunity of positioning, which wasn't developed for that reason, but has now given us a real opportunity.

Julien Dumoulin-Smith *- UBS - Analyst*

Great, thank you very much for the time.

Operator

Greg Gordon.

Greg Gordon *- ISI Group - Analyst*

Guys, your balance sheet capacity is still quite robust and all the more so bolstered by the strong performance you are seeing in PSEG Power. If you don't get approval for the full $3.8 billion of Energy Strong, would that spare balance sheet capacity then be redeployed into perhaps a more robust growth in the dividend?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President & CEO of PSEG*

So, Greg -- so we maintain that our number one priority is reinvesting in the business. So as you know, in addition to Energy Strong we have some transmission resiliency programs that we are in pursuit of with PJM. So you would see us make sure that we are exhausting all regulated growth opportunities.

Then we have been talking to PJM, as has everyone else, and very publicly about the 2012 RTEP enhancements that were pushed forth. That was grandfathered on the FERC order 1000, so those projects would come to us as an incumbent. We have proposed some products coming out of artificial island as on FERC order 1000 basis as well.

THOMSON REUTERS

So I am running through a laundry list of regulated utility investments that are beyond Energy Strong, but of course our primary focus right now is over the near-term getting Energy Strong. Having said that, yes, number two on the hit parade is the dividend. And then number three on the hit parade in anticipation of somebody else following up would be share repurchase. But I would put far and away number one is reinvesting in the business and then number two would be dividend growth.

Greg Gordon *- ISI Group - Analyst*

Great, two more questions. First is with the decision on LCAPP, does that change your calculus on whether or not you would bid Sewaren into the next PJM base residual auction?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President & CEO of PSEG*

No -- well, so partially, right. I mean what it does is it reduces the risk of a competitively bid unit having challenges come through subsidized plants. We would do the same kind of return analysis, we use the forward price curve for the near-term and then we use our fundamental models over the longer term and then we have our own internal hurdle rate that I think we have been implying in a fairly disciplined way. So those numbers have to pass muster first and foremost.

And then of course there is the qualitative discussion which is all around well, gee, what do we think the rules will be like X years from now? And the recent court decisions help mitigate some of that risk, but they don't help in terms of the market fundamentals.

By the way, Greg, at risk of beating a dead horse I want to go back to your first question. Even with all of the Energy Strong and transmission opportunities that we see, at the risk of stating the obvious, the balance sheet is strong enough to support modest and sustained growth in that dividend. Just your question was sort of without those things would you do more? And I was just pondering in that vein earlier.

Greg Gordon *- ISI Group - Analyst*

No, that was clear. Thank you. Last question, is the lack of load growth in the service territory perhaps to some degree related to the very high degree of rooftop solar penetration you have in the state? And if so, can you comment on trends in further penetration of distributed generation, mainly rooftop solar? And I guess that dovetails with the commentary on how markets are performing.

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President & CEO of PSEG*

Yes, so clearly all of these things are a contributing factor. To Kit's point before, I mean there is energy efficiency, there is lack of a very strong and robust economic response, there is distributed generation. I think we are still the number one developer of solar energy in the state. And when the program is finished it is about 180-200 megawatts, with the capacity factor of about 12%.

So from an energy sales point of view, it is really fairly miniscule, which is kind of a challenge, right, around solar that when you take that numerator, which is sizable in terms of capital invested and you divide by energy output, which is not so sizable you get a pretty high cost of solar electricity.

Which is something that we were very clear with our regulators that in pursuit of these RPS (inaudible) that one has to be mindful of the rate impact to the customer from a point of view cents of per kilowatt hour. So short answer of course would be yes, it is a contributor. Longer answer would be if you do the arithmetic it is not that big of a contributor.

THOMSON REUTERS

Greg Gordon *- ISI Group - Analyst*

And going forward do you see penetration continuing at the current sort of rate? Or do you see solar investment, both from utilities like yourself and independents declining?

Ralph Izzo *- Public Service Enterprise Group Inc. - Chairman, President & CEO of PSEG*

Yes, I think that the real challenge -- that is a tough question to answer. The real challenge is if we are determined to live by the renewable portfolio standard. Then the question I would pose to the policymaker is when we originally test that standard it is under the assumption that as we nurture the industry in the early stages it would then achieve certain economic efficiencies, either in the form of lower cost of panels or in the form of higher efficiency rates that it would become kind of self-sustaining.

And prices would come down and probably the ITC would go away at the federal level. We have seen those panel prices come down but it has not come down -- those prices have not come down enough to be economically competitive with $4 gas. And I think you are beginning to see the first example of that reflected in our own solar filing. We went in and asked for $800 million plus over five years and we got $440 million over three years.

And I think based on conversations I had with policymakers that was kind of a reflection of we can't do this forever. We need to start seeing some of those expectations be realized in terms of the economic viability of the technology. And that makes perfect sense. I mean it's just -- I am a huge solar fan, we have invested over $1 billion in solar. But we can't keep doing this at the price point that it has been achieving and do it at the RPS levels that we hope to see in 2020 or 20 (technical difficulty).

Greg Gordon *- ISI Group - Analyst*

Thank you very much. Take care.

Operator

Paul Fremont, Jefferies & Company.

Paul Fremont *- Jefferies & Co. - Analyst*

So if I look at the -- you are expecting I think $85 million to $95 million of uplift at PSEG Power versus where you had been previously. If I look at the $0.04 in the third quarter and then the other gas-related item in the first quarter that makes up roughly I guess $70 million. So, what makes up -- would gas in some way, shape or form also make up the remaining piece of the $85 million to $95 million, or is that coming from somewhere else?

Caroline Dorsa *- Public Service Enterprise Group Inc. - EVP & CFO*

You correctly pointed out the factors that we've highlighted and which we talked about today, gas in the first quarter and in terms of BGSS and then the $0.04 this quarter. Remember that one of the things we have also talked about during the year is we have had some higher market prices than original expectations. So, on a year-over-year basis that has given us some uplift a little bit different than what we expected.

So prices have come up and you see that of course across the fleet in every quarter offset by the hedges but a little bit more positive than our expectations. So I think it has been -- we have got great operational performance, now we do and expect that but it certainly

THOMSON REUTERS

comes through. We did have weather that was warmer than normal this summer, cooler than last year but warmer than normal. And you know we always plan on normal weather.

So when you put all those factors together with the benefit we've actually seen on those specific things that I've called out and you've just called out, that is overall what really lifts us across the fleet. So it is a confluence of factors that have all worked in our direction, but of course which we have been able to take advantage of because of our good operational performance.

Paul Fremont - ***Jefferies & Co. - Analyst***

And then if I look at the BGSS volumes, I guess on a steady state throughout the year, roughly 75% is residential, roughly 25% is nonresidential. Would you not get the benefit for the nonresidential portion even in the winter month in terms of pipe usage?

Caroline Dorsa - ***Public Service Enterprise Group Inc. - EVP & CFO***

So the -- just to clarify, right, for the residential customer, right, it is a pass-through cost, so there is no profitability kind of either way relative to that. And for the commercial customer that uses some of that gas in the territory I think we have gone specifically into all of that.

But really think of it as in general it is sort of a formula based on market prices and a competitive market. So I wouldn't look to that frankly as a significant source of overall earnings going forward, think of that as a little bit more on just a competitive market base.

Paul Fremont - ***Jefferies & Co. - Analyst***

Still not sure -- in terms of my question, my question just relates specifically to winter months. So in other words, in winter months should we allocate some benefit because there is a roughly 75/25 split where 25% of the volumes at least are going to customers on which you are able to make a margin?

Caroline Dorsa - ***Public Service Enterprise Group Inc. - EVP & CFO***

Yes, that is right. So again, a competitive sort of market-based approach for BGSS for the nonresidential customer. I just want to be sure just to distinguish between the residential and non residential because there isn't margin in the structure for the residential customer.

There is some margin for us under the contract for the nonresidential customer. But again, I wouldn't look to that as a significant source of earnings and that is something we've been getting overall all the time. Right, that is something that has been baked into our numbers, so baked into our year on year.

Paul Fremont - ***Jefferies & Co. - Analyst***

Right, but the -- I think the price differential in the Marcellus is a recent phenomenon, but what you are saying is even in months where you are at peak usage you are still -- there will still be benefit that is essentially going to benefit PSEG Power --

---

Caroline Dorsa - ***Public Service Enterprise Group Inc. - EVP & CFO***

Yes.

THOMSON REUTERS

SI-SSA-0015-12074

Paul Fremont - ***Jefferies & Co. - Analyst***

-- from the lower cost gas?

Caroline Dorsa - ***Public Service Enterprise Group Inc. - EVP & CFO***

That is right, that is exactly right. Yes.

Paul Fremont - ***Jefferies & Co. - Analyst***

And then if I look at third quarter, I would assume third quarter would be less of a profit opportunity for you than fourth quarter because you also are dedicating a certain amount of pipe to storage delivery, correct?

Caroline Dorsa - ***Public Service Enterprise Group Inc. - EVP & CFO***

So we are dedicating pipe to storage delivery, as I mentioned. But keep in mind, you have got some going into storage but you don't have the residential customer draw. So actually from -- if you are just looking at the issue of what kind of benefit does Marcellus give to the combined cycle, the best opportunities for that are in the shoulder period where the customer demand, residential PSE&G customer, is pulling less of the pipe, right.

So we definitely are filling storage, we absolutely do that. But given the flow that we have, that you have seen in the slides in our deck, we fill the storage but we still have extra room. And so we typically fill the storage earlier in the summer months and then when the storage is eventually filling up you have that extra flow on the pipe we can use it for our own generation or we can sell that pipe capacity to others.

So I would say when you think about the gas pipeline and the benefit you think about that potential benefit for us is the least in the winter and the most in the seasons other than the winter because you have got the least draw on the one class of utilization of the pipe that isn't a profit opportunity and that is the PSE&G residential customer.

Paul Fremont - ***Jefferies & Co. - Analyst***

And then my last question just has to do with -- for the LIPA contribution you say it is $0.03 in 2014 going to $0.07 to $0.08 in 2016. So in 2015 should we just pick something like a nickel contribution? In other words -- I assume it goes up from the $0.03 but not quite to the $0.07 to $0.08?

Ralph Izzo - ***Public Service Enterprise Group Inc. - Chairman, President & CEO of PSEG***

That is exactly right. You should add another $0.02 to that.

Paul Fremont - ***Jefferies & Co. - Analyst***

Thank you very much.

THOMSON REUTERS

Kathleen Lally - ***Public Service Enterprise Group Inc. - VP of IR***

I think, operator, that brings us to the noon hour and I know everyone is busy with earnings calls today. So if, Ralph, you have --.

Ralph Izzo - ***Public Service Enterprise Group Inc. - Chairman, President & CEO of PSEG***

Yes. So, thanks, Kathleen. So hopefully you noticed that Caroline and I and the team are quite pleased with our quarter. We are pleased with the year to date. And moreover, we're greatly encouraged by our opportunity and the fact that we have the financial strength to take advantage of those opportunities and, again, have demonstrated the execution when the opportunities come our way. So we hope to see you all at EEI, thank you for joining us today.

PSEG ANNOUNCES 2013 THIRD QUARTER RESULTS

$0.77 PER SHARE FROM CONTINUING OPERATIONS

Operating Earnings of $0.76 Per Share

Operating Earnings Guidance Increased to $2.40 - $2.55 Per Share

October 30, 2013 (Newark, NJ) (NYSE – PEG) Public Service Enterprise Group (PSEG) today reported third quarter 2013 Income from Continuing Operations and Net Income of $390 million or $0.77 per share as compared to Net Income and Income from Continuing Operations of $347 million or $0.68 per share for the third quarter of 2012. Operating earnings for the third quarter of 2013 were $385 million or $0.76 per share compared to the third quarter of 2012 operating earnings of $382 million or $0.75 per share.

"Our company delivered solid results in the third quarter consistent with our objectives," said Ralph Izzo, chairman, president and chief executive officer of PSEG. "PSE&G is on track to provide double-digit growth in earnings driven by increased investment in transmission, and PSEG Power's results benefit from its strong locational advantages. Based on our performance through the third quarter, we are raising our full year operating earnings guidance to $2.40 - $2.55 per share from $2.25 - $2.50 per share."

PSEG believes that the non-GAAP financial measure of "Operating Earnings" provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. Operating Earnings exclude the impact of returns/(losses) associated with Nuclear Decommissioning Trust (NDT), certain Mark-to-Market (MTM) accounting and other material one-time items. The table below provides a reconciliation of PSEG's Net Income to Operating Earnings (a non-GAAP measure) for the third quarter. See Attachment 12 for a complete list of items excluded from Income from Continuing Operations in the determination of Operating Earnings.

PSEG CONSOLIDATED EARNINGS (unaudited)

Third Quarter Comparative Results
2013 and 2012

	Income ($ millions)		Diluted Earnings Per Share	
	2013	**2012**	**2013**	**2012**
Operating Earnings	$385	$382	$0.76	$0.75
Reconciling Items	5	(35)	0.01	(0.07)
Income from Continuing Operations*	$390	$347	$0.77	$0.68
Average Shares			**508M**	**507M**

*Income from Continuing Operations is equal to Net Income in both years.

Mr. Izzo went on to say, “A year ago, we were responding to the devastation to our system caused by Superstorm Sandy. It’s only due to the tireless efforts of a dedicated work-force that we are on track to meet our near and long-term targets for capital investment and can raise our full year guidance for operating earnings. The ability of our workforce to meet customer needs has been recognized with an enhancement to our original contract to operate the Long Island Power Authority’s transmission and distribution system. We remain focused on securing approval for PSE&G’s ‘Energy Strong’ proposal, and are well positioned to meet the needs of our customers and perform for our shareholders.”

Our revised Operating Earnings guidance by company for the full year is as follows:

Operating Earnings
($ millions, except EPS)

	2013E	2012A
PSEG Power	$630 - $685	$644
PSE&G	$585 - $600	$528
PSEG Energy Holdings/ Parent	$0 - $10	$64
Total	$1,215- $1,295	$1,236
Earnings Per Share	$2.40 - $2.55	$2.44

Operating Earnings Review and Outlook by Operating Subsidiary

See Attachment 6 for detail regarding the quarter-over-quarter reconciliations for each of PSEG’s businesses.

PSEG Power

PSEG Power reported operating earnings of $216 million ($0.43 per share) for the third quarter of 2013 compared with operating earnings of $217 million ($0.43 per share) for the third quarter of 2012.

Power’s third quarter earnings benefited from higher PJM capacity prices, an improvement in the market price of energy and a decline in the supply cost of gas.

An increase in capacity prices improved Power’s quarter-over-quarter earnings by $0.11 per share. Higher overall market prices for natural gas and an improvement in basis in the PS-zone had a favorable influence on spot market prices for energy. In addition, Power’s results benefited from its firm gas transportation contracts which provide it with access to low-cost gas from the Marcellus Basin. The improvement in the wholesale price of energy and decline in fuel cost combined to add $0.04 per share to earnings quarter-over-quarter. The improvement in capacity revenue and wholesale energy margins more than offset the impact on earnings from a reduction in the average price on hedged volumes. The decline in the average price of energy hedges reduced quarter-over-quarter earnings by $0.10 per share. A reduction in generation

volumes, as a result of more normal weather and a maintenance related outage, reduced Power's quarter-over-quarter earnings comparisons by $0.02 per share.

PSEG Power initiated a planned major maintenance program at the Bethlehem Energy Center in the third quarter. The maintenance work, which concluded in October, resulted in an increase in Power's operating and maintenance (O&M) expense (exclusive of storm-related restoration activity) and reduced quarter-over-quarter earnings comparisons by $0.04 per share.

Power's output declined by 5.4% in the quarter from year-ago levels. More normal weather conditions and the maintenance outage at Bethlehem combined to reduce output from the fossil fleet by 10% in the quarter. The nuclear fleet operated at an average capacity factor of 91% in the quarter versus 92% in the year-ago quarter resulting in a capacity factor of 93.2% for the nine months ended September 30, 2013.

Power continues to forecast output for 2013 of 53 – 55 TWh. Output for the fourth quarter of approximately 13 – 14 TWh is 70% - 75% hedged at an average price of $50 per MWh. For 2014, forecast output of 53 – 55 TWh is approximately 65% - 70% hedged at an average price of $48 per MWh. Power has hedged approximately 35% - 40% of its forecast generation in 2015 of 52 – 54 TWh at an average price of $48 per MWh. Power's forecast of total output in each of the next two years remains unchanged from prior guidance. The increase in the percentage of Power's generation hedged for 2014 – 2015 reflects an upward adjustment to the forecast of BGS related hedges as well as an increase in the percentage of energy hedged through other PJM-West hedges. The hedge data for 2014 now assumes BGS volumes of 11 TWh versus the prior guidance of 10 TWh. Power continues to assume BGS related load and hedges in 2013 will represent approximately 12 TWh of generation for the year.

The forecast range of Power's operating earnings for 2013 has been increased to $630 - $685 million from $535 - $600 million.

PSE&G

PSE&G reported operating earnings of $168 million ($0.33 per share) for the third quarter of 2013 compared with operating earnings of $155 million ($0.30 per share) for the third quarter of 2012.

PSE&G's third quarter earnings reflect increased revenue associated with a greater level of investment.

An increase in PSE&G's transmission revenue, effective on January 1, 2013, increased quarter-over-quarter earnings by $0.04 per share. Revenue from investments made under PSE&G's distribution capital infrastructure investment program contributed $0.01 per share to earnings in the third quarter.

Electric demand in the third quarter was influenced by weather which was hotter than normal, but cooler than the weather conditions experienced in the year-ago period. Also, demand for electricity continues to be impacted by customer conservation in a slowly improving economic environment. Weather normalized sales – led by a decline in the residential sector – are estimated to have declined by 2.3% in the third quarter. Sales of gas, although not as important in the third quarter as demand for electricity, increased 10.4% from year-ago levels reflective of customer adjustment of use to a lower cost of gas.

The net impact on earnings from weather and the change in sales was a reduction in quarter-over-quarter earnings of $0.02 per share. A slight increase in distribution related O&M and depreciation expense was offset by a decline in interest expense and other items.

PSE&G announced on October 23 that it would be providing a two-month bill credit for its residential gas customers that will reduce the typical monthly bill by approximately 33% in both November and December. The credit is driven by our access to low-cost shale gas supply.

PSE&G is investing $3.4 billion in transmission related programs over the period 2013 – 2015. This program, which includes five major transmission lines, remains on time and on budget. All five transmission projects are expected to be operational during 2014 – 2015. PSE&G filed its annual update of revenue requirements associated with its transmission investment program with the Federal Energy Regulatory Commission (FERC) in mid-October. If accepted, transmission revenue in 2014 would increase by $176 million at the start of the New Year.

The forecast of PSE&G's operating earnings for 2013 has been adjusted to $585 million - $600 million from $580 - $635 million.

PSEG Energy Holdings/Enterprise

PSEG Energy Holdings/Enterprise reported operating earnings of $1 million for the third quarter of 2013 versus operating earnings of $10 million ($0.02 per share) during the third quarter of 2012. Results for the quarter reflect the continued monetization of assets within Holdings' portfolio and the absence of gains on an asset sale in the year-ago quarter.

NRG Energy recently announced that it has entered into an agreement to acquire Edison Mission Energy (EME) as part of an EME Chapter 11 plan of re-organization sponsored by NRG. In connection with the transaction, NRG has agreed to certain financial conditions with the lessors of the Powerton and Joliet facilities (including PSEG Energy Holdings) which would cure all monetary defaults at closing and protect the lessors' equity value in the leveraged leases.

The forecast of PSEG Energy Holdings/Enterprise full year operating earnings for 2013 has been adjusted to $0 - $10 million from $25 - $35 million. The updated guidance reflects the impact of revised estimates for the legacy Holdings' portfolio and related taxes (separate from the merchant energy leases) which are expected to more than offset the impact on operating earnings from the commercial operation of Holdings' sixth solar facility, a 19MW solar facility ($50 million investment) located in Arizona.

PSEG – Long Island

The Board of Directors for the Long Island Power Authority (LIPA) has approved amendments to PSEG – Long Island's original operating services agreement for LIPA's transmission and distribution system. The amendments recognize an increase in PSEG – Long Island management responsibility to operate and maintain LIPA's system, expand the length of the contract by 2 years to 12 years effective January 1, 2014, increase PSEG – Long Island's compensation effective in 2016 and, in 2015, provide PSEG Power's Energy Resources and Trade group with the contract to procure LIPA's fuel requirements. The agreements' effectiveness is contingent upon LIPA's receipt of a Private Letter Ruling from the IRS on the continued tax-exempt status of certain LIPA debt securities and LIPA's approval of the proposed 2014 and 2015 operating and capital pass-through budgets.

FORWARD-LOOKING STATEMENTS

Certain of the matters discussed in this communication about us and our subsidiaries future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward- looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient coverage or recover proceeds of insurance on such matters,
- increases in competition in energy supply markets as well as competition from certain rate-base transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology, such as distributed generation and microgrids, and resultant changes in customer usage patterns, including energy efficiency and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we

cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

Forward-Looking Statement

Certain of the matters discussed in this communication about us and our subsidiaries future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient coverage or recover proceeds of insurance on such matters,
- increases in competition in energy supply markets as well as competition from certain rate-based transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology, such as distributed generation and microgrids, and resultant changes in customer usage patterns, including energy efficiency and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws. The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. Slide A at the end of this presentation includes a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

SI-SSA-0015-12099

Year to Date Earnings Summary

Nine months ended September 30

$ millions (except EPS)	2013	2012
Operating Earnings	$ 1,061	$ 1,029
Reconciling Items, Net of Tax	(18)	22
Income from Continuing Operations/ Net Income	$ 1,043	$ 1,051
EPS from Operating Earnings*	$ 2.09	$ 2.03

* See Slide A for Items excluded from income from Continuing Operations/Net Income to reconcile to Operating Earnings.

SI-SSA-0015-12100

PSEG – Q3 2013 Highlights

- **Operating Earnings of $0.76 vs. $0.75 per share in Q3 2012**
  - ✓ Delivered solid results in the quarter driven by Power's locational value, and PSE&G's continuing investment in transmission
  - ✓ Raised 2013 full–year, operating earnings guidance to $2.40-$2.55 per share, from $2.25-$2.50 per share prior

- **Executing on operational goals**
  - ✓ Power met summer demand using diverse fleet
  - ✓ Continued control of O&M supports full-year expectations

- **Executing on capital program**
  - ✓ Transmission program of $3.4 billion, including construction of 5 major transmission projects, continues on schedule and on budget
  - ✓ Review of Energy Strong proposal underway by BPU
  - ✓ Over 80 NJ municipalities, including 7 county governments, have passed resolutions in support of the Energy Strong infrastructure proposal

- **Market developments**
  - ✓ US District Courts in NJ and MD rendered decisions supportive of competitive markets and FERC's rate-setting authority
  - ✓ New LIPA agreement broadens and extends original contract

SI-SSA-0015-12101

PSEG – Raising 2013 Operating Earnings Guidance

We have raised full-year 2013 Operating Earnings guidance to $2.40 - $2.55 per share from $2.25 - $2.50 per share

$ / MWh	17.19	19.32

SI-SSA-0015-12113

PSEG Power – Gross Margin Performance

- ✓ Margins aided by higher capacity pricing through mid-2014
- ✓ Higher year-over-year spot market prices continued in Q3
- ✓ Lower cost Marcellus gas contributing to fuel cost savings

PSEG Power Gross Margin ($/MWh)

Regional Performance		
Region	**Q3 2013 Gross Margin ($M)**	**2013 Performance**
PJM	**$691**	Decline in hedged energy prices offset by full quarter of higher capacity prices and lower fuel costs
New England	**$19**	Milder weather
New York	**$12**	Major maintenance outage limited production during Q3

SI-SSA-0015-12114

PSEG's locational advantage and gas basis

- Lower cost supplies of shale gas have been beneficial to both PSE&G customers and PSEG Power
- Over 50% of our available pipeline capacity can access market area supplies of shale gas
- Power's generating units sit in close proximity to the Marcellus fairway
- Power buys approximately 350BCF/year of gas
- Availability of a robust gas portfolio of storage and pipeline capacity primarily benefits PSE&G's gas customers and then Power, as conditions permit

SI-SSA-0015-12115

Hedging Update…

Contracted Energy*

		Oct -Dec 2013	2014	2015
Base Load (Nuclear and Base Load Coal)	Volume TWh	8	35	35
	% Hedged	100%	100%	55-60%
	Price $/MWh	$50	$48	$48
Intermediate Coal, Combined Cycle, Peaking	Volume TWh	5	18	17
	% Hedged	30-35%	5-10%	0%
	Price $/MWh	$50	$48	$48
Total	Volume TWh	13-14	53-55	52-54
	% Hedged	70-75%	65-70%	35-40%
	Price $/MWh	$50	$48	$48

* Hedge percentages and prices as of September 30, 2013. Revenues of full requirement load deals based on contract price, including renewable energy credits, ancillary, and transmission components but excluding capacity. Hedges include positions with MTM accounting treatment and options.

SI-SSA-0015-12116

PSEG Power – Q3 2013 Operating Highlights

Operations

- ✓ Power met all demand requirements during the hottest days of July
- ✓ Q3 output declined by 5.4% from the Q3 2012 reflecting maintenance at NY CCGT
- ✓ Strong nuclear performance has resulted in a YTD nuclear capacity factor of 93.2%
- ✓ Hope Creek refueling outage underway

Regulatory and Market Environment

- ✓ Recent NJ and MD Federal Court decisions supportive of competitive markets
- ✓ Average energy only hedge price for 2013 is $50/MWh
- ✓ Lower cost Marcellus gas continuing to provide fuel cost savings

Financial

- ✓ Power's total debt as a percentage of capital at September 30 was 28%

SI-SSA-0015-12117

PSE&G
2013 Q3 Review

PSE&G – Q3 Earnings Summary

SI-SSA-0015-12120

PSE&G – Monthly Summer Weather Data

SI-SSA-0015-12121

PSE&G – Q3 Operating Highlights

Operations

- ✓ Weather in Q3 2013 warmer than normal but cooler than Q3 2012
- ✓ Transmission revenues added $0.04 per share over Q3 2012
- ✓ O&M remains under control

Regulatory and Market Environment

- ✓ All five major Transmission projects on schedule and on budget
- ✓ BPU review of Energy Strong infrastructure proposal underway; Public hearings concluded in October
- ✓ 2014 FERC Formula Rate filing submitted
- ✓ PSE&G announced a 33% gas bill credit for November and December 2013 to reflect lower commodity costs for residential gas customers

Financial

- ✓ PSE&G earned its authorized return
- ✓ Issued $600 million of secured MTNs and retired $300 million of maturities in Q3

PSEG Energy Holdings/Enterprise – Q3 Operating Highlights

Financial

- ✓ **LIPA – Amended Operating Services Agreement will begin January 1, 2014 subject to LIPA receiving IRS ruling on tax status of debt**
  - Increases PSEG-Long Island's management responsibility to operate and maintain the LIPA T&D system
  - Extends original 10-year contract by two years
  - PSEG Power will procure LIPA's fuel requirements beginning 2015
  - PSEG-LI compensation will increase in 2016 for expanded management role
- ✓ **NRG Energy's announced acquisition of Edison Mission Energy would cure all monetary defaults at closing and preserve Holdings' entire equity value in the Powerton and Joliet leases**
- ✓ **Payments on Holdings' remaining lease portfolio are current**
- ✓ **Q4 2013 commercial operation of $50 million investment in 19 MW, Badger 1 solar farm in Arizona**

SI-SSA-0015-12125

PSEG

PSEG Financial Highlights

- **2013 operating earnings guidance raised to $2.40 - $2.55 per share**
  - ✓Focused on maintaining operating efficiency and customer reliability
  - ✓PSE&G's operating earnings on track to grow at double-digit rate in 2013

- **Executing PSE&G's existing $3.4 billion Transmission capital spending program on schedule and on budget – fueling double-digit growth in PSE&G operating earnings through 2015, based on approved programs**

- **Financial position remains strong**
  - ✓Positive cash from Power and increasing cash flow from PSE&G supports dividend growth and funds capital spending program without the need to issue equity
  - ✓Debt as a percentage of capital was 41% at September 30, 2013

- **Long history of returning cash to the shareholder through the common dividend, with opportunity for future growth**

Public Service Enterprise Group
4Q 2013 Earnings Conference Call & Webcast

February 20, 2014
4:00 PM ET

Operator: Ladies and gentlemen, thank you for standing by. My name is Jennifer, and I am your event operator today. I would like to welcome everyone to today's conference call, Public Service Enterprise Group Fourth Quarter 2013 Earnings Conference Call and Webcast. At this time, all participants are in a listen-only mode. Later, we will conduct a question-and-answer session for members of the financial community. At that time, if you have a question, you will need to press the star and the number one on your telephone keypad. To withdraw your question, press the pound key. As a reminder, this conference is being recorded today, February 20, 2014, and will be available for telephone replay beginning at 1:00 p.m. Eastern Standard today until 11:30 p.m. Eastern Standard on February 28, 2014. It will also be available as an audio webcast on PSEG corporate website at www.PSEG.com. I would now like to turn the conference over to Kathleen Lally. Please go ahead.

Kathleen Lally: Thank you, operator. Good morning, everyone. We appreciate your participating in our call today. As you are aware, we released our fourth quarter and full-year 2013 results earlier this morning. The release and attachments as mentioned are posted on our website, www.PSEG.com, under the Investor section. We have also posted a series of slides that detail the operating results by company for the quarter. Our 10-K for the period ended December 31, 2013 is expected to be filed shortly, usually by the end of February.

I'm not going to read the full disclaimer statement or the comments we have on the difference between operating earnings and GAAP results, but I do ask that you read these comments contained in our slides and on our website. The disclaimer statement regards forward-looking statements detailing the number of risks and uncertainties that could cause actual results to differ materially from forward-looking statements, and although we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so even if our estimates change unless required by applicable securities law.

We also provide commentary with regard to the difference between operating earnings and net income, reported in accordance with Generally Accepted Accounting Principles in the United States. PSEG believes the non-GAAP financial measure of operating earnings provides a consistent and comparable measure of performance to help shareholders understand trends. I am now going to turn the call over to Ralph Izzo, Chairman, President and Chief Executive Officer of Public Service Enterprise Group, and joining Ralph on the call is Caroline Dorsa, Executive Vice President and Chief Financial Officer. And at the conclusion of their remarks, there will be time for your questions. We ask that you limit yourself to one question and one follow-up. There is a lot of interest in today's call. With that, Ralph.

Ralph Izzo: Great, thank you, Kathleen, and thanks everyone for joining us today. This is a great day for us following a great 2013 and an even better 2014 and beyond. So, let's get into the details.

This morning we reported operating earnings for the full year of 2013, and operating earnings for the fourth quarter were $0.49 a share versus $0.41 a share in 2012, which brought results for the full year to $2.58 per share, or 5.7%, almost 6%, greater than 2012's operating earnings of $2.44 per share, and actually was above our guidance range of $2.40 to $2.55 per share.

I hope you'll agree that PSEG delivered outstanding results in 2013 on many levels and let me tell you about a few of them. What made this success particularly notable is that we did it in the wake of the damage to our equipment and facilities that we sustained from Superstorm Sandy just a year earlier.

First of all, PSEG was recognized for the twelfth consecutive year as the Mid-Atlantic region's most reliable electric utility, and was specifically recognized by EEI for excellence in its storm response during Sandy. It seems that we're tested every year, and we excel at our response each and every time.

We maintain that focus on improving reliability throughout the year, not just after the storm. PSE&G invested $1.7 billion over the past year to upgrade its transmission network. The investment is part of a long-term program that has resulted in transmission growing to represent approximately 36% of PSE&G's rate base at the end of 2013. Let me remind you there'd been only 28% of the rate base at the end of 2012. This work includes work on five major transmission lines, each of which was scheduled to be operational during the course of 2014 and 2015, and each of which are on-schedule and on-budget.

But PSE&G's investment in transmission does not end in 2015. PSE&G was assigned construction by PJM of a new transmission project that is designed to maintain the reliability of the northeastern part of our electrical grid. This project, which has an expected in-service date of June 2018, has an estimated construction cost of up to $1.2 billion. PSE&G has also started to invest in new solar capacity under the agreement we reached with the New Jersey Board of Public Utilities in 2013, which will allow us to spend up to $446 million over a multi-year period and result in about 143 megawatts of new renewable energy capacity through our solar loan and Solar for All programs.

We are still awaiting a response from the BPU on our Energy Strong proposal, and as you recall we asked for approval to invest $2.6 billion over five years. The investments, which strengthen PSE&G's distribution infrastructure, provide it with better intelligence on system outages and improve on the reliable service expected by customers.

Now, we're still in active discussion with parties to the proceeding, even while evidentiary hearings are scheduled for next Tuesday, February 25, 2014. And I will give you fair notice that as those negotiations are confidential, we are required to not disclose the details of those negotiations.

Now for the year, an increase in PSE&G's capital investment as well as sensible regulatory recovery mechanisms providing for contemporaneous return of our costs and

return on our costs, and PSE&G's ability to control growth and its operating expenses, all supported double-digit growth in PSE&G's operating earnings year-over-year.

Similarly, PSEG Power also did a superb job operating its power plants and especially bringing back units that were damaged by Superstorm Sandy. The Salem 2 nuclear unit operated at record levels, and the nuclear fleet operated over 90% capacity factor for the ninth consecutive year.

Our fossil fleet achieved top decile safety performance in 2013, as the gas-fired Linden combined cycle generation plant had record-setting output, and the coal fleet responded to an improvement in dark spreads. The fleet's fuel diversity allowed it to respond to changes in the market and its dispatch flexibility allowed it to overcome the impact of planned and unplanned outages, and participate in the improvement in market prices throughout the year.

And Power continues to benefit from its favorable location. Power's earnings in 2013 benefited from the successful management of its firm gas pipeline and storage contracts, which provided access to low cost gas in the Marcellus basin. The contracts primarily benefit PSE&G's residential customers, who enjoyed a credit amounting to 33% against the gas bills in both November and December of 2013, and then they also enjoyed an additional credit of 25% against their February bills.

We'll be providing details later today about providing customers with an additional credit for the month of March.

Power has become one of the largest shippers of gas from the Marcellus Basin, and under a BPU-approved agreement, is able to supply Power's generation fleet when capacity is not needed to meet the needs of residential customers. The availability of low-cost gas continued to provide a benefit to Power's earnings in the fourth quarter, on top of the benefits seen earlier in the year.

Power is moving ahead with plans to increase the output and improve the performance of its existing gas-powered combined cycle generating capacity. Power will be investing $150 million at the Bergen, Linden and Bethlehem facilities over several years, to increase the operating efficiency of the turbines at each station while adding approximately 150 megawatts of capacity. The investment should also lengthen the time between major maintenance programs and therefore yield attractive returns.

Power's approach to managing supply risk has been affirmed during the recent period of extreme weather and volatility in the power markets. The fuel flexibility of our fleet enabled us to maintain output during this time. We successfully responded to record demand while our customers have benefited from our ability to pass along savings and gas costs.

In another area, we negotiated a new 12-year amended and restated operations service agreement with the Long Island Power Authority which was effective at the start of this year. The new agreement will provide for an increase in our operating fee in 2016 and beginning in 2015, Power will provide LIPA with fuel procurement and power management services. The agreement is expected to add to our earnings, provide a

platform of growth for our employees, and doesn't require the commitment of financial capital.

The team at PSEG Long Island hit the ground running, responding to several storms since we assumed operations, and will I'm sure provide customers with the service they require and enhance our reputation for reliability. We literally had a snowstorm on January 2, 24 hours after taking over the operations, and the team is doing a fabulous job.

So, we exceeded our expectations for earnings in 2013 and we expect earnings to remain strong in 2014. We're providing operating earnings guidance for 2014 of $2.55 to $2.75 per share. Now, our outlook reflects the impact of the emphasis placed on the anchor principles of our strategy. First and foremost, operational excellence which yields financial strength which we then deploy through a disciplined manner in new investments.

PSE&G is building on a strong platform and providing the opportunity for continuation of growth with an investment program that supports reliability and enhances resilience. PSE&G is expected to contribute more than half of 2014's estimated operating earnings. PSEG Power continues to benefit from the flexibility of its fleet and a locational advantage. Recent structural changes in the gas market also favor power, given our ability to take advantage of market volatility. Power's strong financial position also allows us to respond to changes in the market. We focus on improving operating efficiency and are investing in economically-attractive capacity upgrades that add to our well-positioned fleet.

We remain committed to containing the growth in our operating expenses. We will be aided in this regard by reduction in pension expense, which provides an ongoing benefit. The commitment to funding our pension following the market decline in 2008 and an equity-oriented investment approach has brought the value of our pension at the end of 2013 to a level which is in excess of our obligations. The improvement in return on a portfolio and an increase in the discount rate will result in our pension adding modestly to income in '14, a substantial improvement from our recent experience.

And not to be overlooked, a strong investment-grade credit rating and robust cash flow support our growth program without the need to issue equity. We look ahead with optimism as demonstrated by the Board's recent decision to increase the common dividend by 2.8% to the indicative annual level of $1.48 per share. This is the tenth increase in the dividend in the last 11 years, and we believe we are well-positioned to provide our investors with consistent, sustainable growth in the dividend.

The strong commitment and dedication shown by our employees to our customers has been a major contributor to our success, and provides me with confidence in our ability to achieve our long-term goals. I will now turn the call over to Caroline for more details on our results and we'll be available to answer your questions after her remarks.

Caroline Dorsa: Thanks Ralph, and good morning, everyone. As Ralph said, PSEG reported operating earnings for the fourth quarter of $0.49 per share versus operating earnings of $0.41 per share in last year's fourth quarter. Our earnings for the fourth quarter brought operating earnings for the full year to $2.58 per share versus operating earnings for 2012 of $2.44 per share.

On slide four of our deck, we have provided you with a reconciliation of operating earnings, income from continuing operations and net income for the quarter. As you can see on slide 11, PSE&G provided the largest contribution to earnings for the quarter. PSE&G reported operating earnings of $0.29 per share compared to $0.15 per share last year. For the quarter, Power reported operating earnings of $0.23 per share compared with $0.25 per share last year. For the quarter, Power reported operating earnings of $0.23 per share compared with $0.25 per share last year.

PSEG Enterprise and Other reported a loss in operating earnings of $0.03 per share compared with operating earnings of $0.01 per share in the year-ago quarter. We provided you with waterfall charts on slide 12 and slide 14 to take you through the net changes in quarter-over-quarter and year-over-year operating earnings by the major businesses. So, I'll now go into more detail on each company starting with Power.

As shown on slide 16, PSEG Power reported operating earnings for the fourth quarter $0.23 per share compared with $0.25 per share a year ago. The results for the quarter brought Power's full-year operating earnings to $710 million, or $1.40 per share, compared to 2012's operating earnings of $663 million, or $1.31 per share.

Power's full-year operating earnings exceeded the upper end of our guidance. Even if we exclude the operating earnings associated with the asset transfer we undertook at year-end from Holdings to Power, which I'll discuss a bit later. The earnings release as well as the earnings slides 12 and 14 provide you with detailed analysis of the impact on Power's operating earnings quarter-over-quarter and year-over-year from changes in revenue and costs.

Power's fourth quarter operating earnings benefited from higher capacity revenues, an improvement in the market price of energy on a net long position, an increase in volume and a decline in the supply cost of gas. The improvement in gross margin during the quarter nearly offset the impact on operating earnings from a larger-than-expected increase in O&M expense, associated with both planned and unplanned outages. Note that part of that cost included the investment for the uprate work on the combined cycle capacity at Linden, which is a source as Ralph mentioned, of future additional earnings for Power.

Let's now turn to operations. Power's output increased 6.2% in the quarter from year-ago levels. For the year, output increased 1.8% to 53.5 terawatt hours. You saw the fleet's fuel and dispatch flexibility during the quarter and throughout the year. The nuclear fleet produced 29.5 terawatt hours, or about 55% of total generation, operating at an average capacity factor of 90.3%.

Record production from Salem 2 helped offset the impact from a refueling outage-related decline in output from our 100%-owned Hope Creek Nuclear Facility. The gas-fired combined cycle fleet produced 15.9 terawatt hours in 2013, or about 30% of total generation. Record setting output from the Linden station helped to partially offset the impact on production from planned major maintenance work at the Bethlehem Energy Center in New York in the second half of the year. At the coal fleet, we saw an improvement in dark spreads, so production from the base load coal fired stations in Pennsylvania increased 20% during the year. Bridgeport harbor's output increased in

response to higher market prices, and the New Jersey stations, Hudson and Mercer, primarily operated on gas throughout the year.

Overall, the coal stations provided approximately 14% of the fleet's output in 2013, or 7.3 terawatt hours.

As Ralph noted earlier, the gas-fired combined cycle fleet continues to benefit from its access to lower-price gas supplies in the Marcellus basin. Power's fleet enjoys higher spark spreads than implied by observed market prices, and the quarter-over-quarter impact on earnings from our spark spread advantage was not as large as experienced earlier in the year, but recall this is in line with our expectations given the need to meet utility customer heating demand in the winter period.

Slides 18 and 19 provide more detail on generation in the quarter and for the year.

The combination of higher capacity prices, lower fuel costs and an increase in market prices on Power's unhedged position more than offset the impact of lower average prices on hedges, resulting in gross margins for the fourth quarter of $46 per megawatt hour, equivalent to the level experienced in the year-ago period.

And for the year, gross margins amounted to $47 per megawatt hour versus $45 per megawatt hour last year.

Slide 21 in our deck provides detail on Power's gross margin for the quarter and the year. Power's forecasting output for 2014, a 53 to 55 terawatt hours, in line with 2013's performance. Right now, approximately 75% to 80% of anticipated production for the year is hedged at an average price of $48 per megawatt hour, which compares with average hedge prices in 2013 of about $50 per megawatt hour.

Power has hedged approximately 45% to 55% of its forecast generation in 2015, totaling 53 to 55 terawatt hours, at an average price of about $51 per megawatt hour. Power's forecast of total output over 2014 and 2015 is up slightly from our prior guidance, and for 2016 Power has hedged 20% to 30% of forecast production of 53 to 55 terawatt hours, at an average price of $53 per megawatt hour.

The increase in the percentage of generation hedged over '14 and '15 reflects the completion of the most recent basic generation service or BGS auction in New Jersey, and we assume that BGS volumes represent about 11 terawatt hours in 2014 and 10 terawatt hours in 2015, compared with volumes in 2013 of approximately 12 terawatt hours.

The BGS auction result for PSE&G customers for the three-year period beginning June of this year and ending May 31 of 2017, was priced at $97 per megawatt hour. This contract for one-third of the load will replace the contract for $94 per megawatt hour which expires on May 31 of 2014.

The latest auction is based on an average price per energy at the PJM west hub of about $38 to $39 per megawatt hour, which is similar to the base price for energy seen in the past two auctions.

You can see from the hedge data that Power's maintained a consistent strategy. Base load units were fully hedged in the current year, as Power maintains open positions on its intermediate and peaking assets. This strategy allows Power to contain the risk associated with its load-following contract such as BGS, while being able to participate in opportunities provided by the market.

Power's operating earnings for 2013 and 2012 now reflect the inclusion of its 50% equity interest in a partnership that owns and operates the Kalealoa generating facility in Hawaii and its wholly-owned interest in PSEG Solar Source, both of which were transferred from energy holdings in 2013. These assets provided $0.03 per share of operating earnings in 2013 and are included in Power's reported results. Compared with operating earnings in 2012 for these same assets of $0.04 per share.

So, Power's operating earnings for 2013 of $710 million would have exceeded the upper end of our guidance of $685 million, even if these assets had not been included in our results.

Power's operating earnings for 2014 are forecast at $550 million to $610 million. Results for the full year will be influenced by a $2 per megawatt hour reduction in the average price of energy hedges, and a decline in our average PJM capacity price on June 1 of this year, to $167 per megawatt day from the historically high level of $244 per megawatt day.

I'm sure you'll recall that Power's capacity price is essentially steady for the next three years, given the results of already-completed capacity auctions through mid-2017.

Power's fuel costs should continue to benefit from firm gas transportation agreements providing access to low-cost Marcellus gas supply, and O&M should compare favorably with the results of 2013 given a decline in pension expense and ongoing cost control.

Let me now turn to PSE&G. PSE&G reported operating earnings for the fourth quarter of 2013 of $0.29 per share compared with $0.15 per share for the fourth quarter of 2012 as we show on Slide 26. PSE&G's full-year 2013 operating earnings were $612 million, or $1.21 per share, compared with operating earnings of $528 million, or $1.04 per share for 2012, a growth rate of 16%.

PSE&G's earnings for the fourth quarter reflect the benefit of an increase in revenue associated with the greater level of capital investment, and a decline in O&M expense relative to the prior year period which as you recall included Superstorm Sandy-related restoration expenditures.

An increase in transmission revenue improved the quarter-over-quarter earnings contribution by $0.04 per share, and for the year PSE&G's investment in transmission increased earnings by $0.14 per share. In 2013, our $1.7 billion investment in transmission increased the percentage of rate-based and transmission from 28% last year to 36% at the end of 2013.

PSE&G's O&M declined during the quarter given comparisons against the year-ago period which included Sandy-related restoration expenditures, and the decline in O&M increased quarter-over-quarter earnings comparisons by $0.04 per share.

Demand for electricity and gas during the quarter was influenced by weather, which was slightly colder than a year ago. Also, weather normalized demand for gas continues to show improvement. The impact on quarter-over-quarter earnings from the improvement in demand and weather was about $0.01 a share.

Earnings comparisons in the quarter also improved by about $0.04 per share due to a reduction in taxes and the absence of a tax-related change in reserves recognized in the prior year. And all other items contributed about $0.01 per share to earnings.

Economic conditions in PSE&G service territory appear to have stabilized and exhibit signs of slow recovery. On a weather-normalized basis, electric sales are estimated to have improved in the quarter by 2.7% and for the year, weather normalized sales declined by 1.5%. It's too early to get excited about the improvement at weather normalized sales in the quarter, given the comparisons against a period impacted by Sandy-related outages. Gas deliveries, however, continue to point to improved demand. As a result of still low commodity prices and slowly-recovering economic conditions.

On a weather-normalized basis, gas deliveries increased 2.7% in the fourth quarter, and now for the year total an increase of 2.2%.

PSE&G's operating earnings for 2014 are forecast at $705 million to $745 million, and this implies that even at the low end of the range, we're forecasting at least 15% growth in PSE&G's operating earnings.

PSE&G's growth in 2014 will continue to benefit from its ability to earn a return on its expanded investment in transmission. The Federal Energy Regulatory Commission approved an agreement which provides for an annual increase in transmission revenue of $171 million under the Company's formula rate filing, and this increase became effective on January 1 of this year.

Results will also reflect the recovery of capital costs associated with PSE&G's investment in solar, and the reduction in pension expense as well as ongoing expense control is expected to result in a year-over-year reduction in O&M.

As Ralph indicated, PSE&G's significant transmission investment program is on time and on budget, and we'll be providing you with an updated forecast of PSE&G's capital expenditures for 2014 through 2018 at our annual Financial Conference on March 7 of this year.

Let me now turn to Enterprise and Other. Enterprise and Other reported a small operating loss for the fourth quarter of $11 million or about $0.03per share compared to operating earnings of $6 million or a penny per share in the fourth quarter of 2012. The results for the fourth quarter brought the full year 2015 to an operating loss of about $13 million or $0.03 per share compared with 2012's operating earnings of $45 million or $0.09 per share.

The results for the quarter and the full year have been restated simply to reflect the distribution to PSEG Power of the 50% equity interest in the partnership that owns the Kalaeloa generating facility as well as the wholly-owned interest in solar source.

Operating earnings on the remaining portfolio however, were affected by a decline in lease income as well as an adjustment to the tax basis of the portfolio which together reduced quarter-over-quarter earnings by $0.03 per share.

We'll no longer be reporting separately the results for energy holdings. The management team has successfully monetized non-core assets in the portfolio and significantly reduced financial risk. The focus going forward will be on managing the remaining assets in the lease portfolio.

For 2014, operating earnings are forecast to fall within the range of $35 million to $40 million. Going forward, the fee associated with the operating contract for PSEG Long Island will be reported as part of Enterprise, along with the results for the remaining lease portfolio.

Next, I'd like to spend just a minute talking about pensions. We did close 2013 with the value of our pension assets in excess of our PBO obligations. The improved return and higher discount rate will, as Ralph mentioned, have a favorable impact on pension expense this year and going forward. In fact, we estimate there will be a positive impact on income in 2014 and in future years, and compared to the previous year's expense of $110 million.

We will not need to make any cash contributions to our pension trust this year as well.

The benefit to earnings is essentially equally shared between PSE&G and PSEG Power, and will provide you with a deeper multi-year view of the impact on O&M from the improved outlook on pensions at our March 7 investor meeting.

Lastly, a word on our financing capability. We remain in a strong position to finance our capital program. At the end of 2013 we had approximately $493 million of cash on hand and debt represented approximately 42% of PSEG's consolidated capital with debt at Power approximating 31% of its capital base.

Power's free cash flow remains strong and PSE&G's cash generation has improved from its ability to earn its authorized return on increased levels of capital investment. And of course, we'll provide you with an update of our capital program at our annual financial conference, but the message on equity issuance will be the same. We can finance our robust long-term capital program without the need to issue equity.

We're guiding to strong operating earnings for 2014 of $2.55 to $2.75 per share. This outlook is our best guidance for the full year, but I will note that it does not reflect any specific weather conditions related to January, consistent with our practice of not incorporating weather into our guidance until we go through the Summer season.

The dividend was recently increased by 2.8% to the indicative annual level of $1.48 per share, and we believe we can provide shareholders with consistent and sustainable growth in the dividend going forward, and we'll provide more detail on our outlook at our annual financial conference on March 7.

So with that, I'll now turn it back to Jennifer, and we'll be happy to take questions.

Operator: Ladies and gentlemen, we will now begin the Question-and-Answer session for members of the financial community. If you have a question, please press star and the number one on your telephone keypad. If your question has been answered and you wish to withdraw your polling question, you may do so by pressing the pound key. If you are on a speaker phone, please pick up your handset before entering your question. One moment for the first question. And your first question comes from Travis Miller with Morningstar.

Travis Miller: Good morning, thanks.

Ralph Izzo: Good morning, Travis.

Caroline Dorsa: Good morning.

Travis Miller: I was wondering real quick if you could give some thoughts on that dividend policy. You've obviously got a strong balance sheet, you've got some pretty good visibility into earnings, at least certainly for next year and perhaps the following year. Good for cash flow generation. I was wondering what the thought is in terms of using some more of that cash flow capacity to perhaps increase the dividend at a faster rate?

Ralph Izzo: So Travis, as you know, we don't have a target number in terms of percentage payout or percentage growth rate. It's a variety of factors, it's where the earnings coming from, how stable are they, how predictable, where are we in the commodities cycle. So, the word that we continue to hold onto is that looking at all of that, where power prices are, where the market prediction could be, where our capital program is at the utility, that investors do have the opportunity for consistent and sustainable growth in a dividend. And I'd rather not be held to a specific number, at this point.

Travis Miller: Okay, I understand. And then real quick, what's the LIPA contribution for the 2014 guidance?

Ralph Izzo: It's $0.02 to $0.03 for '14, then it steps up in basically two-penny increments until we get to '16 where it's about $0.07 or $0.08.

Travis Miller: Great, thanks so much.

Operator: Your next question comes from Brian Chin with Merrill Lynch.

Brian Chin: Hi, good morning.

Caroline Dorsa: Good morning.

Brian Chin: Just a clarification on the ongoing pension question. Of the $110 million number you referenced, that's the year-over-year benefit from '13 into '14 that's included in guidance, is that right?

Caroline Dorsa: That's a great question Brian, let me clarify that. So, the $110 million was our net of capitalization, so therefore what impacts the P&L. That was our pension expense in 2013. So, in 2014 you're actually going to see pension income instead of having $110 million in expense. You're going to see pension income, and the turnaround on a year-

on-year basis is a $0.15 improvement from the impact of pension going from expense last year of $110 million to income in the teens that you're going to see in this year's numbers, split evenly between the businesses.

So, a $0.15 year-on-year improvement we're going, we expect to see pension income as we forecast out during the business plans, you're going to see continuation of value driven from pension as opposed to the history you've had in the last few years of significant pension expense.

Ralph Izzo: Just to add to that counsel, Brian, it's not a step up and then a step back down in subsequent years. It's just a resetting of the level of pension, in this case no longer burdened on the income statement but benefit, but we'll incorporate that in all of our other O&M forecasts in our March 7 meeting.

Brian Chin: Okay, understood, and I understand that you're going to give more quantitative color on the ongoing effect of that at the analysts' meeting. But in terms of just qualitatively what's going on beyond '14, the reason why there's an ongoing effect there is because assumably some degree of asset returns and adjustment in your discount rate, that would cause an ongoing pension income in future years. Is that sort of the right way to think about that, or is there an amortization effect that's taking place?

Caroline Dorsa: So the right way to think about this, Brian, is we make long-term assumptions for returns on our investment portfolio. We make the same long-term assumptions going forward that we've made prior. You know from our disclosures, we assume an 8% return on our asset investments. We just continue to assume that same return. We look at the discount rate from the forward curve, that's why -- the way everybody looks at it, right? So you set it from wherever you land, and when we look at it going forward, we're just looking at the forward curve.

So, the discount rate went up for this year from last year, right? Last year was 4.2%, this year it's 5%. That's pretty -- just taken right off the curves at the end of 2013. So, it's a really steady-as-she-goes set of assumptions about rate of return, which we've set at 8, and the discount rate which we just use from the forward curve. Very significant turnaround we see between '13 and '14 comes from the fact that in 2013, our trust returned 20% and that comes from having that sustained equity-oriented allocation, about 70% equities. You'll see if you look at our historical, that's been the same for the past few years. We really take a long-term view, and because we don't smooth the year-end asset values -- so remember, there's two types of smoothing in pension, right? There's the gain-and-loss smoothing, everybody does that, but the ending assets, most companies smooth the ending asset value. In other words, what value you apply that 8% return to in your current year. Most companies use a five-year average. We use the actual value at the end of the prior year.

So, the fact that we had 20% return gives us that benefit as we come into 2014, purely from where the market put our assets at the end of 2013.

Brian Chin: Thank you very much.

Caroline Dorsa: Sure.

Operator: Your next question comes from Kit Konolige from BGC.

Kit Konolige: Good morning.

Ralph Izzo: Hi, Kit.

Kit Konolige: So it would appear if I heard this correctly, that the 2014 guidance benefits relative to 2013 actual by $0.15 from the pension, correct?

Caroline Dorsa: That's correct.

Kit Konolige: Okay, so -- in other words, basically all of the improvement in let's say the midpoint of '14 versus '13 is due to that pension improvement?

Caroline Dorsa: Well, there are a lot of obviously different dynamics going on in the businesses s well, though. I wouldn't want you to just focus on one item and not focus on the others, right? We've got significant increases assumed in PSE&G, part of which comes from the year-on-year from pension, but it's much more than that. Right?

Ralph Izzo: Well, and we also have huge benefits from the transmission investment, offset by a decline in the hedge prices. So, we just need to be careful, Kit, that we don't just pick one thing that looks like a $0.15 change because that's the only thing that isn't washing out.

Kit Konolige: Right, absolutely. Understood. A lot of moving parts. The -- and the transmission improvement was $0.14, '13 versus '12? Is that -- did I get that down right?

Ralph Izzo: Yes, that's correct.

Caroline Dorsa: Yes, that's right.

Kit Konolige: Okay, and for -- can you give us a sense of at PSE&G, '14 versus '13 is the transmission improvement going to be similar to that? And what should we think of in terms of the benefit from the solar investment, year-over-year?

Ralph Izzo: What we've always told you so far is that we have a $171 million increase in transmission revenues. Now the piece that you're missing is, what's the increase in transmission O&M, we'll give a little bit more information on March 7. The solar 440 is a three-year program and you should assume that that's pretty evenly-distributed over the three years.

Kit Konolige: Okay.

Ralph Izzo: And that's a (inaudible) return at a 10% ROE, and a 51% equity ratio, 51 point.

Kit Konolige: Okay, great. And then final, my final question, on Energy Strong, there was an article in New Jersey Spotlight about I guess a -- you know, their indication was that there seemed to be a bid asked of about $1 billion from the staff and $1.9 billion that you guys had come down to. Are you in a phase, let me just ask it this way. Are you in a phase of negotiating about a number for Energy Strong at this point, and are other issues basically settled?

Ralph Izzo: So Kit, when that article appeared, there was an appropriate and very stern letter that came out of the presiding officer of the BPU, chastising all participants but in particular whoever was responsible for that leak, which was not us. That such conversations in public would not be tolerated and sanctions unnamed would be enforced afterwards. So, I really don't even want to come close to answering your question other than to say yes, there was an article.

Kit Konolige: I knew that already. (laughter)

Ralph Izzo: I know you did. (laughter)

Kit Konolige: Well, let me just follow up on that. Ralph, you've been saying all along that you expect the settlement in Energy Strong. Are you still confident that there will be a settlement rather than a full proceeding on Energy Strong?

Ralph Izzo: Yes I am, but I was clearly wrong on the date, right? I thought we'd have it done by the end of January and I obviously missed that time frame. But I'm still optimistic. Everyone recognizes the importance of the work that's being proposed, but the devil is in the details.

Kit Konolige: Great, thank you.

Operator: Your next question comes from Paul Patterson with Glen Rock Associates.

Paul Patterson: Good morning.

Ralph Izzo: Good morning, Paul.

Caroline Dorsa: Good morning.

Paul Patterson: Just to sort of follow up on the transmission, this Bergen to Linden line and just all the improvements that you guys have been doing there, should we think about any potential risk to the PS zone breakout?

Ralph Izzo: No Paul, so most of the transmission work that does have impact, you've seen already in the way they've been reflected in the RPM auction. So, the two biggest projects that had any effect were Susquehanna Roseland in terms of its transfer capability from eastern mac into PS zone, and then the overall PS zone, and then the northeast grid and its transfer capability between PS zone and PS north. I forget the exact number. I think I saw was about 1500 megawatts, and I think northeast grid was 400 or 500, I don't remember. 200 to 300 Kathleen's telling me.

So, those projects have had an effect, and that's fully-reflected in the price. This is, this latest project is pretty much wholly-within PS north and the NYISO seam, so this is a stability issue across the PGM and New York ISO (ph) seam.

Paul Patterson: Okay. So, nothing else that you see out there as being a problem?

Ralph Izzo: No, I don't.

Paul Patterson: Okay, and then just finally on taxes, for the 2014 guidance could you just tell us what we should be expecting there?

Caroline Dorsa: So, we haven't given a specific effective tax rate, but I think it's fair to assume you'll see tax rate kind of similar to what we've seen in Power over the past period close to 40%, and the utility obviously as solar installations go into effect, you have a little bit of an ITC. So, there's a little bit of a tax rate benefit. Won't be quite as high as Power but pretty much steady. Nothing really dramatically different going on there.

Ralph Izzo: Great. Thanks a lot.

Caroline Dorsa: Your next question comes from Jonathan Arnold with Deutsche Bank.

Jonathan Arnold: Good morning.

Caroline Dorsa: Morning.

Ralph Izzo: Good morning, John.

Jonathan Arnold: Hi. Can you just, first on the hedging, I notice that the pricing on the 2015 had gone up a little bit. Can you give us some sense on what -- is that primarily BGS, is there something else going on in there, is it peak-weighted? Or just whatever you could give me there. And then any flavor on what the composition of the 16 hedge is on the base load?

Caroline Dorsa: Sure. So, you're right Jonathan, on 2015 a big driver here from our prior disclosure is the impact of BGS. So, BGS goes in at about a low-teens impact on the total hedge book for 2015, because the most recent option of course puts a full year of BGS in there. And so, that's the biggest driver of the change in the hedge percentage, and the change in the hedge price, because remember we put BGS in there at about -- at the BGS price less capacity, so it has an impact as you go into 2015 on a full-year basis, and then raise the price from 48 to 51 per our last quarter disclosure.

For 2016, BGS has an impact in there as well, and the book for 2016 per your question is about a third BGS and about two-thirds west hub hedges. You know, as we go out further, BGS is a heftier piece of the total hedge book than it is near term, because it tends to be what you can really do on a long-term basis.

Jonathan Arnold: Okay, great. And secondly, on -- can you give us any insight how the portfolio behaved in this January and early February pricing blowouts? You know, was it a net positive, was it neutral, and how you've thought about that in the context of guidance?

Ralph Izzo: So, we did not factor that into the guidance we've just given you for '14, Jonathan, but I can tell you this. The units performed well. Our gas team was able to get the fuel we needed. There were times we were running on kerosene and not on natural gas, but the assets were up and running. We had Linden down I think for a few days because we were fishing out the AGP, the Advanced Gas Path, but no -- we had solid operational performance, managed the fuel situation very well, and did not factor that into our '14 guidance. We have -- Kathleen reminded me this morning, I forgot already, there's only 51 days gone so far. (laughter) 314 to go, so she didn't want me to get ahead of myself.

Jonathan Arnold: So you've just basically done it as of year-end?

Ralph Izzo: That's correct.

Caroline Dorsa: That's right.

Ralph Izzo: That's exactly right, John.

Jonathan Arnold: Okay, and then, just sort of finally as you -- as we think about this sort of '14 number, and the pension and the other moving parts, and I don't know if this is something you'll talk about now or not. But is -- do you see '15 and '16 as kind of flat-to-up kind of trajectory, adding everything together, or is this still kind of hedge roll-up headwind etc., kind of offsetting some of the positives you have on the other side of the business?

Ralph Izzo: So John, you know, we're not going to give guidance for the out years. We will at the conference remind folks, and I'll just do it at a high level here, of what the utility rate base growth will be and how that translates into earnings. We'll re-present, we'll present to you data that I think most of you know about RPM, because that does carry us certainly through '16. We'll update, we'll discuss the hedge book to the extent that further detail is needed. So what we don't do is try to outguess the forward price curve, and that's the part that keeps us from giving you precision in the out years. We're going to give you an O&M growth rate. I don't -- so other than changes in the forward price curve and how we're able to dynamically hedge, which is something that I think we're all learning to understand is a real advantage of Power. Those two limitations keep us from giving you even a plus or a minus for the out years.

And we're going to give you five years of utility capital this time around, as well.

Jonathan Arnold: But if you used, I mean, not asking you to second guess the curve, but if you assumed the curve, can you go there?

Ralph Izzo: Well, the reason why I wouldn't want to do that is, I think that limits us to a bias of understating our potential. Our naturally long position with our diverse asset fleet, both in terms of fuel and in terms of dispatchability, has allowed us to benefit from the volatility quite nicely. And the greater that volatility, the greater the benefit for us, and that's a theme we've been trying to educate the investor community about for the past 18 months or so, and I think we want to make sure we don't short change ourselves by simply saying the current prediction is a spark of X, and therefore that's all you should bake into our numbers.

Jonathan Arnold: Thank you, Ralph.

Ralph Izzo: Thank you, John.

Operator: Your next question comes from Ashar Khan with Visium.

Ashar Khan: Hi, how are you doing?

Caroline Dorsa: Good morning.

Ashar Khan: Can I just -- the -- what we should expect at the conference, would you be in a position at that time to give us -- Ralph, I guess this is a question in terms of Energy Strong, would that be done by then or not done by them? Or I'm just trying to see how you're going to address what is in rate base for the utility for the next five years.

Ralph Izzo: So, Ashar, I obviously did a mea culpa already on predicting it by the end of January, so I'm not going to invite a second opportunity to be wrong or beat my chest over being right by predicting a date and then not living up to it. We're in active negotiations. The hearings begin on Tuesday or Monday, I forget, the 25th. So, believe me, there's no one on this call who wants that done sooner but not without the right terms and conditions for our shareholders and our customers.

So, I can't predict if we'll have more details for you. Suffice to say that we will do what we've done in the past. We will tell you, here's what has been approved, and what is definitely happening, and to the extent that there are open questions, we'll tell you what those additional open questions could yield.

Ashar Khan: Okay, and then Caroline, just based on what you had provided earlier, and I know pensions has provided an uplift, but you had still said that going up 16 year-over-year, even starting from '14 the way I understood it, that the utility company could still show double digit EPS growth without Energy Strong. Am I -- if I'm understanding that right, that should still be the case, right? From a '14 to '16 time frame?

Caroline Dorsa: Yes. That's correct.

Ashar Khan: Okay. Okay. Thank you so much.

Caroline Dorsa: You're welcome.

Operator: Your next question comes from Julian Dumoulin-Smith with UBS.

Julian Dumoulin-Smith: Hi, good morning.

Ralph Izzo: Good morning, Julian.

Caroline Dorsa: Good morning.

Julian Dumoulin-Smith: So, a quick first question. I'll try. In terms of the, at least the first 60 days here of the year?

Ralph Izzo: (laughter) 51 days, Julian.

Julian Dumoulin-Smith: Yeah I mean you know (laughter) first couple months, what -- can you give us any ball park in terms of what that means for you versus plan?

Ralph Izzo: Caroline, I tried to say no. Your turn.

Julian Dumoulin-Smith: I tried, I swear. (laughter)

Caroline Dorsa: Well, we can't give you ballpark Julian, because we just obviously just put out the guidance at all. But I think as Ralph said, we performed well and we've had other periods where when opportunities present themselves we capture them, and we captured what was available to us here. But it's -- you know, we'll be on the phone with you not too long from now during the first quarter, it seems, right? In April? But I think you should expect that we're able to do the kind of things that our terrific ER&T group is able to do, which is take advantage of opportunities when they present themselves, because our operations and our assets, we run really well.

But beyond that, I think we'll just wait for the first quarter results.

Ralph Izzo: Yeah, I mean Julian, I do respect the desire for that information. We have two nuclear refueling outages ahead of us, we have a summer season that is at least as important as the winter season, so there's a lot of territory ahead of us before we start taking something to the bank.

Julian Dumoulin-Smith: Now, let me jump onto the last question a little bit and ask you -- in terms of you know, you have the 1 billion, you have the 2 billion. In terms of aggregate CapEx, at the utility, you talked about earnings growth. But you know, for the next few year period, is there an ability to accelerate other spend that you would've otherwise put into Energy Strong, should it come out at the lower end, if you get what I'm saying? Is there some level of flexibility? And maybe let me just head at this a little bit differently. How are you thinking about energy holdings spending in the context of perhaps greater balance sheet latitude and getting more involved on let's say more contracted assets on that side?

Ralph Izzo: So we -- we do continue to invest on contracted assets on the energy holdings side, but that is -- it is modest compared to what's going on in the utility. And while I do want Energy Strong for all the reasons we've articulated in the past, the critical issue in the utility has been and continues to be transmission. So, whether it's the Bergen-Linden 345 KV line, that was a $1.2 billion add. Now, that's a gross number. We will detail for you the net impact of that, because some projects are being canceled. Whether it's the possibility of the artificial island bid that we've made along with six other bidders, so we don't know if we'll win that. The fact that PJM is going to have an open window in April on FERC Order 1000 project.

So, there are, there have continued -- we have consistently been able to find important reliability-based investments to deploy our balance sheet in the utility, and I just think given the uncertainty in the market about where assets get built, power generation assets get built, and where they get shut down, that those opportunities will continue to appear before us and Caroline will add to that, now.

Caroline Dorsa: Yeah, and one other thing, Julian. I think you know we have a robust capital program. We talked about a lot going on including the potential for Energy Strong as filed, and the other thing that we will talk about in March as we always do, and you would expect from our results and our cash and balance sheet position, is everything we've talked about has the potential for going forward including Energy Strong, none of that takes away our entire investment capacity. So, there's more investment capacity to put to work on either good projects at the utility, additional transmission, things like you know, uprates at Power. There's opportunity to do even more because we've run the balance sheet and have so much free cash flow coming from both businesses. So, even the things that you

know, we'll still have more room to do more things as these opportunities that Ralph identified, come potentially come forward to us.

Julian Dumoulin-Smith: Got you. So, I'll take that as a general yes.

Ralph Izzo: Yes (laughter)

Julian Dumoulin-Smith: Great, thank you.

Operator: Your next question -- I'm sorry, go ahead?

Kathleen Lally: I'm going to say we have time for one more question, and then we'll have closing comments after that question, thank you.

Operator: Your next question comes from Neil Mitre from Tudor Pickering.

Neil Mitre: Hi, good morning.

Caroline Dorsa: Good morning.

Ralph Izzo: Good morning, Neil.

Neil Mitre: In the past, you guys have detailed a slide with the amount of exports that you have from New Jersey to New York, and I think the last time you put one out was about 2500 megawatts. Ralph, can you kind of talk about maybe how that number has changed, and maybe more specifically over the last year, and what projects are perhaps in the backlog that could increase the exports out of New Jersey?

Ralph Izzo: Neil, we haven't broken that number out in a number of years. I'm kind of trying to remember when the last time was that we did break that out. I know we have some, it's been at least three years I'm being told. So, I know we have some energy and capacity sales over a VFT line that goes over to New York. We do some spot transactions, but I don't know that we break out our Power book to that level of specificity.

Neil Mitre: I'm guessing more kind of on the utility side.

Ralph Izzo: Oh, on the utility side?

Neil Mitre: You talked about --

Ralph Izzo: Oh yeah, wait a minute, the utility isn't building any transmission into New York City. The -- perhaps, I hope I didn't mis-speak before. The 345 KV is a reliability issue that affects the seam but it's all inside New Jersey.

Neil Mitre: It's all inside New Jersey, okay, great. And then second, with the uprates, the 150 megawatts, are you considering any other kind of expansions, Power, I know in the past you've kind of talked about maybe Essex brown field additions. Are those off the table right now or are you kind of happy with the 150 megawatt?

Ralph Izzo: Right now we have two major projects, and the way we have an upgrade at about 140

megawatts at Peach Bottom and we have the advanced gas path. And right now, that's all that we have planned.

Neil Mitre: Okay, great. Thank you.

Ralph Izzo: Okay, yeah. So thanks everyone for participating in the call. We had a terrific 2013. I mean, it was terrific operationally, financially, meeting the needs of the New Jersey Energy Master Plan, and we firmly expect that we're going to build on that in '14 and beyond. So, we'll share some more details with you on March 7. We hope you're able to join us then in New York. I'm told by Kathleen in celebration of the winter we had, we may actually have some sleigh rides and hot chocolate for people, but hopefully we'll have the beginning of some Spring weather when we see you on March 7. So, thanks for being here today, and we'll see you soon.

Operator: Ladies and gentlemen, that does conclude your conference call for today. You may disconnect, and thank you for your participation.

PSEG ANNOUNCES 2013 RESULTS

$2.45 NET INCOME PER SHARE

Operating Earnings of $2.58 Per Share Exceeds Guidance of $2.40 - $2.55 Per Share

Company Provides 2014 Guidance of $2.55 - $2.75 Per Share

(February 20, 2014 – Newark, NJ) Public Service Enterprise Group (PSEG) reported today 2013 Net Income of $1,243 million or $2.45 per share as compared to Net Income of $1,275 million, or $2.51 per share for 2012. Operating Earnings for the year 2013 were $1,309 million or $2.58 per share compared to 2012 Operating Earnings of $1,236 million or $2.44 per share.

PSEG also reported Net Income for the fourth quarter of 2013 of $200 million, or $0.39 per share. This compares to fourth quarter 2012 Net Income of $224 million, or $0.44 per share. Operating Earnings for the fourth quarter of 2013 were $248 million, or $0.49 per share compared to fourth quarter 2012 Operating Earnings of $207 million, or $0.41 per share.

"PSEG delivered outstanding results in 2013" said Ralph Izzo, chairman, president and chief executive officer. "An increased level of investment in our regulated company produced double-digit earnings growth at PSE&G. PSEG Power's earnings benefited, as expected, from the locational premium placed on the capacity price for its generating assets, PSEG Power also realized the benefits from higher wholesale prices on its open position and successful management of its gas supply arrangements. We executed well on our business plan in 2013, and a strong balance sheet continues to support our growth initiatives without the need to issue equity. Our approach to managing supply risk has been affirmed during the recent period of extreme weather and volatility in the power markets. We have successfully responded to record demand while our customers have benefited from our ability to pass along savings in gas costs. We look ahead to 2014 with optimism as demonstrated by the Board's recent decision to increase the common dividend by 2.8% to the indicative annual level of $1.48 per share."

PSEG believes that the non-GAAP financial measure of "Operating Earnings" provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. Operating Earnings exclude the impact of gains/(losses) associated with Nuclear Decommissioning Trust (NDT) investments and Mark-To-Market (MTM) accounting as well as other material one-time items. The table below provides a reconciliation of PSEG's Net Income to Operating Earnings (a non-GAAP measure) for the full year and fourth quarter. See Attachment 12 for a complete list of items excluded from Net Income in the determination of Operating Earnings.

PSEG CONSOLIDATED EARNINGS (unaudited)
Full-Year Comparative Results
2013 and 2012

	Income ($ millions)		Diluted Earnings Per Share	
	2013	**2012**	**2013**	**2012**
Operating Earnings	$1,309	$1,236	$2.58	$2.44
Reconciling Items	(66)	39	(0.13)	0.07
Net Income	**$1,243**	**$1,275**	**$2.45**	**$2.51**
		Avg. Shares	**508M**	**507M**

PSEG CONSOLIDATED EARNINGS (unaudited)
Fourth Quarter Comparative Results
2013 and 2012

	Income ($ millions)		Diluted Earnings Per Share	
	2013	**2012**	**2013**	**2012**
Operating Earnings	$248	$207	$0.49	$0.41
Reconciling Items	(48)	17	(0.10)	0.03
Net Income	**$200**	**$224**	**$0.39**	**$0.44**
		Avg. Shares	**508M**	**507M**

"The emphasis we have placed on the anchor principles of our strategy – operational excellence, financial strength and disciplined investment – created benefits in 2013 and is expected to continue to yield results over the coming year" continued Ralph Izzo. "Double-digit growth in earnings from our stable, regulated business, Power's strong free cash flow and the benefits from successful management of our cost structure -- including our pension obligations -- are expected to yield long lasting benefits to Operating Earnings. For 2014, we are initiating Operating Earnings guidance of $2.55 - $2.75 per share. The strong commitment and dedication shown by our employees to our customers has been a major contributor to our success and provides me with confidence in our ability to achieve our long-term goals."

The following table outlines PSEG's 2013 operating earnings by subsidiary and expectations for 2014.

2014 Guidance and 2013 Operating Earnings
($ millions, except EPS)

	2014E	**2013A**
PSE&G	$705 - $745	$612
PSEG Power	$550 - $610	$710
PSEG Enterprise/ Other	$35 - $40	$(13)
Operating Earnings	$1,290 - $1,395	$1,309
Earnings Per Share	$2.55 - $2.75	$2.58

Operating Earnings Review and Outlook by Operating Subsidiary

See Attachments 6 and 7 for detail regarding the quarter-over-quarter and year-over-year earnings reconciliations for each of PSEG's businesses.

PSEG Power

PSEG Power reported operating earnings of $115 million ($0.23 per share) for the fourth quarter of 2013, bringing full year operating earnings to $710 million ($1.40 per share). On a comparative basis, PSEG Power reported operating earnings of $126 million ($0.25 per share) and $663 million ($1.31 per share) for the fourth quarter and full year 2012 respectively.

PSEG Power's operating earnings in the fourth quarter benefited from higher capacity revenues, an improvement in the market price of energy on a net long position, an increase in volume and a decline in the supply cost of gas. The improvement in gross margin during the quarter nearly offset the impact on operating earnings from an increase in operating and maintenance expense associated with outage related work.

Power's earnings for the fourth quarter benefited from higher revenues in PJM. An increase in our average PJM capacity prices to $244/MW-day from $153/MW-day on June 1, 2013 improved quarter-over-quarter earnings by $0.10 per share. The improvement in capacity revenues more than offset the $0.09 per share impact on earnings from lower realized prices on energy hedges. Higher prices for natural gas and an improvement in basis in the PS-zone had a favorable influence on the price received by Power on its open wholesale power position. In addition, Power's results continued to benefit from its firm gas transportation contracts which provided it with access to low-cost gas from the Marcellus Basin. Together these items added $0.02 per share to Power's quarter-over-quarter earnings. Generation volumes increased in the fourth quarter relative to the year-ago period when production was impacted by Superstorm Sandy. The increase in generation added $0.01 per share to Power's quarter-over-quarter earnings comparisons. Operating and maintenance (O&M) expenditures were higher than normal during the quarter due to outage related work – both planned and unplanned -- at the nuclear and fossil stations. The increase in O&M reduced quarter-over-quarter earnings comparisons by $0.08 per share. The absence of debt restructuring costs in the year-ago period improved quarter-over-quarter earnings comparisons by $0.02 per share. An increase in depreciation expense was offset by a reduction in interest expense.

Power's output increased 6.2% in the quarter from year-ago levels. For the year, output increased 1.8% to 53.5 TWh. The fleet's fuel and dispatch flexibility was demonstrated in the quarter and throughout the year. The nuclear fleet produced 29.5 TWh (55% of total generation) operating at an average capacity factor of 90.3%. Record production from Salem 2 helped offset the impact from a refueling-outage related decline in production at Hope Creek. The gas-fired combined cycle fleet produced 15.9 TWh in 2013 (31% of total generation). Record setting output from the Linden station helped to partially offset the impact on production from planned major maintenance work at the Bethlehem Energy Center in the second half of the year. The coal fleet responded to an improvement in dark spreads. Production from the base-load coal-fired stations in Pennsylvania increased 20% as the New Jersey stations continued to operate on gas and Bridgeport Harbor's output increased in response to higher market prices. The coal stations together provided 7.3 Twh of output in 2013 (14% of total generation).

Power continues to forecast output for 2014 of 53 – 55 TWh. Approximately 75% - 80% of anticipated production for the year is hedged at an average price of $48 per MWh which compares with average hedge prices in 2013 of $50 per MWh. Power has hedged approximately 45% - 55% of its forecast generation in 2015 of 53 – 55 TWh at an average price of $51 per MWh. Power's forecast of total output over 2014 – 2015 has increased slightly from prior guidance. For 2016, Power has hedged 20% - 30% of forecast production of 53 – 55 TWh at an average price of $53 per MWh. The increase in the percentage of generation hedged over 2014 – 2015 reflects the completion of the most recent Basic Generation Service auction in New Jersey. The hedge data for 2014 and 2015 assumes BGS volumes represent approximately 11 TWh in 2014 and 10 TWh in 2015 compared to approximately 12 TWh in 2013.

PSEG Power's operating earnings for 2013 and 2012 reflect the inclusion of its 50% equity interest in a partnership that owns and operates the Kalaeloa generation facility in Hawaii and its wholly owned interest in PSEG Solar Source LLC, both of which were transferred from Energy Holdings in 2013. These assets provided $0.03 per share of operating earnings in 2013 compared with operating earnings in 2012 of $0.04 per share.

Power's operating earnings for 2014 are forecast at $550 million - $610 million. Results for the full year will be influenced by a decline in our average PJM capacity price on June 1, 2014 to $167/MW-day from the historically high level of $244/MW-day and a $2/MWh reduction in the average price of energy hedges. Power's fuel costs should continue to benefit from favorable access to low-cost Marcellus gas supply, and O&M should compare favorably with the results of 2013 given a decline in pension expense, and on-going cost control.

PSE&G

PSE&G reported operating earnings of $144 million ($0.29 per share) for the fourth quarter bringing full year operating earnings to $612 million ($1.21 per share). On a comparative basis, PSE&G reported operating earnings of $75 million ($0.15 per share) and $528 million ($1.04 per share) for the fourth quarter and full year 2012, respectively.

PSE&G's earnings for the fourth quarter reflect the benefit of an increase in revenue associated with a greater level of capital investment and a decline in O&M expense relative to the prior year period which included Superstorm Sandy-related restoration expenditures.

An increase in transmission earnings from increased investment added $0.04 per share to earnings in the quarter. An absence of Sandy-related restoration expenditures improved quarter-over-quarter earnings comparisons by $0.04 per share. Electric and Gas demand was influenced by weather which was slightly colder than a year ago. Also, weather normalized demand for gas continued to improve. The impact on earnings quarter-over-quarter from the improvement in demand and weather was $0.01 per share. Earnings comparisons in the quarter also improved by $0.04 per share due to a reduction in taxes and the absence of a tax-related change in reserves recognized in the prior year. Miscellaneous items contributed $0.01 per share quarter-over-quarter.

Economic conditions in the service area have stabilized and exhibit signs of a slow recovery. On a weather-normalized basis, electric sales are estimated to have improved in the quarter by 2.7%. For the year, weather-normalized sales declined by 1.5%. It's too early to characterize the improvement in weather-normalized sales for the quarter as the result of economic growth, given comparisons against a period impacted by Sandy-related outages. Gas deliveries, however, continue to point to an improvement in demand as a result of still low commodity prices and slowly recovering economic

conditions. On a weather-normalized basis, gas deliveries increased 2.7% in the fourth quarter and 2.2% for the year.

The Federal Energy Regulatory Commission (FERC) approved an agreement reached with certain customers which provides for an annual increase in transmission revenue of $171 million under the company's formula rate filing. The increase in revenue was effective on January 1, 2014.

PSE&G was assigned construction by PJM of a new transmission project that will construct a double-circuit line in the Bergen-Linden Corridor to maintain the reliability of the northeastern electrical grid. This project has an expected in-service date of June 2018, and an estimated construction cost of up to $1.2 billion. The net increase in capital expenditures is expected to be less than the cost of the 345-kV project which will eliminate the need for other projects.

PSE&G's operating earnings for 2014 are forecast at $705 million - $745 million. Operating earnings will be influenced by an increase in transmission revenues, an increase in the amount of capital invested in solar and a reduction in pension expenses.

PSEG Enterprise/Other

PSEG Enterprise/Other reported a loss in operating earnings for the fourth quarter of $11 million ($0.03) per share compared to operating earnings of $6 million ($0.01 per share) for the fourth quarter of 2012. The results for the fourth quarter brought the full year 2013 for PSEG Enterprise/Other to a loss of $13 million ($0.03 per share) versus Operating Earnings in 2012 of $45 million ($0.09 per share).

The results reflect the distribution to PSEG Power of Energy Holdings' 50% equity interest in a partnership that owns the Kalaeloa generating facility as well as its wholly owned interest in PSEG Solar Source LLC. Operating earnings on the remaining portfolio of assets reflect a decline in lease income as well as additional taxes. These items reduced quarter-over-quarter earnings by $0.03 per share.

For 2014, operating earnings for PSEG Enterprise/Other are forecast to be $35 million - $40 million. Results will include the fee associated with the distribution management contract for PSEG – Long Island.

Long Island Power Authority

On December 31, 2013, PSEG-Long Island LLC and the Long Island Power Authority (LIPA) entered into a twelve-year Amended and Restated Operations Services Agreement (OSA) effective January 1, 2014 to operate LIPA's electric transmission and distribution (T&D) system in Long Island, NY. In addition, there is the opportunity for the parties to extend the contract for an additional eight years subject to the achievement by PSEG LI of certain performance levels during the initial term of the OSA. Also, beginning in 2015, Power will provide fuel procurement and power management services to LIPA under separate agreements.

FORWARD-LOOKING STATEMENT

Certain of the matters discussed in this communication about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently

available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient coverage or recover proceeds of insurance with respect to such events,
- cybersecurity attacks or intrusions could adversely impact our businesses,
- Increases in competition in energy supply markets as well as competition from certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies and changes in customer behaviors, including energy efficiency, net metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws. The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

Forward-Looking Statement

Certain of the matters discussed in this communication about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient coverage or recover proceeds of insurance with respect to such events,
- cybersecurity attacks or intrusions could adversely impact our businesses,
- Increases in competition in energy supply markets as well as competition from certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies and changes in customer behaviors, including energy efficiency, net metering and demand response.

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. Slide 35 at the end of this presentation includes a list of items excluded from Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

PSEG
2013 Q4 and Full Year Review

Ralph Izzo

Chairman, President and Chief Executive Officer

SI-SSA-0015-12171

Q4 Earnings Summary – Strong finish to 2013

Quarter ended December 31

$ millions (except EPS)	2013	2012
Operating Earnings	$ 248	$ 207
Reconciling Items, Net of Tax	(48)	17
Net Income	$ 200	$ 224
EPS from Operating Earnings*	$ 0.49	$ 0.41

*See Slide 35 for Items excluded from Net Income to reconcile to Operating Earnings.

SI-SSA-0015-12172

Full-year Earnings Summary – EPS exceeded guidance

Twelve Months ended December 31

$ millions (except EPS)	2013	2012
Operating Earnings	$ 1,309	$ 1,236
Reconciling Items, Net of Tax	(66)	39
Net Income	$ 1,243	$ 1,275
EPS from Operating Earnings*	$ 2.58	$ 2.44

SI-SSA-0015-12173

* See Slide 35 for Items excluded from Net Income to reconcile to Operating Earnings.

PSEG – 2013 Highlights

- **Strong 2013 financial performance – exceeded guidance**
  - ✓ Achieved operating earnings of $2.58 per share compared to $2.44 per share in 2012, up 5.7%
  - ✓ PSE&G posted double digit earnings growth, representing 47% of consolidated operating earnings with the growth in transmission investment
  - ✓ Power's operating earnings exceeded high end of guidance
- **Continued operational excellence**
  - ✓ Power set record output at Linden CCGT and Salem 2 nuclear
  - ✓ PSE&G's control of O&M supported results
  - ✓ PSE&G and Power successfully responded to record summer and winter demand, while our customers have benefitted from savings in gas costs
  - ✓ PSE&G recognized for the 12th consecutive year as the Mid-Atlantic region's most reliable electric utility
- **Disciplined capital investment – producing results**
  - ✓ Five major transmission projects in construction – on schedule and on budget
  - ✓ New PJM transmission projects add to utility rate base growth beyond 2015
  - ✓ Power adding 150 MWs through uprates at CCGTs
  - ✓ S&P ratings upgrades for Power (BBB+), PSE&G (A) and PSEG (BBB+); Moody's recently upgraded PSE&G's senior secured rating to Aa3

SI-SSA-0015-12174

PSE&G Energy Strong Proposal -- Update

- **Multi-year, $2.6 Billion Infrastructure Program filed with the NJBPU to strengthen PSE&G's electric and gas system focusing on hardening and resiliency**

- **PSE&G's Infrastructure proposal includes:**
  - ✓ Protecting 29 utility installations from severe storms
  - ✓ Making the electric grid smarter and easier to repair
  - ✓ Adding backup distribution lines and system redundancies
  - ✓ Undergrounding 20 miles of overhead distribution lines
  - ✓ Modernizing the gas distribution system

- **Over 90 NJ municipalities, including 9 county governments, have passed resolutions supporting PSE&G's Energy Strong proposal**

- **Proposed filing creates ~5,800 jobs and stimulates economic activity for New Jersey businesses**

$ / MWh	17.18	19.22

SI-SSA-0015-12188

PSEG Power – Gross Margin Performance

- ✓ Margins benefit from higher capacity pricing through mid-2014
- ✓ Higher year-over-year spot market prices throughout 2013
- ✓ Lower cost Marcellus gas continued to benefit fuel cost savings in Q4

Regional Performance		
Region	**2013 Gross Margin ($M)**	**2013 Performance**
PJM	$2,392	Decline in hedged energy prices offset by higher capacity prices, improved spark spreads, increased volume and improved market pricing on open position for the year.
New England	$78	Favorable pricing and generation.
New York	$48	Major maintenance outage limited production during Q3.

Market Perspective – 2014 BGS Auction Results

Full Requirements Component

Capacity Markets/RPM
Growing Renewable Energy/Transmission
Component for Market Risk

… reflects an increase from the prior year driven primarily by transmission costs

Note: BGS prices reflect PSE&G Zone; results from the 2012-2014 auctions will be the new blended prices beginning June 1, 2014.

SI-SSA-0015-12190

Hedging Update…

Contracted Energy*

		2014	2015	2016
Base Load (Nuclear and Base Load Coal)	Volume TWh	35	35	35
	% Hedged	100%	75-80%	30-35%
	Price $/MWh	$48	$51	$53
Intermediate Coal, Combined Cycle, Peaking	Volume TWh	20	19	19
	% Hedged	35-40%	0%	0%
	Price $/MWh	$48	$51	$53
Total	Volume TWh	53-55	53-55	53-55
	% Hedged	75-80%	45-55%	20-30%
	Price $/MWh	$48	$51	$53

* Hedge percentages and prices as of February 11, 2014. Revenues of full requirement load deals based on contract price, including renewable energy credits, ancillary, and transmission components but excluding capacity. Hedges include positions with MTM accounting treatment and options.

SI-SSA-0015-12191

PSEG Power – Q4 2013 Operating Highlights

Operations

- ✓ Q4 output up 6.2% from Q4 2012, with absence of Sandy outages, strong performance at Salem station and Peach Bottom 2 and Linden CCGT
- ✓ Nuclear capacity factor of 90.3% for 2013; record generation at Salem 2
- ✓ Major CCGT maintenance at BEC; began CCGT upgrades
- ✓ Hope Creek and Peach Bottom 3 refuelings in Q4

Regulatory and Market Environment

- ✓ 2014 BGS auction priced higher at $97.39/MWh vs. $92.18/MWh in 2013 and $83.88 in 2012 for the PSE&G contract
- ✓ 2014 anticipated base load output hedged at an average price of $48 MWh
- ✓ 2014 BGS load projected at 11 TWhs
- ✓ Power markets adjusting to heightened volatility, winter peak demand, less liquidity

Financial

- ✓ Power's total debt as a percentage of capitalization at year-end was 31%

SI-SSA-0015-12192

PSE&G
2013 Q4 Review

SI-SSA-0015-12193

PSE&G – Q4 Earnings Summary

$ millions (except EPS)	Q4 2013	Q4 2012	Variance
Operating Revenues	$ 1,571	$ 1,597	$ (26)
Operating Expenses			
Energy Costs	633	779	(146)

PSE&G EPS Reconciliation – Q4 2013 versus Q4 2012

SI-SSA-0015-12195

*See Slide 35 for Items excluded from Net Income to reconcile to Operating Earnings.

PSE&G – Q4 Operating Highlights

Operations

- ✓ Q4 weather slightly colder vs. Q4 2012 and normal: Heating degree days 5.2% above Q4 2012 and 3.5% higher vs. normal weather
- ✓ Absence of Sandy costs
- ✓ Electric & Gas demand and volume up (weather adjusted) over Q4 2012

Regulatory and Market Environment

- ✓ Construction of 5 major transmission lines continues on schedule and on budget
- ✓ PJM assigned the "Double Circuit" project to PSE&G to enhance reliability of the Bergen-Linden line to 345-kV; expected in service date is June 2018
- ✓ Annual FERC formula rate revenue increase of $171 million effective January 1, 2014
- ✓ BPU continues to review Energy Strong infrastructure proposal
- ✓ PSE&G recognized for the 12th consecutive year as the Mid-Atlantic region's most reliable electric utility; specifically recognized by EEI for excellence in its storm response during Sandy

Financial

- ✓ PSE&G earned its authorized return in 2013
- ✓ Moody's recently upgraded PSE&G's senior secured debt rating to Aa3

PSEG

PSEG Financial Highlights

- **Introducing 2014 operating earnings guidance of $2.55 - $2.75 per share**
  - ✓ Focused on maintaining operating efficiency and customer reliability
  - ✓ PSE&G expected to provide over 50% of 2014 operating earnings

- **Energy Strong infrastructure proposal remains under consideration:**
  - ✓ First 5-year request to invest $2.6 billion to strengthen resiliency of PSE&G's distribution infrastructure

- **Executing existing transmission capital spending program on schedule and pursuing new RTEP, FERC 1000, and 345 kV projects**

- **Financial position remains strong:**
  - ✓ Positive cash from Power and increasing cash flow from operations at PSE&G supports dividend growth and funds capital spending program without the need to issue equity
  - ✓ Debt as a percentage of capitalization was 42% at December 31, 2013

- **Increased common dividend 2.8% to indicative annual rate of $1.48 per share**
  - ✓ Increasing regulated earnings mix supports growing dividend

Gregg Orrill *Barclays Capital - Analyst*

PRESENTATION

Kathleen Lally ***- PSEG Inc. - VP - IR***

Good morning. I know it's a very busy season and we appreciate you all being here with us this morning, both at the Waldorf Astoria and on the webcast.

I'm Kathleen Lally, Vice President of Investor Relations for Public Service Enterprise Group. We have a very full morning for you. We intend to do a very thorough review of our businesses and provide you with an outlook for growth over the next several years, particularly in terms of the utilities capital program, take you out longer than we normally have in the past and provide a very thorough review of the financial picture of Power and the corporation as a whole. So, we hope you stay with us. We're going to start with Ralph Izzo, Chairman, President and CEO. We're going to hold questions for Ralph until the end of the morning. Ralph Izzo will be followed by the President of PSE&G, Ralph LaRossa, and then Randy Mehrberg of PSEG Energy Holdings. They will take questions at the end of Randy's comments.

After that concludes, we'll have a short break for about 15 minutes, and we will then proceed to discuss PSEG Power's business. Bill Levis, President and Chief Operating Officer of Power will do a review of his business, and he'll be joined by Shahid Malik, President of Energy Resources and Trade. They will take Q&A jointly at the end of Shahid's comments.

And shortly after the Q&A, Caroline Dorsa, Executive Vice President and Chief Financial Officer, will provide a review of the Company's earnings and cash picture for 2013 and into 2015. Caroline will be followed by a short summary from Ralph Izzo, and they will take Q&A together at the end of the day. Again, a very thorough review of PSEG, which we hope you will find informative.

I'm now going to turn the program over to Ralph Izzo.

Ralph Izzo ***- PSEG - President, CEO***

I saw my General Counsel gagging because we didn't refer to the forward-looking statement and the GAAP disclosure.

So, good morning, everyone, it's great to be here with you again for our annual meeting. And it is a fascinating phenomenon to watch, whether it's church or an employee meeting, how the front rows are always empty and you eventually do fill in. So, please, you're welcome to come on up and spend some time with us.

As Kathleen pointed out, we have lots to talk about today and I think we're going to be giving you some information that is new. It's not necessarily news, but it is more detail -- as it pertains to longer term outlook for the Company and the utility, in particular. And we'll create a context for you in terms of the utility capital program with respect to the overall company's financial picture that will provide a level of detail and fulsomeness that we haven't provided in the past. And I think you'll walk away feeling quite good about it. I certainly feel quite good about it and am eager to get started in that regard.

THOMSON REUTERS

So, a little bit about our philosophy at the Company, if I may, and then we'll get into some of the numbers. It all begins at PSEG with our employees, without question, and we are beyond fortunate to have the cast of employees that we do have. And it is often said that, while we still have not crossed the bridge, whereby the first two words out of our mouth when we meet with employees is anything other than good morning or good afternoon. But certainly the third and fourth words when we meet with employees are operational excellence.

And as a matter of fact, some people accuse me maybe of the first two words being operational excellence and the third and fourth being good morning. But we impress upon our employees, whether it's the 91.1% capacity factor at our nuclear plants or the 1.7% forced outage rate at our combined cycles or the 58 minute Kd results or the quality of our proxy statement or the accuracy of our press releases, that throughout the Company, operational excellence is first and foremost on our minds.

And I think you'll see some numbers later on from Ralph and from Bill and from Randy and Shahid, that point out that we've delivered on that promise and that's resulted in a level of financial performance that we're quite proud of in light of the business environment we face.

We've hit our earnings target. We've created a very strong balance sheet. And really, the theme today is about how we're going to deploy that balance sheet into some very disciplined investments. Investments that we believe, strongly, are what our customers need and are demanding today. But a little bit more about that in a few minutes.

So, last year, 2012, I won't read you the numbers, you can see the assets and the operating earnings by company. Starting on the left side of the screen, the utility, the usual list of accolades about its reliability, its performance, its customer satisfaction, I cannot say enough about that. But the story looking ahead is the capital program to reinvent the grids to a certain extent and I will spend quite a bit of time focusing on that later on.

Power, the story is one we've started to shine a light on. The flexibility of the fleet, the fuel flexibility, the technology flexibility, the consistent favorable physical location, the consistent favorable environmental position of the fleet is standing as well in a very, very challenging wholesale power market.

And in holdings, not only a fabulous job of derisking the balance sheet, but now starting to grow some fledgling businesses that are performing quite well for us, some very attractive unregulated solar energy projects.

So, if you'll indulge me for a moment as I look backward, prior to looking forward. 2012, a year of significant accomplishments, for the sixth year in a row we've hit our earnings guidance. I don't know that we didn't do it in the seventh year, but for very selfish reasons, I've only been counting six.

PSE&G now over 40% of the consolidated operating earnings of the Company, record output from our combined cycle gas turbine units, as gas has become in favor on the dispatch curve. The utility recognized in a variety of places, fifth time in the last eight years as the most reliable electric utility in the nation, 11th time in a row in the mid Atlantic and a bunch of awards for its outstanding response to a myriad of storms that we've experienced in the past 15 months. And a two-week period that was a defining event in our history, namely Superstorm Sandy, which we will have much more to say about later on.

And then, a very quiet thing that we did, which I don't think we often talk about and we should. Namely that we, without event, extended the contracts of five of our six labor unions, all of the major ones -- we have one major one that we didn't get to, but that doesn't come due until '14, at very, very fair and reasonable terms.

And I will submit to you that one of our competitive advantages is the progressive enlightened nature of our union leadership. We are quite fortunate to share our company with them, to share an operating experience and very often a cup of coffee with these men and women who are just outstanding and true partners in running the Company successfully.

Lastly, on the investment front, we had some key regulatory approvals, in particular as it related to our transmission programs. We are expecting a decision from the Board of Public Utilities on our solar filings made last July. We're expecting to hear something by May 1st on that.

We did get 400 megawatts of peakers in service, ready to operate and they did operate in New Haven and in Kearny for the summer peak demand and holdings -- added to its fleet of unregulated solar projects supported by long term PPAs.

That takes us to '13, where we are reaffirming our earnings guidance of $2.25 to $2.50 a share, following last year's operating earnings of $2.44 per share.

So, what's different about '13, if in fact, the guidance is exactly what you heard us offer in '12? Here, what we've tried to show is the percentage of earnings and where they are coming from and we've taken you back to 2009, albeit just a year after the gas price spike which drove the commodity earnings potential of PSEG Power, where it was essentially almost four to one times larger than the utility, to this year, where if you take the midpoint of the operating earnings guidance for each company, which we've publicized, you can see the utility is half of the Company and slightly larger than power.

But the story does not end in '13, and that's what today is about. We've heard you loud and clear saying, gee, what happens after the next three years? We thought you'd get the message when we've answered that question well for each of the past five years, about the next three years not being the end of time. But nonetheless, we'll give you a little bit more visibility out to five and six -- I think we're just going out to five years today.

So, if I take a look back to where we were in 2008 and where we are in 2012, no one likes to show operating numbers that have a negative first derivative. There's just no if, ands or buts, there's no way to put a happy face on that. But if you look at that $2.91 going to $2.44 in the context of $70 of PJM West round the clock prices, compared to the $34 that we have today, I believe our strategy of making sure we get the most out of those power assets while growing the utility has at least offset a fair amount of what would have been an otherwise very, very challenging picture.

We've outperformed even our own expectations in terms of O&M growth. We have nearly tripled the transmission rate base. We took utility distribution spending from zero to $955 million, that gets contemporaneous returns. We opened up a quasi new line of business in terms of solar and energy efficiency to the tune of $900 million, in contemporaneous return.

We've maintained consistent solid performance at our combined cycle units. We eked out a few more terawatt hours of power from our nuclear plants, both in terms of running the assets better and expanding the output of Hope Creek, and we've started to grow this unregulated solar business. So, a pretty good run from '08 to '12.

But the event of '12 that, once again, defines us, and I know I'm repeating that expression but it can't be overstated, was Superstorm Sandy. I'm not going to read these statistics to you. But I am going to ask you to indulge me for about three minutes as I show you a video slideshow that we planned to share with our shareholders, as well as our employees about what Sandy meant to us. Now, do I have to do anything, Caroline or Kathleen -- no, it's the same. Thank heaven. Thank you. We can show the slideshow.

(VIDEO PRESENTATION)

Unidentified Speaker

Radar showed a storm nearly 500 miles wide would affect the eastern seaboard, from Florida to Maine. But it could only hint at the devastation Sandy would leave in its wake. With an unprecedented storm surge, cities and towns disappeared under black waters. Subways, power plants and 10s of thousands of homes were inundated and falling trees downed miles of power lines, snapped poles and destroyed buildings.

Shattering the records set by Hurricane Irene, Sandy became the most destructive storm in PSE&G's 110 year history and the worst natural disaster to ever strike New Jersey.

With lessons learned from Irene, PSE&G addressed challenges of the past to face the coming threat. The Company positioned out of state crews prior to the storm's arrival. Communications were upgraded, providing local officials and customers with critical updates and information. Mobile customer service centers were deployed to deliver food and water and charging stations helped customers stay connected with family and friends.

And PSE&G employees, many without power in their own homes, worked tirelessly to restore power to more customers in a two week period than any utility in America had done before. In the first three days alone, electric service was restored to over 1 million customers and PSE&G's power plants were ready to meet our customers' energy needs.

While the Company received outspoken support for their restoration efforts after the storm, PSE&G continues to work to make its system even more resilient against natural disasters.

The men and women of PSE&G are committed to making New Jersey energy strong, safe and more reliable than ever.

SI-SSA-0015-12207

So, a couple of observations on that point. First of all, I cannot over emphasize how much personal sacrifice employees experienced to make sure the customers came back. And while all eyes of policymakers and the media were on customers, one thing that no one noticed, and just a huge acknowledgment here that we need to make, was that every time a circuit was restored, there was a power plant able to deliver electricity through those wires.

The folks at PSEG power were every bit as responsible for the successful and safe restoration of electricity to 2.1 million customers. There was no problem with the grid when we watched load collapsed by 80% and there was no problem with the grid -- the high voltage grid when power was there to respond as customers were turned back on.

And that meant, successfully closing Salem during some pretty nasty conditions in the Delaware River, successfully bringing back our combined cycle gas turbines, successfully bringing back our peaking units with people working in the dark, in the cold around the clock. And it was just an amazing thing to watch.

It was equally fun to answer, personally, quite a few emails from customers. And I will tell you, it was actually rather heartwarming, customers would write, and it's interesting to see what panics people. In some cases, it was the absence of access to life saving equipment. In others, it was the looming early decision deadline for college applications in the absence of computer access. And whenever I would respond, in every case, the response back from the customer was, thank you so much. I know you're hard at work.

Except one customer wrote back, thank you so very much for responding, but you are still, without a doubt, the worst CEO and the worst run company. Suffice to say, I did not respond a second time to that email, but that was the two week period. So, it was quite an experience. And it was something that made us think hard and in a couple of slides we'll talk about what that thinking led to.

Here you see a set of numbers that are business as usual. By that, I mean, what we have discussed with our colleagues at the BPU, what has been approved, what we've discussed with our colleagues at PJM, what they have approved and put in the RTEP.

And that's a capital program, in the next three years, that calls for a little over $6 billion in investment, 70% of which is aimed at growth and 80% of all of the investment at the utility, the lion's share of the growth taking place at the utility, and once again, the centerpiece of that investment being in the transmission arena. This is already approved, in the works, engineers at the headquarters working on the work packages and getting that out to the field.

Now, we've talked about our $3.9 billion 10-year energy strong program, and in addition to that, the $1.5 billion transmission program, that we believe are essential for meeting what we're calling a new normal for our customers. And we'll give a little more detail on that in the next slide. If all of that were to occur over that multiyear period, here's what it means for the next three years.

Okay, so I'm not forecasting 10 years here, I'm just giving you out to '15. Caroline will give you a little bit more information out to '17 later on. And what you see is the 70% growth becomes 80% growth investments and the utility consumes 85% of that capital and the $6.1 billion becomes $7.6 billion over the next three year period.

Now, let me pull back a second and ask a question that I've often asked in the past of this group, but nonetheless, I want to repeat now. How many of you are our customers? Okay, fair chunk. I remember that in the past. So, I'm going to speak to those of you who are our customers, both as investors and analysts and as our customers today.

So, I will often congratulate Ralph LaRossa and his team at the utility, because they deserve it, people like John Latka, our division managers. I would argue there are none in the industry who are better at restoring customers, once they are out.

And in fact, throughout the Sandy and post Sandy era, people would come to me in my community, you must be tired, you must be exhausted having to deal with what you've had to deal with, and I say, yes, I am tired, but rest assured, my most important job is making sure that Ralph LaRossa's coffee cup was filled so he could do the real work of getting customers back.

And the last person you want in managing the emergency response and it was Izzo, and you wanted it to be LaRossa and he did an outstanding job. But I think Ralph would be the first person to tell you that outside of the Sandy type events, where everybody loses power, but on the day to day events, which are the ones that earn us the most reliable electric utility in the nation awards, it is not the current set of management team that are responsible for the outstanding performance of this company.

It was the foresight and the thinking of teams of engineers and network designers, decades ago, that realized a very simple fact, that you will do better by customers if they're being fed in more than one direction. So thus, our network is designed, in many parts, not throughout the territory, to feed customers in a different way if their primary route of getting electricity is down.

THOMSON REUTERS

SI-SSA-0015-12208

So, we have the switching capability and the network design that achieves better levels -- lower levels of customer interruptions in most utilities. Even with a predominantly overhead system.

After Irene, after the Halloween snow storm, after Sandy, after getting those kinds of emails that say, thank you for your message but you are the worst CEO in the business, we said, wait a minute, something is going on here. Everyone is focused on demand growth slowing down, why are customers absolutely insane when they lose their power?

I mean, think about that we did as a nation during Sandy. We were shipping in military transport utility trucks from across the nation to restore customers. Think of the marginal cost to restore that last customer when we were doing things like that.

So, while demand is growing more slowly, what's ever, ever clearer is that our lives are much more centered around the use of electricity. Call it what you want, a digital economy, a digitized society, people cannot live without the electricity in their home, for a variety of reasons, beyond a finite period of time. And for some people, that finite period of time is measured in hours, in others, its days, but for no one is it measured in weeks.

So, number one, was the massive change in our lifestyles since the foresight that was demonstrated by the engineers of PSEG decades ago.

Number two, I happen to be a believer in climate change. I'm not saying the last 15 months is proof positive that we've had climate change. But I'll be darned if I'm going to be the one standing here for the next Sandy, the next Irene and if someone asks, what have you done about that, and my answer is nothing.

So, the severity of the weather that we've experienced -- weather patterns that we've experienced, the types of storms that we've experienced are clearly happening with increased frequency, whether it's climate change and due to manmade impacts or whether it's a cycle in the natural ecosystem, we're in it and it’s happening and there's something that needs to be done.

So, we said, what can our customers afford and what's the maximum value we can produce for them and we have two -- we have a few opportunities here. We have a low interest rate environment. We have highly available labor. We have a declining forward price as compared to where BGS was.

And equally, if not more importantly, we have a couple of components of the bill that are coming to an end. That would result in lower rates, if we just let time take its toll, and these have to do with the deregulation of the industry back in year 2000. But if we capture the moment of all of those forces, we can literally implement this program and hold bills flat.

So, we've been criticized by some people that say oh, you have to believe in fairy dust to think that you could spend $3.9 billion and not get paid for it. That is nonsense. Of course, we're going to get paid for it. But the customer won't be paying more than they're paying today.

We've had extensive conversations with policymakers, both in the administration and in the legislature. We've talked to senior staff of the board of public utilities. I'm not suggesting we've dotted I's and crossed T's by any stretch of the imagination.

But, I am delighted by the fact that the consistent foresight and progressive thinking at our board of public utilities and in our state government realizes that this is the time to do something of this nature, and we will now spend the coming months deciding whether or not the $1.7 billion for the 40 utility substations or the $454 million to finish out our SCADA systems, et cetera, et cetera, are exactly right.

I have confidence in our team that we have picked the things that are exactly right and, at the same time, creating almost 6,000 jobs for the economy of New Jersey. Ralph will go through a little bit more detail on this in his presentation.

So, let's talk a little bit about power. The middle -- the left pie chart and the right side pie chart are things that should be familiar to you, the middle chart keeps changing. The flexibility of our fleet is constantly in play, constantly being tested and constantly rising to the challenge. It wasn't that long ago where that nuclear piece was 50%. Now, you see it growing at 57% as we get more and more out of our nuclear plants.

The orange and the dark blue, you tell me what the spark spread is, you tell me what the dark spread is, I'll tell you what that piece of the pie is. But whatever that piece of the pie should be, will be what the market determines, and we're ready to deliver on that set of numbers.

It wasn't that long ago where that 32% for natural gas was, I think, 15% and the 11% for coal was 35%. And I believe in those numbers, in that 11% slice of the pie for coal, some of those coal plants were running on gas. So, we not only have the ability to switch from one plant to another, we have the ability to switch within a plant from one fuel to another, and Bill will tell you more about that as will Shahid.

THOMSON REUTERS

SI-SSA-0015-12209

So, I've talked already about what we've done in going from '08 to '12, now let's talk about what we will do to get from here to '15.

So, in '13, we've given you the $2.25 to $2.50 a share guidance. From '13 to '15, we expect O&M to grow by 2.2%. And rest assured, we are always, always tackling those numbers.

Our rate base will grow by 40%. Our transmission alone will double. Our E&G distribution, if we get the energy strong program, will increase by nearly 16%. You'll see another 16% growth in our solar investments, in our energy efficiency investments. We'll further improve upon our strong performance in our forced outage rate at our combined cycle units. The peach bottom upgrade will materially increase the output from our nuclear generation. We'll look for additional projects and holdings, and we will have LIPA as of January 1, 2014, contributing to the bottom line.

And how are we going to do that? With a balance sheet that our finance team and every member of the Company has steadfastly protected. You could see what we've done to that balance sheet from 2009 to 2012, strongly, strongly delevering PSEG power.

Okay, so what are we going to do with that balance sheet from today to tomorrow? We will be able to make these investments with room to spare. With investment capacity left over, without one red cent of equity needs from outside the business.

Kathleen tells me she keeps getting calls on this. Let's put that to bed. We will grow this business. We will support the dividend and have room for modest and sustainable growth, and we will do that and end up with a balance sheet that you see on this side of the equation, the room for additional investment capacity. Because we are darn proud of that 100 year history of paying dividends on an annual basis and the 3% growth that we've seen over the past 10 years. And this management team isn't going to be the one to do anything, but continue that pattern over the future.

So, with that, I think you're understanding that our value proposition going forward is, once again, operational excellence, getting the most out of the tremendous asset base we have in PSEG Power, the fuel flexibility, the technology flexibility, continuing the outstanding track record of PSE&G, and designing that system for a completely different future than the one we've operated -- than the operating environment we've had in the prior century.

And I will be back later on after, Caroline finishes her remarks, but for now, I will turn it over to Ralph LaRossa to talk to you more about the utility.

Ralph LaRossa - ***PSE&G - President***

My goal is to only make the lights go out here once, and then Bill will do it no times because he runs a nuclear plant. Utility guys can make a mistake every once in a while.

Good morning, everybody. My goal here today is to kind of leave you with three things, just a reminder of who we are, how we operate, hopefully show you a little bit about our history and what I believe is some really good work that we've done. And so that you believe in us a little bit more, and then, set a clear path for you as to where we're going in the future.

So, without anymore ado, Ralph put this slide up, and he talked about our people. It's 1,000% true. Everything that I'm going to show you and explain to you about our response to Superstorm Sandy starts exactly with that, it's with the people that we have here. Ralph mentioned the fact that we have good relationships with our labor leaders.

I have to tell you, during that storm, there was never one phone call that came in from any of our union leaders that asked the question about, hey, how come you're treating people this way, how come -- the only question they ever came back to us was with was, how can we help you more? It's just a great, great organization to be part of, and can't say enough about those folks.

But we build that base and then what we try to do is, we try to align our interest with the interests of the policymakers, whether those are policymakers in the state of New Jersey or policymakers at FERC.

So, it's all about aligning our initiatives with public policy and using that base that we've talked about, and that Ralph explained earlier, about making those investments and put those two pieces together and being able to grow our business. Each one of the initiatives that I talk about that we've completed, and each one of the ones that I'll be talking about are all focused on exactly that.

THOMSON REUTERS

So, just a reminder, if there's anyone new in the room, I know there's a lot of customers, our service territory, take a straight line from the George Washington Bridge, go down to the Ben Franklin Bridge, 30 miles on both sides, slam in 2.2 million customers in the middle and try to keep the lights on and the gas flowing for each of those customers. That's our service territory.

What I want you to take away from this slide, though, are really three things. One, at the top of the slide, you can see that the growth rate of customers in that service territory has been rather slow. It's less than 1%. So, you look at that and you ask the question, how can you grow a business? Well, it's all about the replacement and reinforcement of the infrastructure, as well as the growth in our solar and energy efficiency businesses. So, I'll explain each one of those as we go.

The second thing I'd like you to take away is the section on the approved ROEs. That, to me, has always been a clear signal from the regulators as to where they would like to see investment. So, it was 10 years ago now that a tree fell in Ohio and when that tree fell in Ohio -- it's actually been 10 years, I can't believe it, it's been 10 years. It feels like yesterday we were in the control room, Ralph.

But -- and we kept Ralph away from the buttons back then, too, so -- but when that tree fell, FERC stood up and said, we're going to set policy and we're going to put rates of return in place, so that we can incent investment, and they've done that. And we responded, as a company, by aligning our investments and our plans with those -- with that desire from the regulator.

Same thing has happened in New Jersey where they've said from an energy master plan standpoint, we'd like to move ahead with solar, we'd like to move ahead with energy efficiency. So, we aligned our investments the same way. And that's what you see at the bottom part of the page, which is -- how we've actually executed on the plans that we were given approval for already on a solar loan, our Solar 4 All and our energy efficiency programs. So, a real good example of where we've intersected the public policy and our business initiatives.

So, that's who we are. Let me tell you a little bit about how we run the place. We thought 2012 was a challenge. 2011 was a challenge. And we had -- I sat up here in front of you and did what Ralph did earlier, which was ask you how many of you are customers? By the way, how many of you are Long Island customers? LIPA? Only a few.

Okay, so next year, hopefully, you won't be too mad at us and we'll explain that at the tail end. So, it'll mostly be New Jersey customers we'll still be talking to. But we're very proud of the results that we've given to all of you who are New Jersey customers. And if you look at the slide that's up here, we were recognized by a number of different entities for our reliability and for our response to Hurricane Irene and to the snowstorm that came through in October of last year.

So, we felt very good about our response, about how we've been recognized. It was from entities like PA Consulting which gave us the number one utility -- reliability in the nation, the folks from EEI. And we've also been [given] awards on our customer service side of our business, as well as our gas side of the business, specifically in the area of safety, which is so important these days in that area.

So, we were sitting there thinking that we've done pretty well, maybe we'll get a little breather and along came Sandy. Now, I put this slide up here and I'm going to spend a few minutes on it. So, it's rather important to take a look at each one of those pictures that you see.

I'll start in the top right hand corner, which is what everybody recognized as they were driving around, that's the overhead damage that we experienced. So, if you take our 1.9 million customers, about 1.1 million of our customers were impacted due to the damage that the wind caused in our system. You saw the video, you saw how the hurricane came in, and a lot of that high winds that run in north side of the eye all came in to the top part of our service territories, did quite a bit of damage.

So, when you look at what we've aligned ourselves with in our Superstorm Sandy filing, Sandy response, it's all about aligning our investments with the damage and the types of things that we saw. So, folks ask -- Leslie asked before we started, can you really spend this? Is this really -- if everything that we have in our filing is completely aligned directly with the damage that we experienced during Sandy?

So, the top right hand side is the overhead damage. So, what are we doing on that front? You'll see us, in our filing, if you look at the details, and Ralph had a little bit of it up there, we're going to respond by making some of those loop systems that our predecessors put in place. They come back in. They feed our customers, about 1,000 customers are in each one of our circuits, loop it together. So if a tree falls on one of those circuits, we don't impact everyone. We impact only about 250 customers because they're split up into four segments.

What we've started to do, and what we'll continue to do is further segment those circuits. So, instead of having four circuit segments, we'll have eight. And at some places, we even put 12 in place. So, use a smart grid technology, we're able to reduce the amount of impact that any one damage has, directly responsive to the storm.

We're talking about undergrounding some of our systems. We've identified about 20 miles of circuitry that we want to put underground, as well as some transformers and other assets that we had that were flooded out that are in our outside plant and we're going to underground those facilities.

© 2013 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

But in there, if you look at the filing, it's about $60 million for the 20 miles. So, as we've said and many people in the industry have said, $3 million a mile. Quite expensive. So, you really have to have focused efforts on that. But there's a few other things that we have in that area, but really, what we've tried to do is again is align our interests and our investments directly with a response to the storm, as policymakers in New Jersey have said.

The picture on the bottom right, I'll give anybody $1 if you can figure out what that is. But that's a control that caused all of you to get in gas lines. That is a control that was in our Sewaren switch that impacted many of the refineries and the tank farms that pump gasoline out of -- in New Jersey. So, that particular control, there's literally hundreds of them in our Sewaren switch, was underwater. Halfway up that picture, if you look, is the water line.

So, when we saw the video to talk about the black water, that's the result of what the black water does when it comes into your controls. We literally had to go in, by hand, with a toothbrush and clean out every one of those contacts. So, when we get back to that foundation that we talked about and the work the people do and you have an engaged workforce, just think about all the people that were working 24 hours a day to clean that up so we could restore power. Same thing was happening in Bill's part of the business. Same thing was happening in many other areas across the state in many of the utilities.

So, when you look at our filing for Superstorm Sandy, it's all focused on how we can try to improve things in our substations and switching stations that are in low lying areas.

So, four things that we're talking about in that area, one is to build some walls, some temporary walls, and secondarily, some permanent walls, so we can protect those assets, pump the water out from behind them if it gets in place. Third thing we're doing around those stations is actually lifting them.

So, we'll raise some of the assets so that we get above the flood plain that Governor Christie's come out with from the FEMA flood maps, where they've said they want to rebuild to. So, we're going to strengthen New Jersey, rebuild, again align with policymakers. We'll lift those assets up.

And finally, we'll build some redundancy into this system. So we can feed this circuits and those areas from elder circuits and from elder switching stations. So, those tank farms have a redundant source of power coming into them. So, multiple ways that we're trying to address the bottom right hand side of the picture.

The bottom left, our customer service centers, that's where all of you were trying to get information. When is my power going to come back on, what's going on, has the crew been dispatched. We also, in this filing, have identified a couple hundred million dollars of investment that we want to make in our IT infrastructure, so that your mobile devices get information that's meaningful to you.

Right now, we still give information that's generic to the utilities, timeframe that the lights will come back on, about how many customers we have out. The end of the day, in this society, as Ralph was saying earlier, everybody was just -- how does it impact me? So when will the lights come back on at One Main Street. And we're going to put some technology in place, tied to that overhead work that I mentioned which will give us better information so we can communicate better with customers.

And then, in the top left, that's our untold story from Superstorm Sandy, 41,000 customers were without gas service. We had to go in to 41,000 individual homes, clean out the meters because there was water infiltration and then, after we cleaned out the meters, go up into each one of the premises and relight the appliances. So, what you see there is one picture of one apartment building in Hoboken. And the amount of work that was needed.

So, what have we done in our energy strong filing? We've identified many of our gas mains that are low pressure, so the water can get into them if it gets too high, not high pressure mains, but low pressure mains that are cast iron. We've identified those, we're going to replace those mains, bring in high pressure, insert them with plastic, and you'll have that problem resolved in the future.

So, what I ask you to think about is every one of those pieces of the puzzle in that $3.9 billion filing we made with the state of New Jersey and the $1.5 billion that we're going to be making through our FERC regulatory process are all aligned with solving issues that you see on this slide.

We also think we did a halfway decent job from a logistics standpoint during the storm, but what I all ask you to take a focus on is the bottom left hand part of this slide, and that is what you should be all telling your kids to do, as Ralph mentioned, become a lines man.

We did bring in 1,000 folks in advance of the storm and we thought we were well prepared, not only did we bring people in, but we did put up sandbags around some of our substations that we had traditionally seen flooding, we did all sorts of preparation work with our workforce, but at the end of the day, that top right hand picture, that I mentioned, where you had the overhead damage is all about hand to hand combat and putting people up in the air to get the lights back on.

So, what you see there is a trend line of actually bringing personnel in and there's two big bumps in that line that I'll just point out to you, one is about halfway through the chart and that's when the power was restored in the Delmarva Peninsula. So, we started to get workforce that came up and helped us.

THOMSON REUTERS

The second big bump at the right hand side of the chart is when the nor'easter passed the Boston area and the crews were released from the Boston area. So, at no time during this storm were we or any other utility in this area not asking for help, we had identified right up front, once that storm hit and the severity of it, that we wanted additional personnel, but they just were not available from the industry standpoint.

We were flying people from California, that's how hard it was. So, if your kids are wondering what they want to be when they grow up, there's a lot of opportunity to be -- to work in the line workforce.

The logistics that we had to pull together 4,000 folks, that just gets right down to the hard work that's done by all of our employees in our back office. As Ralph said, he filled my coffee cup, I fill a lot more coffee cups, because there's a lot of great people that do work there, Dave Daly, Kim Hanemann, folks that work day in and day out really pull together and we're able to put 4000 people in beds, making sure that they had work every day when they woke up so that they could be out there and being productive.

And finally, with all of that gasoline -- all those gasoline lines were out there, we're able to fuel those trucks and get them on the road, we never had crews waiting at all during the entire storm for gasoline to be pumped into their trucks. It was always done the night before and it was all preplanned. So, just great work by a number of folks.

Which resulted in -- when you look again, we always want to get better, but if you compare us against a lot of the other utilities in the region, we did a pretty darn good job, almost had 1.8 million of our customers back by the end of the seventh day. You can see the growth that took place here.

And just comparing the orange being the response that we had to Superstorm Sandy and Irene, which we thought was a really big storm in blue, is just shown below that and the amount of damage that was -- the difference in the damage and difference in the customer impact is pretty dramatic. So, again, just a focus on what the employees were able to do and the work that the team pulled together.

So, we don't just run a good operation, we've done pretty decent job of growing the earnings and the utility and executing on the plans that we've identified. You can see, back from 2008, we've had about a 10% growth rate in our earnings, and I'd just point out to you, that if you took 2012 and you added back in the impacts of O&M for Sandy, that'd add back in about $0.04 and the impact of the reduced revenues would be about another $0.01. So, that number would have been about $1.08, $1.09, depending upon how you want to take a look at it. So, that growth plan has been put in place and it's been executed on by the folks in the utility.

And it's been done two ways, the first has been through the growth in the rate base. You could see here that rate base has grown about 7%. Our electric distribution, while it's gone down as a percentage of our total rate base, it stayed a little bit flat, a little bit of growth from our capital investment programs, which we've executed on and I'll show you in a second, our gas distribution, about the same story there, pretty flat, a little bit of growth. But the big area of growth has been the two quote, new areas of focus that regulators and policy makers have indicated to us the investment should be made in.

First, is on the transmission where we've grown that rate base from 13% of it 28% and the last piece being our renewable and our energy efficiency programs.

Little more detail on the transmission side of our business, we can see here, 2009 and '10, a little bit below our plan and we've really ramped up and executed in '11 and '12. What's been the difference? We are learning organization, we try to implement the lessons that we've learned, it's a big change in our understanding and our execution on the permitting process.

Last year I stood up here and talked to you about Susquehanna Roseland and some of the challenges we had in the national park service, that's not the reason for that, but we had other, smaller projects that were very similar in getting local approvals, and as we've learned the process, we've been really able to ramp up and execute on that transmission plan.

The transmission piece, again, aligns with the FERC regulators and their policy, what was aligned in the state of New Jersey, renewables, our Solar 4 All program, our solar loan program, again, executed on. We've got a little bit left to do in spending in those two programs, our energy efficiency programs. Again, good execution across the board there, the last one that was approved in July of 2011, that $81 million of spend will be about $40 million in this year and about $41 million next year in '14. So, a little bit left on that program, but that was the original schedule that we had laid out.

And then, the investment in our core electric distribution and gas distribution businesses was completed on the plan. The little bit that's left in electric, the $20 million is electric and that was pushed out a little bit because of Sandy and our response to Sandy. So, we didn't get that completed. But the regulator understood that and gave us an extension through the first quarter of this year.

THOMSON REUTERS

SI-SSA-0015-12213

So, that's the first piece, we've grown the capital. Second piece is, we've kept our own end flat -- flattish. We've gone from 2008 to 2013, we'll have a compound annual growth rate of 1.4%. So, investment being executed on and a good job by folks running the core business day in and day out to keep their expenses down throughout the entire length of that growth program that we've executed on.

So, where are we going? This is, as Ralph mentioned, our first time that we've talked about giving you a picture out five years. You can see what we've done through '12. That's the piece that I just spoke about, and I'm going to give you a little bit of a view into '13 and beyond. '13, good plan in place, very little of it associated with proposed filings at all that are in that '13 plan.

Most of it is actually right on our existing approved programs, and then, as we get out into '14 and beyond, it's all about our capital spend that's associated with the filings that we've discussed, our solar filings which we expect to hear in May, our Energy Strong filing, which is just been put out last week, and you've all read about it, and again, we think very well aligned with what the policy folks in the state of New Jersey are looking for, and then, our energy efficiency filing that we expect to make in the upcoming months, so, additional energy focus on the same type of programs that we've executed on in the past.

This is a little more detail about those. So, you can see where we take the utility from $6.9 billion to $10.6 billion in -- after all those proposed filings are executed on, and you can see the business mix, where we were very focused on transmission during this last timeframe, but as we rebuild New Jersey, as we rebuild the infrastructure, we start to focus a little more on the distribution going forward. Again, that alignment with the policy.

Here's just a little bit more on each one of those programs, broken down, but what I really want to focus on is the type of return that we get in this area. If you think about the way PSE&G and many utilities in the past were set up, a lot of the returns were traditional rate making -- you go in, you spend the money, and then you go back and have the true regulatory lag.

FERC, again, to incent the investment came out with a program that we've aligned with, which is the formula rate program. So, we've made those investments in transmission and as a result, we get contemporaneous return on those investments.

The state of New Jersey was also trying to incent investment in the solar area, in the energy efficiency area, and in those four distribution assets as there was a lull in the workforce, and they wanted to put some people to work, and they gave us that same type of alignment. That's why we've asked for the same type of treatment on the energy strong filing, because it's completely aligned with the policy to try to rebuild New Jersey better than it was when Sandy hit.

So, I'm going to take a second to go into a little more detail about transmission, I promise I won't bore you too much, but I think it's important to give you a little bit about each one of the major transmission projects that we've undertaken and where we stand. We have our Susquehanna Roseland line, which is the biggest line that's had the most visibility. That's the line that comes from Pennsylvania into northern New Jersey.

Our northeast grid reliability, which builds up our system in the northeast, just like it says, up by the George Washington Bridge area. North Central Reliablity is in the center part of our state, brings some power up into northern New Jersey, and then the reinforcements that we have down in the southern area that are all down outside of Philadelphia.

So, we'll start with Susquehanna Roseland. Last year I sat here and told you about some of the challenges with the permitting. Well, I'll tell you what our two major challenges are this year, the first one was a line workforce, back to what your kids should be when they grow up. A lot of the folks that were working on our Susquehanna Roseland line went off and were assisting us and other utilities during Superstorm Sandy.

We had to get those folks back, get them back on schedule. When you look at our total schedule with -- we're within one week. We've brought that all back in, we lost a little bit of time during Sandy, but within one week of our planned schedule. That's one issue.

Our second big issue, and another thing you should have your kids think about are snakes. Yesterday we removed 57 copperhead snakes from the project. We take those snakes out, we bring them to snake rehab, we let them relax a little bit, after we're done with our work, we release them back into the rightaways. 57 snakes yesterday were taken away out of the area.

We have cornered the market on everybody who handles snakes in New Jersey, they were working on this project. But that's a real tower that's going up on the lines today. No more pictures about what may be, it's no more artist rendering. That's an actual tower that's been built.

Our Northeast Grid Reliablity project, this is the only one of those five major projects where all permitting is not completed at this point. We have two towns left to get our permits through, West Caldwell and North Caldwell, we've continued to have conversations there. But we've started working the areas that we can. So, what you see here is a picture of some of our underground transmission work that was completed in the Jersey City area. So again, execution has started, a little bit left on the permitting side on the local level, but well on our way to move forward.

THOMSON REUTERS

Our North Central Reliablity project, any of you that are down by the Livingston Mall area, Short Hills Mall area, you can see the project being built there along route 280. It's going up. These are actual towers on the right of way.

Some real things that have helped us in this, we had a low rainfall last year in the fall, a lot of the swampy areas that this right a way goes through were down, so we were able to get in there very quickly and start to build the line, those are -- that is actually the first three towers that you see there are the new monopoles that are up, if you can look in the distance, you can see some of the lattice towers that we are taking down. We're executing on it.

Just a little bit of a tidbit for anybody that lives in the area, you can see the wires on the inside of the poles, that's because we're making sure that the electromagnetic fields are dissipated as much as possible to get to the edge of the right away, so we stick those lines together, they cancel each other out and are inside the poles.

So, again, good execution. Well on our way on the North Central Reliability project.

Burlington-Camden. Under the radar screen, to a great extent, not a lot of people talk about this project. That's our Burlington yard that you see there. Completely taken down, the transmission's being rebuilt already. Back in there, we've installed a lot of our transformers. All the permitting is completed. Everything that we need to do to site this project has been in place and we're, again, executing on the installations.

And finally, our Mickleton Gloucester to Camden line, this is the -- this one has not moved ahead from a construction standpoint, yet, just because we are that early in the process. But I point to you, if you look, the major permitting and citing has all been completed.

The biggest challenge for this line and the reason we show this picture, it's built over railroads. So, we're going to have to work with New Jersey Transit and Amtrak to get to schedule those times where we can actually be in there and working and we'll have to work through their train schedules and be a little bit of disruption there, but that's the only real challenge that we have left on this project, is scheduling those outages so we can get in there. So, things have continued and Amtrak and New Jersey Transit worked with us, which is why we have those permitting and citing hurdles behind us.

So a good story on transmission. A lot of execution completed, a lot of the permitting behind us and now I'll move into some of the things that we're looking forward to on the state front. As I mentioned to you earlier, and we've said a bunch of time today, the world's changed for us in October. When Sandy came through, we had to stop and rethink everything that we were doing.

The first thing we're waiting on, to get some clear signals from the Board of Public Utilities, was their order on some of the storm best practices that they wanted to see put out across the entire state. So, I think they came out with about 108 recommendations or so, that are needed. We're completely aligned with those, there's really nothing in there that is going to cause us a major change from an expense standpoint.

Only challenge that's out there is our IT infrastructure, to upgrade that and that's for all the utilities, there're looking for some more information, some more transparency for all of your, as our customers, so you can see exactly where those outages are.

Other than that, the -- a lot of those best practices actually came from our company and will continue to be implemented as we go forward. So, that was the first hurdle we had.

The second one was, how are we going to deal with the costs associated with our storm. As we've expressed, the storm itself, to restore the power, to get us back up and running, was about $295 million. The way that we've worked with the board on that is that those costs have been deferred until into a future time. We did that -- that came out in December of 2012, so that order was released.

And then, just on February 20th, just last month, the board has identified that they're going to have a generic proceeding to look at all of the cost for all the utilities, and then determine how they're going to deal with them going forward. So, that's a real good sign from my standpoint, because, again, we think were very prudent in what we did. A lot of the spend that we had was pretty low compared to some of our peers.

And not only that, but the fact that we're going to have that conversation now is a good indication rather than kicking the can too far down the road. So, all good signs, from my perspective, on how we're working together with the Board, on the response to the storm.

But that was just getting us done with what happened up to the date of the restoration. Where we responded is the slide that I spent all the time on, which was our energy strong filing. So, you can see in there that we've got, again, $3.9 billion of spend focused on those four core areas.

THOMSON REUTERS

And in addition to that, $1.5 billion in the transmission side, because that Sewaren switch, as an example, has both transmission assets in it, and distribution assets. So, when we raise those, when we deal with them, they -- both sides of the house have to be dealt with, to do it effectively.

A great example of what happens when you don't do it at the same time, when you don't move forward is our Bayonne switch. Bayonne area was upgraded. Our switching station was upgraded in Bayonne prior to Superstorm Sandy coming through. So, our transmission assets, the work was completed. And as a result, that -- those assets never lost power. We had energy at the switching station.

But the substation that fed Bayonne, was not raised yet. The work was not completed on those distribution assets, and as a result, they were affected. So, we do them at the same time. Again, aligned with the policy of what we're trying to do. We'll get everything completed, which is why you've got both the transmission and distribution needs in each one of these stations.

And let's not forget, everything that we've got from the energy master plan. So, we've got our Solar 4 All extension, which we filed in July. We've got our Solar Loan III program which we filed, again, last July. Ralph mentioned we'll have those -- we expect to have some answers on those by the May timeframe and we do expect to invest additional dollars in our energy efficiency programs. We've identified about $470 million worth of programs that we'll be talking to the Board of Public Utilities about shortly.

So, put those pieces together, got alignment with federal regulators, alignment with the policy of the state regulators, but we got to worry about my mom and dad, who are customers of the utility. So, we can't just keep layering on, as Ralph mentioned, we've got to look at the total bill. So, when my mom and dad get their bill, they don't want to -- I don't want to listen to them.

The first thing when we filed the $3.9 billion, my father called me up and said what's going to happen to my bill. Well, this is what's going to happen to the bill. It's going to stay flat. As we mentioned, the market transition charges, the NUG charges that are in our current bills for customers are going be to rolling off over the next three to five years. As those prices roll off, we feather in the infrastructure. We keep bills flat for the consumers. The reaction, so far, has been relatively positive to that concept, as we do that, and we've been able to, we think, have good positive conversations with board as we move forward with it.

So, putting all those projects on the table, we're not going to put a tremendous burden on the customers. If you look back to 2008 and the impact from the commodity prices, we've gone well down compared to the CPI. That line you see at the top is the CPI. So, buy a gallon of milk, buy an electron, much flatter -- actually, a decrease in the cost of that electron and an increase of cost in that gallon of milk. So, that's the story I tell my mom and dad, hopefully it stands with all of you as we go through the conversation.

We put those pieces together, as we mentioned, that we're going -- this is the range that we have for our operating earnings of 2013, growing from $528 million in 2012 to the range of $580 million to $635 million in '13, all about executing on our approved programs.

So that's the end of the New Jersey side of the river. I'll touch just a little bit on LIPA, and what we have on the front there. If you recall, back in December of 2011, LIPA chose us to manage the T&D system, going forward, starting on 1/1/14. The big takeaway for everyone here, the transition is on schedule. The teams continue to work towards that end.

We all have been reading in the newspaper, just like you have, about some of the thoughts that Governor Cuomo has about privatization. Some of the thoughts others have about municipalization, some of the thoughts others have about continuing the contract to go forward.

The clear signal that we've received, from the regulators and the policymakers in New York, has been to move ahead, to continue with the contract, to be ready to transition on 1/1/14.

Just like we talked about, everything at the federal level and at the New Jersey level, we will align our business with what the needs and the policy of the state of New York is. So, if they move that, we will align and we're not going to get into a battle with folks over each one of these things.

We're moving ahead, we think that the transition is going to provide better service to the customers on Long Island, we've identified three, four, five things that we think we can do tomorrow to start improve things. Just starting with the way we operate the system, the way we trim the trees, the way we communicate with customers.

Those things are easy for us to implement, quick hits for us. We think will show big improvement and those are the big areas that, again, the policymakers in New York have identified as needs for their consumers. So, all -- the whole story starts with and ends with an alignment of our interests with the policy that the state and the regulators put together.

With that, I'm going to turn it over to Randy.

THOMSON REUTERS

SI-SSA-0015-12216

Randall Mehrberg - ***PSEG Energy Holdings - President***

Good morning. I'm going to speak with you about Energy Holdings this morning. We've made a lot of progress at Energy Holdings over the last several years. Most of the large problems, the large issues are behind us. Holdings is much simpler today than it was a few years ago and my goal this morning is to make this very clear and transparent for you.

Our focus today, as we continue to move forward in Holdings, is to continue to derisk the portfolio, to exit the noncore investments and maximize the value that we realize from the investments, to build our contracted renewable solar projects and to pursue other growth opportunities.

So, Ralph just spoke about LIPA. LIPA will reside in Holdings because obviously LIPA cannot reside in PSE&G. Although, the utility folks and the utility experts will run it, structurally, it'll be in Energy Holdings.

So, this chart depicts what holdings look like a few years ago and then, what's left today. Everything on here is depicted in book value, so you can take a look at it from that perspective. If you look on the left side of the chart, on the top of the LILO SILOs, we've exited all of those. They're completely done.

The international investments, we've exited all of those as well. Scott Jennings did a terrific job last year, in exiting the last investment in Venezuela, which was a little bit of a challenge.

With regard to our domestic power plants, we have only one operating plant left. That's a combined cycle in Hawaii. It's a good plant, it runs well, we like the plant. So, it's something that we may decide not to sell.

Unidentified Company Representative

(Inaudible - microphone inaccessible).

Randall Mehrberg - ***PSEG Energy Holdings - President***

Thank you, Ralph. Ralph is not, he's a little -- well, I won't comment any further. And most of the real estate assets have been sold as well. We sold the Qwest Tower in Denver about a year ago. There is some miscellaneous real estate, some more office complexes. We have the Renaissance, a couple of -- two towers of the Renaissance Center in Detroit left, and some other facilities, about 28 Wal-Marts, I think it was 29 yesterday.

So, what have we done with the proceeds? We've paid 100% of the holdings level debt. Back in 2005, that was almost $1.8 billion in debt. That is all paid in full. We've paid the Internal Revenue Service in full, with interest, on the LILO SILO claims. Indeed, we'll be getting a refund in connection with that. We've invested in the six solar projects.

And we've returned almost $1 billion to the public service parent. No new money has been invested or sent to holdings since about 2002. So, since that time, all the money from holdings has come to public service, to the parent, as opposed to the other way around.

So, what do we have left? It's $1.2 billion in book value assets. The box to the far right lays out what they are. Solar Source, on a book value basis, has about $159 million in solar assets. We invested about $240 million, but because of the ITC, the investment tax credit, a lot of that money comes back to us very quickly.

We have the merchant energy leases, with GenOn and Edison Mission. Regulated energy leases, that's our 11% interest in Entergy's Grand Gulf nuclear plant. We have a reservoir, things like that.

And then, we have the remaining real estate that I mentioned, things like a couple of office parks, shopping centers, strip malls, the Renaissance Center Towers, things like that.

The generating legacy assets, that's just the Hawaii plant plus, we're in the process of winding down a California plant, so there's a little bit in there. That'll be pretty much completed this year and then some miscellaneous assets. Some of these assets are challenged, most particularly the Edison Mission merchant leases.

© 2013 Thomson Reuters. All rights reserved. THOMSON REUTERS

SI-SSA-0015-12217

And then, some of these assets are very nice, like the Grand Gulf plant, which is on leveraged lease, which will end in 2015, there'll be no debt when that lease ends. Like the plant in Hawaii, like the Renaissance Center and the reservoir. So, a couple of challenges and some opportunities as well.

So, where do we go from here? We think we've demonstrated a good track record of derisking and moving forward. We are confident that we can continue along those lines. I can't control the timing of some bad things that may happen. For instance, the Edison bankruptcy, but as you look at the portfolio go forward, we've had as many or more good things in the portfolio as bad and we expect that to continue in the future. And then, at the same time, we're investing in things like our solar facilities and our LIPA agreement -- our LIPA management.

These are our solar projects to date. We're very, very proud of this portfolio. All of our projects were completed on time or better. All of our projects were completed on budget or better. All of these projects have long term power purchase agreements with the creditworthy counter parties, and all of these projects are performing well.

The bottom right is our Badger project. We expect that to come online near the end of this year and we continue to look to develop additional projects.

By the way, the slides that Ralph showed you earlier, and slides that Caroline will show you later, do not have any assumptions, go forward, with regard to solar. So, anything we're able to do in the future would just be a positive, but we didn't bake -- we did not bake into the plan additional solar projects, simply because we don't know when we would secure them, when they would come forward. So, we're conservative and they're not baked into our plan.

With regard to what they're producing for us, this is the EBITDA with regard to the solar projects we have in place. This year we project about $12 million in EBITDA. But on an annualized basis, if you looked at this on an annualized basis, it would be about $16 million because the Badger project comes on very late in the year.

So, what this means is, irrespective of any new projects, this is the level of EBITDA that is in these solar project, and these projects have a minimum of 20 year contracts, some have contracts as long as 30 years. And this, of course, is also irrespective of the investment tax credit. So, I know, in the call last week, some people asked about the impact of the investment tax credit, that's on top of what's here. Again, that's lumpy as you do a new project, but that's not reflected here.

So, if we were to stop doing solar tomorrow and not have a team anymore, this -- which is not what we're not going to do, this income -- this EBITDA would continue on a go forward basis.

And that's pretty much it. I hope I was able to make this holdings story simple and clear. I think we've reduced and bounded the risk and I think our future will be nice but modest growth through things like additional solar projects, the LIPA contract and other growth opportunities that we think makes sense for us.

QUESTION AND ANSWER

Unidentified Company Representative

So, Ralph and I are happy to entertain questions.

Unidentified Audience Member

(Inaudible - microphone inaccessible).

Unidentified Company Representative

Yes?

Unidentified Audience Member

Thank you. Ralph, just -- I'm curious it seemed like the estimates of the costs of the storm and obviously your restoration efforts were fantastic, and we give thanks for all the detail on that. But the cost estimates, kind of from what you -- what the numbers were initially being discussed to then where they kind of shook out, seemed to

© 2013 Thomson Reuters. All rights reserved. THOMSON REUTERS

move quite a bit. I'm just wondering what caused that. What caused the kind of incremental expense over kind of the extrapolated type of numbers you may have had initially?

Unidentified Company Representative

So are you referring to the rebuild cost that go out to $3.9 billion?

Unidentified Audience Member

No, more the actual cost of restoration.

Unidentified Company Representative

Well, I think we came out -- I think we were pretty much within in the range that we had identified right in the beginning. We talked between $250 million and $300 million, and we came in at $295 million. So, on a per customer basis, you look at that from a prudency standpoint, that's why I think it's all -- but my recollection is, we from -- right from the beginning, we're between $250 million and $300 million.

Unidentified Audience Member

Okay, well I was -- just misperception on my part. Thank you.

Unidentified Audience Member

Going over to the holdings side of the equation, just when you think about the cash flows over the next few years, is it a net outflow back to the public service parent, sort of pre ITC and post IPC? How much cash can we expect to contribute?

Randall Mehrberg ***- PSEG Energy Holdings - President***

It really depends on a host of factors. How many assets we sell. We have a signed purchase and sale agreement for a medium sized office park right now. So, that would be an inflow of cash. If the Edison Mission plants -- if Edison Mission rejects the leases, that would likely trigger a tax liability.

So, that would be a cash outflow. And then, you have the recurring income that we get from things -- right now, we have a lease arrangement with Entergy, on Grand Gulf, so we get a nice payment for that every year. When the leverage lease expires, we can either renew the lease or sell the interest to them or somebody else. So, there're a whole bunch of variables.

But on a net net basis, what we've experienced is that there were at least as many positives, from holdings as they were negatives. And we've been able to manage all of the obligations through holdings. And I would expect something similar to that in the future, but again, I can't control the timing. I don't know that, for instance, if we sold our Grand Gulf interest, I don't know that, that would coincide with a potential problem at the Edison Mission bankruptcy.

Unidentified Audience Member

And then maybe a follow up there, just in terms of the earnings trajectory. Sort of net of all these factors, what do you think over the next few years as you think about it?

Randall Mehrberg ***- PSEG Energy Holdings - President***

THOMSON REUTERS

Right. So, Caroline gave you a number last week, for holdings and enterprise for this year, and I think the range was $25 million to $35 million. That's a good number. And again, that's subject to certain things. If we sell certain assets, we won't have the continuing income, but we'll have the money from the sale. But we have enough good assets, such that the number that Caroline gave you is a good number.

Kathleen Lally *- PSEG Inc. - VP - IR*

Another question?

Unidentified Audience Member

Ralph, could you talk about your load growth expectation, 0.7% at electric, 0.2% at gas, and why is that above the historical actual growth expectation. So, are you forecasting a pickup in load growth?

Ralph LaRossa *- PSE&G - President*

So, just a couple of things there. If you look at the total customers that have been coming in, we've been at about 0.6%, right? So, we get a little bit more growth on the electric side, on a per household basis or customer basis. So, that's just a little bit of a tick there. You actually lose ground compared to the amount of customers you add on the gas side because you have that energy -- basically, every time you upgrade a furnace in a home, it's got a higher efficiency.

So, we're really not adding any products on the gas side of the business. The electric side, we still got the iPods and the new TVs and the new things that are plugging in everyday. So, a little bit of a tick there, but it's really driven by the customer growth levels.

Unidentified Audience Member

And on FERC ROEs. Could you talk about that and all the discussion going on at FERC about base ROEs?

Ralph LaRossa *- PSE&G - President*

So, sure. We're monitoring what's going on at FERC. I stick by what I said in the beginning, which is FERC has sent a clear message to folks, they'd like to invest. We'll see what comes out of New England. When -- I guess that's in the September timeframe. There'll be some conversation there, we'll be monitoring it.

If there's a signal sent that, going forward, there should be a change in where our investment pattern should be, we'll take a look at it. But right now we're just -- all those programs are approved and we all have those our ROEs first. So, there's no big project that we're waiting to go into FERC and to get approval on.

Michael Lapides *- Goldman Sachs - Analyst*

Ralph, Michael Lapides, Goldman Sachs. How are you thinking about rate case timelines when you come back in and file? That's question one.

And question two, are you expecting pushback from intervenors or the commission itself about filing the energy strong program under a rider or a tracker mechanism versus just the traditional take? Because a lot of -- a lot of this work is on gas main replacement, a lot of this work is stuff that some folks might view as core. Why don't you just fund it as part of typical rate base growth of the distribution utility?

Unidentified Company Representative

Okay, so first piece on the rate case, our current plans do not have anything in there in the near term for a rate case. The way we've been managing the O&M has allowed us to stay out of that type of situation. Because we have some growth from our other -- some parts of our business, so our client service business, which we really don't talk about a lot, has also been growing, that offsets some of the expenses that we get.

© 2013 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. THOMSON REUTERS

SI-SSA-0015-12220

So, if you just look at our electric and gas distribution, we're right at -- we've been earning our allotted rate of return. So, don't have any more detail there, it's right about where we need to be.

For the intervenor status, as we go forward -- and one other piece, if you go back to the rate case. We've been managing our base capital spend at depreciation level. So, you put the two pieces together, your expenses staying flat and you've got your capital at depreciation levels, we been trying to manage the business right at that allowed ROE.

Flipping over to the intervenors and what they're -- I absolutely expect people will push back. I mean, that's what happens in all these processes and then, at the end of the day, we'll find a place that makes sense for the policymakers. If you look again at the history that we've had on the solar, there was push back there. There was push back on the energy efficiency. There was push back on the CIP, the capital investment program.

All of those though, good conversation that we had, but the policy is what drove the day. And I believe that Governor Christie's been very clear about that need to rebuild New Jersey better than it was and to rebuild it in such a way that it matched against those FEMA flood maps and that's exactly what we've put on the table.

Michael Lapides *- Goldman Sachs - Analyst*

Would you do a -- quick follow up, would you do the same size and scalable program if you didn't get the tracker?

Unidentified Company Representative

I think we'd take a hard look at that. I'm not sure we would be making an investment of that magnitude without a tracker at all. I mean, there's just -- if policymakers want us to do it, this is the way we do it, and this is the way investors will want to see us do it.

If there's no tracker, not going to do that type of money at risk for a future rate case proceeding, it just doesn't make sense to us. Because again, if you want to leave the reliability where it is, that's fine. But if you want to raise it, and to be able to deal with the storms that we've had and to meet the desires of the policymakers, then we need the certainty from the contemporaneous return.

Unidentified Audience Member

Ralph, I just want to mention, I think that what you're doing is exactly what is needed, because I think for the infrastructure over here in the US is really poor and the European utilities see us, as they come, they laugh at the US infrastructure. And I think for those people should be paraded to the governor as well as to the regulator, especially in New Jersey, that how they view the US as being such an inferior infrastructure. So, I'm very, very happy that you've taken the stance.

And from a shareholder perspective, also, if the regulators don't give it us, then they shouldn't complain, because investment is needed to improve the service and we lose so much time and everything, especially this last hurricane. It was an eye opener. And it's an eye opener and if the regulators don't answer and the governor doesn't support us, then as the governor says, they should shut up.

Unidentified Company Representative

Can I just add two things to that? No, no, no, they're all positive. Just from an infrastructure standpoint, I do know some people look at our infrastructure and say, why do the poles fall down and everything else? We have to remember, those poles are built right along the roadways, so, yes, there may be better ways to build concrete and steel, but our -- the way our planners and our city planners laid things out, long time ago, they were constructed nearby, so you have to -- you can't make steel poles and concrete poles show up next to roadways.

So, I do understand some of the things that elders say, but there are some -- there's some good reason for why the infrastructure is built the way it was. I'm sticking up for my predecessor, Ralph.

And then, the only thing I'll say, look, Governor Christie has been very good, very supportive of the state. He has been very clear in what he said about rebuilding the shoreline. He didn't want anybody to rebuild their home, to raise it without certainty that they were going to have funding to go back to. That was a statement that was clearly made when they talked about changing the standards. That's exactly why I think the policy is aligned to what we're trying to do.

Unidentified Audience Member

(Inaudible - microphone inaccessible).

Unidentified Company Representative

I'm proud of New Jersey, so (inaudible).

Gregg Orrill - ***Barclays Capital - Analyst***

Hi, Gregg Orrill with Barclays. As you thought about the proposal for the energy strong program and you came to $3.9 billion, what was kind of the -- what you could have proposed? I assume there was a much bigger number.

Unidentified Company Representative

So, everything that we proposed in that $3.9 billion was based upon those four pictures that we showed you. The overhead, we could go higher because you could rebuild loop systems and you could continue to deploy smart grid. So, that's where there's greater opportunity. What we've identified -- and what we think we need to do immediately are in those substations and switching stations. But long, long term and to continue to grow, you could quadruple the numbers that you've got on the overhead side.

Kathleen Lally - ***PSEG Inc. - VP - IR***

Any other questions? (Inaudible).

Unidentified Audience Member

Hey, Ralph, just a follow up on the FERC issues. Have you spoken to BPU are they're getting any indication about what they think is a fair return? Because they're participating on a 206 against ACE, so I was just curious, if they're going to kind of go after holding ROEs in state?

Unidentified Company Representative

No, I -- we have conversations, but that specific one hasn't come up and we haven't had conversations with the BPU about that. I think that if you read through that, the 206, there were some other things in there about transparency in the process. We've gone through that. We've been very transparent. We have our meetings all the time, so I think we've been holding good productive conversations all along.

Kathleen Lally - ***PSEG Inc. - VP - IR***

Anything else? With that, we're going to move to a 15-minute break and we'll be back here for Bill Levis and Shahid Malik. Thank you.

(BREAK)

PRESENTATION

Kathleen Lally - ***PSEG Inc. - VP - IR***

THOMSON REUTERS

I am going to ask that you find your seats. We're going to begin in just a few seconds. We're going to resume in a few seconds, I should say. Thanks. You've got enough -- do you have enough water up here? Can I ask that you take your seats? Thank you.

Good. Great. We're going to resume the presentation. Bill Levis, President and Chief Operating Officer of PSEG Power and Shahid Malik, President of Energy Resources and Trade will provide you a very thorough update on power's operations and financials and outlook for the market. Turn it over to Bill now.

William Levis *- PSEG Power - President, COO*

Well, thank you, Kathleen, and good morning, everybody. I am not here to announce the $3.9 billion building program at power. What I am going to talk about though is a number of the competitive forces and challenges in our business and let you know that we're not afraid of one of them. And in fact, we believe in competition, we think competitive business are a good thing and I think we're in pretty good shape to face whatever those headwinds may be ahead of us.

So, I want to amplify more about what Ralph talked about in his slide, but -- so the simple power strategy and focus is to insure that we get the most out of the assets that we have and resources under our control, and those include the power plants that we operate and also the people that work for us, and do so in a safe, reliable, economic and environmentally responsible fashion. And I'll show during the course of the discussion this morning that we have made progress in all of those fronts.

So, what do we do in PSEG Power and how do we add value and create value? Two points I will make up top there is relative to regulations, we try to insure that we have a seat at the table and can influence and shape regulations going forward. We talk an awful lot about being a deregulated business, but that couldn't be further from the truth relative to all the help we get and the various regulatory agencies. And rules matter. Rules are important, and we want to make sure we have an active voice in helping shaping those move forward.

The second point I'd like to make is, we don't try to predict markets. And we position ourselves so that we can take advantage of what the market presents. We position ourselves to make sure we manage the downside and lever ourselves to the upside. Because I haven't found anybody here that can predict the future and our industry has a long history of being wrong.

And -- so, it's not about looking forward and taking a stake, it's about managing everything that could possibly happen to us. And we truly do practice in all of the above strategy. Folks talk about it. We do it. We do it every day and it's about adding value in each of those pieces.

We recognize in order to have that seat at the table, in order to be an active player, it starts with safety. It starts with strong regulatory performance because that's the only way you can be credible with the public and with the regulator, if you're not running a safe operation.

The fleet diversity that Ralph mentioned before, we have assets up and down the dispatch curve and most of those assets can run on duel fuel. And whatever the market presents to us is the way that we'll operate our plants.

A couple of small notes here is, we do add incremental megawatts along the way. On the nuclear side, Peach Bottom completed its steam patch retrofit in the last year. That was a 28 megawatt effort altogether, 14 of those last year, 14 of those the year before.

The combined cycle fleet that Ralph referred to before, record generation last year. That was with our Linden plant unavailable for two months of the year. Even in that case, it was an 8% increase in generation year on year and in just a steady increase in production over the years.

400 megawatts of new peaking added. And in fact, those megawatts were added on essentially some of those units one year ahead of schedule and on budget. The first day that they were offered to the marketplace, they were taken. And in fact, those units at Kearny operated at greater than 12% capacity factor last year.

I'm going to talk a little bit going forward about how we've delivered on the O&M side to manage the business and what opportunities are available for expansion going forward.

So, I pushed this -- here we go. So, if I stood in front of you last year and talked about our business plan, which you'll see in our business plan, it has a lot of normal stuff in it. We assume normal weather. We assume normal operations with our power plants from transmission build and the like.

But if I told you that we would have no winter, that we'd have significant transmission outages and build that we're going to challenge basis, that we're going to have six weeks of steaming hot summer, followed by a storm that took out half of our generation and we were still going to meet the upper end of our earnings guidance, you'd have probably thought I needed to be replaced. But in fact, that's what happened, and that's what we did. And we did that by essentially acting everyday to what was presented to us.

THOMSON REUTERS

SI-SSA-0015-12223

So, and when we saw there was going to be no winter, we essentially enhanced our seasonal dispatch model that we added earlier in place for our coal plants. And, as we looked at our coal plants, we know what maintenance is needed to be done for reliability purposes and efficiency purposes, which is condition based and time based, and we're able to pull the levers and the triggers to defer what didn't need to be done based on what we predicted then would be the run rate of our coal plants.

We're also able to take our people, so we need about half the people to run our plants on gas that we do with coal and dispatch those to other sites to displace contractors or combined cycle outages and also supported our nuclear plants. All told, those efforts in our fossil area saved us $50 million during the course of the year.

Our Hudson plant ran on gas two thirds of the time last year, one third of the time on coal. Our Mercer plant ran two thirds of time on coal, one third of the time on gas. As you'll see, availability numbers improved, and they improved when it mattered the most, that's when the prices were the best.

And in little things, like we saw with no winter, then we keep oil for winter operations primarily because sometimes there's a shortages of gas and we have that alternate fuel capability. We're able to monetize some oil sales, balance our coal sales. We have a favorable contractor sales and one that requires some delivery. So, between the two of them, we would offset one another, so there was essentially no impact on coal last year with some minor benefit in oil sales. And I'll talk a little bit about the storm recovery in a couple of slides.

So our assets come -- exist in three competitive markets. We happen to be believer in competitive markets and we think there are real benefits to competitive markets. And so, just a little bit about the assets here. So, essentially one third of our units are base load units.

That's our nuclear plant, you see in the south of New Jersey and also Eastern Pennsylvania with Peach Bottom and also Keystone Conemaugh plant, of which we're about 23% owners. Our mid merit plants are 42% of what we have available. That is essentially Linden, Bergen, Bethlehem Energy Center, Mercer and Hudson, a combination of combined cycle and coal plants, both -- all of which are duel fuel.

And then, up in New England, we have Bridgeport Harbor, which is a coal plant that many folks thought was a bad thing to have, because we were the only coal plant in Connecticut. And we predicted for some, why that would be a good thing at some point, and it certainly showed that in the last couple of months where there were some challenges with gas supply and the like, and that little coal plant that allowed to keep the lights on or up in the particular area.

Just wanted to highlight two little things and these aren't big dollars, but it's a reflection of what the organization has been able to do. Our New Haven plant up in Connecticut is essentially a 455 megawatt oil fired plant. Two years ago, we were able to convert that also to a gas fired plant, so it has the opportunity to run in gas at about 200 megawatts. And last year that was called to run 61 times. 61 times we met the bell, had that unit successfully started in on line.

Our Sewaren plant is an old steam plant, in fact, 65 years old. And gas fired and or oil fired. And last year, it was called to run 62 times and it met the bell 62 times. And in fact, our Sewaren plant has a string now of 248 consecutive successful starts. And I'll talk a little bit more about that plant and the storm recovery, but our organizations sure wants to make that 249.

And I'll show later on that we did put in notices that HEDD units would not be available after the 2015, '16 time period, and you'll actually see how those -- the heat rates improved from our organization as a result of that.

So, at the heart and the foundation of what we do is our nuclear operations. It's core to our business and a predictable and a reliable source of generation. This allows Shahid and his group, at energy trading and resources, then to have that as an important part of our hedging profile going forward. This predictability piece is essential for that to work correctly.

We've had eight consecutive years of greater than 90% capacity factor, and top quartile performance in the cost -- in generating cost arena. And certainly, we recognize the challenges and economic pressures in this particular area and we know the particular challenges some units face.

But I would tell you, large capital spend for these units is behind us, absent some regulatory risk potentially moving forward. And these are large units located in the right place with the licenses that have been extended so we think we're fairly well positioned for the nuclear future here.

These units have three outages per year, one in the spring, two in the fall. So, it really does form the basis from our planning, from our cost standpoint, and also Shahid talk about, our hedging profile.

So the -- essentially, I would say the risks that we manage going forward are associated with our operations and made a lot of progress -- be top quartile in many of the areas that matter here and then in nuclear business and going forward, it's a function of how well we manage our regulatory risk with some impending regulations. And I think we're in pretty good position to do that.

THOMSON REUTERS

SI-SSA-0015-12224

The bottom bullet that I'll expand on a little later is we are active and have a seat at the table where it matters. And I think we're making a real difference in how these rules shape up.

Going forward, we do have an investment. In fact, our biggest investment is in the Peach Bottom up-rate, 130 megawatts, as you see, in service 2015 and 2016. That project is progressing on schedule at this point.

On the fossil side, so the headline there is steady improvement. And I think a lot about we do just shows that we're continuing to make that steady improvement. And these are just two indicators that I'll highlight. EFORd is effective forced outage rate, and you'll see over the -- since 2008 to '12.

And frankly, the reason we highlight '08 to '12 is because of the changes that have happened during this period of time. When we went a from a predominantly nuclear coal, little combined cycle to nuclear combined cycle a little bit of coal, and how we were able to change as the business changed.

So, that's 200 megawatts of additional capacity, just by improvements in forced outage rate. And as we talk about energy efficiency in our business, the most efficient plant is the one that doesn't have to be built. And so, we will continue to look for those opportunities in our power plants, and I will tell you every day we find another one.

The bottom slide is something we refer to as EFORp. You may or may not be familiar with that, but we look at that. This is essentially your forced outage rate during peak periods. And it measured at specific times in the summer and the winter. And this is a zero sum game, so to the extent that you do better than everybody else, you get a payment and to the extent that you don't, you pay.

And so, we have made steady progress in this area in four consecutive years now, and we have been paid because we've done better than our competitors in this particular area at having our plants online when it matters the most. And you can see last year this number was 0.46%. So, this is having that understanding what you think the market's going to need, having close coordination and cooperation with our trading and fossil organization, so that if there's an outage needed, you do it at the right time. But most importantly, that you have your unit available when it's needed the most?

In the combined cycle area, it certainly has been a keen area of focus for us lately, given the amount that our units have been running and what we see with sparks spreads in particular.

So, this represents an operating heat rate and so, before you look at that number in the far right and say, wait a minute, I know units out there that are 6,800 or so, that would be full load heat rate. That's not what this represents. This is an operating heat rate, which represents how the unit is run and dispatched every day.

I would tell you from a full load heat rate, we improved that number almost 150 BTUs per kilowatt hour last week, but the unit doesn't always run at full power and, in fact, usually runs many times of the year at someplace in the middle.

So, we had significant work done last year to improve the operation in this particular area and what we balance here is margin we get from an energy perspective versus margin we can get from other ancillary services, such as area regulation. I think this is an area Shahid will touch on, where we saw the rules changing in this area. We saw competition from things like batteries, flywheels and whatnot.

So, we made some modifications to our combined cycle units, so they could be faster responding and follow the demand curve much closer and we were able to take advantage of that opportunity when the rules changed in the October timeframe.

Just for an item reference, a 1% improvement in heat rate's worth about $5 million. And so, you see this period of time, 3.2% is about $16 million of opportunity for us.

So, that talks about the heat rate program. We have obviously brought a lot of people in our organization, so the training program is important, of how we train people to do rounds, how to monitor equipment, respond to alarms and the like so that we can take quick and timely action to insure our power plants are reliable.

I put unit testing initiative on there. We have to do environmental -- about 200 or so environmental tests on our units every year. And finding the time to do them is -- creates a challenge and opportunity for us. If you do this testing when you're out of the money, you actually have the potential to lose money while doing this testing.

So, we have made considerable progress with cooperation and coordination between the trading organization and the fossil organization to minimize the number of tests that had we do to, so we're able to combine some, to shorten the time, become more efficient in doing them, and then doing them at the right time. And over the last number of years, this has been $6 million or so plus of advantage for us of other cost that we didn't have to incur.

© 2013 Thomson Reuters. All rights reserved. THOMSON REUTERS

SI-SSA-0015-12225

And from an outage standpoint, we know what the top quartile and benchmark numbers are. We beat those and do considerable work to improve the efficiency of essentially turbines and condensers, which are a lot of the heat rate opportunities.

So, let me talk a little bit about Sandy. And we had a pretty simple goal when Sandy occurred, we knew Ralph and his crew were going to do a terrific job of getting power back, but we wanted to make sure the power plants were there to support it. I also did not want the opportunity to have to appear on television to say why there weren't available. So, I was going to let Ralph and Ralph handle all the press. Our simple strategy is stay off the radar screen, but let's get these power plants back.

So, if I back up just a little bit to -- we have a little over 10,000 megawatts available in the New Jersey area. We had some outages on plants ongoing at that time, namely our Salem two unit. So, as a part of our preparation, we had to do essentially significant work to be able to get that plant at a place where it was a good time to stop, staff up that organization, was essentially two shifts of folk that would be available around the clock, and then send 1,000 plus people home.

And, hoping, that many of them would come back. And I thought the organization did just a terrific job of being able to prep for that. And when the storm came, there, in fact, was a significant wave and surge of water that impacted the intake structure that caused number one Salem unit to trip.

On the fossil side, we did significant prep work also. We thought that we had learned quite a bit from Irene the year before, because we did experience some flooding in our sites. But I would tell you, we were not ready for the four to six foot wave of water that engulfed our sites. And we have many, many pictures that show how high that water level came up, but essentially basements were flooded, plants were flooded, and so we had a significant challenge on our hands, now how are we going to recover.

So, you see on 31 October, we lost 4,500 megawatts of generation. And now, was a matter of -- what we're going to get back? How we were going to get it back, so that, as Ralph restored the system, we had the right plants in the right location there to be able to supply load to the customers? So, fortunately, this wasn't the first time that we had to deal with outage readiness.

We've been well versed in doing outages before, doing scope evaluations, work evaluations, planning works. So, our outage command centers at both fossil and nuclear were manned, be able to do quick assessments, let's have an understanding of the extent of damage. And remember, this extent of damage is being done where there is no power, no heat and then, no light at night. And, so they developed a strategy of what we were going to recover and when. And during the course of that, we're able to get plants back in sufficient time to meet the needs of customers and the grid in our area.

So, you can see how Salem one came back first. There was just a minor impact at the intake structure that needed to be repaired. But some of that was, we needed to get divers to be able to go do those repairs for us. And our supplier organization, I'll tell you, did tremendous work. To go find the things that we needed, whether it was divers, generators, lights, spare parts, motors. I think the government could take a lesson from our supply folks on how to get stuff to where it's needed and get it there quickly.

But Salem came back, followed by some of our Linden peakers and our Kearny peakers. Kearny 13 and 14, in fact, were the new peakers that we just put in service that June. They were both on higher ground. So, we saw an opportunity to get them back sooner.

And then, the other Linden units, we finished the outage on Bergen one, Salem two then came back.

So, I talked about having to send all those people away. Now, we had to bring them back. So, we had to recover Salem one and get that outage back on track. And there were some impact of the outage, but I'll tell you when all was said and done, that refueling outage at Salem, as measured against everybody else, still ends up in the second quartile. Not so bad when you got a storm that impacts you right in the middle of it.

Now, we also thought that Linden would be available on November 30th, and in fact, had both units spinning the turbine, getting to sync it. We had essentially a bow and a rotor. So, we had to take that machine apart, ship the rotor off, get it straightened out, and we got essentially that back and the Linden unit back in service in early January, just before the cold weather hit.

Our Hudson unit was in outage that time. Another place that took five feet of water on site. And recognize, when this water comes on site, this isn't the most pleasant stuff to be deal with. There's various health concerns and the like that have to be fixed before you can actually send the folks working in a safe fashion. But our Hudson plant, we got back on gas by the end of the year. We just got it back on coal within the last two weeks.

So, you can see what it is that's recovered at this point. I will tell you there is still work to do to get, essentially, these units back to what we would call pre-storm conditions, because we have some systems working, but they're not working as well -- essentially, ancillary systems and the like, as we would like.

THOMSON REUTERS

SI-SSA-0015-12226

The spend that got us to this point was $85 million. And if you saw, we have $19 million in insurance recovery, so that was a net spend last year of $66 million. We have a similar spend profile this year. Obviously, I'm not going to estimate what the recovery is, and Caroline will talk a little bit more about that, and we expect operating -- earnings to look like in '13. But essentially, our challenge, at this point, is to essentially get the level of spend commensurate with insurance recovery, and then make some decisions relative to some units that are not repaired yet.

And if you look up there, you can see, two sites, in particular, our Essex sites, units 11 and 12, and our Sewaren sites. That we are making progress restoring, although that progress is basically supplementing of the detail work and analysis about what's the work that needs to be done and then the insurance claim that follows it.

So, we have a number of options going forward, because you say wait a minute, you spent $85 million, you got $85 million more, that's not what you said your insurance claim was. And we're going to follow this process all along, try to manage spend commensurate with recovery, and then we have some decisions to make. And some of those decisions are depending on insurance recoveries.

And there are various options. Insurance recovery may offer us a cash out value, we just don't know how much that would be. Insurance may say you have to repair. So, if we repair, you might ask me, well, why would you repair a unit that's going to retire in 2015 anyway? Well, I might do that because then the salvage value is worth more.

Or maybe that unit does get picked up for a black start RFP that's out there. Or maybe, that money had to be invested in something new. New could be an up rate of existing units. New could be some other kind of power plant. We just don't know all those rules yet and we're going to follow that process along. And like all decisions we make, we'll do it in a disciplined fashion.

And so managing the storm recovery is still a big item on our plate this year. And our folks are keenly attuned to any reliability challenges that might present, too, because we made some repairs. And, as Ralph talked about, using toothbrushes and the like to clean out contacts. We did a lot of those same sorts of things.

And in the long term, maybe it is better to just replace the device and it wouldn't be making -- any decisions as we go, once again, commensurate with insurance recovery. We're also using this opportunity, quite frankly, to look at other practices and reshape the business. How do we do warehousing? Is was our previous practice in how we warehouse materials the best, because in that number that I quoted was about an $18 million impact on inventory?

So as we recover that, where do you want that? How do we want to do it? How can we get more efficient in that process? Likewise, damage to machine shops. So, it gives us a chance to look at how many do we need? Where do we need them? And what's the best way to do that business going forward also?

This is a slide I like to show to many audience, because it shows how you can invest in generation and produce more and emit less. And in fact, that's what the Company has a history of doing, and this particular one shows sulfur dioxide and nitrous oxide. And there's a note on the bottom about mercury. If you looked at just our plants, the PS owned and operated in New Jersey, that would be greater than 95% removal for mercury.

The outstanding item there, what's is driving that number right now, is the Conemaugh site that has an SCR project underway, due to be installed in the 2014 time period. We're well positioned perhaps. And don't know when that regulation will get in place, don't know how it will be challenged in the court systems, sooner is obviously better for us, but we're ready for it whenever it comes.

So, just a little bit on our O&M and essentially how we've been able to control and manage costs.

So, a couple of items, the asterisk up on the right, since this is with storm costs. So, if you look at 2012 in particular, we were able to absorb $66 million of storm cost, because we have saved $50 million plus in fossil with nary a tick up in our total O&M spend. In 2013, also includes storm cost.

What were some of the things we've done throughout the years? And as you just think throughout the years, we were essentially -- we've transitioned from coal operations to combined cycle operations, so how are we able to do that? Is one we did, obviously, assessments of both technologies and understanding the basis for the corrective maintenance program, have an asset management plan that knew what components need to be replaced and when, which needed to be replaced on a time basis, which one needs to be replaced on a condition basis. And so, when those conditions change, we're able to alter the investments and spend from our coal plants to our combined cycle plants.

You heard Ralph LaRossa talk about contracts negotiations that helps us, obviously, considerably going forward. And we know what our labor costs are going to be.

On the materials side, you may or may not recall, we talked last year about changing our approach in the maintenance of our combined cycle units, where we had a CSA, an agreement with General Electric to do maintenance in our plants, where they also own the parts. We changed that process, so that we own the parts now and we do the maintenance.

THOMSON REUTERS

SI-SSA-0015-12227

And we're seeing some near term benefits in -- of that particular approach, as our people do more and more work, also gains a better understanding of how the machine operates, which helps us. And as we're doing outages on these machines now, we're doing additional inspections that will extend the life of these combined cycles for the next maintenance period.

We're looking to do that same effort with our LM6000 this year, to transition from the CSA to a PSA, a parts and services agreement.

On the nuclear side, we completed the productivity study. The number -- two years ago and this was essentially an effort to arm our supervisors and managers with the tools to make sure that the folks working for them are the most productive, so there specific measures in place that tell how well their crews are doing and we can compare one to another.

This year, there's a refueling initiative underway, and if you look at refilling performance, it's in the top quartile, but we recognize this as a -- obviously, one of the big drivers to things like capacity factor and O&M costs and the industry, as a whole, has seen a number of days increase and we're going to turn that around. And so, we have focused attention and help from some key players to continue improve performance in the refueling outage area.

So, relative to opportunities going forward, we just try to keep as many options open as we can. And so, we have done side studies at our locations and know which sites are available for expansion, whether that expansion is just an upgrade of the existing unit or whether that expansion would include a new unit.

We're going to continue our heat rate improvements on our machines. We did an efficiency study, completed last year on there's, we've have realized two thirds of the benefit at our Bergen plant, half of the benefit at Linden. We're going to realize the rest of that this year and take that to our existing combined cycles and then our coal plants also, because we realize there some synergies there, too.

So, heat rate improvements will continue, we -- basically the head room to do that as additional megawatts come out of that. Reviewing opportunity to upgrade our units. And then, just keeping alive what would it take to build -- looking for those right market conditions or whatever those might be to keep that option on the table for us.

So, just a before and after of our fleet from today until the 2016 time period. 2016 just represents when our HEDD units will be retired. And you can see a couple of things. One, is fuel diversity is maintained. Two, is our ability to manage full service requirements is maintained, up and down the dispatch curve. The fleets heat rate -- and this includes nuclear improves by 6%, if you break out just fossil, that improvement is 9%. And it's about heat rate and efficiency that gets you the opportunity to generate more also.

And if you look to the right, you'll see that borne out in the fact is that there will be no reduction in output from our units from an energy production standpoint.

So, I talked before about helping to shape the rules in our business, and I would tell you, we do have a seat at the table at the right places and are recognized as a leader in our business.

The first couple of areas, INPO, the Institute of Nuclear Power Operations, NEI, Nuclear Energy Institute, EPRI, Electric Power Research Institute, BWR Owners Group, they're primarily nuclear areas, where essentially, the basis for rules, rules and how they're implemented and then -- and standards of excellence are established.

So, fundamental to potential cost drivers in our business and we're actively involved in each of those, from Board of Director positions to some very important ones that may be off your radar screen, but we pay attention to it. If you look at the Chair of the Emergency Preparedness Working Group, you look at the Security Working Group, some of the near term drivers of cost and nuclear business are in security and emergency planning.

So, we want to make sure those rules get right, so that in the near term there's not a potential impact that there could be if those rules don't get established of where they could or should be.

And obviously, the Fukushima part, a lot to play out there yet. There's a lot of activity going on with filtered vents and will they be required, will they not be required. I believe what you'll see there is a more measured approach in their [grown] area, that something like rule making will happen, and which will allow us some more time to get input from all stakeholders, so that the right actions are required going forward.

That said, when we look at some of the design features of our site, I think we're fairly well situated for some of the potential changes that could come this way. But obviously, a lot of work to be done, we just followed our tier one responses yesterday that were due, and we'll see how this issue plays out in the weeks and months ahead.

THOMSON REUTERS

The USA Alliance is an alliance of single site nuclear operators that gets the benefit of fleet operations without the additional overhead. And so we're very, very active in there, in fact, chair it. So, these are nuclear plants all over the country that share best practices, indicators and the likes.

We have a good understanding of where we are and where the improvement opportunities are. Not up here, but also in the fossil area, we're key players in things like the 316b argument with UWAG, with leadership positions there. And Shahid will talk a little bit more with what we do with PJM, New York, New England, ISOs and the like to get the market rules right, so that we can be successful in those environments.

But, you can't be a leader in this business without having the credibility of solid operations. So, we always go back to, you got to pay attention to business each and every day, so that you can have a chance to have a seat at the table. So, what does this mean? As we look to add value every day in what we do.

And gone are the days when you just needed to show up where you can make money. You make money now by being a leader in the business. And I think the numbers up here show that we do that, and every one of these things are opportunities for us. And, at the end of the day, we're looking for every megawatt, every dollar, every day in a safe, reliable and economic responsible fashion.

And with that, I will stop and let Shahid talk about how we take these assets, that I've talked, about to market and even get additional opportunities from those.

Shahid Malik *- PSEG Inc. - President - Energy Resources & Trade*

Thank you, Bill. Good morning, everyone. I'd like to add my very warm welcome to you and thank you for joining us today and thank you for sticking around for my piece.

So, I wanted to share our view of the world today and describe some of the key areas that we focus on to add value and to manage our risk as we go to market. A year ago, I talked about some of the forces that are reshaping our industry and our business. And those forces, as you know, continue to shape and change our industry. Change is good, as Bill talked about, we've coped pretty well, considering all that has occurred over the last year. And as you know, power's earnings last year were lower than in 2011, due primarily to much lower commodity prices, so started their descent three years ago.

However, as I was outside in the hallway talking to our Controller, Derek Di Risio, earlier on, he reminded me that 2012 did actually start with some pretty good news. The Giants did win the Super Bowl and Linsanity became a cool new word for us in this region. But of course, the rest of the year was more challenging. Despite that, we've persevered and ended up having a pretty good year financially, with earnings in line with our expectations, and as Bill said, we recovered pretty well from the storm.

So I'm going to spend the next 30 minutes describing how we've dealt with all these events in the past year, and more importantly, how we're repositioning ourselves for the future.

PSEG's wholesale strategy, in a volatile commodity market, it's pretty simple. We optimize the value of fleet. We provide an outstanding service to our customers and we prudently manage our risk.

So I'm going to split the talk into three sections. First, I'd like to describe how we've managed our portfolio of power and gas assets in this market. I'll talk about how we managed risks and create additional upside for our company with our trading group. And I'll also give you a flavor of what we expect to see happening in the marketplace, and what some folks in the industry are saying about future trends.

And thirdly, I'd like to touch on the regulatory scene and what the key issues are that we're working on here at PSEG in the wholesale business.

So our wholesale strategy is built around a strong asset portfolio. And so what do I mean by having diversified and flexible assets? Bill described how we're becoming top quartile in running our generation fleet, and our commercial group adds significantly to that by aggressively managing its dispatch in each of the three [ISOs] that we operate in.

And a key value driver here, that we've actually improved on over the past 24 months, is our ability to switch between coal, oil and gas at many of our plants, whenever the economic dictates. By trading around the switching optionality, we increase not just the run times at our plants, but we also add income to our bottom line by using that optionality.

THOMSON REUTERS

SI-SSA-0015-12229

So, how do we manage risks and create value? So those of you on the Wall Street, don't like companies like ours to trade speculatively, and we don't. What we do, do though is to trade to optimize our portfolio. We're cautious in how we do it, we have a robust system of control, we have an experienced trading team and a well defined hedging strategy that I'll talk about in just a minute.

But a goal that's equally important to us in managing risks is to create value by monetizing the option value of our fleet and of our positions. We do that by selling out of the money costs, by being long in the volatility, by buying fuel and storing it when it's cheap, by making a judgment call on which products and when to hedge. And I also talk a little bit more about that in just a second.

Now, as Ralph and Bill mentioned, we try not to outguess the overall market direction. We know that we're not smart enough to do that. But we definitely do have a point of view on the price of all the commodities that we trade, on power, on oil, on coal, on gas, on ancillary services, solar x, on capacity. You name it, we have a point of view. And each of our buy sell decisions is influenced by our opinion on the marketplace and we actively manage our short term portfolio according to that market view.

And the third platform on here is regulatory advocacy. This is about getting the rules right, the rules that promote a competitive wholesale market. Somebody asked me once what keeps me awake at night, to which I replied, I sleep pretty well, but my biggest nightmare would be a regulatory decision that completely changes the landscape overnight. And we try very, very hard, as Bill described, to have a seat at the table when the regulators are making decisions that affect our business. So, I'll talk about some of the key issues that's impacting us right now and how we're positioning ourselves on the regulatory front as well.

So, I'm going to quickly walk you through our assets, Bill talked about them, but they bring us great diversity from a geographic, fuel type and also an economic dispatch wise basis.

First, as Bill mentioned, our nuclear has performed exceptionally well, with an over 90% capacity factor last year. Now knowing that they're there gives us tremendous confidence to sell against them. Having them all the time being available, gives us that confidence. And with their location in Southern New Jersey also gives us an opportunity to arbitrage that basis south into the growth pockets of Washington, DC and also into the giant load pocket that is New York City.

Second, our share of two coal plants in Western Pennsylvania run on cheap, local Appalachian coal and give us access to sales and marketing opportunities in Western PJM, such as in FirstEnergy's territory. These shared stations are well run and Conemaugh being upgraded with an SCR, as Bill described, and both Keystone and Conemaugh will have full environmental controls by the end of next year.

Thirdly, our combined cycle fleet, which happens to be one of the largest in the Northeast has replaced a lot of the margin from our coal plants in New Jersey, they just don't run as much anymore. Furthermore, we've invested and fine tuned units, so that they run more often. And also, we're able to capture more ancillary service revenue as a result of that.

Fourthly, we have 1,200 megawatts of dual fuel, coal or gas fired generation, as well peaking units. They're predominantly in the eastern part of PJM and close to New York. So, they can take advantage of the gas and power volatility, which, by the way, has been exceptionally strong, as I think you've noticed this winter.

And last but not least, we have a very experienced group of employees that manage the commercial bidding, fuel management logistics, and the trading. And one of the things I've been really impressed with is the close communications between our operating plant management and our commercial management. Actually, we have shared goals and our common objective is to operate safely and to maximize value. And I think that working relationship, frankly, is as good as any that I've seen in the industry.

So, as the market has evolved, so has the capability of our fossil plants and the management of them. And moving anti clockwise from the top left chart and I'll give you four examples. Bill described what we do, so I won't dwell on it too much, but as this started running more, we raise the heat rate performance, the additional tune ups, better management practices and as a result, we've seen an increase in our performance by over 3%. And work is ongoing on the other combined cycles as well. And this has been very valuable as our units are now running at record rates of throughput, with almost a 60% capacity factor last year.

Secondly, in our three coal plants, we're trying to balance the need for proactive maintenance with the knowledge that they're just not generating the same kind of revenue that they were before. So, as a result, our generation team has dramatically lowered O&M by making better choices with our maintenance dollars and by replacing fixed overhead with variable cost. Primarily, by utilizing our fixed labor much more effectively.

Also, at our coal plant in New England, we change our work practices there to improve its start up success rate, and this has been especially helpful to us this winter to meet the high electricity demand that we've experienced over the last couple of months.

THOMSON REUTERS

SI-SSA-0015-12230

Thirdly, as a result of being at the table, the bottom right chart, will show you that the ancillary services market -- we had a really good idea what the new rules would be for the ancillary services market in PJM. Particularly, in the area of regulation market. Bill described that we've actively made investments to the government in our combined cycle fleet to improve their ability to provide AR service to PJM. And as a result, we've raised their rate by 25 megawatts per unit at Linden and by 10 megawatts per unit at Bergen. And that's allowed us to increase our share of the AR market in PJM.

I won't tell you how much money we made, but I will tell you that our margin from AR service in 2012 was very meaningful, as a result of being proactive, with understanding the new market, working with the regulators -- the regulatory authorities at PJM and also upgrading our units and making those investments.

Lastly, on the trading desk, we're acutely aware of changes in commodity prices and the relative economics of our plants. As, a result, our plant managers have responded and they have changed the way in which they prepare the plants at night, so they can switch fuels and restart quicker than ever before. So, whether it's switching to more economic fuel, cycling the units at night, so we don't lose our rights in a dispatch stack or by taking a chance in self scheduling our units, we're changing the way in which we dispatch the fleet, which has all helped our bottom line.

So, how has the market evolved over the last 12 months? One crucial area, of course, has been in the economics of the industry's coal plants. In 2012, we continued to see the sparks spread outperformed the dark spread. Now, although the gap did narrow at the end of the year as gas prices rose with the onset of real winter demand. That dark spread is the key indicator, as you know, profitability. And there are many coal fleets out there that are struggling to make enough money in today's price environment.

The chart on the left shows us the three year relationship between the dark spread, essentially the economics burning coal for electricity, represented by the orange line, versus the spark spread, or burning gas for electricity, which is represented by the blue line. And as you know, gas prices fell much faster than coal prices last year, causing merchant plants to become uneconomic relative to gas plants, you saw widening in that spread during the year, and a little narrowing as we got toward the end of the year as gas prices rose.

Now, those lines, by the way, represent PSEG's delivered costs last year, that's why the dark spread shows as being negative, because it includes all of our costs, including our VOM cost.

Now, the chart on the right will show you how PSEG has responded to this change in relative economics. The shaded area reflects the average minimum and maximum gas burns for the last seven years for our fleet. The blue lines denotes where our actual gas burn was for 2012 only. And as you can see, it was as high as it's ever been in our history. Our burns did taper off post Sandy, as our Linden unit was temporarily taken out by the storm. But in general, our combined cycles are running well.

Now, although our combined cycles don't produce as much electricity or as much margin as our previously base loaded coal plants, we love the flexibility of the combined cycles and we love their ramping capability. Now, furthermore, we're advantaged by the different ancillary service markets that we can penetrate as a result of them, and we also use our gas requirement as a short position to manage our fleet around.

So, the market clearly has changed for coal, but what about for other commodities? So, in general, we don't forecast prices. There are plenty of first class companies that do just that for a living. What we do, do though, of course, is we do our own analysis, we have our own forecasts, we have our own models. And as a result, we're simply not just price takers for all our business.

Our base load energy is hedged on a consistent monthly basis, as long as it's profitable. But our remaining fleet, our gas position, our ancillary services, our load following business depends on us having a point of view and acting on that point of view. And, I'm sure, you've seen leading consultants forecast of full energy prices. On the gas side, this forecasts, you'll see a range of gas prices that are mostly higher than the forward curve, based on higher demand, higher production economics for natural gas, and eventually exports of LNG.

On the power side, similarly, they're seeing power prices above the forward curve. Even our friends at Morgan Stanley, I read Stephen Byrd's article a couple of weeks back, which mentioned that he felt that prices were undervalued by between $4 to $7 per megawatt hour.

We're not going to make those predictions, we will work within the forward curve. But such scenarios, of course, would help our nuclear fleet's profitability, much more so than any potential squeeze in the spark spread if gas prices rise.

And by the way, every $1 rise in the gas price, with all other things being equal, does raise our profitability by between $0.03 to $0.06 per share in 2014, as I think Caroline mentioned on the earnings call.

So, to sum it up, we transact around and within the forward curve. We do have a point of view in the market for our unhedged fleet, and as a result, we are ready to manage the portfolio for the downside, as we'll leverage it when required to the upside.

THOMSON REUTERS

SI-SSA-0015-12231

So, turning now to how we protect our company from risk and create value at the same time. We receive a ton of questions from the analyst community about the BGS sale and how significant is it to our profitability and to our hedging practice. Let me say upfront, that we like BGS sales at the right price, but we're not wedded to it at any price.

Now, in general, we like BGS for four reasons. Firstly, the load obligation is well correlated to our units output. Secondly, it does provide us an opportunity to hedge some forward basis exposure. The sure positioning can be dynamically managed as part of our overall portfolio and we do that. And lastly, we can use it to lean long or short, depending on our short term market view.

Now, as I think you know, that every year we sell additional amount into this forward three year option. Last month, we took part, again, in the annual procurement by the New Jersey Utilities. The most interesting thing to note from this slide is that the first -- for the first time since 2009, prices did start to edge up, reflecting higher energy prices slightly, but more importantly higher transmission, higher capacity and higher renewables prices. It would appear that BGS prices have bottomed now.

New Jersey law prevents me from sharing with you the volumes we saw, but I can tell you that we are satisfied with the results. Having said that, we were fully prepared not to win anything at unacceptable margins.

Lastly, while there continues to be positive headroom here for third party of retailers, it is shrinking now into single digits and we expect that trend to continue. At some point, depending on headroom, we expect migration to decelerate or even stop.

And some of you have asked us as well, how have our BGS importance -- has the relative importance of it changed over the year, and these three pie charts try to show you what that percentages now look like. So, as you can see, five years ago in 2008, BGS sales made up about half of our hedged quantities. They fell modestly to 44% in 2010 and last year accounted for 35%. This was not necessarily a bad thing for us, frankly, as the financial value of BGS has dropped.

Without question though, BGS continues to be useful sales for us to make and it does help us lock in that basis risk and sell forward for up to three years. But in the market, if the absolute price should rise, we're not being overly aggressive on BGS sales, in fact, we've been supplementing BGS sales with shorter duration, full requirement sales in other markets, which are also very well correlated to our assets.

One other thing that we're doing, we are selling more into the retail market indirectly through the retailers and capturing some from that retail rent, what our competitors talk about all the time. We have no plans to directly enter the retail electric or gas market as salesmen.

Going to switch gears and talk about hedging. We fine tuned our hedging strategy this year with a more consistent monthly hedging program. Whereby, which we to lock up about two thirds of our base load plants output for the next three years. In numbers, that's about two thirds of 4,400 megawatts per hour for three years. By the way, this table only reflects energy hedges, but of course, PJM's capacity market does allow us to forward hedge up to three years in capacity as well, which is a very important part of our hedging activity.

Let me make a couple of additional points on our hedging strategy. First, we focus on capturing value and in protecting the gross margin long term. We do not hedge at a loss and we will fine tune our hedging, depending on relative economics. For example, for much of the last year, we did not sell off peak power in PJM until the price got to a level that we were comfortable with. When prices eventually reached our target, we sold into it and we rebalanced in our portfolio.

Dan Eggers and his team at Credit Suisse wrote a really interesting article last year on the impact of blindly hedging. My words, not his, where companies are hedging, come what may, driven by cash flow and debt coverage needs, rather than by profitability. He also spoke about the impact of retail companies, whose forward buying, insures that prices remain depressed for some of those companies with in house retail businesses.

Dan, I found this a very thoughtful piece and I hope that you circulate it to all of our competitors, with some remedial homework on their part. And, by the way, when I read this, this is a great title, Adventures in Power Market Expectations, sounds like a romance novel, I was very excited when I read it.

But joking aside, we're also have a trading activity that we call dynamic hedging. This is where we manage our closed hedge positions for operational reasons. In addition, we actively manage our open positions dependent on our view of the short term marketplace. We create many tens of millions of dollars in value here by monetizing the option value of our fleet.

So, in summary, we have a solid risk management practice, that in a consistent, monthly manner, attempts to lock up two thirds of our base load energy margin for three years. This is supplemented with short term, profitable trading tactics that adjust our positions based on operational and price opportunities.

THOMSON REUTERS

SI-SSA-0015-12232

Moving on now, I'd like to talk a little bit about locational value. When we talk about the locational value of our assets, we're referring to some of that value as being the positive basis that's inherent in our location. Basis reflects the premium that our assets receive relative to the PJM West price, where most companies in this region place the financial hedges. Forward basis, by the way, through 2015, is currently trading in a $2 to $4 per megawatt hour range.

On the right hand side, you can see that our assets are located on the eastern edge of PJM, right next to the giant load pocket, that is New York City.

On the left hand side, you can see our monthly basis, relative to the PJM West hub, has varied. As you can see, it's very volatile. And as Bill alluded to, it was very negative last spring and it's also been very positive this past winter. Our assets and our open position are generally able to take advantage of that positive volatility, which we do on a regular basis. No pun intended, sorry.

Basis is impacted by the absolute level of prices, by the amount of load in the region, by the way, in which units are dispatched according to relative fuel economics and crucially, by the amount of electric and gas transmission capability into our region. As you know, each of these elements have changed over the past few years, sometimes quite dramatically, and we also expect changes heading into the future. For example, PSE&G, and others, have been building both electric and gas transmission into the eastern PJM region.

As a result, we expect that forward basis will continue to be pressured. However, basis will remain very volatile in prompt periods driven by other factors such as weather, operation energies, and some of the other things I mentioned, which has relative fuel economics.

In addition to locational advantage from electric basis, we also have locational advantage on the gas side. Particularly, at the top of that green region, that's an area that we affectionately call, PS North. This is a very constrained and a congestive region. Here, we can switch between coal, oil and gas at our units, from base load to intermediate to peaking. And our company derives great value from this flexibility. Both from the electric as well as actually on the fuel side.

And so, talking of fuel, we have a very strong natural gas position in the Northeast. In fact, PSEG, as I said before, has one of the largest gas transportation storage and procurement operations in the country. In 2012, we bought over 350 Bcf of gas, over one Bcf a day for our power generation as oils for our New Jersey customers. Being short in a market that's flooded with cheap Marcellus gas really gives us great leverage when we go to buy gas and also gives us great insight into the market.

As a result of all that, we're able to add significant value by purchasing gas below the market indices. Again, in 2012, we are very proud that the service we give our customers allows them to have the lowest consumer gas price in the state of New Jersey.

Now, this winter, as you know, we've seen enormous volatility in the gas price due to extreme weather conditions in the Northeast and very strong New England markets that have pulled up electric prices in the New York and PJM service. Despite this, we've maintained gas supply to our customers for heating and we've been able to buy additional gas for power plants to sell in to these high electric prices and capture value.

So, you can see that when it talk about locational advantage, we don't just mean having a terrific electric position in a world class [R tier], but we also have a terrific gas position right next a world class gas field, the Marcellus. Now, put another way, we're long electricity in a short market, and we're short gas in a long market. That's a nice position to have.

Another leg in our hedging strategy is the capacity market, which is present in all of the three markets that we operate in actually in PJM, New York and also in New England. Now, we believe that the capacity concert in PJM is pretty good, actually. Here we earn substantial revenues and we actively manage our plant investments in order to earn an acceptable return on our assets.

We're not just a price taker, we're involved in all stages of the process. We have a seat at the table when rules are being debated. We asses load growth, we'll analyze plant retirements and new builds. And we'll make investments in our plant when justified, so they can continue to clear the market, and then, of course, replace our bids.

As you know, the PJM capacity market continues to evolve and we've received updated parameters in February for the upcoming 2016, 2017 auction, which for PSEG, we believe, was fairly constructive.

In addition, as you know, there are several key issues being debated and litigated right now that we hope will eventually improve clarity around the PJM capacity markets. First, we are hopeful for a positive settlement in the Maryland and New Jersey court cases surrounding the outer market circuit contracts. And we expect a ruling on that this summer. The court cases start in the month of March.

Second, we do expect that FERC will allow PJM to adopt a robust and [mobile] construct in order to prevent future rigging of the capacity market. Although there is a good chance that won't come into force until the subsequent auction in 2014.

THOMSON REUTERS

SI-SSA-0015-12233

Third, we believe that demand response will eventually be prevented from financially gaining the capacity market, maybe not in this auction, but certainly, in subsequent ones.

And fourth, and most important, we predict that some of the coal plants that had been hanging on for their life, will start shutting down post 2016 and tighten the supply demand balance, leading to more stable capacity prices.

So, when we think about retirement, not mine, which is still quite a few years away, happily. I wanted to show this chart from PJM on the left. PJM has received the activation notices from -- for nearly 13 gigawatts of capacity, shutting down by 2016 as environmental rules kick in. An additional four gigawatts has been announced by their plant owners. And this week, AEP actually announced another two gigawatts of retirement. We and others predict that the final number would be over 20 gigawatts, we're up to 19 right now. Driven actually more by economics of negative cash flow for coal plants and not just negative MPVs of environmental investment.

And that right hand chart from PJM, predicts the reserve margins fall into 18% within three years. These are their numbers, not ours. Despite weak load growth. We think that reserve margin might even go lower, due to some of those economic retirements I just mentioned. And as you know, often replacement generation that's promised often comes in slower than predicted.

I would also like to mention here that the forecast reserve margin for the Midwest ISO, right next door to PJM, is also headed downward. With 11 gigawatts of net retirements by 2016, which will lead to a 14.2% reserve margins by 2016 for the Midwest ISO. All that will set up the market for stable capacity pricing with potential strength in some LDA's leading to additional generation of investment towards the end of the decade, and the market will work. And in any event PSEG has a strong asset base that will participate in all future RPM options and will again be positioned with new generation available to the market, if prices warrant the investments.

So last, but not least, I do want to touch on some of the regulatory changes in our market and what we're doing to protect and defend those deregulated markets. The most important point is that, as a respected and strong player in the market, we have a seat at the table when decisions involve those deregulated markets. We are in favor of constructive market regulation and change. And we believe that as markets evolve, the regulation should also evolve to keep in step.

We proactively express our views, we share our data and we share our analysis. And then we promote positions that benefit the competitive market as a whole.

Now, as you know, although we operate in competitive markets, we are still very much under the purview of numerous government agencies and regulators. And on this slide, I have listed a few of the things that we're working on that are important to us.

Now regulators in our industry are doing whatever they can to make electricity cheaper, cleaner and more reliable. That's a direct quote from Connecticut's master energy plan that came out last month. Of course, they're aware that companies need to earn a reasonable rate of return on investment and not just enough to cover operating costs, which would be a sure path to value destruction.

And I've touched, and Bill has touched on some of these regulatory issues before, as has Ralph. But I would like to highlight three areas that we think we'll see meaningful movement and impact this year. First, capacity markets are gaining ground. It provides great support and credence to formalized capacity markets when the Texas and California ISOs are considering moving to a capacity market construct, just like in PJM.

Second, environmental issues will probably take a higher priority, we believe, now that President Obama's government has been reelected. As Bill described, we believe our fleet is very well positioned and will continue to promote reasonable positions to advocate for a cleaner environment.

And third, gas to electric coordination must improve as the events in New England this winter are bearing out. Last week, the New York Times had a front page article that highlighted the fragile nature of gas infrastructure up there. The solution to our minds is not a one size fits all approach, but an approach that meshes well with the requirements of a particular region or a particular ISO.

So, for example, we don't agree that generators must sign up for long term firm pipeline capacity for the less than 1% of time that gas is not available. Fuel diversity is an important part of the solution here and should be considered first. And as Jay Apt, from the Carnegie Mellon University said in that article, and I'll quote it, it's certainly true that a region like New England, that relies on a single fuel source, like natural gas for the bulk of its power does leave itself open for more disruptions than a region with more diverse fuel mixes. It's not a knock against natural gas, it's a knock against a single fuel source. Very well put.

So, with that, I'd like to wrap up now with some closing comments. As I hope Bill and I have been able to demonstrate, PSEG has a very strong, well performing power and gas assets and very constructive markets, particularly in PJM. We're very active in the wholesale markets in order to optimize the value of our fleet, which still have and we still predict will have, a strong locational advantage.

THOMSON REUTERS

SI-SSA-0015-12234

We're not just price takers. We absolutely do have a view on the market direction as to when we hedge our non base load fleet and when to extract the option value of our assets. We are comforted by the opinion of industry consultants who think prices might be higher in the future, but we're not counting on them. We're counting on our own abilities and our own assets to grow our earnings.

We expect that BGS will continue to be a significant part of our future, but we will not be as dependent on it as we have been in the past. We think that forward electric and gas bases will decline, but prompt volatility at certain times of the year will allow us to extract tremendous financial value.

And finally, we know that the markets are evolving and we are participating in those changes, whether it's developing new products, investing in new equipment or advocating for competitive markets.

So with that, I want to thank you very much for your attention. That concludes my formal remarks, and I believe that Bill and I are ready now to take your questions. I'll turn the podium over to Kathleen to be our moderator

QUESTION AND ANSWER

Unidentified Audience Member

Thank you. So, perhaps going back to the earlier part of the discussion, on Fukushima impact, if we could just talk for a second about filtered vent expectations and what that might potentially cost you as well as timing expectations from here?

William Levis *- PSEG Power - President, COO*

I'm very hesitant to say what it might cost, because it's not clear what the rules might be. Okay? For example, I would argue that I have a filtered vent right now, so I could make an argument for a zero cost.

However, if there's something additional required that might meet some set of standards, then I just don't want to speculate where that could go, which is why I think rule making is the most prudent course of action here, so we can get some good discussion from all stakeholders involved. I think that's the course of action that will occur here and I think that'll occur over the course of years and not months.

Unidentified Audience Member

Great. And then, secondly, on the HEDD units, quickly. You talked about some latitude about insurance proceeds, et cetera as you think about making a decision on the state of some of those units, how could that impact your capital spending and also, specifically, your earnings in this period between 2013 and 2015, either positively or negatively?

William Levis *- PSEG Power - President, COO*

I would -- obviously, any investments -- we make -- we'll make sure we meet the threshold and hurdles we have in place for those. In that period of time that you refer to, where there could be some positive impact on earnings, if we took some of that insurance proceeds and used it to operate our unit. We think we could do that in that period of time. Other than that, most of those scenarios are outside of the planning period.

Unidentified Audience Member

Thank you, I have a question about your HEDD peakers. You made a statement that many of them didn't clear the last auction. So, what do you plan to do with those assets? And also, should we expect that you're going to be actually bidding in either expansion of those assets or upgrades of those assets in the upcoming auction? And also, could you give us a sense how big of an EPS impact or, roughly, you got in 2012 from your coal plant in New England and how this looks so far this year?

William Levis *- PSEG Power - President, COO*

THOMSON REUTERS

Let's see if I can get all those questions here in a second. I'll probably need to be reminded because I'll probably skip one. Relative to our high electric demand day units, I would say we expect that those units will retire in the 2015, '16 time period. That's the requirement of the state currently, and obviously, we have every intent on meeting that.

What we will do in its place, it depends on a wide variety of factors. Some of it, I know, depends on insurance proceeds. Other things depend on what does the capacity auction and market look like and what are the rules going forward there. And that's why we'll continue to monitor our efforts underway and make sure we play an active role to get a level playing field for all entrants. And I'm sure that answer your question on HEDD?

Now, there was a question about our coal plant in Connecticut, I'm not sure. If you could repeat that for me, please?

Unidentified Audience Member

I was basically trying to figure out the -- we saw this major spike in New England power prices on the back of some natural gas constraints and you have must have run your coal plant much more -- we've seen pretty strong results from PSE&G Power in 2012. The guidance for 2013 is also relatively strong, and I'm trying figure out how big of a -- how big of an impact the coal plant in New England is playing in those numbers?

William Levis ***- PSEG Power - President, COO***

I'm sorry, that impact from last year or the impact going forward?

Unidentified Audience Member

Both.

William Levis ***- PSEG Power - President, COO***

When we look at the coal plant, we don't just look at the coal plant, we actually look it as a fleet of plants. So, when we report on a particular area, we don't say whether this one plant is profitable or not. We say, is New England profitable? And I would say, we're not going to stay in a business that's not profitable.

And so, we're in that business and doing everything we can to make sure that it is profitable for us going forward, recognizing that there'll be ups and downs in the market. What I didn't say when I talked about Bridgeport Harbor before is, we've looked at O&M costs there. We look at staffing levels there and we made some adjustments. And if you look at how we operate those plants, we operate New England as a virtual plant. New Haven and Bridgeport Harbor are not that far from each other.

But essentially, we have one management team that operates both of those sites, and including the new peakers that were put in. And we had recognized some of the challenges that might exist in New England. Remember, New England hasn't had a summer or winter in years. This reliance on any one fuel source, we don't think is a good thing. And so, we believe that this plant will -- be very, very profitable when those conditions exist. We saw some of that the last couple of months. So, we don't bet on any one fuel source. Like I said, we do practice all of the above. And I think it played out for us in New England within the last couple of months.

Unidentified Audience Member

Hi, thanks. I just have a couple of questions. First of all, I notice you didn't talk much about your coal hedging strategy in the deck. How much flexibility do you have under your contracts now? And how does that impact your bidding strategies? Is there still a lot of take or pay obligations and how far out do they go? You said that this year, one third and two thirds of Hudson and Mercer were running on coal. I was just wondering why, with gas in the twos to threes, they would be dispatching on coal. You can answer that first.

Shahid Malik ***- PSEG Inc. - President - Energy Resources & Trade***

© 2013 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

So, thanks for the question on coal. Firstly, we do have contracts on coal that basically ran out at the end of 2012. We have committed to extend them for a little bit further to insure that we met the full contractual obligation of that load -- of that amount that we've signed up for. Since we weren't be able to fulfill the full amount of it in 2012. But the amounts are relatively small and we haven't seen the need to go out and contract for any more, since we have enough on our coal pile right now.

So, does that answer your question? We have a lot of flexibility, basically. We have small commitments, well within the range of reasonable, and well within the range of being able to put them on our sites.

Unidentified Audience Member

Sorry, Shahid, so running those units on coal, you're allowed to sort of bake in to your bid price some contract breakage cost or something that would allow you to bid --

---

Shahid Malik ***- PSEG Inc. - President - Energy Resources & Trade***

The way that we bid our fuel into the PJM market is basically on a replacement cost basis. So, we make the decision as to whether we want to bid it at that price and we compare it, on an economic standpoint with the other fuels, whether it's oil -- whether it's oil or gas, and we will make that decision.

Now, the other thing that we will decide to do is, it may be better for us to burn the coal rather than take the penalty hit from not meeting our contractual obligations. So, you saw some of that in 2012 when we decided that it's better for us to burn the coal and lose less money than if we had taken a contract hit to our coal suppliers. But in general, I would tell you that when we look -- in general, we run coal when it's in the money and most of the time it was running last year it was in the money.

Unidentified Audience Member

Okay, thanks. And then, on the HEDD stuff, I noticed, beginning of this year, you filed deactivation request in PJM for about a gigawatt of capacity. I think that was at Essex and Edison. First question is, were those deactivation requests factored into PJM's parameters that they released on February 1st?

Shahid Malik ***- PSEG Inc. - President - Energy Resources & Trade***

Yes, yes, they were, 1,700 megawatts.

Unidentified Audience Member

1,700.

Shahid Malik ***- PSEG Inc. - President - Energy Resources & Trade***

For all our HEDD units.

Unidentified Audience Member

I was talking about the new deactivation --.

Shahid Malik ***- PSEG Inc. - President - Energy Resources & Trade***

Okay.

Unidentified Audience Member

THOMSON REUTERS

SI-SSA-0015-12237

-- and then, the second question, how much did those units run last year? And is there going to be a significant reliability issue when all of that comes offline in 2015?

Shahid Malik *- PSEG Inc. - President - Energy Resources & Trade*

They ran very little last year, less than 1%. So, we don't expect there to be a reliability issue as a result of those units not being there. We have other assets close by that can handle the load from those assets.

Unidentified Audience Member

Okay, and then one last one. You mentioned, as part of your hedging strategy, you're seeing more opportunities to sell to competitive retailers. How does that work? I mean is that full requirements for those guys? And are they short load and they're coming to you, or you going to them?

Shahid Malik *- PSEG Inc. - President - Energy Resources & Trade*

Yes, that's a good the question. Firstly, do we go to them, or do they come to us? It's both. So, they come to us, we're a natural supplier to cover full requirements loads in eastern PJM by virtue of our assets. So, they see us as a natural seller and we see them as a potential natural outlet.

Then, in terms of which pieces of the loads do they want us to cover, typically they are more interested in us covering the peaky aspects of it and the capacity and the green, as opposed to base load energy price, which they can buy by hedging at PJM West. So, generally, they're looking for the hard to get stuff, and of course we charge them a premium for that.

Unidentified Audience Member

Okay. Thank you very much.

Shahid Malik *- PSEG Inc. - President - Energy Resources & Trade*

Sure, Thank you. Michael has a question.

Unidentified Audience Member

Yes, just a big picture question about the broader PJM market. We're seeing development occur, meaning people build combined cycles, outside of the plants that receive the LCAPP or the Maryland contracts. Meaning, I can think of one or two already that are permitted and financed. I can name one or two more that are actively seeking permits and starting at the very ground stages of seeking financing. What's your company's view about whether new build of combined cycle, especially in the eastern portions of PJM, Eastern Pennsylvania and New Jersey, et cetera whether that's economic?

William Levis *- PSEG Power - President, COO*

Well, we have a chance every year to bid in the RPM auction and we get the opportunity to ask ourselves that question. And what I will tell you is, we exercise discipline in that process and we're not going to build unless it's economic. And we'll control the things that we can control. Developers develop and so that might give them a different view on -- and a set of assumptions on the prospects for new build.

So, there's no perfect marketplace. There may be a lack of discipline by others and we're going to make sure we stay disciplined. And for those who are undisciplined, frankly, that creates an opportunity for us later. Economics rule and if they're doing -- making the right decisions, that's something we can pick up later.

THOMSON REUTERS

SI-SSA-0015-12238

Kathleen Lally *- PSEG Inc. - VP - IR*

I'm going to ask that we hold any other questions for Bill and Shahid until the conclusion. And we're going to turn now to Caroline Dorsa to give you a financial overview of the operations.

Caroline Dorsa *- PSEG Inc. - CFO*

Good morning, everyone. I have the numbers to go through, I feel like my job is easy following my colleagues with such a strong operational story to tell, whether it's the Sandy related results or the ongoing operations of the business. They are really what allows the numbers to be what I hope you will appreciate when I show you are very, very strong. It comes from the ability of the plants and all the people in power and the utility to make these numbers work.

So, let me just do a brief reminder of our strong financial position, what we come into this opportunity for us an incremental investment with, then I'll do a brief review of 2012 and '13 guidance and then, do a little bit of a build going forward.

So, you've heard some nice comments about capital investment opportunities, I want to show you what that means for rate base, for potential for earnings, and also the work that we continue to do on O&M control, take that out a few years as well, and then show you what it all means when it all wraps together.

So, I'll start with a little bit about our financial position as we get started. So, as you know, we achieved our earnings guidance for 2012. We have a stable dividend, grown again this year, with opportunity for continued dividend growth, as you know, based on the earnings at the utility and the cash flow generation at power.

We have a strong balance sheet, which we've talked about for a long time and we'll show you some more statistics about that. That gives us the terrific platform to do the things that we've identified as potential opportunities, while continuing to not put anything like financial risk with the operational investments that we have. That regulated growth opportunity, therefore, can be achieved without equity issuance. I think Ralph said that twice, I'm probably going to say it four times before I'm done.

And importantly, because we're showing a base level of investment, but we're also showing a potential upside level of investment, that statement is true anywhere along that spectrum and I'll show you the outside bounds of that as we go.

On solid credit ratings, which are very important to us and we had every intention of keeping well controlled O&M, which I think you've seen from both Ralph and Bill, we've demonstrated and also intend to keep. As well as a well funded pension, something that has been a focus for many in our industry for the last few years and I think we're in a good position there as well, and I'll show you a little bit of that at the end.

What isn't on this sheet, but is just as important, is everything that I'll show you relative to thinking about the future, thinking about the credit metrics, the balance sheet. All of that assumes nothing other than the forward curve in all of our financial forecasts and projections. As Shahid said, we have a ratable hedging program, we don't take long term market views against the market, and so everything I'm showing here assumes nothing about anything other than a forward curve that you can read on your own screens as well.

So, in terms of guidance. Our 2013 guidance is, in fact, the same range as 2012, $2.25 to $2.50, but you can see something different, as I'm sure you all know, when looking at our numbers relative to what we've talked about for the last few years, and that is the changing position between PSE&G and PEG Power relative to their contribution to our earnings.

So, with our current guidance in 2013, you now see the utility being about 50% of our earnings, and you can see using last year's actual numbers against either side of the utilities, $580 million to $635 million, a double digit operating earnings growth opportunity in our guidance. So, strong utility earnings growth, opportunity. Obviously, power coming down for reasons that you know, related to pricing, but also a changing picture in terms of the position of PSE&G.

And of course, because we just filed our new programs, it goes without saying, that there's nothing material assumed in any of these numbers relative to utility and new programs, because those new programs have obviously just been filed.

So, this picture I don't need to spend a whole lot of time on, as you well know. And as Ralph alluded to, that changing picture has occurred over the last few years, for two reasons, obviously, the growth in the utility as our investment programs, transmission, as well as the infrastructure programs, have borne fruit. And, of course, the changing mix is in part -- a large part also driven by power and the pricing effects that have happened at power.

THOMSON REUTERS

SI-SSA-0015-12239

But what has continued throughout this period, and I think really does make a difference when you think about where we landed in '12 and how we think about going forward, is the cash position. The significant sources of cash that we have that enables us to have that strong balance sheet and execute.

So, this picture in the traditional way that we've shown it to you, is our 2012 sources and uses. We did have significantly, again, cash from operations in both of our businesses, were very significant contributors. Power continued to deliver the highest amount of cash from operations. You take the PSE&G cash and take off securitization, as we always do. So, power did contribute the larger share of cash from operations, but the utility is becoming a significant cash flow generator.

In terms of the debt issuance for the year, that's a net debt issuance for PSE&G that, in fact, reflects net debt reduction at power, as you probably saw from looking at the 10K, offset by incremental issuance at PSE&G. So, that picture is right along with our spend profile as PSE&G has grown, it issued debt consistent with its capital structure. Power, once again, because of its strong cash flow position, had the opportunity to reduce its debt and improve its credit ratios.

Of course, on the usage side, the PSE&G capital investment, obviously, very significant, as you know, almost $2 billion. Power's capital investments, relatively modest, as we've been talking about all along. And as I go forward and talk about future investments will split out between growth and maintenance, but I think the key thing to keep in mind here is you got two businesses, both delivering significant cash and the growth investments are dominating where that cash is going.

We did end the year, by the way, with almost $400 million in cash. The cash I show here on the left bar is actually the net cash applied toward investment, but there was still net cash on hand at the end of the year.

And many of you are also always interested in how does this cash flow picture become affected by bonus depreciation, because that's been something we've talked about for a number of years. Actually, in 2012, if you look at bonus depreciation on a net basis -- and I think that's a good way to think about it now that we have bonus depreciation for a number of years, and what I mean by net is, the gross amount of bonus depreciation, net of the amount that you have from bonus depreciation effectively reversing, right? You get it early, that means you don't get it later.

So, if you look at the net amount of bonus depreciation that's embedded in these numbers, it's about $200 million because remember, in prior periods, we got very significant amounts of gross bonus depreciation, about $750 million last year, and so you start to see that net reversal. But it's still a positive contributor to our cash flow in 2012.

Actually, in this current 2012 picture, a little more for power than the utility because, you may recall, as Bill said, we had peakers come online and things like that. So, a good contributor, but not something that was critical to helping us have significantly strong cash flow generation in both of our businesses. So, I think a nice picture in terms of how it sets us up for going into the future.

So this next slide, it's a picture that sort of lays out on a year by year, three year basis, 2013 to 2015, our base approved program capital spend and so, of course, approved program is really referring to the utility and then the power and other spend at the bottom on the orange. But then, looking at how big that spend might be if all of our programs are approved, just during this three year period, '13, '14 and '15.

And so, if I just draw your attention to the total, you can see $6 billion in total spend is our forecast from approved programs, on a base level, if you will, for '13, '14, '15 in the aggregate, of which PSE&G's growth spend is $4 billion.

So, $4 billion is consistent with the numbers we have given you before, in terms of the base programs just carried out for an additional year. There's about $900 million in PSE&G maintenance, and about $1.1 billion in other. So, rounded, about $6 billion.

But there is more opportunity, based on the things that Ralph told you from the hardening programs, as well as the incremental transmission investments. And you can see that, that could be as big as a total capital spend over that three year -- same three year period, '13, '14, and '15, of as much as $7.6 billion with the potential for $400 million more being from the energy master plan programs, $200 million from transmission, and as much as $1 billion from the incremental distribution programs.

So, if you put that together, all of that increment is PSE&G growth. So, the total spend could be as much as $7.6 billion with PSE&G growth being as much as $5.6 billion, and out of that, transmission is about $3.6 billion. So, there's a lot of investment opportunity, based on things that we think really are good for our customers, based on their experience recently with Sandy, and of course, that base level of reliability based transmission baked in these numbers were already of $3.4 billion. So, a lot of opportunity, I think, for growth, based on the things that Ralph earlier outlined.

So, as Ralph likes to always say, how about the checkbook? So, here's effectively the checkbook. If you look at these pictures, they're the normal sources and uses pictures that we've looked at before going forward, and as I've said before, I usually like graphs with the Y axis, but this one doesn't, that's kind of on purpose, but I think you'll get the idea. The left set of bars are sources and uses based on the approved programs.

THOMSON REUTERS

SI-SSA-0015-12240

So, the left set of bars are based on the numbers that I just mentioned on the left side of the last chart at the $6 billion. You can see PSE&G's cash from operations in the aggregate over that three year period, now exceeds power's cash from operations. You would expect that as the utility continues to grow and it's growing with programs like transmission that have formula rate returns, many of which have flip and rate base, so that means cash, as well as the other programs that it has underway.

Power continues to generate significant cash from operations and probably most important in that picture is that right side, when you look at power's capital investments, because over that three year period they're very modest. So, when you look at power, it continues to be a significant excess cash generator, as mentioned earlier, with so much of our environmental, for example, our back end technologies are all behind us. Power's excess cash flow becomes significant contributor in dividending up to the parent.

PSE&G, of course, continues the strong investment program and finances part of that with debt. In this base assumption, on the approved programs side, again, that net debt issuance reflects incremental issuance by the utility and some incremental debt reduction by power. So, we continue to have a very trim balance sheet, supporting all of our base level of growth.

So, why does that matter? It matters because when you flip to the right, and you look at that incremental investment, that $7.6 billion total, you see that now the net debt issuances are obviously bigger, because the utility is investing a whole lot more. And what's really going on in those dynamics is utility debt goes up consistent with its capital structure and if we were to have all of the opportunity to invest at the proposed program levels, you'd see power's debt go up a little bit, rather than go down.

We're still well within credit metrics and I'll show you what that looks like a little bit later. But also, I think an important piece to note in the orange portion of the right side, in terms of PSE&G's cash from operations, that's higher as well, because the nature of our investment programs as we talked about in terms of how we filed them, is contemporaneous return, so you start to get cash back as you make the investments.

So, the picture squares, in terms of setting us up in a way that we can handle even the highest level of capital investment that we've spoken about with keeping power's credit metrics strong, with keeping the utility in a nice position and having that excess cash flow at power that continues to provide opportunity for the shareholder dividend.

So, either way and everywhere in between, obviously, the missing piece on the picture is the new equity, because it simply doesn't need to be there.

So, in terms of what things mean for rate base, right? Because we always talk about when you look at the utility and you wrap it all together, show us that rate base picture, what does it look like? So, here's the rate base picture from the approved programs all the way out through the potential new investments, again, scaled exactly the same way over that three year timeframe.

So, you see the rate base from 2012 to 2015, just using the approved programs, has a CAGR of 7.8% and if we have all of the potential new programs, the ones we've been talking about, you can see the rate base increase up to $12.6 billion, by the end of '15, versus the $11.2 billion with a rate base CAGR now double digit of 12%.

Now, when I was preparing these slides, I said to Kathleen, we have a 7.8% three year rate base CAGR, and on a later slide that I have coming up in a moment, I talk about the double digit earnings growth opportunity, not just '12 to '13, as I already mentioned, but '12 through '15, CAGR is double digit on the earnings as well. And I said to her, maybe somebody will ask about the 7.8% relative to a double digit earnings opportunity.

I've already have that question about nine times at the first break. So, let me just say, that's right. The 7.8% rate base CAGR still supports a double digit operating earnings, or bottom line earnings growth for the utility over that time same timeframe. And let me just mention two things that I think will help square that for you as you think that through and then ultimately model it.

So, remember in the rate base growth, when we look at rate base growth, we're looking at the growth in the investments in net plant, offset by the growth in primarily deferred taxes. So, you do have some higher level of growth rate in deferred taxes than you have in net plant -- in plant additions, partially driven by bonus depreciation and partially driven by normal makers. So, that puts your rate base growth a little lower than your net plant growth. But, when you think about the earnings growth or the utility over this same time frame, I just encourage you to keep two things in mind.

First, the impact of the Sandy -- Superstorm Sandy, on the utilities starting earnings level in 2012 was affected on an absolute basis, as we've talked about, by $0.05 a share for Sandy. It was $0.04 year over year, but from a starting basis, is absolute $0.05 a share, which has one impact on the lowering the base, and therefore higher growth opportunity.

And the other is to keep in mind that part of our investments in transmission don't go in service, of course -- don't go into rate base until they go in service, the ones that don't have CWIP and they are earning on a bottom line EPS basis, AFUDC, and that's a significant growth over the period as well.

THOMSON REUTERS

So, those two things make the earnings growth a little bit different from the rate base growth, and the rate base growth is a little bit less than the gross plant because of the deferred taxes. And if you run that out and you look at the different places that we are investing, particularly transmission, you'll see all of that clears.

And of course, as we go out to a 12% CAGR for rate base, if we have all of the approved programs, the same math obviously applies, it's still double digit, can't say more than that, obviously. It doesn't get bigger than that, because it becomes triple digit, but it stays double digit all the way out, whether you have the base amount or whether you have that higher amount for approved programs.

So, what are the credit metrics that go along with this? Can we demonstrate that we still have that investment flexibility? And the answer is yes. As you know, power's cash from operations has been very strong and you can look at it in the 10K. You can see that power has significant cash from operations in 2012, and of course, with power's credit metrics as I -- as power's debt levels coming down slightly, you see that the FFO to debt continues to be very strong at the end of 2012, at over 60%.

Remember some of the -- the higher numbers in 2011 were partially affected by bonus depreciation, the tax receivable and tax cash that went along with that. So, they're just a little bit different from what you'd see in an ongoing run rate.

But if you look at the 2013 to 2015 average, again, cycling from the approved programs all the way out to the approved plus the new programs, you still see the FFO to debt metrics stay comfortably in the 40s, because remember as I said, in the approved program scenario, you'd be seeing some of the debt levels come down. In the higher scenario, you'd be seeing a little bit of incremental debt, but you still have a very strong opportunity to keep our credit metrics well above the floor that we always set for ourselves, which, as you know, is 35% FFO to debt.

So, it doesn't mean that this is tapped out to no longer have the ability to consider opportunities or to be so close to edge just to be problematic. So, we're very comfortable with our ability to say that we can finance all of what we have the potential, and hope to have the opportunity to do.

This picture has really repeated of what Ralph already showed, so you can see the total capitalization, the debt and equity split of 2012 to 2015. And you can see that even as we go out through 2015, the total debt of 44% relative, to the equity, you're still looking at power debt to cap still comfortably in that 30% or so range that we talked about before, so not even a push relative to our ability to handle the opportunities.

So, in terms of handling the opportunities, Ralph also mentioned the issue of the customer bill and the ability of the customer bill to handle what we're looking at doing with stability, given things that are rolling off. So, I thought I would just show you, because I know many of you track the numbers and try to reconcile between some of the things that's hit the GAAP numbers and the numbers that we gave you on an op earnings basis.

This picture is just really just a reminder for you of the fact that there are significant things that will roll off the customer bill, and to -- the two biggest ones that we talked about previously, certainly securitization, maybe not as much as the non utility generators, but if you look at the PSE&G securitization and NUG impacts, I show you here just how they hit the P&L geography.

Obviously, they are not P&L impacts to the bottom line because they are revenues to offset the costs of the expenses, so they zero out. But the revenue requirement, in order to zero that out on the P&L, is what hits the customer bill. And when these roll off, securitization, as I'm sure many of you are aware of, because we've talked about it before, finishing by the end of the 2015, the NUGs by the end of 2016, if you simply took those two and put them together and compared them as a proportion of today's customer bill, it's the fair way to do it, it's about 8.7%.

So, overtime, regardless of what happens on the energy side, these are absolutes that will be rolling off, and they provide that kind of headroom in the customer bill to be replaced by the things that we do think are very good for our customers and allow for bill stability.

So, let me turn now very briefly to O&M and talk a little bit about our O&M and our pension.

Modest O&M growth, something that we've talked about pretty consistently and as Ralph and Bill showed you, we've really been able to deliver over a very long term time horizon, and we anticipate still being able to do that.

So, starting with 2013 and the guidance that we've given already for 2013, if you look out from 2013 to 2015, what do the next two years of O&M growth look like? Obviously, we haven't given you the earnings growth of the Company but we like to give you the O&M picture, we see continued modest O&M growth of about 2.2% CAGR for the total company from '13 to '15.

You can see that transmission actually relatively modest growth. Transmission, a little more growth this year over last, but that's all recovered in our formula rates. So, transmission, about half a percentage point on a CAGR basis. Again, all of that recovered in our formula rates that allows us to get the $11.6 billion to as high as $12.9 billion, so think of that as coming in to our spend and then coming out as we get the formula rate recovery.

THOMSON REUTERS

SI-SSA-0015-12242

Distribution, relatively modest, slightly higher growth rate at power, and as Bill shown you, a very modest growth rate over the long term historical period. Rolling that altogether, at 2.2%. Last year, we showed you about a 2.9% for a different period, '11 to '14, this is now '13 to '15, I can tell you we're hitting that target and now, we're talking about a more modest target as we go out from '13 to '15.

In prior slides that I've shown you on this in prior years, we've broken pension out separately. We didn't do that this time and I'll show you pension on the next chart, but I can tell you that our pension expense is moderating. In fact, our assumptions this year, and you know we set these based on the numbers at the end of the 2012, is that pension expense will be slightly lower this year than last year. It's a better position than we've been in a while, since pension has been a little bit volatile. So, we didn't break it out here, because it's actually really not a driver of the thinking about the impacts for O&M on a go forward basis, as it has been in the past.

If you look at our pension contributions, it goes right along with, obviously, a moderating pension expense. As you know, we've talked about making significant contributions to our pension plan. We've made over $1 billion in contributions in the last few years. We have a pension plan that's funded at about the mid 80s, 83% at 2012, and our expectations are more modest contributions this year, and as you can see, very much more modest than the out years, based on our assumptions.

But I think our assumptions are actually reasonable assumptions. We took down our discount rate, probably everybody did this year, right? So we had 5% discount rate in the past, we now have a 4.2% rate. You would normally think that would lead to significantly higher pension expense in the current year, but in addition to our contributions, we had a double digit teens return in our pension trust.

And so, you net that all together, you have a basically flat, slightly in fact down, pension expense in '13 over '12. And our rate of return assumption, by the way, is 8%, which it has -- this is the second year it's been 8%. So, we think a nice picture relative to our pension trust, we really do look at this to insure that we have long term, a well funded pension trust and we think we're in good shape there.

Just coming back very quickly to the earnings numbers, and as we usually give you, just some general sensitivities, as you think about '14 and '15, you wouldn't be surprised, I think, by any of these numbers. Remember, as we think about 2014 and 2015, '15 is less hedged than '14, as you know, and so, you'd have a bigger impact based on natural gas price changes, so they're impacts to power prices for '14 and then bigger again for '15, because of being more open.

Changes in spark spreads, similar in both years. Keep in mind that, that intermediate portion, right where the combined cycles are, is not hedged in '14 or '15. So, you'd see that same kind of impact. And of course, dark spread impacts, lower than they have been before just given the changing dynamics of coal and gas as Shahid talked about that and then capacity factor for nuclear.

On the utility, I think you recognize these and the math here is relatively straightforward, right. The incremental investment, think about the portion that's debt and the portion that's equity and multiplied by our ROE. Changes in sales, you can see also a relatively modest O&M, everything's a penny, but if you run off the math, you'll see that all of clears in pretty straightforward math.

So, of course, as we've talked about before, the more volatile are the things that are in the less hedged, as we look at the power prices and the gas prices, but you'd expect us -- you expect to see us, as we go through the year, continue to do that ratable hedging, which, obviously, would bring down the volatility in those out years on the first line as a go through the year on a regular basis.

And then lastly, how it all comes together. Putting that all together and looking at what we've been able to do on the dividend, I think you can see in something that I know many of you look at and track, is the proportion of the dividend that is able to be financed by utility earnings. Keep in mind, with our utility growth program, right, the utility is keeping a lot of its earnings for its reinvestment in growth.

But in terms of stability and dividend support, if you looked at the portion that could be financed by the utility, you can see, as we come into this year, with the dividend based on the increase we just recently announced to $1.44 indicated per share, that the utility earnings in its whole range is about -- is in the 80s in terms of being able to actually support that dividend. So, as the utility earnings are growing, they have an opportunity to support that greater amount of dividend.

But again, as I said, both businesses have significant cash from operations, which gives us great confidence in that dividend. And our opportunity to grow it, as we've always said, is based on utility earnings and cash generation opportunity at power, the former, I think, we've talked about in terms of earnings growth expectations. The latter, we don't forecast, but I think as you can see from the bar charts, there's still significant cash flow generation at power, and power's capital needs continue to be very modest.

So, summarizing all of that up. In terms of our operating earnings guidance, $2.25 to $2.50, same as last year with a greater regulated mix. Double digit operating earnings growth opportunity in '13 and continuing through '15, based on our approved programs. And then, continued focus by power on operational excellence, all the

THOMSON REUTERS

SI-SSA-0015-12243

things that Bill and Shahid spoke to you about, our significant market expertise and continued financial strength, we don't do anything to compromise power's financial strength with our investment program. So, we have all of that opportunity without the need for issuing equity.

And then, of course, our very strong commitment to returning cash to shareholder continues to be fundamental to our investment and our financial picture.

So with that, I thank you for your time, and I'll take a seat here and invite Ralph up to join, and we'll be happy to take your questions.

QUESTION AND ANSWER

Unidentified Audience Member

There we go. Thank you. Perhaps going back to your discussion there on O&M growth, just to kind of touch on it for a second. On the power side, if you could just provide a bit more of an elaboration as to what's happening there? And specifically, I think you alluded to earlier, some potential alleviation with contract renegotiation on the peaker side, could we actually see that come down at all?

Caroline Dorsa - ***PSEG Inc. - CFO***

Contract negotiation -- I'm sorry --

Unidentified Audience Member

You mentioned, I believe, in a prior presentation about renegotiating peakers.

Unidentified Company Representative

The services agreement.

Unidentified Audience Member

Right, services agreement. Is that a meaningful mover in any sense, just overall, what are the key drivers there?

Caroline Dorsa - ***PSEG Inc. - CFO***

Yes. So -- think I have --.

Unidentified Company Representative

Yes, we're both live.

Caroline Dorsa - ***PSEG Inc. - CFO***

We're both live, okay.

Unidentified Audience Member

We can hear you.

© 2013 Thomson Reuters. All rights reserved. THOMSON REUTERS

Caroline Dorsa - ***PSEG Inc. - CFO***

So, the -- if you look at the numbers relative to power, a bigger driver in power on the fossil side than the nuclear side, although there's growth there. And I think Bill may have mentioned earlier, outage work as we continue to have the gas plants running more, those are things that become a bit of a driver there.

But when you look at that over that period, with the things that Bill has under way, 2.9% we're pretty comfortable with. It's kind of similar to last year's guidance for the overall company. See renegotiated union contracts are already baked and embedded in that guidance. So, it's already factored in because they happened before the business planning cycle for last year.

Unidentified Audience Member

All right, great. And then, sort of a second question, going back to the utility cash flows you've talked about. First, looks like not material pension contributions on a go forward basis. What kind of -- relative to your expense, what kind of cash flow line items should we be looking for there in terms of a benefit, I would imagine, relative to the line item, what's baked into your O&M for pension expense?

Caroline Dorsa - ***PSEG Inc. - CFO***

For pension expense?

Unidentified Audience Member

Right, relative to your contribution.

Caroline Dorsa - ***PSEG Inc. - CFO***

Right. So, if you think about our pension expense for this year, it was about $110 million. So, you're looking at something relatively similar. So, slightly lower, but relatively similar to last year in terms of how it fits within the two businesses, the utility, if you looked at the FAS 87, the utility picks up more than half, but the utility capitalizes a good portion. So, when you look at the net amount that hits the O&M on pension, it's actually pretty similar half and half between utility and power, net to the O&M, not gross to FAS 87, but net to the O&M.

Unidentified Audience Member

And then, how much should we be focusing on the reversal of some of the bonus depreciation benefits in the outer years? I'm thinking '15 or something. What kind of an impact does that have?

Caroline Dorsa - ***PSEG Inc. - CFO***

Yes. So, it's a very modest. As I said, the net effects this year are very modest, but still positive. Starts become sort of neutral and slightly negative as you go out in the further years. But nothing dramatic. So, if you think about wrapping these three years together, you can kind of think of '13, '14, '15 as a little bit sort of close to neutral, relative to net bonus and reversal, relative to what makers would have been.

So, you get a big piece when you do that. You do the upfront and then it kind of trails out all the time. So, we're neither dependent or really penalized, right, for bonus depreciation over the period. Which means that the cash flow generation you see in the businesses, you should think of them as more fundamentally driven in that three year period than driven by something bumpy.

Unidentified Audience Member

THOMSON REUTERS

SI-SSA-0015-12245

Right. And maybe last, more strategic. Just in terms of timing of these approvals, it looks like there's a lot out there waiting to be approved. What months -- what are the key data points here that we should be focused on?

Unidentified Company Representative

So the energy efficiency -- I'm sorry, the solar filings that at the BPU, we've agreed with the BPU to extend the approval of the decision date to May 1st. The clock should have run out on that, but given what Sandy did, it was only fair for both parties to extend the date, because we probably weren't as prompt as we should have been in some of the responses to the discovery questions.

On the energy strong, there is no timetable. At the risk of getting into the weeds, the solar filing is done under what we call the RGGI bill, the energy strong are not done under any particular enabling legislation that gives the BPU a date certain. Having said that, the whole theme around Governor Christie's administration this year, as Ralph earlier said, has been to rebuild.

So, we've been asking for an accelerated hearing schedule and the ability to announce something on the 4th of July, on Memorial Day, for its symbolic purposes but we really -- I can't be more specific than that, other than everybody want to get this type of stuff done underway as soon as possible.

Unidentified Audience Member

Okay. Those are the two (inaudible).

Kathleen Lally ***- PSEG Inc. - VP - IR***

You have a question?

Unidentified Audience Member

Hi, thanks for the time today. A couple of things. Strategically, maybe on power, it looks like your plan is showing the application of some of the free cash to help support the infrastructure. But can you talk about what your thoughts are on given that there are quite a bit of power assets possibly out here for sale. How do you think about that in terms of using that free cash or that balance sheet strength for power?

And longer term, how should we think about the mix between regulated and non-regulated as your longer term strategy is going forward. It looks like you're projecting to be more regulated, and if that's the trend, what's sort of a good range in terms of what you folks are thinking?

Unidentified Company Representative

Well, there's no specific number, but clearly, one of the things we've tried to signal today is that the very healthy balance sheet we have is being directed to the utility. So, Caroline gave you the 12% CAGR from now until '15. We've talked about that 10-year plan, that is above and beyond the CapEx, which matches depreciation at the utility so you will continue to see growth and rate base beyond even in the five year numbers. We've not articulated a specific number.

Power is looking at two opportunities for growth, organic and acquisitive. And we have not had success on the acquisitive aspects of it. People have a different point of view than we do about what assets are worth. We've had tremendous success, albeit much smaller scale, on the organic growth. Bill talked about those Kearny peakers, one year ahead of schedule, on time, one part of that project was on time, another part was a year ahead of schedule, both of them able to meet the load this past summer.

The Hope Creek uprate, on budget, on schedule. The Peach Bottom uprate, right now, looking like on budget and on schedule. We're constantly looking at opportunities to expand the output from our existing units. We do look at whether or not to build a new unit. Bill gave you the right answer when asked that question directly before. So, in general, we appear to have more luck when we do things organically and in our disciplined fashion.

But in terms of a magic number, there isn't one, but for the foreseeable future, if you define five years as long term, which I think is just as fair as any, clearly the emphasis is on the regulated side.

THOMSON REUTERS

SI-SSA-0015-12246

Unidentified Audience Member

Caroline, just on the power credit metrics slide where you showed the FFO to debt, there's an average for '13 to '15, and it looks like the average is sort of north of 40%. Can you -- how far above the floor do you stay in any given year, given the sort of hedge roll off profile?

Caroline Dorsa - ***PSEG Inc. - CFO***

Right, sure. So, you're right, it's in the 40s, right, but both views in the 40s level, approved and approved plus. Pretty steady, [Jonathan]. There aren't any bumps in the road here where you have to say, gee, this average is not representative of year on year and therefore, there could be challenges if something happens. It's actually staying well above. Since 35% is the 40%, actually have a lot of room there and we're pretty comfortable all the way through.

Unidentified Audience Member

So it's not like it declines below that average of any --.

Caroline Dorsa - ***PSEG Inc. - CFO***

No, we don't fall below that average and come back up, no.

Unidentified Audience Member

Okay, thank you.

Unidentified Audience Member

Just a little bit wrapping up the way I understood, I just want to get my math right. So, it's double digit growth without the -- with the approved projects at the utility. So, that could be like $0.22 to $0.24, '13 to '15, if I do it. And then, you're saying $1.6 billion of extra -- if all the things get approved, and based on your sensitivity slide, that's equal to about $0.16.

If I do my math correct from the sensitive -- so, that could be like $0.40 and then if you get that LIPA contract, you pick up another couple of cents from that, and then, I guess, I have my generation down, but I still see that the Company is overall, if we get everything approved, in the process of increasing earnings from where we are currently from the midpoint. Am I missing something?

Unidentified Company Representative

So, Ashar, you did this to us last year. You're very good at trying to get us to do multiple years earnings growth. And we practiced this, so don't get nervous, Caroline.

Caroline Dorsa - ***PSEG Inc. - CFO***

I'm good.

Unidentified Company Representative

What I will tell you is that the main theme of today is that 2013 is between $2.25 and $2.50 a share, and stop worrying about the opportunity for investment in the utility after 24 months post the one year refresh. That's the main message today.

© 2013 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

That we have to achieve a new standard of service level on behalf of our customers and there's a lot of work to do and there appears to be some tremendous empathy for doing that work, both among the customers and the policymakers and there are the financial tools to get it done. So, we're not going to get it to $0.30 or $0.40, but stop worrying about the end of time happening 24 months from now. I did better than last year, I think, Caroline.

Caroline Dorsa - ***PSEG Inc. - CFO***

No, that's good.

Unidentified Company Representative

(Inaudible)

Kathleen Lally - ***PSEG Inc. - VP - IR***

Michael?

Unidentified Audience Member

Ralph, from an environmental standpoint, your company's extremely well positioned. I mean, I think, we all recognize that. How do you think through, and this is more thinking about the industry, not just PSEG, how do you think through the next five or seven years or so, in terms of things like 316B, things like coal ash, even on the outer edge carbon about which one of those likely happen, do they happen, are there some that like maybe 316B that could be significantly watered down and others that could have a bigger impact than people think? Just curious, your views on timelines, outcomes and likely -- I guess, expectations versus likely reality?

Unidentified Company Representative

Sure. So, no pun intended on watering down 316B, I hope, but just looking at the EPA public schedule and then kind of giving a little bit of, if history is a teacher, what might happen to that. The first of those three would be 316B, I think, it's a July timeframe decision that we would expect to get from EPA.

And I think the reality is given the magnitude of the impact of 316B and what it would for variety, not just of nuclear plants, but many fossil plants, we've seen some very constructive conversations and results coming out of the EPA. And given what -- who most people expect to be the one or two candidates likely to lead EPA, being internal candidates, I would expect that continuity would be the operative word there.

So, I would expect while there will be some expectations for improved performance in terms of the ones through cooling and its effects on the ambient environment, nonetheless, there'll be a rational decision making processing at EPA.

I'm a little less able to speak about coal combustion residuals, only because our shop is so clean in that regard, and we're so well taken care of. I haven't focused on that as much but that can keeps getting kicked down the road, so I put that in the number two position, behind 316B.

And in terms of carbon, notwithstanding the agency, and I think it's going to be all at the agency, I don't see any legislative activity, notwithstanding the agency's earnest desires to do something, would simply take you back to the clean air economics of 1990 and how clear they were with respect to traditional pollutants and how it's taken two decades to get anywhere.

And notwithstanding the Supreme Court's decision on endangerment fining as it pertains to carbon, I think even those of us who were proponents of doing something, have to admit that the Clean Air Act is not as precise and as clear in that regard. So, the likelihood of the agency being able to implement, as opposed to propose, regulations that then has an effect, a meaningful effect on the power markets is one that I would not expect to happen over the near term.

Unidentified Audience Member

Just a quick clarification on slide 127, in the appendix. There's the nuclear fuel anticipated cost. Is this intended to be where the cost is hedged at? I'm not sure if I'm just seeing the colors right or wrong. Just want to make sure I understand that.

Unidentified Company Representative

The colors don't match.

Caroline Dorsa - ***PSEG Inc. - CFO***

Yes. The colors aren't quite --.

Unidentified Company Representative

They're one and the same there, [Brian]. There's no -- that is what's contracted. We posted --.

Caroline Dorsa - ***PSEG Inc. - CFO***

That's right -- sorry about that.

Unidentified Company Representative

Either the bars should be what the legend is or the legend should be what the bar is. Thanks.

Unidentified Audience Member

I just have one quick clarification. I think you said that power debt, under the approved scenario, would be going down, but under the expanded scenario will be going up. Am I correct to assume that you're leading on the power balance sheet in that case, so sort of divvying it up to the parent to invest in the regulated utility? And if so, what is the total [debt] amount that you plan to raise at power?

Caroline Dorsa - ***PSEG Inc. - CFO***

Yes, sure. So, we didn't -- I didn't, obviously, give out that number, because what I'm trying to signal is direction here, because we propose programs, right? We've propose what we think should be spent, but they're not approved yet, so we don't get into specific forecasting.

Actually, the way I think it's appropriate to think about it, [John], is in the current, approved program scenario, over the forecast horizon, you start to see the utility with its cash from operations be able to contribute some dividend in the incremental investment approach, you'd see the utility be keeping pretty much all of its cash.

So, less the case, actually, that the utility needs net investment, because remember those -- those programs are contemporaneous return and more that the utility would be keeping all the cash flow. So, it's not a leaning on power's balance sheet going in, it's more that instead of power's debt going slightly down, it goes slightly up, significant cash generator supporting the shareholder dividend, utility just keeps and reinvests. So, nice picture clears without really looking at what you might otherwise consider subsidy.

Unidentified Audience Member

Okay, and then just on the rate base math again. So, we're at $9 billion now. I think the total approved programs, maintenance and growth, about $4.3 billion CapEx? So, of the $2.2 billion of growth, under the approved scenario, how much is deferred taxes and quit having an impact on the rate base number? If you can give a number, that would be great for both of those.

Caroline Dorsa - ***PSEG Inc. - CFO***

THOMSON REUTERS

Yes, I can't give the number from memory, I'm sorry.

Unidentified Audience Member

Okay.

Caroline Dorsa *- PSEG Inc. - CFO*

But I think if you can go back, you can go back and look at our 10K and you can pull out, right, the amount of deferred taxes that's there right now, right? So, it's a multibillion dollar number, right? So, you think about deferred taxes, is growing faster than the net -- than the plant additions, because there's a little bit of a bonus for this year and then there's the normal makers, which would normally pull down that growth.

But I can't give you the deferred tax forecast as we go out. But that's what's affecting the rate base piece and that's why I wanted to signal it, because otherwise, you'd take the capital, you subtract the depreciation, you'd say, I should get a higher number, but don't forget the deferred taxes.

Unidentified Audience Member

Okay, thank you.

Caroline Dorsa *- PSEG Inc. - CFO*

Sure.

Unidentified Audience Member

Thank you, just a quick question on credit metrics slide. Does the FFO here, do you add back the nuclear fuel amortization to this number? In other words, net income plus nuclear fuel [amort] or -- because I know there's -- the rating agencies treat that a little bit differently, so just wondering which one you're showing us.

Caroline Dorsa *- PSEG Inc. - CFO*

Right. So, we treat the nuclear fuel as capital.

Unidentified Audience Member

Okay, got you. Thank you.

Ralph Izzo *- PSEG - President, CEO*

Okay, so thank you for being here today. Just a couple of closing comments to just to acknowledge some folks. Obviously, there are many, many components to the kind of success that we've been able to realize, and that I expected us to realize going forward.

One, needs to have fair regulation and fair regulators, and I think we have that, in New Jersey, at our Board of Public Utilities. You need to have open minded and accessible policy makers, and we clearly have that in the Christie administration. It's been a tremendous advantage to have enlightened union leadership and we have that at PSEG, and I'm not sure that is as ubiquitous as perhaps some of the other items I've mentioned.

I never can tell you enough good things about our dedicated and talented employees. But there's probably one area where I don't spend enough time congratulating folks and that's in the leadership team that you saw here today. Actually, LaRossa's first name is not Ralph, I asked him to change it so I can get credit for many of the things he does, and I enjoy that tremendously.

THOMSON REUTERS

And enough good things may have been said about him today, I don't know that it's ever possible to say those things. I will tell you, in the next 12 months, my exclusive focus with Ralph is not on energy strong, it's on making sure that everybody knows that we are not responsible for keeping the lights on the Super Bowl. We have the 26 KV lines that go to that switchyard and then the sports and exposition authority is responsible for the operations and maintenance for that switchyard. I would sleep a lot better, if I knew Ralph was in charge of that.

I can't say enough good things about Randy. What he has done to derisk the holdings portfolio is just phenomenal, and at the same time, to grow the solar business, obviously, with the enormous leadership of Diana Drysdale. And then, when he's not standing on one foot and balancing a rotating dish with his right hand, he's running our communications team and our strategy group.

About a year or so ago, Kathleen and Caroline took me down to meet a former large shareholder who shall go nameless. And he looked me in the eye and said, okay, I liked your company in the past, I'm interested in getting back in, if you promise me that you will never ever again invest in communication satellites. I didn't know what the heck he was talking about. We came back to the office and we checked and we had invested in communication satellites. I assured him, we would not be investing in communication satellite, but Randy let's me sleep at night by derisking that portfolio. I have no doubt that 10 years from now, some CEO will be sitting here and saying -- and she will say, I can't believe what Izzo did, but it won't be communications satellites. That you can count on.

Bill Levis. Let me just tell you a little bit about the nuclear industry if you're not aware of it. There are no perennial losers in the nuclear industry. There are very few perennial winners in the nuclear industry. If I were to ask you to seize upon one line that Bill mentioned, it was eight years of above 90% capacity factors in our nuclear plants. What the nuclear industry has lacked to its history has been consistency. And what Bill and Tom Joyce and the team have brought there since 2004 has been phenomenal outstanding performance, consistently improving performance.

About a month or so ago, we presented our five year plan to the board of directors and, as they should, they challenged me on the fact that earning guidance was going to be the same as it was the prior five years. And they said to me, are you sure there's enough stretch in that plan? And I responded with two words. I responded with Bill Levis. The man doesn't know the meaning of anything less than stretch whether it's at nuclear or at fossil or at ER&T.

Shahid, I sleep at night like a baby. No guessing, no betting, he talks about his point of view. I use different words about our point of view. First of all, that point of view is in the dynamic hedging program. And it's founded on our deep, deep knowledge about the transmission system and the gas system in the PJM region, and how we can take advantage of temporary, short term dislocations that do occur, in any highly efficient markets, such as ours. They still occur, and that's what Shahid brings to that table.

Caroline, I finally realized, her initials are CD, but she changed her name, too. Her original name was Capital Discipline. And then, she took the initials and adopted Caroline Dorsa, and you would just love to see the change in discussion that's taken place over the last three years at our offices. Three years ago, people would come to us with projects and Caroline in a professional and understated way would say, the NPV is negative, you're not saving shareholder value, no.

And then they would do a bunch of arm weighing and talk about strategic value and how this is critical, absolutely critical for the future of the Company. She would patiently listen and say, but no, there's no shareholder value being created, I don't think we should do this. I don't have those conversations anymore. Nobody even comes to me with those projects anymore because of the capital discipline she's brought to the business.

Caroline has an army of documents here, I have an army of people here, but day in and day out, I believe I'm confident that your questions are answered without that army of people behind her, by Kathleen Lally and Carlotta. And, I can't say enough about them in terms of pulling together this presentation together today and answering your questions day in day out.

There are far too many people to name throughout the Company, some of them are here today, some of them are not. But, I will tell you that we are quite, quite optimistic about our future.

We thank you for following us. We hope you share that confidence to the extent that you do. I thank you. That is a bright future and we invite you to join us in that future as we march forward together. Have a great day and I think there may be some food outside still left. See you next year.

We make things work for you.

We have the
energy
to make things better
... for you, for our investors
and for our stakeholders.

SI-SSA-0015-12253

Forward Looking Statement

Readers are cautioned that statements contained in this presentation about our future performance, including future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical, are forward-looking statements for purposes of the safe harbor provisions under The Private Securities Litigation Reform Act of 1995. When used herein, the words “anticipate”, “intend”, “estimate”, “believe”, “expect”, “plan”, “should”, “hypothetical”, “potential”, “forecast”, “project”, variations of such words and similar expressions are intended to identify forward-looking statements. Although we believe that our expectations are based on reasonable assumptions, they are subject to risks and uncertainties and we can give no assurance they will be achieved. The results or developments projected or predicted in these statements may differ materially from what may actually occur. Factors which could cause results or events to differ from current expectations include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units, delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers,
- increase in competition in energy supply markets as well as competition for certain rate-based transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and changes in technology and customer usage patterns.

For further information, please refer to our Annual Report on Form 10-K, including Item 1A. Risk Factors, and subsequent reports on Form 10-Q and Form 8-K filed with the Securities and Exchange Commission. These documents address in further detail our business, industry issues and other factors that could cause actual results to differ materially from those indicated in this presentation. In addition, any forward-looking statements included herein represent our estimates only as of today and should not be relied upon as representing our estimates as of any subsequent date. While we may elect to update forward-looking statements from time to time

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. The last slide in this presentation includes a list of items excluded from Income from Continuing Operations to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

SI-SSA-0015-12256

PSEG INTRODUCTION & OVERVIEW

Ralph Izzo

CHAIRMAN, PRESIDENT AND
CHIEF EXECUTIVE OFFICER

PSEG

We make things work for you.

SI-SSA-0015-12257

PSEG Strategy

Leveraging the strength of PSEG's balance sheet to invest primarily in our stable, regulated business in ways that meet customer needs and state goals as we protect the upside of the merchant business and provide growth for our shareholders

SI-SSA-0015-12258

PSEG met 2012's challenges

with our strong platform of assets

PSEG

PSE&G	PSEG Power LLC	PSEG Energy Holdings*
Electric & Gas Delivery and Transmission	**Regional Wholesale Energy**	**Renewable Investments**
PSE&G positioned to meet NJ's energy policy and economic growth objectives with an investment program exceeding $10 billion through 2017	PSEG Power's low-cost, base load and load following fleet is geographically well positioned and environmentally responsible	PSEG Energy Holdings positioned to pursue attractive renewable generation and develop new business opportunities
Assets $19.2B **Operating Earnings $528M**	**Assets $11.0B** **Operating Earnings $644M**	**Assets $1.5B** **Operating Earnings $64M**

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2012.
ENERGY HOLDINGS INCLUDES PARENT.
SEE PAGE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS TO RECONCILE TO OPERATING EARNING.

SI-SSA-0015-12259

PSEG – 2012 Highlights

2012 Earnings in-line with guidance

- Achieved operating earnings of $2.44 per share, at the high end of guidance range of $2.25-$2.50, including storm-related costs at PSE&G
- PSE&G represented 43% of consolidated operating earnings with growth in transmission

Operational excellence

- Record output from CCGTs, continued strong production from Nuclear, and Power's control of O&M supported results
- PSE&G recognized for reliability: National ReliabilityOne Excellence Award, Mid-Atlantic Reliability Award, and Award for Outstanding Response to a Major Outage Event; as well as EEI's Emergency Response Award
- Restored service to 2.1 million customers in a two-week period of time in the aftermath of Superstorm Sandy and the Nor'easter that followed
- Extension of major labor contracts

PSEG disciplined capital investment

- Key regulatory approvals received for major transmission projects
- BPU decisions pending on Solar4All Extension and Solar Loan III
- Power added 400 MW of new peakers in time to respond to summer demand
- Holdings added 40 MW of new solar capacity

SI-SSA-0015-12260

2013 Operating Earnings Guidance

SI-SSA-0015-12261

PSEG

PSE&G's Energy Strong Capital Program addresses new reality

- New $3.9 Billion Infrastructure Program filed with the NJBPU to strengthen PSE&G's electric and gas system focusing on hardening and resiliency
- Plan to invest an additional $1.5 Billion in Transmission grid over the ten-year period
- PSE&G's Infrastructure proposal includes:
  - Protecting 40 utility installations from severe storms (**$1.7 Billion**)
  - Making the electric grid smarter and easier to repair (**$454 Million**)
  - Adding backup distribution lines and system redundancies (**$415 Million**)
  - Undergrounding 20 miles of overhead distribution lines (**$60 Million**)
  - Modernizing the gas distribution system (**$1.1 Billion**)
- Better protection for homes and businesses during severe weather and improved day to day system reliability
- Proposed filing creates ~5,800 jobs and stimulates economic activity for New Jersey businesses

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-12293

Mickleton-Gloucester-Camden 230kV

consists of upgrading 10 circuit miles of overhead transmission, installing ~16 circuit miles of new 230kV underground, 10 circuit miles of new 230kV overhead, and modifications/upgrades at five existing stations

Project Estimate Up To	Through Year-end 2012	2013-2015E	Expected In-service Date
$435M	$24M	$411M	June 2015

- PJM RTEP project b1398
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-12294

State policy imperatives have been redefined by SuperStorm Sandy

Storm report issued by NJBPU focusing on:

- Preparedness Efforts
- Communications
- Restoration and Response
- Post Event Analysis
- Underlying Infrastructure Issues

Storm Deferral Filings:

- On December 19, 2012 the Board granted a PSE&G request for general authority to defer storm restoration costs, thereby making such costs potentially recoverable in future rate filings
- On February 20, 2013, at its open public meeting, the Board voted that the recovery of all such storm restoration costs would be reviewed in a generic (multi-utility) proceeding

SI-SSA-0015-12295

We have also responded with a plan focused on infrastructure hardening and resiliency

- PSE&G filed a petition on February 20, 2013, with the NJBPU seeking approval for the Energy Strong Program (ES) which will harden electric and gas distribution infrastructure and increase the resiliency of the electric distribution system
- The filing complements the NJBPU's recently issued order requiring all Electric Distribution Companies to take specific actions to improve preparedness and response to major storms
- ES program represents a potential investment of approximately $3.9 billion over the next 10 years. PSE&G has asked for initial funding approval of $2.6 billion during the first five years
- Additional Transmission investment of approximately $1.5 billion would be included in future FERC Formula Rate filings

SI-SSA-0015-12296

PSE&G is continuing to provide solutions to assist New Jersey in achieving its EMP goals

Solar 4 All extension (S4Ae)*

- Filed July 2012
- Investment up to $690 million and 136 MW
- The program will assist the state in developing solar for underserved market segments by installing solar systems on landfills, brownfields and other underutilized land

Solar Loan III (SL3)*

- Filed July 2012
- Investment up to $193 million and 97 MW
- The program will assist the state in meeting its solar policy objective by providing loans to solar developers and generation owners focused on residential, small non-residential and large non-residential customers

Energy Efficiency 4 All (EE4A)

- Investment up to $470 million
- The program will target four residential and three commercial and industrial segments
- To be filed

SI-SSA-0015-12297

Lower commodity costs and expiration of certain transition charges are expected to fully offset the impact to customer bills

*2018 BGS/BGSS RATES AS WELL AS SBC AND DISTRIBUTION RATES HELD CONSTANT AT CURRENT 2013 RATES. RATES RELATED TO ELECTRIC RESTRUCTURING: SECURITIZATION (STC), NON-UTILITY GENERATION CHARGE (NGC), & TRANSITIONAL ENERGY FACILITIES ASSESSMENT (TEFA), ARE REDUCED TO ZERO BY 2018. THE RGGI RECOVERY CHARGE (RRC), SOLAR PILOT RECOVERY CHARGE (SPRC), AND CAPITAL ECONOMIC STIMULUS INFRASTRUCTURE INVESTMENT PROGRAM EXTENSION (CIP II) BILL IMPACTS ARE INCLUDED IN THEIR RESPECTIVE GAS AND ELECTRIC BARS AND FORECASTED IN 2018 BASED UPON LATEST ESTIMATE. THE 2018 BILL IMPACTS OF ES, EE4ALL, AND S4AEXT/SL3 IMPACTS ARE BASED UPON CURRENT ESTIMATES.

Long Island Power Authority

SI-SSA-0015-12300

PSEG

LIPA T&D management contract

In December 2011, the Long Island Power Authority (LIPA) selected PSEG to manage its electric transmission and distribution system for 10 years starting in 2014

- Reasons for selecting PSEG included:
- Proven technical capabilities and track record of top quartile customer service and reliability
  - Commitment to cost control and investment optimization
  - Corporate culture of transparency and data-driven decision making
  - Transition activities on-track – successfully achieving all milestones through February 2013

- Evaluating impact of SuperStorm Sandy and recent LIPA management changes on the overall schedule and transition

Successful management of the LIPA transmission and distribution system may lead to additional growth opportunities

William Levis

PRESIDENT & CHIEF OPERATING OFFICER, PSEG POWER

SI-SSA-0015-12309

PSEG

We make things work for you.

PSEG Power strategy

Focused on safety performance, unit reliability, competitive cost structure with control of maintenance costs, achieving operational excellence, and supporting market rules to maintain a level playing field

SI-SSA-0015-12310

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus

Fleet Diversity/Efficiency Focus

- Fleet diversity across the dispatch curve and fuel types provides flexibility
- Nuclear units continue to achieve strong operational results and are well positioned for the future
- Peach Bottom steam path retrofit completed
- Fossil fleet is suited for market dynamics
- CCGT achieved record output in 2012
- Installed 400 MW new peaking capacity in 2012

Financial/Economic Focus

- O&M cost control programs have delivered
- Sites offering competitive advantage suited for expansion

Regulatory Focus

- Strong regulatory performance
- Industry leadership in the changing regulatory environment

SI-SSA-0015-12311

PSEG Power delivered in 2012

Storm and weather challenges	Market challenges	Value delivered
• SuperStorm Sandy impacted our generating sites • Warm winter put pressure on demand and pricing for both electricity and gas • Hot summer weather created challenging operating environment	• Unit outages and transmission outages resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by weather and economy	• Cost control • Lower dispatch and fuel cost • Captured value through coal/gas switching, unit flexibility • Improved unit availability • Coal & oil sales optimized inventory • Expedited return from storm outages, restored margin opportunities • Optimized unit dispatch across fleet during storm recovery

SI-SSA-0015-12312

PSEG Power has generating assets in three competitive markets

- Low cost portfolio
- Fuel flexibility
- Assets near loads
- Poised to benefit in real time markets
- Fleet will maintain diversity and efficiency in 2016 after HEDD
- Most sites suitable for expansion

SI-SSA-0015-12313

PSEG Power Nuclear fleet is a critical element of success

Hope Creek	Salem Units 1 and 2	Peach Bottom Units 2 and 3

• Operated by PSEG Nuclear
• PSEG Ownership: 100%
• Technology: Boiling Water Reactor
• Total Capacity: 1,174 MW
• Owned Capacity: 1,174 MW
• License Expiration: 2046
• Next Refueling
  • Fall 2013
	• Operated by PSEG Nuclear
	• PSEG Ownership: 57%, Exelon – 43%
	• Technology: Pressurized Water Reactor
	• Total Capacity: 2,326 MW
	• Owned Capacity: 1,335 MW
	• License Expiration: 2036 and 2040
	• Next Refueling
	  • Unit 1 -- Spring 2013
	  • Unit 2 – Spring 2014
		• Operated by Exelon
		• PSEG Ownership: 50%
		• Technology: Boiling Water Reactor
		• Total Capacity: 2,245 MW
		• Owned Capacity: 1,123 MW
		• License Expiration: 2033 and 2034
		• Next Refueling
		  • Unit 2 – Fall 2014
		  • Unit 3 – Fall 2013

SI-SSA-0015-12314

PSEG Power Nuclear is core to the fleet and has competitive advantages

- Continued strong nuclear operations – eight consecutive years of >90% capacity factor
- Significant earnings contributor
- Top quartile of cost performance/MWh
- One third new staff, recruitment of the best new and experienced talent and attractive training program
- Developing Fukushima action plan in response to NRC staff review
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

SI-SSA-0015-12315

PSEG Power's Fossil Fleet availability has shown steady improvement

EFORd improvement resulted in over 200 MW of additional capacity available

EFORp improvement and availability at peak demand times has resulted in performance payments in each of the last four years

SI-SSA-0015-12316

PSEG Power improvements achieved in combined cycle fleet efficiency

Actions Taken to Create Value	
• Heat rate improvement program • Operational Excellence Model	• Training programs • Unit testing initiative • Outage work to restore efficiency

SI-SSA-0015-12317

SuperStorm Sandy affected the fleet;

when the load returned, Power was ready

SI-SSA-0015-12318

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- Power is well positioned for HAPS

SI-SSA-0015-12319

PSEG Power's focus on costs has resulted in moderate increase in O&M for six years

Cost control actions taken:	
• Coal assessment • CCGT material condition assessment • Contract renegotiation	• Material management • Nuclear maintenance productivity study • Nuclear outage efficiency initiative

SI-SSA-0015-12320

* INCLUDES IMPACTS FROM STORM RECOVERY COSTS AND POTENTIAL RELATED INSURANCE PROCEEDS.
E = ESTIMATE.

PSEG Power is well positioned for growth in the fleet when market conditions dictate

Available locations		Our sites possess infrastructure advantages
• Bergen • Burlington • Essex • Edison • Kearny	• Hudson • Linden • Sewaren • Bridgeport Harbor	• Electric Interconnection • Gas Pipeline Access • Sites/Space • Emissions

SI-SSA-0015-12321

PSEG Power will maintain diversity and efficiency after a realignment of the fleet in 2016

Objective
2012 → 2016E

- Maintain fuel diversity
- Maintain load serving capability
- Improve fleet heat rate by 6%
- Maintain low cost structure
- Environmental improvement

Fuel Diversity
13,226 MW 11,200 MW

Energy Produced
52.5 TWh 52-54 TWh

ENERGY RESOURCES AND TRADE

PSEG

We make things work for you.

SI-SSA-0015-12325

PSEG Power
ER&T strategy

Focused on optimizing the value of its asset portfolio and providing outstanding service to our customers, while prudently managing risk

SI-SSA-0015-12326

Agenda

Diversified Assets & Flexible Dispatch

Managing Risks & Creating Value

Regulatory Advocacy

SI-SSA-0015-12327

PSEG wholesale market strategy

built on a strong asset portfolio

Managing Risks & Creating Value

Consistent hedging strategy • Full load requirements • Capacity sales • Monetize optionality

Diversified Assets & Flexible Dispatch

Strong operational performance
Fuel switching
Ancillary services

Regulatory Advocacy

Supports competitive markets
Seeks a level playing field
Provides insight
Creates opportunity

SI-SSA-0015-12328

Diversified assets and flexible dispatch

High performing, baseload nuclear assets	3,632 MW
Fuel advantaged, baseload coal plants in PA	776 MW
Flexible combined cycle fleet	3,176 MW
Well leveraged intermediate & peaking assets	5,642 MW

Integrated trading and dispatch capability around fleet

SI-SSA-0015-12329

Fleet capacity has been advanced by:

Improved Heat Rate capability

Trading acumen to execute fuel switching opportunities

Reduced O&M and increased start-up success

Capturing new products opportunity with minimal investment

SI-SSA-0015-12330

Spark spread replaces dark spread as major value driver

- Spark spread has risen above dark spread in PJM markets
- Power's gas units operating at record throughput
- Gas operation provides much more operational flexibility
- Enhances the ability of trading organization to capture volatility

Agenda

Diversified Assets & Flexible Dispatch

Managing Risks & Creating Value

Regulatory Advocacy

SI-SSA-0015-12332

2013 BGS Auction Results for PSE&G Zone

BGS sales account for about a third of our forward portfolio of hedges

SI-SSA-0015-12333

BGS PRICES REFLECT PSE&G ZONE; RESULTS FOR 2011-2013 WILL BE THE NEW BLENDED PRICES BEGINNING JUNE 1, 2013.

Our hedging mix has changed with the market but still captures the fleet's locational advantage

- 3 Year forward BGS sales comprise smaller percentage of Power's hedges
- Other full requirement load deals help capture additional locational and load shape premium

SI-SSA-0015-12334

NOTE: PERCENTAGES REPRESENT HEDGED VOLUMES IN PLACE AFTER BGS AUCTION.

Hedging strategy designed to protect gross margin and leverage the portfolio

Ratable Hedging on Baseload:

- 3 year ratable hedge tactics
- 3 year PJM hedge of capacity (not included in table)
- Load following sales (such as BGS) have strong correlation to our units for hedging basis and load shaping premium

Dynamic Hedging on Intermediate Coal, Combined Cycle and Peaking:

- Position fleet to take advantage of market volatility
- Gas and load-following fleet left open until prompt year to capture volatility
- Use all trading products to capture option value of assets and benefit from market dislocations

		2013	2014	2015
Baseload (Nuclear and Baseload Coal)	Volume TWh	35	35	35
	% Hedged	100%	80-85%	40-45%
	Price $/MWh	$50	$49	$51
Intermediate Coal, Combined Cycle, Peaking	Volume TWh	20	19	18
	% Hedged	30-35%	0%	0%
	Price $/MWh	$50	$49	$51
TOTAL	Volume TWh	53-55	53-55	52-54
	% Hedged	75-80%	50-60%	25-30%
	Price $/MWh	$50	$49	$51

SI-SSA-0015-12335

PSEG

* HEDGE PERCENTAGES AND PRICES AS OF FEBRUARY 11, 2013. REVENUES OF FULL REQUIREMENT LOAD DEALS BASED ON CONTRACT PRICE, INCLUDING RENEWABLE ENERGY CREDITS, ANCILLARY, AND TRANSMISSION COMPONENTS BUT EXCLUDING CAPACITY. HEDGES INCLUDE POSITIONS WITH MTM ACCOUNTING TREATMENT AND OPTIONS.

PSEG's locational advantage

and electric basis

- Basis (PS Zone to PJM West) will continue to trend downward for forward sales
- Volatility will remain significant in the prompt periods (especially summer/winter)
- Power maintains sufficient length to participate in upside volatility as well as a valuable 250MW transmission position into NYC
- Basis will continue to have a positive impact on PSEG Power profitability

SI-SSA-0015-12336

*AS OF FEBRUARY 14, 2013.

PSEG's locational advantage

and gas basis

- Lower cost supplies of shale gas have been beneficial to both PSE&G customers and PSEG Power
- Over 50% of our available pipeline capacity can access market area supplies of shale gas
- Power's generating units sit in close proximity to the Marcellus fairway
- Power buys approximately 350BCF/year of gas
- We have been able to arbitrage gas values from South to North and East to West using our storage and pipeline capacity

SI-SSA-0015-12337

PJM's capacity market continues to recognize locational value of our fleet

$/MW-day	2012 / 2013	2013 / 2014	2014 / 2015	2015 / 2016
Power's Average Prices	$153	$244	$162	$167
Rest of Pool Prices	$16	$28	$126	$136
Power's Capacity (MW)	10,400	10,600	10,300	9,000

2016/2017 RPM Auction Influenced By:

- Updated Demand Curve
- Environmental Retirements
- Minimum Offer Price Rule
- Updated Transfer Capabilities
- New Build/Cost of New Entry
- Demand Response

SI-SSA-0015-12356

Opportunity for modest and sustainable

dividend increases consistent with stable regulated growth and cash generation outlook at PSEG Power

SI-SSA-0015-12357

Summary

- Operating Earnings Guidance for 2013 of $2.25 - $2.50 per share with earnings mix shifting to 50% regulated
- Double digit operating earnings growth at PSE&G starting in 2013, and continuing through 2015 driven by transmission investments and approved programs
- Power's continued focus on operational excellence, market expertise and financial strength reduces risk in low price environment
- Strong Balance Sheet and Cash Flow support full capital program without the need for equity
- Long history of returning cash to the shareholder through the common dividend, with opportunity for further growth

SI-SSA-0015-12358

PSE&G
Appendix

SI-SSA-0015-12359

PSE&G provides high reliability at below average cost which creates superior value to customers

SAIDI = SYSTEM AVERAGE INTERRUPTION DURATION INDEX, A MEASURE OF AVERAGE OUTAGE DURATION FOR ALL CUSTOMERS SERVED.

PSE&G prioritizes public safety

while maintaining value to customers

LEAK RESPONSE RATE = PERCENTAGE OF UTILITY RESPONSES TO REPORTED LEAKS WITHIN ONE HOUR.

SI-SSA-0015-12361

Formula rates for transmission make the process more predictable with contemporaneous returns

	Transmission (Federal)	Distribution Base Rate Case (State)
Current ROE	• 11.68% base • 12.93% with incentives on Susquehanna-Roseland • 11.93% with incentives on Northeast Grid	• 10.3%
Volatility of Returns	• Low – prospective recovery with annual true-ups for over/under recovery	• Higher – performance impacted positively/negatively by cost management, weather, customer demands, etc.
Process	• Formula – The rate template and specific elements like ROE are predetermined with annual updates and true ups	• Litigated case with each element (depreciation, ROE, O&M levels, Rate Base) scrutinized and settled
Intervenors	• State consumer advocates usually participate	• State consumer advocates • Large customers • Other parties affected by the case, e.g. Solar Developers
Test Year	• PSE&G has fully **forecasted** test year for both Capital and O&M	• **Historical** test year with pro-forma adjustments for known and measurable items, e.g. wage escalation
Time to resolve	• Annual Formula updates are filed in October with January 1 effective date	• Typically settled within 12-15 months

SI-SSA-0015-12362

New Jersey Board of Public Utilities (BPU)

- The Board of Public Utilities consists of five commissioners appointed by the Governor. These appointees are confirmed by the NJ Senate for six-year, staggered terms. The Governor appoints one of the five to serve as Commission President. Currently, the commissioners are:
  - Robert M. Hanna, Commission President
  - Jeanne M. Fox
  - Joseph L. Fiordaliso
  - Mary-Anna Holden
- Stefanie Brand, Director of the Division of Rate Counsel

SI-SSA-0015-12363

Slow economic recovery in NJ is constraining growth in all market sectors

Modest residential growth limited by housing market inactivity and the slow economic recovery

Consumer spending is trending with the slow economic recovery and impacting growth in the commercial sector

Industrial sales growth continues to be constrained by slow economic recovery

PRESENTATION

Operator

Ladies and gentlemen, thank you for standing by. My name is Allie, and I'm your event operator today. I would like to welcome everyone to today's conference call, Public Service Enterprise Group first quarter 2014 earnings conference call and webcast.

(Operator Instructions)

As a reminder this conference is being recorded today, May 1, 2014 and will be available for telephone replay beginning at 1 PM Eastern time today until 11.30 PM Eastern time on May 8, 2014. It will also be available as an audio webcast on PSEG's corporate website at www.PSEG.com. I would now like to turn the conference over to Kathleen Lally. Please go ahead.

Kathleen Lally ***- Public Service Enterprise Group Inc - VP IR***

Thank you, Allie. I appreciate that. Good morning, everyone. I apologize for the slight delay in our call this morning. I appreciate your patience with us. There are a lot of earnings call this morning. We do appreciate your participation in our earnings call.

And as you are aware we released first quarter 2014 earnings statements earlier this morning. The release and the attachments are posted on our website at www.PSEG.com under the investor section. We also posted a series of slides that detail operating results by company for the quarter.

The 10-Q for the period ended March 31, 2014 is expected to be filed shortly. I'm not going to read the full disclaimer statement or the comments we have made on the difference between operating earnings and GAAP results, but as you know, the earnings release and other matters that we will discuss in today's call contain forward-looking statements and estimates that are subject to various risks and uncertainties.

THOMSON REUTERS

SI-SSA-0015-12379

And, although we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so even if our estimate changes, unless, of course, we are required to do so. Our release also contains adjusted non-GAAP operating earnings. Please refer to today's 8-K or our other filings for a discussion of factors that may cause results to differ from management's projections, forecasts and expectations and for a reconciliation of operating earnings to GAAP results.

I would now like to turn the call over to Ralph Izzo, Chairman, President and Chief Executive Officer of Public Service Enterprise Group. And joining Ralph on the call is Caroline Dorsa, Executive Vice President and Chief Financial Officer. At the conclusion of their remarks, there will be time for your questions.

Ralph Izzo *- Public Service Enterprise Group Inc - Chairman, President & CEO*

Thank you, Kathleen, and thank you, everyone, for joining us today. Earlier this morning we reported operating earnings for the first quarter of 2014 of $1.01 per share. That's a 19% increase over the first quarter of 2013's operating earnings of $0.85 per share. I am extremely pleased with the PSEG's results. We delivered on many fronts during quarter.

For anyone on this call listening who resides on the East Coast, I don't need to tell you how cold it was the winter. You experienced the polar vortex, and we experienced it as well. The record low temperatures challenged our employees, our equipment and our markets. Our readiness was tested at a critical time, and the effort that PSEG's employees put into secure the availability of our equipment and maintain the reliability of the system was evident and appreciated by customers.

The extreme cold weather caused stress around the system, from freezing coal handling equipment at some facilities and playing havoc with other equipment which resulted in forced outages at some of our coal, gas and peaking units. And there was a need to respond to the stress weather placed on our electric and gas distribution system with additional repair work.

Despite these challenges the strength of Power's fleet was demonstrated in the first quarter through its dispatch flexibility and diverse fuel mix. Our dual fuel coal units were able to run on gas, and, when necessary, our peaking units with dual fuel capability ran on fuel oil when gas wasn't available. And our nuclear fleet continues to perform at high levels, operating at 100% capacity factor.

Even though some of our gas generation was curtailed, we were able to get sufficient gas to operate our units at critical times. Our coal and peaking stations responded to the improvement in market economics, and, given the responsiveness of our employees, the impact of outages was limited, and the fleet was available to meet the strong demand. The extremes in weather created substantial volatility in the market.

PSEG Power's diverse fuel mix and dispatch flexibility allowed Power to capture margin on its net long position as it responded to the increase in demand. The strong interaction between our station managers and commercial teams resulted in the adjustment of scheduled outage work and assured the supply of energy in support of customer needs. We were also able to pull forward major work at our Linden units to upgrade with advanced gas path technology in advance of the summer season.

Our access to low-cost gas supplies continued to yield benefits for our customers. During the months of February and March PSE&G's customers received bill credit amounting to $115 million. That's an important savings at any time of year. Our operating earnings in the quarter also reflect the benefit of an increase in the capital invested in our stable regulated business.

This increased investment continues to drive earnings growth and improvement in reliability at PSE&G as it transforms the profile of our Company. PSE&G capital program remains on schedule. In 2014 PSE&G is expected to invest $2.2 billion electric and gas infrastructure upgrades to its transmission and distribution facilities to maintain reliability as part of a five-year $10 billion capital program.

We reached a milestone as part of our capital program that we are quite proud of. The first segment of the Susquehanna Roseland 500kV transmission line went into service during the month of April. We expect to complete construction of SR towers and the lines heading west to the Delaware water gap this summer.

© 2014 Thomson Reuters. All rights reserved. THOMSON REUTERS

SI-SSA-0015-12380

Our section of the line, an investment of approximately $790 million will eventually connect with PPL's portion, and Susquehanna Roseland is expected be fully operational in 2015 when PPL completes construction on the western portion of the line. This will be a major achievement. SR's 2015 operational date will be 12 years after the August 2003 blackout and almost a decade after PGM identified the critical system needs required to upgrade aging infrastructure and relieve overloaded power lines.

PSE&G energized the Burlington-Camden 230kV line this week, ahead of schedule, and it is on schedule to energize the North Central reliability transmission line this summer. These projects represent a total investment of approximately $790 million and are designed to improve power quality and system reliability. All three lines are part of PSE&G's ongoing transmission program, representing $6.8 billion of the $10 billion capital program I mentioned a moment ago and providing double-digit growth in PSE&G operating earnings through 2016.

As PSE&G's investment in transmission is expected to drive its earnings growth, it is also expected to further diversify PSE&G's asset base as transmission grows to represent more than 45% of PSE&G's rate base over the next three years. Transmission lines and switching stations are the backbone of our electric grid ensuring that we can transport power where it's needed safely and reliably. This will assume greater importance as we begin to experience growth, although still modest, in weather normalized electric demand.

The polar vortex exposed the critical need to maintain and improve on the resiliency of our infrastructure, the need to replace aging equipment and maintain the level of service demanded by our customers. And it highlighted the every day truth that not investing in the system can have a real cost.

We expect the Federal Energy Regulatory Commission to rule on out PJM's proposed changes for a demand response prior to the upcoming RPM auction is I switch over to Power now.

We are supportive of PJM's proposals and believe the rule changes would be a good step in recognizing the need for a more level playing field among suppliers. As we look ahead, Power has also invested in necessary retrofits to it's fossil units to meet existing environmental requirements.

Earlier this week the US Supreme Court issued a ruling upholding the Environmental Protection Agency's cross state air pollution rule, or CSAPR, as we often refer to it. As you may recall this was vacated by the DC Circuit Court of Appeal. We are studying the ruling and await word from the EPA in its intention in regard to implementing CSAPR. With its implementation we would see reductions in NOX emissions in addition to the SO2 reductions achieved through the implementation of the Mercury and Air Toxic rule, commonly referred to as MATS.

The Supreme Court ruling validates the investments we made to satisfy environmental requirements and supports expectations for the retirement of plants that don't meet EPA requirements.

As I mentioned earlier, the first quarter represented a significant challenge. Through it we demonstrated the strength of our assets and the talent of our employees. Their focus on the mission of providing safe, reliable energy allowed us to meet the needs of our customers and shareholders. The first quarter was very strong financially and operationally.

Now we are maintaining our operating earnings guidance for 2014 of $2.55 to $2.75 per share, given the importance of normal weather to third-quarter earnings expectations for both the utility and for Power. We have a proven strategy, and we continue to reap benefits from our robust business mix. Our strong financial position will allow us to meet our goals without the need to dilute shareholders through the issuance of equity.

And our employees provide me with the confidence in our ability to achieve our long-term goals. With that, I'll turn the call over to Caroline who will discuss our financials in greater detail.

THOMSON REUTERS

SI-SSA-0015-12381

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP and CFO***

Thank you, Ralph. Good morning, everyone. As Ralph said, PSEG reported operating earnings for the first quarter of 2014 of $1.01 per share, versus operating earnings of $0.85 per share in last year's first quarter. We provide you with a reconciliation of operating earnings to income from continuing operations and net income for the quarter on slide 4. As you can see in slide 8, PSEG Power provided the largest contribution to earnings.

For the quarter Power reported operating earnings of $0.58 per share compared with $0.50 per share last year. PSE&G reported operating earnings of $0.42 per share compared with $0.35 per share last year. And PSEG Enterprise other, or the parent, contributed operating earnings of $0.01 per share compared with breakeven operating earnings during the first quarter of 2013. We provided you with a waterfall charts on slide 9 to take you through the net changes in quarter-over- quarter operating earnings by major business, and I'll now review each company in more detail.

First let's turn to PSE&G. As shown on slide 11, PSE&G reported operating earnings for the first quarter of 2014 of $0.42 per share, compared to with $0.35 per share for the first quarter 2013. PSE&G's earnings for the first quarter reflect the benefit of an increase in revenue associated with its expanded capital investment program, an improvement in demand and a reduction in pension expense.

Slide 12 provides a reconciliation of the items that influenced PSE&G's quarter-over-quarter earnings. FERC authorized PSE&G's request for an annual increase in transmission revenue under the Company's formula rate filing. The increase in revenue which was effective on January 1 of this year, supported a quarter-over-quarter increase in the net earnings contribution from transmission of $0.03 per share. Demand for electricity and gas in the quarter was influenced by weather which was significantly colder than both normal whether and the weather of a year ago.

The impact of the colder than normal weather on electric demand added $0.01 per share to quarter-over-quarter earnings. The impact of weather on gas demands, as you would expect, was recaptured in the weather normalization clause and didn't impact earnings comparisons. Apart from the weather, an improvement in the weather normalized gas demand and volumes added $0.02 per share to quarter-over-quarter earnings.

Gas deliveries continue to benefit from sustained low commodity prices and slowly recovering economic conditions. On a weather normalized basis, gas deliveries are estimated to have increased by about 3.4% in the quarter. Earnings also improved by $0.01 per share due to a reduction in the effective tax rate on all other items.

And the reduction in PSE&G's pension expense was fully offset by some higher operating and maintenance expense associated with weather-related repair costs resulting in a flat O&M comparison quarter-over-quarter. Economic conditions in the service area led by the housing market are exhibiting slow but steady signs of improvement. On a weather normalized basis electric sales are estimate to have improved by 1.3% in the quarter led by a 2.9% growth in sales to commercial customers.

But this level of growth may be greater than the underlying improvement in economic conditions given Sandy related adjustments to billings in the year ago quarter. And you'll recall we mentioned last year that Sandy impacted normal billing patterns during that quarter and immediately after. Weather normalized electric sales to residential customers are estimated to have increased by a more modest 0.6% in the first quarter.

Turning to investments, despite the extreme cold weather experienced in the quarter, PSE&G has been able to maintain its schedule for capital spending and remains on target to invest up to $2.2 billion on electric and gas infrastructure upgrades during 2014 to maintain reliability. As Ralph mentioned, a portion of the Susquehanna Roseland transmission line was energized from the new Hopatcong switching station to Roseland earlier this year, and the North Central reliability and Burlington-Camden 230kV lines are on schedule to be in service to meet this summer's peak electricity demand.

PSE&G is earning its authorized ROE for the 12 months ended March 31, 2014. We are maintaining our forecast for double-digit growth and PSE&G's operating earnings for 2014 to $705 million to $745 million as well as expectations for double-digit earnings growth through 2016.

THOMSON REUTERS

Now let's move to Power. As shown on slide 15, PSEG Power of reported operating earnings for the first quarter of $0.58 per share compared with $0.50 per share a year ago.

The earnings release and slide 16 provide you with detailed analysis of the impact on Power's operating earnings quarter-over-quarter from changes in revenue and costs. Power's first quarter results, which are $0.08 per share higher than last year, benefited from an increase in revenue. Higher capacity prices, an improvement in economic dispatch of Power's fleet and an increase in output more than offset the impact of higher costs associated with the need to meet the increased demand as well as the need to undertake planned outages and the costs associated with completing the capacity upgrade work at Linden.

Now let's turn to Power's operations. Power's output increased approximately 3% in the quarter from the year ago levels. And Power's assets were well-positioned to take advantage of market movements in the quarter given Power's hedging strategy, dispatch flexibility and diverse fuel mix. The base load nuclear fleet operated at an average capacity factor of 100% in the quarter, as Ralph mentioned.

And it produced 55% of Power's total generation in the quarter or 8 terawatt hours. Production from the combined cycle fleet declined 8% to 3.4 terawatt hours in the quarter of 23% of total generation. Output at the Bethlehem, New York facility was hurt by a declining gas availability, and Linden's availability was affected by a decision to extend and outage to complete the AGP capacity upgrade work actually ahead of schedule.

An improvement in dark spreads reported an increase in output from the coal stations, particularly from the Connecticut-based Bridgeport Harbor station. Production from the coal fleet increased 15%, to 2.6 terawatt hours or 18% of total generation. The cold weather and increased demand supported the economic dispatch of the steam and peaking units which provided 4% of the fleet's output in the quarter. Slide 17 provides more detail on the generation in the quarter.

The combination of higher capacity prices and an increase in market prices on Power's unhedged position more than offset the impact of lower average prices on hedges and the need to meet the demand under the fixed price full requirements PGS contracts. For the quarter, Power's gross margins as shown on slide 19 expanded to $50 per megawatt hour from $47.50 per megawatt hour last year.

Lastly, impacting electric gross margins Power's identified that it incorrectly calculated certain components of its cost based bids for certain generating units in the PJM energy market with resulting over-collection of revenues related to its fossil fleet. Power has self reported the issue to FERC, PJM and the PJM independent market monitor on this issue. The issue is still under review, and we are unable to estimate the ultimate impact or predict any resulting penalties or other costs associated with the matter at this time.

The Company recognized a liability in the quarter related to this matter, but this impact is included in our calculation of gross margin which continues to show quarter-over-quarter improvement to the $50 per megawatt hour level that I just mentioned. Turning to the gas side, the contribution from Power's firm gas transportation contracts improved quarter-over-quarter earnings by $0.05 per share.

The contribution to earnings is from Power's traditional gas supply business, and it reflects the positive impact on earnings from higher volumes and the ability to price gas sold to commercial and industrial customers at market. Looking forward, Power has increased its forecast generation output for 2014 to 56 to 58 terawatt hours from the prior estimate of 53 to 55 terawatt hours. The revised forecast reflects the increase in output during the first quarter and an expected improvement in the economic dispatch of the fleet.

As always, our forecast is based on normal weather conditions for the remainder of the year. Approximately 70% to 75% of anticipated production for the April to December period is hedged at an average price of $49 per megawatt hour. Power has also increased its forecast of economic generation in 2015 and 2016 to 54 to 56 terawatt hours from 53 to 55 terawatt hours in each year. For 2015 power has hedged between 50% and 55% of its forecast generation at an average price of $51 per megawatt hour.

For 2016 Power has hedged 25% to 30% of its forecast generation at an average price of $51 per megawatt hour. The hedge data, as we show on slide 20, for 2014 and 2015, continue to assume BGS volumes will represent about 11 terawatt hours in 2014 and about 10 terawatt hours in 2015. We continue to forecast full-year operating earnings for Power of $550 million to $610 million. Results for the remainder of the year will be influenced by a decline in the average price received on our PJM capacity to $166 per megawatt day on June 1 of this year from the historically high level we're currently enjoying of $242 per megawatt day as well as a decline in the average price of our energy hedges.

THOMSON REUTERS

SI-SSA-0015-12383

O&M is expected to compare favorably given a reduction in pension expense and the absence of major outage related work that occurred in the second half of last year for comparison purposes. Now let me briefly discuss the operating results from enterprise and other. For the first quarter PSEG Enterprise other, or the parent, reported operating earnings of $0.01 per share which compares with essentially breakeven operating results during the first quarter of 2013.

Results reflected a steady contribution to earnings from the lease portfolio and a contribution from PSEG Long Island. We continue to forecast full-year operating earnings for 2014 from PSEG Enterprise other of $35 million to $40 million. I want to point out that in April PSE&G Power amended their credit agreements ending in 2017 which is effectively extends the expiration dates from March of 2017 to now, April 2019.

Total credit capacity as of March 31, 2014 was $4.3 billion. PSEG has credit facilities amounting to $1 billion. Power's credit facilities total $2.7 billion. In addition, PSEG maintains a five-year credit facility amounting to $600 million. A significant portion of our $4.3 billion of credit capacity expires post 2018. $2 billion matures in 2018 and $2.1 billion matures in 2019 with this recent extension.

As we have said many times we can finance our capital program without the need for the issuance of equity given the strength of Power's cash flow and our already strong balance sheet with debt at the end of March 31 of this year representing 41% of our consolidated capital. And we ended the quarter with about $655 million in cash. We continue to forecast operating earnings for the full year of $2.55 to $2.75 per share.

With that, that concludes my comments, and I will now turn the call back over to the operator and open the line for your questions. Allie?

QUESTION AND ANSWER

Operator

We will now begin the question and answer session for members of the financial community. (Operator Instructions)

Jonathan Arnold, Deutsche Bank

Jonathan Arnold - ***Deutsche Bank - Analyst***

Just on this reserve, Caroline, you talked about in the quarter, for the cost based bidding, et cetera, could you clarify, was that just a first quarter item, or did you reserve against something that relates to a longer period of history? How long if that's the case?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP and CFO***

Sure. Thanks, Jonathan. We booked a liability in this quarter based on errors that we identified and they are in certain bid adders such as emissions, and we have fixed all of the errors that we have identified in the bid adder arena that resulted in any over collection. So right now we are assessing all other aspects of our model, any other identified and quantified errors will be fixed. We can't comment any further at this point, other than to remind you that we have self-reported, and what we booked as a liability is reflected still in those numbers that I gave you that result in gross margin per megawatt hour increasing for quarter-over-quarter to $50 per megawatt hour.

THOMSON REUTERS

SI-SSA-0015-12384

Jonathan Arnold - ***Deutsche Bank - Analyst***

You give us any sort of insight as to what you're -- whether this is -- there's some kind historical liability booked against the first quarter?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP and CFO***

As it relates to errors we've identified historically, that's exactly right. But since we're in the self-report and the appropriate regulatory process we can't give more detail about this time. When the process is complete, we'll give the full information, but we can't do that quite yet.

Jonathan Arnold - ***Deutsche Bank - Analyst***

Okay. So it's safe to say there's some element of this unquantified reserve, it doesn't just relate to re-jiggering how you presented first quarter? There is some past stuff in there, too?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP and CFO***

It relates to the past, correct.

Jonathan Arnold - ***Deutsche Bank - Analyst***

Okay. All right. When do you think we might have a better sense of how much that affected the quarter?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP and CFO***

We are in this self-report process, discussions with PJM and the market monitor and the self-report we just made to FERC. We want to see that regulatory process, of course, through to completion and can't really predict what that timeframe would be. But when we get to that end of that timeframe we will disclose it is as appropriate, the final results.

Jonathan Arnold - ***Deutsche Bank - Analyst***

Okay. And then I think as you've been on the phone it looks like and 8-K has it with information about an energy strong settlement?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Yes, Jonathan, let me talk about that. I wanted to dispel one rumor and confirm one rumor. The one rumor I want to dispel is that we moved the call up an hour, and I couldn't get here on time so we started five minutes late. That's not accurate. (laughter) But we did have some tremendous progress last night in our discussions with all of the interveners and particularly board staff. And this morning we were just trying to dot our Is and cross our Ts and have signatures on the settlement agreement. And then of course to comply with FD we needed to make sure that information was released.

The earnings release went out ahead of the dotting of Is and crossing of Ts, and we now have done that. I am pleased to say that we have a settlement agreement with the staff. W e expect many of the other interveners to join, but we don't have their signature yet, and

THOMSON REUTERS

I'm okay with that. The staff is who we always want to make sure we have the agreement with. It's a $1.22 billion program, about $820 million is electric and $400 million of that is gas. The allowed ROE is 9.75%.

$1 billion of that will be recovered through accelerated recovery mechanisms. $200 million of that will be done in 2017 time frame when we will then file a rate case in November of 2017 with a three month historic nine-month look ahead profile. So, that will be seven years plus from our last base rate case. We would expect the BPU to approve this. They have not as yet.

The schedule for approving it will be announced shortly. That will be a partial function of how many other parties sign-on. Although, as I said, I do expect most of the participants to sign-on. I know that they're not on the phone right now, but I just have to thank the 100 plus municipalities and counties who supported us, the unions who supported us, the hospitals who supported us, the other parties who are engaged in the dialogue for 15 months and our regulatory team.

They just did a great job, and we're just pleased to get this thing going right now. I would view this as an important start to hardening the system. There's nothing in the settlement that says we can do the full $3.96. I don't mean to suggest that, but there's nothing that says we can't. I just view this as an important start, and we will be measured by our success and effectiveness in hardening the system, as we should be. But I'm glad that we can get underway.

Jonathan Arnold ***- Deutsche Bank - Analyst***

Thank you, Ralph. I guess, given that it's my question, can I just ask one clarifier on this?

Ralph Izzo ***- Public Service Enterprise Group Inc - Chairman, President & CEO***

Sure.

Jonathan Arnold ***- Deutsche Bank - Analyst***

The -- when you said the $1 billion will be under accelerated recovery and then the balance, $200 million will be -- so the billion is sort of 2015 in 2014 through 2016, is that correct?

Ralph Izzo ***- Public Service Enterprise Group Inc - Chairman, President & CEO***

Yes, it's unfortunately not quite so simple, Jonathan. Some of this stuff will get done in two years, some will take three and some will take five. The five-year has to do with the substations that were underwater in Irene and in Sandy. And all of those, even those that go out to five years will be under the accelerated recovery mechanism. So there's $200 million of the program is going to be done just leading up to the rate case, what we agreed is we would just make that part of the prudency review since there's really not a lot of time lag between the prudency review and the capital program. Because none of this stuff gets recovery until it goes into service, so we thought that that would be okay, that there would be no lag on that $200 million.

Jonathan Arnold ***- Deutsche Bank - Analyst***

The rate case will be filed within nine months of 2016, three months of 2017, for one 2017 rate?

Ralph Izzo ***- Public Service Enterprise Group Inc - Chairman, President & CEO***

No. The other way around. When it goes in November 2017 it would be three-month actuals and nine months of forecast.

THOMSON REUTERS

SI-SSA-0015-12386

Jonathan Arnold - ***Deutsche Bank - Analyst***

So it will go in November of 2017? Okay. I got it. Three months.

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Good. Because if I have to repeat it, I might not say it the same way twice. It's three-months of actuals and nine months forward. That's been our practice.

Jonathan Arnold - ***Deutsche Bank - Analyst***

Great. Thank you. I'll move along.

Operator

Kit Konolige, BGC Financial

Kit Konolige - ***BGC Partners - Analyst***

Thank you. Good morning. Just to follow a little on the energy strong, can you quantify how much that -- this deal would be worth say in terms of EPS?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Kit, we've pretty much given you the fairly consistent rule of thumb, that at our cap structure with these kind of returns it is about a penny for every $100 million of investment.

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP and CFO***

That's right.

Kit Konolige - ***BGC Partners - Analyst***

Right. When would, under this settlement when would the investment start to be made, and how would the rate base ramp-up as a result of this?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP and CFO***

You should not expect a big impact in 2014. I don't have in front of me the exact capital program calendar, but most of it will be felt in 2015, 2016, 2017 and 2018. You may recall, Kit, as we talked about in March, we forecast double-digit earnings growth but also double digit rate base growth even without energy strong, as we talked about. (multiple speakers) is that to reinforce the strength of the rate base growth as double-digit and the earnings, but as Ralph said, not a material item at all for 2014.

© 2014 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

SI-SSA-0015-12387

Kit Konolige - ***BGC Partners - Analyst***

Right. Okay. And one other area to go back to, Ralph, your comment on the auction -- it sounds like -- did I understand you correctly to say you view the demand resources rule change is kind of the key change in the auction?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

We do view it as a key change, right? Because the import issue is more of a Western PJM issue than it is for us. Whether it's the limited dr resources or trying to address some of the arbitrage opportunities available between the base residual auction and the incremental auctions. We think all of these are positive for creating more of a level playing field in the market. I've been running around trying to find the settlement documents -- I'm just looking around at my colleagues to make sure FERC hasn't acted on this yet. It's supposed to happen soon, but we don't have a decision yet.

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP and CFO***

No. That's right. Not yet.

Kit Konolige - ***BGC Partners - Analyst***

Okay. And so can you give us any insight into what we should expect from the auction? Should we expect the PSEG zones to separate again, and can you give us what you're thinking about where RTO settles?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Yes. You know, we would never do that, we just -- it's obviously a competitive auction process. To forecast out predictions would not be a good idea, and we've never done that in the past. I will tell you though that we will know by May 23, the bids go in on the 12th and from the 12th to the 16th and then PJM takes a week to assess them. And so three weeks and two days from today we will all have the answer.

Kit Konolige - ***BGC Partners - Analyst***

Okay.

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

I don't want to lead you to think that we don't analyze this. We just don't publicize what we think.

Kit Konolige - ***BGC Partners - Analyst***

Right, right. At least you confirmed that will know by May 23, right? (laughter) Thank you.

THOMSON REUTERS

Operator

Dan Eggers, Credit Suisse

Dan Eggers - ***Credit Suisse - Analyst***

Can you just -- with the settlement, can you just walk through, I don't have them side-by-side yet, I apologize, but walk through what were the big changes kind of from the maybe the $2.6 billion over the five years you had projected or requested and what you guys settled today as far as where dollars weren't spent and how you think about the opportunity to spend those later?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Yes. So the most important part we viewed of the settlement was the electric substations. All of that is covered and from the point of view of what was affected by Irene and Sandy. But there were a bunch of other areas that we thought would be beneficial. For example, we had the undergrounding of I think 30 miles of circuits, of overhead circuits, and that was knocked out.

We had some improvements to SCADA system, data analysis, data acquisition and analysis system that would help us restore those customers who were interrupted more promptly. That was knocked out. On the gas side we had I think 500 miles of cast-iron that was affected or is in now FEMA more at risk areas, and that 500 was cut back to 250. We then had some movement of backyard services to the front of the home. Once again, a backyard service getting knocked out is that much more difficult to restore. That was knocked out.

We had some improvements in construction standards for some of our distribution systems. That was knocked out. The heart, I just listed a whole bunch of stuff that was knocked not. I don't give the wrong impression. The heart of the program was the substations, and that was fully funded. But we will go back. I think people are going to see that this has a benefit.

We wouldn't have proposed it if we didn't think so. And as we do the work and as we see the system perform, we will go back and talk with staff and talk to the other parties. I really do take their reaction to this not as a no on the other stuff but as a not yet. And just show me that it is money well spent. I think that's perfectly legitimate and fair on their part, and we will step up to that.

Dan Eggers - ***Credit Suisse - Analyst***

Do you have a ballpark maybe of by year how that money is going to get spent over the next?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

We will release further details -- I don't off the top of my head right now. I just want to make sure the team has a chance to get the schedules all put together, and then we can release that.

Dan Eggers - ***Credit Suisse - Analyst***

Okay.

© 2014 Thomson Reuters. All rights reserved. THOMSON REUTERS

SI-SSA-0015-12389

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

But as Caroline said, in our March conference we didn't bake into our growth projections for the utility energy strong so this $1.2 billion over the next two to five years -- it's really more like four, will be incremental to that, and we will give you the specifics there

Dan Eggers - ***Credit Suisse - Analyst***

I guess just one other questions I'll just kind have been out in the market is kind of views on remaining an integrated company with the distribution business on the regulated side and the competitive generation business. Can you remind us how you guys think about combined company and what would be required and maybe how you reevaluate that strategy?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Dan, we talk about that often. There's arguments on both sides of the equation. By and large, we don't think we're hampered from doing things on either side of the Company by virtue of having the other company as part of the family. We kind of like the stable earnings growth of utility providing a really strong foundation for the dividend and its future growth.

We like the fact that Power is generating a healthy amount of cash that can feed the equity needs of the utility. There are very obvious operational dis-synergies to separating. Again, you never say never, because we are always asking the question, but we obviously like the model right now. And I just keep reminding myself that every once in a while somebody says, gee, you have such a great utility, if only that was standalone and separate from that struggling power company. Five years ago we used to have the same conversation only the roles were totally reversed.

It's not -- we don't put our head in the sand and not ask that question. We do talk about it regularly from the point of view of strategic clarity and being able to give a very specific messages to our shareholders. Right now the cash from Power and the equity needs of the utility are really nice financial complements, and the operational benefits of moving people from one organization to the other with complementary skill sets has been a big plus for us as well.

Dan Eggers - ***Credit Suisse - Analyst***

Great. Thank you, guys.

Operator

Travis Miller, Morningstar, Inc.

Travis Miller - ***Morningstar - Analyst***

Sorry, I'm back on the capacity auction real quick. I was wondering if you could characterize how much demand response you would either expect or you have seen in the past show up and thus potential impact on you guys specifically or your zone specifically?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Travis, the ability to forecast the DR is not an inconsequential part of getting the price right. We really wouldn't want to put that number out. The historic DR I would rather have you -- I don't mean to make you do extra work, but check the PJM website for that

© 2014 Thomson Reuters. All rights reserved. THOMSON REUTERS

SI-SSA-0015-12390

rather than me quoting it. The numbers that I recall are high single-digit percentages like 8% or so, but it's better to check PJM website.

But the [CTEL and CTO] numbers and the transfer capability and the known assets and the known demand numbers are all out there for PJM. So really a large part of the auction turns on what you expect for DR. I will say this, that most DR does happen in the higher industrial zones and in the part of PJM that we operate we don't have a large industrial load so there's typically at lower DR component where we are.

Travis Miller *- Morningstar - Analyst*

Okay. Fair enough. Thanks. And secondly I was wondering if you could characterize the hedging environments as you saw from February to where we are today end March.

Ralph Izzo *- Public Service Enterprise Group Inc - Chairman, President & CEO*

I'll start that one and fill in -- to be sure with some of the banks and the financial players leaving the markets we have seen a little bit -- we have seen less liquidity in the out years. I don't want to qualify it as less. Also given some of the infrastructure challenges of moving low-cost gas out of the Marcellus to other regions combined with some fairly extreme weather conditions have really introduced a tremendous amount of volatility in the market. We have benefited greatly with our naturally long position. We have what I would just call corridors. They are upper and lower limits in terms of how much we want to hedge.

We play within those corridors in terms of if we think the market is over-sold, or maybe there's some potential for upside. So we will lean one way or another, that's why we give you ranges of our hedge position. Suffice to say we've been pleased by the way in which we've managed our books given the increase in power prices of late. And we've seen a little modest increase coming from the CSAPR rule, how sustainable that will be we don't out guess the market, but we do capitalize on the opportunities when they come up. Caroline, please go ahead and answer -- I'm sure you have --

---

Caroline Dorsa *- Public Service Enterprise Group Inc - EVP and CFO*

Sure just a few other points then looking at some of the numbers that you saw in our slide deck and comparing them perhaps to what you saw when we were at the March 7 meeting, we did continue to layer on hedges consistent with that layering and strategy that Ralph mentioned within the corridors. Keep in mind that the numbers that you have now in today's slide deck reflect an increase in the expected terawatt hour generation from our fleet based on the economics in the market.

That's a good thing obviously for us. What its impact would be is that as we continue to layer on hedges you wouldn't see the ranges move up quite as much of the hedge percentage because the denominator is moving up. That's great from our perspective. Also, if you look at the hedge percentage for the remainder of this year, it looks a little lower than the hedge percentage we gave you for the full year earlier this year.

That's normally what you see because when the first quarter rolls off, you've got a greater representation from the summer period, and the summer period is where we have the [mid meridan] peaking which we would never be hedging fully because of the weather. You normally see that percentage looking like it's going down and then it kind of goes back up after you get through the summer.

So we continue to layer on our hedges, it kind of looks the same as the progression last year. If you roll the tape back, the only other thing going on there is that increased generation expectations which is great from our perspective. It changes a little bit how to think about the numbers, but it's all because of that denominator effect which we' very pleased with.

Travis Miller - ***Morningstar - Analyst***

Right. Thanks so much for all the detail.

Operator

[Paul Dimardo], UBS

Unidentified Participant

I think pretty much all of my questions have been answered, but one question on Linden and that acceleration and the other cost acceleration. Do see that having an impact on the remainder of the year if some of the costs have been accelerated?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP and CFO***

In terms of O&M do you mean or in terms of generation?

Unidentified Participant

Like in terms of outages and O&M type of expenses that you have moved forward.

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP and CFO***

Oh, sure. We moved them forward, because we had a Linden outage that was ongoing. We took the opportunity to extend it a little bit, so that we could add the AGP, the up rate, so now we have 63 extra megawatts at Linden which will be available for us for the summer. That increment was about $0.02 for the quarter, but that would have happened later on as we continue to do Linden.

We're still forecasting to have the O&M be lower at Power on the full-year basis than prior year. That's what we told you earlier this year, and that hasn't changed. Again, some of this is timing but a good timing to get the AGP done sooner. Remember both businesses continue to benefit from pension expense, and that's baked into the numbers. So a little bit of timing difference -- good thing for us from the generation side.

Still going to see that O&M reduction in our current forecast, actually in both businesses on a year-over-year basis.

Unidentified Participant

Okay, great. I'm sorry if I missed it, but did you say as potential timeline on when we would get our next update potential review from the BPU on the energy strong settlement?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Depending upon the expense which the settlement is universal, if all the parties agree then it's conceivable that the board would act on it in the May time frame. If all the parties are not on board, and there's reason to believe that we have a good shot at getting all the

THOMSON REUTERS

SI-SSA-0015-12392

parties, but I don't know that for a fact. Then it's more likely that the board will schedule an opportunity for comment on the settlement, and you're looking more of a June decision.

Unidentified Participant

Okay, great. Thank you.

Operator

Anthony Crowdell, Jefferies

Paul Fremont *- Jefferies & Company - Analyst*

Actually it is Paul Fremont. What I'm struggling with a little bit is when I compare the uplift in commodity margin that you guys realized, which is roughly, I guess, in PJM $50 million on close to 14.5 million megawatt hours, and I compare that to Calpine, which I think had only 3.5 million megawatt hours in their north region but had an uplift of like $125 million, what is it that you would point to as the biggest differences between their profit opportunity versus your profit opportunity when both companies were sort of in a similar hedge position going into the quarter?

Caroline Dorsa *- Public Service Enterprise Group Inc - EVP and CFO*

Thanks, Paul. We don't know their situation, so I certainly can't comment on that. Obviously t you saw as we provided the data in the waterfall, part of what you have to keep in mind for us is not just the data on the incremental generation which we said was 3% higher, but you've got to take into account the impact of the hedges, right? The hedges that we have including the full requirements BGS. So when BGS gas stronger demand because of the winter weather, and it was a strong winter this winter, that BGS is a fixed price.

So that reduces some opportunities for us in taking advantage of the market, because we have that cost to serve. So we were about 75% hedged, about 25% open to the market for the quarter. Not too dissimilar to where we've been before, but obviously the BGS prices relative to the market prices are lower now, because of the where the market moved in the first quarter.

Paul Fremont *- Jefferies & Company - Analyst*

So, I think, does that lead you to maybe reconsider whether the BGS is the best hedging vehicle for the Company?

Ralph Izzo *- Public Service Enterprise Group Inc - Chairman, President & CEO*

No. No. Not really. If you think about the reliance on Power's cash generation, BGS has nicely protected us in the down market. Yes, it does create an opportunity cost on the up markets, but it provides a nice stable platform. If you remember the strength of a BGS is that it is full requirements, and it's -- we are uniquely capable of serving full requirements because of the breadth of our technologies. The breadth meaning base load, load following and peaking which allows us to incorporated a load factor premium and a risk mitigation premium. No, I don't think you'll see us moving away. That's why we have the 10 to 11 terawatt hours of BGS all factored into future years.

Paul Fremont - ***Jefferies & Company - Analyst***

Thank you very much.

Operator

Paul Patterson, Glenrock Associates.

Paul Patterson - ***Glenrock Associates - Analyst***

Just -- I wanted to fall back on this energy cost bid issue. Are you guys not disclosing the liability in the quarter? Did I get that correct?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP and CFO***

Were not disclosing the specifics of the liability in the quarter because, as I mentioned, we are in the regulatory process. We did the self report. We are in discussions with PJM and the market monitor and self report to FERC. Wed rather let that regulatory process go on and complete. So, as I mentioned to you, we did book something this quarter, but it's all rolled into that gross margin per megawatt hour that increased, and we will give more details when we finish the process.

Paul Patterson - ***Glenrock Associates - Analyst***

Okay. Then you also said it was historical in nature. Could you give us a little bit of the flavor just roughly speaking over what time frame this was?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP and CFO***

No, I won't go into that right now. Same thing, we want to handle the regulatory process as appropriate. But it is historical in nature. It's things we identified looking at historical things, for example, as I mentioned, such bid adders like emissions. Those things have been fixed, and those are the kinds of errors we've been reporting.

Paul Patterson - ***Glenrock Associates - Analyst***

Did it have an impact on market prices during that period of time?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP and CFO***

That's not something we can comment on. As I said, will go to the regulatory process, complete all of that, and then we will give additional information.

THOMSON REUTERS

SI-SSA-0015-12394

Paul Patterson - ***Glenrock Associates - Analyst***

Okay. But this is something that you guys discovered, and it didn't involve the market monitor or anybody else. You guys are self reporting that, correct?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

We self reported. That's correct. We discovered it, and we self reported it to all of agencies,

Paul Patterson - ***Glenrock Associates - Analyst***

Okay, and then just finally there was some commentary about the replacement capacity case, I think the arbitrage and you guys have some insight as to what the outcome is going to be, is that correct? What were you talking about?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

No. No. We like others, have been curious about whether or not DR actually is physically delivered or whether there's an arbitrage between the base residual auction and the incremental auction. And PJM has basically adjusted some modifications to the way in which that incremental auction can take place and the physical delivery of germane response that we think will benefit the market. We have no insights other than the full public dialogue on the subject.

Paul Patterson - ***Glenrock Associates - Analyst***

Okay. All of other questions have been asked and answers. Thanks so much.

Operator

Michael Lapides, Goldman Sachs

Michael Lapides - ***Goldman Sachs - Analyst***

Two questions. One, Caroline, when I look at O&M in the quarter, at both Power and E&G, up year-over-year at both places, up a good bit at E&G relative to first quarter 2013 but even a little bit at Power. Can you just walk us through the puts and takes and what of that, if any, would be recurring when we start thinking about 2015?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Sure. Not really forecasting 2015 specifically, but if you look the O&M for the quarter and you see a nice break out I think on page 9 of our deck. We've put the O&M in two pieces for you which I think is kind of helpful. The lower pension expense for PSE&G is valued at about $0.02 per share on a favorable basis. Right? And then there's distribution O&M of about $0.02 a share unfavorable.

The way to think about that is we told you that pension expense for the whole company would be about $0.15 per share favorable, a little bit more than half of the PSE&G so you see more like $0.08 for the year and for the quarter. The $0.02 on distribution O&M that

© 2014 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

was unfavorable year-over-year is primarily driven by some incremental repair that occurred in the winter. Can't really forecast that, right? We always forecast normal weather. Sometimes we have storms in the winter, and sometimes we have storms in the summer.

Together that leads to a flat O&M on an operating earnings basis, the way we typically report it. Keep in mind, if you're looking at the GAAP statements you wouldn't see the impact I'm showing on the waterfall because the O&M in the GAAP statement includes the O&M for clauses. We always take that out from a management perspective. But if you're looking at GAAP going to see O&M the relates to the contemporaneous return clauses we have, for example, like solar and a number of other things.

We've always excluded that, because that's recovered within the ROEs that we get when we get those clauses. That's why we focus on the operating earnings waterfall that we show you on 9, because that is really what to think about in terms of what flows down to the bottom line without recovery. That's the utility piece. You should expect to see pension continue to benefit quarter-over-quarter.

And then the rest of the O&M really depends on the rest of our ongoing control and whether there are any storms in the summer season, but you can't be sure about that. In terms of Power, if I go to over to the other side, Power, we also break out pension, it's about $0.01 for the quarter. Remember, I said Power would be little less than half, so Power gets on a rounded basis about $0.01 of benefit for the quarter. And then it has about $0.05 on a quarter-over-quarter impact for this quarter, and I mentioned the Linden outage, which was planned but then extended. And the extension was an impact of about an extra $0.02 this quarter for the AGP.

That's a good thing, because that gives us more generation. When I do year-over-year comparison most of what you're seeing in the O&M negative is the impact of outages and outage extensions. For Power going forward there's no Hope Creek outage in 2014, so that will be a favorable impact relative to prior year, because remember when we of outages at Hope Creek we get 100% versus outages at Salem where we only get a portion.

And also there was a BEC outage remember I talked about last quarter for the end of the year. There won't be a BEC outage in the later part of this year. Roll that all together and where does it all take is? We had some storms in the utility we had to spend and couldn't anticipate. We have extended outage for the AGP and Power that was a little negative.

You've got the positive pension rolling through just the way you should expect to see it for this quarter. And when you put all of that together and you look at the rest of the year on an operating earnings basis, setting aside utility clauses that get recovered, that's why we're still comfortable forecasting a decrease in the aggregate for each of our businesses year-over-year.

Michael Lapides *- Goldman Sachs - Analyst*

Got it. And then, Ralph, just on energy strong settlement, I want to make sure I follow the high level details -- $1.22 billion -- the bulk of the CapEx is really 2015 through 2017. There will be a tiny bit at the end of 2014 and a tiny bit that trickles after 2017. And ROE that's 30 to 40 basis points lower, 30-ish basis points lower than the last authorized level. About 80%, 85% of it recovered via contemporaneous clause, and the rest of it will be trued up in a rate case. Is that basically the high level gist of the settlement? Anything I'm leaving out?

Ralph Izzo *- Public Service Enterprise Group Inc - Chairman, President & CEO*

No. I think you got it, Michael.

Michael Lapides *- Goldman Sachs - Analyst*

Got it. Congrats on the settlement.

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Thank you.

Kathleen Lally - ***Public Service Enterprise Group Inc - VP IR***

I know there's another call that's about to begin. I don't want to interfere with -- so I'll turn the call back over to Ralph for any closing comments. I'm available as well as Carlotta for any calls people have.

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Thanks, Kathleen. So just a summary looking back at the quarter and then looking ahead, from my perspective Power just continues to handle anything that comes its way. Power managed the polar vortex almost flawlessly. While that's going on, we ran 100% nuclear capacity factor, and we managed to get our advanced gas path technology accelerated into the quarter at Linden to make sure it's ready for the summer. And then looking ahead please make note of the increase in our expectations for Power's output in the subsequent years.

In the utility, once again, on track for double-digit earnings growth. Capital program is on budget. You heard us mention a couple of transmission project that are ahead of schedule. And of course, the good news that we've reached settlement on a $1.22 billion dollar energy strong program. And last but not least, the weather normalized demand for gas continues to grow, and we're now beginning to see growth in electric demand.

That's refreshing. Thank you for joining us. I hope to see all of you at some point in the near future on the road as we make our visits. Thanks, everyone.

- Carlotta Chan, Manager - Investor Relations Phone: 973-430-6596

May 1, 2014

PSEG ANNOUNCES 2014 FIRST QUARTER RESULTS

$0.76 PER SHARE OF NET INCOME

$1.01 PER SHARE OF OPERATING EARNINGS

Company Maintains 2014 Operating Earnings Guidance of $2.55 - $2.75 Per Share

Public Service Enterprise Group (PSEG) reported today Net Income for the first quarter of 2014 of $386 million, or $0.76 per share as compared to Net Income of $320 million, or $0.63 per share, in the first quarter of 2013. Operating Earnings for the first quarter of 2014 were $515 million, or $1.01 per share, compared to Operating Earnings for the first quarter of 2013 of $433 million, or $0.85 per share.

"I'm extremely pleased with PSEG's results for the first quarter" said Ralph Izzo, chairman, president and chief executive officer. He went on to say "our strong earnings demonstrated the ability of our business model to perform for our customers and shareholders. The diversity of PSEG Power's fuel mix and dispatch flexibility supported the needs of customers and allowed Power to capture margin during the extreme weather conditions experienced this winter. Power is enhancing its position in the market through economic investments in capacity uprates; and, the increased capital investment in our stable, regulated business continues to drive earnings growth and improvement in reliability at PSE&G as it also transforms the profile of our company. This year, operating earnings from PSE&G are expected to represent over 50% of forecast operating earnings as we expand our investment in critical infrastructure projects."

PSEG believes that the non-GAAP financial measure of "Operating Earnings" provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. Operating Earnings excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. The table below provides a reconciliation of PSEG's Net Income to Operating Earnings (a non-GAAP measure) for the first quarter. See Attachment 10 for a complete list of items excluded from Net Income in the determination of Operating Earnings.

PSEG CONSOLIDATED EARNINGS (unaudited)
First Quarter Comparative Results
2014 and 2013

	Income ($millions)		Diluted Earnings Per Share	
	2014	**2013**	**2014**	**2013**
Operating Earnings	$515	$433	$1.01	$0.85
Reconciling Items	(129)	(113)	(0.25)	(0.22)
Net Income	**$386**	**$320**	**$0.76**	**$0.63**
		Avg. Shares	**508M**	**507M**

“Our employees’ commitment to our strategic focus -- operational excellence, financial strength and disciplined investment – provided our customers with safe, reliable power during the extreme weather conditions experienced in the first quarter, and allowed us to achieve our financial goals. PSE&G remains on course to achieve double-digit growth in earnings, as the flexibility of our merchant generation business continues to provide earnings and cash flow to finance our investment program. We had strong results in the first quarter. We are maintaining our forecast of operating earnings for the full year of $2.55 - $2.75 per share given the importance of normal weather to our third quarter and full year results.”

The following table outlines expectations for operating earnings in 2014 by subsidiary:

2014 Operating Earnings Guidance
($ millions, except EPS)

	2014E
PSE&G	$705 - $745
PSEG Power	$550 - $610
PSEG Enterprise/Other	$35 - $40
PSEG Operating Earnings	$1,290 - $1,395
Earnings Per Share	$2.55 - $2.75

Operating Earnings Review by Subsidiary

See Attachment 5 for detail regarding the quarter-over-quarter reconciliations for each of PSEG’s businesses.

PSE&G

PSE&G reported operating earnings of $214 million ($0.42 per share) for the first quarter of 2014 compared with operating earnings of $179 million ($0.35 per share) for the first quarter of 2013.

PSE&G’s earnings for the first quarter reflect the benefit of an increase in revenue associated with an expansion of its capital investment program, an improvement in demand and a reduction in pension expense.

The Federal Energy Regulatory Commission (FERC) approved an annual increase in transmission revenue of $171 million under the company’s formula rate filing. The increase in revenue was effective on January 1, 2014. PSE&G’s expanded investment in transmission added $0.03 per share to earnings in the quarter. The winter weather, which was significantly colder than normal and colder than a year ago, influenced electric and gas demand. The impact of the colder than normal weather on electric demand added $0.01 per share to quarter-over-quarter earnings. In addition, electric weather-normalized sales experienced a slight improvement in demand as weather normalized gas deliveries continue to grow. The impact of weather on gas demand was recaptured in the weather normalization clause and didn’t impact earnings comparisons. However, the weather-normalized improvement in gas demand and volume added $0.02 per share to quarter-over-quarter earnings. Earnings also improved

by $0.01 per share in the quarter due to a reduction in the effective tax rate and other items. A decline in PSE&G's pension expense was fully offset by an increase in operating and maintenance expense associated with weather-related repair costs.

Economic conditions in the service area are exhibiting slow but steady signs of improvement led by the housing market. On a weather-normalized basis, electric sales are estimated to have improved by 1.3% in the quarter. The improvement in electric sales was led by 2.9% growth in sales to commercial customers which may be greater than the underlying economic conditions would indicate given Sandy related adjustments to billings in the year-ago quarter. Weather normalized electric sales to residential customers are estimated to have increased by a more modest 0.6% in the first quarter. Gas deliveries continue to benefit from sustained low commodity prices and slowly recovering economic conditions. On a weather-normalized basis, gas deliveries are estimated to have increased by 3.4% in the quarter.

PSE&G's capital program remains on schedule. PSE&G is expected to invest $2.2 billion in electric and gas infrastructure upgrades to its transmission and distribution facilities during 2014 to maintain reliability. A portion of the 500-kV Susquehanna – Roseland line was energized from the new Hopatcong switching station to Roseland earlier this year. The line is expected to be fully in-service to meet the summer peak electricity demand next year. The 230-kV North Central Reliability line and the 230-kV Burlington-Camden line are expected to be placed into service this summer.

The forecast of PSE&G's operating earnings for 2014 remains unchanged at $705 million - $745 million. Operating earnings will be influenced by an increase in transmission revenue, an increase in the level of capital invested in solar and a reduction in pension related expenses.

PSEG Power

PSEG Power reported operating earnings of $293 million ($0.58 per share) for the first quarter of 2014 compared with operating earnings of $254 million ($0.50 per share) for the first quarter of 2013.

PSEG Power's operating earnings in the first quarter benefited from higher capacity revenues, dispatch flexibility and the diverse fuel mix of the fleet. When combined with a strategy to maintain a net long position this allowed the fleet to benefit from an improvement in market prices and reduced the risk associated with higher costs to serve the increase in demand. Power's firm gas transmission contracts also benefited from higher pricing and demand.

An increase in average PJM capacity prices to $242/MW-day from $153/MW-day improved quarter-over-quarter earnings by $0.11 per share. The improvement in capacity revenues more than offset lower realized prices on energy hedges which reduced quarterly earnings comparisons by $0.05 per share. Pricing on Power's net long position was favorably influenced by the extreme cold weather conditions experienced in the quarter. Higher market prices, and an increase in output in response to an improvement in demand more than offset the cost associated with the need to meet increased demands under the full-requirements BGS contract resulting in a net improvement of $0.02 per share to Power's quarter-over-quarter earnings. Higher prices and send-out under the BGSS contract in response to the extreme cold weather added $0.05 per share to quarter-over-quarter earnings.

Operation and maintenance expense was higher than last year. Outage related work at the fossil stations and acceleration into the first quarter of advanced gas path improvements at the Linden generation station more than offset a reduction in pension expense and reduced quarter-over-quarter earnings comparisons by $0.04 per share. Other miscellaneous items reduced earnings by $0.01 per share.

Power has discovered that it incorrectly calculated certain components of its cost-based bids for certain generating units in the PJM energy market, with resulting over-collection of revenues related to its fossil fleet. Power has notified FERC, PJM and the PJM Independent Market Monitor on this issue. This issue is still under review, and we are unable to estimate the ultimate impact or predict any resulting penalties or other costs associated with the matter at this time. The company recognized a liability in the quarter related to this matter.

The extreme market conditions experienced during the first quarter improved economic dispatch and highlighted the benefits of the fleet's dispatch flexibility and diverse fuel mix. The nuclear fleet operated at an average capacity factor of 100% producing 8TWh of output, 55% of generation, in line with year-ago levels. Production from the combined cycle gas fleet (CCGT) was affected by lower gas availability at the Bethlehem, NY facility, and a decision to extend an outage at the Linden plant to complete the capacity uprate work. The CCGTs accounted for 23% of the fleet's output in the quarter, or 3.4 TWh of generation. Output from the coal stations as well as the steam and peaking units increased in response to an improvement in demand, providing 3.1 TWh, or, 22% of generation.

Power has increased its forecast of output for the full year to 56 – 58 TWh from 53 – 55 TWh. The revised forecast reflects the increase in output during the first quarter and an improvement in the economic dispatch of the fleet and assumes only normal weather for the remainder of the year. Approximately 70% - 75% of anticipated production for the period April – December 2014 is hedged at an average price of $49 per MWh. Power has also increased its forecast of economic generation in 2015 and 2016 to 54 – 56 TWh from 53 – 55 TWh. For 2015, Power has hedged 50% - 55% of its forecast generation at an average price of $51 per MWh; for 2016, Power has hedged 25% - 30% of its forecast generation at an average price of $51 per MWh. The hedge data for 2014 and 2015 continues to assume BGS volumes represent 11 TWh in 2014 and 10 TWh in 2015.

Power's operating earnings for 2014 are forecast at $550 - $610 million. Results for the remainder of the year will be influenced by a decline in the average price received on our PJM capacity to $166/MW-day on June 1, 2014 from the historically high level of $242/MW-day and a decline in the average price of energy hedges. O&M is expected to compare favorably given a reduction in pension expense and the absence of major outage-related work.

PSEG Enterprise/Other

PSEG Enterprise/Other reported operating earnings of $8 million ($0.01 per share) for the first quarter of 2014 compared with breakeven operating results during the first quarter of 2013. Results reflect a steady contribution to earnings from the lease portfolio, and the start-up of PSEG-Long Island's 12-year contract to operate the distribution and transmission assets of the Long Island Power Authority.

The forecast of PSEG Enterprise/Other full year operating earnings for 2014 is unchanged at $35 million - $40 million.

Credit Facilities

In April 2014, PSEG and Power amended their respective 5- year credit agreements ending in 2017, extending the expiration dates from March 2017 to April 2019. PSEG has credit facilities amounting to $1.0 billion; Power's credit facilities total $2.7 billion. Of these amounts, PSEG's $500 million and Power's $1.6 billion facilities will now mature in 2019. PSE&G maintains a 5-year credit facility amounting to $600 million which expires in March 2018. Total credit capacity was $4.3 billion as of March 31, 2014.

Forward Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as competition for certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies and changes in customer behaviors, including energy efficiency,
  net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.
The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-12413

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as competition for certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies and changes in customer behaviors, including energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-12414

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. The last slide in this presentation includes a list of items excluded from Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

PSEG
2014 Q1 Review

Ralph Izzo

Chairman, President and Chief Executive Officer

SI-SSA-0015-12416

Q1 Earnings Summary

Quarter ended March 31

$ millions (except EPS)	2014	2013
Operating Earnings	$ 515	$ 433
Reconciling Items, Net of Tax	(129)	(113)
Net Income	$ 386	$ 320
EPS from Operating Earnings*	$ 1.01	$ 0.85

* See Slide A for Items excluded from Net Income to reconcile to Operating Earnings.

SI-SSA-0015-12417

PSEG – Q1 2014 Highlights

- **Strong Earnings**
  - ✓ Operating earnings of $1.01 vs. $0.85 per share in Q1 2013
  - ✓ Power benefited from higher market pricing, market volatility and increased output
  - ✓ Increased contribution to earnings from PSE&G's investment in transmission

- **Operational Excellence**
  - ✓ PSEG Power output up 3% in quarter; nuclear capacity factor at 100%
  - ✓ Diversity and location of Power's fleet provided flexibility to participate in market
  - ✓ O&M on track to meet full-year expectations

- **PSEG Disciplined Capital Investment**
  - ✓ BPU decision pending on Energy Strong infrastructure proposal
  - ✓ PSE&G brought 230kV Burlington-Camden line in-service ahead of schedule; energized a portion of 500 kV Susquehanna-Roseland transmission line; and on schedule to place 230 kV North Central Reliability line in-service this summer
  - ✓ PSEG Power adding 63 MW at Linden CCGT station with completion of AGP uprate
  - ✓ Increased common dividend to indicative annual rate of $1.48 per share

SI-SSA-0015-12418

PSEG – Maintaining 2014 Guidance

2014 guidance reflects increased level of investment, pension savings and assumes normal weather and unit operations for rest of year

PSE&G EPS Reconciliation – Q1 2014 versus Q1 2013

* Operating Earnings is equal to Net Income .

SI-SSA-0015-12425

PSE&G – Q1 2014 Operating Highlights

Operations

- ✓ Q1 weather was significantly colder than Q1 2013: Heating degree days were 16% above Q1 2013 and 18% above normal
- ✓ Slowly improving economy providing some support to weather normalized electric sales: Overall improvement of 1.3%, with the residential sector up a more modest 0.6%
- ✓ Gas deliveries, up 3.4% for the quarter, continue to benefit from decline in supply costs

Regulatory and Market Environment

- ✓ PSE&G continuing pursuit of Energy Strong infrastructure proposal with the NJBPU to invest $2.6 billion over initial five years of a 10-year plan addressing E&G system hardening and resiliency
- ✓ Construction of major transmission lines progressing on schedule: A portion of S-R energized in NJ – full line expected in service for summer 2015 peak demand

Financial

- ✓ PSE&G plans to invest over $2.2 billion in its T&D system in 2014
- ✓ PSE&G 2014-2018 Capital Spending program increased 40% to $10 billion, with further opportunity from Energy Strong
- ✓ PSE&G earned its authorized return in the quarter

PSEG Power
2014 Q1 Review

SI-SSA-0015-12427

PSEG Power – Q1 EPS Summary

$ millions (except EPS)	Q1 2014	Q1 2013	Variance
Operating Revenues	$ 1,700	$ 1,451	$ 249
Operating Earnings	$ 293	$ 254	$ 39
Reconciling Items, Net of Tax**	(129)	(113)	(16)
Net Income	$ 164	$ 141	$ 23
EPS from Operating Earnings*	$ 0.58	$ 0.50	$ 0.08

* See Slide A for Items excluded from Net Income to reconcile to Operating Earnings.
**Includes the financial impact from Mark-to-Market positions with forward delivery months.

SI-SSA-0015-12428

Total Generation (GWh)	14,157	14,565
$ / MWh	21.33	35.29

SI-SSA-0015-12431

PSEG Power – Gross Margin Performance

- ✓ Weather driven volatility pushed natural gas and power prices to multi-year highs, offsetting decline in average hedge prices
- ✓ Q1 spot prices higher across PJM, ISO-NE, and NYISO
- ✓ Capacity prices higher year-over-year through May 2014; then resets to $166/MW-day
- ✓ Fuel flexibility and Power's market position essential to serving BGS volumetric load

Q1 2014 Regional Performance		
Region	**Gross Margin ($M)**	**2014 Performance**
PJM	$689	Higher market pricing and higher volumes offset lower priced hedges. Higher capacity pricing versus a year ago.
New England	$38	Higher volume and higher pricing.
New York	$6	Higher pricing.

SI-SSA-0015-12432

Hedging Update…

Contracted Energy*

		Apr-Dec 2014	2015	2016
Base Load (Nuclear and Base Load Coal)	Volume TWh	26	35	36
	% Hedged	100%	75-80%	35-40%
	Price $/MWh	$49	$51	$51
Intermediate Coal, Combined Cycle, Peaking	Volume TWh	18	21	19
	% Hedged	30-35%	0%	0%
	Price $/MWh	$49	$51	$51
Total	Volume TWh	42-44	54-56	54-56
	% Hedged	70-75%	50-55%	25-30%
	Price $/MWh	$49	$51	$51

* Hedge percentages and prices as of March 31, 2014. Revenues of full requirement load deals based on contract price, including renewable energy credits, ancillary, and transmission components but excluding capacity. Hedges include positions with MTM accounting treatment and options.

SI-SSA-0015-12433

PSEG Power – Q1 2014 Operating Highlights

Operations

- ✓ Q1 output up 3% under extreme weather conditions; nuclear capacity factor at 100%
- ✓ Advance gas path uprates (~63MW) accelerated at Linden for May in-service date
- ✓ Output of NJ coal units was 69% coal, 31% gas fueled

Regulatory and Market Environment

- ✓ Improved spot power prices from 2nd coldest winter since 1970; higher natural gas prices persisted for the quarter
- ✓ Increased generation forecast to 56-58 TWh from 53-55 TWh, with 70%-75% of remaining 2014 production hedged at an average price of $49/MWh

Financial

- ✓ Power recognized a liability in the quarter related to its discovery that it incorrectly calculated certain components of its cost-based bids for certain generating units in the PJM energy market, with resulting over-collection of revenues related to its fossil fleet. Power has notified FERC, PJM and the PJM Independent Market Monitor of this issue, which is still under review; we are unable to estimate the ultimate impact or predict any resulting penalties or other costs associated with the matter at this time
- ✓ Power's total debt as a percentage of capital at March 31 was 31%

SI-SSA-0015-12434

PSEG

PSEG Financial Highlights

- **Maintaining 2014 operating earnings guidance of $2.55 - $2.75 per share**
  - ✓ Focused on maintaining operating efficiency and customer reliability
  - ✓ PSE&G expected to grow at double-digit rate in 2014 and provide over 50% of operating earnings

- **Executing existing 5-year, $6.8 billion transmission capital spending program on budget and on schedule**

- **PSE&G continuing to pursue Energy Strong infrastructure proposal with the NJBPU to invest $2.6 billion over initial five years of a 10-year plan addressing E&G system hardening and resiliency**

- **Financial position remains strong**
  - ✓ Positive cash from Power and increasing cash flow from PSE&G supports dividend growth and funds capital spending program without the need to issue equity
  - ✓ Debt as a percentage of capital was 41% at March 31, 2014

- **Long history of returning cash to the shareholder through the common dividend, with opportunity for consistent and sustainable growth**
  - ✓ Increased common dividend to indicative annual rate of $1.48 per share in Q1 2014

PRESENTATION

Operator

Ladies and gentlemen, thank you for standing by. My name is Kayla and I am your event operator today. I would like to welcome everyone to today's conference, Public Service Enterprise Group's second quarter 2014 earnings conference call and webcast. At this time, all participants are in a listen-only mode. Later, we will conduct a question-and-answer session for members of the financial community.

(Operator Instructions)

As a reminder, this conference is being recorded today, July 30, 2014, and will be available for telephone replay beginning at 1:00 p.m. Eastern Standard Time today until 11:30 p.m. Eastern Standard Time on August 8, 2014. It will also be available as an audio webcast on PSEG's corporate website at www.PSEG.com. I would now like to turn the conference over to Kathleen Lally. Please go ahead.

Kathleen Lally ***- Public Service Enterprise Group Inc - VP of IR***

Thank you, Kayla. Good morning, everyone. Thank you for participating in PSEG's earnings call this morning. As you are aware, we released our second quarter 2014 earnings statements earlier today and, as mentioned, the release and attachments are posted on our website at www.PSEG.com under the investors section. We also posted a series of slides that detail operating results by company for the quarter.

Our 10-Q for the period ended June 30, 2014, is expected to be filed shortly. I don't go through and read the entire disclaimer statement or the comments we have on the difference between operating earnings and GAAP results but, as you know, the earnings release and other matters that we will discuss in today's call contain forward-looking statements and estimates that are subject to various risks and uncertainties. And although we may elect to update those statements from time to time, we specifically disclaim any obligation to do so, even if our estimate changes, unless we, of course, are required to do so.

Our release also contains adjusted non-GAAP operating earnings. Please refer to today's 8-K or other filings for a discussion of the factors that may cause those results to differ from Management's projections, forecasts, and expectations as well as for a reconciliation of operating earnings to GAAP results. I am now going to turn the call over to Ralph Izzo, Chairman, President, and Chief Executive Officer of Public Service Enterprise Group, and joining Ralph on the call is Caroline Dorsa, Executive Vice President and Chief Financial Officer.

At the conclusion of their remarks, there will be time for your questions.

THOMSON REUTERS

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Thank you, Kathleen, and thank you, everyone, for joining us today. Earlier this morning we reported operating earnings for the second quarter of 2014 of $0.49 per share, and that's to be compared with $0.48 per share earned in 2013's second quarter. The results for the quarter bring operating earnings for the first half of 2014 to $1.50 per share compared with operating earnings of $1.33 per share earned in 2013's first half.

Slides 4 and 5 contain the detail on the results for the quarter and the first half. Several results for the quarter are noteworthy. We continue to see benefits to earnings from the increased deployment of capital into our regulated company. Now, that's primarily in the form of transmission infrastructure, and we're completing major projects on time and on budget. From our perspective, we're delivering on the promise both for earnings growth and improvement in reliability associated with this multi-billion dollar investment program.

We've been able to supplement that growth with the continued focus on controlling O&M costs and supportive rate mechanisms have allowed us to earn the authorized return on our regulated Company's investment program. The improvement in earnings from our regulated company, PSE&G, offset the impact of mixed operating conditions during the quarter on Power's results. The costs related to the extended outages at the sale of two nuclear facilities and the gas-fired Linden combined cycle station masked the underlying strength of Power's operations.

The downtime at Linden during the quarter was longer than planned and associated with extensive work being done to test and complete the installation of equipment which has led to a 63-megawatt increase in the station's capacity. During a recent re-fueling outage at Salem, we discovered the need to make repairs to Salem 2's four reactor coolant pumps. The re-fueling outage was extended by approximately 60 days to complete the necessary repairs and the unit was returned to service on July 14.

The decision to keep a unit out of service is not made easily. However, only by taking the steps necessary in the short term in support of operational excellence will a key asset such as Salem be available on a reliable basis to provide substantial value for years to come.

I'm pleased to report that both Linden and Salem 2 have been operating essentially flawlessly since they returned to service. Keeping a focus on operational excellence is the primary means of assuring our customers and regulators that we operate our assets in a safe and reliable manner.

We have begun the work recently approved by the New Jersey Board of Public Utilities to protect and strengthen PSE&G's electric and gas distribution systems against severe weather conditions. The $1.22 billion Energy Strong investment program represents an initial phase of work designed to upgrade and improve the resilience of our system, and we intend to work with our regulators and other parties to consider additional measures at a later date.

This is an opportune time to pursue these investments. Major surcharges on customers' electric bills are scheduled to expire over the next two years and the bills for PSE&G's gas customers continue to benefit from the capable management of the Company's gas supply, storage, and transportation contracts.

In fact, PSE&G has filed for a further 9% reduction in the gas rate paid by residential customers. The reduction, which would be effective in time for this year's heating season, will be the latest in a series of reductions which have lowered the customers' gas bills by 44% in the past five years. The availability of low-cost gas from the Marcellus basin and the lack of infrastructure to move the gas to market has been a source of volatility in the power markets. Power's combined cycle assets in PJM enjoy an economic advantage given access to low-cost supplies in the Marcellus, particularly during the summer period.

As a practice we don't, as you well know, forecast results for PSEG Power beyond the current year and outside of what is implied by market prices, but we will make note of some consistent improvement in demand that is showing up here in our region. The results of PJM's recent capacity auction point to an improving market environment with the retirement of older inefficient generating capacity as environmental rules take effect. Power's assets in PJM will also once again receive a price that continues to reflect our asset's value given their location relative to load. So, for the next four years Power's assets will receive a price for capacity of approximately $166 per megawatt day.

The Power markets have gained greater clarity on another key environmental priority. We are pleased that the Environmental Protection Agency has issued its ruling on cooling water, commonly referred to as Section 316B. The agency's ruling substantially addresses many of our concerns and we are working with the appropriate state environmental agencies on permitting of our affected units.

THOMSON REUTERS

SI-SSA-0015-12442

On another environmental matter, the EPA also released its proposed rules concerning a reduction in CO2 from existing generating units. We are supportive of the administration's efforts to enforce the Clean Air Act. Power has made the necessary investments to meet existing air quality environmental requirements. And although we expect it may take some time to implement final rules regarding carbon, given the complexity of the proposal, Power's fleet should benefit given the generation profile that is almost 60% carbon free.

Before I conclude, I want to bring you up to date on matters relating to Power's trading arm, Energy Resources and Trade, which we commonly refer to as ER&T. As you recall, we indicated with our release of first-quarter results that Power informed FERC, PJM, and the independent market monitor of PJM that it found errors in some components of its cost-based bids for its New Jersey fossil generation units. We began an internal investigation and have since notified FERC, PJM, and the IMM that we identified and corrected additional errors.

We are working with the appropriate parties but cannot provide you with a timetable as to when this issue will be resolved or whether or not we will be required to recognize another charge against Power's earnings. We take pride in our performance and candidly we did not live up to our own standards of applying sufficient rigor in this area, but I can assure you that we corrected all identified errors and we are instituting new processes and controls to reduce the likelihood of a recurrence of the situation. This issue does not change the strong underlying operating performance of Power's fleet of assets that continue to provide solid earnings and good cash flow given the fleet's favorable location close to load, its dispatch flexibility, and fuel diversity.

Despite Power's strengths, we have nonetheless changed the profile of our earnings over the past several years. Our investment program focused on improving reliability and expanding the transmission system has yielded the anticipated outcomes. PSE&G remains on course to achieve double-digit growth in operating earnings during 2014 as its contribution to earnings is expected to exceed 50% of our forecast for the year. The Energy Strong related capital investment provides further support for our forecast of double-digit growth in PSE&G's rate base and earnings over the next several years.

Given the strength of Power's operations in the first half of the year and the growth of PSE&G, we feel comfortable saying we expect operating earnings for the full year to be at the upper end of our range of guidance of $2.55 to $2.75 per share, assuming normal weather and operations. The growth in our capital program doesn't diminish the strength of our financial position and our balance sheet. We remain well positioned to deploy that balance sheet strength to meet shareholder objectives for long-term growth. And, with that, I'll turn the call over to Caroline who will discuss our financials in greater detail.

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Thank you, Ralph, and thank you, everyone, for joining us this morning. As Ralph said, PSEG reported operating earnings for the second quarter of 2014 of $0.49 per share versus operating earnings of $0.48 per share in last year's second quarter. We provide you with a reconciliation of operating earnings to income from continuing operations and net income for the quarter on slide 4. We've also provided you a waterfall chart on slide 10 that takes you through the net changes in quarter-over-quarter operating earnings by major business and a similar chart on slide 12 that provides you with the changes in operating earnings by each business on a year-to-date basis.

So, I'll now review each company in more detail starting with PSE&G. PSE&G reported operating earnings for the second quarter of 2014 of $0.30 per share compared to $0.24 per share for the second quarter of 2013, and results for the quarter are shown on slide 14. PSE&G's operating earnings continue to benefit from an increase in revenue associated with an expansion of its capital program and tight control of its operating costs. PSE&G's results for the quarter were also aided by a reduction in financing costs as weather normalized sales growth which remains consistent in the slowly improving economy.

A FERC approved increase in PSE&G's transmission revenue under the Company's formula rate was effective on January 1, 2014. The increase supported a quarter-over-quarter improvement in the net earnings contribution from transmission of $0.03 per share. Weather conditions during the quarter were unfavorable relative to normal and in comparison to conditions experienced in the year-ago quarter, and these conditions reduced quarterly earnings comparisons by $0.01 per share and offset the favorable impact on earnings from continued growth in demand for gas.

PSE&G's focus on controlling the growth in operating expenses, including a decrease in pension expense, led to an improvement in quarter-over-quarter earnings of $0.02 per share. And although the level of debt on PSE&G's balance sheet has grown consistent with the expansion of its capital program, the actual overall cost of debt has declined as a result of the refinancing of higher cost debt and a decline in interest rates. This reduction in financing cost improved earnings comparisons quarter-over-quarter by $0.01 per share.

THOMSON REUTERS

The service area continues to experience a slow improvement in underlying economic conditions. Sales data for the first half of the year, which in general is more reflective of trends than quarterly data, indicate weather normalized demand for gas grew by 4.4% as a decline in prices and an improvement in the economy continue to support demand. Weather normalized electric sales increased by 1.6% during the first half.

Demand from residential customers grew in line with customer growth of about 0.5% as demand from the commercial and industrial sectors improved by 2.1% and 1.7% respectively over the six-month period. The New Jersey Board of Public Utilities, or BPU, approved PSE&G's Energy Strong settlement during May. The agreement calls for PSE&G to invest $1.22 billion over the next three to five years to improve the resiliency of its electric and gas grid. The addition of Energy Strong brings PSE&G's five-year capital program to approximately $11.3 billion versus our prior forecast of $10.1 billion in spending over the 2014 to 2018 time period, and will provide further support for our double-digit earnings growth in PSE&G's rate base, as we've mentioned before.

PSE&G's operating earnings increased 22% during the first half of the year and supports maintenance of our forecast for a growth in operating earnings for 2014 to $705 million to $745 million. Results for the remainder of the year will continue to reflect an increase in transmission revenue and a reduction in operating and maintenance costs, including pension expense.

Let's now turn to Power. PSE&G Power reported operating earnings of $0.17 per share for the second quarter of 2014 compared with operating earnings of $0.24 per share for the second quarter of 2013. The decline in Power's results for the quarter is the result of the impact on production and O&M expenses associated with the extended outage at the Salem 2 nuclear facility and the maintenance outage at the Linden gas-fired combined cycle facility during which we also upgraded the equipment to increase that station's capacity.

Power's quarterly earnings comparisons continue to benefit from a net increase in capacity revenue. Power received capacity prices of $242 per megawatt day during the first two months of the quarter versus $153 per megawatt day in the year-ago period before capacity prices reset to $166 per megawatt day effective June 1 of this year. This net increase in capacity prices improved quarter-over-quarter earnings by $0.04 per share. The capacity price benefit plus benefits from lower cost gas offset a decline in average hedge prices and the negative impact from relatively lower market prices in the east resulting from transmission and generation outages outside of our region.

Incremental production at the coal-fired and peaking stations partly offset the lower production due to the outages at Salem 2 and the completion of the capacity upgrade work at Linden. The net reduction in output, however, reduced earnings quarter-over-quarter by $0.03 per share. Operation and maintenance expense, or O&M expense, was higher than the year-ago quarter. Again, the costs associated with the outage and upgrade work at Linden and the repair at Salem more than offset the benefit from lower pension expense and, altogether, reduced quarter-over-quarter earnings by $0.04 per share. An increase in depreciation expense was offset by a reduction in the tax rate and other miscellaneous items.

Output from Power's fleet was 5% lower in the second quarter compared to year-ago levels. Power determined in mid May, at the conclusion of Salem 2's normal refueling outage, that it was necessary to extend the outage to inspect and repair the reactor's coolant pumps. The unit was returned to service on July 14. The extended outage reduced the nuclear fleet's output in the quarter by 9% to 6.5 terawatt hours, 54% of our generation, and lowered the nuclear fleet's average capacity factor in the quarter to 80.5%.

Production from the gas-fired combined cycle fleet declined 11% in the quarter to 3.6 terawatt hours, 30% of production -- 30% of our production as Linden was out of service early in the quarter to complete maintenance and the work associated with the 63-megawatt increase in the unit's capacity which is now in place. Production from the coal-fired and peaking units increased 27% to 1.9 terawatt hours, or 16% of generation, with improved market economics. Power was able to meet its hedged obligations from its own generation despite the decline in output given the fleet's net long position and the availability of the coal-fired units.

Power has reduced the upper end of its forecasted output for the full year to 56 to 57 terawatt hours from the previous 56 to 58 terawatt hours to take into account the results for the second quarter. Our forecast, which represents an increase in output for the year of 4% to 6%, continues to assume normal operations and weather. Approximately 70% to 75% of generation for the second half of the year is hedged at $50 per megawatt hour. Power has slightly increased its forecast of economic generation for 2015 and 2016 to 55 to 57 terawatt hours per year from the previous 54 to 56 terawatt hours to take into account normal operations and our estimates of economic dispatch.

Power's taken advantage of the strength in market prices earlier this year to hedge the gas-fired combined cycle fleet into the third quarter and also increase the percent of generation hedged in 2015 and 2016 to the upper end of the normal limits that we would normally see at this time. That's in order to take advantage of some opportunities we saw to lock in heat rate and spark spread. Liquidity has improved somewhat into 2016, but generally speaking we can think of liquidity as poorer the further you get beyond 2015.

THOMSON REUTERS

SI-SSA-0015-12444

Power's combined cycle fleet also benefits in the summer months from its access to low-cost Marcellus gas. Economics are particularly compelling as gas prices have declined more than Power prices, which has allowed Power to do that heat rate lock-in. For 2015, Power has hedged 65% to 70% of its forecast generation at an average price of $50 per megawatt hour. For 2016, Power has hedged approximately 30% to 35% of its generation at an average price of $51 per megawatt hour. Hedged data for 2015 reflects a change in our forecast of the BGS volumes.

As a result of the extreme volatility in market prices for energy experienced earlier in the year, we have seen some return of customers to the BGS contract, but not a lot. So, our forecast for 2015 now assumes BGS volumes represent 11 terawatt hours of demand, more in line with the forecast volumes for 2014 than our prior forecast which had assumed BGS volumes of 10 terawatt hours as we move into 2015.

As Ralph mentioned, we are working with FERC, PJM, and the independent market monitor, or IMM, to determine the impact of identified errors in our bidding processes. We recorded a charged operating earnings of $25 million or $0.03 per share in the first quarter based on the information available at that time. Upon discovery of the errors, we initiated an investigation and identified additional errors in our bids and further determined that the quantity of energy that Power offered into the day-ahead energy market for its fossil peaking units differed from the amounts for which Power was compensated in the capacity market for those units.

Based on information currently available to us, we've generally not seen an impact on our real-time operations for these units. We informed the FERC, PJM, and the IMM of these additional issues and we have corrected these errors. We have not recorded an additional charge to income in the second quarter over the amount we reserved earlier this year. PSEG doesn't have access to PJM's proprietary data to determine if the differences in quantity had any impact and, if so, the level of that impact.

However, FERC has the authority to investigate the matter which could result in FERC seeking disgorgement of any over collected amounts, civil penalties, and non-financial remedies. The forecast range of Power's operating earnings for 2014 remains unchanged at $550 million to $610 million with full-year operating earnings expected to be at the upper end of the range assuming normal weather and normal unit operations. Our forecast includes all of the issues we just discussed, including the $0.03 per share charge in the first quarter related to the items I just discussed.

Results for the remainder of the year will be influenced by a reset in the average price received on PJM capacity to $166 per megawatt day which started in June from the $242 per megawatt day we've seen previously as well as a decline in the average price of energy hedges. O&M expense is expected to compare favorably in the second half of the year given a reduction in pension expense and the absence of major outage-related work in the year-ago period. For the full year, however, Power's O&M is expected to be flat against 2013's experience given the increased cost associated with the extended outages.

Let me now turn brief briefly to PSEG Enterprise and other. Operating earnings for PSEG Energy Holdings/Enterprise in the second quarter of 2014 were $7 million or rounded about $0.02 per share versus operating earnings of $2 million or basically breakeven results during the second quarter of 2013. The results for 2014 reflect the inclusion of earnings from PSEG Long Island's operating contract and the absence of some charges in the year-ago quarter.

PSEG Long Island filed its first utility 2.0 proposal on July 1 of this year. The proposal calls for investing $200 million in energy efficiency, demand response programs, distributed generation, and related programs over a four-year period beginning in 2015, and we expect a response to our proposal by year end. We continue to forecast full-year operating earnings for PSEG Enterprise and other of $35 million to $40 million.

Just a brief note on financing. During the quarter, PSE&G issued a total of $500 million of medium term notes consisting of $250 million of five-year notes at 1.8% and 30-year notes of 4%. These funds will be used to meet PSE&G's capital requirements. PSE&G's capital budget is currently 15% to 20% greater than what we told you in the spring and is now expected to approximate $11.3 billion over the five-year period from 2014 to 2018 which brings our plans for our consolidated PSEG capital spending to $13 billion over that same period.

We ended the quarter with debt representing 42% of consolidated capital. The improvement in PSE&G's earnings and cash flow as well as our continued strong earnings in cash generated by Power support our financing requirements without the need to issue equity. And as I think we've demonstrated with the growth in PSE&G's capital program, we continue to seek opportunities to deploy our investment capacity to drive growth.

We continue to forecast operating earnings for the full year of $2.55 to $2.75 per share, but we do anticipate the results for the full year to be at the upper end of our range, assuming normal weather and normal unit operations. And, with that, we're ready for your questions. So, Kayla, I'll turn it back to you.

(Operator Instructions)

Your first question is from Kit Konolige with BGC. Please proceed with your question.

Kit Konolige *- BGC Partners - Analyst*

Good morning.

Ralph Izzo *- Public Service Enterprise Group Inc - Chairman, President & CEO*

Good morning, Kit.

Kit Konolige *- BGC Partners - Analyst*

Caroline, you just mentioned that the Company continues to see opportunities to redeploy cash flow to drive growth. Can you -- certainly, transmission investments are one major area there. Maybe you can outline for us -- are there other areas that you see -- and Energy Strong I guess I should say as well. So those strike me as the two big buckets. What else should we be looking for? And are there other arenas that you're considering that may not be front and center now, but could be an afterburner effect later on?

Ralph Izzo *- Public Service Enterprise Group Inc - Chairman, President & CEO*

Sorry to disappoint you, but Ralph will answer that instead of Caroline. Yes, so, we only talk about things that are fully baked. But because this question comes up so often, I will just give you a couple of examples.

We have been in conversation with the BPU staff about a modest, by our definition modest, $100-million energy efficiency program. Ralph LaRossa is the incoming Chair of the American Gas Association. He was in DC yesterday, where he heard nothing but concern expressed by the Obama administration and many other attendees on methane emissions -- fugitive methane emissions from gas pipes.

BPU has consistently supported a gas cast iron main infrastructure replacement program, and you will probably see that as the first thing in Energy Strong that we go in for an increase on. We had our first public hearing on Long Island over Utility 2.0, a $200-million program we put in. And I would say that if there was one message that came from that meeting, it was that we were being too timid and it needed to be bigger.

Now, that's only one of several hearings that we'll have on the subject. We'll get a chance to refresh that proposal in October.

So, the RTEP I believe came out just this past month, if I'm not mistaken. It usually comes out in June. I shouldn't say whether or not it did come out in June this year. And we'll be looking at the PJM open window on some of the problems identified in there, and I don't want to give a number there because I just heard from Ralph only a day ago on that, and that number moves around depending on the engineering analysis.

So, I just mentioned a few things that all start at nine figures. And, as Caroline mentioned, I think our five-year capital program increased by 50% from last year to this year, and it's now up by 23% between March and July. So, I don't want to guarantee that that's what will happen on the next quarterly call, but we don't seem to be running out of infrastructure needs in this region.

Kit Konolige *- BGC Partners - Analyst*

Excellent. And just to focus on one item of infrastructure, can you give us the outlook for the artificial island project with the reconsideration now, and how we mark our score cards to see this going forward?

Ralph Izzo *- Public Service Enterprise Group Inc - Chairman, President & CEO*

Well, I was hoping that you would have the answer for that.

THOMSON REUTERS

Kit Konolige - ***BGC Partners - Analyst***

Yes, sure.

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

This is witnessing the making of sausage, the making of law, the making of everything else. In defense of PJM, and they don't need me to defend them, this is a brand new tariff in response to a brand new regulation and a first-time major process. So, we're seeing growing pains. I would be less than 100% candid if I didn't express disappointment at the Board's action last week.

Having said that, what the Board said is they are inviting the finalists -- and we are one of the four finalists, down from whatever the original number was, which was a number I think at least double that, and they want some more information. And I don't even know the exact nature of the additional information they want. I do know that we're going to do $2.2 billion of transmission this year, on top of $1.6 billion of transmission last year. We've got a great team, and we will be able to answer any one of their questions and outshine the competition. So, I think it's just growing pains of a brand new tariff and a brand new program that PJM is experiencing right now.

Kit Konolige - ***BGC Partners - Analyst***

Great. Okay. Thanks a lot.

Kathleen Lally - ***Public Service Enterprise Group Inc - VP of IR***

Next question.

Operator

The next question is from Julien Dumoulin-Smith with UBS. Please proceed with your question.

Julien Dumoulin-Smith - ***UBS - Analyst***

Hi. Good morning.

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Hi, Julien.

Julien Dumoulin-Smith - ***UBS - Analyst***

So, perhaps going back to the Energy Strong side of the equation, just following up there, obviously there is a number of things that didn't ultimately get put into that package. Is there a potential to go back and pick up some of those last items, and kind of reflect that in your CapEx here at some point?

© 2014 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

So, the answer to that, Julien, is yes. I think, if I could steer you in certain directions, it's more likely that we'll go in first on the gas side, because that work is expected to be complete in a 2- to 3-year time frame, and just the fact that, not withstanding that that will be our fourth request for gas infrastructure improvement, these things take many months to get approved. So, we wouldn't wait until we were running out of work -- I'm sorry, running out of approval, because there's no chance that we will run out of work.

On the substation work, that really is scheduled to go five years, and candidly, we are not convinced that given the amount of transmission work that we have, and the 29 switching and substations that we plan to work on, that we want to put the system much more in a configuration that is as tenuous as it would be with all of that electrical work going on.

Some of the stuff that went away was making the distribution system smarter. That one is a little tougher to predict. So, a little bit of a long-winded answer, but the short answer is: There is no doubt that before the 3- to 5-year period is up we will be back in, and my prediction today would be that we would be back in on the gas pipe replacement, first and foremost.

Julien Dumoulin-Smith - ***UBS - Analyst***

Got you. Any sense of magnitude there, or is it still too early here -- ?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

We've tended to talk about $250 million to $300 million a year, is about the size of the program that we can reasonably manage. If there were emergency issues, which we do not have, you'd somehow find a way to do more than that. But right now the emergent issue that seems to be coming up is the order-of-magnitude increase in greenhouse gas effect that comes from fugitive methane emissions, and the desire in the policy circles -- fairly prominent policy circles -- to do more about that.

Julien Dumoulin-Smith - ***UBS - Analyst***

Excellent. And then, going back to the Artificial Island side of the equation, just to be clear, is this really about capital costs and who can deliver the cheapest project, and is that where this is headed? I mean, it's tough to tell obviously; or is this about terms, conditions, ultimately indicating that you can partner with, or someone else can get involved in your territory?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

No, I think it's more the former, but simply answering the question that way oversimplifies it, right? These are complicated engineering solutions to a sophisticated set of infrastructure -- assets in the infrastructure.

So, it would be a mistake for anyone to assume that just because a project is less expensive than another, that it is preferred from a consumer point of view. That's the equivalent of saying: Gee, I could buy that car for $10,000 and that car for $100,000; I should buy the $10,000 care. And then you'd fail to recognize but you needed that $100,000 crane because you're in the construction business, and the $10,000 smart car isn't going to quite help you be able to move equipment around. I'm sure I don't have the right brands and dollar amounts there, but you know my point, that these are not commodity services. These are sophisticated engineering services.

The terms and conditions issues that you allude to, I think it's fairly well understood that some people come in after the process and said: We'll guarantee a price. Well, a prudent buyer would say: Well, let me understand that guarantee. Is it bumper to tailpipe? Is it just the drive train, which doesn't fall apart, but for 200,000 miles, and now you've extended the warranty from 50,000 to 75,000 miles?

So, there are some terms and conditions elements. There are some pricing elements. And I think that's why the PJM Board simply said: Gee, we're getting a little bit more noise in the system than we'd like to under first time in a project. And I don't mean to speak for the PJM Board; I don't have

THOMSON REUTERS

SI-SSA-0015-12448

that ability -- but let's just ask more questions. They did not come out and say: You picked the wrong project, by any stretch of the imagination. They just want more information on those issues that you implied would be front and center.

Julien Dumoulin-Smith *- UBS - Analyst*

All right. Excellent. Thank you.

Kathleen Lally *- Public Service Enterprise Group Inc - VP of IR*

Next question.

Operator

The next question is from Paul Patterson with Glenrock Associates. Please proceed with your question.

Paul Patterson *- Glenrock Associates - Analyst*

Good morning.

Ralph Izzo *- Public Service Enterprise Group Inc - Chairman, President & CEO*

Good morning, Paul.

Paul Patterson *- Glenrock Associates - Analyst*

There was some discussion surrounding the Pepco acquisition; and of course, you guys are located in New Jersey and I am sure you guys are aware of the press reports. I'm just wondering, philosophically, if you look at the potential amount of leverage that might be used in that transaction, and what you're seeing with respect to the discussion -- the CTA in New Jersey -- is there any change or thoughts that you guys might have in terms of leverage over the long term at Public Service?

Caroline Dorsa *- Public Service Enterprise Group Inc - EVP & CFO*

Sure, Paul, it's Caroline. Thanks for your question. So, yes, we obviously saw what Exelon said in terms of how they were financing that acquisition. So, a part of that, I guess I'd characterize as not really surprising. We look at our own balance sheet, and we obviously are always in discussions with the rating agencies, given the fact that we don't have any parent leverage, right? We have the occasional commercial paper, but our long-term debt is at our operating companies.

We talk about investment capacity. We tend to talk to you about Power, and Power's debt-to-cap profile -- where that stands at the end of a period, and what its investment capacity is. But we've always recognized that we do have incremental investment capacity at the parent that we could deploy, and in conversations with the rating agencies, the deployment for that to regulated, right. Investments is something that works very well.

The way I look at that is, given where Power's performance has been, and, as I think we note where the Company ended the quarter, and Power, of course, ended the quarter at debt to cap at 32%, there is a significant amount of capacity at Power, but there also is that parent-related investment capacity. So, when we talk about things internally in terms of opportunities, some of the things that Ralph was mentioning earlier, we look at that from the perspective of having a balance sheet that has a lot of room, not just the room for Power, but also the room for parent if it's oriented toward regulated.

© 2014 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

SI-SSA-0015-12449

So, maybe that was the first largest announcement of use of that kind of capacity that we've seen, but we recognize that we have it as well, and of course, continuing to run our businesses appropriately and keeping the right capital structure at PSE&G, et cetera, and then seeking out regulated opportunities. So, I look at that as just reinforcing the fact that we have ample room.

Paul Patterson - ***Glenrock Associates - Analyst***

Okay. And then, with respect to this PJM independent market monitor stuff, I wasn't completely clear exactly what you guys indicated happened. It suggested that there were some additional pricing areas in the cost-based bids that were identified with the quantity of energy that Power offered into the energy market that differed from the amount that Power was compensated in the capacity market for those units. I'm just trying to get an idea -- what does that actually mean, for somebody that is a little bit less sophisticated on what actually happened, I guess?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Yes. So, you got it right. In terms of -- in the first quarter, we talked about the cost-based bids. And then the incremental information that we identified during this quarter was other errors, but also this capacity issue. And so, let me just try to say it again.

So, we had -- we offer, of course, our units into the day-ahead energy market. We offer an amount of megawatts into the day-ahead energy market. And what we have seen is, at times, we did not offer the capacity into the day-ahead energy market that was equivalent to the amount of capacity that we have -- we were getting paid for from the capacity auction results.

So, as I said, generally speaking, what I'm talking about is offering into the day-ahead market that differential, not, generally speaking, impact on the real-time operation of the unit. So, it's about the bidding in the day-ahead, generally speaking, more than it is about the operation in the real-time. So, it's a differential.

And, as I said, we're in the process of investigating that, doing the analysis, and working with the IMM and PJM, and we've informed FERC. This day-ahead, this issue about the capacity difference, you may recall I mentioned in my remarks it's about our peakers. So, not about all of our units, but our fossil peaking units in the day-ahead market.

Paul Patterson - ***Glenrock Associates - Analyst***

Okay. I got you. And then, finally, the methane emissions issue, and the policy objective and the opportunity, you mentioned that I think that this might start with nine figures. Could you give us a little bit more of a flavor of the total opportunity that might be involved in that? I noticed this other stuff that was coming out yesterday from the DOE, and I was thinking about this. Just any more you can share with us about what that could possibly mean, these methane leaks, plugging them up and the benefit there?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

We have, I think I'm being told, 4,000 miles of cast iron main pipe that needs to be replaced. I don't know the amount of bare steel pipes that we have that needs to be replaced. And typically speaking, Energy Strong had how much for how many miles?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

$350 million.

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

250 miles. Yes, so, it's about $1.4 million per mile, Paul. So, you could take that 4,000 miles and multiply by $1.4 million. You get a really rough ballpark. Yes, it was $350 million in Energy Strong to replace 250 miles.

© 2014 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

SI-SSA-0015-12450

Paul Patterson - ***Glenrock Associates - Analyst***

But for the methane escape issue, isn't that a climate issue that's separate from Energy Strong? I thought there was an additional amount.

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Yes, that's correct, Paul. So, I was connecting two disparate thoughts. So, we've been on a longstanding program to replace our cast iron main because it is the oldest part of our gas distribution system. It's the leakiest part of our gas distribution system.

It doesn't have any safety consequences from the point of view of high pressure. It's a low-pressure, low-utilization system. But just from the point of view of good operational practices, you don't want leaky pipes.

What's been added to the calculation of why it's important to do it, is concern over the greenhouse gas effect associated with methane being, I think, I read estimates of 30 to 35 times more impactful per pound of CO2. So, that's just an added impetus for a program that's been under way for many years now to replace the cast iron main.

Paul Patterson - ***Glenrock Associates - Analyst***

So, you don't have a dollar number?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Yes, so, if you wanted to replace all 4,000 miles, you can multiply that --

Paul Patterson - ***Glenrock Associates - Analyst***

Okay. I got you. Thanks so much.

Kathleen Lally - ***Public Service Enterprise Group Inc - VP of IR***

Thank you. Next question.

Operator

The next question is from Dan Eggers with Credit Suisse. Please proceed with your question.

Dan Eggers - ***Credit Suisse - Analyst***

Good morning, guys. Can you maybe give us an update or is there a way to quantify how much benefit you guys saw in the second quarter because of the advantaged gas supply contracts at Power? And how should we think about maybe the benefit in the third quarter this year versus last year, seeing how wide based this is today?

© 2014 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Yes. Sure, Dan. Thanks for the question. So, not much impact in the second quarter. So, about $0.01 -- even that's rounded into the numbers I gave you relative to overall pricing impacts offsetting capacity upsides. That's not surprising to us. Remember we talked about last year in the second quarter was when we actually first saw this differential come into play, and actually it had a similar impact in last year's second quarter, again, rounding to about $0.01.

You may remember it was the third quarter that we actually talked more about it because, with the summer season, we had a nice warm summer last year, you had that supply-demand imbalance. More supply trying to get on to the pipe, right. And so the differential widened out, and we got about $0.03-a-share benefit in the third quarter.

So, of course, this is a season where we haven't had as warm of weather as we would normally have at the end of the second quarter. It's cooler than normal, and cooler than last year. You're not seeing a lot of that benefit. Not surprising we wouldn't see as much.

So, differential for [LIDE] is ranging, and looking a little bit ahead, $0.50 to $1 right now, just given supply-demand issues as people refill storage. That's not surprising. We saw -- depending on those supply-demand conditions, you can see that basis really move around.

So, we still think -- obviously, we're well positioned, and whenever we can capture that advantage, we will take it, and you'll see it come through our numbers. Can't really forecast obviously the rest of this quarter. We will have to see what the summer turns out to be. It was cool at my house this morning, I don't know about yours, but we'll see how that goes.

But we still have that evergreen opportunity on the pipeline with those contracts that Power has. Residential customer, of course, gets the first claim. That's why you don't hear us talk about it in the winter, right, because the residential customer is using it for heating. But in the summer, where there is obviously not as much heating demand, we can get that benefit.

So, I still think it's something you should look to us to try to capture whenever we can. We will report on how we do at the end of the summer in the third quarter, but, as I said, not surprising that 2Q is about the same as last year's 2Q, and again, a reminder that that advantage Power has is an evergreen advantage. Overall, you may remember last year we said about 25% of the gas that we use for our generation on a net basis -- net 25% across the year is LIDE source, but it's peaky. It's peaky in that summer period; it's much less so in the winter.

Dan Eggers - ***Credit Suisse - Analyst***

Thank you for that. And, yes, it was cold in the city this morning, too.

That brings me to my next question. The guidance pointed to the top end of the range. How is that reflecting the absence of July weather so far?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

So, Dan, whenever we give information, it's up to the minute. So, we obviously have taken into account July, and we've looked at a 10- to 14-day forecast, and all of that is factored in.

By the way, I just saw yesterday that it is being called the polar vortex again. So, evidently, in July, that's 74 degrees versus negative 17.

Yes, the recent weather and the near-term forecast is included in the upper end of the guidance. Thanks for asking that because, beyond that range, we would assume normal weather.

Dan Eggers - ***Credit Suisse - Analyst***

Okay. And then I guess just a last question, Caroline. How should we think about tax rate for this year, given the fact the rate came in lower in the second quarter, and what are the expectations for next year?

© 2014 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Yes, so, I think in terms of tax rate, you should pretty much think of our tax rate as relatively steady for the businesses. Sometimes we have small adjustments in the tax rate.

Just a little bit of benefit in Power for the tax rate this year. We close out audits. Obviously, sometimes that affects things. Production deduction -- you calculate that as you look at the overall amount of generation that you source from market versus what you produce. Those kinds of things I think of as noise. So, I would say think of your tax rate as basically consistent for Power and for the utility on a year-on-year basis.

The only thing that might bounce your tax rate a little bit on a core source business in Power and solar source goes into -- as the unit comes into service, you'd see that little bit of boost -- benefit, if you will, right, a little bit of benefit for the portion of the ITC that you see kind of run through the [P&Ls] as a permanent difference. Other than that, I think you should expect it to be pretty smooth.

Dan Eggers - ***Credit Suisse - Analyst***

Okay. Thank you very much.

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Sure. Next question.

Operator

The next question is from Travis Miller with Morningstar. Please proceed with your question.

Travis Miller - ***Morningstar - Analyst***

Morning. Thanks.

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Good morning, Travis.

Travis Miller - ***Morningstar - Analyst***

Wondering about the outage at Salem. Was there anything in the work that you did there that perhaps, I guess for lack of a better term, pulled-ahead work, or work that you would have done or had to do in a year or two years that you were able to do at this point? Is there anything in that --?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Nothing that would meaningfully change the duration of the next refueling outage, Travis. Believe me, that topic was front and center often, as we waited for the coolant pumps to come back from the refurbishment of the vendors. But by no means will we skip an outage, nor should you think of any material shortening of the next refueling outages, which will be 18 months from now.

Travis Miller - ***Morningstar - Analyst***

Okay. Different topic: Now that you have certainty on the Energy Strong investment needs, what are your thoughts around equity needs and use of balance sheet right now and use of retained earnings, financing that?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

So we consistently and remain firm in our belief that we do not have any need for outside equity for the fairly robust capital program we have. Caroline, you may want to add to that.

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Yes, Travis, as I mentioned just earlier, we closed the quarter with the debt to cap for the Company at 42%, and for Power at 32%. We also talked about the fact that we know if we had more regulated investments to do, we even have parent debt capacity. So, there is a lot of room on the balance sheet. Not to say that we haven't used it, right?

We've consistently identified things, as Ralph has mentioned, to put balance sheet to work. But when I look at this, and then I look at the things that we were just talking about earlier, whether it's more on the gas side that we might be able to do next round of something following Energy Strong, more transmission and the open window, potential for artificial island if it comes our way, potential for more things that we might identify on an infrastructure basis. And those kinds of things that we identify, and they do add up, but none of them add up to suggest that the balance sheet we have can't support that and more.

And, of course, for things like transmission, as you know, under our formula rates, it's real-time, we're not lagging, and so cash comes back as well. So, I look at this and say: We have our conversations and talk about opportunities. We have a balance sheet that can support that, and nothing gets close to equity issuance.

Travis Miller - ***Morningstar - Analyst***

Great. Thanks a lot.

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Sure. Thank you. Next question.

Operator

And the next question is from Jonathan Arnold with Deutsche Bank. Please proceed with your question.

Jonathan Arnold - ***Deutsche Bank - Analyst***

Good morning, guys.

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Good morning, Jon.

THOMSON REUTERS

SI-SSA-0015-12454

Jonathan Arnold - ***Deutsche Bank - Analyst***

I just wanted to understand a little better the thought process behind the charge related to the cost-base bidding issue. So, in the first quarter you identified the initial issue -- you took a charge, you didn't tell us how much it was. And then this quarter you are telling us how much that charge was. You've identified the issue might be broader to it, but you haven't added to the charge.

So, should we read into that that you feel that you took an adequate reserve, or you just have no way of estimating it? If that was case initially, why did you come up with $25 million? Any context you can give there, Ralph?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Sure. I'll answer that, Jonathan. So, thanks for asking the questions. We should be clear here.

So, as you recall, we said we took a charge in the first quarter. We didn't identify what it was. So, obviously that was a source of a lot of conversation. So, we thought it was appropriate to tell you what we took in the first quarter, which was the $25 million, the $0.03 a share. It was all embedded into Power's operating earnings for the first quarter.

The standard on which we rely here in determining that charge is the accounting standard for contingency. You may be familiar with it, but, if not, let me be a little bit descriptive. The accounting guidelines for the time for which we took the charge in the first quarter essentially worked this way. You take a look at what a potential issue might be, if you need to take a charge or a reserve. And if you identify a particular number that you think is the most likely number, then you book that.

If you don't know a most likely number but you have a range of potential outcomes, all of which, given the level of uncertainty, you can't really ascribe differential probabilities to, then you book the low end of that range. And that's what we did in the first quarter. That's what the $25 million represented when we took the charge in the first quarter.

As I mentioned during the remarks and also in an earlier question, we've identified some additional errors, as well as this quantity matter that I was just describing before as well. And so, as we looked at the second quarter, we didn't have any basis on which to revise that number or change that number, and we determined that we would leave that number where it is. So that -- what I'm saying here is: You should not interpret that to say that is the best number, when we took the number. The charge in the first quarter, we were taking the low end of the range. And at this point, we don't have any sufficient additional information to change the value right now because we're in the process, as I mentioned, and that process could result in a change in the value.

Jonathan Arnold - ***Deutsche Bank - Analyst***

Okay. Thank you, Caroline. One other follow-up on that. (multiple speakers) Is there any aspect of this which is ongoing affecting your earnings power at Power? Some of these changes in practice and systems you talked about -- are they -- are we going to notice any of that?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

No. So, the guidance that we gave you, and the upper end of the range guidance, we're really talking about Power's operational earnings power. And Power's operational earnings power is unchanged in how we bid the units and how the units run and the capacity of having more megawatts. So, we don't see this as changing the ability of Power to continue to garner the value it garners from its location. So, I would say no to that.

This is something we need to work through, and we will update you as we go. And there may be more to say in subsequent quarters because we are just in the process now, but it doesn't change the fundamentals of how you should think about Power operating in the market.

Jonathan Arnold - ***Deutsche Bank - Analyst***

This is more a retroactive thing that either penalties or disgorgement or whatever that may occur, but the go forward is not really affected?

THOMSON REUTERS

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

You're correct. This is something that may result in incremental charges. It may result in penalties, but we just don't know enough right now to give you any guidance in that regard.

Jonathan Arnold - ***Deutsche Bank - Analyst***

Okay. Do you have an update on when you think you might have some clarity on that? I apologize if you already said that.

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

No, that's okay, Jonathan. No, we actually don't. As I mentioned, or as we mentioned earlier and Ralph mentioned as well, we did inform FERC. We've been in discussions with PJM and the independent market monitors. So, there are many parties into this conversation, appropriately. So, we can't really give an estimate of the time frame at this point. We're continuing to obviously work with all those parties.

Jonathan Arnold - ***Deutsche Bank - Analyst***

Thank you.

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

You're welcome. Next question.

Operator

The next question is from Paul Fremont with Jefferies. Please proceed with your question.

Paul Fremont - ***Jefferies & Company - Analyst***

Thank you very much. Really, two things. One, could I get a reaction to the staff recommendation on the consolidated tax adjustment, and what that might mean for Public Service Enterprise -- for Public Service Electric and Gas?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Sure. So, the CTA, as recommended, of course, which is not final, right, it's just recommended, takes a view of taking a five-year look back from the date of filing. Also takes a view of separating out transmission from distribution, and then 75% to the Company, 25% for the benefit of the customer.

So, we think that is a very good outcome, and we think if that were to be the final rule, we think that would be fine from a PSE&G perspective, and would continue we think to appropriately reflect how to think about taxes and, therefore, appropriately encourage incremental investments. If that were the outcome, which, as I said, is not the final outcome, that would be a good outcome from our perspective.

Paul Fremont - ***Jefferies & Company - Analyst***

Are you able to quantify the potential rate base impact if that recommendation were adopted?

THOMSON REUTERS

SI-SSA-0015-12456

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

It would be deminimis. It would not be material.

Paul Fremont - ***Jefferies & Company - Analyst***

Okay. Then the second question I have is: You guys mentioned the 316B final rules at EPA. Where do you currently stand with the Salem water discharge permit?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

So, I believe our sale and water discharge permit expired some years ago, and it's been held in advance. Had some very preliminary meetings with the DEP staff, not only on Salem, but some of our fossil units that now can have their permits refreshed, given the promulgation of the rule. I am pretty sure that the 316B rule, as proposed by EPA, named traveling restructuring as the best technology available for impingement. Entrainment is more of a site-specific determination. So, we'll -- the ink wasn't dry when we called up DEP and said let's talk about these permits.

Paul Fremont - ***Jefferies & Company - Analyst***

So, you're essentially ruling that's consistent with the EPA standards then, at the state level?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

That's right, Paul. That's right.

Paul Fremont - ***Jefferies & Company - Analyst***

Okay.

Kathleen Lally - ***Public Service Enterprise Group Inc - VP of IR***

I think we're going to move to closing comments right now, given the fact we're at the noon hour. So, I'm going to turn it back over to Ralph for closing comments before concluding.

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Thanks, Kathleen. So, just to recap, we obviously had some help from the weather and the markets earlier in the year. Mostly weather early in the year, and a little more help from the markets early in the spring, which we were able to capitalize on in some of our hedging activity, as Caroline described for you. We're not getting any help from the weather lately, and we didn't do ourselves a favor with some of our operational challenges in the spring.

But when I add up all those challenges, whether it's weather or operational, I am pleased to guide you to the upper end of the range, even having put all of that into the stew, and I'm even more happy about the fact that all of those challenges are in the rearview mirror and that the plants are running well now. As Caroline's dialogue with Jonathan alluded to, even the bidding issues at our trading group we've corrected -- the errors that we were aware of have been corrected, and that's in the rearview mirror.

The balance sheet remains strong. The investment program is on track. We don't need new equity. We can do all of that and still support growth in the dividend.

THOMSON REUTERS

So with that, I'd just say thank you for joining us on the call. We'll see you in various venues in the fall, and then I'm sure at EEI late in the fall. And that will be it from here. Thank you, all.

Kathleen Lally *- Public Service Enterprise Group Inc - VP of IR*

Thank you, operator. With that, we're going to conclude today's call.

Operator

Ladies and gentlemen, that does conclude your conference call for today. You may disconnect, and thank you for participating.

- Carlotta Chan, Manager – Investor Relations Phone: 973-430-6596

PSEG ANNOUNCES 2014 SECOND QUARTER RESULTS

Net Income of $0.42 Per Share; Operating Earnings of $0.49 Per Share

Operating Earnings Expected to be at Upper End of Full Year Guidance of $2.55 - $2.75 Per Share

July 30, 2014 (Newark, NJ) (NYSE- PEG) Public Service Enterprise Group (PSEG) reported today Second Quarter 2014 Net Income of $212 million or $0.42 per share as compared to Net Income of $333 million or $0.66 per share reported for the Second Quarter of 2013. Operating Earnings for the Second Quarter of 2014 were $245 million or $0.49 per share compared to the Second Quarter of 2013 Operating Earnings of $243 million or $0.48 per share.

"Our results in the second quarter reflect the benefit of our diversified business model, the growth in our regulated utility company capital program and our long-term focus on operating in a safe, reliable manner as we meet the needs of our customers and shareholders," said Ralph Izzo, chairman, president and chief executive officer. "The primary driver of growth – increased investment in transmission in our utility, PSE&G – remained strong in the second quarter offsetting the impact from mixed operating conditions. We are delivering on the growth potential of our multi-billion dollar capital program while at the same time our favorable natural gas supply position continues to yield benefits for customers and shareholders. PSE&G remains on course to provide greater than 50% of our forecast operating earnings for the year as Power is well positioned to generate solid earnings and free cash flow. Based on our performance thus far in the year, and assuming normal weather and operations over the remainder of the year, we expect operating earnings for the full year to be at the upper end of our guidance of $2.55 - $2.75 per share."

PSEG believes that the non-GAAP financial measure of "Operating Earnings" provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. Operating Earnings exclude the impact of returns/(losses) associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting and other material one-time items. The table below provides a reconciliation of PSEG's Net Income to Operating Earnings for the second quarter. See Attachment 12 for a complete list of items excluded from Net Income in the determination of Operating Earnings.

Izzo continued, "The recent approval of PSE&G's $1.22 billion Energy Strong program is expected to further support PSE&G's double-digit growth in rate base. We have confidence in our ability to deliver on the promise for growth offered by our 5-year, $11.3 billion dollar capital program. Even so, we continue to enjoy a strong balance sheet that positions the company well for long-term growth."

PSEG CONSOLIDATED EARNINGS (unaudited)
Second Quarter Comparative Results
2014 and 2013

	Income ($millions)		Diluted Earnings Per Share	
	2014	**2013**	**2014**	**2013**
Operating Earnings	$245	$243	$0.49	$0.48
Reconciling Items	(33)	90	(0.07)	0.18
Net Income	$212	$333	$0.42	$0.66
		Avg. Shares	**508M**	**507M**

Operating Earnings guidance by company for the full year is as follows:

Operating Earnings
($ millions, except EPS)

	2014E
PSE&G	$705 - $745
PSEG Power	$550 - $610
PSEG Enterprise/Other	$35 - $40
Total	$1,290 - $1,395
Earnings Per Share	$2.55 - $2.75

We anticipate results for the full year, assuming normal weather and operations over the remainder of the year, to be at the upper end of the company guidance range, driven by year-to-date performance and expectations for Power.

Operating Earnings Review and Outlook by Operating Subsidiary

See Attachment 6 for detail regarding the quarter-over-quarter reconciliations for each of PSEG's businesses.

PSE&G

PSE&G reported operating earnings of $151 million ($0.30 per share) for the second quarter of 2014 compared with operating earnings of $121 million ($0.24 per share) for the second quarter of 2013.

PSE&G's operating results have been influenced by an increase in revenue associated with an expansion in its capital program and a decline in operating and financial costs.

PSE&G's second quarter results reflect the contribution to earnings from higher transmission revenues associated with an increase in capital investment. A Federal Energy Regulatory Commission (FERC) approved increase in PSE&G's transmission revenue under the company's formula rate, effective on January 1, 2014, supported a quarter-over-quarter increase in the net earnings contribution from transmission of $0.03 per share.

Sales and margin from increased demand for gas improved quarter-over-quarter earnings comparisons by $0.01 per share. This improvement in earnings, however, was offset by weather conditions during the second quarter which were unfavorable relative to normal and in comparison to conditions experienced in the year-ago quarter. A focus on controlling the growth in operating expenses, including a decline in pension expense, led to an improvement in quarter-over-quarter earnings of $0.02 per share. Although the level of debt on the balance sheet has increased with an expansion in the capital program, the overall cost of financing has declined as the result of re-financing activity and a decline in interest rates. The reduction in financing costs improved earnings comparisons quarter-over-quarter by $0.01 per share.

Economic conditions in the service area continue to exhibit signs of slow improvement. During the quarter, weather normalized electric sales grew by 1.9%. The favorable quarter-over-quarter sales comparisons, however, were heavily influenced by weakness in the industrial sector in the year ago quarter. Weather-normalized growth in residential electric sales of 0.5% during the quarter is consistent with customer growth. And growth in weather-normalized electric sales to the commercial sector of 1.3% is more reflective of the local economy. On a weather-normalized basis, sales of gas in the first half improved by 4.4% which reflects a fundamental improvement in market conditions given declining prices and economic conditions.

The NJ Board of Public Utilities (BPU) approved the capital expenditure of $1.22 billion under the settlement of PSE&G's Energy Strong Proposal most of which will be spent over a 3-year period. The spending on Energy Strong brings PSE&G's five-year capital program to approximately $11.3 billion versus its previous forecast of $10.1 billion in capital spending over the 2014 – 2018 time period.

PSE&G, as part of its Annual BGSS filing with the BPU, requested a 9% reduction in annual gas rates for residential customers effective October 1, 2014. The reduction reflects the continued benefits associated with the company's long-term supply arrangements, and would be the latest in a series of reductions in gas rates which have lowered customer bills 44% in the past five years.

The forecast of PSE&G's operating earnings for 2014 remains $705 - $745 million. Results for the remainder of the year will continue to reflect an increase in transmission revenue and a reduction in operating and maintenance costs including pension expense.

PSEG Power

PSEG Power reported operating earnings of $87 million ($0.17 per share) for the second quarter of 2014 compared with operating earnings of $120 million ($0.24 per share) for the second quarter of 2013.

Power's operating results for the second quarter reflect primarily the impact on production and O&M expenses associated with an extended outage at the Salem 2 nuclear facility and the installation of

equipment at the Linden gas-fired combined cycle facility to increase the unit's capacity. The fleet's net long position allowed Power to meet its hedged obligations from its own generation.

Earnings in the quarter benefited from higher capacity revenue. Power received capacity prices of $242/MW-day during the first two months of the quarter versus $153/MW-day in the year-ago period before capacity prices reset to $166/MW-day effective June 1, 2014. The $0.04 per share increase in capacity revenue was offset by a decline in average hedge prices. Power's access to low-cost gas under its firm transportation contracts supported off-system sales of gas and reduced the cost of gas for its fleet. These benefits offset the negative impact from lower market prices in the east resulting from transmission and generation outages outside the region. The extended outage at Salem 2 and the outage to complete the capacity uprate work at the gas-fired Linden station were partially offset by incremental production at the coal-fired and peaking units and combined to lower quarter-over-quarter earnings by $0.03 per share.

Operation and maintenance expense (O&M) was higher than the level experienced in the year ago quarter. The completion of initiatives that increased the capacity at the Linden generating station and the cost of the repair work at Salem 2 more than offset the benefit from lower pension expense and reduced quarter-over-quarter earnings by $0.04 per share. An increase in depreciation was offset by a reduction in the tax rate and other miscellaneous items.

Output from Power's fleet was 5% lower in the second quarter compared to year-ago levels. Power determined in mid-May it was necessary to extend Salem 2's refueling outage to inspect and repair the reactor's coolant pumps. The unit returned to service on July 14, 2014. The extended outage reduced the nuclear fleet's output in the quarter by 9% to 6.5 TWh, 54% of generation, and lowered the nuclear fleet's average capacity factor in the quarter to 80.5%. Production from the gas-fired combined cycle fleet declined 11% in the quarter to 3.6 TWh, 30% of production, as work related to an expansion of capacity at Linden kept the unit out of service early in the quarter. The retrofit work at Linden is expected to increase the unit's capacity by approximately 63 MW. Production from the coal-fired and peaking units increased 27% to 1.9 TWh, 16% of generation, with improved market economics.

Power has reduced the upper end of its forecast of output for the full year to 56 – 57 TWh from 56 – 58 TWh to take into account the results for the second quarter. The forecast, which represents an increase of 4% - 6% in output for the year, continues to reflect normal operations and weather. Approximately 70% - 75% of generation for the second half of the year is hedged at an average price of $50 per MWh. Power has slightly increased its forecast of economic generation for 2015 and 2016 to 55 – 57 TWh per year from 54 – 56 TWh. For 2015, Power has hedged 65% - 70% of its forecast generation at an average price of $50 per MWh; for 2016, Power has hedged approximately 30% - 35% of its generation at an average price of $51 per MWh. Power increased the percent of generation hedged in 2015 and 2016 to the upper end of limits it would normally take at this time to take advantage of market strength in the quarter. The hedge data for 2015 also assumes BGS volumes represent 11 TWh of demand – more in line with forecast volumes for 2014 – than the prior forecast which assumed BGS volumes of 10 TWh.

The forecast range of Power's operating earnings for 2014 remains unchanged at $550 - $610 million with full year operating earnings expected to be at the upper end of the range. Results for the remainder of the year will be influenced by a reset in the average price received on PJM capacity to $166/MW-day from $242/MW-day and a decline in the average price of energy hedges. O&M expense is expected to compare favorably in the second half of the year given a reduction in pension expense and the absence of major outage-related work.

PSEG Enterprise/Other

PSEG Enterprise/Other reported operating earnings of $7 million ($0.02 per share) for the second quarter of 2014 versus operating earnings of $2 million ($0.00 per share) during the second quarter of 2013. The results reflect the inclusion of earnings from PSEG-Long Island's operating contract and the absence of charges in the year-ago quarter.

PSEG-Long Island, on July 1, 2014, filed its Utility 2.0 proposal which calls for investing $200 million in energy efficiency, demand resources, distributed generation and related programs over a 4-year period beginning in 2015. A decision on the proposal is expected in December 2014.

The forecast of PSEG Enterprise/Other full year operating earnings for 2014 is unchanged at $35 - $40 million.

Other Items

PSEG Power notified the FERC, PJM and the PJM Independent Market Monitor (IMM) in the first quarter that it found certain errors in the cost-based component of its bids for its fossil generation units. In the first quarter, Power recorded a charge to income of $25 million based on the information available at that time. Upon discovery of the errors, PSEG commenced an investigation and has since notified the FERC, PJM and the IMM that additional pricing errors in the cost-based bids were identified and it was further determined that the quantity of energy that Power offered into the energy market for its fossil peaking units differed from the amounts for which Power was compensated in the capacity market for those units. PSEG informed the FERC, PJM and the IMM of these additional issues, and has corrected these errors. PSEG does not have access to PJM's proprietary data to determine if the differences in quantity had any impact, and if so the level of that impact. FERC has the authority to investigate the matter, which could result in FERC seeking disgorgement of any over-collected amounts, civil penalties and non-financial remedies. Power has corrected processes to ensure that the pricing errors identified in the calculations of the bids and differences in quantities offered into the energy market from those in the capacity market have been corrected. Power is also in the process of implementing procedures to help mitigate the risk of similar issues occurring in the future. It is not possible at this time to reasonably estimate the ultimate impact or predict any resulting penalties, other costs associated with this matter, or the applicability of mitigating factors.

######

FORWARD-LOOKING STATEMENT

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,

- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry, any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as competition for certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies, and
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

PSEG Earnings Conference Call

2nd Quarter 2014

July 30, 2014

SI-SSA-0015-12477

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as competition for certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies, and
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-12478

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. The last slide in this presentation includes a list of items excluded from Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

First Half 2014 Earnings Summary

Six months ended June 30

$ millions (except EPS)	2014	2013
Operating Earnings	$ 760	$ 676
Reconciling Items, Net of Tax	(162)	(23)
Net Income	$ 598	$ 653
EPS from Operating Earnings*	$ 1.50	$ 1.33

SI-SSA-0015-12482

* See Slide A for Items excluded from Net Income to reconcile to Operating Earnings.

PSEG – Q2 2014 Highlights

- **Earnings on Track**
  - ✓ Operating earnings of $0.49 vs. $0.48 per share in Q2 2013
  - ✓ Increased earnings contribution from PSE&G's investment in Transmission
  - ✓ Expect 2014 Operating Earnings to be at the upper end of the $2.55 to $2.75 per share guidance range – assuming normal weather and plant operations for the balance of the year
- **Operating Review**
  - ✓ PSEG Power output down 5% vs. Q2 2013 from Linden and Salem 2 outages, partially offset by improvement in coal generation
  - ✓ PSE&G placed the 230 kV North Central Reliability transmission project in service
  - ✓ Power's fleet fully restored from storm outages
- **PSEG Disciplined Capital Investment**
  - ✓ BPU approved $1.22 billion investment in PSE&G's Energy Strong infrastructure program
  - ✓ PJM deferred a final decision on its recommended solution, to be built by PSE&G, for the Artificial Island project via FERC 1000 competitive bidding process
- **Market Developments**
  - ✓ Recent EPA actions on 316(b) and GHGs

* Operating Earnings is equal to Net Income.

SI-SSA-0015-12492

PSE&G – Monthly Summer Weather Data

SI-SSA-0015-12493

PSE&G – Q2 2014 Operating Highlights

Operations

- ✓ Q2 2014 weather was milder than Q2 2013: Heating degree days were 3% below normal, and cooling load was 15% below normal
- ✓ Economy slowly improving, weather normalized electric sales up 1.6% YTD; residential demand up 0.5% and commercial sector up 1.3% in Q2
- ✓ Gas deliveries (weather normal), up 7.5% in Q2 and up 4.4% for the YTD, continue to benefit from decline in supply costs

Regulatory and Market Environment

- ✓ PSE&G received final NJBPU approval to invest $1.22 billion in the Energy Strong program
- ✓ PJM deferred a final decision on its recommended solution, to be built by PSE&G, for the Artificial Island project via FERC 1000 competitive bidding process
- ✓ Construction of major transmission lines progressing on schedule and on budget
- ✓ PSE&G residential gas customers to benefit from a proposed rate reduction this October, estimated to save the average customer $100 per year

Financial

- ✓ PSE&G plans to invest over $2.2 billion in its T&D system in 2014
- ✓ PSE&G's 2014-2018 Capital Spending increased to $11.3 billion with recently approved Energy Strong
- ✓ PSE&G earned its authorized return in the quarter
- ✓ PSE&G issued $250 million, 1.8% secured medium-term notes due June 2019 and $250 million, 4% secured medium-term notes due June 2044
- ✓ S&P revised PSE&G's credit rating outlook from Stable to Positive

PSEG Power – Gross Margin Performance

- ✓ Weather-driven volatility pushed natural gas and power prices to multi-year highs; Q2 spot prices in PJM peaked in April
- ✓ Decline in average hedge prices
- ✓ Capacity prices reset on June 1 to ~$166/MW-day and remain stable for the next three capacity years
- ✓ Fuel flexibility and access to lower cost Marcellus gas continue to benefit margin

PSEG Power Gross Margin ($/MWh)

Q2 2014 Regional Performance		
Region	**Gross Margin ($M)**	**2014 Performance**
PJM	$468	Higher capacity pricing for most of the quarter offset lower hedge prices. Output hurt by outages at Linden and Salem 2.
New England	$18	Higher volume offset lower priced hedges.
New York	$18	Higher volume offset lower pricing.

Hedging Update…

Contracted Energy*

		Jul-Dec 2014	2015	2016

	% Hedged	70-75%	65-70%	30-35%
	Price $/MWh	$50	$50	$51

* Hedge percentages and prices as of June 30, 2014. Revenues of full requirement load deals based on contract price, including renewable energy credits, ancillary, and transmission components but excluding capacity. Hedges include positions with MTM accounting treatment and options.

SI-SSA-0015-12502

PSEG Power – Q2 2014 Operating Highlights

Operations

- ✓ Q2 output down 5% due to Linden and Salem 2 outages
- ✓ Advance gas path uprates (~63MW) completed at Linden
- ✓ Output of NJ coal units was 10% coal, 90% gas fueled in Q2; 45% coal, 55% gas for the YTD

Regulatory and Market Environment

- ✓ Capacity pricing for the 2014/2015 capacity year reset to $166 MW/day on June 1
- ✓ Access to Marcellus gas benefited off-system sales and reduced the fleet's cost of gas
- ✓ FERC and PJM reviewing implications of circuit court ruling on use of DR in capacity auctions

Financial

- ✓ Power recorded a charge of $25 million in Q1 2014 related to potential liability associated with the discovery of bidding errors in the PJM energy market. Power identified additional errors in Q2 2014, as well as differences between the quantity of energy offered into the market and the amount for which it was compensated in the capacity market. Power has corrected these errors. The matter remains under review with the FERC, PJM and its Independent Market Monitor. We are unable to estimate the ultimate impact or predict any resulting penalties or other costs associated with the matter at this time.
- ✓ Power's total debt as a percentage of capital at June 30 was 32%
- ✓ S&P revised PSEG Power's credit rating outlook from Stable to Positive

SI-SSA-0015-12503

PSEG

PSEG Financial Highlights

- **Maintaining 2014 operating earnings guidance of $2.55 - $2.75 per share, expecting results at upper end of the range**
  - ✓ Focused on maintaining operating efficiency and customer reliability
  - ✓ PSE&G expected to grow at double-digit rate in 2014 and provide over 50% of operating earnings
- **PSE&G expanded capital program of $11.3 billion over 2014-2018 is expected to further support double digit rate base growth**
- **PSEG capital program now projected at $13.1 billion over the 2014-2018 period**
- **PSE&G has begun construction of Energy Strong infrastructure projects and continues to build out its Transmission plan on-time and on-budget**
- **Financial position remains strong**
  - ✓ Positive cash from Power and increasing cash flow from PSE&G supports sustainable dividend growth and funds capital spending program without the need to issue equity
  - ✓ PSEG's debt as a percentage of capital was 42% at June 30
  - ✓ Standard & Poor's revised the credit rating outlooks of PSEG, PSE&G and PSEG Power from Stable to Positive in May
- **Long history of returning cash to the shareholder through the common dividend, with opportunity for consistent and sustainable dividend growth**

PRESENTATION

Operator

As a reminder, this conference is being recorded today, October 30th, 2014 and will be available for telephone replay beginning at 2:00 PM Eastern today until 11:30 PM Eastern on November 6th, 2014. It will also be available as an audio webcast on PSEG's corporate website at www.pseg.com.

I would now like to turn the conference over to Kathleen Lally. Please go ahead.

Kathleen Lally ***- Public Service Enterprise Group Inc - VP of IR***

Thank you, Brent.

Good morning. Thank you all for participating in PSEG's earnings call this morning.

As you are aware, we released our third-quarter 2014 earnings statements earlier this morning. The release and attachments, as mentioned, are posted on our website, www.pseg.com under the Investor section. We have also posted a series of slides that detail the operating results by company for the quarter. Our 10-Q for the period ended September 30, 2014, is expected to be filed shortly.

I'm not going to read the full disclaimer statement or the comments we have on the difference between operating earnings and GAAP results, but as you know, the earnings release and other matters that we will discuss in today's call contain forward-looking statements and estimates that are subject to various risk and uncertainties. And although we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if our estimate changes, unless we of course are required to do so.

Our results also contains adjusted non-GAAP operating earnings. Please refer to today's 8K or other filings for a discussion of factors that may cause results to differ from management's projections, forecasts, and expectations and for a reconciliation of operating earnings to GAAP results.

I am now going to turn the call over to Ralph Izzo, Chairman, President and Chief Executive Officer of Public Service Enterprise Group. And joining Ralph on the call is Caroline Dorsa, Executive Vice President and Chief Financial Officer. At the conclusion of their remarks there will be time for your questions. And I'm not going to limit you. (laughter)

THOMSON REUTERS

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Nice try, Kathleen. Thank you.

And thank you, everyone, for joining us today. Earlier this morning, we reported operating earnings for the third quarter of 2014 of $0.77 per share, compared with operating earnings of $0.76 per share in 2013's third quarter. The results for the third quarter bring PSEG's operating earnings for the nine months ended September to $2.27 per share, which is a 9% increase over the $2.09 per share earned during the first nine months of last year. I will refer you to slides 4 and 5, as they contain the detail for the results in the third quarter and for the nine months.

PSEG earnings continue to benefit from the expansion of our regulated utility capital program. Our results also benefited from the focus placed on controlling the growth in operating expenses, which offset the impact of less favorable weather conditions on demand for electricity. Our major transmission projects are being completed on time and on budget. We completed construction of the $390 million North Central reliability line and placed the $400 million Burlington-Camden line into service, as well. These two 230 kilovolt lines will improve the system's power quality and voltage stability.

Construction on the New Jersey portion of the Susquehanna-Roseland line was also completed in the quarter. The work to connect the western portion of this major 500 kilovolt project in Pennsylvania with New Jersey is underway. And it is planned to go into service around mid-2015.

We are in the midst of engineering, permitting, and siting work on our remaining large projects as we also work on the upgrade and conversion of lower-voltage lines. These projects are all part of our planned $6.8 billion capital investment in transmission, which provides for the double-digit growth in PSE&G's earnings in 2014, as well as the anticipated double-digit growth in rate base and earnings through 2016.

We hope to add the proposed 500 kilovolt line and artificial island to our stable of transmission projects. We supplemented our original proposal to meet the stability issues at artificial island and expect to have a decision during PJM in the first quarter next year.

We have also accelerated the replacement of the PSE&G's cast iron gas pipe system. Approximately $350 million of the $1.22 billion energy strong investment program, approved by the BPU earlier this year, is dedicated to this ongoing effort. This is an opportune time to pursue these investments. Major surcharges on customer's electric bills are scheduled to expire over the next two years. And the bills for PSE&G's gas customers continue to benefit from the capable management of the Company's natural gas storage and transportation contracts.

The BPU approved, on a provisional basis, a 9% reduction in the gas rate paid by residential customers. The reduction, which was effective on October 1, just a few weeks ago, is the latest in a series of reductions which have lowered customers' gas bills by 44% over the past five years. PSE&G has since indicated that to intends to implement an additional bill credit over the months of November, December, and January, that will return approximately $160 million to residential gas customers.

The earnings growth enjoyed by PSE&G in the quarter offset the impact on earnings from the well-known reset in power’s capacity revenues. Lower operating costs help to offset the impact of mild weather on energy pricing and earnings.

We are in the midst of major change in the electricity markets. An unprecedented amount of capacity is expected to retire over the next two years in response to environmental requirements and market economics. In addition, the availability of low-cost gas in the Marcellus and Utica Basins and the lag in the development of infrastructure to move the gas to market has, and is expected to continue to be, a source of volatility in gas and electricity prices. The new dynamic implies that winter is as important to the power market as the summer, as demand in the winter season can heavily influence forward prices.

Power is well-situated. Its fleet of base load, intermediate, and peaking generating assets benefits from access to low-cost gas in the summer and from price volatility in the winter. The changing dynamic in the market creates a need to review maintenance practices to assure availability of our units during critical peak conditions. The changing market dynamic appears to be recognized by PJM. The changes proposed by PJM to the reliability pricing model, RPM, as we often refer to it, are designed to incent operations-related investments as much as they're meant to encourage new investments in light of the events from the winter of 2014 and known retirements of capacity over the next two to three years.

PJM's proposals, which provide for a change in the demand curve, as well as its capacity performance proposal, could provide greater visibility to much needed market-driven price formation. Outside PJM, the potential to receive a seven-year contract for new capacity that clears the market in

THOMSON REUTERS

New England, under its revised capacity construct, has encouraged us to consider bidding a new 450 megawatt gas fired combined cycle unit into next year's auction. The new unit, which would be located at our existing Bridgeport Harbor site, would represent a $600 million investment. I do want to emphasize, however, that we would only proceed with this project if it clears in the Forward Capacity Auction.

The potential investment in Bridgeport Harbor would represent the latest of several opportunities for PSEG. Over the past quarter, Power's announced it plans to invest $100 million to $120 million for an equity interest in the Penn East pipeline. This 105-mile pipeline would bring gas from Pennsylvania into New Jersey, and provide PSEG and its customers with increased access to low-cost natural gas supply.

Similarly, PSEG Long Island has updated its utility 2.0 proposal. The revised proposal, to spend up to $345 million, meets the customers' desire for increased investment in energy efficiency, demand resources, and distributed generation. It also limits the impact on customer bills, as the increased investment would be financed by LIPA, the Long Island Power Authority. The inclusion of a performance incentive mechanism in the proposal, provides PSEG Long Island the opportunity to earn an increased return. If preferred, the proposal also reaffirms PSEG Long Island's original approach to fund new rate base-like investments.

So PSEG Long Island could benefit from the utility 2.0 investments through either the use of its own capital or proving out the effectiveness of the program and earning under the performance mechanism. PSE&G is also awaiting the BPU's response to its request to invest approximately $100 million in programs that would extend existing energy efficiency offerings here in New Jersey.

Together, if my math is right, these programs represent an investment opportunity of over $1.2 billion and extend the growth associated with our existing $13 billion capital program. These investments also provide our customers with access to low-cost gas and cost-effective technologies that reduce emissions, as they also improve system reliability.

Based on the strength of our results for the quarter and year to date, we are raising the low end of our full-year operating earnings guidance to $2.60 from $2.55 per share. And as we indicated last quarter, we remain on track to achieve results at the upper end of our revised operating guidance of $2.60 to $2.75 per share.

Our investments are meeting our expectations. Our costs are under control. And we remain well-positioned to deploy our balance sheet to meet shareholder objectives for long-term growth.

I will now turn the call over to Caroline to review our operating results in greater detail.

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Thank you, Ralph, and good morning.

I will review our quarterly operating earnings, as well as the outlook full-year results, by each subsidiary company. As Ralph said, PSEG reported operating earnings of the third quarter of 2014 of $0.77 per share versus $0.76 per share in last year's third quarter. And for the nine months ending September 30th, we reported operating earnings of $2.27 per share versus $2.09 per share last year.

Slides 4 and 5 provide a reconciliation of operating earnings to income from continuing operations and net income for the quarter and year to date. We've also provide you a waterfall chart on slide 10 that takes you through the net changes in quarter-over-quarter operating earnings by major business. And a similar chart on slide 12 that provides you with those changes in operating earnings by business on a year-to-date basis.

So now I will review each Company in more detail, starting with PSE&G. As shown on slide 14, PSE&G reported operating earnings for the third quarter of $0.39 per share, compared with $0.33 per share a year ago. PSE&G's earnings in the third quarter continue to benefit from an increase in revenue associated with its expanded capital program, particularly in transmission, and a decline in operating costs.

An approved increase in PSE&G's transmission revenue under its formula rate effective at the start of the year, supported a quarter-over-quarter increase in the net earnings contribution from transmission of $0.04 per share. Bringing the total transmission-related earnings increase to $0.10 per share on a year-to-date basis. And the roll-in of our second Capital Infrastructure Program, or CIP2, into our rates this past July improved earnings comparisons from distribution during the quarter by $0.01 per share. A decline in operating expenses, particularly pension expense, led to an improvement in earnings of $0.02 per share.

THOMSON REUTERS

PSE&G's revenue was affected by weather conditions during the third quarter, which was very mild relative to normal, as well as relative to conditions in the year-ago quarter. On average, weather in the third quarter was 14% cooler than normal and 18% cooler than 2013's third quarter. The impact on demand from the mild weather reduced quarter-over-quarter earnings by $0.02 per share.

PSE&G earnings continue to benefit from a decline in financing costs, which more than offset an increase on the level of debt on balance sheet associated with higher levels of capital spending. The reduction in interest expense and a lower tax rate more than offset an increase in depreciation expense and netted to an increase in quarter-over-quarter earnings of $0.01 per share in the distribution business.

Economic conditions in New Jersey, as evidenced by employment in the service territory, continue to show signs of improvement. Adjusting for the weather, electric sales in the quarter grew by 0.04%. And the improvement was led by an increase in demand from the residential sector and reflects some growth in the number of customers. So on a year-to-date basis, weather normalized electric sales grew by 1.1%. Weather normalized gas sales, while less impactful to results in the third quarter, advanced 1.9% in the quarter and 4% for the nine months ended in September.

Of course, demand for gas continues to benefit from a decline in commodity prices and economic conditions. Customers will see a further decline in the commodity portion of their bills during the upcoming year. The BPU approved on a provisional basis an annual reduction of 9% in residential customer gas rates that went into effect on October 1st of this year. And given the continued availability of low-cost gas under the Company's long-term supply arrangements, PSE&G has since informed the BPU that it would be implementing an additional three-month bill credit of 31%, which would return approximately $160 million to customers over the months of November, December, and January of 2015.

On the transmission front, PSE&G has filed for an update to its formula rate for transmission at the FERC. The update, which provides for a return on PSE&G's forecasted increase in its capital investment in transmission, would increase 2015's annual transmission revenues by an estimated $182 million at the start of the new year. You'll recall that in 2014, we added $171 million to our revenues, which has resulted in year-to-date growth in earnings of $0.10 per share. Something to keep in mind proportionately, as you do your modeling for our filings for 2015.

The BPU also found that all but $400,000 of PSE&G's $366 million of storm costs are prudent and recoverable in a future base rate proceeding. The total spend breaks down as approximately $126 million of major storm capital expenditures and incremental O&M of approximately $240 million.

PSE&G is also awaiting a decision from the BPU on its request to invest approximately $100 million, plus administrative costs, on programs that would extend existing energy efficiency offerings in the residential, multifamily, hospital, and self-install markets. This program is not expected to have a major impact on customer rates, and we expect a decision during the first half of next year.

PSE&G is meeting its capital and operating benchmarks and earning its authorized return. For the year, we've made a slight modification to our forecast of PSE&G's operating earnings. The low end of the range has been increased to $710 million, bringing the range for operating earnings guidance to $710 million to $745 million, from the prior $705 million to $745 million. Results for the remainder of the year will continue to reflect an increase in transmission and distribution revenue, and a reduction in operating and maintenance expense including, importantly, pension costs.

With that, let's now turn to Power. Power reported operating earnings for the third quarter of 2014 of $0.34 per share, compared with $0.43 per share for the third quarter of 2013. Power's results reflect the full-quarter impact of the scheduled reset in the average price received on PJM capacity, as well as lower market prices for energy. PJM capacity prices are reset to an average level of $166 per megawatt day on June 1, 2014, from $242 per megawatt day in the prior capacity year.

Recall that we now enter a period where Power's PJM fleet, based on the results of past auctions, is expected to experience stable capacity prices in the range of $165 to $166 per megawatt day through May 31st of 2018. Declining capacity revenues reduced Power's quarter-over-quarter earnings by $0.09 per share. Mild weather conditions relative to a year ago and lower gas prices resulted in a return to a more average spark spread for our region than those we experienced during the hot summer last year. And that reduced quarter-over-quarter earnings by $0.03 per share. A decline in Power's average hedge price for energy and lower market prices combined to further reduce quarter-over-quarter earnings by $0.04 per share.

Powers O&M expense was lower in the quarter relative to the level experienced in the year-ago quarter. The absence of major maintenance expense at the Bethlehem New York facility in 2014 compared to the year-ago quarter and lower nuclear outage-related costs, even with the impact of Salem's extended outage in the quarter, combined with lower pension expense to improve Power's quarter-over-quarter earnings by $0.06 per share. A reduction in the tax rate and other miscellaneous items more than offset an increase in depreciation in interest expense to improve quarter-over-quarter earnings by $0.01 per share.

THOMSON REUTERS

The availability of the Bethlehem New York gas-fired combined cycle facility in 2014 led to a 4% improvement in the generating fleet's output in the third quarter. As production from the gas-fired combined cycle fleet increased 16% in the quarter to 5 terawatt hours, or about 34% of output. Output of the nuclear fleet improved slightly from year ago levels. During the quarter, the fleet operated at a capacity factor of 92% and produced 7.6 terawatt hours, or about 52% of output. Production from the coal-fired and peaking units declined 8% during the quarter to 2.1 terawatt hours, about 14% of output, due to planned outages, as well as lower weather related demand.

Generation volumes in PJM, overall, were flat relative to year-ago level. Power expects output for the full year to be a approximately 53 to 55 terawatt hours. The forecast represents a slight increase in output on a year-over-year basis, but is lower than our prior forecast for 2014 given year-to-date performance including the mild summer.

Keep in mind, we have scheduled fourth-quarter outages at the Salem 1 and Peach Bottom 2 nuclear facilities. Salem 1 began a normal refueling outage earlier this month, and Peach Bottom is undergoing work associated with its planned uprate during a refueling outage.

Approximately 80% to 85% of generation in the fourth quarter is hedged at an average price of $49 per megawatt hour. The average price per energy hedges in the full year is approximately $48 per megawatt hour versus the average hedge price for energy in 2013 of about $50 per megawatt hour.

Power is maintaining its forecast of economic generation for both 2015 and 2016, at 55 to 57 terawatt hours per year. This represents an increase in output from 2014's forecast. For 2015, Power has maintained its average hedge position at 65% to 70% of forecast generation, at an average price of $50 per megawatt hour. You will recall that Power had increased its hedge activity earlier in the year in response to higher market prices. The current level of hedges is consistent with past practice and continues to assume BGS volumes represent about 11 terawatt hours of demand, in line with the 2014 forecast for BGS volumes.

In 2016, Power has increased its average hedge position to approximately 35% to 40% of its generation, from 30% to 35%. Hedges in 2016 have been transacted at an average price overall of $49 per megawatt hour, compared with our prior update, which indicated average hedge prices for 2016 of $51 per megawatt hour. The decline in the average hedge price for 2016 reflects an increase in non-BGS-related hedges, all done at market prices since our last update. And you will recall, you've seen this pattern from us in prior periods. As we increase the proportion of non-BGS hedges in the third year out, the weighted average math of putting in hedges at market prices, relative to the representation of BGS in that total -- and remember BGS goes in at a full requirements price, less capacity -- normally brings down the weighted average hedge price as we move through the year.

For example, in 2016, last quarter BGS represented about 30% of the total amount that was hedged in our disclosures last quarter; and now it's closer to 25%. One thing to note is that the prices that the new hedges were put on, the market prices for the new hedges, are actually slightly higher than the energy component of BGS that cleared in February of 2014. So again, our normal pattern as we layer in market hedges post the clearing of BGS in February.

We've narrowed our range for Power's 2014 operating earnings guidance to $575 million to $610 million, from the prior $550 million to $610 million, with full-year operating results expected to be at the upper end of the range. Results for the remainder of the year are expected to be influenced by the reset in the average price received on PJM capacity that we just talked about, and a decline in the average price of energy.

Power's O&M expense for the fourth quarter is expected to compare favorably with year-ago levels, given a reduction in pension expense and the absence of major outage-related work. We anticipate O&M for the full year will be flat versus 2013's level of expense. And this estimate, as always, assumes normal weather and normal operations.

As we notified you earlier this year, Power discovered errors in its cost-based bids for its New Jersey fossil generating units in the PJM energy market, as well as additional pricing errors and differences between the quantity of energy that Power offered into the energy market and the amounts in which Power was compensated in the capacity market. We have since been verbally notified by FERC staff that they have initiated a preliminary non-public staff investigation into matters discovered by Power.

The investigation could result in the FERC seeking disgorgement of any over-collected amounts, civil penalties and non-financial remedies. Power has implemented procedures and continues to develop processes to mitigate the risk of similar issues occurring in the future. And as is usual in matters of this nature, FERC investigation may take an extended period of time to resolve. We have not, by the way, changed the reserve we took in the first quarter, which still stands at $25 million.

THOMSON REUTERS

SI-SSA-0015-12514

Let me now turn briefly to the Enterprise and all other. PSEG Enterprise Other reported operating earnings of $22 million, or $0.04 per share, in the third quarter of 2014, versus an operating loss of $4 million, or $0.01 per share, during the third quarter of 2013. The results reflect the inclusion of earnings from the operating contract for PSEG Long Island, as well as a reduction in tax expense. The conclusion of an Internal Revenue Service audit for the tax years 2007 through 2010 resulted in a $121 million cash refund and a reduction in tax expense. The reduction in taxes improved quarter-over-quarter earnings comparisons by $0.02 per share from the closure of the audit.

In October, PSEG Long Island updated its original utility 2.0 proposal, which called for PSEG Long Island to invest up to $200 million over four years in programs that would expand energy efficiency, demand resources, and distributed generation on Long Island. The updated proposal calls for an increase in the size of the program to $345 million. As currently proposed, PSEG could fund all or some of the increased program in compensation for the part that is funded by LIPA could be performance-based. We anticipate a decision on the utility 2.0 proposal by year end.

On the financing side, we ended the quarter with cash on hand of $703 million. The growth in PSE&G's earnings and cash flow and the cash generated by Power continue to support our financing requirements without the need to issue equity. Debt represented 41.6% of our consolidated capital structure and 31.6% of Power's capitalization at the end of September.

As Ralph mentioned earlier, we have narrowed the range of our 2014 operating earnings guidance to $2.60 to $2.75 per share, and continue to expect earnings to fall at the upper end of that range. PSE&G remains on course to achieve double-digit growth in operating earnings during 2014, as a contribution to earnings is expected to exceed 50% of our forecasted earnings for the year. PSEG Power is expected to report earnings at the upper end of the forecast range for the year.

That concludes my remarks. And at this point, we are now ready for your questions. And I will turn it back over to Brent.

QUESTION AND ANSWER

Operator

Ladies and gentlemen, we will now begin the question and answer session for members of the financial community.

(Operator Instructions)

Kit Konolige with BGC.

Kit Konolige *- BGC Partners - Analyst*

Good morning, guys.

Caroline Dorsa *- Public Service Enterprise Group Inc - EVP & CFO*

Good morning.

Kit Konolige *- BGC Partners - Analyst*

A couple of related areas. First of all, can you give us a sense of what kind of response you've seen in New Jersey so far to -- as far as, working with the commission and the authorities in general on 111D?

Ralph Izzo *- Public Service Enterprise Group Inc - Chairman, President & CEO*

Sure, Kit. We've had lots of communication, staff to staff, with New Jersey DEP. I think it's pretty safe to assume that one of the areas we've be focusing on is the amount of credit, or, candidly, the lack of credit given for nuclear output and the feeling that the cleaner states, in our case, are being somewhat penalized.

THOMSON REUTERS

SI-SSA-0015-12515

The second area that I'd put as sort of lower priority, is the opportunity to perhaps expand the purview of 111D to touch upon things that are electric related, but not specific to power plants in New Jersey. Our leading cause of CO2 emissions is transportation, so the possibility of extending 111D to electric transport and the possibility of expanding 111D to include methane leakage, fugitive emission of pipes that feed combined cycle units. But I'd put those two issues, electric transportation and methane leakage, as a distant second to the concern for the credit not given to nuclear.

Kit Konolige *- BGC Partners - Analyst*

What -- Ralph, do you have any sense of our A- if there's been any responsiveness at the state level to crediting nuclear and B- what kind of form would you like that to see and can we reasonably expect it to see -- to appear as?

Ralph Izzo *- Public Service Enterprise Group Inc - Chairman, President & CEO*

I'd say that it's not much of an exaggeration to say that we are in lock step with the state on their perspectives on 111D. As you know, we have a very clean fleet. Nuclear is typically 55%, 57% of our yearly output (inaudible) 2%. But as to the details of how that would manifest itself, I'm not sure I want to get into that on this call. We can certainly talk more about this, hopefully, in Dallas, if you're at EEI.

But there's no space that I'm aware of, I'd hate to be absolutely definitive and say that there isn't any at all between us and the state's position. But I've been briefed on this a couple of times already and I think we're in lock step with the state, in terms of the issue.

Kit Konolige *- BGC Partners - Analyst*

Let me ask about one particular area. You used to be in RGGI and now you're not. So is that something you'd like to see reinstated?

Ralph Izzo *- Public Service Enterprise Group Inc - Chairman, President & CEO*

No, it's isn't. Because as we've said many times, we thought RGGI was a good idea to serve as a template for national emissions trading program. It doesn't seem wise for the state to diminish its economic competitiveness with respect to near by states in joining RGGI.

Kit Konolige *- BGC Partners - Analyst*

One other separate area.

Ralph Izzo *- Public Service Enterprise Group Inc - Chairman, President & CEO*

Go ahead, Kit.

Kit Konolige *- BGC Partners - Analyst*

Last one. DR -- how do you expect that to play out? Obviously there are legal issues pending. And then one way or another presumably PJM and FERC have to figure things out and possibly states as well.

Ralph Izzo *- Public Service Enterprise Group Inc - Chairman, President & CEO*

So on DR, I know just what you and everyone else on the call knows about it. The court decisions were very comprehensive. Very deterministic, dispositive on the issue. I'm guessing, I'm inferring, that the recent stay is just out of a healthy degree of respect for FERC and the desire of the judicial branch to allow the executive branch to weigh its options. And not all a reflection that the courts decided what they previously ruled upon was any kind of backpedaling whatsoever. So I think DR is likely to come out of energy and capacity markets in the future.

Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

Now, PJM has gone on record saying that they're going to adjust for that. That they are going to look for ways to allow DR to affect the demand curve. But I've got to believe that once that very transparent, efficient market whereby DR providers are paid a revenue stream, goes away, that that's going to, candidly, diminish the amount of DR that's available.

And remember RPM stands for reliability pricing model. That's PJM's number one responsibility, reliability. If they don't control the asset, I don't how much they're going to be able to count on it. Add that to the removal of the 2.5% hold-back and I think all that weighs very positively for people with iron in the ground and generation assets that are there when needed.

Kit Konolige *- BGC Partners - Analyst*

Great. Thanks.

Operator

Ashar Khan with Visium.

Ashar Khan *- Visium Asset Management - Analyst*

Good morning and congratulations. Can you just talk a little bit about the plant in Connecticut, if it gets into the auction? When it comes online? And also on the Power's investment in the pipe, when that comes into line as to when those would be helpful to earnings? Remind us what the dates are on those things?

Ralph Izzo *- Public Service Enterprise Group Inc - Chairman, President & CEO*

Sure, Ashar. So the auction is in February, I believe, and it is a three year forward. So it comes into service in 2018. I'm not sure what month exactly, but early or first half of 2018.

Penn East, we've been publicizing a target date of November of 2017. We have also been emphasizing that is a greenfield project. You can take those two emphases -- what's the plural of emphasis? (Laughter) And infer your own start up date for Penn East. It's a greenfield project and it will not be online before November of 2017. It wouldn't surprise me if it slips into 2018.

Ashar Khan *- Visium Asset Management - Analyst*

Okay. And, Ralph, is there any other transmission or any other projects can you just talk about or anything, which might be on the drawing board which is not in the CapEx plan?

Ralph Izzo *- Public Service Enterprise Group Inc - Chairman, President & CEO*

So I listed about $1.2 billion worth of projects that are not in the CapEx plan. And they range from Bridgeport Harbour to Penn East. And I mentioned artificial island, which is about $250 million, in our resubmittal. I'm looking with a quizzical look at Kathleen and Caroline to see if we have publicly announced what we've put in the open window for PJM.

Kathleen Lally *- Public Service Enterprise Group Inc - VP of IR*

No.

THOMSON REUTERS

SI-SSA-0015-12517

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

We have not So there are other things we are working on right now. Nothing that is staggering or tilts the balance sheet. But we are always looking at ways to improve the system. And we will definitely have an update for you on that in a not very distant future, actually.

Ashar Khan - ***Visium Asset Management - Analyst***

Okay. Thank you, sir.

Kathleen Lally - ***Public Service Enterprise Group Inc - VP of IR***

Thank you. Next question.

Operator

Julien Dumoulin-Smith with UBS.

Julien Dumoulin-Smith - ***UBS - Analyst***

First off, good morning. Perhaps a follow-up on the last question. I was curious, how are you thinking about the power strategy overall? I would just be curious the extent to which you are reinvesting potentially meaningful dollars in New England?

Are there other markets? More broadly, are there other asset types? Again, you've done a few solar projects. Are we thinking about a scaling up of spend in this business at all, just as the way to deploy dollars and your access balance sheet?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Julien, good morning. We like the integrated model. We love the regulated utility business. We love the power generation business. We look at every project, whether it's a solar farm in California. We just closed on one recently. Or bidding a combined cycle unit in New England or building more transmission on a discounted cash flow basis with different hurdle rates. And make sure they're NPV positive. That there's near-term visibility to accretion.

The balance sheet gives us room to do both, in both businesses. There's no shortage of us trolling around looking for these opportunities. There is a long list of those we walked away from because others had a different point of view of what the future held. But, no, you shouldn't interpret the Bridgeport Harbor project as any shift in our affection for the regulated utility or anything of that nature.

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Absolutely. And I think when we look at this kind of opportunities, as Ralph said, we are disciplined in looking at the NPV, using the right hurdle rates. I think the thing that makes us interested in considering Bridgeport, is you think about the capacity construct there and what they've put in place, giving a seven-year incentive. Which really helps us think through how to make that work for a new investment. So those kind of constructs that truly can confer something, really can encourage new investment, we think are very good

THOMSON REUTERS

SI-SSA-0015-12518

Julien Dumoulin-Smith - *UBS - Analyst*

Excellent. And then turning to the BGS auction. Can we talk briefly about the ability to pass through capacity -- transitional capacity increases as a result of the capacity performance scheme? And any ability, from a regulatory perspective, to have shift the BGS contracts that will allow that?

Ralph Izzo - *Public Service Enterprise Group Inc - Chairman, President & CEO*

So that has not been decided formally at this point, Julien. I would point out that, as Caroline mentioned a moment ago, we've received -- we put in for a transmission formula rate adjustment of north of $180 million and the BPU has made it a policy that transmission increases are passed through. I believe there was a similar ruling on SREC issues a couple of years ago.

In general, I think the BPU has recognized that if they want to continue to have a fully competitive active BGS market, that things that are outside of the control of the BGS suppliers have to be adjusted on an as-grow basis. But they have not opined specifically on an incremental capacity auction change that could come out of the PJM's most recent concern asset performance.

Julien Dumoulin-Smith - *UBS - Analyst*

But presumably that would be something you would be seeking?

Ralph Izzo - *Public Service Enterprise Group Inc - Chairman, President & CEO*

Absolutely. Absolutely.

Julien Dumoulin-Smith - *UBS - Analyst*

And then lastly, just a quick one, energy efficiency and just the broad -- call it -- LIPA plan. Can you talk about the incentive in terms of EPS, perhaps a bit more explicit range? Just to give us some kind of sense of what of this could ultimately drive?

Ralph Izzo - *Public Service Enterprise Group Inc - Chairman, President & CEO*

Yes. So those details have been yet to be worked out. But it would be safe to assume that they would be in the same vicinity as a what a regulated return would achieve, if the investment had delivered upon the promised operational performance. Right?

So don't think of this as having an effective ROE of 20% to 30%. And don't think of it as something that would be south of 10%. It's just, okay, if we think this light bulb is to do X and it does X, then alright that seemed to have been a prudent investment. But there's a slight increase in risk that's taken as a result in that kind of mechanism.

Caroline Dorsa - *Public Service Enterprise Group Inc - EVP & CFO*

And just keep in mind as you are thinking about the modeling for Long Island, I know you know this, but just to reinforce, right, we have $0.03 per share this year, rising to $0.07 to $0.08 per share by 2016. And that does not include any potential uplift that we might get from these new proposals that we're making. So that's the base contract that's currently in force, something here would be additional.

© 2014 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

Julien Dumoulin-Smith - ***UBS - Analyst***

And a clarification there. Presumably you would achieve these targets over time such that you would not necessarily immediately hit the first year of the $345 million, the regulated return? Or is that --

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Yes. The numbers we gave earlier, Julien, our original program of $200 million and the expanded program of $345 million -- both of those were four year programs. So you would not see all that programmatic emphasis or capital deployment take place in the first year. It would be over four years.

Julien Dumoulin-Smith - ***UBS - Analyst***

Right. Okay. Thank you.

Kathleen Lally - ***Public Service Enterprise Group Inc - VP of IR***

Next question.

Operator

Neil Mitra with Tudor Pickering.

Neil Mitra – ***Tudor Pickering - Analyst***

Hi. Good morning. I had a question about the Penn East pipeline and the off take agreements. How does that benefit you? Is at the utility with lower gas prices for PSE&G? Or is it kind of lower gas prices to fuel your combined cycle plants?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Good morning, Neil. It's the same exact sequencing of uses as we have today. It's either 125,000 or 150,000 bcf a day. 125,000 bcf a day. So the priority customer would be the utility -- regulated distribution gas customer, they'd get first dibs at that. Second, would be off system sales. And then lastly would be power as used for burning in its plants.

What tends to happen under those three-tier prioritization, is that power really it doesn't get to make a lot of use of that additional low-cost gas in the winter months. A little bit more, but not a lot, in the spring as we start to refill for storage reasons. But gets to use a whole bunch of it in the summer when storage is completed and there's no heating demand.

Right now Power is using -- about 25% of the gas to power burns is from the (inaudible) region. It could go up from there.

Neil Mitra – ***Tudor Pickering - Analyst***

Got it. Great, thank you. And then secondly, with the CCGT expansion in New England, could you just generally give your thoughts on the New England market? It's obviously gone very quickly from an oversupply to an under supply. And just wanted to get your thoughts on capacity and energy -- looking at that project.

© 2014 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

SI-SSA-0015-12520

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

So I think there's two things that are important in the New England market. Number one, is what you just mentioned, that it went to an under supply condition as assets announce and carry through on their retirement. But number two, is really what Caroline pointed out, which is the risk-reward profile has shifted to be a little bit saner when you're making an investment and you want to recover your long-run marginal cost, not just your short-run marginal cost. So the seven year capacity payment is extremely helpful there.

I think the big question is the one that you hinted at, in New England, and that's around energy markets. Given the lack of infrastructure for natural gas into the region you're going to find people looking at assets that are near existing infrastructure and have a dual fuel capability.

And I'm pleased to say that we have both of those in our Bridgeport Harbor site. We have both access to gas and we will build it for dual fuel.

Lastly, on the capacity market, in addition to the seven year construct, the change on the slope on demand curve allowing for return of sort of missing money that has plagued that region.

Neil Mitra – ***Tudor Pickering - Analyst***

Okay, great. Perfect. Thank you.

Kathleen Lally - ***Public Service Enterprise Group Inc - VP of IR***

Thank you, next question.

Operator

Dan Eggers with Credit Suisse.

Dan Eggers - ***Credit Suisse - Analyst***

Good morning, guys. Caroline, I hate to bring up of a numbers questions on the call but when I look at the fourth quarter guidance for Power, kind of filling in with the range what you guys have full year guidance at, basically it means you guys will earn somewhere between, I think $0.05 and $0.12 or $0.13. Which is down quite a bit from prior years.

Can you kind of walk me through what are the big drivers that's going to lead to that much of a decline? And then how we should think about that kind of for next year from a baseline perspective?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Of course. Thanks for the question, Dan. We took up the bottom end of the range, right, but we've also said that we expect to be at the high end of the range. The one thing I think you should always keep in mind as you do the quarter-over-quarter comparisons, which you saw this quarter first time as a full quarter -- last quarter it was just a month -- is capacity. Capacity on a quarter-over-quarter basis, just like you saw this quarter is a $0.09 impact.

So you have to start there. That's significant dollars. But of course, we knew that, right? We took that into our account in our guidance all through the year. That's the number one thing that I would suggest that you consider.

Of course, going the other direction, as you we expect favorability in the O&M, as I mentioned, so that's going to little bit in a positive direction. And then the normal unit operations. Keep in mind that we have Salem 1 and Peach Bottom outages, which I mentioned during my remarks. That Peach

THOMSON REUTERS

SI-SSA-0015-12521

Bottom outage is a good one for us because it's the EPU going into one of the units that will give us more megawatts for the future. So but those things obviously have an impact in the expected generation.

If you think about the pushes and pulls you've got Salem 1, you've got Peach Bottom in the recent and near-term before the winter period, of course. You've got capacity at $0.09 going the negative direction -- fully anticipated. You've got O&M going the positive direction, so full-year, we're guiding to about flat. You can pretty easily do the math.

We were worse in O&M in the first two orders, better in this quarter and anticipate better in the fourth quarter. And then of course, is just the normal operations and whatever the weather is at the beginning of the winter. So all in, we still expect to be at the upper end of the range. We peeled the bottom, but we really haven't changed our thinking which is with normal operations, you'd see us be at the upper end which is what drives the Company to the upper end.

Dan Eggers - ***Credit Suisse - Analyst***

Okay. So the $0.23 or whatever it is, you take out the $0.09 of capacity revenues, which would get you to kind of $0.14, which is above the implied range right now. So there's just some other maintenance issues that will bring you down from the high end. Is that the right way to think about it? (inaudible - multiple speakers)

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

That's right. Think about the outages I just mentioned, but still consider us -- we're talking about the high end of the range.

Dan Eggers - ***Credit Suisse - Analyst***

Okay. And then, can we talk a little bit on the gas basis side note, 25% of gas generation came from Leidy. How does the benefit of the basis arbitrage look full-year or year-to-date, 2014 versus 2013?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Yes, sure. Year-to-date, not as strong as 2013. So let's wind back and remember what happened in 2013. We saw the Leidy differential really appear in 2013 at the end of the second quarter. And that Leidy differential became pretty wide as we got into the summer of 2013. Remember, we talked about differentials being as much as $2. And then, of course, there was that warm weather and the warm weather is what drove and kept that differential from the Leidy price to the actual market price for the energy.

This summer was quite different with the cooler weather right on a Leidy basis, depending on where you compared to last year or normal, 13% to 18% lower in terms of weather. It only makes sense if you cite THI.

What we actually have is lighted gas costs are still lower, the problem was for the summer with the lower demand and the cooler weather, the differential of Leidy to thinking about where energy is priced in our market -- looking at Z-6 or M3 that brought those prices down. So what happened was the differential really collapsed.
Leidy was still cheaper than Henry Hub, but the differential moved together. As opposed to last summer which moved much more widely apart, because of the low demand for the power.

Now keep in mind as we think about Leidy going forward, think about Leidy for us, we had that access it's about 25% of Power's overall gas use, as Ralph just mentioned. And I think what we're still expecting to see -- and you can see it if you look at monthly data going forward -- is a choppiness to the pattern of how to think about basis.

Just like we've seen, actually now for the last two winters, the months make a difference. And so as we come into 2015, we still expect to see benefit from having Leidy. It's really just about how that basis differential moves relative from power prices.

THOMSON REUTERS

SI-SSA-0015-12522

So the winter periods and strong summer periods, we would still expect to see some basis differential in our favor. This was just a tough summer because the low demand led to the lower power prices. Not because Leidy prices came up, because power prices came down.

Last year, you may recall we had $0.03 from the Leidy benefit in the third quarter. And that's the $0.03 negative year-over-year I'm citing in this year's third quarter, that I attribute to weather. It's really the Sparks Spread going back to a normal level going versus that expanded spark we had, given the differential last summer

---

Dan Eggers - ***Credit Suisse - Analyst***

Thank you for that. I appreciate it

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Sure. Next question

Operator

Paul Fremont with Jefferies.

Paul Fremont - ***Jefferies & Company - Analyst***

Thank you very much. I guess my first question is at a proposed cost of about $600 million it works out to about 1330 per KW. How confident are you in your ability to build to that level? And I know that others in the region have experienced problems building in the Northeast.

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Yes. Good morning, Paul. I think you are obviously quoting round numbers. The team is running through details right now, filing permit applications. Just think of that as one significant figure and not three significant figures in terms of the accuracy.

I think the bigger challenges people had in terms of building has been access to gas. That's been the number one concern. That one we have well in hand. We don't want to give you an exact amount on our what kind of bids we're getting from folks in terms of engines. It would just be too easy to back calculate what we might bid in an auction and that wouldn't help anyone.

Paul Fremont - ***Jefferies & Company - Analyst***

And then, Caroline, just a follow-up on the last question. You, I think provided the quarter contribution as been zero this quarter, versus $0.03 in the third quarter last year. What would be the year-to-date numbers on WTI?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Year-to-date numbers in terms of the gas benefit -- we had about a $0.03 benefit in the first quarter. Remember it was a strong winter. So it's about neutral on a year-to-date basis. At zero.

THOMSON REUTERS

SI-SSA-0015-12523

Paul Fremont - ***Jefferies & Company - Analyst***

And last year, year-to-date?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Last year when the WTI differential really started to spread it was end of the second quarter. So there really wasn't a sort of first quarter last year for effect. So last year at this time, it was about $0.03 and for the full year it was $0.05. But that included the fourth quarter. So we haven't got to the fourth quarter yet. So $0.05 full-year, $0.03 to this point last year. And this year it is about neutral.

Paul Fremont - ***Jefferies & Company - Analyst***

Great. Based on the modified CTA formula that was adopted by the NJ BPU, what type of adjustment should we assume for the PSE&G rate base, if you were to use that methodology?

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Yes. We are very pleased, obviously, with the decision. We think that reflects the right balance from the perspective of the Company and the ratepayers. Thinking about our rate filing, which would be made by November 2017 and then the five year look-back period -- the impact for us is de minimis.

So really not something you should really be thinking too much about as we think about our rate case numbers going forward. Because by that period, if you take a five year look-back, you do the adjustment, you do the 75/25 -- it's truly de minimis.

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

And you back out transmission.

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

And you back out transmission, as well. Right.

Paul Fremont - ***Jefferies & Company - Analyst***

Great. Thank you, very much

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

Sure. Next question.

Operator

Paul Patterson with Glenrock Associates.

© 2014 Thomson Reuters. All rights reserved. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

Paul Patterson - ***Glenrock Associates - Analyst***

Hi. Can you hear me?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Yes, Paul.

Paul Patterson - ***Glenrock Associates - Analyst***

You have sort of in a unique position in New York. And I was just wondering with the stuff going on there, with the reg. sort of really transformative potential for change in regulation -- what you guys see as potentially happening to energy and power prices in the state?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

New York State?

Paul Patterson - ***Glenrock Associates - Analyst***

Well, you guys have (inaudible - multiple speakers) --

Caroline Dorsa - ***Public Service Enterprise Group Inc - EVP & CFO***

We don't have it fully. (laughter)

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

That's a very complicated question, right?

Paul Patterson - ***Glenrock Associates - Analyst***

I apologize then. Just sort of directionally, maybe?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

I think that a lot of the distributed resources that are being advocated are going to put upward pressure on prices for customers. There are other reasons for doing things like rooftop solar and offshore wind as being advocated just off of Long Island. And those are capturing some of the environmental benefits that are not baked in. Having said that there are some other parts of the program, specifically energy efficiency, which while they will also serve to increase rates, they will bring overall bills down.

So I think a lot depends upon how aggressive people want to be in making inroads to capturing the benefits associated with these programs. We're big advocates of this, both on Long Island and New Jersey, but we never tell people that doing this stuff is going to lower their rates. You're getting a benefit and you're having to pay for it.

© 2014 Thomson Reuters. All rights reserved. THOMSON REUTERS

SI-SSA-0015-12525

There are some things that we can do in terms of making sure that some of the reinforcements that would have to be made in a distribution system are foregone or delayed as a result of, perhaps, some peak shaving or some broader demand response programs that we can target.

There are some parts on Long Island -- I think it from the South Fork, that is been a significant growth in peak demand that would otherwise command a need for some infrastructure that we'll be able to delay.

But it really is a much more complicated question then simply gee, will doing this lower everyone's bills and lower everyone's rate. The answer really depends on what this is and how aggressive one wants to be on the sort of green agenda.

Paul Patterson - ***Glenrock Associates - Analyst***

Okay. Fair enough. And then just -- as you know, RPM has been controversial in the past and New Jersey has been sometimes apprehensive about it. And I'm just wondering we've added several changes with the BPU and we've had the potential for several changes happening with DR and capacity performance and everything else.

How would you describe the political situation or the general regulatory environment vis-a-vis these issues now as it was in comparison to maybe when the MOPR and LCAPP issue was going on?

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Good questions, Paul. We've had a bit of a change at the BPU, with all due respect to the commissioners who have gone off. We have two new commissioners to our quite astute about both energy policy, in the form of President Mroz and terms of the technology -- strengths, weakness, limitations, in the form of and former assemblyman, Chivakula. He's an [electrical] engineer by training and he has 20 years at Bell Labs. This is a very intelligent man who understands the complexity of capital intensive infrastructure. And Rick is a well known entity in policy circles in New Jersey. And has actually worked in the energy sphere in the past. So I think those are two strong additions to balance the BPU.

The world is very different now from what it was in LCAPP. In the LCAPP days you had strong basis differentials West to East. You had a coal dominated West and a gas dominated East. And people always scratching their heads saying we don't understand why we pay so much in New Jersey. Sadly, last month the basis was the other way. It was lower in West than it was in the East. Gas has kind of change that whole dynamic. I think as a result you'll see people realizing that the market is working. It's doing what it is supposed to do. And prices are going up for everybody, I believe, in this new RPM market as the missing money appropriately gets restored.

No one likes to pay high prices for energy. There are no if and or buts around that. No one likes to see the lights go out either and we came dangerously close in 2014 and a similar winter in 2015 and it probably would go out. I think PJM is doing the right thing in trying to address that. And New Jersey knows that PJM is doing a better job than just of any place in the country in making sure those lights stay on

---

Bob Patterson - ***Glenrock Associates - Analyst***

Great. Thanks a lot

Kathleen Lally - ***Public Service Enterprise Group Inc - VP of IR***

Operator, that's all the time we have for questions. I'll turn it over to Ralph for just some closing comments. And see you at EEI.

THOMSON REUTERS

SI-SSA-0015-12526

Ralph Izzo - ***Public Service Enterprise Group Inc - Chairman, President & CEO***

Thanks, Kathleen. I just want to reinforce three messages or comments made by Caroline and me earlier. First of all, the utility growth story is very much intact. Not only is it doing what we said it would do this year, but our filing at FERC is very much exactly on where we said we would be for 2015.

Secondly, hopefully, you are as impressed by Power's diverse asset base as we are, in terms of not only its strong performance in current markets, whatever gas prices are doing, whatever coal prices are doing, but also how strong a performer it is and how well-positioned it is, even as we look forward to the ever-changing environmental rules and market design parameters.

We have dual fuel capability, we have units that are strong in high capacity factors, all of them will have a great position in the CP market, if the risk-reward profile in the details as we go forward is done sensibly. And I have every reason to believe that PJM will do that sensibly. Growth story intact at the utility. Power's diverse asset base once again demonstrating its strength.

And last, but by no means least, the balance sheet remains as strong as ever. So as Kathleen, said we look forward to seeing you in the days ahead and hopefully for most of us that means at EEI in Dallas. Thank you for your time today

Operator

Ladies and gentlemen, that does conclude your conference call today. You may disconnect. Thank you for participating.

- Carlotta Chan, Manager - Investor Relations Phone: 973-430-6596

PSEG ANNOUNCES 2014 THIRD QUARTER RESULTS

$0.87 PER SHARE NET INCOME

Operating Earnings of $0.77 Per Share

Operating Earnings Guidance Narrowed to $2.60 - $2.75 Per Share

Full Year Operating Earnings Expected to be at Upper End of Range

October 30, 2014 (Newark, NJ) (NYSE – PEG) Public Service Enterprise Group (PSEG) today reported third quarter 2014 Net Income of $444 million or $0.87 per share as compared to Net Income of $390 million or $0.77 per share for the third quarter of 2013. Operating earnings for the third quarter of 2014 were $393 million or $0.77 per share compared to the third quarter of 2013 operating earnings of $385 million or $0.76 per share.

"PSEG performed well in the third quarter despite the impact on demand for electricity due to less favorable weather conditions", said Ralph Izzo, chairman, president and chief executive officer. "Our earnings continue to benefit from the expansion of our regulated utility capital programs as we execute on our business objectives to deliver safe, reliable energy to our customers and meet the needs of our shareholders even while we lowered customer gas rates another 9% on October 1. The strength of our results allows us to raise the low end of our full year operating earnings guidance. We remain on track to achieve results at the upper end of our revised operating earnings guidance of $2.60 - $2.75 per share."

PSEG believes that the non-GAAP financial measure of "Operating Earnings" provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. Operating Earnings exclude the impact of gains/(losses) associated with Nuclear Decommissioning Trust (NDT), certain Mark-to-Market (MTM) accounting and other material one-time items. The table below provides a reconciliation of PSEG's Net Income to Operating Earnings (a non-GAAP measure) for the third quarter. See Attachment 12 for a complete list of items excluded from Net Income in the determination of Operating Earnings.

PSEG CONSOLIDATED EARNINGS (unaudited)

Third Quarter Comparative Results
2014 and 2013

	Income ($ millions)		Diluted Earnings Per Share	
	2014	**2013**	**2014**	**2013**
Operating Earnings	$393	$385	$0.77	$0.76
Reconciling Items	51	5	0.10	0.01
Net Income	$444	$390	$0.87	$0.77
Average Shares			**507.4M**	**507.7M**

Ralph Izzo went on to say "PSEG's earnings demonstrate the benefits of our diversified business model. Our strong financial position has supported double-digit growth in our regulated company's earnings. We continue to pursue investment opportunities across our business platform. Recently announced plans for PSEG Power to participate as an equity investor in the Penn East Pipeline; PSE&G's filing to expand Energy Efficiency programs in New Jersey; the potential expansion of our Utility 2.0 investment program on Long Island; and, Power's consideration of construction and permitting for a potential new generation unit at the Bridgeport Harbor Station will enhance our growth. These investments will also provide our customers with access to low-cost gas and cost effective technologies that reduce emissions as they also improve system reliability."

Our revised Operating Earnings guidance by company for the full year is as follows:

Operating Earnings
($ millions, except EPS)

	2014E	2013A
PSE&G	$710 - $745	$612
PSEG Power	$575 - $610	$710
PSEG Enterprise/Other	$35-$40	$(13)
Total	$1,320 - $1,395	$1,309
Earnings Per Share	$2.60 - $2.75	$2.58

Operating Earnings Review and Outlook by Operating Subsidiary

See Attachment 6 for detail regarding the quarter-over-quarter reconciliations for each of PSEG's businesses.

PSE&G

PSE&G reported operating earnings of $200 million ($0.39 per share) for the third quarter of 2014 compared with operating earnings of $168 million ($0.33 per share) for the third quarter of 2013.

PSE&G's earnings reflect the impact of an increase in revenue associated with an expanded capital program and a decline in operating costs including pension expense.

PSE&G's third quarter results reflect the contribution to earnings from higher transmission revenues associated with an increase in capital investment. An approved increase in PSE&G's transmission revenue under its formula rate, effective on January 1, 2014, supported a quarter-over-quarter increase in the net earnings contribution from transmission of $0.04 per share.

Revenue from recognition of increased levels of capital investment under PSE&G's Capital Infrastructure II investment program improved earnings comparisons by $0.01 per share. A decline in operating expenses – particularly pension expense – led to an improvement in quarter-over-quarter earnings of $0.02 per share. Weather conditions in the third quarter were cooler than normal and unfavorable relative to the year-ago quarter. The weather-related impact on sales reduced quarter-over-quarter earnings by $0.02 per share. PSE&G continues to benefit

from a decline in financing costs which more than offsets an increase in the level of debt on its balance sheet associated with higher levels of capital spending. The reduction in interest expense and a lower tax rate more than offset an increase in depreciation expense and improved quarter-over-quarter earnings comparisons by $0.01 per share.

Economic conditions, as evidenced by employment in the service area, continue to show signs of improvement. During the quarter, weather-normalized electric sales -- led by an improvement in demand from the residential sector – grew by 0.4%. On a year-to-date basis, weather-normalized electric sales grew by 1.1%. Weather-normalized sales of gas, while less impactful to results during the third quarter, advanced 1.9% in the quarter and 4.0% for the nine months ended September. Demand for gas continues to benefit from a decline in commodity prices and economic conditions.

The NJ Board of Public Utilities (BPU) approved, on a provisional basis, a reduction in gas rates effective on October 1, 2014. The reduction would reduce customer rates by 9%, or approximately $112 million on an annual basis. Given the continued availability of low-cost gas under the company's long-term supply arrangements, PSE&G subsequently filed at the BPU a self-implementing three-month bill credit which would return approximately $160 million to residential customers over the last two months of 2014 and during January 2015.

In August 2014, PSE&G filed an Energy Efficiency Economic Extension II Program for approval from the BPU. The filing requests approval to invest $96 million (plus administrative costs) in programs that would extend existing energy efficiency offerings in the residential multi-family, self-install and hospital markets. A decision is expected in early 2015.

PSE&G filed an update of its Formula Rate for transmission at the Federal Energy Regulatory Commission. The update, which reflects an increase in the level of PSE&G's capital investment in the transmission system, would increase 2015's annual transmission revenues by an estimated $182 million effective on January 1, 2015.

The forecast of PSE&G's operating earnings for 2014 has been modified slightly to $710 - $745 million from the prior forecast of $705 - $745 million. Results for the remainder of the year will continue to reflect an increase in transmission and distribution revenue and a reduction in operating and maintenance expense including pension costs.

PSEG Power

PSEG Power reported operating earnings of $171 million ($0.34 per share) for the third quarter of 2014 compared with operating earnings of $221 million ($0.43 per share) for the third quarter of 2013.

Power's results for the third quarter reflect the impact of the scheduled reset in the average price received on PJM capacity and lower market prices for energy.

Earnings in the quarter were affected by a decline in capacity prices. PJM capacity prices were reset to an average level of $166/MW-day on June 1, 2014 from $242/MW-day. The decline in capacity revenues reduced quarter-over-quarter earnings by $0.09 per share. A decline in spark spreads due to lower gas prices and mild weather conditions compared to last year reduced quarter-over-quarter earnings by $0.03 per share. A decline in Power's average hedged price for energy and lower market prices combined to further reduce quarter-over-quarter earnings by $0.04 per share.

Operation and maintenance expense (O&M) was lower than the level experienced in the year-ago quarter. The absence of major maintenance expense at the Bethlehem NY facility in 2014 compared to the year-ago quarter and a decline in nuclear outage related costs combined with lower pension expense to improve quarter-over-quarter earnings by $0.06 per share. A reduction in the tax rate and other miscellaneous items more than offset an increase in depreciation and interest expense to improve quarter-over-quarter earnings by $0.01 per share.

Output from Power's fleet improved 4% in the third quarter compared to year-ago levels. The improvement reflects the availability of the Bethlehem NY combined cycle facility which was undergoing major maintenance in the year-ago period. Output from the nuclear fleet increased slightly from year ago levels to 7.6 TWh (52% of generation) as the fleet operated at a capacity factor of 92% in the third quarter. On a year-to-date basis, the nuclear fleet operated at a 91% capacity factor. Production from the gas-fired combined cycle fleet increased 16% in the quarter to 5 TWh given the availability of Bethlehem. Production from the coal-fired and peaking units declined 8% relative to year-ago levels as the result of planned outages at the Keystone/Conemaugh coal-fired station and lower weather-related demand.

Power expects output for the full year to approximate 53 – 55 TWh. The forecast, which represents a slight increase in output for the year, takes into account year-to-date performance and the scheduled fourth quarter outages at the Salem 1 and Peach Bottom 2 nuclear facilities. Approximately 80% - 85% of generation in the fourth quarter is hedged at an average price of $49 per MWh. Power is maintaining its forecast of economic generation for 2015 and 2016 at 55 – 57 TWh per year. For 2015, Power has maintained its average hedge position at 65% - 70% of forecast generation at an average price of $50 per MWh; for 2016, Power has hedged approximately 35% - 40% of its generation at an average price of $49 per MWh. The hedge data for 2015 continues to assume BGS volumes represent 11 TWh of demand – in line with the 2014 forecast of volumes.

PSEG Power plans to invest $100 - $120 million for an equity interest in the to-be constructed PennEast Pipeline, a 105.5 mile pipeline that would bring gas from eastern Pennsylvania to New Jersey. The targeted in-service date is November 2017.

PSEG Power is considering construction of and proceeding with permitting for a new, highly efficient combined-cycle power plant at its existing Bridgeport Harbor Station site based on the strength of the ISO NE capacity market. The proposed project would add approximately 450 megawatts (MWs) of gas-fired generating capacity in Connecticut's southwestern region to support electric system reliability. A final decision on this investment will be made in early 2015.

PSEG Power has been verbally notified by the FERC staff that they have initiated a preliminary, non-public staff investigation into the matters surrounding the errors discovered by Power in its cost-based bids for its New Jersey fossil generating units in the PJM energy market as well as additional pricing errors and differences between the quantity of energy that Power offered into the energy market and the amounts for which Power was compensated in the capacity market. The investigation could result in the FERC seeking disgorgement of any over-collected amounts, civil penalties and non-financial remedies. Power has implemented and remains in the process of implementing additional measures to mitigate the risk of similar issues occurring in the future. It is not possible at this time to reasonably estimate the ultimate impact or predict any resulting penalties, other costs or the applicability of mitigating factors.

The forecast range of Power's operating earnings for 2014 has been narrowed to $575 - $610 million from $550 - $610 million with full year operating results expected to be at the upper end

of the range. Results for the remainder of the year will continue to be influenced by the reset in the average price received on PJM capacity and a decline in the average price of energy. O&M expense for the fourth quarter is expected to compare favorably with year-ago levels given a reduction in pension expense and the absence of major outage-related work. The estimate assumes normal operations and weather.

PSEG Enterprise/Other

PSEG Enterprise/Other reported operating earnings of $22 million ($0.04 per share) for the third quarter of 2014 versus an operating loss of $4 million, or a loss of less than $0.01 per share during the third quarter of 2013. The results reflect the inclusion of earnings from PSEG-Long Island's (PSEG-LI) operating contract and a reduction in tax expense. The conclusion of an Internal Revenue Service audit for the tax years 2007 – 2010 resulted in a cash refund and a reduction in tax expense. The reduction in taxes improved quarter-over-quarter earnings comparisons by $0.02 per share.

PSEG-LI, on October 6, 2014, filed an update of its Utility 2.0 proposal. The revised proposal calls for an increase in the size of the program to $345 million, reaffirms PSEG-LI's original proposal to fund programs that would expand investment in energy efficiency, demand resources and distributed generation and offered an alternate economic structure to support the expanded program which includes a performance incentive mechanism rather than utilizing PSEG LI's capital. A decision is expected by year-end.

The forecast of PSEG Enterprise/Other full year operating earnings for 2014 remains unchanged at $35 - $40 million.

FORWARD-LOOKING STATEMENT

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, capacity market design, transmission planning and cost allocation rules, including how transmission projects are planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,

- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as competition for certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies, and
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, capacity market design, transmission planning and cost allocation rules, including how transmission projects are planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as competition for certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies, and
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. The last slide in this presentation includes a list of items excluded from Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

2014 Q3 Review

Ralph Izzo
Chairman, President and Chief Executive Officer

SI-SSA-0015-12549

Q3 Earnings Summary

Quarter ended September 30

$ millions (except EPS)	2014	2013
Operating Earnings	$ 393	$ 385
Reconciling Items, Net of Tax	51	5
Net Income	$ 444	$ 390
EPS from Operating Earnings*	$ 0.77	$ 0.76

* See Slide A for Items excluded from Net Income to reconcile to Operating Earnings.

SI-SSA-0015-12550

Year to Date Earnings Summary

Nine months ended September 30

$ millions (except EPS)	2014	2013
Operating Earnings	$ 1,153	$ 1,061
Reconciling Items, Net of Tax	(111)	(18)
Net Income	$ 1,042	$ 1,043
EPS from Operating Earnings*	$ 2.27	$ 2.09

* See Slide A for Items excluded from Net Income to reconcile to Operating Earnings.

SI-SSA-0015-12551

PSEG – Q3 2014 Highlights

- **Operating Earnings of $0.77 vs. $0.76 per share in Q3 2013**
  - ✓ Delivered solid results in the quarter as PSE&G's continuing investment in transmission drove results
  - ✓ Narrowed 2014 full–year, operating earnings guidance to $2.60-$2.75 per share, from $2.55-$2.75 per share prior

- **Executing on operational goals**
  - ✓ Continued control of O&M supports full-year expectations
  - ✓ Generation increase of 4% – with increased availability

- **Executing on our on our capital program**
  - ✓ Transmission program of $6.8 billion continues on schedule and on budget
  - ✓ Energy Strong investment underway – gas mains replacement prioritized
  - ✓ Power announced a new $100-$120 million investment in the PennEast Pipeline project

- **Market developments**
  - ✓ PJM proposed changes on Capacity Performance, Demand Curve Adjustment and pending Demand Response (DR) issues supportive of price formation
  - ✓ PJM decision on FERC 1000 Artificial Island solution expected early 2015
  - ✓ Updated PSEG-Long Island "Utility 2.0" filing submitted to NY regulators

SI-SSA-0015-12552

PSEG – 2014 Another Year of Growth

2014 operating earnings guidance narrowed; forecast full-year at upper end of range, assuming normal weather and unit operations for rest of year

SI-SSA-0015-12561

PSE&G – Monthly Summer Weather Data

SI-SSA-0015-12562

PSE&G – Q3 Operating Highlights

Operations

- ✓ Weather in Q3 2014 was 18% cooler than Q3 2013 and 14% cooler than normal
- ✓ Transmission revenues added $0.04 per share over Q3 2013
- ✓ O&M remains under control

Regulatory and Market Environment

- ✓ Transmission projects on schedule and on budget
- ✓ Energy Strong investments underway: Gas mains replacement prioritized
- ✓ 2015 FERC Formula Rate filing submitted
- ✓ PSE&G lowered gas rates by 9% on 10/1; Additional BGSS rate credits to be implemented Nov 2014 to Jan 2015 – expected to further reduce winter heating bills
- ✓ Filed Energy Efficiency Ext II program with BPU for ~$100 million; early 2015 decision expected
- ✓ BPU approved settlement finding $366 million of 2010-2012 storm cost expenditures to be prudent: $126 million of capital costs and $240 million of O&M expenditures to be recoverable in a future rate case
- ✓ New NJBPU President Mroz (R) and Commissioner Chivukula (D) confirmed by NJ Senate

Financial

- ✓ PSE&G earned its authorized return
- ✓ Issued $250 million of secured MTNs (due 2019) and $250 million secured MTNs (due 2024); Retired $500 million of debt maturities in Q3

New England	**$20**	Lower volume
New York	**$24**	Increased volume

SI-SSA-0015-12570

PSEG Power expanding supply of low-cost Marcellus gas

Proposed PennEast Pipeline Project

- PSEG plans to invest $100-$120 million in the to-be-constructed PennEast Pipeline, a 105.5 mile pipeline that would bring gas from eastern Pennsylvania to New Jersey
- PSEG ER&T would contract for approximately 125mmcf/day of PennEast's 1 bcf/day capacity under a 15-year contract; other project sponsors have committed to offtake ~500mmcf/day
- PSEG and its customers would benefit from the displacement of higher-cost, Gulf Coast gas supply
- Targeted in-service date is November 2017

SI-SSA-0015-12571

Hedging Update…

Contracted Energy*

		Oct-Dec 2014	2015	2016
Base Load (Nuclear and Base Load Coal)	Volume TWh	8	36	36
	% Hedged	100%	100%	55-60%
	Price $/MWh	$49	$50	$49
Intermediate Coal, Combined Cycle, Peaking	Volume TWh	5	21	21
	% Hedged	50-55%	5-10%	0%
	Price $/MWh	$49	$50	$49

	% Hedged	80-85%	65-70%	35-40%
	Price $/MWh	$49	$50	$49

* Hedge percentages and prices as of September 30, 2014. Revenues of full requirement load deals based on contract price, including renewable energy credits, ancillary, and transmission components but excluding capacity. Hedges include positions with MTM accounting treatment and options.

SI-SSA-0015-12572

PSEG Power – Q3 2014 Operating Highlights

Operations

- ✓ Q3 output up 4% from Q3 2013
- ✓ YTD nuclear capacity factor was 91%; Q3 capacity factor was 92%
- ✓ Salem 1 refueling outage underway
- ✓ CCGT capacity factor improved 7% from Q3 2013

Regulatory and Market Environment

- ✓ PJM active on ensuring future reliability: Capacity Performance proposal, review of DR participation in energy markets, and revision of demand (VRR) curve – all supportive of price formation
- ✓ Average hedge price for 2014 is $48/MWh vs. $50/MWh for 2013

Financial

- ✓ New $600 million, 450 MW CCGT at Bridgeport Harbor under consideration
- ✓ Announced $100-$120 million PennEast Pipeline investment
- ✓ Power's total debt as a percentage of capital at September 30 was 32%
- ✓ Power has been verbally notified by the FERC staff that they have initiated a preliminary, non-public staff investigation into the matters surrounding the errors discovered by Power in certain of its cost based bids

SI-SSA-0015-12573

PSEG

PSEG Financial Highlights

- **2014 operating earnings guidance narrowed to $2.60 - $2.75 per share**
  - ✓Focused on maintaining operating efficiency and customer reliability
  - ✓PSE&G's operating earnings on track to grow at double-digit rate in 2014
- **PSE&G transmission investment program continues on-track and on-budget**
- **Financial position remains strong**
  - ✓Positive cash from Power and increasing cash flow from PSE&G supports dividend growth and funds capital spending program without the need to issue equity
  - ✓Debt as a percentage of capital was 42% at September 30
- **Long history of returning cash to the shareholder through the common dividend, with opportunity for future growth**

PRESENTATION

Operator

Ladies and gentlemen, thank you for standing by. My name is Brandy and I am your event operator today. I would like to welcome everyone to today's conference, Public Service Enterprise Group's fourth-quarter earnings conference call and webcast.

(Operator Instructions)

As a reminder, this conference is being recorded today, February 20, 2015, and will be available for telephone replay beginning at 1 PM Eastern Time today until 11:30 PM Eastern Time on February 27, 2015. It will also be available as an audio webcast on PSEG's corporate website at www.pseg.com.

I would now like to turn the conference over to Kathleen Lally. Please go ahead.

Kathleen Lally ***- Public Service Enterprise Group - VP of IR***

Thank you, Brandy. Good morning, everyone. Thank you for participating in our call today. As you are aware, we released our fourth-quarter and full-year 2014 earnings results earlier this morning. The release and attachments, as mentioned, are posted on our website www.pseg.com under the Investor section. We have also posted a series of slides that detail operating results by Company for the quarter.

Our 10-K for the period ended December 31, 2014, is expected to be filed shortly. I don't typically read the full disclaimer statement or the comments we have on the difference between operating earnings and GAAP results, but I do ask that you read those comments contained in our slides and on our website. The disclaimer regards forward-looking statements, detailing the number of risks and uncertainties that could cause actual results to differ materially from forward-looking statements made therein and although we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if our estimates change unless, of course, we are required to do so by applicable securities laws.

We also provide commentary with regard to the difference between operating earnings and net income reported in accordance with Generally Accepted accounting principles in the United States. We believe, PSEG believes, that the non-GAAP financial measure of operating earnings provides a consistent and comparable measure of performance to help shareholders understand trends.

THOMSON REUTERS

SI-SSA-0015-12580

I would now like to turn the call over to Ralph Izzo, Chairman, President and Chief Executive Officer of Public Service Enterprise Group. Joining Ralph on the call is Caroline Dorsa, Executive Vice President and Chief Financial Officer. At the conclusion of their remarks, there will be time for your questions. Ralph?

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

Thanks, Kathleen, and thanks everyone for joining us today. This morning we reported operating earnings for the full year 2014. I'm pleased to report -- actually, I'm more than pleased to report that 2014 was a year in which we continued to make progress on our plans to deliver for our customers and shareholders.

Operating earnings for the fourth quarter were $0.49 per share, which equaled the $0.49 per share earned in 2013's fourth quarter, bringing results for the full year to $2.76 per share, or 7% greater than in 2013's operating earnings of $2.58 per share, and it was above our guidance of $2.60 to $2.75 per share.

Our results are benefiting from disciplined capital allocation. PSE&G, our utility, achieved double-digit growth and earnings, adding to our track record of five years of 18% compound annual growth.

As a result of an expanded capital program, earnings from our regulated Company grew to represent 52% of our consolidated operating earnings as PSE&G's investment in transmission has grown to represent 39% of its $11.4 billion rate base. PSEG Power's successful management of its operations, including its gas supply arrangements, supported earnings in excess of guidance for the full year and delivered substantial savings to PSE&G's customers.

In addition to being a successful year for delivering on earnings, we achieved success in many areas that will provide a lasting foundation for customer satisfaction and shareholder value. By way of a reminder, we received approval to invest $1.2 billion in Energy Strong, a program that will improve the resiliency of our electric and gas distribution systems.

We have begun work on replacing and modernizing 250 miles of gas pipe and have begun the engineering and scheduling associated with upgrading and enhancing our electric sub stations. The investments under the Energy Strong program, as you will recall, will take place over a period of three to five years.

We're also executing well on our transmission investment program. We completed construction of two 230-kilovolt transmission lines during the year, as well as the New Jersey portion of the 500 KV Susquehanna-Roseland line.

We expect the full Susquehanna-Roseland line to go into service this year when the Pennsylvania portion of S-R is completed. The investment in transmission will support the reliable service our customers have come to expect and provide an important boost to New Jersey's economy as it also adds to PSE&G's growth.

PSE&G once again was named the Mid Atlantic region's most reliable electric utility. This is the 13th consecutive year that PSE&G's capabilities have been recognized.

In addition to that, for the first time in its history, PSE&G received JD Power's award for highest customer satisfaction for both electric and gas business service among large utilities in the region. This recognition, while important in itself, we think recognizes that PSE&G always kept the needs of its customers upper most as we pursue our major growth initiatives.

But 2014 was not just a year of PSE&G accomplishment. PSEG Power's combined cycle fleet produced at record levels, as Power's fossil fleet achieved a safety performance in the top 10% of the industry.

We successfully grew PSEG solar sources portfolio. In 2014, we added projects in three states that expanded solar sources portfolio to 123 megawatts of clean, renewable energy.

We had a successful first year of operating the electric system of the Long Island Power Authority. I'm particularly pleased with the efforts of our PSEG Long Island team, where we are rewarded with a major improvement in customer satisfaction scores. But let me be clear, this is only the beginning of a multi-year journey for us on Long Island.

Our core strategy, focused on operational excellence, financial strength, and disciplined investments, is anticipated to yield a third year of growth in operating earnings over the coming year. For 2015, we are initiating operating earnings guidance of $2.75 to $2.95 per share. PSE&G's expanded investment in transmission is expected to support continued growth in operating earnings in 2015 as PSE&G's results for the full year are expected to represent more than 50% of consolidated earnings.

THOMSON REUTERS

SI-SSA-0015-12581

PSEG Power is expected to report operating earnings in line with its strong 2014 results. The investments made by PSEG Power are expected to enhance the competitiveness of its environmentally well positioned fleet. Capacity up rates at our gas-fired combined cycle fleet and in our nuclear units will increase the fleet's output as Power's investment in the PennEast pipeline enhances its already strong access to low-cost gas from the Marcellus region.

PSEG Power's fleet has the characteristics envisioned by PJM's proposed standards for capacity performance. Its diversity and dispatch and fuel mix, as well as the alternate fuel capability, mitigates operating risk. Power's investment program will be focused on improving its reliability during periods of stress on the system.

We also look to expand the fleet when its financially attractive. We were disappointed that our bid to construct a new 475-megawatt combined cycle plant at our Bridgeport Harbor site in Connecticut didn't clear the New England ISOs recent capacity auction; however, we haven't abandoned this work and will invest when the markets support its development.

The strategy we implemented has yielded growth. We have a robust pipeline of investment opportunities that will support further expansion of our capital program over the next five years.

The program is expected to yield double-digit growth in PSE&G's rate base as we maintain the operating strength of Power's generating assets. We will update you on our capital spending plans on March 2.

Our financial position remains strong. An acknowledgment of our success and the strength of our platform going forward was the recent decision by our Board of Directors to meaningfully increase the common dividend by 5.4% to the indicative annual level of $1.56 per share.

We see the potential for consistent and sustainable growth in the dividend given our business mix. Our continued positive cash flow from our generation business and our strong financial position all support this dividend philosophy.

We've made significant strides in meeting our objectives for growth as we also satisfy customer requirements and we're not done. Of course none of this would be possible without the contribution made by PSEG's dedicated employees to our continued success.

I look forward to discussing our investment outlook in greater detail with you at our March 2 annual financial conference. I will now turn the call over to Carolyn for more details on our results and will be available to answer your questions after her remarks.

Caroline Dorsa - ***Public Service Enterprise Group - EVP & CFO***

Thank you, Ralph, and good morning, everyone. As Ralph said, PSEG reported operating earnings for the fourth quarter of $0.49 per share, equal to operating earnings of $0.49 per share in last year's fourth quarter. Our earnings for the fourth quarter brought operating earnings for the full year to $2.76 per share, versus operating earnings for 2013 of $2.58 per share or, 7% growth.

On slide 4 we have provided you with a reconciliation of operating earnings to net income for the quarter. As you can see on slide 10, PSE&G provided the largest contribution to earnings for the quarter.

PSE&G reported operating earnings of $0.32 per share, compared to $0.29 per share last year. For the quarter, Power reported operating earnings of $0.18 per share, compared with $0.23 per share last year. Enterprise/other reported a small loss in operating earnings for the fourth quarter of $0.01 per share versus the operating loss of $0.03 per share reported in the fourth quarter of 2013.

We've provided you with water fall charts on slides 11 and 13 to take you through the net changes in quarter-over-quarter and year-over-year operating earnings by major business, so now, I will review each company in a bit more detail, starting with PSE&G. As I mentioned, PSE&G reported operating earnings for the fourth quarter of 2014 of $0.32 per share, compared with $0.29 per share for the fourth quarter of 2013, as we show on slide 15. PSE&G's full-year 2014 operating earnings were $725 million, or $1.43 per share, compared with operating earnings of $612 million, or $1.21 per share, for 2013, for growth of 18%.

PSE&G's earnings in the fourth quarter benefited from lower operating expenses, including pension, and a return on its expanded capital infrastructure program which more than offset the impact of mild weather on sales. PSE&G's investment in transmission infrastructure increased its quarter-over-quarter earnings by $0.02 per share. The earnings improvement related to the investment in transmission in the fourth quarter was less than the earnings increases you've seen during each of the first three quarters of the year and this reflects a reduction in PSE&G's rate base at year-end associated with the deferred tax impacts of the expansion of bonus depreciation.

THOMSON REUTERS

SI-SSA-0015-12582

PSE&G's tight control of its operating expenses, including lower pension expense, resulted in a quarter-over-quarter increase in earnings of $0.04 per share. The continued improvement in weather-normalized gas volume and demand, which improved quarter-over-quarter earnings by $0.01 per share, was offset by a similar decline in electric volume and demand. And although you wouldn't think it on a day like today, weather was actually mild relative to normal and relative to the prior year and that reduced earnings comparisons by about $0.01 per share.

Earnings comparisons were also affected by the absence of $0.02 per share and a tax related change which benefited earnings in the prior year. Economic conditions continued to exhibit signs of an improvement in the service area, which is good news. On a weather-normalized basis gas basis, gas deliveries are estimated to have increased 1% in the quarter and 3.1% for the year.

Demand continues to benefit from a decline in the cost of gas, which is passed on to our residential customers, and an improvement in economic growth. PSE&G announced earlier this month it would extend through March of 2015 the credits against gas bills that it had already provided its residential customers for the months of November, December and January. A typical residential customer with these credits would experience savings on their total bill over the five months of approximately 31%, or $210.

Electric sales on a weather-normalized basis are estimated to have declined 2.3% in the fourth quarter. The decline in the quarter reflects a number of winter storms at the end of 2013 that increased residential consumption that year as well as decreases in demand this quarter from some large industrial customers.

By the way, weather normalization is generally good for temperature but unfortunately, there's not really a good way to adjust for storms. Overall, there was a 0.3% increase in weather-normalized electric demand for the year, which we think is indicative of improving economic conditions, partially offset by continued customer conservation.

PSE&G implemented an increase in transmission revenue of $182 million, effective of January 1 of this year. The increase in revenue under PSE&G's transmission formula rate will provide PSE&G with recovery of, and a return on, its forecast of transmission-related capital expenditures through the year. PSE&G's investment in transmission grew to $4.5 billion at the end of 2014, or 39% of the Company's consolidated rate base of $11.4 billion, and transmission is forecast to be well over 40% of rate base as we go forward.

Let me just mention the impact of bonus depreciation. Expansion of bonus depreciation has the effect of reducing PSE&G's transmission-related rate base with an increase in deferred taxes. We estimate PSE&G's transmission-related rate base was reduced by approximately $150 million to $200 million from prior forecast levels and this is reflected in PSE&G's year-end rate base of $11.4 billion.

The impact of this change on 2015 revenues is not reflected in the formula rate increase that I just went through, as that filing took place prior to the enactment of the extension of bonus depreciation, but our guidance for PSE&G reflects the impact on revenue associated with the expansion of bonus depreciation and we estimate that impact to be approximately $21 million. As you know, this is really a timing related issue. We get the benefit of an increase in cash over the short term and see a decrease in the deferred tax balance over the long term.

PSE&G's operating earnings for 2015 are forecasted to grow to $735 million to $775 million. Our forecast for 2015 reflects the continued growth in PSE&G's transmission-related rate base and the expansion of PSE&G's investment in distribution through the Energy Strong program.

Earnings for the full year will also be affected by a forecast increase in pension expense that will affect O&M and I'll go into a little more detail on that shortly. We expect PSE&G's rate of earnings growth to improve beyond 2015 as the impact of bonus depreciation will annualize and pension expense is expected to be lower under long term return and interest rate assumptions.

PSE&G invested approximately $2.2 billion in 2014 on capital projects that improve the system's resilience and maintain its reliability. We currently forecast an increase in PSE&G's average capital spending for the next three years to about $2.4 billion per year.

PSE&G's investment in transmission will represent more than 50% of this new spending. We will be providing you with an updated forecast of PSE&G's capital expenditures by year for the five-year period ending 2019 at our annual financial conference on March 2 of this year and I can tell you that spending plan remains robust.

Now let's turn to PSEG Power. As shown on slide 19, Power reported operating earnings for the fourth quarter, as I mentioned, of $0.18 per share, compared with $0.23 per share a year ago. The results for the quarter brought Power's full-year operating earnings to $642 million, or $1.27 per share, compared to 2013's operating earnings of $710 million, or $1.40 per share.

© 2015 Thomson Reuters. All rights reserved. THOMSON REUTERS

SI-SSA-0015-12583

The earnings release, as well as slides 11 and 13, provide you with detailed analysis of the impact on Power's operating earnings quarter over quarter and year over year from changes in revenue and costs. We've also provided you with more detail on generation in the quarter and for the year on slides 21 and 22.

Power's operating earnings for the fourth quarter were influenced by the known decline in capacity revenues that we've discussed in prior calls. Monetization of Power's gas supply position and a reduction in operating and maintenance expense helped mitigate the effects of lower market prices for energy.

As you recall, the average price for our PJM capacity declined to $166 per megawatt day from $244 per megawatt day on June 1 of 2014. The decline in price reduced Power's quarter-over-quarter earnings by $0.09 per share.

A decline in the average hedge price for energy that Power realized during the quarter relative to year-ago levels and lower market prices on Power's open position were more than offset by Power's ability to monetize its gas supply position. These items together lead to an improvement in quarter-over-quarter earnings of $0.01 per share.

A decline in Power's O&M expenditures during the quarter improved quarter-over-quarter earnings by $0.05 per share. The decline in expense for the quarter was greater than what we have been forecasting at the end of the third quarter. Power's management of maintenance outages at fossil stations, coupled with the absence of outage-related expenditures in the prior year, resulted in a better-than-forecast reduction in L&M expense for the forth quarter and lead overall to lower O&M expense in 2014 versus the full year of 2013.

Now let's turn to the operations. Power's output increased 3.1% in the quarter from year-ago levels. For the year, output increased 1.3% to 54.2 terawatt hours. The fleet's flexibility and response to volatile market conditions was demonstrated in the quarter and through out the year.

The level of production achieved by the fleet in 2014 represented the third-highest level of output in the fleets history as a merchant generator. The nuclear fleet produced 29.1 terawatt hours, or 54% of generation, operating at an average capacity factor of 89.3%.

Hope Creek experienced its second-best year, operating at a 97.9% annual capacity factor, which helped to offset the impact of the extended refueling outage at Salem 2 earlier in 2014. The market is clearly rewarding efficient combined cycle gas units and Power's combined cycle fleet set a generation record during the year.

The fleet produced 16.5 terawatt hours, or 30% of our generation, during the year, with record levels of output from the Bergen Station and Linden Unit 1. The coal fleet produced 7.4 terawatt hours, or 14% of generation, and the peaking fleets responsiveness to market conditions, particularly the abnormally cold weather experienced at the start of 2014, lead to full-year production of 1.2 terawatt hours.

Power's gas fired combined cycle fleet continues to benefit from its access to lower price gas supplies in the Marcellus Basin. For the year, gas from the Marcellus Utica region supplied approximately 60% of the PJM assets fuel requirements. This represents a larger percentage of the fleet's gas supply than was available in the past.

Power's ability to step up its acquisition of gas from the Western Marcellus and Utica Basin, in addition to the use of backhaul arrangements on existing pipe in the Eastern Marcellus, improved its access to this low-cost resource. This supply supports higher spark spreads than implied by market pricing and allowed Power to enjoy fuel cost savings similar to the levels it enjoyed in 2013, despite the decline in energy prices.

Overall, Power's gross margin per megawatt hour in the fourth quarter was $37.40, versus $45.90 last year, which was driven by the capacity price reset. For the year, gross margin amounted to $42.41 per megawatt hour versus $47.10 per megawatt hour last year and slide 24 provides detail on Power's gross margin for the quarter and the year.

Power's forecasting a further improvement in output in 2015 to 55 to 57 terawatt hours. The increase is primarily the result of investments we have made to expand the capacity of our nuclear and combined cycle fleet.

Following the completion of the basic generation service option in New Jersey earlier this month, Power has hedged 100% of its base load generation in 2015 and has hedged approximately 75% to 80% of anticipated total production for 2015 at an average price of $52 per megawatt hour, which compares favorably to the average hedge prices in 2014 of $48 per megawatt hour. Power has hedged approximately 50% to 55% of its forecast generation in 2016 estimated at 55 to 57 terawatt hours, also at an average price of $52 per megawatt hour.

And for 2017, power has hedged 25% to 30% of forecast production of 55 to 57 terawatt hours at an average price of $52 per megawatt hour. The hedge data for 2015 and 2016 assumes BGS volumes represent approximately 11.5 terawatt hours of deliveries, about comparable to the 11.5 we delivered in 2014 under BGS.

THOMSON REUTERS

Based on our current hedge position for 2015, each $2 change in spark spreads would impact earnings by only $0.04 per share. This modest impact on earnings is the result of a higher percentage of output from our intermediate and peaking fleet that is hedged at this time, about 40% to 45% than we had hedged a year ago, when it was really about 35% to 40% of forecasted output of the intermediate and peaking fleet.

For 2016, a $1 change in natural gas pricing would impact earnings by $0.06 per share. Just for your reference, if we were fully open, the $1 change in natural gas pricing would impact earnings by about $0.24 per share.

The BGS option for PSE&G customers for the three-year period beginning June 1 of 2015 and ending on May 31 of 2018, was priced at $99.54 per megawatt hour. This contract for one-third of the load will replace the contract for $83.88 per megawatt hour, which expires on May 31 of this year.

This latest auction is based on an average price for energy at the PJM West hub of about $37 to $38 per megawatt hour, which is similar to the base price for energy seen in the last two auctions. The BGS auction continues to represent a key means for Power to hedge bases associated with base-load output.

Power's hedging strategy is consistent with what you've seen in the past. Power maintains open positions on a portion of its intermediate and load-following assets and this allows Power to capture any benefits associated with weather-related demand in the summer months and contain the risks associated with fuller requirements contracts like BGS.

Power took advantage of market strength earlier in 2014 to hedge its output. And, given favorable pricing, Power's also committed to serve a larger percentage of load under the BGS contract in this latest auction, which of course will have its proportional impact across the upcoming three years.

Power's operating earnings for 2015 are forecast at $620 million to $680 million. We're very pleased that our anticipated results are essentially in line with 2014's operating results. Comparative results for the full year will be affected by a decline in capacity revenues, which will essentially be fully offset by an increase in the average price received on energy hedges and a modest increase in O&M.

Turning to enterprise and other, PSEG enterprise/other reported an operating earnings loss for the forth quarter of $4 million, or about $0.01 per share, which compares to a loss in operating earnings of $11 million, or $0.03 per share, for the fourth quarter of 2013.

The results of the fourth quarter brought full-year 2014 operating earnings to $33 million, or $0.06 per share, compared with 2013's operating loss of $13 million, or $0.03 per share. The difference in operating results quarter over quarter reflects primarily the absence of tax payments and other items which contributed $0.03 per share relative to the fourth quarter of 2013.

For 2015, operating earnings are forecasted to fall within the range of $40 million to $45 million and results will be influenced by the contractual payments associated with the operation of PSEG Long Island, income on the lease portfolio, including the benefit from the renegotiation and extension of our lease on the Grand Gulf nuclear generating facility.

Let me now just add a word about pension expense. Last year, as you recall, we saw total pension income of about $0.02 per share as the success of our investment strategy created that pension income. In 2015, our funding level remains greater than 90%, but a lower discount rate and changes to mortality tables offset the continued strong return generated on the trust, resulting in net pension expense of slightly less than $0.07 per share, which is split about evenly between PSE&G and Power. Keep in mind, these are non-cash charges and we anticipate a move back to pension income over the next two to three year period, given our solid funding and our long-term investment strategy.

These impacts that I just mentioned are embedded in our financial plan and our guidance for growth at PSE&G and consistent performance in 2015 at Power. We still see a low-single-digit growth in O&M across the Company over the three year horizon and we'll talk more about that in greater detail on March 2.

Lastly, just a word on our financial position. We're in great shape to finance our capital program. At the end of 2014, we had $402 million of cash on hand and debt represented about 42% of our consolidated capital position, with debt at Power approximating 31% of its capital base and no parent debt.

We'll be updating you on our capital program at our annual financial conference, but the message is the same. We can finance our robust long-term capital program and pursue a very healthy amount of growth opportunities without the need to issue equity, as we also provide our shareholders with a meaningful increase in the growth of the common dividend on a sustainable basis.

© 2015 Thomson Reuters. All rights reserved. THOMSON REUTERS

SI-SSA-0015-12585

We're pleased to be guiding to another year of anticipated growth in earnings for 2015 of $2.75 to $2.95 per share. Our forecast continues to reflect the benefits from PSE&G's expanded capital program and the dynamics of Power's fleet and access to low-cost gas supplies. As you know, the common dividend was recently increased 5.4% to the indicative annual level of $1.56 per share and we believe we can provide shareholders with consistent and sustainable growth in the dividend going forward.

With that, Brandy, I'll turn it back to you and we're now ready for your questions.

QUESTION AND ANSWER

Operator

(Operator Instructions)

Your first question comes from the line of Julien Dumoulin-Smith with UBS.

Julien Dumoulin-Smith *- UBS - Analyst*

Hi. Good morning.

Ralph Izzo *- Public Service Enterprise Group - Chairman, President & CEO*

Good morning, Julien.

Julien Dumoulin-Smith *- UBS - Analyst*

So first quick question, following the Bridgeport -- or back of clearing that asset, what's your thought about building at Power at present? Are we going to look towards clearing potentially new assets in different markets or what's your overall thought about capital deployment at this point in time in Power?

Ralph Izzo *- Public Service Enterprise Group - Chairman, President & CEO*

Julien, our thinking on this hasn't changed. Our power markets that we're interested in are PJM, New York and New England. We look for asset acquisitions. We look for opportunities to re-power sites. We look for opportunities to expand or increase the output of our plants.

As you all know, we've been much more successful on the latter and not as successful on the former -- Peach Bottom uprate, advanced gas path improvements, a couple peakers here and there, have not been able to see the same price justification as others on asset acquisitions and a similar thing happened in New England. In general, we like the New England market from the point of view of new build because of seven year contract. That's a bigger hurdle to overcome in PJM because of the one-year price.

On the regulated utility side, we'll give you more detail on March 2 but there's still very much a robust capital program we'll be showing you for the five years, not just in terms of transmission, which has been our number one, but as we've talked about in the past, opportunities to accelerate the replacement of our cast iron main system in the gas business as well as some of the components of the energy master plan that relates to energy efficiency and renewables. You may recall its only been 10 months or so, so I'm not suggesting we're done by any means, but Energy Strong was a much bigger program than what was ultimately approved so there will be more of that, but it's a little bit longer term than in the next coming months.

There's no shortage of opportunities to deploy the capital. We are disappointed with Bridgeport I'm not going to deny that, but we've got things we can do.

Julien Dumoulin-Smith *- UBS - Analyst*

Great. And then perhaps moving onwards, what about the bidding inquiry? Any updates there? Can you elaborate by chance where we stand?

© 2015 Thomson Reuters. All rights reserved. THOMSON REUTERS

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

No, we aren't giving any more detail on that than we have already, Julien. We don't have any new information to update our financials and we are actively involved with FERC. We meet with them on a regular basis in terms of their questions and giving them feedback, but right now we would rather make sure that FERC has all of the information before talking much more about that on an earnings call.

Julien Dumoulin-Smith - ***UBS - Analyst***

Great. And then if you will, just I noticed PJM East just generally or specifically public service zone saw a negative basis versus PJM West on a spot basis in the back half of the year. Could you talk about what dynamics you saw day-to-day in the markets that would drive that and what your expectations are for forward basis, East versus West? And hedging that specifically?

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

Julien, as we've said, the Power markets, at least for the foreseeable future, have been turned 180 degrees. The winter is where most of the volatility and earnings potential for Power is coming from and that hasn't changed since we started talking about that now almost two seasons ago. So when you look at basis for the year, that's a little bit of a misleading view of the world. it's a combination of moderate basis in the summer, a very strong basis in the winter and weak basis, in fact, negative basis in the shoulder periods but the flexibility of our fleet and the way in which we hedge it takes all that into account.

Over the longer term, I think what you're going to see is the market dynamic driven by significant infrastructure build of gas [pipes] from the Marcellus region to the Southeast and significant replacement of aging power plants that aren't able to meet environmental standards in the Southeast, with highly efficient natural gas combined cycles. We don't run the business saying we're smarter than the market, but to the extent the markets view doesn't extend to three- to that five-year time frame, we still have lots of reasons to feel pretty confident in the location and quality of our asset base.

Julien Dumoulin-Smith - ***UBS - Analyst***

Great, thank you all very much.

Operator

Your next question comes from the line of Dan Eggers with Credit Suisse.

Dan Eggers - ***Credit Suisse - Analyst***

Hey, good morning, guys. Just kind of on the Power side, or the outlook for Power, can you walk through or remind us all the hedging strategies you guys are using? Obviously you had a nice price up lift and you hedge percentages going from 100% hedged to 100% hedged, so can you remind us how you got that upside?

Caroline Dorsa - ***Public Service Enterprise Group - EVP & CFO***

Oh, sure Dan. It's Caroline. Sure, thanks. I cited the base load and the total, and keep in mind, that intermediate and peaking, right? So if you looked at what we told you on the third quarter call, we were still 100% hedged at the base load but the difference has really occurred as we've added hedges in that intermediate and peaking, which was 5% to10% for 2015 on the last call and it's now 40% to 45%. Of course, a piece of that would be BGS, but if you do the math on that you'd see that's a little less than half of the total on an estimated basis.

Really, what's going on, Dan, and if you look at the curves, just look at the forward price curves, you can see this. There were opportunities where the prices moved up during the last quarter before they came down right at the very end and spark spreads have been pretty robust, so we took advantage of those opportunities to layer on incremental hedges and by having that incremental flexibility and putting on a little bit more and capturing those pricing in sparks for opportunities, that's what's really increased the numbers.

© 2015 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

SI-SSA-0015-12587

Now, if you're asking about the change in the price of base load, you know that we actually give one consistent price across, so even though base load was 100% the average price of the entirety of the book, we put that across all the hedges, but we give you the granularity of where we're hedged between base load and intermediate in peeking. We like the impact that we had in the fourth quarter by adding on hedges. You know that BGS, of course, being full requirements also has some pass through costs, but even if you strip that out, you find that the hedges are really higher than they were from our last report.

Dan Eggers - ***Credit Suisse - Analyst***

Okay. Thank you for that answer. On the outlook for the utility this year, if you look at the bridge or think about a mental bridge from 2014 to 2015, maybe not as much of an increase year on year as we would have previously modeled. Can I think of it as basically there's going to be a drag of $0.035 or $0.04 because of pension year on year, maybe $0.05 because you had some gains in 2014, and then you could just step down from what you would have expected at transmission because of the bonus depreciation. Is that right way to think about the step year to year in simple terms?

Caroline Dorsa - ***Public Service Enterprise Group - EVP & CFO***

That's exactly right Dan. You're exactly on the right math, because when you look at those key things which, of course, if you think about interest rate, actuarial tables and bonus depreciation really aren't in our control, but you've got your finger on the right things that take the utility growth rate perhaps lower than the expectation, but a nice growth rate nonetheless, because the things that we do control, the things we're doing to put capital to work obviously continue. As I said, when you think about going out beyond 2015, you'd see the annualization, right, of bonus depreciation in terms of a base versus a subsequent year effect and then pension, obviously, we think being more of a one-time and then going back to normal. You're exactly right in how you're thinking about it.

Dan Eggers - ***Credit Suisse - Analyst***

Last question. You talked about $2.4 billion of utility CapEx. Is that just for 2015 or are you guys thinking that's going to be the new repeated number kind of for the five-year plan?

Caroline Dorsa - ***Public Service Enterprise Group - EVP & CFO***

We haven't given the five-year number but the three-year number, and you'll see this in our 10-K, then, when we file it, the three-year number averages about $2.4 billion per year in total for PSE&G, so I'm talking 2015, 2016 and 2017. When you do that, and you look at that, keep in mind that, as I said, transmission will be more than half of that, so you're going to see transmission really, really carrying the weight of that growth. We're really pleased to see that on average for the next three years and then we'll talk more about the five years on March 2.

Dan Eggers - ***Credit Suisse - Analyst***

Great, thank you guys.

Caroline Dorsa - ***Public Service Enterprise Group - EVP & CFO***

Sure.

Ashar Khan - ***Visium Asset Management - Analyst***

Good morning and congratulations.

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

Thank you, Ashar. (Multiple speakers)

Ashar Khan - ***Visium Asset Management - Analyst***

You know what? I've been kind of attacking this, I guess, Ralph, it's, year after year it's the best integrated company, and I hope you start getting the discernable premium this year as we go forward. But I wanted to go over a point that Caroline raised is that because of the oil pension and that and the hefty CapEx that you've mentioned, if I heard correctly, Caroline, you expect the utility to then go back to somewhat closer to a 9% or 10% growth rate going forward. If I do my math correctly, based on the CapEx and everything for the next couple of years, is that a fair thing which you will refer to a little bit in your remarks, because the growth got a little bit dampened this year from 2014 to 2015, from the pension and other things, but it should regrow at a faster rate coming out of the blocks, 2015 going forward, based on the CapEx and things which you have indicated. Am I on the right track?

Caroline Dorsa - ***Public Service Enterprise Group - EVP & CFO***

Yes, Ashar, you are on the right track. I won't validate a particular number that you cited there, but yes. Think about one-time effects, right? When you have a year-on-year effect of something like bonus depreciation, which you remember was passed at the very, very end of 2014, that has its one-year effect and then it becomes part of the base.

Pension, same thing, right? Lower interest rate and that mortality table which, as you probably know, is a once in a ten-year effect.

Those things come in so we would expect utility growth to be higher as we go into -- on a 2015 2016 basis than on a 2014 2015 for exactly the reasons you cite, overlaid on the back drop of what I just mentioned, which is a continued robust investment program averaging a little bit more on an annual basis than we actually spent last year. The fundamentals are there to provide the driver for that opportunity and we've got these sort of one-year effects from the two items. That's the right way to think about it.

Ashar Khan - ***Visium Asset Management - Analyst***

And then, if I can just, then, if I'm thinking through it on an investment proposition, so if now you totaled the earnings with the life of contract and all that make up like 55% of the earnings. Say this is my number, if you're growing at around 9% or 10% on the utility that would imply a consolidated growth rate of about 5% or so. And with the dividend now growing at 5%, I mean, I think we have a value proposition which is equal to any utility or even better than the rest of the group.

Caroline Dorsa - ***Public Service Enterprise Group - EVP & CFO***

We certainly think we have a good value proposition, don't forget about that. Thank you for mentioning the dividend as well.

Obviously, we don't give guidance beyond the current year, as you know, because of Power, although I think we're pretty pleased with what we've been able to deliver and the guidance we're giving for Power for this year. Frankly, going forward, expect us to do the same things we've been doing with Power for the past few years and I think relatively successfully layering in hedging, taking advantage of opportunities when we see them and continuing to just take advantage of a well-positioned fleet. We do think we have a good value proposition.

I just mentioned, and I think you were just doing the math separately. As you know, PSEG Long Island and our operating arrangement on Long Island is not part of PSE&G's results. It's part of enterprise but you may have just been adding that back in your calculation.

THOMSON REUTERS

SI-SSA-0015-12589

Ashar Khan - ***Visium Asset Management - Analyst***

Okay, and if I can just end up, Ralph, we're happy on the dividend, but do you have a pay-out goal in mind for the consolidated entity earnings or on the utility earnings? I just wanted to get a sense. If the Board has a pay out or no.

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

No, we don't, Ashar. You may recall a few years ago, maybe about five or so, we did have a number and we found it too limiting. The dividend is something that we discuss all the time with the Board, but we have a very robust conversation. We talk about where the earning's coming from, what is the cash being generated, where are we in the power price cycle, what are the cash needs of the business, what are our competitors doing, competitors for capital, that is.

It's a very fulsome discussion and not one that lends itself to simply saying X percent is the pay out ratio. We do try to guide you qualitatively, recognizing that the dividend decisions are the purview of the Board on a quarterly basis but the number we put forth this time, we believe, is consistent with that view that we can provide a sustainable growth in the dividend.

Ashar Khan - ***Visium Asset Management - Analyst***

Thank you so much. Cracking results.

Operator

Your next question comes from the line of Paul Patterson with Glenrock Associates.

Paul Patterson - ***Glenrock Associates - Analyst***

Good morning, guys.

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

Good morning, Paul.

Paul Patterson - ***Glenrock Associates - Analyst***

Just really quick, I'm sorry if I missed it, the gas monetization in Q4, could you quantify that and is there any sort of outlook of what the opportunity might be for stuff like that going forward?

Caroline Dorsa - ***Public Service Enterprise Group - EVP & CFO***

Yes, so I didn't quantify that specifically, Paul, in terms of a number on the quarter. What I did mention was that the gas monetization benefit was essentially similar to what we saw in 2013.

You may recall on 2013, so now I'm talking about this sliding basis, differential base in our supply. 2013 it was about $0.05 and in 2014 it was just about the same level. In terms of thinking about it going forward, obviously we don't control that differential but two things good to keep in mind.

If you look at forward curves, you still see that differential and so that's valuable and we model everything on the forward curve, including thinking about that differential. But what, of course, you can always think about for us that does sustain is that access, right?

THOMSON REUTERS

SI-SSA-0015-12590

We have the access this year, given what the team has been able to accomplish in terms of providing even more access to lining up Marcellus and Utica gas. We've been able to step up that percentage to a total of about 60%. So when you have the differential, and we've got this long term access that's going to stay with us, can't say exactly what percentage every year, but long term significant access, when that differential is there, you'd expect us to get it.

Paul Patterson *- Glenrock Associates - Analyst*

Okay. And then the polar vortex? It looks like we have some similar conditions out there to what we saw on January 7 of last year and the performance of plant seems to be better.

I'm wondering whether or not you think that might impact the capacity performance proceedings going on right now at FERC? Just in general, what do you guys see or what are you hearing out of FERC or anywhere else with respect to how that process is going in your expectations?

Ralph Izzo *- Public Service Enterprise Group - Chairman, President & CEO*

Paul, you're right. Temperatures have been averaging about 16 degrees below average the last few days and plants are operating better. I think, I know for us and I suspect for others, there were some operational changes we were able to make to reduce the amount of forced outages. Just in light of the forecast, we moved our coal piles around a little bit more so we made sure we didn't have them freezing up.

What hasn't changed for us, and I suspect for others, are the amount, is the amount of capital investment that's being made in the older units, which basically never run until you get six days averaging 16 degrees below zero. I think FERC is very cognizant of that. There's only so much you can get out of improved performance by doing some operational prep work and eventually the frictional forces of these temperatures overcome whatever you might do in terms of preparation and those capital improvements are needed.

I think FERC will be supportive. I don't want to predict any outcome. I don't want to guarantee an outcome but suffice to say that there's really two issues that are involved in making sure a power plant runs. It's what you physically have put into the asset and what you do to ready it.

In terms of physical preparation, it's not leaving coal piles exposed, putting buildings around them so that they are protected from the elements. That's a capital investment and you aren't going to do that unless you know that you're going get paid in the capacity market because those typically, in our case at least, aren't units that capture energy market. We're still cautiously optimistic about what FERC will do and we are very confident that whatever FERC does, we do have the type of fleet that will benefit from it.

Paul Patterson *- Glenrock Associates - Analyst*

Okay, great. I appreciate it.

Caroline Dorsa *- Public Service Enterprise Group - EVP & CFO*

Thank you.

THOMSON REUTERS

SI-SSA-0015-12591

Caroline Dorsa - ***Public Service Enterprise Group - EVP & CFO***

Good morning.

Stephen Byrd - ***Morgan Stanley - Analyst***

Wanted to start on the utility. For 2014 and, I guess, going into 2015, what was the earned ROE of the utility in 2014, and what's the assumption going into 2015 that defines the guidance?

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

We earned our allowed return, Stephen. Just, you may recall we have an 11.68% return at transmission and a blend of 10.3% at the utility for the most -- at the distribution level, a blend of 10.3% and some of the more recent programs are at 9.75%.

Stephen Byrd - ***Morgan Stanley - Analyst***

Okay so the actual results in 2015 were right at your earned level or were they in excess of the earned level?

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

They were right at the earned level.

Stephen Byrd - ***Morgan Stanley - Analyst***

Okay, and--

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

We were investing heavily in the utility to make sure that's the case.

Stephen Byrd - ***Morgan Stanley - Analyst***

Understood. What's the timing for the likely filing of the rate case?

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

November of 17.

Stephen Byrd - ***Morgan Stanley - Analyst***

Is when you would file?

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

Is when we would file for a test year. That is three months historic and nine years prospective. Typically, we may seek to push it out even further.

THOMSON REUTERS

Stephen Byrd - *Morgan Stanley - Analyst*

Okay, and then looking over in terms of gas infrastructure, major theme we've seen is more investment in pipelines and we saw your investment there at the Power side. Do you see other potential need for gas infrastructure that looks interesting for you in your service territories as you look at the growth of gas infrastructure?

Ralph Izzo - *Public Service Enterprise Group - Chairman, President & CEO*

No, not in service territory. It seems to me that most of the gas pipeline build that is being proposed nowadays for a variety of reasons is go from Marcellus and Utica to the Southeast and to the South. That's a much longer conversation that we can have, but there's some very good economic fundamental reasons why that's taking place. I think we're ready for the next question, operator.

Operator

Your next question comes from the line from Travis Miller from Morningstar.

Travis Miller - *Morningstar - Analyst*

Good morning, thank you.

Ralph Izzo - *Public Service Enterprise Group - Chairman, President & CEO*

Hi Travis.

Travis Miller - *Morningstar - Analyst*

Hi. Wonder if you could talk a little bit more about the incremental investments you've discussed here over the last few months about Energy Strong. What outstands, what filings might we see in the next three to six months, opportunities and incremental stuff that's not been approved for Energy Strong?

Ralph Izzo - *Public Service Enterprise Group - Chairman, President & CEO*

Sure, Travis. The pure Energy Strong filing, if you will, had multiple components to it. There were a series of sub stations, for example, that were a center piece of, I think, there 29 of them that have to be upgraded and there what we are is we are in the engineering and design phase of that work, so that work is probably going to be the longest-dated one and when we do file for additional help in that area, that's likely to not be off for at least another year.

Another big part of Energy Strong, though, was the $350 million program to replace some of the cast iron main system. I think we've done over 200 miles of that already.

That is one that is scheduled to pretty much wind down by the end of 2015. We'll talk more in detail about that on March 2, but that is a filing that we will be making in very, very short order to continue that program.

That's important for a whole host of reasons, not the least of which is number one, you don't want to keep mobilizing and then demobilizing the workforce to do that and as I said that's winding down at the end of the year. But probably equally, if not more important, is the fact we've been able to continued to be able to pass these gas credits on to our customers so this is the time to make the investment in the infrastructure while the supply part of the bill is actually coming down, because it's something that the customer can afford to do right now. We're always mindful of the burden that we're putting on the customers.

There are some other parts of Energy Strong that are smaller in magnitude, but those being the two biggest ones. Some of the other things we talked about in terms of potential investments we're still waiting to hear on are the utility 2.0 program out on Long Island. Candidly, we thought that would be resolved by now but that looks like it's going to go out a couple more quarters into this year.

THOMSON REUTERS

We had thought we were the winner of the FERC 1,000 project at Artificial Island. As you know, PJM is reconsidering that and I don't know exactly when the decision would be forthcoming there. We thought it would be Q1, but Q1 is now half way gone and that decision isn't done.

The PennEast pipeline investment we've made is still under way. The energy efficiency filing that we've made is still having very constructed dialogue with the staff on that. There are things in all manor, all different stages, from disappointment, in terms of Bridgeport Harbor, optimism in terms of energy efficiency and a whole bunch of stuff in between.

Travis Miller - ***Morningstar - Analyst***

How much of all those programs that either haven't been approved or are in the development process are included in that $2.4 billion?

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

Zero.

Travis Miller - ***Morningstar - Analyst***

Okay so that's upside. Okay. Thank you very much.

Caroline Dorsa - ***Public Service Enterprise Group - EVP & CFO***

Thanks, Travis.

Operator

Your next question comes from the line of Jonathan Arnold with Deutsche Bank.

Jonathan Arnold - ***Deutsche Bank - Analyst***

Well, good morning, guys.

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

Morning, John.

Jonathan Arnold - ***Deutsche Bank - Analyst***

Quick question on what you've said about the dividend, Ralph. You've been very clear you wanted to be, to grow consistently and sustainable. Does that mean we should anticipate similar percentage growth going forward to what you've just done or similar share growth? How consistent are we talking?

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

Let's just put it this way, Jonathan. About four years ago, I think it was about then, we put a big increase into the dividend. I think it was about an $0.08 or $0.10 increase in the dividend. $0.12, thanks for that.

© 2015 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. THOMSON REUTERS

We went out of our way to tell people that was a significant resetting of the dividend and not to be expected as an ongoing change in the dividend and we haven't used those words this time. I really don't want to be tied to a specific number, either from a cents-per-share or a percentage point of view, except to say that we think this dividend increases is supportable and sustainable.

Jonathan Arnold - ***Deutsche Bank - Analyst***

You think you're growing roughly in line with how you expect the utility earnings to grow this year, is that kind of the policy?

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

Yes. And again, that's a fair question, Jonathan. I did say earlier that we look to see where the earnings in the Company are coming from, because quite candidly, Power is more cyclical and the utilities are more steady. But, it's not [0.9] utility plus [0.1] Power or [1.1] utility plus [0.2] Power.

Clearly the fact that the utility will be well over 50% this year for the second year in a row -- it depends how you define well over. It'll be over 50% for the second year in a row. It gives us more confidence in the size of the increase and the sustainability of the increase.

But we absolutely know how important it is to the shareholders. We hear about it all the time.

Jonathan Arnold - ***Deutsche Bank - Analyst***

And then on the credit metrics, I think we mentioned that Power's FFO-to-debt was 69% at the end of the year. Is there anything about you're forecasting flattish earnings for 2015 in Power at the middle of the range. Is there any reason why FFO-to-debt wouldn't be similar in 2015 as in 2014?

Caroline Dorsa - ***Public Service Enterprise Group - EVP & CFO***

No. Good question, Jonathan. If you look at, you're right, where we landed the year, Power is going to continue to be in very good shape so I think the way to think about it is FFO-to-debt will continue to be well in excess of our floor of 30%, just continuing to provide a lot of investment capacity of Power for the things that Ralph has just been talking about. And of course, as you know, we don't have any parent debt and so that provides us even more opportunity for regulated investments.

So yes, I continue to see Power very robust, and what I like about it is it allows us to have that conversation of where else we can make incremental investments because there's just a lot of room there and that's a nice way to start the conversation about extra capital investment, not talking about issuing equity.

Jonathan Arnold - ***Deutsche Bank - Analyst***

And that [16] is going to step down very significantly. It seems like mathematically there's no way you can be sub 50% of the [14-16] average, which is, I think, what your slide showed. Am I on -- could those numbers be up by that much higher? Is that -- are we on the right track there?

Caroline Dorsa - ***Public Service Enterprise Group - EVP & CFO***

Yes, so I won't do the specific numbers on the call, and we'll talk more about the long-term view of things on March 2, but I think the right take away is that balance sheet is in terrific shape and we look for, as Ralph said, lots of ways to deploy it. The numbers are in really, really good shape.

Jonathan Arnold - ***Deutsche Bank - Analyst***

And did you come close on Bridgeport Harbor, or was it --

THOMSON REUTERS

SI-SSA-0015-12595

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

(Laughter) Nice try, Jonathan. We're not going to reveal close or not close because as soon as I give you a qualitative answer, you'll try to narrow it further.

Jonathan Arnold - ***Deutsche Bank - Analyst***

Thank you.

Kathleen Lally - ***Public Service Enterprise Group - VP of IR***

Operator, Ralph is going to have closing remarks and then we'll complete the call, thank you.

Ralph Izzo - ***Public Service Enterprise Group - Chairman, President & CEO***

Thanks, Kathleen. Something just a little bit out of character. As many of you know -- as all of you know, there's probably no bigger fan of our employees than yours truly here. There is one that I just want to make special mention of, that many of you probably have never met before, but after 40 years of service to the industry and 10 years with us, 8 years as our Chief Nuclear Officer, we did announce the retirement of Tom Joyce.

Tom is just a quintessential professional. Not only did he just create tremendous value for our customers and shareholders, but he did what's expected of every strong leader and that is he leaves behind an incredibly solid team and groomed a talented successor. I just can't thank Tom enough and I thanked him yesterday in front of employees, so I want to make sure I thank him today in front of our investors.

As to the rest of my comments, it's simply this. For those in the Northeast, I hope you stay warm. Hang in there. Our plants are running, our gas pressures on the system are good, if not only even Northeast but you're in our service territory, and I hope to see all of you a week from Monday at our Annual Financial Conference. I hope you're as pleased as we are with our results and the outlook for 2015 looks even stronger. See you soon. Thank you.

Kathleen Lally - ***Public Service Enterprise Group - VP of IR***

Thank you, operator.

Operator

Ladies and gentlemen that does conclude your conference call for today. You may now disconnect and thank you for your participation.
