- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as for transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies, and
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Income from Continuing Operations/Net Income. Operating Earnings exclude gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP.
PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends.

PSEG is presenting Adjusted EBITDA because it provides investors with additional information to compare our business performance to other companies and understand performance trends. Adjusted EBITDA excludes the same items as our Operating Earnings measure as well as income tax expense, interest expense, depreciation and amortization and major maintenance expense costs at Power's fossil generation facilities. This information is not intended to be viewed as an alternative to GAAP information. The last three slides in this presentation (Slides A, B and C) include a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings and Adjusted EBITDA with a reference to that slide included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

PSEG

We make things work for you.

SI-SSA-0015-06448

PSEG's Strategy

Investment program delivering results

Operational Excellence: Maintaining reliability and improving performance as we control costs in low price environment

Financial Strength: Strong financial position supports investment program and dividend growth

Disciplined Investment:

- Transformed business mix
- Robust pipeline of opportunities

Results

- Project 3rd year of EPS growth
- Increased rate of dividend growth
- Best in class utility growth rate
- Stable business mix with upside potential from power markets

SI-SSA-0015-06449

Two complementary businesses

A stable platform, each with growth opportunities

PSEG

PSE&G	PSEG Power LLC
Electric & Gas Delivery and Transmission	**Regional Competitive Generation**
Strategy: Investments aligned with public policy and customer needs **Value Proposition:** An $11 billion infrastructure program – focused on transmission – produces double-digit rate base growth through 2019	**Strategy:** Diverse (fuel and dispatch) fleet geographically and environmentally well positioned, with investments to enhance competitiveness **Value Proposition:** Provides substantial free cash flow in current environment and upside from market rule improvements
2014 **Assets $22B** **Operating Earnings $725M**	2014 **Assets $12B** **Operating Earnings $642M**

SI-SSA-0015-06450

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2014.
PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT AND PSEG LONG ISLAND ACTIVITY.
SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS.

Delivering on commitments and realizing growth

Operational Excellence	• PSE&G: Mid-Atlantic Reliability Award (13th consecutive year), top ranked among eastern electric and gas utilities in business customer satisfaction • PSEG Power: Record output from combined cycle units • PSEG Long Island: Demonstrated management and integration capability through a successful transition in first year • PSEG: Cost-control benefits continue
Financial Strength	• Earnings performance exceeded guidance • Cash flows and business mix support strong credit ratings and ability to fully fund robust investment pipeline without issuing new equity • Increased rate of dividend growth in 2015
Disciplined Investment	• PSE&G ✓ Transmission capital program execution and growth ✓ Energy Strong infrastructure program underway ✓ Energy efficiency program extension ✓ Further growth planned – Gas System Modernization Program • Power: Unit uprates, PennEast Pipeline, Solar Source

SI-SSA-0015-06451

Operating Earnings

Disciplined investment program and focus on operational excellence have supported growth

Power's diverse fuel mix and dispatch flexibility continue to generate strong earnings and free cash flow in low price environment

PSE&G's investment program has driven double digit compound annual earnings growth since 2010

SI-SSA-0015-06452

** 2015 PERCENTS USE MIDPOINT OF EARNINGS GUIDANCE.

Robust pipeline of investment opportunities

supports growth objectives

PSEG Capital Spending

2010 – 2014: $12.6 Billion

2015E - 2019E*: $13 Billion

2015E–2019E:

- $1.3B of capital for Gas System Modernization Program and Artificial Island would be incremental

*INCLUDES ALL PLANNED SPENDING. **ENERGY STRONG EXCLUDES RISK AND CONTINGENCY. ***POWER CAPITAL SPENDING EXCLUDES NUCLEAR FUEL. ****INCLUDES PENNEAST PIPELINE EQUITY INVESTMENT OF $0.1B. E=ESTIMATE. DATA AS OF MARCH 2, 2015.

SI-SSA-0015-06453

Balance sheet strength supports capital allocation

Timeframe	Actions taken
2010 – 2014: Transformed business mix	• Applied $16 billion towards investments and dividends • Improved credit ratings • Monetized Energy Holdings' portfolio • Strong balance sheet sustained during period of low power prices, while increasing the dividend
2015 – Forward: Strong financial position supports continued growth	• Increased rate of dividend growth in 2015 • $13 billion investment program through 2019 • Gas System Modernization Program and Artificial Island increase capital program by $1.3 billion through 2019 • Financial capability supports further expansion of the current capital plan

SI-SSA-0015-06454

PSE&G's investment program

Meeting public policy goals and customer needs

*SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/ NET INCOME TO RECONCILE TO OPERATING EARNINGS.

SI-SSA-0015-06455

Containing customer bills while investing in the system

PSE&G Typical Residential Customer Bills*

- PSE&G customers' combined electric and gas bills declined 23% over the period.
- Low gas prices drove rate decreases; in addition, gas customers received bill credits of ~$400 in total from 2012 through 2014.

SI-SSA-0015-06456

PSEG

*FOR ALL YEARS THE BILLING ASSUMES 7,200 KWH FOR ELECTRIC AND 1,010 THERMS FOR GAS ANNUALLY. E = ESTIMATE

PSE&G's robust capital investment pipeline

- Planned capital spending expected to drive double digit rate base growth and high single digit EPS growth through 2017
- Transmission expected to grow to >50% of rate base in 2019
- Gas System Modernization Program and Artificial Island investments would be incremental
- Seeking to broaden platform to expand energy efficiency and other investments

SI-SSA-0015-06457

Power's fleet has the desired attributes to be successful in today's and tomorrow's market

Economic Drivers	Outlook	Combined Cycle	Nuclear	Scrubbed Coal	Peakers	Renewable
Energy Margins	• Low natural gas and energy prices • Robust portfolio of gas pipeline contracts	✓	✓	✓	n/a	n/a
Capacity Markets	• Tightened rules proposed for capacity performance	✓	✓	✓	✓	n/a
Environmental Regulations	• Tighter air emissions standards	✓	✓	✓	✓	✓
Location	• Assets in well-designed markets, premium regions • Opportunities on brownfield sites	✓	✓	✓	✓	n/a
	PSEG Power Capacity (GW) Total 13 GW	3.2	3.6	2.4	3.7	0.1

- **Largest nuclear site** in the eastern U.S. and ownership in **large, fully scrubbed coal facilities** at Keystone and Conemaugh provide **economies of scale** that enhance energy margins in current low market, and provide for upside potential if prices improve.
- **Dual fuel peakers** meet reliability criteria in capacity markets and provide option value in energy market. Opportunity exists to repower peakers that do not meet NJ HEDD environmental regulations.

SI-SSA-0015-06458

Power – Growing value by improving market rules and developing investment opportunities

Value Source	Opportunities and Actions Taken
Improving rules will better recognize value of our fleet	• PJM's Capacity market – 2014 limits on demand response and 2015 Capacity Performance proposal • Demand response treatment at U.S. Courts / FERC • Energy price formation at FERC • Increasing air standards through Federal and State regulations
Our footprint provides growth opportunities	• Nuclear and Combined Cycle plant uprates are underway • Brownfield expansions at existing sites ➢ New peakers built at New Haven and Kearny sites ➢ Continue to explore further opportunities • PennEast pipeline - equity investment and gas portfolio enhancement • Solar Source owns ~123 MW*, with significant project pipeline • Continue to seek opportunities to expand the fleet

*PROJECT SIZE IN MEGAWATTS SHOWN IN DC (DIRECT CURRENT), AC EQUIVALENT IS 96 MW.

SI-SSA-0015-06459

PSEG Annual Dividend

An increased dividend growth rate with potential for consistent and sustainable growth given our business mix and financial position

	2011	2012	2013	2014	2015E
Payout Ratio	50%	58%	56%	54%	55%*

SI-SSA-0015-06460

SI-SSA-0015-06465

Mid-Atlantic ReliabilityOne award winner for 13 years in a row

SI-SSA-0015-06466

PSE&G's service and reliability is being recognized by customers

SI-SSA-0015-06467

PSE&G has achieved annual growth in operating earnings of ~18% over the past five years

with implementation of supportive rate mechanisms on our expanded capital program and cost control

SI-SSA-0015-06468

*SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS.

PSE&G plans to invest $10.8B over the next five years

PSE&G's Capital Expenditures*

*INCLUDES AFUDC. E=ESTIMATE.

SI-SSA-0015-06469

PSE&G's existing major Transmission

projects are being completed on schedule and on budget

Major Transmission Investments

Project Roster	Approved ROE	Inclusion of CWIP in Rate Base	100% Recovery of Costs Due to Abandonment	Estimate Up To ($ Millions)	Expected In-service Date
Susquehanna-Roseland	12.93%	✓	✓	$790	Completed
Northeast Grid Reliability	11.93%	✓	✓	$907	June-Dec 2015
North Central Reliability	11.68%	✓	✓	$390	Completed
Burlington–Camden 230kV	11.68%	✓	✓	$399	Completed
Mickleton–Gloucester–Camden 230kV	11.68%	✓	✓	$435	June 2015

SI-SSA-0015-06470

A robust pipeline of Transmission

investments focus on reliability improvements and replacement of aging infrastructure

Major Transmission Investments

Project Roster	Approved ROE	Program Description	Estimate Up To ($ Millions)	Expected In-service Date
Bergen—Linden Corridor 345kV	11.68%	PJM baseline project receiving CWIP in rate base treatment	$1,200	June 2018
PJM Regional Transmission Expansion Plan (RTEP) – multiple projects	11.68%	PJM mandated system reliability projects	$1,900	Various
69kV Upgrade – multiple projects	11.68%	Upgrade of 26kV to 69kV	$1,500	Various
Transmission Lifecycle – multiple projects	11.68%	Replacement of aging infrastructure	$1,100	Various
Transmission Hardening– multiple projects	11.68%	Reliability projects focused on system resiliency	$650	Various

*INCREMENTAL INVESTMENT IN HARDENING INCLUDED AS PART OF OTHER PROGRAMS.

Bergen-Linden Corridor is a project which will provide a double-circuit 345kV line designed to maintain system reliability

Project Estimate Up To	Through Year-end 2014	Expected Completion Date
$1,200M	$40M	June 2018

- PJM RTEP project b2436 and b2437 with phased in-service dates
- 30 miles of underground cable
  - New ~ 23 miles
  - Reconductor (Upgrade of 138 to 345) ~7 miles
- 13 miles of double circuit overhead conductor (replacing double circuit 138 with double circuit 345)
- 11 station upgrades to 345kV

Customer Benefit: Addresses thermal and short-circuit reliability

Project Status: Engineering, Licensing and Construction

Marion Substation Pile Installation

SI-SSA-0015-06472

Major Transmission programs focus on reliability and replacing aging infrastructure

- PJM's Regional Transmission Expansion Plan (RTEP) identifies system enhancements needed for reliability
- 69kV system upgrades improve system reliability and provide capacity for future growth
- Transmission Lifecycle is an ongoing program to manage transmission asset life to maintain and improve system integrity and reliability
- Transmission Hardening projects focus on increasing system resiliency

SI-SSA-00015-06473

PSE&G has successfully worked with regulators to develop multiple solutions for New Jersey's energy and economic development goals

RENEWABLES
creative solutions to install solar generation

- Solar Loan I – 2008
- Solar Loan II – 2009
- Solar 4 All – 2009
- Solar Loan III – 2013
- Solar 4 All Ext – 2013

ENERGY EFFICIENCY
assisting customers with controlling energy usage

- Carbon Abatement – 2008
- Demand Response – 2009
- Energy Efficiency (EE) – 2009
- EE Extension – 2011
- EE Extension II – 2015

DISTRIBUTION
improving electric and gas delivery infrastructure

- NJ Capital Infrastructure Program 1 (CIP 1) – 2009
- NJ Capital Infrastructure Program 2 (CIP 2) – 2011
- Energy Strong – 2014

To date we have invested over $2B in the above programs

Over $1B ahead in Energy Strong, Energy Efficiency Ext II and Solar programs

Gas System Modernization Program would increase potential investment by ~$1.6B

SI-SSA-0015-06474

PSE&G is successfully executing on Energy Strong with ~$150M deployed during the latter half of 2014

Program	Approved	Spend thru 2014
Flood Mitigation	$620M	$19M
Electric Contingency Reconfiguration	$100M	$26M
Electric Advanced Technology	$100M	$10M
Gas Utilization Pressure Cast Iron (UPCI)	$350M	$94M
Gas Metering & Regulating (M&R)	$50M	$1M
TOTAL	$1,220M	$150M

SI-SSA-0015-06475

Energy Strong will provide increased reliability and resiliency

- **Electric Flood Mitigation**
  - Engineering and scheduling began on 16 of the 29 total planned substation projects
- **Electric Contingency Reconfiguration**
  - Over 100 projects have been started and 15 projects have been completed to date, including installation of over 900 poles and 70 reclosers
- **Advanced Technology**
  - A total of 60 relays replaced and 3 remote terminal unit (RTU) has been installed
- **Gas Utilization Pressure Cast Iron (UPCI)**
  - Installed ~110 miles of gas main and replaced ~5,300 services
- **Gas Metering & Regulating (M&R)**
  - Design and engineering completed for all of the eight stations scheduled

SI-SSA-0015-06476

Extension of PSE&G's award winning Energy Efficiency program

- Energy Efficiency Extension II approved by the BPU in April 2015 will extend the investment and time frame for three previously approved programs already in the marketplace, allowing PSE&G to factor in lessons learned and balance policy issues
- $95M of rate base investment approved at an ROE of 9.75%
- Extends existing programs, two of which have sizable waiting lists:
  - Hospitals
  - Multifamily
  - Direct install – government, non-profit, and small business
- Would allow PSE&G to leverage past investments in people, capabilities, systems and processes

SI-SSA-0015-06477

Gas System Modernization Program of ~$1.6B focusing on aging gas mains

- PSE&G's gas distribution system currently operates and maintains over 4,800 miles of cast iron and unprotected steel main, the largest such system in any single state
- The program provides for investment of ~$1.6B focused on replacing cast iron and unprotected steel main over a five-year period, beginning mid-2016
- Program will replace approximately 160 miles of main per year
  - Requested accelerated clause-based recovery similar to the Energy Strong program with a 9.75% ROE
  - This program is the first phase of a long-term, 30-year cast iron and unprotected steel replacement plan
- Benefits:
  - Methane emission reduction is estimated at 24,500 metric tons of CO_2 equivalent per year*
  - Directly creates and supports 500 New Jersey jobs
  - Higher pressure system allows usage of high efficiency appliances by customers

SI-SSA-0015-06478

PSEG

* EPA SUBPART W METHODOLOGY.

PSE&G continues to receive contemporaneous/ formula rate recovery on ~75% of its investment program

2010-2014 PSE&G Capital Spending by Recovery Method

$9.8B

2015-2019E PSE&G Capital with Potential Upside by Recovery Method

$12.1B

Clause Recovery Mechanisms
- Energy Strong / Infrastructure / Solar / Energy Efficiency
- Gas System Modernization Program

FERC Formula Rates
- Transmission
- Artificial Island

Traditional Recovery Mechanisms
- Distribution Base Rates

SI-SSA-0015-06479

E = ESTIMATE. DATA AS OF MARCH 2, 2015

PSE&G has controlled costs

through process improvements and will continue to drive future efficiencies

Cost control actions taken:

- PSE&G is utilizing the Lean Six Sigma discipline to achieve costs savings and process improvements
- Conducted organizational reviews resulting in streamlining of processes through restructuring
- Continued focus on vendor and inventory practices ensuring maximum value
- Successful management of pension

E=ESTIMATE

SI-SSA-0015-06480

PSE&G's 2015 operating earnings

expected to benefit from increased investment in Transmission

SI-SSA-0015-06481

PSEG LONG ISLAND

PSEG

We make things work for you.

SI-SSA-0015-06482

PSEG Long Island is focused on improving customer service and reliability

- Provide best-in-class customer service, including building on our new Call Center Technology platform to better serve our customers
  - According to J.D. Power, in 2014 PSEG Long Island showed the most improvement in overall customer satisfaction of any large electric utility, anywhere in the nation
- Work to maintain industry-leading service reliability
- Improve every aspect of the storm response process
  - Leveraged our new Outage Management System to improve storm logistics and outage coordination
- Contributed $0.02* to PSEG's earnings per share in 2014, as expected

SI-SSA-0015-06483

* EXCLUDES THE ENERGY RESOURCES & TRADE CONTRACT, WHICH WILL BE INCLUDED IN PSEG POWER'S RESULTS.

PSEG POWER

PSEG

We make things work for you.

SI-SSA-0015-06484

PSEG Power strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-06485

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus Fleet Diversity/Efficiency Focus	Financial/Economic Focus	Regulatory Focus
• Nuclear units have performed well for ten consecutive years • Hope Creek recorded its second highest output in its history • Fleet diversity across the dispatch curve and fuel types provide flexibility to meet changing market conditions • Bergen 1 & 2 and Linden 1 individually, and the CCGT fleet in total, set generation records in 2014 • Kearny 13 & 14 have shown increasing output in each year since start-up	• Getting the most out of existing fleet • Locational advantage • O&M control programs have delivered a CAGR of 2.6% between 2009 and 2015 • Sites offer competitive advantage for expansion	• Strong regulatory performance • Industry leadership in the changing business environment

SI-SSA-0015-06486

PSEG Power Delivering on priorities

Operational Excellence	• Maximize value of existing generating plants through implementation of the Operational Excellence Model (OEM) • Workforce engagement and development	• OEM implemented and achieving measures • Resource sharing program between Nuclear & Fossil initiated
Financial Strength	• Deliver on Business Plan Commitments • Maintain competitive markets and improve constituent communication on issues important to Power	• Exceeded earnings guidance in 2014 • Ongoing effort in key markets showing success • Successful court outcome against subsidized generation
Disciplined Investment	• Successfully complete the Advanced Gas Path (AGP) uprates • Seek new opportunities in target markets (PJM, ISO-NE, NYISO) • Develop our renewables business (solar) • Maintain new nuclear option by successfully managing the Early Site Permit (ESP) process	• Accelerated schedule for AGP to maximize opportunity • LIPA contract for fuel and generation dispatch began January 1, 2015 • Completed three projects with one underway, bringing Solar Source's portfolio to 123 MW_{DC} • Nuclear ESP is expected in 2016

SI-SSA-0015-06487

PSEG Power met 2014's challenges

Storm and weather challenges	+	Market challenges	=	Value delivered
• All of the generation sites affected by SuperStorm Sandy were restored to service by mid-2014, with ongoing repairs • Cold weather extremes created a challenging operating environment, but also presented opportunities		• Transmission (outages and build outs) and gas markets resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by economy		• Expedited return from storm outages, restored margin opportunities • High availability when needed • Flexibility of portfolio captured real-time basis opportunities • Captured value through coal/gas switching, unit flexibility • Management of gas assets benefited customers and fleet • Achieved fuel cost savings

SI-SSA-0015-06488

PSEG Power exceeded 2014's earnings guidance

2014 PSEG Power Operating Earnings*
($ Millions)

Over $60M of additional value gained from:

- Weather, basis volatility
- Fuel flexibility
- Lower gas cost
- Spark/dark spread

*EXCLUDES IMPACTS FROM STORM RECOVERY COSTS.
SEE SLIDE A FOR ITEMS EXCLUDED FROM NET INCOME TO RECONCILE TO OPERATING EARNINGS.

SI-SSA-0015-06489

PSEG Power has generating assets

in three competitive markets

- Assets located near load centers
- Low cost portfolio
  - Fuel flexibility with gas cost advantage
- Positioned to benefit from volatility in real-time markets
- Readiness for capacity performance (CP) in PJM
- Fleet positioned to maintain diversity and efficiency after HEDD
- Sites suitable for expansion

SI-SSA-0015-06490

Power's PJM assets along the dispatch curve reduce the risk of serving full requirement load contracts and can take advantage of volatile market conditions

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape
- Readiness for Capacity Performance (CP)

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel capability at 87% of load following and peaking units

SI-SSA-0015-06491

PSEG Power positioned to maintain diversity and efficiency after a realignment of the fleet following HEDD retirements

Objective 2015 → 2017

- Maintain fuel diversity
- Maintain load-serving capability
- Maintain low cost structure
- Improve environmental & heat rate profiles
- Complete
  - Peach Bottom (PB) uprate
  - Advanced Gas Path (AGP)

Fuel Diversity

Energy Produced

E=ESTIMATE

SI-SSA-0015-06492

PSEG Power's fleet is expected to see improvement in heat rate and decline in emissions

- AGP (Advanced Gas Path) investments
- Other Efficiency improvements
- HEDD retirements

SI-SSA-0015-06493

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing

SI-SSA-0015-06494

PSEG Power Nuclear is a critical element of our success

Hope Creek

- Operated by PSEG Nuclear
- PSEG Ownership: 100%
- Technology: Boiling Water Reactor
- Total Capacity: 1,178 MW
- Owned Capacity: 1,178 MW
- License Expiration: 2046
- Next Refueling
  - Fall 2016

Salem Units 1 and 2

- Operated by PSEG Nuclear
- PSEG Ownership: 57%
- Technology: Pressurized Water Reactor
- Total Capacity: 2,307 MW
- Owned Capacity: 1,324 MW
- License Expiration: 2036 and 2040
- Next Refueling
  - Unit 1 – Spring 2016
  - Unit 2 -- Fall 2015

Peach Bottom Units 2 and 3

- Operated by Exelon
- PSEG Ownership: 50%
- Technology: Boiling Water Reactor
- Total Capacity: 2,242 MW
- Owned Capacity: 1,121 MW
- License Expiration: 2033 and 2034
- Next Refueling
  - Unit 2 - Spring 2016
  - Unit 3 - Fall 2015
- Uprate: 130 MW (PS Share)
  - Unit 2 - March 2015
  - Unit 3 - 2016

SI-SSA-0015-06495

PSEG Power Nuclear has competitive advantages

- Continued strong nuclear operations
- Nuclear excellence program
- Top quartile of cost performance/MWh
  - Brought security services in-house
- Significant earnings contributor
- Recruitment of the best new and experienced talent, and attractive training program
- Fukushima action plan in response to NRC staff review
  - FLEX* plan submitted with implementation underway
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

*STRATEGY KNOWN AS THE "DIVERSE AND FLEXIBLE MITIGATION CAPABILITY" OR FLEX, ADDRESSES RECOMMENDATIONS OF THE NUCLEAR REGULATORY COMMISSION'S FUKUSHIMA TASK FORCE.

SI-SSA-0015-06496

Power's nuclear fleet is well positioned

with significantly lower-than-average US cost structure

*SOURCE: ELECTRIC UTILITY COST GROUP.
** SOURCE: PSEG NUCLEAR.

SI-SSA-0015-06497

PSEG Power's focus on costs

has resulted in moderate increase in O&M for seven years

Cost control actions taken:	
• Fossil plant assessment • CCGT material condition assessment • Vendor contract renegotiations • Nuclear security services brought in-house to control costs	• Nuclear maintenance productivity study • Nuclear outage efficiency initiative • Materials management

*EXCLUDES IMPACTS FROM STORM RECOVERY COSTS. E=ESTIMATE

SI-SSA-0015-06498

PSEG Power's Fossil Fleet has shown improvement in performance

Fossil Generation

Coal Generation

Peaking Start Success*

- Fossil Generation rebounded with market
- Peaking Units maintain high start success
- Record output from Kearny 13 & 14 peakers

Combined Cycle Generation

- Combined Cycle Generation set record
- Bergen AGP uprate project scheduled for 2015

SI-SSA-0015-06499

PSEG

*LM6000 AND 7EA UNITS E = ESTIMATE.

PSEG Power initiatives result in

continuing improvement in combined cycle heat rate

E= ESTIMATE.

SI-SSA-0015-06500

PSEG Power CCGT/Fossil initiatives

Actions Taken to Create Value

Capacity
- Advanced Gas Path (AGP) investments 2014 through 2018 to provide additional efficient capacity, heat rate improvements
- New lower cost gas line at BEC with Dominion

Performance
- EPRI efficiency initiatives
- GE initiatives for large data analytic
- Consolidation of unit testing
- Auto tuning software

Maintenance
- Ongoing outage efficiency improvement
- Improvements to reliability
- Central fleet monitoring and diagnostic center

SI-SSA-0015-06501

PSEG Power's capital expenditures for environmental requirements are essentially complete*

SI-SSA-0015-06502

*BASED ON CURRENTLY KNOWN AND QUANTIFIABLE ENVIRONMENTAL REQUIREMENTS. E=ESTIMATE. DATA AS OF DECEMBER 31, 2014.

PSEG Power's Growth Investments

Site	Project	Cost ($ millions)	Benefits	Status
BEC	Dominion Gas Line	$8	Access to a 2nd, lower cost gas supply: $8-9 million/year increase in margin	Completed
Linden	AGP Upgrade	$69	Increased capacity and improved heat rate: 63 MW capacity increase ~1.2% heat rate improvement	Completed
Linden Kearny	Black Start: Linden 7/8 Kearny 12	$13	New ancillary revenue source: ~ $3 million per year	Linden Completed Kearny Underway
CA / TX / VT	Solar Source Projects	$44	Increased capacity: 21 MW	Completed
Peach Bottom	Peach Bottom EPU (2014 – 2015)	$417	Increased capacity: 130 MW	PB2 March 2015, PB3 in 2016
Bergen / BEC	Future AGP Upgrades: Bergen (2015) BEC (2017-2018)	$98	Increased capacity and improved heat rate: 88 MW capacity increase ~1.2% heat rate improvement	Underway
Various	Interim ISA's*	No cost	Increased capacity: 69 MW	Completed
Eastern PA to Mercer, NJ	PennEast Pipeline	$119	Estimated Earnings in 2019: $13 million	Underway

Total Increased Capacity – 371 MW

* INTERCONNECTION SERVICE AGREEMENTS.

SI-SSA-0015-06503

Additional investment opportunities under consideration

Site	Project	Benefits
Bridgeport Harbor	CCGT development	New ISO NE Capacity: 475 MW
Hope Creek	Uprate	Additional PJM Nuclear Capacity: 20 MW
Edison / Essex	SCR retrofit	Continued operation of FT4s Edison: up to ~ 470 MW Essex: up to ~ 330 MW
Bergen	Bergen 1 Uprate (AGP-type uprate)	Additional PJM Capacity: Up to 50 MW
Sewaren	CCGT development	New PJM Capacity: 450 – 625 MW
Various	Additional solar projects under investigation	100's of MW of new solar capacity under evaluation

SI-SSA-0015-06504

PSEG Solar Source owns ~123 MW

of solar facilities* with long term contracted revenues

Hackettstown (Mars)
New Jersey (2 MW)
COD September 2009
Thin film panels – fixed tilt
Investment $13 million
15 year PPA with Mars, Inc.

Queen Creek
Arizona (25 MW)
COD October 2012
Polycrystalline - single axis
Investment $75 million

Milford
Delaware (15 MW)
COD December 2012
Polycrystalline - fixed tilt
Investment $47 million
20 year PPA with DEMEC

In Construction – Rockfish
Maryland (13 MW)
COD - June 2015E
Polycrystalline - single axis
20 year PPA with SMECO

JEA
Florida (15 MW)
COD September 2010
Thin film panels – fixed tilt
Investment $59 million
30 year PPA with JEA

Badger I
Arizona (19 MW)
COD November 2013
Polycrystalline - single axis
Investment $48 million
30 year PPA with APS

Shasta A & B
California (4 MW)
COD March 2014
Polycrystalline - single axis
Investment $13 million
20 year PPAs with PG&E

Whitcomb
Vermont (4 MW)
COD October 2014
Polycrystalline – fixed tilt
Investment $10 million
25 year PPA with VT Electric Power Producers, Inc.

SI-SSA-0015-06505

*PROJECT SIZE IN MEGAWATTS SHOWN IN DC (DIRECT CURRENT), AC EQUIVALENT IS 96 MEGAWATTS. E=ESTIMATE.

PSEG Power has other attractive sources of revenues to round out a robust portfolio, in addition to energy and capacity

Gas Asset Optimization

- Large wholesale provider to PSE&G and others
  - Storage capacity of approximately 75 Bcf (in the Gulf and market regions)
  - Firm transportation of 1.3 Bcf/day on seven pipelines
- Off-system sales margins shared with residential customers
- Commercial & Industrial customers (C&I)
- Weather and price volatility

Ancillary Services

LIPA Fuel and energy dispatch management

SI-SSA-0015-06506

PSEG Power has delivered on its commitments during volatile market conditions

PSEG POWER
ER&T

SI-SSA-0015-06511

PSEG

We make things work for you.

Market Review: 2014 was influenced by extremes in weather highlighting the importance of winter

Q1: Periods of extreme cold temperatures resulted in high gas prices, significant basis differentials, and higher energy demand.

Q3: A cooler than normal summer, combined with increased supply of gas, reduced energy prices and basis.

SI-SSA-0015-06512

Market Review: PSEG's extensive gas asset portfolio gives unparalleled access to Marcellus Shale gas

Power's Gas for Generation in 2014

- PSEG Power maintains a robust portfolio of pipeline and storage assets in the Mid-Atlantic
- PSEG Power's gas for generation was ~100 BCF in 2014, of which >60% was supplied by Shale gas
- PSEG Power procured over 400 BCF in 2014 with ~75% going to PSE&G's utility gas customers
- When gas is surplus to customer needs, PSEG Power sells surplus to others; margins from such sales benefit PSE&G gas customers and PSEG Power

SI-SSA-0015-06513

Market Review: Winter Z6 gas prices retain seasonal volatility; spark spreads have continued to be robust in PJM

2015 YTD Z6

2015-2018 Z6

PJM West vs. PS Zone Spark Spreads (2013-2018)

SI-SSA-0015-06514

Market Review: New pipelines will move significant quantities of Marcellus gas out of the region by 2018

Historical and Expected Marcellus Production

Pipeline capacity grows significantly by 2018

New pipeline investment is expected to increase takeaway capacity from the low cost Marcellus/Utica shale and reduce regional surpluses and increase gas prices by 2018

SI-SSA-0015-06515

Power Basis in Eastern PJM: Expected to be volatile but positive on an annual basis with winter pricing driving value

Electric Basis will remain positive overall and stabilize within 3 years due to:

- Export of ~18 bcf/day of gas which will significantly strengthen regional gas prices
- Easing of transmission constraints in Virginia/Maryland
- Construction of significant new gas-fired generation in VA/MD

ANNUAL FORWARD BASIS TO PJM-WEST AS OF DECEMBER 31, 2014.

SI-SSA-0015-06516

Regulatory Framework: Significant reforms already implemented and new rules being promulgated to improve energy and capacity market designs

	ISSUE /POLICY	OUTCOME
PJM	CAPACITY	• Higher payments for enhanced reliability (Capacity Performance)
	DEMAND RESPONSE RULES	• Stricter rules for eligibility and deployment
	ENERGY PRICE FORMATION	• PJM and FERC forcing improvements to energy price formation; higher caps
ISO-NE	CAPACITY	• Higher prices in recent auction better reflect tight supply conditions • Implementation of sloping demand curve in FCA 9 • Zonal demand curves expected in FCA 10
	ENERGY	• Demand response required to participate in Day Ahead markets • Implemented hourly offers/real time reoffers • Reserve market prices better reflect scarcity prices • 5 minute interval LMP settlements expected Q1 2016
NYISO	CAPACITY	• New Capacity Zone (LHV) leads to more accurate price signals
	ENERGY	• Improvement in price formation during reserve shortage conditions
FEDERAL	DEMAND RESPONSE	• EPSA VS. FERC and national implications; US Supreme Court will hear case
	ENVIRONMENTAL REGULATIONS	• HEDD, CPP, HAPS/MACT will lead to tightening of supply in 2015+ timeframe

SI-SSA-0015-06517

PJM Capacity Performance Proposal: aims to increase electric supply reliability

- **Capacity performance (CP)** proposal places emphasis on reliability, given observed outages during times of extreme weather stress and anticipated retirements; Imposition of higher penalty structure and enhanced opportunities for cost recovery to encourage reliability
- **Generator performance/flexibility is key** objective for units with secure fuel supply capable of meeting more stringent operating standards
- **Elimination of 2.5% holdback offsetting weak demand growth**, making all capacity resources annual products in end state, net CONE bidding safe harbor, and the change in the demand curve (VRR) support price formation and improve resource adequacy

December 2014
PJM Filed
Final CP Proposal

April 2015
Expected FERC Response
to PJM CP Proposal

FERC Granted Delay of
May 2015 RPM Auction for
2018/2019 Capacity Year

SI-SSA-0015-06518

Capacity Performance: >90% of PSEG's PJM capacity meets the new capacity performance standards with minimal to moderate investment

How does our fleet stack up?*

CP Compliant Assets

* EXCLUDES 205MW OF PUMPED STORAGE

SI-SSA-0015-06519

Northeast Portfolio: New York and New England

New England (972MW)

- Small but dynamic market
- Significant improvement in market construct
- High volatility due to extreme (winter) weather conditions
- Significant siting and permitting challenges
- Gas pipeline infrastructure poses supply challenges/opportunity

New York (774MW)

- Single state ISO
- Investment in new lateral to connect to the Dominion pipeline at Bethlehem Energy Center (BEC) allows for access to fuel supply from Marcellus
- Long Island Power Authority Management Contract

SI-SSA-0015-06520

Northeast Portfolio: Expanding our footprint with PSEG Long Island

PSEG Power acting as an agent for LIPA began January 2015

- Performing ISO bidding for LIPA's 6,000MWs of generation/tolls
- Procuring natural gas and oil for the majority of these assets
- Scheduling two DC transmission cables (ISO-NE and PJM) into Long Island
- Entering into financial hedges to reduce LIPA customer's price volatility

This relationship has provided PSEG Power:

- Additional experience in Eastern NY and Connecticut markets
- Bigger natural gas footprint
- Fee-based services contract

SI-SSA-0015-06521

Capacity Market Pricing: PJM's capacity market is transitioning to recognize operating performance as well as locational value

RPM Auction Results					
($/MW-day)	2013 / 2014*	2014 / 2015*	2015 / 2016*	2016 / 2017*	2017 / 2018
Power's Average Prices	$242	$168	$168	$167	**$165**

SI-SSA-0015-06524

PSEG Power's Value Proposition

- Well-positioned fleet of merchant generating assets in attractive markets
- Advantaged by low cost structure, fuel diversity and dispatch flexibility
- Value add from strong gas supply capability
- Significant drive by regulatory bodies to improve market constructs
- Low capital requirements to meet enhanced performance standards
- Organic growth opportunities to increase nuclear and combined cycle generation
- Hedging strategy is responsive to changing market dynamics, providing attractive returns and free cash flow

SI-SSA-0015-06525

PSEG FINANCIAL REVIEW & OUTLOOK

SI-SSA-0015-06526

PSEG

We make things work for you.

Strong financial position to support our business initiatives

2014 Financial Position

- ✓ Strong 2014 earnings growth
- ✓ Exceeded earnings guidance
- ✓ Executed major PSE&G capital program
- ✓ Strong balance sheet with no long term Parent debt
- ✓ Solid credit metrics

2015 and Beyond

- ✓ Third year of anticipated positive earnings growth in 2015
- ✓ Controlled O&M growth
- ✓ Balance Sheet and Cash Flow support investment program without equity issuance
- ✓ Substantial additional investment capacity
- ✓ Growth in PSE&G investments with contemporaneous/formula rate returns
- ✓ Consistent and strong cash flow from both Power and PSE&G
- ✓ Potential for accelerated and sustainable dividend growth

SI-SSA-0015-06527

Earnings increase of 7% exceeded guidance

SI-SSA-0015-06534

Substantial internal cash generation

supports our planned growth capital program and potential investment opportunities without the need for equity

PSEG 2015 - 2019E Sources and Uses

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$260M FROM 2015-2019
(2) OTHER CASH FLOW INCLUDES PSEG LI, HOLDINGS NET CASH FLOW, INVESTED CASH, AND PARENT SHORT-TERM DEBT
(3) POWER CASH INVESTMENT INCLUDES NUCLEAR FUEL AND EMISSION PURCHASES E = ESTIMATES.

Power's key credit metric remains strong

providing opportunity for incremental investment

- Increased contribution to earnings from the more stable regulated business
- Power's annual Cash From Operations and Funds From Operations each average ~$1.4B over the 2015 to 2017 period supported by:
  - Capacity Revenues
  - Hedged Generation
  - O&M Control
- Financial strength can be used to pursue future growth in both businesses beyond current plans

SI-SSA-0015-06536

E = ESTIMATE

Substantial Investment Capacity to pursue additional growth without the need for equity

Average Funds from Operations /Debt
2015 - 2017

	Power	PSEG
Estimate	~ 55%	~30%
Minimum Threshold	30%	Low - 20's

Total Incremental Investment Capacity
through 2017

Our incremental investment capacity can support over $6B in regulated investments

SI-SSA-0015-06537

Well Funded Pension due to our long term asset allocation strategy

Pension Fund Returns
for the periods ending December 2014

- 2014 Funded Ratio ~93%
- Cumulative pension contributions total less than $50M through 2017 (1)
- Modest pension expense in 2015 with pension income expected by 2017 given fully funded level

Total company pension expense of <$0.07 per share in 2015, expected return to pension income by 2017

SI-SSA-0015-06538

(1) REPRESENTS CONTRIBUTIONS TO QUALIFIED PENSION PLANS.

Controlling O&M growth, with manageable pension impacts and PSE&G continuing to grow its asset base

SI-SSA-0015-06539

(1) POWER EXCLUDES IMPACTS FROM STORM RECOVERY COSTS AND POTENTIAL RELATED INSURANCE PROCEEDS.

SI-SSA-0015-06542

PSEG Summary

- Our 2014 earnings of $2.76 exceeded our revised operating earnings guidance of $2.60 - $2.75 per share
- Continued third year of anticipated positive earnings trend in 2015 with operating earnings guidance of $2.75 to $2.95 per share
- Continued 5th straight year of expected double digit, 5 year growth in rate base
- Anticipated high single digit earnings growth at PSE&G on three-year basis from 2014 to 2017, driven by transmission investments and planned programs
- Power's continued focus on operational excellence, market expertise and financial strength delivers value in current price environment
- Strong Balance Sheet and Cash Flow support full capital program and new potential opportunities without the need for equity
- Our $0.08 per share dividend increase is consistent with our long history of returning cash to the shareholder through the common dividend, with potential for consistent and sustainable growth

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as competition for certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies and changes in customer behaviors, including energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-06566

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Income from Continuing Operations/Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. Slides A and B at the end of this presentation include a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

PSEG OVERVIEW

PSEG

We make things work for you.

SI-SSA-0015-06568

PSEG's Strategy – delivering results

Our businesses' focus on cost-effective, reliable operations yields strong cash flow

We are funding growth-oriented investments aligned with customer needs and state energy policies

We are enhancing the competitiveness of our environmentally well-positioned generation business

The results of our financial strategy support a credit profile capable of meeting our corporate objectives and providing sustained dividend growth for our shareholders

SI-SSA-0015-06569

Two complementary businesses

Strong asset platform, performing well and positioned for the future

PSEG

PSE&G	PSEG Power LLC
Electric & Gas Delivery and Transmission	**Regional Competitive Generation**
Strategy: Positioned to meet customers' needs as we respond to state and federal energy policy and economic growth objectives	**Strategy:** Fuel diverse fleet is geographically and environmentally well positioned, with investments to enhance competitiveness
Value Proposition: An $11.3 billion infrastructure program – focused on transmission – that is expected to produce double-digit rate base growth through 2016	**Value Proposition:** Provides substantial free cash flow in current environment and poised for price recovery
2013 — Assets $20B; Operating Earnings $612M	2013 — Assets $12B; Operating Earnings $710M

SI-SSA-0015-06570

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2013.
PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT, PSEG LONG ISLAND AND ENERGY HOLDINGS ACTIVITY.
SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS.

Delivering on commitments and pursuing opportunities for growth

Operational Excellence	• Power: Record 2013 output at Linden CCGT and Salem 2; nuclear capacity factor greater than 90% for 9th straight year • PSE&G: Mid-Atlantic Reliability Award (12th consecutive year) • PSEG Long Island: Went "live" on January 1, 2014 • PSEG: Cost-control benefits continue
Financial Strength	• Strong cash flows supported credit rating increases • Pension more than fully funded • Dividend increased
Disciplined Investment	• PSE&G ✓ Transmission capital program execution and growth ✓ Energy Strong infrastructure program underway ✓ Solar 4 All Extension and Solar Loan III programs • Power: Investments to enhance the fleet's competitiveness – 130 MW Nuclear uprate, 150 MW CCGT uprate and efficiency improvement

SI-SSA-0015-06571

Maintaining PSEG 2014 Operating Earnings Guidance

Reflects increased level of utility investment, pension savings and assumes normal weather and unit operations for the rest of year

SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. E = ESTIMATE.

SI-SSA-0015-06572

Operating Earnings Mix

Long term investment program has driven increased earnings contribution from stable, regulated business

Power's diverse fuel mix and dispatch flexibility continues to generate earnings and free cash flow

PSE&G's investment in transmission has diversified its asset base and, coupled with other investments and cost controls, supported compound annual earnings growth of ~18% over 2009 – 2013

SI-SSA-0015-06573

Maintaining a robust capital program focused on growth

PSEG 2009 - 2013 Capital Spending $11.3 Billion	PSEG 2014 - 2018E Capital Spending $13.1 Billion

NOTE: POWER 2009–2013 ACTUALS ARE RESTATED TO INCLUDE SOLAR CAPITAL SPEND. POWER CAPITAL SPENDING EXCLUDES NUCLEAR FUEL. E=ESTIMATE

SI-SSA-0015-06574

PSEG's business profile has been transformed through significant growth in utility capital spending

SI-SSA-0015-06575

Energy Strong Agreement recognizes benefits of system investments

- Energy Strong Agreement reached with all parties
  - ✓ Agreement recognizes the benefits of system investments that prevent or shorten outages
  - ✓ Supports $1.22 billion capital program over several years on reasonable terms: $1 billion recovered through accelerated, rate recovery mechanism
    - $820 million Electric
    - $400 million Gas
  - ✓ Allows PSE&G to earn a 9.75% ROE on the $1 billion recovered on accelerated basis
  - ✓ Requires PSE&G to file a base rate case by November 2017
  - ✓ Approved by the NJBPU in May 2014
- Over 100 New Jersey municipalities supported Energy Strong
- Energy Strong agreement clears path for PSE&G to begin the initial phase of this robust capital program

SI-SSA-0015-06576

PSEG Power – Our diverse fleet and flexible portfolio allow us to capture opportunities arising from market volatility

SI-SSA-0015-06578

PSEG

*AT THE BEGINNING OF EACH YEAR. **EXCLUDES BGSS.

Balance Sheet Strength

2009 – 2013: Reduced risk profile and transformed business mix

- Invested $8.4 billion in PSE&G
- Improved credit ratings
- Monetized and de-risked Holdings' portfolio

2014 – Forward: Strong cash flows and increasingly regulated business mix fully support:

- PSE&G's $11.3 billion approved investment program through 2018
- Consistent and sustainable dividend growth
- Additional investment capacity to deploy in opportunities beyond those in the current capital plan
- No need to issue equity

SI-SSA-0015-06579

PSEG Annual Dividend – A long history of growth and returning cash to shareholders with a financial position that provides opportunity for consistent and sustained growth

*INDICATED ANNUAL RATE.
**2014 PAYOUT RATIO REFLECTS THE MIDPOINT OF OPERATING EARNINGS GUIDANCE. E=ESTIMATE

SI-SSA-0015-06580

PSEG Q1 2014 Financial Highlights

- Strong Q1 Earnings

✓ Operating earnings of $1.01 vs. $0.85 per share in Q1 2013
✓ Power benefited from higher market pricing, market volatility and increased output
✓ Increased contribution to earnings from PSE&G's investment in transmission

- Maintaining 2014 operating earnings guidance of $2.55 - $2.75 per share

✓ Focused on maintaining operating efficiency and customer reliability
✓ PSE&G expected to grow at double-digit rate in 2014 and provide over 50% of operating earnings

- Executing existing 5-year, $6.8 billion transmission capital spending program on budget and on schedule

- Agreement on PSE&G's Energy Strong infrastructure program to invest $1.22 billion over 2014 – 2018

- Power recognized a liability in the quarter related to its discovery that it incorrectly calculated certain components of its cost-based bids for certain generating units in the PJM energy market, with resulting over-collection of revenues related to its fossil fleet. Power has notified FERC, PJM and the PJM Independent Market Monitor of this issue, which is still under review; we are unable to estimate the ultimate impact or predict any resulting penalties or other costs associated with the matter at this time

- Financial position remains strong

✓ Positive cash from Power and increasing cash flow from PSE&G supports dividend growth and funds capital spending program without the need to issue equity
✓ Increased common dividend to indicative annual rate of $1.48 per share in Q1 2014
✓ Debt as a percentage of capital was 41% at March 31, 2014

SI-SSA-0015-06581

Value Proposition

PSEG is positioned to **expand its investment in PSE&G** projects that provide reasonable, risk-adjusted returns, in ways that meet customer needs and state goals, given **strong cash flow of Power** and growing cash contribution from PSE&G.

PSEG will maintain a **strong financial profile** that provides the opportunity to achieve our growth objectives and maintains our **track record** of **returning cash to shareholders**.

PSEG

E = ESTIMATE

Energy Strong Agreement supports customers' needs in the aftermath of Superstorm Sandy

- Settled with NJBPU Staff and all other parties in May 2014 for $1.22 billion; approved by the NJBPU in May 2014
- Program addresses system resiliency and hardening by:
  - ✓ $620 million to raise, relocate or protect 29 switching and substations that were damaged by water in recent storms
  - ✓ $350 million to replace and modernize 250 miles of low-pressure, cast iron gas mains in or near flood areas
  - ✓ $100 million to create redundancy in the electric system, reducing outages when damage occurs
  - ✓ $100 million to deploy smart grid technologies to better monitor system operations to increase our ability to more swiftly deploy repair teams
  - ✓ $50 million to protect five natural gas metering stations and a liquefied natural gas station affected by Sandy or located in flood zones

SI-SSA-0015-06592

Over 70% of PSE&G's $11.3 billion investment program will be recovered through contemporaneous mechanisms

2014-2018E PSE&G Capital Spending by Recovery Method

$11.3 Billion

Clause Recovery Mechanisms

- Energy Strong / Solar / Energy Efficiency

FERC Formula Rates

- Transmission

Traditional Recovery Mechanisms

- Distribution Base Rates

SI-SSA-0015-06593

The Energy Strong impact to customer bills is expected to be fully offset

OUT-YEAR BGS/BGSS, SBC, AND DISTRIBUTION RATES HELD CONSTANT AT CURRENT 2014 RATES.
RATES RELATED TO ELECTRIC RESTRUCTURING: SECURITIZATION (STC), NON-UTILITY GENERATION CHARGE (NGC), & TRANSITIONAL ENERGY FACILITIES ASSESSMENT (TEFA), ARE REDUCED TO ZERO BY 2017. THE RGGI RECOVERY CHARGE (RRC), SOLAR PILOT RECOVERY CHARGE (SPRC), AND CAPITAL ECONOMIC STIMULUS INFRASTRUCTURE INVESTMENT PROGRAM EXTENSION (CIP II) BILL IMPACTS ARE INCLUDED IN THEIR RESPECTIVE GAS AND ELECTRIC BARS AND FORECASTED IN OUT-YEARS BASED UPON LATEST ESTIMATE. ENERGY STRONG BILL IMPACTS ARE BASED UPON SETTLEMENT.

SI-SSA-0015-06594

PSE&G TRANSMISSION

PSEG

We make things work for you.

SI-SSA-0015-06595

Transmission has delivered, and has grown to represent ~36% of rate base

Transmission represented ~36% of rate base at YE 2013 up from ~15% at YE 2009

SI-SSA-0015-06596

PSE&G's existing major transmission

investment program remains on schedule and on budget

Major Transmission Projects

	Approved ROE	Inclusion of CWIP in Rate Base	100% Recovery of Costs Due to Abandonment	Project Estimate Up To ($ Millions)	Expected In-service Date
Susquehanna-Roseland	12.93%	✓	✓	$790	June 2014 / June 2015
Northeast Grid Reliability	11.93%	✓	✓	$907	June 2015
North Central Reliability	11.68%	✓	✓	$390	June 2014
Burlington–Camden 230kV	11.68%	✓	✓	$399	Completed
Mickleton–Gloucester–Camden 230kV	11.68%	✓	✓	$435	June 2015

SI-SSA-0015-06597

Susquehanna-Roseland consists of constructing 150 miles of 500kV circuit (46 miles in NJ) with two new 500kV GIS switching stations at Roseland and Hopatcong

Project Estimate Up To*	Through Year-end 2013	Expected In-service Date
$790M	$661M	June 2014 / June 2015

- PJM RTEP project b0489
- ROE of 12.93% (including 1.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Improves reliability and reduces congestion

Project Status: Major permitting & siting complete, outside plant construction in progress, inside plant construction is complete and commissioning is in progress

SI-SSA-0015-06598

*PROJECT IS SHARED WITH PPL. PROJECT ESTIMATE REPRESENTS PSE&G'S CONSTRUCTION RESPONSIBILITY FOR THE NJ PORTION.

Northeast Grid Reliability consists of upgrading approximately 50 overhead circuit miles of 138kV transmission line to 230kV, constructing ~18 miles of new underground 230kV lines, and converting/upgrading 12 existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$907M	$228M	June 2015

- PJM RTEP project b1304
- ROE of 11.93% (including 0.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment
- Project estimate has increased ~$12M associated with hardening related scope changes as a result of Superstorm Sandy

Customer Benefit: Improves reliability and increases transfer capability

Project Status: Nearing completion of engineering/design and licensing/permitting phase. Outside and inside plant construction are in progress

SI-SSA-0015-06599

North Central Reliability consists of upgrading 55 circuit miles of 138kV transmission line to 230kV, and converting six existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$390M	$349M	June 2014

- PJM RTEP project b1154
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Improves power quality and increases transfer capability

Project Status: Major permitting & siting complete, outside and inside plant construction is essentially complete, commissioning is in progress

SI-SSA-0015-06600

Burlington-Camden 230kV consists of upgrading 37 circuit miles (30 miles of overhead and 7 miles of underground) of 138kV transmission line to 230kV, converting the existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$399M	$301M	Completed

- PJM RTEP project b1156
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Addresses voltage reliability and increases transfer capability

Project Status: In-service April 2014

SI-SSA-0015-06601

Mickleton-Gloucester-Camden 230kV

consists of upgrading 10 circuit miles of overhead transmission, installing ~16 circuit miles of new 230kV underground, 10 circuit miles of new 230kV overhead, and modifications/upgrades at five existing stations

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$435M	$122M	June 2015

- PJM RTEP project b1398
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Addresses thermal reliability and increases transfer capability

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-06602

Bergen-Linden Corridor is a recently approved project which will provide a double-circuit 345kV line to maintain reliability

Project Estimate Up To	Through Year-end 2013	Expected Completion Date
$1,200M	-	June 2018

- PJM RTEP project b2436
- 30 miles of underground cable
  - New ~ 23 miles
  - Reconductor (Upgrade of 138 to 345) ~7 miles
- 13 miles of double circuit overhead conductor (replacing double circuit 138 with double circuit 345)
- 11 station upgrades to 345kV

Customer Benefit: Addresses thermal and short-circuit reliability

Project Status: Engineering

SI-SSA-0015-06603

Planned transmission spend of $6.8 billion

is driven by PJM reliability projects, 69kV conversions and life-cycle replacement projects

SI-SSA-0015-06604

PSE&G's processes and culture are the foundation for project execution success

People

- Diverse, well-rounded team
- Culture with a focus for on-time, on-scope and on-budget execution
- Successful recruitment, development and retention strategies
- Strong unions and supplier relationships

Process

- Cradle to grave project execution organization
- Processes designed to be scalable, repeatable and improvable
- Emphasis on best practices and lessons learned sharing
- Improvements driven by performance metric management

Environment

- Collaborative relationship with regulatory agencies
- Innovative design and construction practices to minimize environmental impacts
- Robust environmental compliance system

SI-SSA-0015-06605

PSE&G's demonstrated ability to successfully execute large projects leaves us well positioned to pursue new opportunities

- Future RTEP as identified by PJM
- Near-term participation in RTO competitive open planning windows
  - PJM
  - MISO
  - NYISO
- Anticipate participating in future competitive solicitations under FERC 1000

SI-SSA-0015-06606

PSE&G's 2014 operating earnings

PSEG LONG ISLAND

PSEG

We make things work for you.

SI-SSA-0015-06608

PSEG was selected to operate Long Island Power Authority's (LIPA) electric transmission and distribution system for 12 years starting in 2014

- Pursuant to the Operating Services Agreement (OSA), all expenses and capital costs to operate the system are pre-funded by LIPA and passed through to their customers
- Compensation consists of a fixed fee and an incentive fee
  - Fixed compensation fee for 2014 with scheduled increases in 2015 and 2016
  - Starting in 2015 PSEG Energy Resources and Trading (ER&T) begins managing fuel/energy contracts
  - PSEG Long Island expected to contribute $0.03 to operating earnings in 2014 increasing to $0.07 per share in 2016 including contribution at ER&T
- Potential for an 8-year extension of the OSA

SI-SSA-0015-06609

PSEG Long Island commenced operations

on January 1, 2014

Key elements of Operating Services Agreement

Increased PSEG scope and control	Use of PSEG brand as PSEG Long Island	3-Year rate freeze (2013-2015)
Performance metrics	NY Department of Public Service oversight	Potential for "Utility 2.0" investment

Early performance

Successful transition to PSEG Long Island	Stakeholder communication	Winter storm response

SI-SSA-0015-06610

PSEG POWER

PSEG

We make things work for you.

SI-SSA-0015-06611

PSEG Power strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-06612

Agenda

- Delivering Value
- Fleet Advantage, Location, Flexibility and Fuel Diversity
- Nuclear Operation
- Fossil Operation
- Financial Performance
- Expansion Opportunities
- Regulatory
- Engaged Workforce

SI-SSA-0015-06613

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus Fleet Diversity/Efficiency Focus	Financial/Economic Focus	Regulatory Focus
• Nuclear units continue to achieve strong operational results, operating at over 90% capacity factors for the 9th consecutive year • Fleet diversity across the dispatch curve and fuel types provide flexibility to meet changing conditions • Linden CCGT and Salem 2 nuclear unit achieved record output in 2013	• "Getting the most out of existing fleet" • Locational advantage • O&M control programs have delivered a CAGR of 1.6% between 2009 and 2014 • Sites offer competitive advantage for expansion	• Strong regulatory performance • Industry leadership in the changing business environment

SI-SSA-0015-06614

PSEG Power Delivering on priorities

Operational Excellence	• Maximize value of existing generating plants through implementation of the Operational Excellence Model (OEM) • Workforce engagement and development	• OEM implemented and achieving measures • Resource sharing program initiated
Financial Strength	• Deliver on Business Plan Commitments • Maintain competitive markets and improve constituent communication on issues important to Power	• Exceeded earnings guidance in 2013 • Ongoing effort in key markets showing success • Successful court outcome against subsidized generation
Disciplined Investment	• Successfully complete the Advanced Gas Path (AGP) uprates • Seek new opportunities in target markets (PJM, ISO-NE, NYISO) • Develop our renewables business (solar) • Maintain new nuclear option by successfully managing the Early Site Permit (ESP) process	• Accelerated schedule for AGP to maximize opportunity • LIPA contract for fuel and generation dispatch • Completed 19 MW solar project, 4 MW project under construction, established robust pipeline • Nuclear ESP is expected in 2015

SI-SSA-0015-06615

PSEG Power met 2013 challenges

Storm and weather challenges	+	Market challenges	=	Value delivered
• SuperStorm Sandy impacted our generating sites • Cold and hot weather extremes created challenging operating environment, but also presented opportunities		• Unit outages and planned transmission outages resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by economy		• Optimized unit dispatch across fleet during storm recovery • Expedited return from storm outages, restored margin opportunities • High availability when needed • Achieved fuel cost savings • Captured value through coal/gas switching, unit flexibility • Coal & oil sales optimized inventory • Flexibility of portfolio captured real-time basis opportunities

SI-SSA-0015-06616

PSEG Power exceeded 2013's earnings guidance

OPERATING EARNINGS FOR PSEG POWER IN 2013; SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. *ASSETS TRANSFERRED TO POWER AT YEAR-END 2013.

SI-SSA-0015-06617

PSEG Power has generating assets

in three competitive markets

- Assets near loads
- Low cost portfolio
- Fuel flexibility with gas cost advantage
- Poised to benefit from volatility in real-time markets
- Fleet will maintain diversity and efficiency after HEDD
- Most sites suitable for expansion

SI-SSA-0015-06618

PSEG Power will maintain diversity and efficiency after a realignment of the fleet due to HEDD

Objective 2013 → 2017

- Maintain fuel diversity
- Maintain load-serving capability
- Maintain low cost structure
- Environmental improvement
- Peach Bottom (PB) uprate
- Advanced Gas Path (AGP)
- Kalaeloa and Solar transfer adds ~200MW of capacity

Fuel Diversity

Energy Produced

SI-SSA-0015-06619

Power's PJM assets along the dispatch curve reduce the risk of serving full requirement load contracts and can take advantage of volatile market conditions

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel flexibility for >60% of fleet

SI-SSA-0015-06620

PSEG Power Nuclear is a critical element of our success

Hope Creek	Salem Units 1 and 2	Peach Bottom Units 2 and 3

• Operated by PSEG Nuclear
• PSEG Ownership: 100%
• Technology: Boiling Water Reactor
• Total Capacity: 1,178 MW
• Owned Capacity: 1,178 MW
• License Expiration: 2046
• Next Refueling
  • Spring 2015
	• Operated by PSEG Nuclear
	• PSEG Ownership: 57%
	• Technology: Pressurized Water Reactor
	• Total Capacity: 2,365 MW
	• Owned Capacity: 1,358 MW
	• License Expiration: 2036 and 2040
	• Next Refueling
	  • Unit 1 -- Fall 2014
	  • Unit 2 – Spring 2014
		• Operated by Exelon
		• PSEG Ownership: 50%
		• Technology: Boiling Water Reactor
		• Total Capacity: 2,251 MW
		• Owned Capacity: 1,125 MW
		• License Expiration: 2033 and 2034
		• Next Refueling
		  • Unit 2 – Fall 2014
		  • Unit 3 – Fall 2015
		• Uprate: 130 MW in 2015/2016

SI-SSA-0015-06621

PSEG Power Nuclear is core to the fleet and has competitive advantages

- Continued strong nuclear operations: nine consecutive years of >90% capacity factor
- Significant earnings contributor
- Top quartile of cost performance/MWh
- One third new staff, recruitment of the best new and experienced talent, and attractive training program
- Fukushima action plan in response to NRC staff review
  - ✓ FLEX* plan submitted with implementation starting with Fall outage
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

*STRATEGY KNOWN AS THE "DIVERSE AND FLEXIBLE MITIGATION CAPABILITY" OR FLEX, ADDRESSES RECOMMENDATIONS OF THE NUCLEAR REGULATORY COMMISSION'S FUKUSHIMA TASK FORCE.

SI-SSA-0015-06622

Power's nuclear fleet is well positioned

with significantly lower-than-average US cost structure

*SOURCE: ELECTRIC UTILITY COST GROUP
** SOURCE: PSEG NUCLEAR

SI-SSA-0015-06623

PSEG Power's Fossil Fleet Performance

has shown improvement

- Fossil Capacity Factor rebounded with market
- Peaking Units maintain high start success

- Coal EFORp improving
- CC EFORp less than 1% in 2013
- Consistent recipient of EFORp payments

SI-SSA-0015-06624

PSEG

*LM6000 AND 7EA UNITS

PSEG Power improvements achieved in combined cycle fleet efficiency

Combined Cycle Operating Heat Rate

Actions Taken to Create Value

- Operational Excellence Model
- Training programs
- Unit testing initiative
- Outage work to restore efficiency
- Second gas line at BEC

- Heat rate improvement 2008-2013 translates to meaningful fuel savings at current market prices

- Advanced Gas Path (AGP) investments 2014 through 2018 to provide additional fuel savings

SI-SSA-0015-06625

Investing to expand CCGT capacity and improve efficiency

PSEG Power - CCGT Uprate Project

- Expand Power's CCGT fleet, one of the largest gas-fired portfolios in PJM, with incremental base and peaking MWs
- Retrofit Bergen, Linden and BEC with Advanced Gas Path (AGP) components at cost of ~$120M over 2014 - 2018

AGP Project Benefits

- ✓ CCGT capacity uprates of ~150 MW:
  - Linden (63 MW – Completed)
  - Bergen (31 MW – 2015)
  - BEC (58 MW – 2017-2018)
- ✓ Increases Efficiency - Combined Cycle (CC) heat rate improvement ~ 1.2%
- ✓ Upgrades technology and extends maintenance outage cycles

SI-SSA-0015-06626

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing
- Cost control through testing coordination program

SI-SSA-0015-06627

PSEG Power's capital expenditures for environmental requirements are essentially complete*

*BASED ON CURRENTLY KNOWN AND QUANTIFIABLE ENVIRONMENTAL REQUIREMENTS. E=ESTIMATE

SI-SSA-0015-06628

PSEG Power is well-positioned for growth when market conditions warrant

Available locations		Our sites possess infrastructure advantages
• Bergen • Burlington • Essex • Edison • Kearny	• Hudson • Linden • Sewaren • Bridgeport Harbor	• Electric Transmission Interconnections • Access to Gas Pipelines • Space • Emissions

Directly engage with regulatory agencies

SI-SSA-0015-06634

PSEG Power: Enjoys real and sustainable advantages in the merchant generation space

Market Review

- Gas, Power, Spark Spreads
- Regulatory construct

PSEG's Competitive Advantage

- Fuel flexibility
- Heat Rate diversity
- Access to Marcellus Shale gas
- Asset flexibility

PSEG's Sustainable Advantage

- Positive cash-flow hedging into the long-term
- Robust capacity market pricing in most concentrated load pocket in US
- Long-term access to discounted Marcellus gas

SI-SSA-0015-06635

Market Review: Prices have stabilized

- Energy and gas prices appear to have stabilized
- Environmental restrictions may tighten market
- Insufficient gas infrastructure continues to place upward pressure on fuel prices during seasonal peaks

SI-SSA-0015-06636

F=FORWARDS AS OF 12/31/2013

Market Review: New generation in PJM not keeping pace with coal retirements

Cumulative Generation Retirements*

Forecast Reserve Margin (PJM January 2014)

- PJM forecasts a declining Reserve Margin through 2018, which may improve forward prices
- Brattle estimates energy prices could rise at least $3-4/MWh from today's prices

SI-SSA-0015-06637

PSEG

*PJM AS OF FEBRUARY 20, 2014
SOURCE OF CHART DATA: PJM

Market Review: Regulatory framework showing signs of improvement

	ISSUE / POLICY	REGULATORY GAINS
PJM	SUBSIDIZED GENERATION (NJ and MD)	• Comprehensively defeated in federal court (appeals currently pending)
	DEMAND RESPONSE RULES	• PJM and ISO-NE enacted stricter rules of eligibility and deployment
	ENERGY PRICE FORMATION	• Concerted drive to improve price formation for generation and ancillary services • Waiver of price caps during extreme market conditions
NYISO	TRANSMISSION	• Significant progress made to relieve bottling of upstate generation
ISO-NE	CAPACITY	• Improvement in price formation to better reflect tight supply conditions • Implementation of sloping demand curve in Forward Capacity Auction (FCA) 9
	ENERGY	• Demand response required to participate in Day Ahead markets
FEDERAL	GAS to ELECTRIC	• Better coordination between pipelines and ISO's will promote efficiency
	ENVIRONMENTAL REGULATIONS	• HEDD, HAPS/MACT may lead to tightening of supply in 2015+ timeframe

SI-SSA-0015-06638

Competitive Advantage: Heat Rate Diversity & Flexible Dispatch

SI-SSA-0015-06639

Competitive Advantage: PSEG's extensive gas asset portfolio gives unparalleled access to Marcellus Shale gas

SI-SSA-0015-06640

Competitive Advantage: ~25% of Power's gas for generation comes from Marcellus

- Our combined cycle and peaking assets have been able to take advantage of locational gas price volatility driven by production and logistical constraints
- Lower cost shale supply provides additional savings during periods of lower residential gas demand

SI-SSA-0015-06641

Competitive Advantage: Locational advantage from short term basis volatility

PS Zone Annual Basis to PJM-W

PS Zone Day Ahead On Peak Monthly Basis to PJM-W

- Annual basis benefits baseload units
- Intermediate units flexible to seasonal opportunities
- Combined Cycle and Peaking units positioned to optimize daily and hourly volatility

PS Zone Real Time On Peak Hourly Basis to PJM-W

SI-SSA-0015-06642

ANNUAL FORWARD BASIS TO PJM-WEST AS OF 12/31/2013.

Competitive Advantage: Trading & Asset Flexibility

PSEG Zone LMP's on January 7, 2014

On Peak Basis to PJM-W on January 7, 2014

Hourly Generation and Load on January 7, 2014

- High gas market at $58/MMbtu setting power prices in PS zone on 1/7/14
- Higher basis to generation
- Base load and load following generation sufficient to cover load and hedge obligations
- Additional steam and peaking generation available above day ahead commitment to gain value from real time market
- Fuel flexibility with coal/gas/oil optionality among available units

SI-SSA-0015-06643

Competitive Advantage: Trading & Asset Flexibility

PSEG Zone LMP's on July 18, 2013

On Peak Basis to PJM-W on July 18, 2013

Hourly Generation and Load on July 18, 2013

- High demand in constrained northern NJ
- Base load and load following generation sufficient to cover load and hedge obligations
- Additional generation available above obligations to gain value from real time market spikes
- Gas advantage in procuring low cost shale supply to capture savings

SI-SSA-0015-06644

Sustainable Advantage: BGS Auction provides excellent opportunity to forward hedge our generation

BGS sales account for about a quarter of our forward portfolio of hedges

SI-SSA-0015-06645

PSEG

$/MWH; BGS PRICES REFLECT PSE&G ZONE; RESULTS FOR 2012-2014 WILL BE THE NEW BLENDED PRICES BEGINNING JUNE 1, 2014.

Sustainable Advantage: Hedging strategy designed to protect gross margin while leveraging the portfolio

		Apr-Dec 2014	2015	2016
Base Load (Nuclear and Base Load Coal)	Volume TWh	26	35	36
	% Hedged	100%	75-80%	35-40%
	Price $/MWh	$49	$51	$51
Intermediate Coal, Combined Cycle, Peaking	Volume TWh	18	21	19
	% Hedged	30-35%	0%	0%
	Price $/MWh	$49	$51	$51
Total	Volume TWh	42-44	54-56	54-56
	% Hedged	70-75%	50-55%	25-30%
	Price $/MWh	$49	$51	$51

Forecast output: Increased to reflect improvement in economic dispatch

HEDGE PERCENTAGES AND PRICES AS OF MARCH 31, 2014. REVENUES OF FULL REQUIREMENT LOAD DEALS BASED ON CONTRACT PRICE, INCLUDING RENEWABLE ENERGY CREDITS, ANCILLARY, AND TRANSMISSION COMPONENTS BUT EXCLUDING CAPACITY. HEDGES INCLUDE POSITIONS WITH MTM ACCOUNTING TREATMENT AND OPTIONS. EXCLUDES SOLAR AND KALAELOA.

SI-SSA-0015-06646

Sustainable Advantage: PJM's capacity market continues to recognize locational value

RPM Auction Results

PSEG

*PSEG POWER'S AVERAGE PRICES AND CLEARED CAPACITY (MW) REFLECT BASE AND INCREMENTAL RPM AUCTION RESULTS. DELIVERY YEAR RUNS FROM JUNE 1 TO MAY 31 OF THE NEXT CALENDAR YEAR.

Sustainable Advantage: Fuel advantage continues throughout the curve

Forward curve shows that Marcellus shale supply averages over $1.50/MMbtu discount year-round through 2018

SI-SSA-0015-06648

2013 AVERAGE 6/1/13-12/31/13; F= FORWARDS AS OF 12/31/13. LEIDY BASIS FROM ICE/BROKER QUOTES

PSEG Power's Value Proposition

- Well-positioned fleet of merchant generating assets concentrated in PJM market
- Advantaged by low cost structure, fuel diversity and dispatch flexibility
- Low environmental capital requirements
- Capacity uprates to enhance value of nuclear and combined cycle stations
- Consistent hedging strategy recognizes asset flexibility
- Continue to meet commitments and to provide free cash flow

PSEG FINANCIAL REVIEW & OUTLOOK

PSEG

We make things work for you.

SI-SSA-0015-06650

Strong financial position to support our business initiatives

2013 Financial Position

- ✓ Exceeded upwardly revised 2013 earnings guidance
- ✓ Pension fully funded
- ✓ Strong balance sheet and upgraded credit ratings

2014 and Beyond

- ✓ Continued positive earnings trend in 2014
- ✓ Controlled O&M growth
- ✓ Balance Sheet and Cash Flow support investments without equity issuance
- ✓ Growth in PSE&G investments with contemporaneous returns
- ✓ Diversified Power assets with a balanced hedge profile
- ✓ Growth in PSE&G Cash from Operations, with continued significant Cash from Operations/FFO at Power
- ✓ Increased Dividend by $0.04 to indicative annual rate of $1.48 for 2014
- ✓ Opportunity for consistent and sustainable dividend growth

SI-SSA-0015-06651

Exceeded upwardly revised guidance

in both businesses

SI-SSA-0015-06652

In 2013, Power had significant free cash flow

SI-SSA-0015-06653

In 2013, PSE&G invested over $2B, using $1.4B of internally generated cash flow and debt, while maintaining its capital structure

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$220 MILLION.

SI-SSA-0015-06654

In 2013, Power's Free Cash Flow supported PSE&G's capital program and shareholder dividend

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$220 MILLION.
(2) OTHER CASH FLOW INCLUDES HOLDINGS NET CASH FLOW AND PARENT CASH.

SI-SSA-0015-06655

PSEG growth spend, including Energy Strong, of ~$6.4B represents ~76% of total investment

E = ESTIMATE; CAPITAL INCLUDES AFUDC AND IDC.

SI-SSA-0015-06656

PSE&G's Capital Program drives double-digit growth in rate base and earnings over the 2013 to 2016 period

SI-SSA-0015-06657

PSE&G's Cash from Operations and Power's Free Cash Flow support growth investments without the need for new equity

PSEG Sources and Uses

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$500M FROM 2014-2016
(2) OTHER CASH FLOW INCLUDES PSEG LI, HOLDINGS NET CASH FLOW, CASH, AND SHORT TERM DEBT
E = ESTIMATE

SI-SSA-0015-06658

Power's key credit metric supports incremental investment opportunities

- Increased contribution to earnings from the more stable regulated business allows us to reset Power's FFO/Debt threshold from 35% to 30%, providing additional financial flexibility
- Power's annual Cash From Operations and Funds From Operations each average ~$1.1B over the 2014 to 2016 period supported by:
  - Capacity Revenues
  - Hedged Generation
  - O&M Control
- Financial strength can be used to pursue future growth in both businesses beyond current plans

SI-SSA-0015-06659

Pension: Our Long Term Asset allocation strategy resulted in a ~17% increase in pension assets during 2013

PBO Funded Ratio	83%			Fully Funded Pension →	106%

SI-SSA-0015-06660

Our Pension Management is expected to result in pension income in 2014 and over the planning horizon

SI-SSA-0015-06664

PSEG Summary

- Our 2013 earnings of $2.58 exceeded our upwardly revised operating earnings guidance of $2.40 - $2.55 per share
- Double digit earnings growth at PSE&G on one and three year basis from 2013 to 2016, driven by transmission investments and approved programs
- Power's continued focus on operational excellence, market expertise and financial strength delivers value in current price environment
- Strong Balance Sheet and Cash Flow support full capital program and new potential opportunities without the need for equity
- Long history of returning cash to the shareholder through the common dividend, with opportunity for consistent and sustainable growth

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as competition for certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies, and
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response.

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Income from Continuing Operations/Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. Slides A and B at the end of this presentation include a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

PSEG OVERVIEW

Caroline Dorsa

EXECUTIVE VICE PRESIDENT AND
CHIEF FINANCIAL OFFICER

Kathleen Lally

VICE PRESIDENT –
INVESTOR RELATIONS

PSEG

We make things work for you.

SI-SSA-0015-06685

PSEG's Strategy – delivering results

Our businesses' focus on cost-effective, reliable operations yields strong cash flow

We are funding growth-oriented investments aligned with customer needs and state energy policies

We are enhancing the competitiveness of our environmentally well-positioned generation business

The results of our financial strategy support a credit profile capable of meeting our corporate objectives and providing sustained dividend growth for our shareholders

SI-SSA-0015-06686

Two complementary businesses

Strong asset platform, performing well and positioned for the future

PSEG

PSE&G	PSEG Power LLC
Electric & Gas Delivery and Transmission	**Regional Competitive Generation**
Strategy: Positioned to meet customers' needs as we respond to state and federal energy policy and economic growth objectives **Value Proposition:** An $11.3 billion infrastructure program – focused on transmission – that is expected to produce double-digit rate base growth through 2016	**Strategy:** Fuel diverse fleet is geographically and environmentally well positioned, with investments to enhance competitiveness **Value Proposition:** Provides substantial free cash flow in current environment and poised for price recovery
2013 — Assets $20B Operating Earnings $612M	2013 — Assets $12B Operating Earnings $710M

SI-SSA-0015-06687

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2013.
PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT, PSEG LONG ISLAND AND ENERGY HOLDINGS ACTIVITY.
SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS.

Delivering on commitments and pursuing opportunities for growth

Operational Excellence	• Power: Record 2013 output at Linden CCGT and Salem 2; nuclear capacity factor greater than 90% for 9th straight year • PSE&G: Mid-Atlantic Reliability Award (12th consecutive year) • PSEG Long Island: Went "live" on January 1, 2014 • PSEG: Cost-control benefits continue
Financial Strength	• Strong cash flows supported credit rating increases • Pension more than fully funded • Dividend increased
Disciplined Investment	• PSE&G ✓ Transmission capital program execution and growth ✓ Energy Strong infrastructure program underway ✓ Solar 4 All Extension and Solar Loan III programs • Power: Investments to enhance the fleet's competitiveness – 130 MW Nuclear uprate, 150 MW CCGT uprate and efficiency improvement

SI-SSA-0015-06688

PSEG 2014 Operating Earnings expected to be at the upper end of guidance range

Reflects increased level of utility investment, pension savings and assumes normal weather and unit operations for the rest of year

SI-SSA-0015-06689

PSEG

SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. E = ESTIMATE.

Operating Earnings Mix

Long term investment program has driven increased earnings contribution from stable, regulated business

Power's diverse fuel mix and dispatch flexibility continues to generate earnings and free cash flow

PSE&G's investment in transmission has diversified its asset base and, coupled with other investments and cost controls, supported compound annual earnings growth of ~18% over 2009 – 2013

SI-SSA-0015-06690

PSEG

Maintaining a robust capital program focused on growth

PSEG 2009 - 2013 Capital Spending $11.3 Billion	PSEG 2014 - 2018E Capital Spending $13.1 Billion

NOTE: POWER 2009–2013 ACTUALS ARE RESTATED TO INCLUDE SOLAR CAPITAL SPEND. POWER CAPITAL SPENDING EXCLUDES NUCLEAR FUEL. E=ESTIMATE

SI-SSA-0015-06691

PSEG's business profile has been transformed through significant growth in utility capital spending

SI-SSA-0015-06692

Energy Strong Agreement recognizes benefits of system investments

- Energy Strong Agreement reached with all parties
  - ✓ Agreement recognizes the benefits of system investments that prevent or shorten outages
  - ✓ Supports $1.22 billion capital program over several years on reasonable terms: $1 billion recovered through accelerated, rate recovery mechanism
    - $820 million Electric
    - $400 million Gas
  - ✓ Allows PSE&G to earn a 9.75% ROE on the $1 billion recovered on accelerated basis
  - ✓ Requires PSE&G to file a base rate case by November 2017
  - ✓ Approved by the NJBPU in May 2014
- Over 100 New Jersey municipalities supported Energy Strong
- Energy Strong agreement clears path for PSE&G to begin the initial phase of this robust capital program

SI-SSA-0015-06693

PSEG Power – Value-advantaged through asset diversity, fuel flexibility, location and installed environmental controls

Fuel Diversity
Total MW: 13,450

Energy Produced
Total GWh: 54,264

Energy Market Served
Total MW: 13,450

- Gas
- Pumped Storage

SI-SSA-0015-06694

Balance Sheet Strength

2009 – 2013: Reduced risk profile and transformed business mix

- Invested $8.4 billion in PSE&G
- Improved credit ratings
- Monetized and de-risked Holdings' portfolio

2014 – Forward: Strong cash flows and increasingly regulated business mix fully support:

- PSE&G's $11.3 billion approved investment program through 2018
- Consistent and sustainable dividend growth
- Additional investment capacity to deploy in opportunities beyond those in the current capital plan
- No need to issue equity

SI-SSA-0015-06695

PSEG Annual Dividend – A long history of growth and returning cash to shareholders with a financial position that provides opportunity for consistent and sustained growth

*INDICATED ANNUAL RATE.
**2014 PAYOUT RATIO REFLECTS THE MIDPOINT OF OPERATING EARNINGS GUIDANCE. E=ESTIMATE

SI-SSA-0015-06696

PSEG Q2 2014 Financial Highlights

- **Earnings on Track**
  - ✓ Operating earnings of $0.49 vs. $0.48 per share in Q2 2013
  - ✓ Increased earnings contribution from PSE&G's investment in Transmission
  - ✓ Expect 2014 Operating Earnings to be at the upper end of the $2.55 to $2.75 per share guidance range – assuming normal weather and plant operations for the balance of the year
- **Operating Review**
  - ✓ PSEG Power output down 5% vs. Q2 2013 from Linden and Salem 2 outages, partially offset by improvement in coal generation
  - ✓ PSE&G placed the 230 kV North Central Reliability transmission project in service
  - ✓ Power's fleet fully restored from storm outages
- **PSEG Disciplined Capital Investment**
  - ✓ BPU approved $1.22 billion investment in PSE&G's Energy Strong infrastructure program
  - ✓ PJM deferred a final decision on its recommended solution, to be built by PSE&G, for the Artificial Island project via FERC 1000 competitive bidding process
- **Market Developments**
  - ✓ Recent EPA actions on 316(b) and GHGs

SI-SSA-0015-06697

*SEE SLIDE B FOR ITEMS EXCLUDED FROM NET INCOME TO RECONCILE TO OPERATING EARNINGS

Value Proposition

PSEG is positioned to **expand its investment in PSE&G** projects that provide reasonable, risk-adjusted returns, in ways that meet customer needs and state goals, given **strong cash flow of Power** and growing cash contribution from PSE&G.

PSEG will maintain a **strong financial profile** that provides the opportunity to achieve our growth objectives and maintains our **track record** of **returning cash to shareholders**.

PSEG

E = ESTIMATE

Energy Strong Agreement supports customers' needs in the aftermath of Superstorm Sandy

- Settled with NJBPU Staff and all other parties in May 2014 for $1.22 billion; approved by the NJBPU in May 2014
- Program addresses system resiliency and hardening by:
  - ✓ $620 million to raise, relocate or protect 29 switching and substations that were damaged by water in recent storms
  - ✓ $350 million to replace and modernize 250 miles of low-pressure, cast iron gas mains in or near flood areas
  - ✓ $100 million to create redundancy in the electric system, reducing outages when damage occurs
  - ✓ $100 million to deploy smart grid technologies to better monitor system operations to increase our ability to more swiftly deploy repair teams
  - ✓ $50 million to protect five natural gas metering stations and a liquefied natural gas station affected by Sandy or located in flood zones

SI-SSA-0015-06708

Over 70% of PSE&G's $11.3 billion investment program will be recovered through contemporaneous mechanisms

2014-2018E PSE&G Capital Spending by Recovery Method

$11.3 Billion

Clause Recovery Mechanisms

FERC Formula Rates

- Transmission

Traditional Recovery Mechanisms

- Distribution Base Rates

SI-SSA-0015-06709

The Energy Strong impact to customer bills is expected to be fully offset

OUT-YEAR BGS/BGSS, SBC, AND DISTRIBUTION RATES HELD CONSTANT AT CURRENT 2014 RATES.
RATES RELATED TO ELECTRIC RESTRUCTURING: SECURITIZATION (STC), NON-UTILITY GENERATION CHARGE (NGC), & TRANSITIONAL ENERGY FACILITIES ASSESSMENT (TEFA), ARE REDUCED TO ZERO BY 2017. THE RGGI RECOVERY CHARGE (RRC), SOLAR PILOT RECOVERY CHARGE (SPRC), AND CAPITAL ECONOMIC STIMULUS INFRASTRUCTURE INVESTMENT PROGRAM EXTENSION (CIP II) BILL IMPACTS ARE INCLUDED IN THEIR RESPECTIVE GAS AND ELECTRIC BARS AND FORECASTED IN OUT-YEARS BASED UPON LATEST ESTIMATE. ENERGY STRONG BILL IMPACTS ARE BASED UPON SETTLEMENT.

SI-SSA-0015-06710

PSE&G TRANSMISSION

PSEG

We make things work for you.

SI-SSA-0015-06711

Transmission has delivered, and has grown to represent ~36% of rate base

Transmission represented ~36% of rate base at YE 2013 up from ~15% at YE 2009

SI-SSA-0015-06712

PSE&G's existing major transmission

investment program remains on schedule and on budget

Major Transmission Projects

	Approved ROE	Inclusion of CWIP in Rate Base	100% Recovery of Costs Due to Abandonment	Project Estimate Up To ($ Millions)	Expected In-service Date
Susquehanna-Roseland	12.93%	✓	✓	$790	June 2014 / June 2015
Northeast Grid Reliability	11.93%	✓	✓	$907	June 2015
North Central Reliability	11.68%	✓	✓	$390	Completed
Burlington–Camden 230kV	11.68%	✓	✓	$399	Completed
Mickleton–Gloucester–Camden 230kV	11.68%	✓	✓	$435	June 2015

SI-SSA-0015-06713

Susquehanna-Roseland consists of constructing 150 miles of 500kV circuit (46 miles in NJ) with two new 500kV GIS switching stations at Roseland and Hopatcong

Project Estimate Up To*	Through Year-end 2013	Expected In-service Date
$790M	$661M	June 2014 / June 2015

- PJM RTEP project b0489
- ROE of 12.93% (including 1.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Improves reliability and reduces congestion

Project Status: The eastern part of line from Hopatcong to Roseland, NJ in service April 2014; NJ construction planned to be completed in Q3 2014. PA portion outside plant construction in progress. Western portion in NJ and the PA portion is planned to go in service June 2015.

SI-SSA-0015-06714

*PROJECT IS SHARED WITH PPL. PROJECT ESTIMATE REPRESENTS PSE&G'S CONSTRUCTION RESPONSIBILITY FOR THE NJ PORTION.

Northeast Grid Reliability consists of upgrading approximately 50 overhead circuit miles of 138kV transmission line to 230kV, constructing ~18 miles of new underground 230kV lines, and converting/upgrading 12 existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$907M	$228M	June 2015

- PJM RTEP project b1304
- ROE of 11.93% (including 0.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment
- Project estimate has increased ~$12M associated with hardening related scope changes as a result of Superstorm Sandy

Customer Benefit: Improves reliability and increases transfer capability

Project Status: Nearing completion of engineering/design and licensing/permitting phase. Outside and inside plant construction are in progress

SI-SSA-0015-06715

North Central Reliability consists of upgrading 55 circuit miles of 138kV transmission line to 230kV, and converting six existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$390M	$349M	Completed

- PJM RTEP project b1154
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Improves power quality and increases transfer capability

Project Status: In service April 2014

SI-SSA-0015-06716

Burlington-Camden 230kV consists of upgrading 37 circuit miles (30 miles of overhead and 7 miles of underground) of 138kV transmission line to 230kV, converting the existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$399M	$301M	Completed

- PJM RTEP project b1156
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Addresses voltage reliability and increases transfer capability

Project Status: In service April 2014

SI-SSA-0015-06717

Mickleton-Gloucester-Camden 230kV

consists of upgrading 10 circuit miles of overhead transmission, installing ~16 circuit miles of new 230kV underground, 10 circuit miles of new 230kV overhead, and modifications/upgrades at five existing stations

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$435M	$122M	June 2015

- PJM RTEP project b1398
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Addresses thermal reliability and increases transfer capability

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-06718

Bergen-Linden Corridor is a recently approved project which will provide a double-circuit 345kV line to maintain reliability

Project Estimate Up To	Through Year-end 2013	Expected Completion Date
$1,200M	-	June 2018

- PJM RTEP project b2436
- 30 miles of underground cable
  - New ~ 23 miles
  - Reconductor (Upgrade of 138 to 345) ~7 miles
- 13 miles of double circuit overhead conductor (replacing double circuit 138 with double circuit 345)
- 11 station upgrades to 345kV

Customer Benefit: Addresses thermal and short-circuit reliability

Project Status: Engineering

SI-SSA-0015-06719

Planned transmission spend of $6.8 billion

is driven by PJM reliability projects, 69kV conversions and life-cycle replacement projects

E= ESTIMATE

PSEG LONG ISLAND

PSEG

We make things work for you.

SI-SSA-0015-06724

PSEG was selected to operate Long Island Power Authority's (LIPA) electric transmission and distribution system for 12 years starting in 2014

- Pursuant to the Operating Services Agreement (OSA), all expenses and capital costs to operate the system are pre-funded by LIPA and passed through to their customers
- Compensation consists of a fixed fee and an incentive fee
  - Fixed compensation fee for 2014 with scheduled increases in 2015 and 2016
  - Starting in 2015 PSEG Energy Resources and Trading (ER&T) begins managing fuel/energy contracts
  - PSEG Long Island expected to contribute $0.03 to operating earnings in 2014 increasing to $0.07 per share in 2016 including contribution at ER&T
- Potential for an 8-year extension of the OSA

SI-SSA-0015-06725

PSEG Long Island commenced operations

on January 1, 2014

Key elements of Operating Services Agreement

Increased PSEG scope and control	Use of PSEG brand as PSEG Long Island	3-Year rate freeze (2013-2015)
Performance metrics	NY Department of Public Service oversight	Potential for "Utility 2.0" investment

Early performance

Successful transition to PSEG Long Island	Stakeholder communication	Winter storm response

PSEG POWER

PSEG

We make things work for you.

SI-SSA-0015-06727

PSEG Power strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-06728

Agenda

- Delivering Value
- Fleet Advantage, Location, Flexibility and Fuel Diversity
- Nuclear Operation
- Fossil Operation
- Financial Performance
- Expansion Opportunities
- Regulatory
- Engaged Workforce

SI-SSA-0015-06729

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus Fleet Diversity/Efficiency Focus	Financial/Economic Focus	Regulatory Focus
• Nuclear units operated at over 90% capacity factors for the 9th consecutive year through 2013 • Fleet diversity across the dispatch curve and fuel types provide flexibility to meet changing conditions • Linden CCGT and Salem 2 nuclear unit achieved record output in 2013	• "Getting the most out of existing fleet" • Locational advantage • O&M control programs have delivered a CAGR of 1.6% between 2009 and 2014 • Sites offer competitive advantage for expansion	• Strong regulatory performance • Industry leadership in the changing business environment

SI-SSA-0015-06730

PSEG Power Delivering on priorities

Operational Excellence	• Maximize value of existing generating plants through implementation of the Operational Excellence Model (OEM) • Workforce engagement and development	• OEM implemented and achieving measures • Resource sharing program initiated
Financial Strength	• Deliver on Business Plan Commitments • Maintain competitive markets and improve constituent communication on issues important to Power	• Exceeded earnings guidance in 2013 • Ongoing effort in key markets showing success • Successful court outcome against subsidized generation
Disciplined Investment	• Successfully complete the Advanced Gas Path (AGP) uprates • Seek new opportunities in target markets (PJM, ISO-NE, NYISO) • Develop our renewables business (solar) • Maintain new nuclear option by successfully managing the Early Site Permit (ESP) process	• Accelerated schedule for AGP to maximize opportunity • LIPA contract for fuel and generation dispatch • Completed 19 MW solar project, 4 MW project under construction, established robust pipeline • Nuclear ESP is expected in 2015

SI-SSA-0015-06731

PSEG Power met 2013 challenges

Storm and weather challenges	+	Market challenges	=	Value delivered
• SuperStorm Sandy impacted our generating sites • Cold and hot weather extremes created challenging operating environment, but also presented opportunities		• Unit outages and planned transmission outages resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by economy		• Optimized unit dispatch across fleet during storm recovery • Expedited return from storm outages, restored margin opportunities • High availability when needed • Achieved fuel cost savings • Captured value through coal/gas switching, unit flexibility • Coal & oil sales optimized inventory • Flexibility of portfolio captured real-time basis opportunities

SI-SSA-0015-06732

PSEG Power exceeded 2013's earnings guidance

OPERATING EARNINGS FOR PSEG POWER IN 2013; SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. *ASSETS TRANSFERRED TO POWER AT YEAR-END 2013.

SI-SSA-0015-06733

PSEG Power has generating assets

in three competitive markets

- Assets near loads
- Low cost portfolio
- Fuel flexibility with gas cost advantage
- Poised to benefit from volatility in real-time markets
- Fleet will maintain diversity and efficiency after HEDD
- Most sites suitable for expansion

SI-SSA-0015-06734

PSEG Power will maintain diversity and efficiency after a realignment of the fleet due to HEDD

Objective 2013 → 2017

- Maintain fuel diversity
- Maintain load-serving capability
- Maintain low cost structure
- Environmental improvement
- Peach Bottom (PB) uprate
- Advanced Gas Path (AGP)
- Kalaeloa and Solar transfer adds ~200MW of capacity

Fuel Diversity

Energy Produced

E=ESTIMATE

SI-SSA-0015-06735

Power's PJM assets along the dispatch curve reduce the risk of serving full requirement load contracts and can take advantage of volatile market conditions

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel flexibility for >60% of fleet

SI-SSA-0015-06736

PSEG Power Nuclear is a critical element of our success

Hope Creek	Salem Units 1 and 2	Peach Bottom Units 2 and 3
• Operated by PSEG Nuclear • PSEG Ownership: 100% • Technology: Boiling Water Reactor • Total Capacity: 1,178 MW • Owned Capacity: 1,178 MW • License Expiration: 2046 • Next Refueling ➢ Spring 2015	• Operated by PSEG Nuclear • PSEG Ownership: 57% • Technology: Pressurized Water Reactor • Total Capacity: 2,365 MW • Owned Capacity: 1,358 MW • License Expiration: 2036 and 2040 • Next Refueling ➢ Unit 1 – Fall 2014 ➢ Unit 2 – Fall 2015	• Operated by Exelon • PSEG Ownership: 50% • Technology: Boiling Water Reactor • Total Capacity: 2,251 MW • Owned Capacity: 1,125 MW • License Expiration: 2033 and 2034 • Next Refueling ➢ Unit 2 – Fall 2014 ➢ Unit 3 – Fall 2015 • Uprate: 130 MW in 2015/2016

SI-SSA-0015-06737

PSEG Power Nuclear is core to the fleet and has competitive advantages

- Continued strong nuclear operations: nine consecutive years of >90% capacity factor through 2013
- Significant earnings contributor
- Top quartile of cost performance/MWh
- One third new staff, recruitment of the best new and experienced talent, and attractive training program
- Fukushima action plan in response to NRC staff review
  - FLEX* plan submitted with implementation starting with Fall outage
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

SI-SSA-0015-06738

*STRATEGY KNOWN AS THE "DIVERSE AND FLEXIBLE MITIGATION CAPABILITY" OR FLEX, ADDRESSES RECOMMENDATIONS OF THE NUCLEAR REGULATORY COMMISSION'S FUKUSHIMA TASK FORCE.

Power's nuclear fleet is well positioned

with significantly lower-than-average US cost structure

*SOURCE: ELECTRIC UTILITY COST GROUP
** SOURCE: PSEG NUCLEAR

SI-SSA-0015-06739

PSEG Power's Fossil Fleet Performance

has shown improvement

- Fossil Capacity Factor rebounded with market
- Peaking Units maintain high start success

- Coal EFORp improving
- CC EFORp less than 1% in 2013
- Consistent recipient of EFORp payments

SI-SSA-0015-06740

PSEG

*LM6000 AND 7EA UNITS

PSEG Power improvements achieved in combined cycle fleet efficiency

Combined Cycle Operating Heat Rate

Actions Taken to Create Value

- Operational Excellence Model
- Training programs
- Unit testing initiative
- Outage work to restore efficiency
- Second gas line at BEC

- Heat rate improvement 2008-2013 translates to meaningful fuel savings at current market prices

- Advanced Gas Path (AGP) investments 2014 through 2018 to provide additional fuel savings

SI-SSA-0015-06741

Investing to expand CCGT capacity and improve efficiency

PSEG Power - CCGT Uprate Project

- Expand Power's CCGT fleet, one of the largest gas-fired portfolios in PJM, with incremental base and peaking MWs
- Retrofit Bergen, Linden and BEC with Advanced Gas Path (AGP) components at cost of ~$120M over 2014 - 2018

AGP Project Benefits

- ✓ CCGT capacity uprates of ~150 MW:
  - Linden (63 MW – Completed)
  - Bergen (31 MW – 2015)
  - BEC (58 MW – 2017-2018)
- ✓ Increases Efficiency - Combined Cycle (CC) heat rate improvement ~ 1.2%
- ✓ Upgrades technology and extends maintenance outage cycles

SI-SSA-0015-06742

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing
- Cost control through testing coordination program

SI-SSA-0015-06743

PSEG Power's capital expenditures for environmental requirements are essentially complete*

*BASED ON CURRENTLY KNOWN AND QUANTIFIABLE ENVIRONMENTAL REQUIREMENTS. E=ESTIMATE

SI-SSA-0015-06744

PSEG Power is well-positioned for growth when market conditions warrant

Available locations		Our sites possess infrastructure advantages
• Bergen • Burlington • Essex • Edison • Kearny	• Hudson • Linden • Sewaren • Bridgeport Harbor	• Electric Transmission Interconnections • Access to Gas Pipelines • Space • Emissions

SI-SSA-0015-06745

SI-SSA-0015-06748

PSEG Power: Enjoys real and sustainable advantages in the merchant generation space

Market Review

- Gas, Power, Spark Spreads
- Regulatory construct

PSEG's Competitive Advantage

- Fuel flexibility
- Heat Rate diversity
- Access to Marcellus Shale gas
- Asset flexibility

PSEG's Sustainable Advantage

- Positive cash-flow hedging into the long-term
- Robust capacity market pricing in most concentrated load pocket in US
- Long-term access to discounted Marcellus gas

SI-SSA-0015-06749

Market Review: Long-term fundamentals remain sound

- Environmental restrictions may tighten market
- Insufficient gas infrastructure continues to place upward pressure on fuel prices during seasonal peaks
- Market liquidity remains weak beyond 2015

SI-SSA-0015-06750

F=FORWARDS AS OF 7/25/2014, 2014F INCLUDES HISTORY AND FORWARDS

Market Review: New generation in PJM not keeping pace with coal retirements

Cumulative Generation Retirements*

Forecast Reserve Margin (PJM January 2014)

- PJM forecasts a declining Reserve Margin through 2018, which may improve forward prices
- Brattle estimates energy prices could rise at least $3-4/MWh from today's prices

SI-SSA-0015-06751

PSEG

*PJM AS OF FEBRUARY 20, 2014
SOURCE OF CHART DATA: PJM

Market Review: Regulatory framework showing signs of improvement

	ISSUE / POLICY	REGULATORY GAINS
PJM	SUBSIDIZED GENERATION (NJ and MD)	• Comprehensively defeated in federal court (appeals currently pending)
	DEMAND RESPONSE RULES	• PJM and ISO-NE enacted stricter rules of eligibility and deployment
	ENERGY PRICE FORMATION	• Concerted drive to improve price formation for generation and ancillary services • Waiver of price caps during extreme market conditions
NYISO	TRANSMISSION	• Significant progress made to relieve bottling of upstate generation
ISO-NE	CAPACITY	• Improvement in price formation to better reflect tight supply conditions • Implementation of sloping demand curve in Forward Capacity Auction (FCA) 9
	ENERGY	• Demand response required to participate in Day Ahead markets
FEDERAL	GAS to ELECTRIC	• Better coordination between pipelines and ISO's will promote efficiency
	ENVIRONMENTAL REGULATIONS	• HEDD, HAPS/MACT may lead to tightening of supply in 2015+ timeframe

SI-SSA-0015-06752

Competitive Advantage: Heat Rate Diversity & Flexible Dispatch

SI-SSA-0015-06753

Competitive Advantage: PSEG's extensive gas asset portfolio gives unparalleled access to Marcellus Shale gas

SI-SSA-0015-06754

Competitive Advantage: ~25% of Power's gas for generation comes from Marcellus

- Our combined cycle and peaking assets have been able to take advantage of locational gas price volatility driven by production and logistical constraints
- Lower cost shale supply provides additional savings during periods of lower residential gas demand

SI-SSA-0015-06755

PSEG

*AS OF 7/25/2014

Competitive Advantage: Locational advantage from short term basis volatility

PS Zone Annual Basis to PJM-W

PS Zone Day Ahead On Peak Monthly Basis to PJM-W

- Annual basis benefits baseload units
- Intermediate units flexible to seasonal opportunities
- Combined Cycle and Peaking units positioned to optimize daily and hourly volatility

PS Zone Real Time On Peak Hourly Basis to PJM-W

ANNUAL FORWARD (F) BASIS TO PJM-WEST AS OF 12/31/2013.

Sustainable Advantage: BGS Auction provides excellent opportunity to forward hedge our generation

BGS sales account for about a quarter of our forward portfolio of hedges

PSEG FINANCIAL REVIEW & OUTLOOK

PSEG

We make things work for you.

SI-SSA-0015-06762

Strong financial position to support our business initiatives

2013 Financial Position

- ✓ Exceeded upwardly revised 2013 earnings guidance
- ✓ Pension fully funded
- ✓ Strong balance sheet and upgraded credit ratings

2014 and Beyond

- ✓ Continued positive earnings trend in 2014
- ✓ Controlled O&M growth
- ✓ Balance Sheet and Cash Flow support investments without equity issuance
- ✓ Growth in PSE&G investments with contemporaneous returns
- ✓ Diversified Power assets with a balanced hedge profile
- ✓ Growth in PSE&G Cash from Operations, with continued significant Cash from Operations/FFO at Power
- ✓ Increased Dividend by $0.04 to indicative annual rate of $1.48 for 2014
- ✓ Opportunity for consistent and sustainable dividend growth

SI-SSA-0015-06763

Exceeded upwardly revised guidance

in both businesses

PSEG Operating Earnings

SI-SSA-0015-06764

In 2013, Power had significant free cash flow

SI-SSA-0015-06765

In 2013, PSE&G invested over $2B, using $1.4B of internally generated cash flow and debt, while maintaining its capital structure

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$220 MILLION.

SI-SSA-0015-06766

In 2013, Power's Free Cash Flow supported PSE&G's capital program and shareholder dividend

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$220 MILLION.
(2) OTHER CASH FLOW INCLUDES HOLDINGS NET CASH FLOW AND PARENT CASH.

SI-SSA-0015-06767

PSEG growth spend, including Energy Strong, of ~$6.4B represents ~76% of total investment

E = ESTIMATE; CAPITAL INCLUDES AFUDC AND IDC.

SI-SSA-0015-06768

PSE&G's Capital Program drives double-digit growth in rate base and earnings over the 2013 to 2016 period

SI-SSA-0015-06769

PSE&G's Cash from Operations and Power's Free Cash Flow support growth investments without the need for new equity

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$500M FROM 2014-2016
(2) OTHER CASH FLOW INCLUDES PSEG LI, HOLDINGS NET CASH FLOW, CASH, AND SHORT TERM DEBT
E = ESTIMATE

SI-SSA-0015-06770

Power's key credit metric supports incremental investment opportunities

- Increased contribution to earnings from the more stable regulated business allows us to reset Power's FFO/Debt threshold from 35% to 30%, providing additional financial flexibility
- Power's annual Cash From Operations and Funds From Operations each average ~$1.1B over the 2014 to 2016 period supported by:
  - Capacity Revenues
  - Hedged Generation
  - O&M Control
- Financial strength can be used to pursue future growth in both businesses beyond current plans

SI-SSA-0015-06771

Pension: Our Long Term Asset allocation strategy resulted in a ~17% increase in pension assets during 2013

PBO Funded Ratio	83%	Fully Funded Pension →	106%

SI-SSA-0015-06772

Our Pension Management is expected to result in pension income in 2014 and over the planning horizon

We make things work for you.

SI-SSA-0015-06797

Forward-Looking Statements

Certain of the matters discussed in this presentation about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K. These factors include, but are not limited to:

- fluctuations in wholesale power and natural gas markets, including the potential impacts on the economic viability of our generation units;
- our ability to obtain adequate fuel supply;
- any inability to manage our energy obligations with available supply;
- increases in competition in wholesale energy and capacity markets;
- changes in technology related to energy generation, distribution and consumption and customer usage patterns;
- economic downturns;
- third-party credit risk relating to our sale of generation output and purchase of fuel;
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements;
- changes in state and federal legislation and regulations, and PSE&G's ability to recover costs and earn returns on authorized investments;
- the impact of pending and any future rate case proceedings;
- regulatory, financial, environmental, health and safety risks associated with our ownership and operation of nuclear facilities;
- adverse changes in energy industry laws, policies and regulations, including market structures and transmission planning;
- changes in federal and state environmental regulations and enforcement;
- delays in receipt of, or an inability to receive, necessary licenses and permits;
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry;
- changes in tax laws and regulations;
- the impact of our holding company structure on our ability to meet our corporate funding needs, service debt and pay dividends;
- lack of growth or slower growth in the number of customers or changes in customer demand;
- any inability of Power to meet its commitments under forward sale obligations;
- reliance on transmission facilities that we do not own or control and the impact on our ability to maintain adequate transmission capacity;
- any inability to successfully develop or construct generation, transmission and distribution projects;
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers;
- our inability to exercise control over the operations of generation facilities in which we do not maintain a controlling interest;
- any inability to recover the carrying amount of our long-lived assets and leveraged leases;
- any inability to maintain sufficient liquidity;
- any inability to realize anticipated tax benefits or retain tax credits;
- challenges associated with recruitment and/or retention of key executives and a qualified workforce;
- the impact of our covenants in our debt instruments on our operations; and
- the impact of acts of terrorism, cybersecurity attacks or intrusions.

All of the forward-looking statements made in this presentation are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business, prospects, financial condition, results of operations or cash flows. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this presentation apply only as of the date of this presentation. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even in light of new information or future events, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this presentation are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

Two strong businesses with a track record of success

Electric & Gas Distribution and Transmission

Strategy: Investments aligned with public policy and customer needs

Value Proposition: A $12 Billion - $16 Billion infrastructure program expected to produce 8%-10% annual rate base growth through 2022

2017	Assets $29B Net Income $973M

Regional Competitive Generation

Strategy: Investment program enhances competitive position with addition of efficient, clean, reliable CCGT capacity

Value Proposition: Provides substantial free cash flow and upside from market rule improvements

2017	Assets $12B Net Income $479M

SI-SSA-0015-06799

ASSETS AND NET INCOME ARE FOR THE YEAR ENDED 12/31/2017. PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO ENTERPRISE / OTHER ACTIVITY. PSE&G 5 YEAR CAPITAL SPEND FORECAST UPDATED FOR CLEAN ENERGY FUTURE PROGRAM FILED SEPTEMBER 26, 2018

NJ has advanced a new Clean Energy agenda

Energy Policy	Description	Investment Opportunity for PSEG
Energy Efficiency (EE)	• Requires electric utilities to reduce energy consumption by 2% and gas utilities to reduce energy consumption by 0.75% from average annual usage over prior 3-year period within 5 years • Allows utilities to recover "reasonable and prudent costs" including return of and on capital and revenue impact of lost sales	☑
Renewable Portfolio Standard (RPS)	• Increases percentage of energy to be supplied from renewable energy resources to 50% by 2030	☑
Solar	• Annual solar requirement increases to 4.8% in 2025 before declining to 4.5% in 2026 and 1.1% in 2033 as net metering cap increased to 5.8% from 2.9% • BPU must complete a study on how to modify/replace SREC program by 24 months after enactment	☑
Community Solar	• BPU must develop rules and regulations establishing a "Community Solar Energy Pilot Program"	☑
Offshore Wind (OSW)	• BPU to establish Offshore Renewable Energy Certificate (OREC) to support 3,500 MW by 2030 • Allows OSW projects to receive tax credits from the Energy Development Agency (EDA) • NJ Dept. of Labor directed to develop	☑
Energy Storage	• BPU to provide Governor and Legisla • BPU to initiate process within six mo mechanism for achieving 600 MW o	☑
EV Infrastructure	• Charging stations and related infrast	☑

New Jersey's recent Clean Energy legislation targets 50% of energy to be supplied by emission free fuel by 2030

SI-SSA-0015-06801

Partnership for a Clean Energy Future:

~$3.6 Billion investment program to provide cost-effective and innovative solutions supporting NJ's clean energy goals

- **Energy Efficiency:** Residential and C&I programs to lower energy bills and combat climate change
  - Savings targeting 2% electric and 0.75% gas savings consistent with NJ Clean Energy Legislation
  - Customer benefits exceed costs
- **Electric Vehicles:** "Smart" electric vehicle infrastructure: residential, workplace, multi-family, travel corridors
- **Energy Storage:** Utility-scale systems to defer traditional distribution investment, enable additional solar, and enhance critical infrastructure resiliency
- **Energy Cloud: Advanced Metering Infrastructure (AMI):** Accelerated roll-out of 2.2 million electric meters and supporting infrastructure. Compelling customer benefits

Program Investment	$ Billion
Energy Efficiency	$2.5
Electric Vehicles	$0.3
Energy Storage	$0.1
Energy Cloud – AMI	$0.7
Investment Total	$3.6

- 6-year investment program starting in 2019
- Seeking contemporaneous recovery
- Contingent on approval of lost revenue recovery mechanism

SI-SSA-0015-06802

Energy Strong – Increasing resiliency

In late October 2012, Superstorm Sandy caused severe damage to PSE&G's T&D system and to some of Power's generation infrastructure in the northern part of New Jersey. Strong winds and the resulting storm surge caused damage to switching stations, substations and generating infrastructure.

Energy Strong Program: In May 2014, the BPU approved Energy Strong, which enabled PSE&G to invest $1.22 billion to upgrade all of its electric substations that were damaged by water in recent storms; make investments that will create redundancy in the electric distribution system, reduce outages when damage occurs; and deploy technologies to better monitor system operations, enabling PSE&G to restore customers more quickly in the event of an electric outage. With respect to PSE&G's gas system, replace and modernize 250 miles of low-pressure cast iron gas mains in or near flood areas; and upgrade five natural gas metering stations and a liquefied natural gas station recently affected by severe weather or located in flood zones.

PSE&G recently filed **Energy Strong II** ($2.5 billion over a five years) to further strengthen the utility's electric and gas systems to withstand storms, improve reliability and significantly enhance resiliency. If approved, ES II will rebuild, raise and/or harden critical electrical equipment, including within flood prone areas; install stronger poles and wires to reduce wind and tree damage; deploy advanced technology to quicken restoration, build backup pipes to distribute natural gas to enhance reliability; modernize critical gas equipment within flood prone areas, and improve customer service.

SI-SSA-0015-06803

NJ Zero Emission Certificates (ZEC) support carbon free nuclear generation

- ✓ Legislation signed by New Jersey Governor Murphy on May 23
- ✓ 330-Day process underway – NJ Board of Public Utilities expected to determine eligibility and select nuclear plants to receive ZECs by mid-April 2019
- ✓ Hope Creek and Salem produce >90% of NJ's carbon free generation, support ~6,000 jobs, and benefit fuel diversity and grid reliability

SI-SSA-0015-06804

PSEG has invested ~$1.7 Billion in Solar

PSEG Power: Solar Source has invested $835M in 23 projects in 14 states totaling 414 MW_{DC}

PSE&G: has invested $876 M across its Solar Loan, Solar4All & Extensions totaling 211 MW_{DC}

SI-SSA-0015-06805

Sustainability is the hallmark of our 115 years of Public Service

- ✓ PSEG's climate goal is to eliminate 13 million tons of CO_2 equivalent emissions by 2030 from 2005 levels; PSE&G's recent Clean Energy Future filing has the potential to more than double this climate goal if approved
- ✓ Named to the Dow Jones North America Sustainability Index for the 11th year in 2018
- ✓ Working to secure the economic viability of PSEG Power's nuclear fleet, which generates >90% of New Jersey's carbon free energy
- ✓ Invested approximately $1.7 Billion in the development of solar energy
- ✓ Proud sponsor of several sustainability and STEM programs including Montclair State's Institute for Sustainability Studies; the Andlinger Center for Energy & the Environment at Princeton; and the Stevens Institute of Technology's SURE House

SI-SSA-0015-06806

PSEG EXECUTIVE PROFILE

SI-SSA-0015-06807

PSEG

We make things work for you.

Daniel J. Cregg

EXECUTIVE VICE PRESIDENT AND CHIEF FINANCIAL OFFICER

PUBLIC SERVICE ENTERPRISE GROUP INCORPORATED, PUBLIC SERVICE ELECTRIC AND GAS COMPANY, PSEG POWER LLC AND PSEG SERVICES CORPORATION

Daniel J. Cregg was named executive vice president and chief financial officer for Public Service Enterprise Group Incorporated (PSEG) and its subsidiaries in October 2015.

Mr. Cregg is responsible for all financial functions, including Internal Audit Services, Investor Relations and Corporate Development. Given the array of financial instruments which serve as the primary means of selling wholesale energy to customers, Mr. Cregg also has responsibility for the Risk Management function, which provides independent oversight of the PSEG Power trading organization. In addition to finance, Mr. Cregg is responsible for the Strategy and Planning function. He is a member of PSEG's Executive Officer Group.

Prior to his current position, Mr. Cregg was vice president – finance for PSE&G, a role he assumed in June 2013. In 2006, Mr. Cregg was named vice president – finance for PSEG Power. In that capacity and in previous financial roles for Power, Mr. Cregg held leadership positions related to financial reporting and forecasting, investor communications, financings, rating agency interactions, external reporting, cash forecasting, financial valuations, competitive intelligence, and fundamental market modeling, with critical responsibilities in Power's development and strategic planning activities.

Previously, Mr. Cregg was director of PSEG corporate development. He joined PSEG in 1991 with overall responsibility for tax planning, strategy and compliance for PSEG Energy Holdings, including domestic and international tax structuring work for PSEG Global and PSEG Resources.

Before joining PSEG, Mr. Cregg spent five years with the accounting and consulting firm of Deloitte and Touche, providing consulting services to a wide range of clients with an emphasis on the energy industry.

Mr. Cregg holds a Master of Business Administration degree from the Wharton School of the University of Pennsylvania and is a graduate of Lehigh University, where he received a bachelor's degree in accounting.

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and transmission planning,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as for transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies, and
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-06810

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Income from Continuing Operations/Net Income. Operating Earnings exclude gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP.
PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends.

PSEG is presenting Adjusted EBITDA because it provides investors with additional information to compare our business performance to other companies and understand performance trends. Adjusted EBITDA excludes the same items as our Operating Earnings measure as well as income tax expense, interest expense, depreciation and amortization and major maintenance expense costs at Power's fossil generation facilities. This information is not intended to be viewed as an alternative to GAAP information. The last two slides in this presentation (Slides A and B) include a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings and Adjusted EBITDA with a reference to that slide included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

PSEG OVERVIEW

Caroline Dorsa

EXECUTIVE VICE PRESIDENT AND
CHIEF FINANCIAL OFFICER

PSEG

We make things work for you.

SI-SSA-0015-06812

PSEG's Strategy

Investment program delivering results

Operational Excellence: Maintaining reliability and improving performance as we control costs in low price environment

Financial Strength: Strong financial position supports investment program and dividend growth

Disciplined Investment:

- Transformed business mix
- Robust pipeline of opportunities

Results

- Project 3rd year of EPS growth
- Increased rate of dividend growth
- Best in class utility growth rate
- Stable business mix with upside potential from power markets

SI-SSA-0015-06813

Two complementary businesses

A stable platform, each with growth opportunities

PSEG

PSE&G	PSEG Power LLC
Electric & Gas Delivery and Transmission	**Regional Competitive Generation**
Strategy: Investments aligned with public policy and customer needs **Value Proposition:** An $11 billion infrastructure program – focused on transmission – produces double-digit rate base growth through 2019	**Strategy:** Diverse (fuel and dispatch) fleet geographically and environmentally well positioned, with investments to enhance competitiveness **Value Proposition:** Provides substantial free cash flow in current environment and upside from market rule improvements
2014 — Assets $22B Operating Earnings $725M	2014 — Assets $12B Operating Earnings $642M

SI-SSA-0015-06814

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2014.
PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT AND PSEG LONG ISLAND ACTIVITY.
SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS.

Delivering on commitments and realizing growth

Operational Excellence	• PSE&G: Mid-Atlantic Reliability Award (13th consecutive year), top ranked among eastern electric and gas utilities in business customer satisfaction • PSEG Power: Record output from combined cycle units • PSEG Long Island: Demonstrated management and integration capability through a successful transition in first year • PSEG: Cost-control benefits continue
Financial Strength	• Earnings performance exceeded guidance • Cash flows and business mix support strong credit ratings and ability to fully fund robust investment pipeline without issuing new equity • Increased rate of dividend growth in 2015
Disciplined Investment	• PSE&G ✓ Transmission capital program execution and growth ✓ Energy Strong infrastructure program underway ✓ Energy efficiency program extension ✓ Further growth planned – Gas System Modernization Program • Power: Unit uprates, PennEast Pipeline, Solar Source

SI-SSA-0015-06815

Operating Earnings

Disciplined investment program and focus on operational excellence have supported growth

Power's diverse fuel mix and dispatch flexibility continue to generate strong earnings and free cash flow in low price environment

PSE&G's investment program has driven double digit compound annual earnings growth since 2010

SI-SSA-0015-06816

** 2015 PERCENTS USE MIDPOINT OF EARNINGS GUIDANCE.

Robust pipeline of investment opportunities

supports growth objectives

PSEG Capital Spending

2010 – 2014: $12.6 Billion

2015E - 2019E*: $13 Billion

2015E–2019E:

- $1.3B of capital for Gas System Modernization Program and Artificial Island would be incremental

*INCLUDES ALL PLANNED SPENDING. **ENERGY STRONG EXCLUDES RISK AND CONTINGENCY. ***POWER CAPITAL SPENDING EXCLUDES NUCLEAR FUEL. ****INCLUDES PENNEAST PIPELINE EQUITY INVESTMENT OF $0.1B. E=ESTIMATE. DATA AS OF MARCH 2, 2015.

SI-SSA-0015-06817

Balance sheet strength supports capital allocation

Timeframe	Actions taken
2010 – 2014: Transformed business mix	• Applied $16 billion towards investments and dividends • Improved credit ratings • Monetized Energy Holdings' portfolio • Strong balance sheet sustained during period of low power prices, while increasing the dividend
2015 – Forward: Strong financial position supports continued growth	• Increased rate of dividend growth in 2015 • $13 billion investment program through 2019 • Gas System Modernization Program and Artificial Island increase capital program by $1.3 billion through 2019 • Financial capability supports further expansion of the current capital plan

SI-SSA-0015-06818

PSE&G's investment program

Meeting public policy goals and customer needs

*SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/ NET INCOME TO RECONCILE TO OPERATING EARNINGS.

SI-SSA-0015-06819

Containing customer bills while investing in the system

PSE&G Typical Residential Customer Bills*

- PSE&G customers' combined electric and gas bills declined 23% over the period.
- Low gas prices drove rate decreases; in addition, gas customers received bill credits of ~$400 in total from 2012 through 2014.

SI-SSA-0015-06820

PSEG

*FOR ALL YEARS THE BILLING ASSUMES 7,200 KWH FOR ELECTRIC AND 1,010 THERMS FOR GAS ANNUALLY. E = ESTIMATE

PSE&G's robust capital investment pipeline

- Planned capital spending expected to drive double digit rate base growth and high single digit EPS growth through 2017
- Transmission expected to grow to >50% of rate base in 2019
- Gas System Modernization Program and Artificial Island investments would be incremental
- Seeking to broaden platform to expand energy efficiency and other investments

SI-SSA-0015-06821

Power's fleet has the desired attributes to be successful in today's and tomorrow's market

Economic Drivers	Outlook	Combined Cycle	Nuclear	Scrubbed Coal	Peakers	Renewable
Energy Margins	• Low natural gas and energy prices • Robust portfolio of gas pipeline contracts	✓	✓	✓	n/a	n/a
Capacity Markets	• Tightened rules proposed for capacity performance	✓	✓	✓	✓	n/a
Environmental Regulations	• Tighter air emissions standards	✓	✓	✓	✓	✓
Location	• Assets in well-designed markets, premium regions • Opportunities on brownfield sites	✓	✓	✓	✓	n/a
	PSEG Power Capacity (GW) Total 13 GW	3.2	3.6	2.4	3.7	0.1

- **Largest nuclear site** in the eastern U.S. and ownership in **large, fully scrubbed coal facilities** at Keystone and Conemaugh provide **economies of scale** that enhance energy margins in current low market, and provide for upside potential if prices improve.
- **Dual fuel peakers** meet reliability criteria in capacity markets and provide option value in energy market. Opportunity exists to repower peakers that do not meet NJ HEDD environmental regulations.

SI-SSA-0015-06822

Power – Growing value by improving market rules and developing investment opportunities

Value Source	Opportunities and Actions Taken
Improving rules will better recognize value of our fleet	• PJM's Capacity market – 2014 limits on demand response and 2015 Capacity Performance proposal • Demand response treatment at U.S. Courts / FERC • Energy price formation at FERC • Increasing air standards through Federal and State regulations

Our footprint provides growth opportunities	• Nuclear and Combined Cycle plant uprates are underway
	• Brownfield expansions at existing sites
	  ➢ New peakers built at New Haven and Kearny sites
	  ➢ Continue to explore further opportunities
	• PennEast pipeline - equity investment and gas portfolio enhancement
	• Solar Source owns ~123 MW*, with significant project pipeline
	• Continue to seek opportunities to expand the fleet

SI-SSA-0015-06823

SI-SSA-0015-06834

A robust pipeline of Transmission

investments focus on reliability improvements and replacement of aging infrastructure

Major Transmission Investments

Project Roster	Approved ROE	Program Description	Estimate Up To ($ Millions)	Expected In-service Date
Bergen—Linden Corridor 345kV	11.68%	PJM baseline project receiving CWIP in rate base treatment	$1,200	June 2018
PJM Regional Transmission Expansion Plan (RTEP) – multiple projects	11.68%	PJM mandated system reliability projects	$1,900	Various
69kV Upgrade – multiple projects	11.68%	Upgrade of 26kV to 69kV	$1,500	Various
Transmission Lifecycle – multiple projects	11.68%	Replacement of aging infrastructure	$1,100	Various
Transmission Hardening– multiple projects	11.68%	Reliability projects focused on system resiliency	$650	Various

*INCREMENTAL INVESTMENT IN HARDENING INCLUDED AS PART OF OTHER PROGRAMS.

Bergen-Linden Corridor is a project which will provide a double-circuit 345kV line designed to maintain system reliability

Project Estimate Up To	Through Year-end 2014	Expected Completion Date
$1,200M	$40M	June 2018

- PJM RTEP project b2436 and b2437 with phased in-service dates
- 30 miles of underground cable
  - New ~ 23 miles
  - Reconductor (Upgrade of 138 to 345) ~7 miles
- 13 miles of double circuit overhead conductor (replacing double circuit 138 with double circuit 345)
- 11 station upgrades to 345kV

Customer Benefit: Addresses thermal and short-circuit reliability

Project Status: Engineering, Licensing and Construction

Marion Substation Pile Installation

SI-SSA-0015-06836

Major Transmission programs focus on reliability and replacing aging infrastructure

- PJM's Regional Transmission Expansion Plan (RTEP) identifies system enhancements needed for reliability
- 69kV system upgrades improve system reliability and provide capacity for future growth
- Transmission Lifecycle is an ongoing program to manage transmission asset life to maintain and improve system integrity and reliability
- Transmission Hardening projects focus on increasing system resiliency

SI-SSA-0015-06837

PSE&G has successfully worked with regulators to develop multiple solutions for New Jersey's energy and economic development goals

RENEWABLES
creative solutions to install solar generation

- Solar Loan I – 2008
- Solar Loan II – 2009
- Solar 4 All – 2009
- Solar Loan III – 2013
- Solar 4 All Ext – 2013

ENERGY EFFICIENCY
assisting customers with controlling energy usage

- Carbon Abatement – 2008
- Demand Response – 2009
- Energy Efficiency (EE) – 2009
- EE Extension – 2011
- EE Extension II – 2015

DISTRIBUTION
improving electric and gas delivery infrastructure

- NJ Capital Infrastructure Program 1 (CIP 1) – 2009
- NJ Capital Infrastructure Program 2 (CIP 2) – 2011
- Energy Strong – 2014

To date we have invested over $2B in the above programs

Over $1B ahead in Energy Strong, Energy Efficiency Ext II and Solar programs

Gas System Modernization Program would increase potential investment by ~$1.6B

SI-SSA-0015-06838

PSE&G is successfully executing on Energy Strong with ~$150M deployed during the latter half of 2014

Program	Approved	Spend thru 2014
Flood Mitigation	$620M	$19M
Electric Contingency Reconfiguration	$100M	$26M
Electric Advanced Technology	$100M	$10M
Gas Utilization Pressure Cast Iron (UPCI)	$350M	$94M
Gas Metering & Regulating (M&R)	$50M	$1M
TOTAL	$1,220M	$150M

SI-SSA-0015-06839

Energy Strong will provide increased reliability and resiliency

- **Electric Flood Mitigation**
  - Engineering and scheduling began on 16 of the 29 total planned substation projects
- **Electric Contingency Reconfiguration**
  - Over 100 projects have been started and 15 projects have been completed to date, including installation of over 900 poles and 70 reclosers
- **Advanced Technology**
  - A total of 60 relays replaced and 3 remote terminal unit (RTU) has been installed
- **Gas Utilization Pressure Cast Iron (UPCI)**
  - Installed ~110 miles of gas main and replaced ~5,300 services
- **Gas Metering & Regulating (M&R)**
  - Design and engineering completed for all of the eight stations scheduled

SI-SSA-0015-06840

Extension of PSE&G's award winning Energy Efficiency program

- Energy Efficiency Extension II approved by the BPU in April 2015 will extend the investment and time frame for three previously approved programs already in the marketplace, allowing PSE&G to factor in lessons learned and balance policy issues
- $95M of rate base investment approved at an ROE of 9.75%
- Extends existing programs, two of which have sizable waiting lists:
  - Hospitals
  - Multifamily
  - Direct install – government, non-profit, and small business
- Would allow PSE&G to leverage past investments in people, capabilities, systems and processes

SI-SSA-0015-06841

Gas System Modernization Program of ~$1.6B focusing on aging gas mains

- PSE&G's gas distribution system currently operates and maintains over 4,800 miles of cast iron and unprotected steel main, the largest such system in any single state
- The program provides for investment of ~$1.6B focused on replacing cast iron and unprotected steel main over a five-year period, beginning mid-2016
- Program will replace approximately 160 miles of main per year
  - Requested accelerated clause-based recovery similar to the Energy Strong program with a 9.75% ROE
  - This program is the first phase of a long-term replacement strategy
  - 30-year cast iron and unprotected steel replacement program
- Benefits:
  - Methane emission reduction is estimated at 24,500 metric tons of CO_2 equivalent per year*
  - Higher pressure system allows usage of high efficiency appliances by customers

SI-SSA-0015-06842

PSEG

* EPA SUBPART W METHODOLOGY.

PSE&G continues to receive contemporaneous/ formula rate recovery on ~75% of its investment program

2010-2014 PSE&G Capital Spending by Recovery Method

$9.8B

2015-2019E PSE&G Capital with Potential Upside by Recovery Method

$12.1B

Clause Recovery Mechanisms
- Energy Strong / Infrastructure / Solar / Energy Efficiency
- Gas System Modernization Program

FERC Formula Rates
- Transmission
- Artificial Island

Traditional Recovery Mechanisms
- Distribution Base Rates

SI-SSA-0015-06843

PSE&G has controlled costs

through process improvements and will continue to drive future efficiencies

Cost control actions taken:

- PSE&G is utilizing the Lean Six Sigma discipline to achieve costs savings and process improvements
- Conducted organizational reviews resulting in streamlining of processes through restructuring
- Continued focus on vendor and inventory practices ensuring maximum value
- Successful management of pension

E=ESTIMATE

PSEG LONG ISLAND

PSEG

We make things work for you.

SI-SSA-0015-06846

PSEG Long Island is focused on improving customer service and reliability

- Provide best-in-class customer service, including building on our new Call Center Technology platform to better serve our customers
  - According to J.D. Power, in 2014 PSEG Long Island showed the most improvement in overall customer satisfaction of any large electric utility, anywhere in the nation
- Work to maintain industry-leading service reliability
- Improve every aspect of the storm response process
  - Leveraged our new Outage Management System to improve storm logistics and outage coordination
- Contributed $0.02* to PSEG's earnings per share in 2014, as expected

SI-SSA-0015-06847

* EXCLUDES THE ENERGY RESOURCES & TRADE CONTRACT, WHICH WILL BE INCLUDED IN PSEG POWER'S RESULTS.

PSEG POWER

PSEG

We make things work for you.

SI-SSA-0015-06848

PSEG Power strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-06849

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus Fleet Diversity/Efficiency Focus	Financial/Economic Focus	Regulatory Focus
• Nuclear units have performed well for ten consecutive years • Hope Creek recorded its second highest output in its history • Fleet diversity across the dispatch curve and fuel types provide flexibility to meet changing market conditions • Bergen 1 & 2 and Linden 1 individually, and the CCGT fleet in total, set generation records in 2014 • Kearny 13 & 14 have shown increasing output in each year since start-up	• Getting the most out of existing fleet • Locational advantage • O&M control programs have delivered a CAGR of 2.6% between 2009 and 2015 • Sites offer competitive advantage for expansion	• Strong regulatory performance • Industry leadership in the changing business environment

SI-SSA-0015-06850

PSEG Power Delivering on priorities

Operational Excellence	• Maximize value of existing generating plants through implementation of the Operational Excellence Model (OEM) • Workforce engagement and development	• OEM implemented and achieving measures • Resource sharing program between Nuclear & Fossil initiated
Financial Strength	• Deliver on Business Plan Commitments • Maintain competitive markets and improve constituent communication on issues important to Power	• Exceeded earnings guidance in 2014 • Ongoing effort in key markets showing success • Successful court outcome against subsidized generation
Disciplined Investment	• Successfully complete the Advanced Gas Path (AGP) uprates • Seek new opportunities in target markets (PJM, ISO-NE, NYISO) • Develop our renewables business (solar) • Maintain new nuclear option by successfully managing the Early Site Permit (ESP) process	• Accelerated schedule for AGP to maximize opportunity • LIPA contract for fuel and generation dispatch began January 1, 2015 • Completed three projects with one underway, bringing Solar Source's portfolio to 123 MW_{DC} • Nuclear ESP is expected in 2016

SI-SSA-0015-06851

PSEG Power met 2014's challenges

Storm and weather challenges	+	Market challenges	=	Value delivered
• All of the generation sites affected by SuperStorm Sandy were restored to service by mid-2014, with ongoing repairs • Cold weather extremes created a challenging operating environment, but also presented opportunities		• Transmission (outages and build outs) and gas markets resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by economy		• Expedited return from storm outages, restored margin opportunities • High availability when needed • Flexibility of portfolio captured real-time basis opportunities • Captured value through coal/gas switching, unit flexibility • Management of gas assets benefited customers and fleet • Achieved fuel cost savings

SI-SSA-0015-06852

PSEG Power exceeded 2014's earnings guidance

2014 PSEG Power Operating Earnings*
($ Millions)

Over $60M of additional value gained from:

- Weather, basis volatility
- Fuel flexibility
- Lower gas cost
- Spark/dark spread

*EXCLUDES IMPACTS FROM STORM RECOVERY COSTS.
SEE SLIDE A FOR ITEMS EXCLUDED FROM NET INCOME TO RECONCILE TO OPERATING EARNINGS.

SI-SSA-0015-06853

PSEG Power has generating assets

in three competitive markets

- Assets located near load centers
- Low cost portfolio
  - Fuel flexibility with gas cost advantage
- Positioned to benefit from volatility in real-time markets
- Readiness for capacity performance (CP) in PJM
- Fleet positioned to maintain diversity and efficiency after HEDD
- Sites suitable for expansion

SI-SSA-0015-06854

Power's PJM assets along the dispatch curve reduce the risk of serving full requirement load contracts and can take advantage of volatile market conditions

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape
- Readiness for Capacity Performance (CP)

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel capability at 87% of load following and peaking units

SI-SSA-0015-06855

PSEG Power positioned to maintain diversity and efficiency after a realignment of the fleet following HEDD retirements

Objective 2015 → 2017

- Maintain fuel diversity
- Maintain load-serving capability
- Maintain low cost structure
- Improve environmental & heat rate profiles
- Complete
  - Peach Bottom (PB) uprate
  - Advanced Gas Path (AGP)

Fuel Diversity

Energy Produced

E=ESTIMATE

SI-SSA-0015-06856

PSEG Power's fleet is expected to see improvement in heat rate and decline in emissions

- AGP (Advanced Gas Path) investments
- Other Efficiency improvements
- HEDD retirements

SI-SSA-0015-06857

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing

SI-SSA-0015-06858

PSEG Power Nuclear is a critical element of our success

Hope Creek

- Operated by PSEG Nuclear
- PSEG Ownership: 100%

PSEG POWER
ER&T

PSEG

We make things work for you.

SI-SSA-0015-06875

Market Review: 2014 was influenced by extremes in weather highlighting the importance of winter

Q1: Periods of extreme cold temperatures resulted in high gas prices, significant basis differentials, and higher energy demand.

Q3: A cooler than normal summer, combined with increased supply of gas, reduced energy prices and basis.

SI-SSA-0015-06876

Market Review: PSEG's extensive gas asset portfolio gives unparalleled access to Marcellus Shale gas

Power's Gas for Generation in 2014

- PSEG Power maintains a robust portfolio of pipeline and storage assets in the Mid-Atlantic
- PSEG Power's gas for generation was ~100 BCF in 2014, of which >60% was supplied by Shale gas
- PSEG Power procured over 400 BCF in 2014 with ~75% going to PSE&G's utility gas customers
- When gas is surplus to customer needs, PSEG Power sells surplus to others; margins from such sales benefit PSE&G gas customers and PSEG Power

SI-SSA-0015-06877

Market Review: Winter Z6 gas prices retain seasonal volatility; spark spreads have continued to be robust in PJM

2015 YTD Z6

2015-2018 Z6

PJM West vs. PS Zone Spark Spreads (2013-2018)

SI-SSA-0015-06878

Market Review: New pipelines will move significant quantities of Marcellus gas out of the region by 2018

Historical and Expected Marcellus Production

Pipeline capacity grows significantly by 2018

New pipeline investment is expected to increase takeaway capacity from the low cost Marcellus/Utica shale and reduce regional surpluses and increase gas prices by 2018

SI-SSA-0015-06879

Power Basis in Eastern PJM: Expected to be volatile but positive on an annual basis with winter pricing driving value

Electric Basis will remain positive overall and stabilize within 3 years due to:

- Export of ~18 bcf/day of gas which will significantly strengthen regional gas prices
- Easing of transmission constraints in Virginia/Maryland
- Construction of significant new gas-fired generation in VA/MD

ANNUAL FORWARD BASIS TO PJM-WEST AS OF DECEMBER 31, 2014.

SI-SSA-0015-06880

Regulatory Framework: Significant reforms already implemented and new rules being promulgated to improve energy and capacity market designs

	ISSUE /POLICY	OUTCOME
PJM	CAPACITY	• Higher payments for enhanced reliability (Capacity Performance)
	DEMAND RESPONSE RULES	• Stricter rules for eligibility and deployment
	ENERGY PRICE FORMATION	• PJM and FERC forcing improvements to energy price formation; higher caps
ISO-NE	CAPACITY	• Higher prices in recent auction better reflect tight supply conditions • Implementation of sloping demand curve in FCA 9 • Zonal demand curves expected in FCA 10
	ENERGY	• Demand response required to participate in Day Ahead markets • Implemented hourly offers/real time reoffers • Reserve market prices better reflect scarcity prices • 5 minute interval LMP settlements expected Q1 2016
NYISO	CAPACITY	• New Capacity Zone (LHV) leads to more accurate price signals
	ENERGY	• Improvement in price formation during reserve shortage conditions
FEDERAL	DEMAND RESPONSE	• EPSA VS. FERC and national implications; US Supreme Court will hear case
	ENVIRONMENTAL REGULATIONS	• HEDD, CPP, HAPS/MACT will lead to tightening of supply in 2015+ timeframe

SI-SSA-0015-06881

PJM Capacity Performance Proposal: aims to increase electric supply reliability

- **Capacity performance (CP)** proposal places emphasis on reliability, given observed outages during times of extreme weather stress and anticipated retirements; Imposition of higher penalty structure and enhanced opportunities for cost recovery to encourage reliability
- **Generator performance/flexibility is key** objective for units with secure fuel supply capable of meeting more stringent operating standards
- **Elimination of 2.5% holdback offsetting weak demand growth**, making all capacity resources annual products in end state, net CONE bidding safe harbor, and the change in the demand curve (VRR) support price formation and improve resource adequacy

December 2014
PJM Filed
Final CP Proposal

April 2015
Expected FERC Response
to PJM CP Proposal

FERC Granted Delay of
May 2015 RPM Auction for
2018/2019 Capacity Year

SI-SSA-0015-06882

Capacity Performance: >90% of PSEG's PJM capacity meets the new capacity performance standards with minimal to moderate investment

How does our fleet stack up?*

CP Compliant Assets

* EXCLUDES 205MW OF PUMPED STORAGE

SI-SSA-0015-06883

Northeast Portfolio: New York and New England

New England (972MW)

- Small but dynamic market
- Significant improvement in market construct
- High volatility due to extreme (winter) weather conditions
- Significant siting and permitting challenges
- Gas pipeline infrastructure poses supply challenges/opportunity

New York (774MW)

- Single state ISO
- Investment in new lateral to connect to the Dominion pipeline at Bethlehem Energy Center (BEC) allows for access to fuel supply from Marcellus
- Long Island Power Authority Management Contract

SI-SSA-0015-06884

Northeast Portfolio: Expanding our footprint with PSEG Long Island

PSEG Power acting as an agent for LIPA began January 2015

- Performing ISO bidding for LIPA's 6,000MWs of generation/tolls
- Procuring natural gas and oil for the majority of these assets
- Scheduling two DC transmission cables (ISO-NE and PJM) into Long Island
- Entering into financial hedges to reduce LIPA customer's price volatility

This relationship has provided PSEG Power:

- Additional experience in Eastern NY and Connecticut markets
- Bigger natural gas footprint
- Fee-based services contract

SI-SSA-0015-06885

Capacity Market Pricing: PJM's capacity market is transitioning to recognize operating performance as well as locational value

RPM Auction Results					
($/MW-day)	2013 / 2014*	2014 / 2015*	2015 / 2016*	2016 / 2017*	2017 / 2018
Power's Average Prices	$242	$168	$168	$167	**$165**

SI-SSA-0015-06888

PSEG Power's Value Proposition

- Well-positioned fleet of merchant generating assets in attractive markets
- Advantaged by low cost structure, fuel diversity and dispatch flexibility
- Value add from strong gas supply capability
- Significant drive by regulatory bodies to improve market constructs
- Low capital requirements to meet enhanced performance standards
- Organic growth opportunities to increase nuclear and combined cycle generation
- Hedging strategy is responsive to changing market dynamics, providing attractive returns and free cash flow

SI-SSA-0015-06889

PSEG FINANCIAL REVIEW & OUTLOOK

SI-SSA-0015-06890

PSEG

We make things work for you.

Strong financial position to support our business initiatives

2014 Financial Position

- ✓ Strong 2014 earnings growth
- ✓ Exceeded earnings guidance
- ✓ Executed major PSE&G capital program
- ✓ Strong balance sheet with no long term Parent debt
- ✓ Solid credit metrics

2015 and Beyond

- ✓ Third year of anticipated positive earnings growth in 2015
- ✓ Controlled O&M growth
- ✓ Balance Sheet and Cash Flow support investment program without equity issuance
- ✓ Substantial additional investment capacity
- ✓ Growth in PSE&G investments with contemporaneous/formula rate returns
- ✓ Consistent and strong cash flow from both Power and PSE&G
- ✓ Potential for accelerated and sustainable dividend growth

SI-SSA-0015-06891

Earnings increase of 7% exceeded guidance

PSEG Operating Earnings		
$ Millions (except EPS)	**2013**	**2014**
PSE&G	$612	$725
PSEG Power	$710	$642

Power produced significant and consistent

Free Cash Flow

SI-SSA-0015-06893

PSE&G delivers increasing cash flow due to investment program

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$215 TO ~$240 MILLION OVER 3 YEAR PERIOD

SI-SSA-0015-06894

In 2014, Power's Free Cash Flow supported PSE&G's capital program and shareholder dividend

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$240 MILLION.
(2) OTHER CASH FLOW INCLUDES HOLDINGS NET CASH FLOW AND INVESTED CASH
(3) POWER CASH INVESTMENT INCLUDES NUCLEAR FUEL AND EMISSION PURCHASES

SI-SSA-0015-06895

PSEG growth spend represents ~70% of total investment with new PSE&G investment opportunities of over $1B

PSEG 2015– 2019E Capital Expenditures[1]

(1) INCLUDES AFUDC AND IDC; PENNEAST PIPELINE EQUITY INVESTMENT OF~$0.1B IS INCLUDED IN POWER GROWTH. E = ESTIMATE.

SI-SSA-0015-06896

PSE&G's Capital Program drives double-digit growth in rate base through 2019

E = ESTIMATE

SI-SSA-0015-06897

Continuing our track record of 5 year

double digit rate base growth leading to high single-digit growth in earnings through 2017

E = ESTIMATE.

SI-SSA-0015-06898

Substantial internal cash generation

supports our planned growth capital program and potential investment opportunities without the need for equity

PSEG 2015 - 2019E Sources and Uses

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$260M FROM 2015-2019
(2) OTHER CASH FLOW INCLUDES PSEG LI, HOLDINGS NET CASH FLOW, INVESTED CASH, AND PARENT SHORT-TERM DEBT
(3) POWER CASH INVESTMENT INCLUDES NUCLEAR FUEL AND EMISSION PURCHASES E = ESTIMATES.

SI-SSA-0015-06899

Power's key credit metric remains strong

providing opportunity for incremental investment

- Increased contribution to earnings from the more stable regulated business
- Power's annual Cash From Operations and Funds From Operations each average ~$1.4B over the 2015 to 2017 period supported by:
  - Capacity Revenues
  - Hedged Generation
  - O&M Control
- Financial strength can be used to pursue future growth in both businesses beyond current plans

SI-SSA-0015-06900

E = ESTIMATE

Substantial Investment Capacity to pursue additional growth without the need for equity

Average Funds from Operations /Debt
2015 - 2017

	Power	PSEG
Estimate	~ 55%	~30%
Minimum Threshold	30%	Low - 20's

Total Incremental Investment Capacity
through 2017

Our incremental investment capacity can support over $6B in regulated investments

SI-SSA-0015-06901

Well Funded Pension due to our long term asset allocation strategy

Pension Fund Returns
for the periods ending December 2014

- 2014 Funded Ratio ~93%
- Cumulative pension contributions total less than $50M through 2017 (1)
- Modest pension expense in 2015 with pension income expected by 2017 given fully funded level

Total company pension expense of <$0.07 per share in 2015, expected return to pension income by 2017

SI-SSA-0015-06902

(1) REPRESENTS CONTRIBUTIONS TO QUALIFIED PENSION PLANS.

Controlling O&M growth, with manageable pension impacts and PSE&G continuing to grow its asset base

(1) POWER EXCLUDES IMPACTS FROM STORM RECOVERY COSTS AND RELATED INSURANCE PROCEEDS.

SI-SSA-0015-06906

PSEG Summary

- Our 2014 earnings of $2.76 exceeded our revised operating earnings guidance of $2.60 - $2.75 per share
- Continued third year of anticipated positive earnings trend in 2015 with operating earnings guidance of $2.75 to $2.95 per share
- Continued 5th straight year of expected double digit, 5 year growth in rate base
- Anticipated high single digit earnings growth at PSE&G on three-year basis from 2014 to 2017, driven by transmission investments and planned programs
- Power's continued focus on operational excellence, market expertise and financial strength delivers value in current price environment
- Strong Balance Sheet and Cash Flow support full capital program and new potential opportunities without the need for equity
- Our $0.08 per share dividend increase is consistent with our long history of returning cash to the shareholder through the common dividend, with potential for consistent and sustainable growth

Forward-Looking Statements

Certain of the matters discussed in this presentation about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K. These factors include, but are not limited to:

- fluctuations in wholesale power and natural gas markets, including the potential impacts on the economic viability of our generation units;
- our ability to obtain adequate fuel supply;
- any inability to manage our energy obligations with available supply;
- increases in competition in wholesale energy and capacity markets;
- changes in technology related to energy generation, distribution and consumption and customer usage patterns;
- economic downturns;
- third party credit risk relating to our sale of generation output and purchase of fuel;
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements;
- changes in state and federal legislation and regulations;
- the impact of pending rate case proceedings;
- regulatory, financial, environmental, health and safety risks associated with our ownership and operation of nuclear facilities;
- adverse changes in energy industry laws, policies and regulations, including market structures and transmission planning;
- changes in federal and state environmental regulations and enforcement;
- delays in receipt of, or an inability to receive, necessary licenses and permits;
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry;
- changes in tax laws and regulations;
- the impact of our holding company structure on our ability to meet our corporate funding needs, service debt and pay dividends;
- lack of growth or slower growth in the number of customers or changes in customer demand;
- any inability of Power to meet its commitments under forward sale obligations;
- reliance on transmission facilities that we do not own or control and the impact on our ability to maintain adequate transmission capacity;
- any inability to successfully develop or construct generation, transmission and distribution projects;
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers;
- our inability to exercise control over the operations of generation facilities in which we do not maintain a controlling interest;
- any inability to maintain sufficient liquidity;
- any inability to realize anticipated tax benefits or retain tax credits;
- challenges associated with recruitment and/or retention of key executives and a qualified workforce;
- the impact of our covenants in our debt instruments on our operations; and
- the impact of acts of terrorism, cybersecurity attacks or intrusions.

All of the forward-looking statements made in this presentation are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business, prospects, financial condition, results of operations or cash flows. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this presentation apply only as of the date of this presentation. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even in light of new information or future events, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this presentation are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-06930

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Net Income. Non-GAAP Operating Earnings exclude the impact of returns (losses) associated with the Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting and material one-time items. Non-GAAP Adjusted EBITDA excludes the same items as our non-GAAP Operating Earnings measure as well as income tax expense, interest expense and depreciation and amortization. The last two slides in this presentation (Slides A and B) include a list of items excluded from Net Income/(Loss) to reconcile to non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA with a reference to those slides included on each of the slides where the non-GAAP information appears.

Management uses non-GAAP Operating Earnings in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results. Management believes non-GAAP Adjusted EBITDA is useful to investors and other users of our financial statements in evaluating operating performance because it provides them with an additional tool to compare business performance across companies and across periods. Management also believes that non-GAAP Adjusted EBITDA is widely used by investors to measure operating performance without regard to items such as income tax expense, interest expense and depreciation and amortization, which can vary substantially from company to company depending upon, among other things, the book value of assets, capital structure and whether assets were constructed or acquired. Non-GAAP Adjusted EBITDA also allows investors and other users to assess the underlying financial performance of our fleet before management's decision to deploy capital. The presentation of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA is intended to complement, and should not be considered an alternative to, the presentation of Net Income, which is an indicator of financial performance determined in accordance with GAAP. In addition, non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA as presented in this release may not be comparable to similarly titled measures used by other companies.

Due to the forward looking nature of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility. Guidance included herein is as of April 28, 2017.

These materials and other financial releases can be found on the PSEG website at www.pseg.com , under the Investors tab. From time to time, PSEG, PSE&G and PSEG Power release important information via postings on their corporate website at http://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. The "email alerts" link at http://investor.pseg.com may be used to enroll to receive automatic email alerts and/or really simple syndication (RSS) feeds regarding new postings at http://investor.pseg.com/rss .

** ESTIMATED ANNUAL GROWTH PER YEAR, ASSUMES NORMAL WEATHER.

Power has generating assets in three competitive markets

- Major assets located near key load centers
- Constructing three new, efficient combined-cycle units
- Positioned to benefit from market volatility
- Additional generation assets:
  - Solar (326 MW_{DC}/257 MW_{AC})
  - Kalaeloa, HI (104 MW)

SI-SSA-0015-06935

*POWER ANNOUNCED RETIREMENTS OF HUDSON AND MERCER GENERATING STATIONS AS OF JUNE 1, 2017.

PSEG Policy and Regulatory focus

on mechanisms that provide customers clean, affordable, resilient energy supply

NJ Distribution Base Rate Proceeding

- True-up data from 2010 base rate case for known changes in customers usage, taxes, O&M and investments

Long-Term Infrastructure Investment Platform

- Seek extension of existing infrastructure programs, e.g., GSMP, and broaden investment platform

Preserve the Value of Nuclear Supply

- Pursuing legislative strategy to recognize the value of nuclear energy under terms and conditions that are affordable for customers and provide the proper incentives for long-term operation

Ensure Federal Regulatory and Policy Framework

- Advocate for rules that preserve benefits of competitive markets while also recognizing the value of clean energy, supply diversity and grid reliability

Extend and broaden Energy Efficiency

Utility of the Future

Electric Infrastructure

Life cycle programs, distribution automation, EV Charging

Gas Infrastructure

GSMP Acceleration and Resiliency

CNG Charging

Distributed energy resources

Solar 4 All, Microgrids, Batteries, Fuel Cells

Energy Efficiency

Hospitals, Municipalities, Universities, Low Income Programs, EE for All (Residential, Small C&I), AMI, Bill Education

Utility of the Future represents potential investment opportunity to sustain annual rate base growth rate

SI-SSA-0015-06943

PSE&G's capital spending drives high single-digit growth in rate base

E = ESTIMATE.

SI-SSA-0015-06944

Customer's bills are materially lower, supporting needed investment in the system

- Combined electric and gas bills declined ~28% over the 2009-2017 period
  - Also provided BGSS bill credits totaling ~$590 per customer since 2012
  - Low gas prices and elimination of transition charges drove rate decreases
- Regional price comparison** Gas is 2nd lowest and Electric is lower than average
- Investing at the Utility of the Future level – would take about a decade to equal the 2009 bill rates (adjusted for growth in CPI/disposable income)

SI-SSA-0015-06945

PSEG

*FOR ALL YEARS THE BILLING ASSUMES 7,200 KWH FOR ELECTRIC AND 1,010 THERMS FOR GAS ANNUALLY. E = ESTIMATE
** COMPARED AGAINST 12 REGIONAL UTILITIES AS OF SEPTEMBER 1, 2016, FOR A CUSTOMER THAT USES 500 KILOWATT-HOURS AND 100 THERMS IN A MONTH.

Power's fleet is being **transformed** with focus on improvement in efficiency

Projected Fleet Comparison 2016 to 2021E

Energy Produced increases by >18%

[1] REFLECTS ANNOUNCED EARLY RETIREMENT OF HUDSON AND MERCER UNITS IN MID-2017.
ALL PERIODS EXCLUDE SOLAR (257 MW_{AC}) CAPACITY AND KALAELOA (104 MW) CAPACITY / ENERGY PRODUCED.
**2016 COAL INCLUDES NEW JERSEY UNITS THAT FUEL SWITCH TO GAS. E= ESTIMATE.

SI-SSA-0015-06946

Power's free cash flow improves as construction program ends, providing funding for growth

PSEG Power
2017E – 2021E Capital Spending (1)

PSE&G
2017E – 2021E Capital Spending (1)

(1) CAPITAL INCLUDES IDC AND AFUDC. E = ESTIMATE.

Strong credit metrics provide substantial investment capacity for increased utility investment

Average Funds From Operations / Debt
2017E – 2019E

	Power	PSEG
Estimate	~40%	Low – 20's
Minimum Threshold	30%	High - teens

Total Incremental Investment Capacity

Incremental capacity invested in utility would be matched with utility debt

SI-SSA-0015-06948

PSEG has demonstrated an ability to control O&M, with plans to reduce in 2017

SI-SSA-0015-06949

PSEG

(1) POWER EXCLUDES IMPACTS FROM STORM RECOVERY COSTS AND THE HUDSON / MERCER EARLY RETIREMENT WRITE-DOWN, DISTRIBUTION EXCLUDES ELECTRIC AND GAS BAD DEBT. E = ESTIMATE.

2017 Federal Tax Reform – PSEG is well positioned

Given positive non-utility contribution to earnings and a strong balance sheet, PSEG is well positioned for potential tax reform

Assumption	PSE&G	PSEG Power	PSEG Parent
Reduction of Corporate Tax Rate	Customer rates lowered with reduction in tax rate Return of excess deferred tax liability – impact on cash and rate base growth dependent on payback period	After-tax earnings and cash flow increase One-time non-cash earnings benefit from reduction in deferred tax liability	After-tax earnings and cash flow improve
100% Expensing of Capital Expenditures	Impact on rate base growth comparable to existing bonus depreciation rules	Cash flow improves	
Elimination of Deductibility of Interest Expense and Border Adjustment Tax	Change in cost anticipated to be passed through to customers	Well positioned given low debt balance Uncertainty on Border Adjustment Tax	Well positioned given low debt balance

SI-SSA-0015-06950

Opportunity for meaningful and sustainable dividend growth

SI-SSA-0015-06951

PSEG Summary

- 2016 Operating Earnings (non-GAAP) at upper end of revised guidance of $2.80 - $2.95 per share
- PSE&G capital spending provides high single-digit rate base growth for foreseeable future balanced between Transmission and Distribution
- Power expected to generate significant free cash flow following CCGT construction program and transformation to a more efficient generation fleet
- Strong balance sheet and cash flow support current capital program and new investment opportunities without the need for equity
- Our indicative $0.08 dividend per share increase for 2017 demonstrates meaningful and sustainable dividend growth given significant contribution from PSE&G earnings and Power's strong financial profile

SI-SSA-0015-06952

PSEG's Value Proposition

- A stable platform with a $15 billion infrastructure investment pipeline providing opportunity for growth
- PSE&G – Delivering on promise for rate base growth through disciplined investment, customer satisfaction and safety
- PSEG Power – Efficient, low-cost, clean fleet advantaged by asset diversity, fuel mix and location
- Focus on providing strong, sustainable returns of invested capital through operational excellence, regulatory and legislative mechanisms
- 110-year record of paying common dividend with opportunity for consistent, sustainable growth
- Strong balance sheet – Financial strength supported by stable credit rating and investment profile

SI-SSA-0015-06953

PSEG FINANCIAL APPENDIX

PSEG

We make things work for you.

SI-SSA-0015-06954

Q1 2017 – Achieved Solid Financial Results

First Quarter Highlights

- Net Income of $0.22 vs. Net Income of $0.93 per share in Q1 2016
- Non-GAAP Operating Earnings* of $0.92 vs. $0.91 per share in Q1 2016
- Net Income reflects decision to retire Hudson-Mercer in June 2017 and REMA lease reserve
- PSE&G achieved 13% growth in Q1 Net Income over Q1 2016, supported by increased investment in transmission and distribution
- PSEG Power results aided by continued cost containment

Operational Excellence

- Nuclear fleet performance achieved 100% capacity factor for Q1

Disciplined Capital Investment – Producing Results

- PSEG expected to invest ~$4.7 billion in 2017, consisting primarily of $3.4 billion at PSE&G and $1.2 billion at PSEG Power
- Regulatory/Legislative Focus: NJ Needs Nuclear advocacy efforts; Energy Efficiency extension and expansion filing in March
- Major capital initiatives on track: Bridgeport Harbor 5 received all needed permits to begin construction phase

Forward Looking Statement

Certain of the matters discussed in this communication about us and our subsidiaries future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q an d Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to sufficiently obtain coverage or recover proceeds of insurance on such matters,
- increases in competition in energy supply markets as well as competition for certain rate-based transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology and customer usage patterns.

All of the forward-looking statements made in this communication are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this communication apply only as of the date of this communication. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this communication are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-06962

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. Slides A and B at the end of this presentation include a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

PSE&G's Energy Strong Capital Program addresses new reality

- New ten-year, $3.9 Billion Infrastructure Program filed February 2013 with the NJBPU to strengthen PSE&G's distribution system focusing on hardening and resiliency
- Plan to invest an additional $1.5 Billion in transmission grid over the ten-year period
- The 10-year Energy Strong proposal includes:
  - ✓ Protecting 40 utility installations from severe storms (**$1.7 Billion**)
  - ✓ Making the electric grid smarter and easier to repair (**$460 Million**)
  - ✓ Adding backup distribution lines and system redundancies (**$550 Million**)
  - ✓ Undergrounding 20 miles of overhead distribution lines (**$60 Million**)
  - ✓ Modernizing the gas distribution system (**$1.2 Billion**)

- PSE&G is seeking BPU approval to implement the first five years of the Energy Strong proposal, an investment of $2.6 Billion
- The proposed filing creates ~5,800 jobs and stimulates economic activity for New Jersey businesses

SI-SSA-0015-06971

70 local NJ towns and 6 counties support

- 70 municipalities and six counties (Bergen, Hudson, Mercer, Passaic, Somerset and Union) have approved resolutions in support of Energy Strong, PSE&G's infrastructure proposal to improve and fortify its electric and gas distribution systems
- The Energy Strong proposal is currently being evaluated by the NJ Board of Public Utilities
- Public hearings are scheduled for September and October 2013

SI-SSA-0015-06972

SI-SSA-0015-06975

PSEG First Half 2013 - Highlights

Maintaining 2013 operating earnings guidance of $2.25 - $2.50 per share

- Strong earnings: First half 2013 earnings of $1.33 per share vs. $1.28 in year-ago period
  - Power benefitting from higher capacity prices and asset location
    - PSE&G seeing results from increased investment in transmission
      - O&M under control {Continuing control of O&M supporting results}

- Capital investment on schedule
  - PSE&G received approval to invest $446 million in extensions of Solar 4 All and Solar Loan programs
    - PSE&G's existing $3.4 billion Transmission investment program remains on schedule
      - Hearings scheduled for Energy Strong, PSE&G's $2.6 billion, 5-year capital infrastructure program

- Financial position remains strong
  - S&P credit rating upgrade across Enterprise, Power and PSE&G
    - Debt represented 41% of capital at June 30, 2013
      - Dividend increased 1.4% to $1.44 per share, the 9th increase in the last ten years

Full year 2013 operating earnings expected to be at the upper end of guidance, assuming normal weather and unit operations

SI-SSA-0015-06976

2013 Operating Earnings*

Investment in the regulated business has changed the earnings mix

Our 2009-2013 investment focus has brought us to a 50/50 mix for 2013

PSE&G's 2013-2017 Energy Strong Program and ongoing transmission investments will support continued growth in PSE&G's earnings

North Central Reliability	11.68%	✓	✓	$390	June 2014
Burlington – Camden 230kV	11.68%	✓	✓	$399	June 2014
Mickleton – Gloucester-Camden 230kV	11.68%	✓	✓	$435	June 2015

SI-SSA-0015-06995

Susquehanna-Roseland consists of constructing 150 miles of 500kV circuit (46 miles in NJ) with two new 500kV GIS switching stations at Roseland and Hopatcong

Project Estimate Up To*	Through Year-end 2012	2013-2015E	Expected In-service Date
$790M	$324M	$466M	June 2014 / June 2015

- PJM RTEP project b0489
- ROE of 12.93% (including 1.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-06996

PSEG

*PROJECT IS SHARED WITH PPL. PROJECT ESTIMATE REPRESENTS PSE&G'S CONSTRUCTION RESPONSIBILITY FOR THE NJ PORTION. E = ESTIMATE

Northeast Grid Reliability consists of upgrading approximately 50 overhead circuit miles of 138kV transmission line to 230kV, constructing ~18 miles of new underground 230kV lines, and converting twelve existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2012	2013-2015E	Expected In-service Date
$895M	$88M	$807M	June 2015

- PJM RTEP project b1304
- ROE of 11.93% (including 0.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Project Status: Engineering, licensing, and outside plant underground construction in progress

SI-SSA-0015-06997

North Central Reliability consists of upgrading 55 circuit miles of 138kV transmission line to 230kV, and converting six existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2012	2013-2015E	Expected In-service Date
$390M	$163M	$227M	June 2014

- PJM RTEP project b1154
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-06998

Burlington-Camden 230kV consists of upgrading 37 circuit miles (30 miles of overhead and 7 miles of underground) of 138kV transmission line to 230kV, converting the existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2012	2013-2014E	Expected In-service Date
$399M	$169M	$230M	June 2014

- PJM RTEP project b1156
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-06999

Mickleton-Gloucester-Camden 230kV

consists of upgrading 10 circuit miles of overhead transmission, installing ~16 circuit miles of new 230kV underground, 10 circuit miles of new 230kV overhead, and modifications/upgrades at five existing stations

Project Estimate Up To	Through Year-end 2012	2013-2015E	Expected In-service Date
$435M	$24M	$411M	June 2015

- PJM RTEP project b1398
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-07000

State policy imperatives have been redefined by Superstorm Sandy

Storm report issued by NJBPU focusing on:

- Preparedness Efforts
- Communications
- Restoration and Response
- Post Event Analysis
- Underlying Infrastructure Issues

Storm Deferral Filings:

- On December 19, 2012 the Board granted a PSE&G request for general authority to defer storm restoration costs, thereby making such costs potentially recoverable in future rate filings
- On February 20, 2013, at its open public meeting, the Board voted that the recovery of all such storm restoration costs would be reviewed in a generic (multi-utility) proceeding

SI-SSA-0015-07001

We have also responded with a plan focused on infrastructure hardening and resiliency

- PSE&G filed a petition on February 20, 2013, with the NJBPU seeking approval for the Energy Strong Program (ES) which will harden electric and gas distribution infrastructure and increase the resiliency of the electric distribution system
- The filing complements the NJBPU's recently issued order requiring all Electric Distribution Companies to take specific actions to improve preparedness and response to major storms
- ES program represents a potential investment of approximately $3.9 billion over the next 10 years. PSE&G has asked for initial funding approval of $2.6 billion during the first five years
- Additional Transmission investment of approximately $1.5 billion would be included in future FERC Formula Rate filings

SI-SSA-0015-07002

Lower commodity costs and expiration of certain transition charges are expected to offset the impact to customer bills

*FOR THE TYPICAL COMBINED ELECTRIC & GAS RESIDENTIAL CUSTOMER, 2018 BGS (INCLUDING TRANSMISSION) / BGSS, AS WELL AS SBC, WNC, RAC AND DISTRIBUTION RATES HELD CONSTANT AS OF THE ES FILING DATE (FEB-2013). RATES RELATED TO ELECTRIC RESTRUCTURING: SECURITIZATION (STC), NON-UTILITY GENERATION CHARGE (NGC), & TRANSITIONAL ENERGY FACILITIES ASSESSMENT (TEFA), ARE REDUCED TO ZERO BY 2018. THE RGGI RECOVERY CHARGE (RRC), SOLAR PILOT RECOVERY CHARGE (SPRC), AND CAPITAL ECONOMIC STIMULUS INFRASTRUCTURE INVESTMENT PROGRAM (CIP I) AND THE CIP EXTENSION (CIP II) BILL IMPACTS ARE INCLUDED IN THEIR RESPECTIVE GAS & ELECTRIC BARS AND FORECASTED BASED UPON MAR-2013 ESTIMATES. THE BILL IMPACTS FOR ES PROGRAM BASED UPON THE PROPOSED FILING AND S4AEXT/SL3 IMPACTS ARE BASED UPON THE BPU APPROVED PROGRAM.

LONG ISLAND POWER AUTHORITY

SI-SSA-0015-07005

PSEG

LIPA T&D management contract

In December 2011, the Long Island Power Authority (LIPA) selected PSEG to manage its electric transmission and distribution system for 10 years starting in January 2014

- Reasons for selecting PSEG included:
  - ✓ Proven technical capabilities and track record of top quartile customer service and reliability
  - ✓ Commitment to cost control and investment optimization
  - ✓ Corporate culture of transparency and data-driven decision making

- Transition activities on-track – successfully achieving all milestones

- Evaluating impact of Superstorm Sandy and recent LIPA management changes on the overall schedule and transition

Successful management of the LIPA transmission and distribution system may lead to additional growth opportunities

Disciplined Investment

SI-SSA-0015-07013

PSEG POWER

PSEG

We make things work for you.

SI-SSA-0015-07014

PSEG Power strategy

Focused on safety performance, unit reliability, competitive cost structure with control of maintenance costs, achieving operational excellence, and supporting market rules to maintain a level playing field

SI-SSA-0015-07015

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus

Fleet Diversity/Efficiency Focus

- Fleet diversity across the dispatch curve and fuel types provides flexibility
- Nuclear units continue to achieve strong operational results and are well positioned for the future
- Peach Bottom steam path retrofit completed
- Fossil fleet is suited for market dynamics
- CCGT achieved record output in 2012
- Installed 400 MW new peaking capacity in 2012

Financial/Economic Focus

- O&M cost control programs have delivered
- Sites offering competitive advantage suited for expansion

Regulatory Focus

- Strong regulatory performance
- Industry leadership in the changing regulatory environment

SI-SSA-0015-07016

PSEG Power delivered in 2012

Storm and weather challenges	Market challenges	Value delivered
• Superstorm Sandy impacted our generating sites • Warm winter put pressure on demand and pricing for both electricity and gas • Hot summer weather created challenging operating environment	• Unit outages and transmission outages resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by weather and economy	• Cost control • Lower dispatch and fuel cost • Captured value through coal/gas switching, unit flexibility • Improved unit availability • Coal & oil sales optimized inventory • Expedited return from storm outages, restored margin opportunities • Optimized unit dispatch across fleet during storm recovery

SI-SSA-0015-07017

PSEG Power has generating assets

in three competitive markets

- Low cost portfolio
- Fuel flexibility
- Assets near loads
- Poised to benefit in real time markets
- Fleet will maintain diversity and efficiency in 2016 after HEDD
- Most sites suitable for expansion

SI-SSA-0015-07018

PSEG Power Nuclear fleet is a critical element of success

Hope Creek	Salem Units 1 and 2	Peach Bottom Units 2 and 3

• Operated by PSEG Nuclear
• PSEG Ownership: 100%
• Technology: Boiling Water Reactor
• Total Capacity: 1,174 MW
• Owned Capacity: 1,174 MW
• License Expiration: 2046
• Next Refueling
  • Fall 2013
	• Operated by PSEG Nuclear
	• PSEG Ownership: 57%, Exelon – 43%
	• Technology: Pressurized Water Reactor
	• Total Capacity: 2,326 MW
	• Owned Capacity: 1,335 MW
	• License Expiration: 2036 and 2040
	• Next Refueling
	  • Unit 1 – Fall 2014
	  • Unit 2 – Spring 2014
		• Operated by Exelon
		• PSEG Ownership: 50%
		• Technology: Boiling Water Reactor
		• Total Capacity: 2,245 MW
		• Owned Capacity: 1,123 MW
		• License Expiration: 2033 and 2034
		• Next Refueling
		  • Unit 2 – Fall 2014
		  • Unit 3 – Fall 2013

SI-SSA-0015-07019

PSEG Power Nuclear is core to the fleet and has competitive advantages

- Continued strong nuclear operations – eight consecutive years of >90% capacity factor
- Significant earnings contributor
- Top quartile of cost performance/MWh
- One third new staff, recruitment of the best new and experienced talent and attractive training program
- Developing Fukushima action plan in response to NRC staff review
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

SI-SSA-0015-07020

PSEG Power's Fossil Fleet availability has shown steady improvement

EFORd improvement resulted in over 200 MW of additional capacity available

EFORp improvement and availability at peak demand times has resulted in performance payments in each of the last four years

SI-SSA-0015-07021

PSEG Power improvements achieved in combined cycle fleet efficiency

Actions Taken to Create Value	
• Heat rate improvement program • Operational Excellence Model	• Training programs • Unit testing initiative • Outage work to restore efficiency

SI-SSA-0015-07022

Superstorm Sandy affected the fleet;

when the load returned, Power was ready

SI-SSA-0015-07023

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- Power is well positioned for HAPS

SI-SSA-0015-07024

PSEG Power's focus on costs has resulted in moderate increase in O&M for six years

Cost control actions taken:	
• Coal assessment • CCGT material condition assessment • Contract renegotiation	• Material management • Nuclear maintenance productivity study • Nuclear outage efficiency initiative

SI-SSA-0015-07025

* INCLUDES IMPACTS FROM STORM RECOVERY COSTS AND POTENTIAL RELATED INSURANCE PROCEEDS.
E = ESTIMATE.

PSEG Power is well positioned for growth in the fleet when market conditions dictate

Available locations		Our sites possess infrastructure advantages
• Bergen • Burlington • Essex • Edison • Kearny	• Hudson • Linden • Sewaren • Bridgeport Harbor	• Electric Interconnection • Gas Pipeline Access • Sites/Space • Emissions

SI-SSA-0015-07026

PSEG Power will maintain diversity and efficiency after a realignment of the fleet in 2016

Objective
2012 → 2016E

- Maintain fuel diversity
- Maintain load serving capability
- Improve fleet heat rate by 6%
- Maintain low cost structure
- Environmental improvement

Fuel Diversity
13,226 MW 11,200 MW

Energy Produced
52.5 TWh 52-54 TWh

E=ESTIMATE

16	NO_x (Ktons)	10

SI-SSA-0015-07029

* EXCLUDES SANDY IMPACT.

PSEG POWER
ER&T

SI-SSA-0015-07030

PSEG

We make things work for you.

PSEG Power
ER&T strategy

Focused on optimizing the value of its asset portfolio and providing outstanding service to our customers, while prudently managing risk

SI-SSA-0015-07031

Diversified assets and flexible dispatch

High performing, base load nuclear assets	3,632 MW
Fuel advantaged, base load coal plants in PA	776 MW
Flexible combined cycle fleet	3,176 MW
Well leveraged intermediate & peaking assets	5,642 MW

Integrated trading and dispatch capability around fleet

SI-SSA-0015-07032

Fleet capacity has been advanced by:

Improved Heat Rate capability

Trading acumen to execute fuel switching opportunities

Reduced O&M and increased start-up success

Capturing new products opportunity with minimal investment

SI-SSA-0015-07033

Spark spread replaces dark spread as major value driver

- Spark spread has risen above dark spread in PJM markets
- Power's gas units operating at record throughput
- Gas operation provides much more operational flexibility
- Enhances the ability of trading organization to capture volatility

SI-SSA-0015-07034

2013 BGS Auction Results for PSE&G Zone

BGS sales account for about a third of our forward portfolio of hedges

SI-SSA-0015-07035

BGS PRICES REFLECT PSE&G ZONE; RESULTS FOR 2011-2013 ARE THE NEW BLENDED PRICES BEGINNING JUNE 1, 2013.

Our hedging mix has changed with the market but still captures the fleet's locational advantage

- 3 Year forward BGS sales comprise smaller percentage of Power's hedges
- Other full requirement load deals help capture additional locational and load shape premium

SI-SSA-0015-07036

NOTE: PERCENTAGES REPRESENT HEDGED VOLUMES IN PLACE AFTER BGS AUCTION.

Hedging strategy designed to protect gross margin and leverage the portfolio

Ratable Hedging on Base Load:

- 3 year ratable hedge tactics
- 3 year PJM hedge of capacity (not included in table)
- Load following sales (such as BGS) have strong correlation to our units for hedging basis and load shaping premium

Dynamic Hedging on Intermediate Coal, Combined Cycle and Peaking:

- Position fleet to take advantage of market volatility
- Gas and load-following fleet left open until prompt year to capture volatility
- Use all trading products to capture option value of assets and benefit from market dislocations

		Jul-Dec 2013	2014	2015
Base Load (Nuclear and Base Load Coal)	Volume TWh	17	35	35
	% Hedged	100%	90-95%	50-55%
	Price $/MWh	$51	$49	$49
Intermediate Coal, Combined Cycle, Peaking	Volume TWh	11	18	17
	% Hedged	30-35%	0%	0%
	Price $/MWh	$51	$49	$49
Total	Volume TWh	26-28	53-55	52-54
	% Hedged	70-75%	55-60%	30-35%
	Price $/MWh	$51	$49	$49

HEDGE PERCENTAGES AND PRICES AS OF JUNE 28, 2013. REVENUES OF FULL REQUIREMENT LOAD DEALS BASED ON CONTRACT PRICE, INCLUDING RENEWABLE ENERGY CREDITS, ANCILLARY, AND TRANSMISSION COMPONENTS BUT EXCLUDING CAPACITY. HEDGES INCLUDE POSITIONS WITH MTM ACCOUNTING TREATMENT AND OPTIONS.

SI-SSA-0015-07037

PSEG's locational advantage

and electric basis

- Basis (PS Zone to PJM West) will continue to trend downward for forward sales
- Volatility will remain significant in the prompt periods (especially summer/winter)
- Power maintains sufficient length to participate in upside volatility as well as a valuable 250MW transmission position into NYC
- Basis will continue to have a positive impact on PSEG Power profitability

SI-SSA-0015-07038

*AS OF MAY 15, 2013.

PSEG's locational advantage

and gas basis

- Lower cost supplies of shale gas have been beneficial to both PSE&G customers and PSEG Power
- Over 50% of our available pipeline capacity can access market area supplies of shale gas
- Power's generating units sit in close proximity to the Marcellus fairway
- Power buys approximately 350BCF/year of gas
- Availability of a robust gas portfolio of storage and pipeline capacity benefits PSE&G customers and Power's generating assets

SI-SSA-0015-07039

PJM's capacity market continues to recognize locational value of our fleet

$/MW-Day	2012 / 2013	2013 / 2014	2014 / 2015	2015 / 2016	2016 / 2017
Power's Average Price	$153	$244	$162	$167	$166
PS Zone					$219
EMAAC	$140	$245	$137	$167	$119
RTO	$16	$28	$126	$136	$59
Power's Capacity (MW)	10,400	10,600	10,300	9,000	8,637*

*PSEG Power's cleared megawatts split between PS Zone and EMAAC.

2016/2017 RPM Auction Influenced By:

- New Build and Higher Imports
- Updated Transfer Capabilities
- Updated Demand Curve
- Environmental Retirements
- Minimum Offer Price Rule
- Lower Demand Response

SI-SSA-0015-07040

Reserve margins in PJM declining with retirements

Generation Deactivation Notifications

Source: PJM TEAC, 8/8/2013

- PJM Pending Deactivation Requests of 13,340 MW as of August 13, 2013
- Approximately 5,000 MW of additional owner announced retirements in PJM through next auction

Forecast Reserve Margin (PJM June 2013)

- PJM forecasts a declining Reserve Margin through 2017

Opportunity for modest and sustainable

dividend increases consistent with stable regulated growth and cash generation outlook at PSEG Power

SI-SSA-0015-07058

PSEG Summary

- Maintaining 2013 operating earnings guidance of $2.25 - $2.50 per share -- based on financial results to date, we expect operating earnings for the full year to be at the upper end of our guidance range assuming normal weather and unit operations
- Double digit operating earnings growth at PSE&G starting in 2013, and continuing through 2015 driven by transmission investments and approved programs
- Power's continued focus on operational excellence, market expertise and financial strength reduces risk in low price environment
- Strong Balance Sheet and Cash Flow support full capital program without the need for equity
- Long history of returning cash to the shareholder through the common dividend, with opportunity for future growth

PSE&G provides high reliability at below average cost which creates superior value to customers

SAIDI = SYSTEM AVERAGE INTERRUPTION DURATION INDEX, A MEASURE OF AVERAGE OUTAGE DURATION FOR ALL CUSTOMERS SERVED.

SI-SSA-0015-07065

PSE&G prioritizes public safety

while maintaining value to customers

LEAK RESPONSE RATE = PERCENTAGE OF UTILITY RESPONSES TO REPORTED LEAKS WITHIN ONE HOUR.

SI-SSA-0015-07066

Formula rates for transmission make the process more predictable with contemporaneous returns

	Transmission (Federal)	Distribution Base Rate Case (State)
Current ROE	• 11.68% base • 12.93% with incentives on Susquehanna-Roseland • 11.93% with incentives on Northeast Grid	• 10.3%
Volatility of Returns	• Low – prospective recovery with annual true-ups for over/under recovery	• Higher – performance impacted positively/negatively by cost management, weather, customer demands, etc.
Process	• Formula – The rate template and specific elements like ROE are predetermined with annual updates and true ups	• Litigated case with each element (depreciation, ROE, O&M levels, Rate Base) scrutinized and settled
Intervenors	• State consumer advocates usually participate	• State consumer advocates • Large customers • Other parties affected by the case, e.g. Solar Developers
Test Year	• PSE&G has fully **forecasted** test year for both Capital and O&M	• **Historical** test year with pro-forma adjustments for known and measurable items, e.g. wage escalation
Time to resolve	• Annual Formula updates are filed in October with January 1 effective date	• Typically settled within 12-15 months

SI-SSA-0015-07067

New Jersey Board of Public Utilities (BPU)

- The Board of Public Utilities consists of five commissioners appointed by the Governor. These appointees are confirmed by the NJ Senate for six-year, staggered terms. The Governor appoints one of the five to serve as Commission President.

  Currently, the commissioners are:

  - Robert M. Hanna, Commission President
  - Jeanne M. Fox
  - Joseph L. Fiordaliso
  - Mary-Anna Holden
  - Dianne Solomon

- Stefanie Brand, Director of the N.J. Division of Rate Counsel

SI-SSA-0015-07068

Slow economic recovery in NJ is constraining growth in all market sectors

Modest residential growth limited by housing market inactivity and the slow economic recovery

Consumer spending is trending with the slow economic recovery and impacting growth in the commercial sector

Industrial sales growth continues to be constrained by slow economic recovery

2013 - 2015
Projected Sales Growth – Gas*

2013 – 2015
Projected Sales Growth – Electric*

SI-SSA-0015-07069

PSEG

*WEATHER NORMALIZED ESTIMATED ANNUAL GROWTH PER YEAR OVER FORECAST PERIOD; PROJECTED SALES GROWTH FOR 2013-2015 GAS INCLUDES ONLY FIRM SALES.

Key economic indicators forecast renewed growth over the 2012 to 2015 timeframe

The New Jersey economy increased by 0.3% annually from 2010 to 2012 and is anticipated to grow 2.3% per year from 2012 to 2015

New Jersey total non-farm employment increased by 0.6% annually from 2010 to 2012 and is expected to grow 1.4% per year from 2012 to 2015

Real personal income in New Jersey increased by 1.4% annually from 2010 to 2012 and is expected to increase 2.5% per year from 2012 to 2015

Single family housing starts declined by 2.6% annually from 2010 to 2012 and are expected to increase ~24% per year from 2012 to 2015

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as competition for certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies, and
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-07080

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Income from Continuing Operations/Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. Slides A and B at the end of this presentation include a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

PSEG OVERVIEW

Ralph Izzo

CHAIRMAN, PRESIDENT AND
CHIEF EXECUTIVE OFFICER

Kathleen Lally

VICE PRESIDENT –
INVESTOR RELATIONS

PSEG

We make things work for you.

SI-SSA-0015-07082

PSEG's Strategy – delivering results

Our businesses' focus on cost-effective, reliable operations yields strong cash flow

We are funding growth-oriented investments aligned with customer needs and state energy policies

We are enhancing the competitiveness of our environmentally well-positioned generation business

The results of our financial strategy support a credit profile capable of meeting our corporate objectives and providing sustained dividend growth for our shareholders

SI-SSA-0015-07083

Two complementary businesses

Strong asset platform, performing well and positioned for the future

PSEG

PSE&G	PSEG Power LLC
Electric & Gas Delivery and Transmission	**Regional Competitive Generation**
Strategy: Positioned to meet customers' needs as we respond to state and federal energy policy and economic growth objectives **Value Proposition:** An $11.3 billion infrastructure program – focused on transmission – that is expected to produce double-digit rate base growth through 2016	**Strategy:** Fuel diverse fleet is geographically and environmentally well positioned, with investments to enhance competitiveness **Value Proposition:** Provides substantial free cash flow in current environment and poised for price recovery
2013 — Assets $20B Operating Earnings $612M	2013 — Assets $12B Operating Earnings $710M

SI-SSA-0015-07084

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2013.
PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT, PSEG LONG ISLAND AND ENERGY HOLDINGS ACTIVITY.
SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS.

Delivering on commitments and pursuing opportunities for growth

Operational Excellence	• Power: Record 2013 output at Linden CCGT and Salem 2; nuclear capacity factor greater than 90% for 9th straight year • PSE&G: Mid-Atlantic Reliability Award (12th consecutive year) • PSEG Long Island: Went "live" on January 1, 2014 • PSEG: Cost-control benefits continue
Financial Strength	• Strong cash flows supported credit rating increases • Pension more than fully funded • Dividend increased
Disciplined Investment	• PSE&G ✓ Transmission capital program execution and growth ✓ Energy Strong infrastructure program underway ✓ Solar 4 All Extension and Solar Loan III programs • Power: Investments to enhance the fleet's competitiveness – 130 MW Nuclear uprate, 150 MW CCGT uprate and efficiency improvement

SI-SSA-0015-07085

PSEG 2014 Operating Earnings expected to be at the upper end of guidance range

Reflects increased level of utility investment, pension savings and assumes normal weather and unit operations for the rest of year

SI-SSA-0015-07086

PSEG

SI-SSA-0015-07087

Maintaining a robust capital program focused on growth

PSEG 2009 - 2013 Capital Spending $11.3 Billion	PSEG 2014 - 2018E Capital Spending $13.1 Billion

SI-SSA-0015-07088

PSEG

NOTE: POWER 2009–2013 ACTUALS ARE RESTATED TO INCLUDE SOLAR CAPITAL SPEND. POWER CAPITAL SPENDING EXCLUDES NUCLEAR FUEL. E=ESTIMATE

PSEG's business profile has been transformed through significant growth in utility capital spending, and we have consistently identified attractive opportunities for additional investment

SI-SSA-0015-07089

Energy Strong Agreement recognizes benefits of system investments

- Energy Strong Agreement reached with all parties
  - ✓ Agreement recognizes the benefits of system investments that prevent or shorten outages
  - ✓ Supports $1.22 billion capital program over several years on reasonable terms: $1 billion recovered through accelerated, rate recovery mechanism
    - $820 million Electric
    - $400 million Gas
  - ✓ Allows PSE&G to earn a 9.75% ROE on the $1 billion recovered on accelerated basis
  - ✓ Requires PSE&G to file a base rate case by November 2017
  - ✓ Approved by the NJBPU in May 2014
- Over 100 New Jersey municipalities supported Energy Strong
- Energy Strong agreement clears path for PSE&G to begin the initial phase of this robust capital program

SI-SSA-0015-07090

Balance Sheet Strength

2009 – 2013: Reduced risk profile and transformed business mix

- Invested $8.4 billion in PSE&G
- Improved credit ratings
- Monetized and de-risked Holdings' portfolio

2014 – Forward: Strong cash flows and increasingly regulated business mix fully support:

- PSE&G's $11.3 billion approved investment program through 2018
- Consistent and sustainable dividend growth
- Additional investment capacity to deploy in opportunities beyond those in the current capital plan
- No need to issue equity

SI-SSA-0015-07092

PSEG Annual Dividend – A long history of growth and returning cash to shareholders with a financial position that provides opportunity for consistent and sustained growth

PSEG Q2 2014 Financial Highlights

- **Earnings on Track**
  - ✓ Operating earnings of $0.49 vs. $0.48 per share in Q2 2013
  - ✓ Increased earnings contribution from PSE&G's investment in Transmission
  - ✓ Expect 2014 Operating Earnings to be at the upper end of the $2.55 to $2.75 per share guidance range – assuming normal weather and plant operations for the balance of the year
- **Operating Review**
  - ✓ PSEG Power output down 5% vs. Q2 2013 from Linden and Salem 2 outages, partially offset by improvement in coal generation
  - ✓ PSE&G placed the 230 kV North Central Reliability transmission project in service
  - ✓ Power's fleet fully restored from storm outages
- **PSEG Disciplined Capital Investment**
  - ✓ BPU approved $1.22 billion investment in PSE&G's Energy Strong infrastructure program
  - ✓ PJM deferred a final decision on its recommended solution, to be built by PSE&G, for the Artificial Island project via FERC 1000 competitive bidding process
- **Market Developments**
  - ✓ Recent EPA actions on 316(b) and GHGs

Value Proposition

PSEG is positioned to **expand its investment in PSE&G** projects that provide reasonable, risk-adjusted returns, in ways that meet customer needs and state goals, given **strong cash flow of Power** and growing cash contribution from PSE&G.

PSEG will maintain a **strong financial profile** that provides the opportunity to achieve our growth objectives and maintains our **track record** of **returning cash to shareholders**.

SI-SSA-0015-07103

Energy Strong Agreement supports customers' needs in the aftermath of Superstorm Sandy

- Settled with NJBPU Staff and all other parties in May 2014 for $1.22 billion; approved by the NJBPU in May 2014
- Program addresses system resiliency and hardening by:
  - ✓ $620 million to raise, relocate or protect 29 switching and substations that were damaged by water in recent storms
  - ✓ $350 million to replace and modernize 250 miles of low-pressure, cast iron gas mains in or near flood areas
  - ✓ $100 million to create redundancy in the electric system, reducing outages when damage occurs
  - ✓ $100 million to deploy smart grid technologies to better monitor system operations to increase our ability to more swiftly deploy repair teams
  - ✓ $50 million to protect five natural gas metering stations and a liquefied natural gas station affected by Sandy or located in flood zones

SI-SSA-0015-07104

Over 70% of PSE&G's $11.3 billion investment program will be recovered through contemporaneous mechanisms

2014-2018E PSE&G Capital Spending by Recovery Method

$11.3 Billion

SI-SSA-0015-07105

The Energy Strong impact to customer bills is expected to be fully offset

OUT-YEAR BGS/BGSS, SBC, AND DISTRIBUTION RATES HELD CONSTANT AT CURRENT 2014 RATES.
RATES RELATED TO ELECTRIC RESTRUCTURING: SECURITIZATION (STC), NON-UTILITY GENERATION CHARGE (NGC), & TRANSITIONAL ENERGY FACILITIES ASSESSMENT (TEFA), ARE REDUCED TO ZERO BY 2017. THE RGGI RECOVERY CHARGE (RRC), SOLAR PILOT RECOVERY CHARGE (SPRC), AND CAPITAL ECONOMIC STIMULUS INFRASTRUCTURE INVESTMENT PROGRAM EXTENSION (CIP II) BILL IMPACTS ARE INCLUDED IN THEIR RESPECTIVE GAS AND ELECTRIC BARS AND FORECASTED IN OUT-YEARS BASED UPON LATEST ESTIMATE. ENERGY STRONG BILL IMPACTS ARE BASED UPON SETTLEMENT.

SI-SSA-0015-07106

PSE&G TRANSMISSION

PSEG

We make things work for you.

SI-SSA-0015-07107

Transmission has delivered, and has grown to represent ~36% of rate base

Transmission represented ~36% of rate base at YE 2013 up from ~15% at YE 2009

SI-SSA-0015-07108

PSE&G's existing major transmission

investment program remains on schedule and on budget

Major Transmission Projects

Project Roster	Approved ROE	Inclusion of CWIP in Rate Base	100% Recovery of Costs Due to Abandonment	Project Estimate Up To ($ Millions)	Expected In-service Date
Susquehanna-Roseland	12.93%	✓	✓	$790	June 2014 / June 2015
Northeast Grid Reliability	11.93%	✓	✓	$907	June 2015
North Central Reliability	11.68%	✓	✓	$390	Completed
Burlington–Camden 230kV	11.68%	✓	✓	$399	Completed
Mickleton–Gloucester–Camden 230kV	11.68%	✓	✓	$435	June 2015
Bergen—Linden Corridor 345kV	11.68%	✓	✓	$1,200	June 2018

SI-SSA-0015-07109

Susquehanna-Roseland consists of constructing 150 miles of 500kV circuit (46 miles in NJ) with two new 500kV GIS switching stations at Roseland and Hopatcong

Project Estimate Up To*	Through Year-end 2013	Expected In-service Date
$790M	$661M	Phase 1 – **Completed** Phase 2 – June 2015

- PJM RTEP project b0489
- ROE of 12.93% (including 1.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Improves reliability and reduces congestion

Project Status: The eastern part of line from Hopatcong to Roseland, NJ in service April 2014; NJ construction planned to be completed in Q3 2014. PA portion outside plant construction in progress. Western portion in NJ and the PA portion is planned to go in service June 2015.

SI-SSA-0015-07110

*PROJECT IS SHARED WITH PPL. PROJECT ESTIMATE REPRESENTS PSE&G'S CONSTRUCTION RESPONSIBILITY FOR THE NJ PORTION.

Northeast Grid Reliability consists of upgrading approximately 50 overhead circuit miles of 138kV transmission line to 230kV, constructing ~18 miles of new underground 230kV lines, and converting/upgrading 12 existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$907M	$228M	June 2015

- PJM RTEP project b1304
- ROE of 11.93% (including 0.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment
- Project estimate has increased ~$12M associated with hardening related scope changes as a result of Superstorm Sandy

Customer Benefit: Improves reliability and increases transfer capability

Project Status: Nearing completion of engineering/design and licensing/permitting phase. Outside and inside plant construction are in progress

SI-SSA-0015-07111

North Central Reliability consists of upgrading 55 circuit miles of 138kV transmission line to 230kV, and converting six existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$390M	$349M	Completed

- PJM RTEP project b1154
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Improves power quality and increases transfer capability

Project Status: In service April 2014

SI-SSA-0015-07112

Burlington-Camden 230kV consists of upgrading 37 circuit miles (30 miles of overhead and 7 miles of underground) of 138kV transmission line to 230kV, converting the existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$399M	$301M	Completed

- PJM RTEP project b1156
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Addresses voltage reliability and increases transfer capability

Project Status: In service April 2014

SI-SSA-0015-07113

Mickleton-Gloucester-Camden 230kV

consists of upgrading 10 circuit miles of overhead transmission, installing ~16 circuit miles of new 230kV underground, 10 circuit miles of new 230kV overhead, and modifications/upgrades at five existing stations

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$435M	$122M	June 2015

- PJM RTEP project b1398
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Addresses thermal reliability and increases transfer capability

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-07114

Bergen-Linden Corridor is a recently approved project which will provide a double-circuit 345kV line to maintain reliability

Project Estimate Up To	Through Year-end 2013	Expected Completion Date
$1,200M	-	June 2018

- PJM RTEP project b2436
- 30 miles of underground cable
  - New ~ 23 miles
  - Reconductor (Upgrade of 138 to 345) ~7 miles
- 13 miles of double circuit overhead conductor (replacing double circuit 138 with double circuit 345)
- 11 station upgrades to 345kV

Customer Benefit: Addresses thermal and short-circuit reliability

Project Status: Engineering

SI-SSA-0015-07115

Planned transmission spend of $6.8 billion

is driven by PJM reliability projects, 69kV conversions and life-cycle replacement projects

PSEG LONG ISLAND

PSEG

We make things work for you.

SI-SSA-0015-07120

PSEG was selected to operate Long Island Power Authority's (LIPA) electric transmission and distribution system for 12 years starting in 2014

- Pursuant to the Operating Services Agreement (OSA), all expenses and capital costs to operate the system are pre-funded by LIPA and passed through to their customers
- Compensation consists of a fixed fee and an incentive fee
  - Fixed compensation fee for 2014 with scheduled increases in 2015 and 2016
  - Starting in 2015 PSEG Energy Resources and Trading (ER&T) begins managing fuel/energy contracts
  - PSEG Long Island expected to contribute $0.03 to operating earnings in 2014 increasing to $0.07 per share in 2016 including contribution at ER&T
- Potential for an 8-year extension of the OSA

SI-SSA-0015-07121

PSEG Long Island commenced operations

on January 1, 2014

Key elements of Operating Services Agreement

Increased PSEG scope and control	Use of PSEG brand as PSEG Long Island	3-Year rate freeze (2013-2015)
Performance metrics	NY Department of Public Service oversight	Potential for "Utility 2.0" investment

Early performance

Successful transition to PSEG Long Island	Stakeholder communication	Winter storm response

SI-SSA-0015-07122

PSEG POWER

PSEG

We make things work for you.

SI-SSA-0015-07123

PSEG Power strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-07124

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus Fleet Diversity/Efficiency Focus	Financial/Economic Focus	Regulatory Focus
• Nuclear units operated at over 90% capacity factors for the 9th consecutive year through 2013 • Fleet diversity across the dispatch curve and fuel types provide flexibility to meet changing conditions • Linden CCGT and Salem 2 nuclear unit achieved record output in 2013	• "Getting the most out of existing fleet" • Locational advantage • O&M control programs have delivered a CAGR of 1.6% between 2009 and 2014 • Sites offer competitive advantage for expansion	• Strong regulatory performance • Industry leadership in the changing business environment

SI-SSA-0015-07125

PSEG Power Delivering on priorities

Operational Excellence	• Maximize value of existing generating plants through implementation of the Operational Excellence Model (OEM) • Workforce engagement and development	• OEM implemented and achieving measures • Resource sharing program initiated
Financial Strength	• Deliver on Business Plan Commitments • Maintain competitive markets and improve constituent communication on issues important to Power	• Exceeded earnings guidance in 2013 • Ongoing effort in key markets showing success • Successful court outcome against subsidized generation
Disciplined Investment	• Successfully complete the Advanced Gas Path (AGP) uprates • Seek new opportunities in target markets (PJM, ISO-NE, NYISO) • Develop our renewables business (solar) • Maintain new nuclear option by successfully managing the Early Site Permit (ESP) process	• Accelerated schedule for AGP to maximize opportunity • LIPA contract for fuel and generation dispatch • Completed 19 MW solar project, 4 MW project under construction, established robust pipeline • Nuclear ESP is expected in 2015

SI-SSA-0015-07126

PSEG Power met 2013 challenges

Storm and weather challenges	+	Market challenges	=	Value delivered
• SuperStorm Sandy impacted our generating sites • Cold and hot weather extremes created challenging operating environment, but also presented opportunities		• Unit outages and planned transmission outages resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by economy		• Optimized unit dispatch across fleet during storm recovery • Expedited return from storm outages, restored margin opportunities • High availability when needed • Achieved fuel cost savings • Captured value through coal/gas switching, unit flexibility • Coal & oil sales optimized inventory • Flexibility of portfolio captured real-time basis opportunities

SI-SSA-0015-07127

PSEG Power exceeded 2013's earnings guidance

OPERATING EARNINGS FOR PSEG POWER IN 2013; SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. *ASSETS TRANSFERRED TO POWER AT YEAR-END 2013.

SI-SSA-0015-07128

PSEG Power has generating assets

in three competitive markets

- Assets near loads
- Low cost portfolio
- Fuel flexibility with gas cost advantage
- Poised to benefit from volatility in real-time markets
- Fleet will maintain diversity and efficiency after HEDD
- Most sites suitable for expansion

SI-SSA-0015-07129

PSEG Power will maintain diversity and efficiency after a realignment of the fleet due to HEDD

Objective 2013 → 2017

- Maintain fuel diversity
- Maintain load-serving capability
- Maintain low cost structure
- Environmental improvement
- Peach Bottom (PB) uprate
- Advanced Gas Path (AGP)
- Kalaeloa and Solar transfer adds ~200MW of capacity

Fuel Diversity

Energy Produced

E=ESTIMATE

SI-SSA-0015-07130

Power's PJM assets along the dispatch curve reduce the risk of serving full requirement load contracts and can take advantage of volatile market conditions

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel flexibility for >60% of fleet

SI-SSA-0015-07131

PSEG Power Nuclear is a critical element of our success

Hope Creek	Salem Units 1 and 2	Peach Bottom Units 2 and 3
• Operated by PSEG Nuclear • PSEG Ownership: 100% • Technology: Boiling Water Reactor • Total Capacity: 1,178 MW • Owned Capacity: 1,178 MW • License Expiration: 2046 • Next Refueling ➢ Spring 2015	• Operated by PSEG Nuclear • PSEG Ownership: 57% • Technology: Pressurized Water Reactor • Total Capacity: 2,365 MW • Owned Capacity: 1,358 MW • License Expiration: 2036 and 2040 • Next Refueling ➢ Unit 1 – Fall 2014 ➢ Unit 2 – Fall 2015	• Operated by Exelon • PSEG Ownership: 50% • Technology: Boiling Water Reactor • Total Capacity: 2,251 MW • Owned Capacity: 1,125 MW • License Expiration: 2033 and 2034 • Next Refueling ➢ Unit 2 – Fall 2014 ➢ Unit 3 – Fall 2015 • Uprate: 130 MW in 2015/2016

SI-SSA-0015-07132

PSEG Power Nuclear is core to the fleet and has competitive advantages

- Continued strong nuclear operations: nine consecutive years of >90% capacity factor through 2013
- Significant earnings contributor
- Top quartile of cost performance/MWh
- One third new staff, recruitment of the best new and experienced talent, and attractive training program
- Fukushima action plan in response to NRC staff review
  - FLEX* plan submitted with implementation starting with Fall outage
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

*STRATEGY KNOWN AS THE "DIVERSE AND FLEXIBLE MITIGATION CAPABILITY" OR FLEX, ADDRESSES RECOMMENDATIONS OF THE NUCLEAR REGULATORY COMMISSION'S FUKUSHIMA TASK FORCE.

SI-SSA-0015-07133

Power's nuclear fleet is well positioned

with significantly lower-than-average US cost structure

*SOURCE: ELECTRIC UTILITY COST GROUP
** SOURCE: PSEG NUCLEAR

SI-SSA-0015-07134

PSEG Power's Fossil Fleet Performance

has shown improvement

- Fossil Capacity Factor rebounded with market
- Peaking Units maintain high start success

- Coal EFORp improving
- CC EFORp less than 1% in 2013
- Consistent recipient of EFORp payments

SI-SSA-0015-07135

PSEG

*LM6000 AND 7EA UNITS

PSEG Power improvements achieved in combined cycle fleet efficiency

Combined Cycle Operating Heat Rate

Actions Taken to Create Value

- Operational Excellence Model
- Training programs
- Unit testing initiative
- Outage work to restore efficiency
- Second gas line at BEC

- Heat rate improvement 2008-2013 translates to meaningful fuel savings at current market prices

- Advanced Gas Path (AGP) investments 2014 through 2018 to provide additional fuel savings

SI-SSA-0015-07136

Investing to expand CCGT capacity and improve efficiency

PSEG Power - CCGT Uprate Project

- Expand Power's CCGT fleet, one of the largest gas-fired portfolios in PJM, with incremental base and peaking MWs
- Retrofit Bergen, Linden and BEC with Advanced Gas Path (AGP) components at cost of ~$120M over 2014 - 2018

AGP Project Benefits

- ✓ CCGT capacity uprates of ~150 MW:
  - Linden (63 MW – Completed)
  - Bergen (31 MW – 2015)
  - BEC (58 MW – 2017-2018)
- ✓ Increases Efficiency - Combined Cycle (CC) heat rate improvement ~ 1.2%
- ✓ Upgrades technology and extends maintenance outage cycles

SI-SSA-0015-07137

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing
- Cost control through testing coordination program

SI-SSA-0015-07138

PSEG Power's capital expenditures for environmental requirements are essentially complete*

SI-SSA-0015-07139

F=FORWARDS AS OF 8/13/2014, 2014F INCLUDES HISTORY AND FORWARDS

Market Review: New generation in PJM not keeping pace with coal retirements

Cumulative Generation Retirements*

Forecast Reserve Margin (PJM January 2014)

- PJM forecasts a declining Reserve Margin through 2018, which may improve forward prices
- Brattle estimates energy prices could rise at least $3-4/MWh from today's prices

SI-SSA-0015-07146

PSEG

*PJM AS OF FEBRUARY 20, 2014
SOURCE OF CHART DATA: PJM

Market Review: Regulatory framework showing signs of improvement

	ISSUE / POLICY	REGULATORY GAINS
PJM	SUBSIDIZED GENERATION (NJ and MD)	• Comprehensively defeated in federal court (appeals currently pending)
	DEMAND RESPONSE RULES	• PJM and ISO-NE enacted stricter rules of eligibility and deployment
	ENERGY PRICE FORMATION	• Concerted drive to improve price formation for generation and ancillary services • Waiver of price caps during extreme market conditions
NYISO	TRANSMISSION	• Significant progress made to relieve bottling of upstate generation
ISO-NE	CAPACITY	• Improvement in price formation to better reflect tight supply conditions • Implementation of sloping demand curve in Forward Capacity Auction (FCA) 9
	ENERGY	• Demand response required to participate in Day Ahead markets
FEDERAL	GAS to ELECTRIC	• Better coordination between pipelines and ISO's will promote efficiency
	ENVIRONMENTAL REGULATIONS	• HEDD, HAPS/MACT may lead to tightening of supply in 2015+ timeframe

SI-SSA-0015-07147

Competitive Advantage: Heat Rate Diversity & Flexible Dispatch

SI-SSA-0015-07148

Competitive Advantage: PSEG's extensive gas asset portfolio gives unparalleled access to Marcellus Shale gas

SI-SSA-0015-07149

Competitive/Sustainable Advantage:

PSEG expanding supply of low-cost Marcellus gas

Proposed PennEast Pipeline Project

- PSEG plans to invest $100 - $120 million for a 12% equity interest in the to-be-constructed PennEast Pipeline, a 105.5 mile pipeline that would bring gas from eastern Pennsylvania to New Jersey
- PSEG ER&T would contract for approximately 125mmcf/day of PennEast's 1 bcf/day capacity under a 15-year contract; other project sponsors have committed to offtake ~500mmcf/day
- PSEG and its customers would benefit from the displacement of higher-cost, Gulf Coast gas supply
- Targeted in-service date is November 2017

SI-SSA-0015-07150

Competitive Advantage: ~25% of Power's gas for generation comes from Marcellus

- Our combined cycle and peaking assets have been able to take advantage of locational gas price volatility driven by production and logistical constraints
- Lower cost shale supply provides additional savings during periods of lower residential gas demand

SI-SSA-0015-07151

PSEG

*AS OF 8/13/2014

Competitive Advantage: Locational advantage from short term basis volatility

PS Zone Annual Basis to PJM-W

PS Zone Day Ahead On Peak Monthly Basis to PJM-W

PS Zone Real Time On Peak Hourly Basis to PJM-W

- Annual basis benefits baseload units
- Intermediate units flexible to seasonal opportunities
- Combined Cycle and Peaking units positioned to optimize daily and hourly volatility

SI-SSA-0015-07152

ANNUAL FORWARD (F) BASIS TO PJM-WEST AS OF 8/13/2014. 2014F INCLUDES HISTORY AND FORWARDS.

Sustainable Advantage: BGS Auction provides excellent opportunity to forward hedge our generation

BGS sales account for about a quarter of our forward portfolio of hedges

SI-SSA-0015-07153

PSEG

$/MWH; BGS PRICES REFLECT PSE&G ZONE; RESULTS FOR 2012-2014 WILL BE THE NEW BLENDED PRICES BEGINNING JUNE 1, 2014.

Sustainable Advantage: Hedging strategy designed to protect gross margin while leveraging the portfolio

		Jul-Dec 2014	2015	2016
Base Load (Nuclear and Base Load Coal)	Volume TWh	17	36	36
	% Hedged	100%	100%	45-50%

PSEG

*PSEG POWER'S AVERAGE PRICES AND CLEARED CAPACITY (MW) REFLECT BASE AND INCREMENTAL RPM AUCTION RESULTS. DELIVERY YEAR RUNS FROM JUNE 1 TO MAY 31 OF THE NEXT CALENDAR YEAR.

Sustainable Advantage: Fuel advantage continues throughout the curve

Forward curve shows that Marcellus shale supply averages over $1.50/MMbtu discount year-round through 2018

SI-SSA-0015-07156

PSEG

2013 AVERAGE 6/1/13-12/31/13; F= FORWARDS AS OF 8/13/14. 2014F INCLUDES HISTORY AND FORWARDS.
LEIDY BASIS FROM ICE/BROKER QUOTES

PSEG Power's Value Proposition

- Well-positioned fleet of merchant generating assets concentrated in PJM market
- Advantaged by low cost structure, fuel diversity and dispatch flexibility
- Low environmental capital requirements
- Capacity uprates to enhance value of nuclear and combined cycle stations
- Consistent hedging strategy recognizes asset flexibility
- Continue to meet commitments and to provide free cash flow

PSEG FINANCIAL REVIEW & OUTLOOK

PSEG

We make things work for you.

SI-SSA-0015-07158

Strong financial position to support our business initiatives

2013 Financial Position

- ✓ Exceeded upwardly revised 2013 earnings guidance
- ✓ Pension fully funded
- ✓ Strong balance sheet and upgraded credit ratings

2014 and Beyond

- ✓ Continued positive earnings trend in 2014
- ✓ Controlled O&M growth
- ✓ Balance Sheet and Cash Flow support investments without equity issuance
- ✓ Growth in PSE&G investments with contemporaneous returns
- ✓ Diversified Power assets with a balanced hedge profile
- ✓ Growth in PSE&G Cash from Operations, with continued significant Cash from Operations/FFO at Power
- ✓ Increased Dividend by $0.04 to indicative annual rate of $1.48 for 2014
- ✓ Opportunity for consistent and sustainable dividend growth

SI-SSA-0015-07159

Exceeded upwardly revised guidance

in both businesses

PSEG Operating Earnings

Earnings Guidance (Feb 2013)	**$2.25 - $2.50**

*SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS.

NOTE: 2012 OPERATING EARNINGS RE-STATED FOR TRANSFER OF ASSETS FROM PSEG HOLDINGS TO PSEG POWER.

In 2013, Power had significant free cash flow

SI-SSA-0015-07161

In 2013, PSE&G invested over $2B, using $1.4B of internally generated cash flow and debt, while maintaining its capital structure

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$220 MILLION.

SI-SSA-0015-07162

In 2013, Power's Free Cash Flow supported PSE&G's capital program and shareholder dividend

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$220 MILLION.
(2) OTHER CASH FLOW INCLUDES HOLDINGS NET CASH FLOW AND PARENT CASH.

SI-SSA-0015-07163

PSEG growth spend, including Energy Strong, of ~$6.4B represents ~76% of total investment

E = ESTIMATE; CAPITAL INCLUDES AFUDC AND IDC.

SI-SSA-0015-07164

PSE&G's Capital Program drives double-digit growth in rate base and earnings over the 2013 to 2016 period

SI-SSA-0015-07165

PSE&G's Cash from Operations and Power's Free Cash Flow support growth investments without the need for new equity

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$500M FROM 2014-2016
(2) OTHER CASH FLOW INCLUDES PSEG LI, HOLDINGS NET CASH FLOW, CASH, AND SHORT TERM DEBT
E = ESTIMATE

SI-SSA-0015-07166

Power's key credit metric supports incremental investment opportunities

- Increased contribution to earnings from the more stable regulated business allows us to reset Power's FFO/Debt threshold from 35% to 30%, providing additional financial flexibility
- Power's annual Cash From Operations and Funds From Operations each average ~$1.1B over the 2014 to 2016 period supported by:
  - Capacity Revenues
  - Hedged Generation
  - O&M Control
- Financial strength can be used to pursue future growth in both businesses beyond current plans

SI-SSA-0015-07167

Pension: Our Long Term Asset allocation strategy resulted in a ~17% increase in pension assets during 2013

PBO Funded Ratio	83%			Fully Funded Pension →	106%

SI-SSA-0015-07168

Our Pension Management is expected to result in pension income in 2014 and over the planning horizon

PSEG's longer-term outlook is influenced by Power's hedge position and increased investment at PSE&G

Segment EPS Drivers

Sensitivities derived from typical annual market variability*	2015E	2016E
Each $0.75/mcf Change in Natural Gas	$0.00	$0.08 - $0.11
Each $2/MWh Change in Spark Spread	$0.04	$0.04
Each $5/MWh Change in Dark Spread	$0.02	$0.04
Each 1% Change in Nuclear Capacity Factor	$0.01	$0.01

Each $100 Million of Incremental Investment	$0.01	$0.01
Each 1% Change in Sales		
Electric	$0.01	$0.01
Gas	$0.01	$0.01
Each 1% Change in O&M	$0.01	$0.01
Each 10 bp Change in ROE	$0.01	$0.01

* Estimated annual variability approximating one standard deviation based on 2011 – 2013 historical data and forward curve estimates applied to PSEG Power open positions

PSEG Summary

- Our 2013 earnings of $2.58 exceeded our upwardly revised operating earnings guidance of $2.40 - $2.55 per share
- Double digit earnings growth at PSE&G on one and three-year basis from 2013 to 2016, driven by transmission investments and approved programs
- Power's continued focus on operational excellence, market expertise and financial strength delivers value in current price environment
- Strong Balance Sheet and Cash Flow support full capital program and new potential opportunities without the need for equity
- Long history of returning cash to the shareholder through the common dividend, with opportunity for consistent and sustainable growth

Forward-Looking Statements

Certain of the matters discussed in this presentation about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K. These factors include, but are not limited to:

- fluctuations in wholesale power and natural gas markets, including the potential impacts on the economic viability of our generation units;
- our ability to obtain adequate fuel supply;
- any inability to manage our energy obligations with available supply;
- increases in competition in wholesale energy and capacity markets;
- changes in technology related to energy generation, distribution and consumption and customer usage patterns;
- economic downturns;
- third party credit risk relating to our sale of generation output and purchase of fuel;
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements;
- changes in state and federal legislation and regulations;
- the impact of pending rate case proceedings;
- regulatory, financial, environmental, health and safety risks associated with our ownership and operation of nuclear facilities;
- adverse changes in energy industry laws, policies and regulations, including market structures and transmission planning;
- changes in federal and state environmental regulations and enforcement;
- delays in receipt of, or an inability to receive, necessary licenses and permits;
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry;
- changes in tax laws and regulations;
- the impact of our holding company structure on our ability to meet our corporate funding needs, service debt and pay dividends;
- lack of growth or slower growth in the number of customers or changes in customer demand;
- any inability of Power to meet its commitments under forward sale obligations;
- reliance on transmission facilities that we do not own or control and the impact on our ability to maintain adequate transmission capacity;
- any inability to successfully develop or construct generation, transmission and distribution projects;
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers;
- our inability to exercise control over the operations of generation facilities in which we do not maintain a controlling interest;
- any inability to maintain sufficient liquidity;
- any inability to realize anticipated tax benefits or retain tax credits;
- challenges associated with recruitment and/or retention of key executives and a qualified workforce;
- the impact of our covenants in our debt instruments on our operations; and
- the impact of acts of terrorism, cybersecurity attacks or intrusions.

All of the forward-looking statements made in this presentation are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business, prospects, financial condition, results of operations or cash flows. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this presentation apply only as of the date of this presentation. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even in light of new information or future events, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this presentation are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Net Income. Non-GAAP Operating Earnings exclude the impact of returns (losses) associated with the Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting and material one-time items. Non-GAAP Adjusted EBITDA excludes the same items as our non-GAAP Operating Earnings measure as well as income tax expense, interest expense and depreciation and amortization. The last two slides in this presentation (Slides A and B) include a list of items excluded from Net Income/(Loss) to reconcile to non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA with a reference to those slides included on each of the slides where the non-GAAP information appears.

Management uses non-GAAP Operating Earnings in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results. Management believes non-GAAP Adjusted EBITDA is useful to investors and other users of our financial statements in evaluating operating performance because it provides them with an additional tool to compare business performance across companies and across periods. Management also believes that non-GAAP Adjusted EBITDA is widely used by investors to measure operating performance without regard to items such as income tax expense, interest expense and depreciation and amortization, which can vary substantially from company to company depending upon, among other things, the book value of assets, capital structure and whether assets were constructed or acquired. Non-GAAP Adjusted EBITDA also allows investors and other users to assess the underlying financial performance of our fleet before management's decision to deploy capital. The presentation of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA is intended to complement, and should not be considered an alternative to, the presentation of Net Income, which is an indicator of financial performance determined in accordance with GAAP. In addition, non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA as presented in this release may not be comparable to similarly titled measures used by other companies.

Due to the forward looking nature of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility. Guidance included herein is as of July 28, 2017.

These materials and other financial releases can be found on the PSEG website at www.pseg.com, under the Investors tab. From time to time, PSEG, PSE&G and PSEG Power release important information via postings on their corporate website at http://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. VP–INVESTOR RELATIONS

SI-SSA-0015-07195

PSEG

We make things work for you.

PSEG's Value Proposition

- A stable platform with a $15 billion infrastructure investment pipeline providing opportunity for growth
- PSE&G – Delivering on promise for rate base growth through disciplined investment, customer satisfaction and safety
- PSEG Power – Efficient, low-cost, clean fleet advantaged by asset diversity, fuel mix and location
- Focus on providing strong, sustainable returns of invested capital through operational excellence, regulatory and legislative mechanisms
- 110-year record of paying common dividend with opportunity for consistent, sustainable growth
- Strong balance sheet – Financial strength supported by stable credit rating and investment profile

SI-SSA-0015-07196

Two strong businesses

A stable platform, each with growth opportunities

Power has generating assets in three competitive markets

- Major assets located near key load centers
- Constructing three new, efficient combined-cycle units
- Positioned to benefit from market volatility
- Additional generation assets:
  - Solar (326 MW_{DC}/257 MW_{AC})
  - Kalaeloa, HI (104 MW)

SI-SSA-0015-07199

*HUDSON AND MERCER GENERATING STATIONS WERE RETIRED AS OF JUNE 1, 2017.

PSEG Policy and Regulatory focus

on mechanisms that provide customers clean, affordable, resilient energy supply

NJ Distribution Base Rate Proceeding

- True-up data from 2010 base rate case for known changes in customers usage, taxes, O&M and investments

Long-Term Infrastructure Investment Platform

- Seek extension of existing infrastructure programs, e.g., GSMP, and broaden investment platform

Preserve the Value of Nuclear Supply

- Pursuing legislative strategy to recognize the value of nuclear energy under terms and conditions that are affordable for customers and provide the proper incentives for long-term operation

Ensure Federal Regulatory and Policy Framework

- Advocate for rules that preserve benefits of competitive markets while also recognizing the value of clean energy, supply diversity and grid reliability

SI-SSA-0015-07217

PSE&G: Energy Efficiency Approval and GSMP II Filing Support Long-term Regulatory and Policy Objectives

PSE&G's recent filing to extend its Gas System Modernization Program (GSMP) and the recent approval of its proposed extension of the Energy Efficiency investment program reinforce PSE&G's commitment to provide clean, reliable energy for its customers

Gas System Modernization Program II

In July, PSE&G filed for a 5-year extension of the GSMP which would accelerate the pace of replacement of its aging cast iron and unprotected steel mains and associated service. PSE&G is proposing to invest approximately $540 million per year, or up to $2.7 billion, over the 5-year program beginning in 2019. The filing is consistent with the draft regulations that the BPU issued in June regarding Infrastructure Investment Programs.

Energy Efficiency

The BPU has approved PSE&G's agreement with BPU Staff and Rate Counsel to extend its investment in Energy Efficiency. Under the agreement, PSE&G would invest $69 million in energy efficiency equipment for hospitals, multi-family housing and other sectors and a residential energy efficiency offering for smart thermostats and data analytics. The agreement represents more than 90% of PSE&G's request.

SI-SSA-0015-07218

Customer's bills are materially lower, supporting needed investment in the system

- Combined electric and gas bills declined ~28% over the 2009-2017 period
  - Also provided BGSS bill credits totaling ~$590 per customer since 2012
  - Low gas prices and elimination of transition charges drove rate decreases
- Regional price comparison** Gas is 2nd lowest and Electric is lower than average
- Investing at the Utility of the Future level – would take about a decade to equal the 2009 bill rates (adjusted for growth in CPI/disposable income)

SI-SSA-0015-07219

PSEG

*FOR ALL YEARS THE BILLING ASSUMES 7,200 KWH FOR ELECTRIC AND 1,010 THERMS FOR GAS ANNUALLY. E = ESTIMATE
** COMPARED AGAINST 12 REGIONAL UTILITIES AS OF SEPTEMBER 1, 2016, FOR A CUSTOMER THAT USES 500 KILOWATT-HOURS AND 100 THERMS IN A MONTH.

Forward-Looking Statements

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or ongoing low pricing of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulations, including market structures and transmission planning,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators, including prudency reviews and disallowances,
- any deterioration in our credit quality or the credit quality of our counterparties,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations or increase the cost of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- delays or unforeseen cost escalations in our construction and development activities, or the inability to recover the carrying amount of our assets,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- increases in competition in energy supply markets as well as for transmission projects,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies,
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- an extended economic recession,
- an inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce, and
- changes in the credit quality and the ability of lessees to meet their obligations under our domestic leveraged leases.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.
The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Income from Continuing Operations/Net Income. Operating Earnings exclude gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items.

PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. The last two slides in this presentation (Slides A and B) include a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

PSEG STRATEGY: GROWING A HIGH-QUALITY, LOW-RISK ENERGY INFRASTRUCTURE COMPANY

Ralph Izzo

CHAIRMAN, PRESIDENT AND
CHIEF EXECUTIVE OFFICER

PSEG

We make things work for you.

SI-SSA-0015-07225

Two strong businesses

A stable platform, each with growth opportunities

PSEG

PSE&G	PSEG Power LLC
Electric & Gas Delivery and Transmission	**Regional Competitive Generation**
Strategy: Investments aligned with public policy and customer needs **Value Proposition:** A ~$12 billion infrastructure program producing high single digit rate base growth through 2020	**Strategy:** Investment program enhances competitive position with addition of efficient, clean, reliable CCGT capacity **Value Proposition:** Provides substantial free cash flow in current environment and upside from market rule improvements
2015 **Assets $24B** **Operating Earnings $787M**	2015 **Assets $12B** **Operating Earnings $653M**

SI-SSA-0015-07226

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2015. PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT AND PSEG LONG ISLAND ACTIVITY. SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS

PSEG's Strategy

Investment program delivering results

Operational Excellence: Maintaining reliability and improving performance as we control costs in low price environment

Financial Strength: Strong financial position supports investment program and dividend growth

Disciplined Investment:
- Balanced business mix
- Robust pipeline of opportunities

Results:
- 3rd year of EPS growth
- Continued dividend growth
- Best in class utility growth rate
- Addition of efficient CCGT capacity enhances market position

SI-SSA-0015-07227

Delivering on commitments and realizing growth

Operational Excellence	• PSE&G: ReliabilityOne Mid-Atlantic Region's Most Reliable Electric Utility (14th consecutive year), Electric Light & Power's 2015 Utility of the Year, ReliabilityOne Outstanding Outage Response Time and Outstanding Customer Engagement • PSEG Power: Record output from combined cycle units • PSEG Long Island: Improved customer service and reliability while managing costs • PSEG: Cost-control benefits continue
Financial Strength	• Operating earnings for 2015 of $2.91 per share at upper end of guidance range • Cash flows and business mix support strong credit ratings and ability to fully fund robust investment pipeline without issuing new equity • Increased dividend in 2015
Disciplined Investment	• PSE&G capital program drives continued rate base growth over the 5-year period (2016-2020) with increased investment in Transmission, Energy Strong, Gas System Modernization Program, and Electric and Gas distribution • Power capital program focusing on growth investments including Keys, Sewaren and Bridgeport Harbor, Nuclear and Fossil uprates, PennEast Pipeline, and Solar Source

SI-SSA-0015-07228

Focus on building a reliable, efficient, clean energy infrastructure

2011	2012	2013	2014	2015

Selected Accomplishments

2011
- Expanded investment programs focused on infrastructure upgrades, energy efficiency, and major transmission projects*
- Sale of Texas generating assets
- Nuclear license extensions and uprates

2012
- Award winning Superstorm Sandy storm response restoring 2.1M customers
- Final federal approval for Susquehanna-Roseland transmission project
- 400 MW of new peaker capacity**

2013
- Expanded Solar investment
- 90% nuclear capacity factor for 9th straight year
- Record output from Linden CCGT and Salem 2 Nuclear Unit

2014
- Energy Strong program approved
- Advanced Gas Path uprates (through 2018)
- PSEG Long Island management contract effective

2015
- Gas System Modernization Project (GSMP) and Energy Efficiency Extension II approved
- New generation build starts Power fleet transformation
- Solar Source portfolio reaches 277 MW_{DC}***

← Cost Control →

PSEG

* INVESTMENT CONTINUED FOR SUSQUEHANNA-ROSELAND, BURLINGTON-CAMDEN, NORTH CENTRAL RELIABILITY, AND STARTED FOR NORTHEAST GRID AND MICKLETON-GLOUCESTER. ** KEARNY AND NEW HAVEN. *** AS OF MARCH 2016.

Growth in capital spending aligned with customer needs

PSEG Capital Spending

2011 – 2015: ~$14.3 Billion | **2016E – 2020E*: ~$16.0 Billion**

*INCLUDES ALL PLANNED SPENDING. **POWER CAPITAL SPENDING EXCLUDES NUCLEAR FUEL. ***INCLUDES PENNEAST PIPELINE EQUITY INVESTMENT OF $0.1B. E=ESTIMATE.

SI-SSA-0015-07230

Building an efficient, clean, reliable energy platform

Timeframe	Actions taken
2011 – 2015: Transformed business mix	• Applied ~$14.3 billion towards investments • Improved credit ratings • Monetized Energy Holdings' portfolio • Strong balance sheet sustained during period of low power prices, while increasing the dividend
2016 – Forward: Strong financial position supports continued growth	• Continued dividend growth in 2016 • ~$16 billion investment program through 2020 • Utility investments focused on improving reliability and replacing aging infrastructure • Continued investment in reliable and efficient energy infrastructure at Power • Financial capability supports further expansion of the current capital plan

SI-SSA-0015-07231

PSE&G's investment program

Meeting public policy goals and customer needs

SI-SSA-0015-07232

PSEG

*SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/
NET INCOME TO RECONCILE TO OPERATING EARNINGS. DISTRIBUTION RATE BASE INCLUDES SOLAR AND ENERGY EFFICIENCY

Managing the total costs to customers while investing in the system

PSE&G Typical Residential Customer Bills*

- PSE&G customers' combined electric and gas bills declined 28% over the period
- Low gas prices and elimination of transition charges drove rate decreases

SI-SSA-0015-07233

PSEG

*FOR ALL YEARS THE BILLING ASSUMES 7,200 KWH FOR ELECTRIC AND 1,010 THERMS FOR GAS ANNUALLY. E = ESTIMATE

Transforming Power's fleet to maintain strong market position

Economic Drivers	Outlook	Combined Cycle	Nuclear	Scrubbed Coal	Peakers	Renewable
Energy Margins	• Low natural gas and energy prices • Robust portfolio of gas pipeline contracts	✓	✓	✓	n/a	n/a
Capacity Markets	• Tightened rules proposed for capacity performance	✓	✓	✓	✓	n/a
Environmental Regulations	• Tighter air emissions standards	✓	✓	✓	✓	✓
Location	• Assets in well-designed markets, premium regions • Opportunities on brownfield sites	✓	✓	✓	✓	n/a
2016 - PSEG Power Total Capacity 11.9 GW		3.3	3.7	2.4	2.3	0.2
2019 - PSEG Power Total Capacity 13.5 GW *		5.3	3.8	2.4	1.8	0.2

- **Largest nuclear site** in the eastern U.S. and ownership in **large, fully scrubbed coal facilities** at Keystone and Conemaugh provide **economies of scale** that enhance energy margins in current low market, and provide for upside potential if prices improve
- **Dual fuel peakers** meet reliability criteria in capacity markets and provide option value in energy market. Opportunity exists to repower peakers that do not meet NJ HEDD environmental regulations
- **Combined cycle units Keys and Sewaren expected to be operational in 2018, and Bridgeport 5 expected to be operational in 2019,** will enhance emissions performance and have a combined average heat rate of approximately 6,600

SI-SSA-0015-07234

*AS OF FEBRUARY 2016 APPROXIMATELY 1.8 GW OF CCGT GENERATION UNDER DEVELOPMENT – KEYS, SEWAREN 7 AND BRIDGEPORT HARBOR 5 , WHICH ARE TARGETED TO GO INTO SERVICE IN 2018/2019 ALONG WITH RETIREMENT OF OLDER SEWAREN UNITS.

Operating Earnings

Disciplined investment program and focus on operational excellence have supported growth

Power's diverse fuel mix and dispatch flexibility continue to generate strong earnings and free cash flow in low price environment

PSE&G's investment program has resulted in an increased contribution to PSEG's earnings

Focus areas over the business plan horizon

PSE&G

- **Operational excellence and cost control**
- **Capital program execution** – Transmission, Energy Strong and GSMP program
- **Regulatory framework** – Advocate for regulatory framework that provides support for long-term infrastructure programs
- **Continue to develop incremental growth opportunities**

PSEG Power

- **Operational excellence and cost control**
- **Timely and on budget construction of new growth opportunities** – Keys Energy Center, Sewaren 7 and Bridgeport Harbor
- **Strong performance at Nuclear and Fossil** to maximize fleet value in dynamic markets
- **Advocacy of constructive market rules** - Capacity markets and environmental regulations

PSEG Long Island

- **Continue execution** – Achievement of performance metrics

SI-SSA-0015-07237

PSEG's Value Proposition

- A stable platform with predictable earnings and a robust investment pipeline
- PSE&G – Best in class utility performance and growth profile
- PSEG Power – Efficient, low-cost, clean fleet advantaged by asset diversity, fuel mix and location
- Strong balance sheet – Supports stable credit rating, growth objectives and the potential for consistent and sustainable dividend growth

PSE&G strategy

Building a sustainable platform that balances reliability, customer rates and public policy to ensure growth at reasonable returns

SI-SSA-0015-07241

PSE&G's focus on meeting customer reliability and policy objectives are key to our investment strategy

2011	2012	2013	2014	2015

Selected Accomplishments

2011
- NJ Capital Infrastructure Program 2
- Energy Efficiency extension
- Major Transmission capital projects*
- Hurricane Irene/ October Snowstorm
- Mid-Atlantic ReliabilityOne Award

2012
- Hurricane Sandy storm response (2.1M customers restored)
- Transmission: Final federal approval for Susquehanna-Roseland (S-R) project
- National ReliabilityOne Excellence Award
- Mid-Atlantic ReliabilityOne Award
- EEI's Emergency Response Award

2013
- Solar Loan III
- Solar 4 All Extension
- Energy Strong program filed
- Mid-Atlantic ReliabilityOne Award
- Award for Outstanding Response to a Major Event

2014
- Energy Strong approved
- Transmission: North Central Reliability and Burlington-Camden projects placed in-service
- Bergen-Linden Corridor Upgrade project investment started
- Mid-Atlantic ReliabilityOne Award

2015
- Gas System Modernization Project (GSMP)
- Energy Efficiency Extension II
- Transmission: S-R and Mickleton-Gloucester projects placed in-service
- Mid-Atlantic ReliabilityOne Award
- Recognized for customer satisfaction by J.D. Power for both large electric and gas business service in the East

← Cost Control →

SI-SSA-0015-07242

PSEG

* INVESTMENT CONTINUED FOR SUSQUEHANNA-ROSELAND, BURLINGTON-CAMDEN, NORTH CENTRAL RELIABILITY, AND STARTED FOR NORTHEAST GRID AND MICKLETON-GLOUCESTER

Building on our track record

Operational Excellence

- Strong reliability record, with plans for further improvement
- Cost control efforts

Financial Strength

- Meeting or exceeding earnings targets
- Maintain solid investment grade credit ratings

Disciplined Investment

- 14 investment programs approved over past seven years
  - ✓ Infrastructure focused
  - ✓ Policy alignment – across administrations – Solar, EE and other
- Win-Win: Job creation, environment benefits, low commodity prices, low interest costs, labor availability, federal tax benefits

SI-SSA-0015-07243

Operational Excellence

Reliability and Customer Service

- Named most reliable electric utility in the Mid-Atlantic region for 14th consecutive year
- Recognized by PA Consulting with the Outstanding Customer Engagement and Outstanding Outage Response Time awards
- Named 2015 Utility of the Year by Electric Light & Power Magazine
- Received Star of Energy Efficiency Award

SI-SSA-0015-07244

Achieved ~11% annual earnings growth

over the past four years through implementation of supportive rate mechanisms on our expanded capital program and cost control

PSE&G Operating Earnings Per Share

SI-SSA-0015-07245

Receive contemporaneous recovery on over 70% of our investments

PSEG Power
strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-07263

Focus on transforming Power's portfolio with reliable, efficient, and cleaner energy infrastructure

2011	2012	2013	2014	2015

Selected Accomplishments

2011
- Hope Creek set annual output record
- Nuclear license extensions and uprates achieved

2012
- Peach Bottom 3 set annual output record
- Additional 400 MW of new peaker capacity at Kearny and New Haven
- Superstorm Sandy recovery initiated

2013
- Record annual output from Linden CCGT and Salem 2 Nuclear Unit
- 90% + nuclear capacity factor for 9th straight year
- Bethlehem Energy Center, 2nd gas pipeline connection added

2014
- Record annual output from Bergen CCGT
- PennEast pipeline investment
- CCGT Advanced Gas Path (AGP) uprate investment completed at Linden 1 & 2, 63 MW
- Established PSEG Long Island fuel management operations for 2015 start-up

2015
- Record CCGT fleet annual output
- Continued growth in fleet with 1,300 MW new CCGT's announced
  - Keys
  - Sewaren 7
- Prepared successful bid for 485 MW Bridgeport Harbor 5
- Projects Completed:
  - Peach Bottom EPU, 130 MW
  - Bergen 2 AGP uprate, 31 MW
- HEDD retirement
- Solar portfolio reaches 277 MW_{DC} as of March 2016

Cost Control

SI-SSA-0015-07264

PSEG Power's value is advantaged

by asset diversity, fuel flexibility and location

2015 Actual

Fuel Diversity*

Total MW: 11,678

- Gas
- Nuclear
- Coal**
- Oil
- Pumped Storage

Energy Market Served*

Total MW: 11,678

- Load Following, 87% dual fuel
- Peaking
- Baseload

Energy Produced*

Total GWh: 55,213

- Gas
- Nuclear
- Coal**
- Oil
- Pumped Storage

* EXCLUDES SOLAR AND KALAELOA.

**INCLUDES NEW JERSEY UNITS THAT FUEL SWITCH TO GAS.

SI-SSA-0015-07265

Power investing $2 billion of capital in new capacity

E=ESTIMATE. DATA AS OF MARCH 2016

SI-SSA-0015-07266

Power's PJM assets are becoming more efficient

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape
- Readiness for Capacity Performance (CP), successful in CP auction

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel capability at 87% of load following and peaking units

SI-SSA-0015-07267

PSEG

* KEYS & SEWAREN 7 TO BE ADDED TO DISPATCH IN 2018E AND SEWAREN 1-4 WILL RETIRE.

PSEG Power has generating assets in three competitive markets

- Assets located near load
- Low cost portfolio with gas cost advantage
- Positioned to benefit from volatility in real-time markets
- Fleet meets new capacity performance standards
- 1,800 MW of new CCGT capacity under construction in PJM and ISO-NE

SI-SSA-0015-07268

PSEG Power developing 1,800 MW of new, efficient CCGT capacity in MD, NJ and CT

- Constructing the 755 MW CCGT Keys Energy Center in Maryland (SWMAAC*) at an estimated cost of $825 to $875 million
- Constructing a new 540 MW CCGT unit, Sewaren in New Jersey (EMAAC*) at a cost of $625 to $675 million which will replace older Sewaren units
- Constructing a new 485 MW CCGT unit, Bridgeport Harbor 5 (ISO NE), at a cost of $525 to $575 million
- Both Keys and Sewaren 7 are targeted to be in-service in 2018 and Bridgeport Harbor 5 in 2019
- Expanding civic stewardship roles and programs in neighboring communities

*SWMAAC = SOUTHWEST/EMAAC = EASTERN MID-ATLANTIC AREA COUNCIL
LOCATIONAL DELIVERABILITY AREA WITHIN PJM.

SI-SSA-0015-07269

Power's fleet to be transformed with addition of Keys, Sewaren 7 and Bridgeport Harbor in 2018-2019

Projected Fleet Comparison 2015 to 2020E

*EXCLUDES SOLAR AND KALAELOA E = ESTIMATE **INCLUDES NEW JERSEY UNITS THAT FUEL SWITCH TO GAS.

SI-SSA-0015-07270

PSEG Power's fossil fleet expected to see improvements in efficiency

- AGP (Advanced Gas Path) investments
- CCGT material condition assessment
- Unit testing and testing coordination initiatives
- HEDD retirements
- Keys/Sewaren Combined Cycle Development (2018)
- Bridgeport Harbor 5 Combined Cycle Development (2019)
- Heat Rate Improvement converts to potential savings of $60-$65M in fuel expense (assuming $3/MB gas price)

SI-SSA-0015-07271

PSEG Power's fossil fleet …

Among the lowest emitting in the industry

- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing
- With the addition of new units, emissions continue to improve

Expected to reduce its carbon footprint

- Carbon emission rates projected to steadily approach EPA national pollution standards for New and Reconstructed Natural Gas Combined Cycle (1,000 lbs CO_2/MWh-gross)

E = ESTIMATE

Nuclear is a critical element of our success

Hope Creek

- Operated by PSEG Nuclear
- PSEG Ownership: 100%
- Technology: Boiling Water Reactor
- Total Capacity: 1,176 MW
- Owned Capacity: 1,176 MW
- License Expiration: 2046
- Next Refueling
  - Fall 2016
- Uprate 18MW Spring 2018

Salem Units 1 and 2

- Operated by PSEG Nuclear
- PSEG Ownership: 57%
- Technology: Pressurized Water Reactor
- Total Capacity: 2,294 MW
- Owned Capacity: 1,317 MW
- License Expiration: 2036 and 2040
- Next Refueling
  - Unit 1 – Spring 2016
  - Unit 2 – Spring 2017

Peach Bottom Units 2 and 3

- Operated by Exelon
- PSEG Ownership: 50%
- Technology: Boiling Water Reactor
- Total Capacity: 2,502 MW
- Owned Capacity: 1,251 MW
- License Expiration: 2033 and 2034
- Next Refueling
  - Unit 2 – Fall 2016
  - Unit 3 – Fall 2017
- Uprate: 130 MW (PS Share)
  - Unit 2 – March 2015
  - Unit 3 – December 2015

SI-SSA-0015-07273

PSEG Power's Growth Investments

Site	Project	Estimate ($ Millions)	Benefits	Status
Peach Bottom	Peach Bottom EPU (2014 – 2015)	$403	Increased capacity: 130 MW	PB2 & PB3 completed in 2015
Linden/ Bergen/ BEC	Advanced Gas Path Uprates (AGP): Linden -- 63 MW Bergen -- 31 MW BEC – 58 MW	$120	Increased capacity and improved heat rate: ~152 MW capacity increase ~1.2% heat rate improvement	Completed: Linden (2014) Bergen (2015) Planned: BEC 2017/2018E
Kearny 13 & 14	LM6000 Engine Throttle Push	--	Increased capacity: 14.5 MW	2016E
Maryland	Keys, 755 MW CCGT	$825 - $875	Geographic diversity within PJM; highly efficient gas fired unit in SWMAAC	2018E
Sewaren	Sewaren Unit 7, 540 MW CCGT	$625 - $675	Improved efficiency and reliability; replaces Sewaren 1-4 steam units	2018E
Bridgeport, CT	Bridgeport Harbor 5, 485 MW CCGT	$525 - $575	Highly efficient gas fired unit in ISO-NE	2019E
Eastern PA to Mercer, NJ	PennEast Pipeline	$123	Estimated Earnings in 2019: $13 million	Underway
Various	6 Solar Projects	$241	2016/2017E increase renewable capacity by 136 MW_{DC}/105 MW_{AC}	2016/2017E

Total New Capacity – 2,200 MW

E = ESTIMATE.

SI-SSA-0015-07274

A position in renewable energy – Power's Solar Source

Solar Source portfolio

- Utility scale solar projects in 12 states in operation or under construction
- Long-term PPA's with creditworthy counterparties
- Lump sum, full wrap EPC* agreements

Asset Optimization

- Maintain high equipment availability
- Minimize operating expenses
- Seek additional revenue streams

SI-SSA-0015-07275

* EPC = ENGINEERING PROCUREMENT & CONSTRUCTION. E = ESTIMATE.

PSEG Power has other attractive sources of revenues to round out a robust portfolio

Gas Asset Optimization

- Large wholesale provider to PSE&G and others
  - Storage capacity of approximately 75 Bcf (in the Gulf and market regions)
  - Firm transportation of 1.3 Bcf/day on seven pipelines
- Off-system sales margins shared with residential customers
- Commercial & Industrial gas sales

Ancillary Services – Black start, reactive power, area regulation

LIPA fuel and energy dispatch management – Began management of 10-year contract in 2015

Kalaeloa, HI – 50% equity interest in a 208 MW combined cycle oil unit

New Haven Peakers – 129 MW, rate based contract with ISO-NE

SI-SSA-0015-07276

PSEG Power has demonstrated ability to control O&M

Cost control actions taken:

- Fossil plant assessment
- CCGT material condition assessment
- Vendor contract renegotiations
- Nuclear security services brought in-house to control costs
- Nuclear maintenance productivity study
- Nuclear outage efficiency initiative
- Materials management
- Nuclear excellence initiative
- Nuclear staff – Right sizing

*EXCLUDES IMPACTS FROM STORM RECOVERY COSTS. E=ESTIMATE

PSEG

*SEE SLIDE A FOR ITEMS EXCLUDED FROM NET INCOME TO RECONCILE TO OPERATING EARNINGS. E = ESTIMATE.

PSEG Power – Delivering on priorities

Operational Excellence

- Fuel and technology-diverse fleet produced 55 TWh, 2% higher than 2014
- Nuclear capacity factor exceeded 90%; output of 30 TWh, close to 30.3 TWh is third best ever, record set in 2009
- Production records set at BEC, Linden and the CCGT fleet in total; Kearny 13 & 14 CTs
- Successful implementation of LIPA contract for fuel / generation dispatch.

Financial Strength

- Achieved earnings guidance in 2015
- Cost control programs held O&M to a 0.8% CAGR between 2011 and 2016
- Successful ongoing effort to influence outcomes in key markets showing success, e.g., price formation

Disciplined Investment

- Completed Peach Bottom EPU and AGP at Bergen 2; AGP planned for BEC in 2017/2018
- Repositioning the fleet with three new CCGTs:
  - Keys (2018)
  - Sewaren 7 (2018)
  - Bridgeport Harbor 5 (2019)
- Solar Source's portfolio is 277 MW_{DC}

SI-SSA-0015-07280

PSEG POWER
ER&T

SI-SSA-0015-07281

PSEG

We make things work for you.

Market Review: Markets in 2015 were affected by abnormal weather conditions

Q1: Periods of extremely cold temperatures resulted in high gas prices, significant basis differentials, and higher energy demand

Q2-Q4: A normal summer and mild December, combined with increased supply of gas, reduced energy prices and basis

SI-SSA-0015-07282

Market Review: Q1 2016 impacted by weather but forward gas and electric prices retain seasonal volatility

SI-SSA-0015-07283

Market Review: PSEG's extensive gas asset portfolio provides unparalleled access to Marcellus Shale gas

- PSEG Power maintains a robust portfolio of pipeline and storage assets in the Mid-Atlantic
- Marcellus Shale gas production reached 18.8 BCF/day in 2015
- PSEG Power procured over 423 BCF in 2015 with approximately 50% going to PSE&G's utility gas customers
- PSEG Power's gas for generation was 150 BCF in 2015, of which >75% was supplied by Northeast Shale gas
- Severe financial stress among the natural gas producer industry is expected to reduce production growth until gas prices rebalance to higher levels
- Investment in the PennEast pipeline expected to provide more access to Marcellus for PSEG

SI-SSA-0015-07284

Market Review: Completion of new pipeline infrastructure expected to move significant quantities of Marcellus gas out of the region by 2018

Pipeline capacity grows significantly by 2018

- Significant amount of new pipelines have already been built and more are in the advanced planning and development stage through 2018
- Gas production and pipeline takeaway capacity estimated to reach equilibrium in 2018 timeframe based on new pipeline development

SI-SSA-0015-07285

Regulatory Framework: New capacity and energy market designs in PSEG's core markets will better reward reliable generation units

	ISSUE /POLICY	OUTCOME
PJM	CAPACITY	• Higher payments for enhanced reliability (Capacity Performance) and lower energy revenues have raised absolute and relative value of capacity
	ENERGY PRICE FORMATION	• FERC is driving ISO's to improve their pricing constructs and rules – NOPRs and RTO reports addressing critical price formation issues
	DEMAND RESPONSE RULES	• Stricter rules for eligibility and deployment; focus returns to wholesale reliability/comparability after U.S. Supreme Court (SCOTUS) ruling
	STATE INTERVENTION	• SCOTUS dismissed the Maryland and New Jersey appeals in April 2016 • Ohio PPAs: FERC rescinded the previously approved waivers of the affiliate transaction standards and will review the PPAs under the affiliate abuse standards
ISO-NE	CAPACITY	• Continued tightness in capacity markets • Zonal demand curves submitted for FERC approval (FCA 11) • Nuclear and coal units under pressure; closure of Pilgrim nuclear plant
	ENERGY	• Proposed gas pipelines are receiving regulatory approvals slowly • 5 minute interval LMP settlements and fast start pricing expected Q2 2017
NYISO	CAPACITY	• Retirement of Fitzpatrick and Ginna and Western steam plants tighten market, but NYPSC directed to develop a clean energy standard that recognizes the value of nuclear
	ENERGY	• Improvement in price formation during reserve shortage conditions
FEDERAL	ENVIRONMENTAL REGULATIONS	• CPP rules stayed by SCOTUS • Some states will still prepare implementation plans for 2020+ timeframe • New PJM DR rules requiring that BTM diesel-fired generation employ environmental controls

SI-SSA-0015-07286

PSEG Power's Portfolio: Our fleet is well positioned in key markets

Right Location

with robust spark spreads

PSEG Summary

- 2015 earnings of $2.91 were at the upper end of our upwardly revised operating earnings guidance of $2.85 - $2.95 per share
- Forecast growth at PSE&G supports our 2016 guidance of $2.80 to $3.00 per share
- Forecast high single-digit rate base growth at PSE&G on five year basis from 2015 to 2020, driven by investment in transmission and approved programs
- Power's investment program and continued focus on operational excellence with financial strength delivers value in current price environment
- Strong Balance Sheet and Cash Flow support current capital program and investment in new opportunities without the need for equity
- Our indicative $0.08 dividend per share increase for 2016 is consistent with our long history of returning cash to the shareholder through the common dividend, with opportunity for consistent and sustainable growth

PSEG FINANCIAL APPENDIX

SI-SSA-0015-07319

PSEG Financial Highlights

Maintaining 2016 Operating Earnings* guidance of $2.80 - $3.00 per share

- ✓ Focused on maintaining operating efficiency and customer reliability
- ✓ PSE&G expected to contribute over 60% of 2016 Operating Earnings*
- ✓ PSEG Power: Salem Q2 refueling outage extended; testing of baffle bolts in reactor vessel complete, repair underway

Infrastructure spend

- ✓ PSE&G
  - Capital spending on T&D for 2016 expected to be $3 billion
  - Recently filed with NJBPU to extend the Solar 4 All program with an additional $275 million investment to develop 100 MW_{dc} of grid-connected, utility scale solar capacity
- ✓ Power has begun construction of its CCGT units in Maryland and New Jersey

Financial position remains strong

- ✓ Strong operating cash flow at both businesses support dividend growth and fund capital spending program without the need to issue equity
- ✓ PSEG debt as a percentage of capitalization was 44% at March 31

Increased common dividend 5.1% to indicative annual rate of $1.64 per share

- ✓ Change in earnings mix supports opportunity for dividend growth

Forward-Looking Statements

Certain of the matters discussed in this presentation about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K. These factors include, but are not limited to:

- fluctuations in wholesale power and natural gas markets, including the potential impacts on the economic viability of our generation units;
- our ability to obtain adequate fuel supply;
- any inability to manage our energy obligations with available supply;
- increases in competition in wholesale energy and capacity markets;
- changes in technology related to energy generation, distribution and consumption and customer usage patterns;
- economic downturns;
- third party credit risk relating to our sale of generation output and purchase of fuel;
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements;
- changes in state and federal legislation and regulations;
- the impact of pending rate case proceedings;
- regulatory, financial, environmental, health and safety risks associated with our ownership and operation of nuclear facilities;
- adverse changes in energy industry laws, policies and regulations, including market structures and transmission planning;
- changes in federal and state environmental regulations and enforcement;
- delays in receipt of, or an inability to receive, necessary licenses and permits;
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry;
- changes in tax laws and regulations;
- the impact of our holding company structure on our ability to meet our corporate funding needs, service debt and pay dividends;
- lack of growth or slower growth in the number of customers or changes in customer demand;
- any inability of Power to meet its commitments under forward sale obligations;
- reliance on transmission facilities that we do not own or control and the impact on our ability to maintain adequate transmission capacity;
- any inability to successfully develop or construct generation, transmission and distribution projects;
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers;
- our inability to exercise control over the operations of generation facilities in which we do not maintain a controlling interest;
- any inability to maintain sufficient liquidity;
- any inability to realize anticipated tax benefits or retain tax credits;
- challenges associated with recruitment and/or retention of key executives and a qualified workforce;
- the impact of our covenants in our debt instruments on our operations; and
- the impact of acts of terrorism, cybersecurity attacks or intrusions.

All of the forward-looking statements made in this presentation are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business, prospects, financial condition, results of operations or cash flows. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this presentation apply only as of the date of this presentation. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even in light of new information or future events, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this presentation are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-07329

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Net Income. Non-GAAP Operating Earnings exclude the impact of returns (losses) associated with the Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting and material one-time items. Non-GAAP Adjusted EBITDA excludes the same items as our non-GAAP Operating Earnings measure as well as income tax expense, interest expense and depreciation and amortization. The last two slides in this presentation (Slides A and B) include a list of items excluded from Net Income/(Loss) to reconcile to non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA with a reference to those slides included on each of the slides where the non-GAAP information appears.

Management uses non-GAAP Operating Earnings in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results. Management believes non-GAAP Adjusted EBITDA is useful to investors and other users of our financial statements in evaluating operating performance because it provides them with an additional tool to compare business performance across companies and across periods. Management also believes that non-GAAP Adjusted EBITDA is widely used by investors to measure operating performance without regard to items such as income tax expense, interest expense and depreciation and amortization, which can vary substantially from company to company depending upon, among other things, the book value of assets, capital structure and whether assets were constructed or acquired. Non-GAAP Adjusted EBITDA also allows investors and other users to assess the underlying financial performance of our fleet before management's decision to deploy capital. The presentation of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA is intended to complement, and should not be considered an alternative to, the presentation of Net Income, which is an indicator of financial performance determined in accordance with GAAP. In addition, non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA as presented in this release may not be comparable to similarly titled measures used by other companies.

Due to the forward looking nature of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility. Guidance included herein is as of April 28, 2017.

These materials and other financial releases can be found on the PSEG website at www.pseg.com , under the Investors tab. From time to time, PSEG, PSE&G and PSEG Power release important information via postings on their corporate website at http://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. The "email alerts" link at http://investor.pseg.com may be used to enroll to receive automatic email alerts and/or really simple syndication (RSS) feeds regarding new postings at http://investor.pseg.com/rss .

*POWER ANNOUNCED RETIREMENTS OF HUDSON AND MERCER GENERATING STATIONS AS OF JUNE 1, 2017.

PSEG Policy and Regulatory focus

on mechanisms that provide customers clean, affordable, resilient energy supply

NJ Distribution Base Rate Proceeding

- True-up data from 2010 base rate case for known changes in customers usage, taxes, O&M and investments

Long-Term Infrastructure Investment Platform

- Seek extension of existing infrastructure programs, e.g., GSMP, and broaden investment platform

Preserve the Value of Nuclear Supply

- Pursuing legislative strategy to recognize the value of nuclear energy under terms and conditions that are affordable for customers and provide the proper incentives for long-term operation

Ensure Federal Regulatory and Policy Framework

- Advocate for rules that preserve benefits of competitive markets while also recognizing the value of clean energy, supply diversity and grid reliability

PSE&G Investment Evolution: System needs, customer expectations and public policy objectives drive need for continued and increasing Distribution investments

2012 - 2016

Infrastructure Clauses focused on hardening and resiliency

Solar 4 All and Solar loans

Energy Efficiency

2017-2021E

Complete hardening, begin system modernization expand efficiency program

Transition from Energy Strong to Life cycle and automation work

Accelerate GSMP

Solar landfills

Extend and broaden Energy Efficiency

Utility of the Future

Electric Infrastructure

Life cycle programs, distribution automation, EV Charging

Gas Infrastructure

GSMP Acceleration and Resiliency

CNG Charging

Distributed energy resources

Solar 4 All, Microgrids, Batteries, Fuel Cells

Energy Efficiency

Hospitals, Municipalities, Universities, Low Income Programs, EE for All (Residential, Small C&I), AMI, Bill Education

Utility of the Future represents potential investment opportunity to sustain annual rate base growth rate

SI-SSA-0015-07342

PSE&G's capital spending drives high single-digit growth in rate base

E = ESTIMATE.

Customer's bills are materially lower, supporting needed investment in the system

- Combined electric and gas bills declined ~28% over the 2009-2017 period
  - Also provided BGSS bill credits totaling ~$590 per customer since 2012
  - Low gas prices and elimination of transition charges drove rate decreases
- Regional price comparison** Gas is 2nd lowest and Electric is lower than average
- Investing at the Utility of the Future level – would take about a decade to equal the 2009 bill rates (adjusted for growth in CPI/disposable income)

SI-SSA-0015-07344

PSEG

*FOR ALL YEARS THE BILLING ASSUMES 7,200 KWH FOR ELECTRIC AND 1,010 THERMS FOR GAS ANNUALLY. E = ESTIMATE
** COMPARED AGAINST 12 REGIONAL UTILITIES AS OF SEPTEMBER 1, 2016, FOR A CUSTOMER THAT USES 500 KILOWATT-HOURS AND 100 THERMS IN A MONTH.

Power's fleet is being **transformed** with focus on improvement in efficiency

Projected Fleet Comparison 2016 to 2021E

[1] REFLECTS ANNOUNCED EARLY RETIREMENT OF HUDSON AND MERCER UNITS IN MID-2017.
ALL PERIODS EXCLUDE SOLAR (257 MW_{AC}) CAPACITY AND KALAELOA (104 MW) CAPACITY / ENERGY PRODUCED.
**2016 COAL INCLUDES NEW JERSEY UNITS THAT FUEL SWITCH TO GAS. E= ESTIMATE.

Power's free cash flow improves as construction program ends, providing funding for growth

PSEG Power
2017E – 2021E Capital Spending (1)

PSE&G
2017E – 2021E Capital Spending (1)

(1) CAPITAL INCLUDES IDC AND AFUDC. E = ESTIMATE.

SI-SSA-0015-07346

Strong credit metrics provide substantial investment capacity for increased utility investment

Average Funds From Operations / Debt
2017E – 2019E

	Power	PSEG
Estimate	~40%	Low – 20's
Minimum Threshold	30%	High - teens

Total Incremental Investment Capacity

Incremental capacity invested in utility would be matched with utility debt

SI-SSA-0015-07347

PSEG has demonstrated an ability to control O&M, with plans to reduce in 2017

SI-SSA-0015-07348

PSEG

(1) POWER EXCLUDES IMPACTS FROM STORM RECOVERY COSTS AND THE HUDSON / MERCER EARLY RETIREMENT WRITE-DOWN, DISTRIBUTION EXCLUDES ELECTRIC AND GAS BAD DEBT. E = ESTIMATE.

2017 Federal Tax Reform – PSEG is well positioned

Given positive non-utility contribution to earnings and a strong balance sheet, PSEG is well positioned for potential tax reform

Assumption	PSE&G	PSEG Power	PSEG Parent
Reduction of Corporate Tax Rate	Customer rates lowered with reduction in tax rate Return of excess deferred tax liability – impact on cash and rate base growth dependent on payback period	After-tax earnings and cash flow increase One-time non-cash earnings benefit from reduction in deferred tax liability	After-tax earnings and cash flow improve
100% Expensing of Capital Expenditures	Impact on rate base growth comparable to existing bonus depreciation rules	Cash flow improves	
Elimination of Deductibility of Interest Expense and Border Adjustment Tax	Change in cost anticipated to be passed through to customers	Well positioned given low debt balance Uncertainty on Border Adjustment Tax	Well positioned given low debt balance

SI-SSA-0015-07349

Opportunity for meaningful and sustainable dividend growth

SI-SSA-0015-07350

PSEG Summary

- 2016 Operating Earnings (non-GAAP) at upper end of revised guidance of $2.80 - $2.95 per share
- PSE&G capital spending provides high single-digit rate base growth for foreseeable future balanced between Transmission and Distribution
- Power expected to generate significant free cash flow following CCGT construction program and transformation to a more efficient generation fleet
- Strong balance sheet and cash flow support current capital program and new investment opportunities without the need for equity
- Our indicative $0.08 dividend per share increase for 2017 demonstrates meaningful and sustainable dividend growth given significant contribution from PSE&G earnings and Power's strong financial profile

SI-SSA-0015-07351

PSEG's Value Proposition

- A stable platform with a $15 billion infrastructure investment pipeline providing opportunity for growth
- PSE&G – Delivering on promise for rate base growth through disciplined investment, customer satisfaction and safety
- PSEG Power – Efficient, low-cost, clean fleet advantaged by asset diversity, fuel mix and location
- Focus on providing strong, sustainable returns of invested capital through operational excellence, regulatory and legislative mechanisms
- 110-year record of paying common dividend with opportunity for consistent, sustainable growth
- Strong balance sheet – Financial strength supported by stable credit rating and investment profile

SI-SSA-0015-07352

PSEG FINANCIAL APPENDIX

PSEG

We make things work for you.

SI-SSA-0015-07353

Q1 2017 – Achieved Solid Financial Results

First Quarter Highlights

- Net Income of $0.22 vs. Net Income of $0.93 per share in Q1 2016
- Non-GAAP Operating Earnings* of $0.92 vs. $0.91 per share in Q1 2016
- Net Income reflects decision to retire Hudson-Mercer in June 2017 and REMA lease reserve
- PSE&G achieved 13% growth in Q1 Net Income over Q1 2016, supported by increased investment in transmission and distribution
- PSEG Power results aided by continued cost containment

Operational Excellence

- Nuclear fleet performance achieved 100% capacity factor for Q1

Disciplined Capital Investment – Producing Results

- PSEG expected to invest ~$4.7 billion in 2017, consisting primarily of $3.4 billion at PSE&G and $1.2 billion at PSEG Power
- Regulatory/Legislative Focus: NJ Needs Nuclear advocacy efforts; Energy Efficiency extension and expansion filing in March
- Major capital initiatives on track: Bridgeport Harbor 5 received all needed permits to begin construction phase

Forward-Looking Statements

Certain of the matters discussed in this presentation about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K. These factors include, but are not limited to:

- fluctuations in wholesale power and natural gas markets, including the potential impacts on the economic viability of our generation units;
- our ability to obtain adequate fuel supply;
- any inability to manage our energy obligations with available supply;
- increases in competition in wholesale energy and capacity markets;
- changes in technology related to energy generation, distribution and consumption and customer usage patterns;
- economic downturns;
- third party credit risk relating to our sale of generation output and purchase of fuel;
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements;
- changes in state and federal legislation and regulations;
- the impact of pending rate case proceedings;
- regulatory, financial, environmental, health and safety risks associated with our ownership and operation of nuclear facilities;
- adverse changes in energy industry laws, policies and regulations, including market structures and transmission planning;
- changes in federal and state environmental regulations and enforcement;
- delays in receipt of, or an inability to receive, necessary licenses and permits;
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry;
- changes in tax laws and regulations;
- the impact of our holding company structure on our ability to meet our corporate funding needs, service debt and pay dividends;
- lack of growth or slower growth in the number of customers or changes in customer demand;
- any inability of Power to meet its commitments under forward sale obligations;
- reliance on transmission facilities that we do not own or control and the impact on our ability to maintain adequate transmission capacity;
- any inability to successfully develop or construct generation, transmission and distribution projects;
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers;
- our inability to exercise control over the operations of generation facilities in which we do not maintain a controlling interest;
- any inability to maintain sufficient liquidity;
- any inability to realize anticipated tax benefits or retain tax credits;
- challenges associated with recruitment and/or retention of key executives and a qualified workforce;
- the impact of our covenants in our debt instruments on our operations; and
- the impact of acts of terrorism, cybersecurity attacks or intrusions.

All of the forward-looking statements made in this presentation are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business, prospects, financial condition, results of operations or cash flows. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this presentation apply only as of the date of this presentation. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even in light of new information or future events, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this presentation are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-07360

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Net Income. Non-GAAP Operating Earnings exclude the impact of returns (losses) associated with the Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting and material one-time items. Non-GAAP Adjusted EBITDA excludes the same items as our non-GAAP Operating Earnings measure as well as income tax expense, interest expense and depreciation and amortization. The last two slides in this presentation (Slides A and B) include a list of items excluded from Net Income/(Loss) to reconcile to non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA with a reference to those slides included on each of the slides where the non-GAAP information appears.

Management uses non-GAAP Operating Earnings in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results. Management believes non-GAAP Adjusted EBITDA is useful to investors and other users of our financial statements in evaluating operating performance because it provides them with an additional tool to compare business performance across companies and across periods. Management also believes that non-GAAP Adjusted EBITDA is widely used by investors to measure operating performance without regard to items such as income tax expense, interest expense and depreciation and amortization, which can vary substantially from company to company depending upon, among other things, the book value of assets, capital structure and whether assets were constructed or acquired. Non-GAAP Adjusted EBITDA also allows investors and other users to assess the underlying financial performance of our fleet before management's decision to deploy capital. The presentation of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA is intended to complement, and should not be considered an alternative to, the presentation of Net Income, which is an indicator of financial performance determined in accordance with GAAP. In addition, non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA as presented in this release may not be comparable to similarly titled measures used by other companies.

Due to the forward looking nature of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility. Guidance included herein is as of July 28, 2017.

These materials and other financial releases can be found on the PSEG website at www.pseg.com, under the Investors tab. From time to time, PSEG, PSE&G and PSEG Power release important information via postings on their corporate website at http://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. Power has generating assets in three competitive markets

- Major assets located near key load centers
- Constructing three new, efficient combined-cycle units
- Positioned to benefit from market volatility
- Additional generation assets:
  - Solar (326 MW_{DC}/257 MW_{AC})
  - Kalaeloa, HI (104 MW)

SI-SSA-0015-07366

*HUDSON AND MERCER GENERATING STATIONS WERE RETIRED AS OF JUNE 1, 2017.

PSEG Policy and Regulatory focus

on mechanisms that provide customers clean, affordable, resilient energy supply

NJ Distribution Base Rate Proceeding

- True-up data from 2010 base rate case for known changes in customers usage, taxes, O&M and investments

Long-Term Infrastructure Investment Platform

- Seek extension of existing infrastructure programs, e.g., GSMP, and broaden investment platform

Preserve the Value of Nuclear Supply

- Pursuing legislative strategy to recognize the value of nuclear energy under terms and conditions that are affordable for customers and provide the proper incentives for long-term operation

Ensure Federal Regulatory and Policy Framework

- Advocate for rules that preserve benefits of competitive markets while also recognizing the value of clean energy, supply diversity and grid reliability

SI-SSA-0015-07367

Focus on earning our cost of capital has provided for growth in operating earnings* and dividends

PSE&G: Energy Efficiency Approval and GSMP II Filing Support Long-term Regulatory and Policy Objectives

PSE&G's recent filing to extend its Gas System Modernization Program (GSMP) and the recent approval of its proposed extension of the Energy Efficiency investment program reinforce PSE&G's commitment to provide clean, reliable energy for its customers

Gas System Modernization Program II

In July, PSE&G filed for a 5-year extension of the GSMP which would accelerate the pace of replacement of its aging cast iron and unprotected steel mains and associated service. PSE&G is proposing to invest approximately $540 million per year, or up to $2.7 billion, over the 5-year program beginning in 2019. The filing is consistent with the draft regulations that the BPU issued in June regarding Infrastructure Investment Programs.

Energy Efficiency

The BPU has approved PSE&G's agreement with BPU Staff and Rate Counsel to extend its investment in Energy Efficiency. Under the agreement, PSE&G would invest $69 million in energy efficiency equipment for hospitals, multi-family housing and other sectors and a residential energy efficiency offering for smart thermostats and data analytics. The agreement represents more than 90% of PSE&G's request.

SI-SSA-0015-07385

Customer's bills are materially lower, supporting needed investment in the system

- Combined electric and gas bills declined ~28% over the 2009-2017 period
  - Also provided BGSS bill credits totaling ~$590 per customer since 2012
  - Low gas prices and elimination of transition charges drove rate decreases
- Regional price comparison** Gas is 2nd lowest and Electric is lower than average
- Investing at the Utility of the Future level – would take about a decade to equal the 2009 bill rates (adjusted for growth in CPI/disposable income)

SI-SSA-0015-07386

PSEG

*FOR ALL YEARS THE BILLING ASSUMES 7,200 KWH FOR ELECTRIC AND 1,010 THERMS FOR GAS ANNUALLY. E = ESTIMATE
** COMPARED AGAINST 12 REGIONAL UTILITIES AS OF SEPTEMBER 1, 2016, FOR A CUSTOMER THAT USES 500 KILOWATT-HOURS AND 100 THERMS IN A MONTH.

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as competition for certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies and changes in customer behaviors, including energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Income from Continuing Operations/Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. Slides A and B at the end of this presentation includes a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

SI-SSA-0015-07398

PSEG's business profile has been transformed through significant growth in utility capital spending

SI-SSA-0015-07399

Energy Strong Agreement recognizes benefits of system investments

- Energy Strong Agreement reached with all parties
  - ✓ Agreement recognizes the benefits of system investments that prevent or shorten outages
  - ✓ Supports $1.22 billion capital program over several years on reasonable terms: $1 billion recovered through accelerated, rate recovery mechanism
    - $820 million Electric
    - $400 million Gas
  - ✓ Allows PSE&G to earn a 9.75% ROE on the $1 billion recovered through mechanism
  - ✓ Requires PSE&G to file a base rate case by November 2017
  - ✓ Final NJBPU approval anticipated
- Over 100 New Jersey municipalities supported Energy Strong
- Energy Strong agreement clears path for PSE&G to pursue the initial phase of this robust capital program

*AT THE BEGINNING OF EACH YEAR. **EXCLUDES BGSS.

Balance Sheet Strength

2009 – 2013: Reduced risk profile and transformed business mix

- Invested $8.4 billion in PSE&G
- Improved credit ratings
- Monetized and de-risked Holdings' portfolio

2014 – Forward: Strong cash flows and increasingly regulated business mix fully support:

- PSE&G's $11.3 billion approved investment program through 2018
- Consistent and sustainable dividend growth
- Additional investment capacity to deploy in opportunities beyond those in the current capital plan
- No need to issue equity

PSEG

*INDICATED ANNUAL RATE.
**2014 PAYOUT RATIO REFLECTS THE MIDPOINT OF OPERATING EARNINGS GUIDANCE. E=ESTIMATE

PSEG Q1 2014 Financial Highlights

- Strong Q1 Earnings

✓ Operating earnings of $1.01 vs. $0.85 per share in Q1 2013
✓ Power benefited from higher market pricing, market volatility and increased output
✓ Increased contribution to earnings from PSE&G's investment in transmission

- Maintaining 2014 operating earnings guidance of $2.55 - $2.75 per share

✓ Focused on maintaining operating efficiency and customer reliability
✓ PSE&G expected to grow at double-digit rate in 2014 and provide over 50% of operating earnings

- Executing existing 5-year, $6.8 billion transmission capital spending program on budget and on schedule

- Agreement on PSE&G's Energy Strong infrastructure program to invest $1.22 billion over 2014 – 2018, awaiting final NJBPU approval

- Power recognized a liability in the quarter related to its discovery that it incorrectly calculated certain components of its cost-based bids for certain generating units in the PJM energy market, with resulting over-collection of revenues related to its fossil fleet. Power has notified FERC, PJM and the PJM Independent Market Monitor of this issue, which is still under review; we are unable to estimate the ultimate impact or predict any resulting penalties or other costs associated with the matter at this time

- Financial position remains strong

✓ Positive cash from Power and increasing cash flow from PSE&G supports dividend growth and funds capital spending program without the need to issue equity
✓ Increased common dividend to indicative annual rate of $1.48 per share in Q1 2014
✓ Debt as a percentage of capital was 41% at March 31, 2014

SI-SSA-0015-07406

Value Proposition

PSEG is positioned to **expand its investment in PSE&G** projects that provide reasonable, risk-adjusted returns, in ways that meet customer needs and state goals, given **strong cash flow of Power** and growing cash contribution from PSE&G.

PSEG will maintain a **strong financial profile** that provides the opportunity to achieve our growth objectives and maintains our **track record** of **returning cash to shareholders**.

SI-SSA-0015-07417

PSEG

E = ESTIMATE

Energy Strong Agreement supports customers' needs in the aftermath of Superstorm Sandy

- Settled with NJBPU Staff and all other parties in May 2014 for $1.22 billion
- Program addresses system resiliency and hardening by:
  - ✓ $620 million to raise, relocate or protect 29 switching and substations that were damaged by water in recent storms
  - ✓ $350 million to replace and modernize 250 miles of low-pressure, cast iron gas mains in or near flood areas
  - ✓ $100 million to create redundancy in the electric system, reducing outages when damage occurs
  - ✓ $100 million to deploy smart grid technologies to better monitor system operations to increase our ability to more swiftly deploy repair teams
  - ✓ $50 million to protect five natural gas metering stations and a liquefied natural gas station affected by Sandy or located in flood zones

SI-SSA-0015-07418

Over 70% of PSE&G's $11.3 billion investment program will be recovered through contemporaneous mechanisms

PSE&G TRANSMISSION

PSEG

We make things work for you.

SI-SSA-0015-07420

Transmission has delivered, and has grown to represent ~36% of rate base

Transmission represented ~36% of rate base at YE 2013 up from ~15% at YE 2009

SI-SSA-0015-07421

PSE&G's existing major transmission

investment program remains on schedule and on budget

Major Transmission Projects

	Approved ROE	Inclusion of CWIP in Rate Base	100% Recovery of Costs Due to Abandonment	Project Estimate Up To ($ Millions)	Expected In-service Date
Susquehanna-Roseland	12.93%	✓	✓	$790	June 2014 / June 2015
Northeast Grid Reliability	11.93%	✓	✓	$907	June 2015
North Central Reliability	11.68%	✓	✓	$390	June 2014
Burlington–Camden 230kV	11.68%	✓	✓	$399	Completed
Mickleton–Gloucester–Camden 230kV	11.68%	✓	✓	$435	June 2015

SI-SSA-0015-07422

Susquehanna-Roseland consists of constructing 150 miles of 500kV circuit (46 miles in NJ) with two new 500kV GIS switching stations at Roseland and Hopatcong

Project Estimate Up To*	Through Year-end 2013	Expected In-service Date
$790M	$661M	June 2014 / June 2015

- PJM RTEP project b0489
- ROE of 12.93% (including 1.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Improves reliability and reduces congestion

Project Status: Major permitting & siting complete, outside plant construction in progress, inside plant construction is complete and commissioning is in progress

SI-SSA-0015-07423

*PROJECT IS SHARED WITH PPL. PROJECT ESTIMATE REPRESENTS PSE&G'S CONSTRUCTION RESPONSIBILITY FOR THE NJ PORTION.

Northeast Grid Reliability consists of upgrading approximately 50 overhead circuit miles of 138kV transmission line to 230kV, constructing ~18 miles of new underground 230kV lines, and converting/upgrading 12 existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$907M	$228M	June 2015

- PJM RTEP project b1304
- ROE of 11.93% (including 0.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment
- Project estimate has increased ~$12M associated with hardening related scope changes as a result of Superstorm Sandy

Customer Benefit: Improves reliability and increases transfer capability

Project Status: Nearing completion of engineering/design and licensing/permitting phase. Outside and inside plant construction are in progress

SI-SSA-0015-07424

North Central Reliability consists of upgrading 55 circuit miles of 138kV transmission line to 230kV, and converting six existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$390M	$349M	June 2014

- PJM RTEP project b1154
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Improves power quality and increases transfer capability

Project Status: Major permitting & siting complete, outside and inside plant construction is essentially complete, commissioning is in progress

SI-SSA-0015-07425

Burlington-Camden 230kV consists of upgrading 37 circuit miles (30 miles of overhead and 7 miles of underground) of 138kV transmission line to 230kV, converting the existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$399M	$301M	Completed

- PJM RTEP project b1156
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Addresses voltage reliability and increases transfer capability

Project Status: In-service April 2014

SI-SSA-0015-07426

Mickleton-Gloucester-Camden 230kV

consists of upgrading 10 circuit miles of overhead transmission, installing ~16 circuit miles of new 230kV underground, 10 circuit miles of new 230kV overhead, and modifications/upgrades at five existing stations

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$435M	$122M	June 2015

- PJM RTEP project b1398
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Addresses thermal reliability and increases transfer capability

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-07427

Bergen-Linden Corridor is a recently approved project which will provide a double-circuit 345kV line to maintain reliability

Project Estimate Up To	Through Year-end 2013	Expected Completion Date
$1,200M	-	June 2018

- PJM RTEP project b2436
- 30 miles of underground cable
  - New ~ 23 miles
  - Reconductor (Upgrade of 138 to 345) ~7 miles
- 13 miles of double circuit overhead conductor (replacing double circuit 138 with double circuit 345)
- 11 station upgrades to 345kV

Customer Benefit: Addresses thermal and short-circuit reliability

Project Status: Engineering

SI-SSA-0015-07428

Planned transmission spend of $6.8 billion

is driven by PJM reliability projects, 69kV conversions and life-cycle replacement projects

PSEG LONG ISLAND

PSEG

We make things work for you.

SI-SSA-0015-07433

PSEG was selected to operate Long Island Power Authority's (LIPA) electric transmission and distribution system for 12 years starting in 2014

- Pursuant to the Operating Services Agreement (OSA), all expenses and capital costs to operate the system are pre-funded by LIPA and passed through to their customers
- Compensation consists of a fixed fee and an incentive fee
  - Fixed compensation fee for 2014 with scheduled increases in 2015 and 2016
  - Starting in 2015 PSEG Energy Resources and Trading (ER&T) begins managing fuel/energy contracts
  - PSEG Long Island expected to contribute $0.03 to operating earnings in 2014 increasing to $0.07 per share in 2016 including contribution at ER&T
- Potential for an 8-year extension of the OSA

SI-SSA-0015-07434

PSEG Long Island commenced operations

on January 1, 2014

Key elements of Operating Services Agreement

Increased PSEG scope and control	Use of PSEG brand as PSEG Long Island	3-Year rate freeze (2013-2015)
Performance metrics	NY Department of Public Service oversight	Potential for "Utility 2.0" investment

Early performance

Successful transition to PSEG Long Island	Stakeholder communication	Winter storm response

SI-SSA-0015-07435

PSEG POWER

PSEG

We make things work for you.

SI-SSA-0015-07436

PSEG Power strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-07437

Agenda

- Delivering Value
- Fleet Advantage, Location, Flexibility and Fuel Diversity
- Nuclear Operation
- Fossil Operation
- Financial Performance
- Expansion Opportunities
- Regulatory
- Engaged Workforce

SI-SSA-0015-07438

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus Fleet Diversity/Efficiency Focus	Financial/Economic Focus	Regulatory Focus
• Nuclear units continue to achieve strong operational results, operating at over 90% capacity factors for the 9th consecutive year • Fleet diversity across the dispatch curve and fuel types provide flexibility to meet changing conditions • Linden CCGT and Salem 2 nuclear unit achieved record output in 2013	• "Getting the most out of existing fleet" • Locational advantage • O&M control programs have delivered a CAGR of 1.6% between 2009 and 2014 • Sites offer competitive advantage for expansion	• Strong regulatory performance • Industry leadership in the changing business environment

SI-SSA-0015-07439

PSEG Power Delivering on priorities

Operational Excellence	• Maximize value of existing generating plants through implementation of the Operational Excellence Model (OEM) • Workforce engagement and development	• OEM implemented and achieving measures • Resource sharing program initiated
Financial Strength	• Deliver on Business Plan Commitments • Maintain competitive markets and improve constituent communication on issues important to Power	• Exceeded earnings guidance in 2013 • Ongoing effort in key markets showing success • Successful court outcome against subsidized generation
Disciplined Investment	• Successfully complete the Advanced Gas Path (AGP) uprates • Seek new opportunities in target markets (PJM, ISO-NE, NYISO) • Develop our renewables business (solar) • Maintain new nuclear option by successfully managing the Early Site Permit (ESP) process	• Accelerated schedule for AGP to maximize opportunity • LIPA contract for fuel and generation dispatch • Completed 19 MW solar project, 4 MW project under construction, established robust pipeline • Nuclear ESP is expected in 2015

SI-SSA-0015-07440

PSEG Power met 2013 challenges

Storm and weather challenges	+	Market challenges	=	Value delivered
• SuperStorm Sandy impacted our generating sites • Cold and hot weather extremes created challenging operating environment, but also presented opportunities		• Unit outages and planned transmission outages resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by economy		• Optimized unit dispatch across fleet during storm recovery • Expedited return from storm outages, restored margin opportunities • High availability when needed • Achieved fuel cost savings • Captured value through coal/gas switching, unit flexibility • Coal & oil sales optimized inventory • Flexibility of portfolio captured real-time basis opportunities

SI-SSA-0015-07441

PSEG Power exceeded 2013's earnings guidance

OPERATING EARNINGS FOR PSEG POWER IN 2013; SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. *ASSETS TRANSFERRED TO POWER AT YEAR-END 2013.

SI-SSA-0015-07442

PSEG Power has generating assets

in three competitive markets

- Assets near loads
- Low cost portfolio
- Fuel flexibility with gas cost advantage
- Poised to benefit from volatility in real-time markets
- Fleet will maintain diversity and efficiency after HEDD
- Most sites suitable for expansion

SI-SSA-0015-07443

PSEG Power will maintain diversity and efficiency after a realignment of the fleet due to HEDD

Objective 2013 → 2017

- Maintain fuel diversity
- Maintain load-serving capability
- Maintain low cost structure
- Environmental improvement
- Peach Bottom (PB) uprate
- Advanced Gas Path (AGP)
- Kalaeloa and Solar transfer adds ~200MW of capacity

Fuel Diversity

Energy Produced

SI-SSA-0015-07444

Power's PJM assets along the dispatch curve reduce the risk of serving full requirement load contracts and can take advantage of volatile market conditions

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel flexibility for >60% of fleet

SI-SSA-0015-07445

PSEG Power Nuclear is a critical element of our success

Hope Creek	Salem Units 1 and 2	Peach Bottom Units 2 and 3

• Operated by PSEG Nuclear
• PSEG Ownership: 100%
• Technology: Boiling Water Reactor
• Total Capacity: 1,178 MW
• Owned Capacity: 1,178 MW
• License Expiration: 2046
• Next Refueling
  • Spring 2015
	• Operated by PSEG Nuclear
	• PSEG Ownership: 57%
	• Technology: Pressurized Water Reactor
	• Total Capacity: 2,365 MW
	• Owned Capacity: 1,358 MW
	• License Expiration: 2036 and 2040
	• Next Refueling
	  • Unit 1 -- Fall 2014
	  • Unit 2 – Spring 2014
		• Operated by Exelon
		• PSEG Ownership: 50%
		• Technology: Boiling Water Reactor
		• Total Capacity: 2,251 MW
		• Owned Capacity: 1,125 MW
		• License Expiration: 2033 and 2034
		• Next Refueling
		  • Unit 2 – Fall 2014
		  • Unit 3 – Fall 2015
		• Uprate: 130 MW in 2015/2016

SI-SSA-0015-07446

PSEG Power Nuclear is core to the fleet and has competitive advantages

- Continued strong nuclear operations: nine consecutive years of >90% capacity factor
- Significant earnings contributor
- Top quartile of cost performance/MWh
- One third new staff, recruitment of the best new and experienced talent, and attractive training program
- Fukushima action plan in response to NRC staff review
  - ✓ FLEX* plan submitted with implementation starting with Fall outage
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

*STRATEGY KNOWN AS THE "DIVERSE AND FLEXIBLE MITIGATION CAPABILITY" OR FLEX, ADDRESSES RECOMMENDATIONS OF THE NUCLEAR REGULATORY COMMISSION'S FUKUSHIMA TASK FORCE.

SI-SSA-0015-07447

Power's nuclear fleet is well positioned

with significantly lower-than-average US cost structure

*SOURCE: ELECTRIC UTILITY COST GROUP
** SOURCE: PSEG NUCLEAR

SI-SSA-0015-07448

PSEG Power's Fossil Fleet Performance

has shown improvement

- Fossil Capacity Factor rebounded with market
- Peaking Units maintain high start success

- Coal EFORp improving
- CC EFORp less than 1% in 2013
- Consistent recipient of EFORp payments

SI-SSA-0015-07449

PSEG

*LM6000 AND 7EA UNITS

PSEG Power improvements achieved in combined cycle fleet efficiency

Combined Cycle Operating Heat Rate

Actions Taken to Create Value

- Operational Excellence Model
- Training programs
- Unit testing initiative
- Outage work to restore efficiency
- Second gas line at BEC

- Heat rate improvement 2008-2013 translates to meaningful fuel savings at current market prices

- Advanced Gas Path (AGP) investments 2014 through 2018 to provide additional fuel savings

SI-SSA-0015-07450

Investing to expand CCGT capacity and improve efficiency

PSEG Power - CCGT Uprate Project

- Expand Power's CCGT fleet, one of the largest gas-fired portfolios in PJM, with incremental base and peaking MWs
- Retrofit Bergen, Linden and BEC with Advanced Gas Path (AGP) components at cost of ~$120M over 2014 - 2018

AGP Project Benefits

- ✓ CCGT capacity uprates of ~150 MW:
  - Linden (63 MW – Completed)
  - Bergen (31 MW – 2015)
  - BEC (58 MW – 2017-2018)
- ✓ Increases Efficiency - Combined Cycle (CC) heat rate improvement ~ 1.2%
- ✓ Upgrades technology and extends maintenance outage cycles

SI-SSA-0015-07451

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing
- Cost control through testing coordination program

SI-SSA-0015-07452

PSEG Power's capital expenditures for environmental requirements are essentially complete*

SI-SSA-0015-07453

SI-SSA-0015-07460

PSEG Power: Enjoys real and sustainable advantages in the merchant generation space

Market Review

- Gas, Power, Spark Spreads
- Regulatory construct

PSEG's Competitive Advantage

- Fuel flexibility
- Heat Rate diversity
- Access to Marcellus Shale gas
- Asset flexibility

PSEG's Sustainable Advantage

- Positive cash-flow hedging into the long-term
- Robust capacity market pricing in most concentrated load pocket in US
- Long-term access to discounted Marcellus gas

SI-SSA-0015-07461

Market Review: Prices have stabilized

- Energy and gas prices appear to have stabilized
- Environmental restrictions may tighten market
- Insufficient gas infrastructure continues to place upward pressure on fuel prices during seasonal peaks

SI-SSA-0015-07462

F=FORWARDS AS OF 12/31/2013

Market Review: New generation in PJM not keeping pace with coal retirements

Cumulative Generation Retirements*

Forecast Reserve Margin (PJM January 2014)

- PJM forecasts a declining Reserve Margin through 2018, which may improve forward prices
- Brattle estimates energy prices could rise at least $3-4/MWh from today's prices

SI-SSA-0015-07463

PSEG

*PJM AS OF FEBRUARY 20, 2014
SOURCE OF CHART DATA: PJM

Market Review: Regulatory framework showing signs of improvement

	ISSUE / POLICY	REGULATORY GAINS
PJM	SUBSIDIZED GENERATION (NJ and MD)	• Comprehensively defeated in federal court (appeals currently pending)
	DEMAND RESPONSE RULES	• PJM and ISO-NE enacted stricter rules of eligibility and deployment
	ENERGY PRICE FORMATION	• Concerted drive to improve price formation for generation and ancillary services • Waiver of price caps during extreme market conditions
NYISO	TRANSMISSION	• Significant progress made to relieve bottling of upstate generation
ISO-NE	CAPACITY	• Improvement in price formation to better reflect tight supply conditions • Implementation of sloping demand curve in Forward Capacity Auction (FCA) 9
	ENERGY	• Demand response required to participate in Day Ahead markets
FEDERAL	GAS to ELECTRIC	• Better coordination between pipelines and ISO's will promote efficiency
	ENVIRONMENTAL REGULATIONS	• HEDD, HAPS/MACT may lead to tightening of supply in 2015+ timeframe

SI-SSA-0015-07464

Competitive Advantage: Heat Rate Diversity & Flexible Dispatch

SI-SSA-0015-07465

Competitive Advantage: PSEG's extensive gas asset portfolio gives unparalleled access to Marcellus Shale gas

SI-SSA-0015-07466

Competitive Advantage: ~25% of Power's gas for generation comes from Marcellus

- Our combined cycle and peaking assets have been able to take advantage of locational gas price volatility driven by production and logistical constraints
- Lower cost shale supply provides additional savings during periods of lower residential gas demand

SI-SSA-0015-07467

Competitive Advantage: Locational advantage from short term basis volatility

PS Zone Annual Basis to PJM-W

PS Zone Day Ahead On Peak Monthly Basis to PJM-W

- Annual basis benefits baseload units
- Intermediate units flexible to seasonal opportunities
- Combined Cycle and Peaking units positioned to optimize daily and hourly volatility

PS Zone Real Time On Peak Hourly Basis to PJM-W

ANNUAL FORWARD BASIS TO PJM-WEST AS OF 12/31/2013.

Competitive Advantage: Trading & Asset Flexibility

PSEG Zone LMP's on January 7, 2014

On Peak Basis to PJM-W on January 7, 2014

Hourly Generation and Load on January 7, 2014

- High gas market at $58/MMbtu setting power prices in PS zone on 1/7/14
- Higher basis to generation
- Base load and load following generation sufficient to cover load and hedge obligations
- Additional steam and peaking generation available above day ahead commitment to gain value from real time market
- Fuel flexibility with coal/gas/oil optionality among available units

SI-SSA-0015-07469

Competitive Advantage: Trading & Asset Flexibility

PSEG Zone LMP's on July 18, 2013

On Peak Basis to PJM-W on July 18, 2013

Hourly Generation and Load on July 18, 2013

- High demand in constrained northern NJ
- Base load and load following generation sufficient to cover load and hedge obligations
- Additional generation available above obligations to gain value from real time market spikes
- Gas advantage in procuring low cost shale supply to capture savings

SI-SSA-0015-07470

Sustainable Advantage: BGS Auction provides excellent opportunity to forward hedge our generation

BGS sales account for about a quarter of our forward portfolio of hedges

SI-SSA-0015-07471

$/MWH; BGS PRICES REFLECT PSE&G ZONE; RESULTS FOR 2012-2014 WILL BE THE NEW BLENDED PRICES BEGINNING JUNE 1, 2014.

Sustainable Advantage: Hedging strategy designed to protect gross margin while leveraging the portfolio

		Apr-Dec 2014	2015	2016
Base Load (Nuclear and Base Load Coal)	Volume TWh	26	35	36
	% Hedged	100%	75-80%	35-40%
	Price $/MWh	$49	$51	$51
Intermediate Coal, Combined Cycle, Peaking	Volume TWh	18	21	19
	% Hedged	30-35%	0%	0%
	Price $/MWh	$49	$51	$51
Total	Volume TWh	42-44	54-56	54-56
	% Hedged	70-75%	50-55%	25-30%
	Price $/MWh	$49	$51	$51

Forecast output: Increased to reflect improvement in economic dispatch

HEDGE PERCENTAGES AND PRICES AS OF MARCH 31, 2014. REVENUES OF FULL REQUIREMENT LOAD DEALS BASED ON CONTRACT PRICE, INCLUDING RENEWABLE ENERGY CREDITS, ANCILLARY, AND TRANSMISSION COMPONENTS BUT EXCLUDING CAPACITY. HEDGES INCLUDE POSITIONS WITH MTM ACCOUNTING TREATMENT AND OPTIONS. EXCLUDES SOLAR AND KALAELOA.

SI-SSA-0015-07472

Sustainable Advantage: PJM's capacity market is expected to continue to recognize locational value

RPM Auction Results*					
($/MW-day)	2012 / 2013	2013 / 2014	2014 / 2015	2015 / 2016	2016 / 2017
Power's Average Prices	$153	$242	$166	$166	$166

PSEG Power's Value Proposition

- Well-positioned fleet of merchant generating assets concentrated in PJM market
- Advantaged by low cost structure, fuel diversity and dispatch flexibility
- Low environmental capital requirements
- Capacity uprates to enhance value of nuclear and combined cycle stations
- Consistent hedging strategy recognizes asset flexibility
- Continue to meet commitments and to provide free cash flow

PSEG FINANCIAL REVIEW & OUTLOOK

PSEG

We make things work for you.

SI-SSA-0015-07476

Strong financial position to support our business initiatives

2013 Financial Position

- ✓ Exceeded upwardly revised 2013 earnings guidance
- ✓ Pension fully funded
- ✓ Strong balance sheet and upgraded credit ratings

2014 and Beyond

- ✓ Continued positive earnings trend in 2014
- ✓ Controlled O&M growth
- ✓ Balance Sheet and Cash Flow support investments without equity issuance
- ✓ Growth in PSE&G investments with contemporaneous returns
- ✓ Diversified Power assets with a balanced hedge profile
- ✓ Growth in PSE&G Cash from Operations, with continued significant Cash from Operations/FFO at Power
- ✓ Increased Dividend by $0.04 to indicative annual rate of $1.48 for 2014
- ✓ Opportunity for consistent and sustainable dividend growth

SI-SSA-0015-07477

Exceeded upwardly revised guidance

in both businesses

PSEG Operating Earnings		
$ Millions (except EPS)	**2012**	**2013**

SI-SSA-0015-07478

In 2013, Power had significant free cash flow

SI-SSA-0015-07479

In 2013, PSE&G invested over $2B, using $1.4B of internally generated cash flow and debt, while maintaining its capital structure

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$220 MILLION.

SI-SSA-0015-07480

In 2013, Power's Free Cash Flow supported PSE&G's capital program and shareholder dividend

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$220 MILLION.
(2) OTHER CASH FLOW INCLUDES HOLDINGS NET CASH FLOW AND PARENT CASH.

SI-SSA-0015-07481

PSEG growth spend, including Energy Strong, of ~$6.4B represents ~76% of total investment

E = ESTIMATE; CAPITAL INCLUDES AFUDC AND IDC.

SI-SSA-0015-07482

PSE&G's Capital Program drives double-digit growth in rate base and earnings over the 2013 to 2016 period

SI-SSA-0015-07483

PSE&G's Cash from Operations and Power's Free Cash Flow support growth investments without the need for new equity

PSEG Sources and Uses

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$500M FROM 2014-2016
(2) OTHER CASH FLOW INCLUDES PSEG LI, HOLDINGS NET CASH FLOW, CASH, AND SHORT TERM DEBT
E = ESTIMATE

SI-SSA-0015-07484

Power's key credit metric supports incremental investment opportunities

- Increased contribution to earnings from the more stable regulated business allows us to reset Power's FFO/Debt threshold from 35% to 30%, providing additional financial flexibility
- Power's annual Cash From Operations and Funds From Operations each average ~$1.1B over the 2014 to 2016 period supported by:
  - Capacity Revenues
  - Hedged Generation
  - O&M Control
- Financial strength can be used to pursue future growth in both businesses beyond current plans

SI-SSA-0015-07485

Pension: Our Long Term Asset allocation strategy resulted in a ~17% increase in pension assets during 2013

PBO Funded Ratio	83%			Fully Funded Pension →	106%

SI-SSA-0015-07486

Our Pension Management is expected to result in pension income in 2014 and over the planning horizon

SI-SSA-0015-07487

PSEG

(1) OTHER REFLECTS UPDATES TO THE POPULATION OF OUR EMPLOYEES AND RETIREES
E=ESTIMATE

Ongoing cost control efforts, including pension, expected to reduce O&M over the forecast period

(1) POWER EXCLUDES IMPACTS FROM STORM RECOVERY COSTS AND POTENTIAL RELATED INSURANCE PROCEEDS
NM = NOT MATERIAL E = ESTIMATE.

PSEG's longer-term outlook is influenced by Power's hedge position and increased investment at PSE&G

Segment EPS Drivers

Sensitivities derived from typical annual market variability*	2015E	2016E
Each $0.75/mcf Change in Natural Gas	$0.04 - $0.07	$0.12 - $0.15
Each $2/MWh Change in Spark Spread	$0.04	$0.04
Each $5/MWh Change in Dark Spread	$0.04	$0.04
Each 1% Change in Nuclear Capacity Factor	$0.01	$0.01

Each $100 Million of Incremental Investment	$0.01	$0.01
Each 1% Change in Sales		
Electric	$0.01	$0.01
Gas	$0.01	$0.01
Each 1% Change in O&M	$0.01	$0.01
Each 10 bp Change in ROE	$0.01	$0.01

* Estimated annual variability approximating one standard deviation based on 2011 – 2013 historical data and forward curve estimates applied to PSEG Power open positions

SI-SSA-0015-07491

PSEG Summary

- Our 2013 earnings of $2.58 exceeded our upwardly revised operating earnings guidance of $2.40 - $2.55 per share
- Double digit earnings growth at PSE&G on one and three year basis from 2013 to 2016, driven by transmission investments and approved programs
- Power's continued focus on operational excellence, market expertise and financial strength delivers value in current price environment
- Strong Balance Sheet and Cash Flow support full capital program and new potential opportunities without the need for equity
- Long history of returning cash to the shareholder through the common dividend, with opportunity for consistent and sustainable growth

Forward-Looking Statements

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or ongoing low pricing of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulations, including market structures and transmission planning,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators, including prudency reviews and disallowances,
- any deterioration in our credit quality or the credit quality of our counterparties,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations or increase the cost of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- delays or unforeseen cost escalations in our construction and development activities, or the inability to recover the carrying amount of our assets,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- increases in competition in energy supply markets as well as for transmission projects,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies,
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- an extended economic recession,
- an inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce, and
- changes in the credit quality and the ability of lessees to meet their obligations under our domestic leveraged leases.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.
The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-07510

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Income from Continuing Operations/Net Income. Operating Earnings exclude gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items.

PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. The last two slides in this presentation (Slides A and B) include a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2015. PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT AND PSEG LONG ISLAND ACTIVITY. SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS

Delivering on commitments and realizing growth

Operational Excellence	• PSE&G: ReliabilityOne Mid-Atlantic Region's Most Reliable Electric Utility (14th consecutive year), Electric Light & Power's 2015 Utility of the Year, ReliabilityOne Outstanding Outage Response Time and Outstanding Customer Engagement • PSEG Power: Record output from combined cycle units • PSEG Long Island: Improved customer service and reliability while managing costs • PSEG: Cost-control benefits continue
Financial Strength	• Operating earnings for 2015 of $2.91 per share at upper end of guidance range • Cash flows and business mix support strong credit ratings and ability to fully fund robust investment pipeline without issuing new equity • Increased dividend in 2015
Disciplined Investment	• PSE&G capital program drives continued rate base growth over the 5-year period (2016-2020) with increased investment in Transmission, Energy Strong, Gas System Modernization Program, and Electric and Gas distribution • Power capital program focusing on growth investments including Keys, Sewaren and Bridgeport Harbor, Nuclear and Fossil uprates, PennEast Pipeline, and Solar Source

Focus on building a reliable, efficient, clean energy infrastructure

2011 → 2012 → 2013 → 2014 → 2015

Selected Accomplishments

2011
- Expanded investment programs focused on infrastructure upgrades, energy efficiency, and major transmission projects*
- Sale of Texas generating assets
- Nuclear license extensions and uprates

2012
- Award winning Superstorm Sandy storm response restoring 2.1M customers
- Final federal approval for Susquehanna-Roseland transmission project
- 400 MW of new peaker capacity**

2013
- Expanded Solar investment
- 90% nuclear capacity factor for 9th straight year
- Record output from Linden CCGT and Salem 2 Nuclear Unit

2014
- Energy Strong program approved
- Advanced Gas Path uprates (through 2018)
- PSEG Long Island management contract effective

2015
- Gas System Modernization Project (GSMP) and Energy Efficiency Extension II approved
- New generation build starts Power fleet transformation
- Solar Source portfolio reaches 277 MW_{DC}***

PSEG

* INVESTMENT CONTINUED FOR SUSQUEHANNA-ROSELAND, BURLINGTON-CAMDEN, NORTH CENTRAL RELIABILITY, AND STARTED FOR NORTHEAST GRID AND MICKLETON-GLOUCESTER. ** KEARNY AND NEW HAVEN. *** AS OF MARCH 2016.

Growth in capital spending aligned with customer needs

PSEG Capital Spending

2011 – 2015: ~$14.3 Billion | **2016E – 2020E*: ~$16.0 Billion**

*INCLUDES ALL PLANNED SPENDING. **POWER CAPITAL SPENDING EXCLUDES NUCLEAR FUEL. ***INCLUDES PENNEAST PIPELINE EQUITY INVESTMENT OF $0.1B. E=ESTIMATE.

SI-SSA-0015-07517

Building an efficient, clean, reliable energy platform

Timeframe	Actions taken
2011 – 2015: Transformed business mix	• Applied ~$14.3 billion towards investments • Improved credit ratings • Monetized Energy Holdings' portfolio • Strong balance sheet sustained during period of low power prices, while increasing the dividend
2016 – Forward: Strong financial position supports continued growth	• Continued dividend growth in 2016 • ~$16 billion investment program through 2020 • Utility investments focused on improving reliability and replacing aging infrastructure • Continued investment in reliable and efficient energy infrastructure at Power • Financial capability supports further expansion of the current capital plan

SI-SSA-0015-07518

PSE&G's investment program

Meeting public policy goals and customer needs

PSEG

*SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/
NET INCOME TO RECONCILE TO OPERATING EARNINGS. DISTRIBUTION RATE BASE INCLUDES SOLAR AND ENERGY EFFICIENCY

Managing the total costs to customers while investing in the system

PSE&G Typical Residential Customer Bills*

- PSE&G customers' combined electric and gas bills declined 28% over the period
- Low gas prices and elimination of transition charges drove rate decreases

SI-SSA-0015-07520

PSEG

*FOR ALL YEARS THE BILLING ASSUMES 7,200 KWH FOR ELECTRIC AND 1,010 THERMS FOR GAS ANNUALLY. E = ESTIMATE

Transforming Power's fleet to maintain strong market position

Economic Drivers	Outlook	Combined Cycle	Nuclear	Scrubbed Coal	Peakers	Renewable
Energy Margins	• Low natural gas and energy prices • Robust portfolio of gas pipeline contracts	✓	✓	✓	n/a	n/a
Capacity Markets	• Tightened rules proposed for capacity performance	✓	✓	✓	✓	n/a
Environmental Regulations	• Tighter air emissions standards	✓	✓	✓	✓	✓
Location	• Assets in well-designed markets, premium regions • Opportunities on brownfield sites	✓	✓	✓	✓	n/a
2016 - PSEG Power Total Capacity 11.9 GW		3.3	3.7	2.4	2.3	0.2
2019 - PSEG Power Total Capacity 13.5 GW *		5.3	3.8	2.4	1.8	0.2

- **Largest nuclear site** in the eastern U.S. and ownership in **large, fully scrubbed coal facilities** at Keystone and Conemaugh provide **economies of scale** that enhance energy margins in current low market, and provide for upside potential if prices improve
- **Dual fuel peakers** meet reliability criteria in capacity markets and provide option value in energy market. Opportunity exists to repower peakers that do not meet NJ HEDD environmental regulations
- **Combined cycle units Keys and Sewaren expected to be operational in 2018, and Bridgeport 5 expected to be operational in 2019,** will enhance emissions performance and have a combined average heat rate of approximately 6,600

SI-SSA-0015-07521

PSEG

*AS OF FEBRUARY 2016 APPROXIMATELY 1.8 GW OF CCGT GENERATION UNDER DEVELOPMENT – KEYS, SEWAREN 7 AND BRIDGEPORT HARBOR 5 , WHICH ARE TARGETED TO GO INTO SERVICE IN 2018/2019 ALONG WITH RETIREMENT OF OLDER SEWAREN UNITS.

Operating Earnings

Disciplined investment program and focus on operational excellence have supported growth

Power's diverse fuel mix and dispatch flexibility continue to generate strong earnings and free cash flow in low price environment

PSE&G's investment program has resulted in an increased contribution to PSEG's earnings

SI-SSA-0015-07522

PSEG

Focus areas over the business plan horizon

PSE&G

- **Operational excellence and cost control**
- **Capital program execution** – Transmission, Energy Strong and GSMP program
- **Regulatory framework** – Advocate for regulatory framework that provides support for long-term infrastructure programs
- **Continue to develop incremental growth opportunities**

PSEG Power

- **Operational excellence and cost control**
- **Timely and on budget construction of new growth opportunities** – Keys Energy Center, Sewaren 7 and Bridgeport Harbor
- **Strong performance at Nuclear and Fossil** to maximize fleet value in dynamic markets
- **Advocacy of constructive market rules** - Capacity markets and environmental regulations

PSEG Long Island

- **Continue execution** – Achievement of performance metrics

SI-SSA-0015-07524

PSEG's Value Proposition

- A stable platform with predictable earnings and a robust investment pipeline
- PSE&G – Best in class utility performance and growth profile
- PSEG Power – Efficient, low-cost, clean fleet advantaged by asset diversity, fuel mix and location
- Strong balance sheet – Supports stable credit rating, growth objectives and the potential for consistent and sustainable dividend growth

PSE&G strategy

Building a sustainable platform that balances reliability, customer rates and public policy to ensure growth at reasonable returns

SI-SSA-0015-07528

PSE&G's focus on meeting customer reliability and policy objectives are key to our investment strategy

2011	2012	2013	2014	2015

Selected Accomplishments

2011
- NJ Capital Infrastructure Program 2
- Energy Efficiency extension
- Major Transmission capital projects*
- Hurricane Irene/ October Snowstorm
- Mid-Atlantic ReliabilityOne Award

2012
- Hurricane Sandy storm response (2.1M customers restored)
- Transmission: Final federal approval for Susquehanna-Roseland (S-R) project
- National ReliabilityOne Excellence Award
- Mid-Atlantic ReliabilityOne Award
- EEI's Emergency Response Award

2013
- Solar Loan III
- Solar 4 All Extension
- Energy Strong program filed
- Mid-Atlantic ReliabilityOne Award
- Award for Outstanding Response to a Major Event

2014
- Energy Strong approved
- Transmission: North Central Reliability and Burlington-Camden projects placed in-service
- Bergen-Linden Corridor Upgrade project investment started
- Mid-Atlantic ReliabilityOne Award

2015
- Gas System Modernization Project (GSMP)
- Energy Efficiency Extension II
- Transmission: S-R and Mickleton-Gloucester projects placed in-service
- Mid-Atlantic ReliabilityOne Award
- Recognized for customer satisfaction by J.D. Power for both large electric and gas business service in the East

← Cost Control →

* INVESTMENT CONTINUED FOR SUSQUEHANNA-ROSELAND, BURLINGTON-CAMDEN, NORTH CENTRAL RELIABILITY, AND STARTED FOR NORTHEAST GRID AND MICKLETON-GLOUCESTER

SI-SSA-0015-07529

Building on our track record

Operational Excellence

- Strong reliability record, with plans for further improvement
- Cost control efforts

Financial Strength

- Meeting or exceeding earnings targets
- Maintain solid investment grade credit ratings

Disciplined Investment

- 14 investment programs approved over past seven years
  - ✓ Infrastructure focused
  - ✓ Policy alignment – across administrations – Solar, EE and other
- Win-Win: Job creation, environment benefits, low commodity prices, low interest costs, labor availability, federal tax benefits

SI-SSA-0015-07530

Operational Excellence

Reliability and Customer Service

- Named most reliable electric utility in the Mid-Atlantic region for 14th consecutive year
- Recognized by PA Consulting with the Outstanding Customer Engagement and Outstanding Outage Response Time awards
- Named 2015 Utility of the Year by Electric Light & Power Magazine
- Received Star of Energy Efficiency Award

SI-SSA-0015-07531

Achieved ~11% annual earnings growth

over the past four years through implementation of supportive rate mechanisms on our expanded capital program and cost control

PSE&G Operating Earnings Per Share

PSEG Power strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-07550

Focus on transforming Power's portfolio with reliable, efficient, and cleaner energy infrastructure

2011	2012	2013	2014	2015

Selected Accomplishments

2011
- Hope Creek set annual output record
- Nuclear license extensions and uprates achieved

2012
- Peach Bottom 3 set annual output record
- Additional 400 MW of new peaker capacity at Kearny and New Haven
- Superstorm Sandy recovery initiated

2013
- Record annual output from Linden CCGT and Salem 2 Nuclear Unit
- 90% + nuclear capacity factor for 9th straight year
- Bethlehem Energy Center, 2nd gas pipeline connection added

2014
- Record annual output from Bergen CCGT
- PennEast pipeline investment
- CCGT Advanced Gas Path (AGP) uprate investment completed at Linden 1 & 2, 63 MW
- Established PSEG Long Island fuel management operations for 2015 start-up

2015
- Record CCGT fleet annual output
- Continued growth in fleet with 1,300 MW new CCGT's announced
  - Keys
  - Sewaren 7
- Prepared successful bid for 485 MW Bridgeport Harbor 5
- Projects Completed:
  - Peach Bottom EPU, 130 MW
  - Bergen 2 AGP uprate, 31 MW
- HEDD retirement
- Solar portfolio reaches 277 MW_{DC} as of March 2016

Cost Control

SI-SSA-0015-07551

- Pumped Storage

SI-SSA-0015-07552

PSEG

* EXCLUDES SOLAR AND KALAELOA.

**INCLUDES NEW JERSEY UNITS THAT FUEL SWITCH TO GAS.

Power investing $2 billion of capital in new capacity

SI-SSA-0015-07553

E=ESTIMATE. DATA AS OF MARCH 2016

Power's PJM assets are becoming more efficient

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape
- Readiness for Capacity Performance (CP), successful in CP auction

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel capability at 87% of load following and peaking units

SI-SSA-0015-07554

PSEG

* KEYS & SEWAREN 7 TO BE ADDED TO DISPATCH IN 2018E AND SEWAREN 1-4 WILL RETIRE.

PSEG Power has generating assets in three competitive markets

- Assets located near load
- Low cost portfolio with gas cost advantage
- Positioned to benefit from volatility in real-time markets
- Fleet meets new capacity performance standards
- 1,800 MW of new CCGT capacity under construction in PJM and ISO-NE

SI-SSA-0015-07555

PSEG Power developing 1,800 MW of new, efficient CCGT capacity in MD, NJ and CT

- Constructing the 755 MW CCGT Keys Energy Center in Maryland (SWMAAC*) at an estimated cost of $825 to $875 million
- Constructing a new 540 MW CCGT unit, Sewaren in New Jersey (EMAAC*) at a cost of $625 to $675 million which will replace older Sewaren units
- Constructing a new 485 MW CCGT unit, Bridgeport Harbor 5 (ISO NE), at a cost of $525 to $575 million
- Both Keys and Sewaren 7 are targeted to be in-service in 2018 and Bridgeport Harbor 5 in 2019
- Expanding civic stewardship roles and programs in neighboring communities

*SWMAAC = SOUTHWEST/EMAAC = EASTERN MID-ATLANTIC AREA COUNCIL
LOCATIONAL DELIVERABILITY AREA WITHIN PJM.

SI-SSA-0015-07556

Power's fleet to be transformed with addition of Keys, Sewaren 7 and Bridgeport Harbor in 2018-2019

Projected Fleet Comparison 2015 to 2020E

*EXCLUDES SOLAR AND KALAELOA E = ESTIMATE **INCLUDES NEW JERSEY UNITS THAT FUEL SWITCH TO GAS.

SI-SSA-0015-07557

PSEG Power's fossil fleet expected to see improvements in efficiency

- AGP (Advanced Gas Path) investments
- CCGT material condition assessment
- Unit testing and testing coordination initiatives
- HEDD retirements
- Keys/Sewaren Combined Cycle Development (2018)
- Bridgeport Harbor 5 Combined Cycle Development (2019)
- Heat Rate Improvement converts to potential savings of $60-$65M in fuel expense (assuming $3/MB gas price)

SI-SSA-0015-07558

PSEG Power's fossil fleet …

Among the lowest emitting in the industry

- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing
- With the addition of new units, emissions continue to improve

Expected to reduce its carbon footprint

- Carbon emission rates projected to steadily approach EPA national pollution standards for New and Reconstructed Natural Gas Combined Cycle (1,000 lbs CO_2/MWh-gross)

SI-SSA-0015-07559

Nuclear is a critical element of our success

Hope Creek

- Operated by PSEG Nuclear
- PSEG Ownership: 100%
- Technology: Boiling Water Reactor
- Total Capacity: 1,176 MW
- Owned Capacity: 1,176 MW
- License Expiration: 2046
- Next Refueling
  - Fall 2016
- Uprate 18MW Spring 2018

Salem Units 1 and 2

- Operated by PSEG Nuclear
- PSEG Ownership: 57%
- Technology: Pressurized Water Reactor
- Total Capacity: 2,294 MW
- Owned Capacity: 1,317 MW
- License Expiration: 2036 and 2040
- Next Refueling
  - Unit 1 – Spring 2016
  - Unit 2 – Spring 2017

Peach Bottom Units 2 and 3

- Operated by Exelon
- PSEG Ownership: 50%
- Technology: Boiling Water Reactor
- Total Capacity: 2,502 MW
- Owned Capacity: 1,251 MW
- License Expiration: 2033 and 2034
- Next Refueling
  - Unit 2 – Fall 2016
  - Unit 3 – Fall 2017
- Uprate: 130 MW (PS Share)
  - Unit 2 – March 2015
  - Unit 3 – December 2015

SI-SSA-0015-07560

PSEG Power's Growth Investments

Site	Project	Estimate ($ Millions)	Benefits	Status
Peach Bottom	Peach Bottom EPU (2014 – 2015)	$403	Increased capacity: 130 MW	PB2 & PB3 completed in 2015
Linden/ Bergen/ BEC	Advanced Gas Path Uprates (AGP): Linden -- 63 MW Bergen -- 31 MW BEC – 58 MW	$120	Increased capacity and improved heat rate: ~152 MW capacity increase ~1.2% heat rate improvement	Completed: Linden (2014) Bergen (2015) Planned: BEC 2017/2018E
Kearny 13 & 14	LM6000 Engine Throttle Push	--	Increased capacity: 14.5 MW	2016E
Maryland	Keys, 755 MW CCGT	$825 - $875	Geographic diversity within PJM; highly efficient gas fired unit in SWMAAC	2018E
Sewaren	Sewaren Unit 7, 540 MW CCGT	$625 - $675	Improved efficiency and reliability; replaces Sewaren 1-4 steam units	2018E
Bridgeport, CT	Bridgeport Harbor 5, 485 MW CCGT	$525 - $575	Highly efficient gas fired unit in ISO-NE	2019E
Eastern PA to Mercer, NJ	PennEast Pipeline	$123	Estimated Earnings in 2019: $13 million	Underway
Various	6 Solar Projects	$241	2016/2017E increase renewable capacity by 136 MW_{DC}/105 MW_{AC}	2016/2017E

Total New Capacity – 2,200 MW

E = ESTIMATE.

SI-SSA-0015-07561

A position in renewable energy – Power's Solar Source

Solar Source portfolio

- Utility scale solar projects in 12 states in operation or under construction
- Long-term PPA's with creditworthy counterparties
- Lump sum, full wrap EPC* agreements

Asset Optimization

- Maintain high equipment availability
- Minimize operating expenses
- Seek additional revenue streams

SI-SSA-0015-07562

* EPC = ENGINEERING PROCUREMENT & CONSTRUCTION. E = ESTIMATE.

PSEG Power has other attractive sources of revenues to round out a robust portfolio

Gas Asset Optimization

- Large wholesale provider to PSE&G and others
  - Storage capacity of approximately 75 Bcf (in the Gulf and market regions)
  - Firm transportation of 1.3 Bcf/day on seven pipelines
- Off-system sales margins shared with residential customers
- Commercial & Industrial gas sales

Ancillary Services – Black start, reactive power, area regulation

LIPA fuel and energy dispatch management – Began management of 10-year contract in 2015

Kalaeloa, HI – 50% equity interest in a 208 MW combined cycle oil unit

New Haven Peakers – 129 MW, rate based contract with ISO-NE

SI-SSA-0015-07563

PSEG Power has demonstrated ability to control O&M

Cost control actions taken:

- Fossil plant assessment
- CCGT material condition assessment
- Vendor contract renegotiations
- Nuclear security services brought in-house to control costs
- Nuclear maintenance productivity study
- Nuclear outage efficiency initiative
- Materials management
- Nuclear excellence initiative
- Nuclear staff – Right sizing

*EXCLUDES IMPACTS FROM STORM RECOVERY COSTS. E=ESTIMATE

PSEG Power – Delivering on priorities

Operational Excellence

- Fuel and technology-diverse fleet produced 55 TWh, 2% higher than 2014
- Nuclear capacity factor exceeded 90%; output of 30 TWh, close to 30.3 TWh is third best ever, record set in 2009
- Production records set at BEC, Linden and the CCGT fleet in total; Kearny 13 & 14 CTs
- Successful implementation of LIPA contract for fuel / generation dispatch.

Financial Strength

- Achieved earnings guidance in 2015
- Cost control programs held O&M to a 0.8% CAGR between 2011 and 2016
- Successful ongoing effort to influence outcomes in key markets showing success, e.g., price formation

Disciplined Investment

- Completed Peach Bottom EPU and AGP at Bergen 2; AGP planned for BEC in 2017/2018
- Repositioning the fleet with three new CCGTs:
  - Keys (2018)
  - Sewaren 7 (2018)
  - Bridgeport Harbor 5 (2019)
- Solar Source's portfolio is 277 MW_{DC}

SI-SSA-0015-07567

PSEG POWER
ER&T

SI-SSA-0015-07568

PSEG

We make things work for you.

Market Review: Markets in 2015 were affected by abnormal weather conditions

Q1: Periods of extremely cold temperatures resulted in high gas prices, significant basis differentials, and higher energy demand

Q2-Q4: A normal summer and mild December, combined with increased supply of gas, reduced energy prices and basis

SI-SSA-0015-07569

Market Review: Q1 2016 impacted by weather but forward gas and electric prices retain seasonal volatility

SI-SSA-0015-07570

Market Review: PSEG's extensive gas asset portfolio provides unparalleled access to Marcellus Shale gas

- PSEG Power maintains a robust portfolio of pipeline and storage assets in the Mid-Atlantic
- Marcellus Shale gas production reached 18.8 BCF/day in 2015
- PSEG Power procured over 423 BCF in 2015 with approximately 50% going to PSE&G's utility gas customers
- PSEG Power's gas for generation was 150 BCF in 2015, of which >75% was supplied by Northeast Shale gas
- Severe financial stress among the natural gas producer industry is expected to reduce production growth until gas prices rebalance to higher levels
- Investment in the PennEast pipeline expected to provide more access to Marcellus for PSEG

SI-SSA-0015-07571

Market Review: Completion of new pipeline infrastructure expected to move significant quantities of Marcellus gas out of the region by 2018

Pipeline capacity grows significantly by 2018

- Significant amount of new pipelines have already been built and more are in the advanced planning and development stage through 2018
- Gas production and pipeline takeaway capacity estimated to reach equilibrium in 2018 timeframe based on new pipeline development

SI-SSA-0015-07572

Regulatory Framework: New capacity and energy market designs in PSEG's core markets will better reward reliable generation units

	ISSUE /POLICY	OUTCOME
PJM	CAPACITY	• Higher payments for enhanced reliability (Capacity Performance) and lower energy revenues have raised absolute and relative value of capacity
	ENERGY PRICE FORMATION	• FERC is driving ISO's to improve their pricing constructs and rules – NOPRs and RTO reports addressing critical price formation issues
	DEMAND RESPONSE RULES	• Stricter rules for eligibility and deployment; focus returns to wholesale reliability/comparability after U.S. Supreme Court (SCOTUS) ruling
	STATE INTERVENTION	• SCOTUS dismissed the Maryland and New Jersey appeals in April 2016 • Ohio PPAs: FERC rescinded the previously approved waivers of the affiliate transaction standards and will review the PPAs under the affiliate abuse standards
ISO-NE	CAPACITY	• Continued tightness in capacity markets • Zonal demand curves submitted for FERC approval (FCA 11) • Nuclear and coal units under pressure; closure of Pilgrim nuclear plant
	ENERGY	• Proposed gas pipelines are receiving regulatory approvals slowly • 5 minute interval LMP settlements and fast start pricing expected Q2 2017
NYISO	CAPACITY	• Retirement of Fitzpatrick and Ginna and Western steam plants tighten market, but NYPSC directed to develop a clean energy standard that recognizes the value of nuclear
	ENERGY	• Improvement in price formation during reserve shortage conditions
FEDERAL	ENVIRONMENTAL REGULATIONS	• CPP rules stayed by SCOTUS • Some states will still prepare implementation plans for 2020+ timeframe • New PJM DR rules requiring that BTM diesel-fired generation employ environmental controls

SI-SSA-0015-07573

PSEG Power's Portfolio: Our fleet is well positioned in key markets

SI-SSA-0015-07597

PSEG Summary

- 2015 earnings of $2.91 were at the upper end of our upwardly revised operating earnings guidance of $2.85 - $2.95 per share
- Forecast growth at PSE&G supports our 2016 guidance of $2.80 to $3.00 per share
- Forecast high single-digit rate base growth at PSE&G on five year basis from 2015 to 2020, driven by investment in transmission and approved programs
- Power's investment program and continued focus on operational excellence with financial strength delivers value in current price environment
- Strong Balance Sheet and Cash Flow support current capital program and investment in new opportunities without the need for equity
- Our indicative $0.08 dividend per share increase for 2016 is consistent with our long history of returning cash to the shareholder through the common dividend, with opportunity for consistent and sustainable growth

PSEG FINANCIAL APPENDIX

SI-SSA-0015-07606

PSEG Financial Highlights

Maintaining 2016 Operating Earnings* guidance of $2.80 - $3.00 per share

- ✓ Focused on maintaining operating efficiency and customer reliability
- ✓ Salem Q2 refueling outage extended to replace and repair baffle bolts in reactor vessel
- ✓ PSE&G expected to contribute over 60% of 2016 Operating Earnings*

Infrastructure spend

- ✓ PSE&G T&D spend for 2016 expected to be $3 billion
- ✓ Power has begun construction of its CCGT units in Maryland and New Jersey

Financial position remains strong

- ✓ Positive cash from Power and increasing cash flow from operations at PSE&G support dividend growth and fund capital spending program without the need to issue equity
- ✓ Debt as a percentage of capitalization was 44% at March 31

Increased common dividend 5.1% to indicative annual rate of $1.64 per share

- ✓ Increasing regulated earnings mix supports opportunity for dividend growth

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and transmission planning,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as for transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies, and
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-07616

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Income from Continuing Operations/Net Income. Operating Earnings exclude gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP.
PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends.

PSEG is presenting Adjusted EBITDA because it provides investors with additional information to compare our business performance to other companies and understand performance trends. Adjusted EBITDA excludes the same items as our Operating Earnings measure as well as income tax expense, interest expense, depreciation and amortization and major maintenance expense costs at Power's fossil generation facilities. This information is not intended to be viewed as an alternative to GAAP information. The last three slides in this presentation (Slides A, B and C) include a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings and Adjusted EBITDA with a reference to that slide included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

We make things work for you.

PSEG's Strategy

Investment program delivering results

Operational Excellence: Maintaining reliability and improving performance as we control costs in low price environment

Financial Strength: Strong financial position supports investment program and dividend growth

Disciplined Investment:

- Transformed business mix
- Robust pipeline of opportunities

Results

- Project 3rd year of EPS growth
- Increased rate of dividend growth
- Best in class utility growth rate
- Stable business mix with upside potential from power markets

SI-SSA-0015-07619

Two complementary businesses

A stable platform, each with growth opportunities

PSEG

PSE&G	PSEG Power LLC
Electric & Gas Delivery and Transmission	**Regional Competitive Generation**
Strategy: Investments aligned with public policy and customer needs **Value Proposition:** An $11 billion infrastructure program – focused on transmission – produces double-digit rate base growth through 2019	**Strategy:** Diverse (fuel and dispatch) fleet geographically and environmentally well positioned, with investments to enhance competitiveness **Value Proposition:** Provides substantial free cash flow in current environment and upside from market rule improvements
2014 Assets $22B Operating Earnings $725M	2014 Assets $12B Operating Earnings $642M

SI-SSA-0015-07620

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2014.
PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT AND PSEG LONG ISLAND ACTIVITY.
SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS.

Delivering on commitments and realizing growth

Operational Excellence	• PSE&G: Mid-Atlantic Reliability Award (13th consecutive year), top ranked among eastern electric and gas utilities in business customer satisfaction • PSEG Power: Record output from combined cycle units • PSEG Long Island: Demonstrated management and integration capability through a successful transition in first year • PSEG: Cost-control benefits continue
Financial Strength	• Earnings performance exceeded guidance in 2014 • Cash flows and business mix support strong credit ratings and ability to fully fund robust investment pipeline without issuing new equity • Increased rate of dividend growth in 2015
Disciplined Investment	• PSE&G ✓ Transmission capital program execution and growth ✓ Energy Strong infrastructure program underway ✓ Energy efficiency program extension ✓ Further growth planned – Gas System Modernization Program • Power: Unit uprates, PennEast Pipeline, Solar Source and Keys CCGT

SI-SSA-0015-07621

Robust pipeline of investment opportunities

supports growth objectives

PSEG Capital Spending

2010 – 2014: $12.6 Billion | **2015E - 2019E*: $13 Billion**

2015E–2019E:

- $2.2B of capital for Gas System Modernization Program, Artificial Island and Keys CCGT would be incremental

*INCLUDES ALL PLANNED SPENDING. **ENERGY STRONG EXCLUDES RISK AND CONTINGENCY. ***POWER CAPITAL SPENDING EXCLUDES NUCLEAR FUEL. ****INCLUDES PENNEAST PIPELINE EQUITY INVESTMENT OF $0.1B. E=ESTIMATE. DATA AS OF MARCH 2, 2015. DOES NOT REFLECT $825 - $875 MILLION KEYS INVESTMENT ANNOUNCED ON JUNE 17, 2015

Balance sheet strength supports capital allocation

Timeframe	Actions taken
2010 – 2014: Transformed business mix	• Applied $16 billion towards investments and dividends • Improved credit ratings • Monetized Energy Holdings' portfolio • Strong balance sheet sustained during period of low power prices, while increasing the dividend
2015 – Forward: Strong financial position supports continued growth	• Increased rate of dividend growth in 2015 • $13 billion investment program through 2019 • Gas System Modernization Program, Artificial Island and Keys CCGT increase capital program by up to $2.2 billion through 2019 • Financial capability supports further expansion of the current capital plan

SI-SSA-0015-07623

PSE&G's investment program

Meeting public policy goals and customer needs

*SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/ NET INCOME TO RECONCILE TO OPERATING EARNINGS.

SI-SSA-0015-07624

Operating Earnings

Disciplined investment program and focus on operational excellence have supported growth

Power's diverse fuel mix and dispatch flexibility continue to generate strong earnings and free cash flow in low price environment

PSE&G's investment program has driven double digit compound annual earnings growth since 2010

SI-SSA-0015-07625

PSEG

*SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/ NET INCOME TO RECONCILE TO OPERATING EARNINGS. E=ESTIMATE
** 2015 PERCENTS USE MIDPOINT OF EARNINGS GUIDANCE.

Containing customer bills while investing in the system

PSE&G Typical Residential Customer Bills*

- PSE&G customers' combined electric and gas bills declined 23% over the period.
- Low gas prices drove rate decreases; in addition, gas customers received bill credits of ~$400 in total from 2012 through 2014.

SI-SSA-0015-07626

PSEG

*FOR ALL YEARS THE BILLING ASSUMES 7,200 KWH FOR ELECTRIC AND 1,010 THERMS FOR GAS ANNUALLY. E = ESTIMATE

PSE&G's robust capital investment pipeline

- Planned capital spending expected to drive double digit rate base growth and high single digit EPS growth through 2017
- Transmission expected to grow to >50% of rate base in 2019
- Gas System Modernization Program and Artificial Island investments would be incremental
- Seeking to broaden platform to expand energy efficiency and other investments

SI-SSA-0015-07627

Power's fleet has the desired attributes to be successful in today's and tomorrow's market

Economic Drivers	Outlook	Combined Cycle	Nuclear	Scrubbed Coal	Peakers	Renewable
Energy Margins	• Low natural gas and energy prices • Robust portfolio of gas pipeline contracts	✓	✓	✓	n/a	n/a
Capacity Markets	• Tightened rules proposed for capacity performance	✓	✓	✓	✓	n/a
Environmental Regulations	• Tighter air emissions standards	✓	✓	✓	✓	✓
Location	• Assets in well-designed markets, premium regions • Opportunities on brownfield sites	✓	✓	✓	✓	n/a
	PSEG Power Capacity (GW) Total 13 GW	3.2	3.6	2.4	3.7	0.1

- **Largest nuclear site** in the eastern U.S. and ownership in **large, fully scrubbed coal facilities** at Keystone and Conemaugh provide **economies of scale** that enhance energy margins in current low market, and provide for upside potential if prices improve.
- **Dual fuel peakers** meet reliability criteria in capacity markets and provide option value in energy market. Opportunity exists to repower peakers that do not meet NJ HEDD environmental regulations.

SI-SSA-0015-07628

Power – Growing value by improving market rules and developing investment opportunities

Value Source	Opportunities and Actions Taken
Improving rules will better recognize value of our fleet	• PJM's Capacity market – 2014 limits on demand response and August 2015 Capacity Performance auction • Demand response treatment at U.S. Courts / FERC • Energy price formation at FERC • Increasing air standards through Federal and State regulations
Our footprint provides growth opportunities	• Nuclear and Combined Cycle plant uprates underway • New build Keys CCGT in SWMAAC (Maryland) • Brownfield expansions at existing sites ➢ New peakers built at New Haven and Kearny sites ➢ Continue to explore further opportunities • PennEast pipeline - equity investment and gas portfolio enhancement • Solar Source owns ~123 MW*, with significant project pipeline • Continue to seek opportunities to expand the fleet

*PROJECT SIZE IN MEGAWATTS SHOWN IN DC (DIRECT CURRENT), AC EQUIVALENT IS 96 MW.
SWMAAC = SOUTHWEST MID-ATLANTIC AREA COUNCIL - LOCATIONAL DELIVERABILITY AREA WITHIN PJM.

SI-SSA-0015-07629

PSEG Annual Dividend

An increased dividend growth rate with potential for consistent and sustainable growth given our business mix and financial position

	2011	2012	2013	2014	2015E
Payout Ratio	50%	58%	56%	54%	55%*

SI-SSA-0015-07630

*2015E PAYOUT RATIO REFLECTS THE MIDPOINT OF OPERATING EARNINGS GUIDANCE. E=ESTIMATE

Focus areas over business plan horizon

PSE&G

- **Capital program execution** – Transmission, Energy Strong and additional programs
- **Operational excellence and cost control**
- **Regulatory framework**
- **Continue to develop incremental growth opportunities**

PSEG Power

- **Operational excellence and cost control**
- **Strong performance at Nuclear and Fossil** to maximize fleet value in dynamic markets
- **Monitor and shape market rules** - Capacity markets and environmental regulations
- **Develop growth opportunities** - Keys CCGT in SWMAAC*

PSEG Long Island

- **Continue execution** – Integration and achievement of performance metrics

SI-SSA-0015-07631

*SWMAAC = SOUTHWEST MID-ATLANTIC AREA COUNCIL - LOCATIONAL DELIVERABILITY AREA WITHIN PJM.

PSEG's Value Proposition

- A stable platform with predictable earnings and a robust investment pipeline
- PSE&G - Best in class utility performance and growth profile
- PSEG Power - Well-positioned fleet that generates substantial free cash flow in this market environment with upside for improvements in pricing
- Strong balance sheet - Supports strong credit rating, growth objectives and the potential for sustainable dividend growth

SI-SSA-0015-07632

PSE&G

SI-SSA-0015-07633

PSEG

We make things work for you.

PSE&G strategy

Building a sustainable platform that balances reliability, customer rates and public policy to ensure growth at reasonable returns

SI-SSA-0015-07634

PSE&G is the largest electric and gas distribution and transmission utility company in New Jersey

	Electric	Gas
Customers Growth (2010 – 2014)	2.2 Million 0.3%	1.8 Million 0.3%

SI-SSA-0015-07640

A robust pipeline of Transmission

investments focus on reliability improvements and replacement of aging infrastructure

Major Transmission Investments

Project Roster	Approved ROE	Program Description	Estimate Up To ($ Millions)	Expected In-service Date
Bergen—Linden Corridor 345kV	11.68%	PJM baseline project receiving CWIP in rate base treatment	$1,200	June 2018
PJM Regional Transmission Expansion Plan (RTEP) – multiple projects	11.68%	PJM mandated system reliability projects	$1,900	Various
69kV Upgrade – multiple projects	11.68%	Upgrade of 26kV to 69kV	$1,500	Various
Transmission Lifecycle – multiple projects	11.68%	Replacement of aging infrastructure	$1,100	Various
Transmission Hardening– multiple projects	11.68%	Reliability projects focused on system resiliency	$650	Various

*INCREMENTAL INVESTMENT IN HARDENING INCLUDED AS PART OF OTHER PROGRAMS.

SI-SSA-0015-07641

Bergen-Linden Corridor is a project which will provide a double-circuit 345kV line designed to maintain system reliability

Project Estimate Up To	Through Year-end 2014	Expected Completion Date
$1,200M	$40M	June 2018

- PJM RTEP project b2436 and b2437 with phased in-service dates
- 30 miles of underground cable
  - New ~ 23 miles
  - Reconductor (Upgrade of 138 to 345) ~7 miles
- 13 miles of double circuit overhead conductor (replacing double circuit 138 with double circuit 345)
- 11 station upgrades to 345kV

Customer Benefit: Addresses thermal and short-circuit reliability

Project Status: Engineering, Licensing and Construction

Marion Substation Pile Installation

SI-SSA-0015-07642

Major Transmission programs focus on reliability and replacing aging infrastructure

- PJM's Regional Transmission Expansion Plan (RTEP) identifies system enhancements needed for reliability
- 69kV system upgrades improve system reliability and provide capacity for future growth
- Transmission Lifecycle is an ongoing program to manage transmission asset life to maintain and improve system integrity and reliability
- Transmission Hardening projects focus on increasing system resiliency

SI-SSA-00015-07643

PSE&G has successfully worked with regulators to develop multiple solutions for New Jersey's energy and economic development goals

RENEWABLES
creative solutions to install solar generation

- Solar Loan I – 2008
- Solar Loan II – 2009
- Solar 4 All – 2009
- Solar Loan III – 2013
- Solar 4 All Ext – 2013

ENERGY EFFICIENCY
assisting customers with controlling energy usage

- Carbon Abatement – 2008
- Demand Response – 2009
- Energy Efficiency (EE) – 2009
- EE Extension – 2011
- EE Extension II – 2015

DISTRIBUTION
improving electric and gas delivery infrastructure

- NJ Capital Infrastructure Program 1 (CIP 1) – 2009
- NJ Capital Infrastructure Program 2 (CIP 2) – 2011
- Energy Strong – 2014

To date we have invested over $2B in the above programs

Over $1B ahead in Energy Strong, Energy Efficiency Ext II and Solar programs

Gas System Modernization Program may increase potential investment by ~$1.6B

SI-SSA-0015-07644

PSE&G is successfully executing on Energy Strong with ~$150M deployed during the latter half of 2014

Program	Approved	Spend thru 2014
Flood Mitigation	$620M	$19M
Electric Contingency Reconfiguration	$100M	$26M
Electric Advanced Technology	$100M	$10M
Gas Utilization Pressure Cast Iron (UPCI)	$350M	$94M
Gas Metering & Regulating (M&R)	$50M	$1M
TOTAL	$1,220M	$150M

SI-SSA-0015-07645

Energy Strong will provide increased reliability and resiliency

- **Electric Flood Mitigation**
  - Engineering and scheduling began on 16 of the 29 total planned substation projects
- **Electric Contingency Reconfiguration**
  - Over 100 projects have been started and 15 projects have been completed to date, including installation of over 900 poles and 70 reclosers
- **Advanced Technology**
  - A total of 60 relays replaced and 3 remote terminal units (RTU) installed
- **Gas Utilization Pressure Cast Iron (UPCI)**
  - Installed ~110 miles of gas main and replaced ~5,300 services
- **Gas Metering & Regulating (M&R)**
  - Design and engineering completed for all of the eight stations scheduled

SI-SSA-0015-07646

Extension of PSE&G's award winning Energy Efficiency program

- Energy Efficiency Extension II approved by the BPU in April 2015 will extend the investment and time frame for three previously approved programs already in the marketplace, allowing PSE&G to factor in lessons learned and balance policy issues
- $95M of rate base investment approved at an ROE of 9.75%
- Extends existing programs, two of which have sizable waiting lists:
  - Hospitals
  - Multifamily
  - Direct install – government, non-profit, and small business
- Would allow PSE&G to leverage past investments in people, capabilities, systems and processes

SI-SSA-0015-07647

Gas System Modernization Program of ~$1.6B focusing on aging gas mains

- PSE&G's gas distribution system currently operates and maintains over 4,800 miles of cast iron and unprotected steel main, the largest such system in any single state
- The program provides for investment of ~$1.6B focused on replacing cast iron and unprotected steel main over a five-year period, beginning mid-2016
- Program will replace approximately 160 miles of main per year
  - Requested accelerated clause-based recovery similar to the Energy Strong program with a 9.75% ROE
  - This program is the first phase of a long-term, 30-year cast iron and unprotected steel replacement plan
- Benefits:
  - Methane emission reduction is estimated at 24,500 metric tons of CO_2 equivalent per year*
  - Directly creates and supports 500 New Jersey jobs
  - Higher pressure system allows usage of high efficiency appliances by customers

SI-SSA-0015-07648

SI-SSA-0015-07649

PSE&G has controlled costs

through process improvements and will continue to drive future efficiencies

Cost control actions taken:

- PSE&G is utilizing the Lean Six Sigma discipline to achieve costs savings and process improvements
- Conducted organizational reviews resulting in streamlining of processes through restructuring
- Continued focus on vendor and inventory practices ensuring maximum value
- Successful management of pension

PSEG LONG ISLAND

PSEG

We make things work for you.

SI-SSA-0015-07652

PSEG Long Island is focused on improving customer service and reliability

- Provide best-in-class customer service, including building on our new Call Center Technology platform to better serve our customers
  - According to J.D. Power, in 2014 PSEG Long Island showed the most improvement in overall customer satisfaction of any large electric utility, anywhere in the nation
- Work to maintain industry-leading service reliability
- Improve every aspect of the storm response process
  - Leveraged our new Outage Management System to improve storm logistics and outage coordination
- Contributed $0.02* to PSEG's earnings per share in 2014, as expected

SI-SSA-0015-07653

* EXCLUDES THE ENERGY RESOURCES & TRADE CONTRACT, WHICH WILL BE INCLUDED IN PSEG POWER'S RESULTS.

PSEG POWER

SI-SSA-0015-07654

PSEG

We make things work for you.

PSEG Power strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-07655

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus Fleet Diversity/Efficiency Focus	Financial/Economic Focus	Regulatory Focus
• Nuclear units have performed well for ten consecutive years • Hope Creek recorded its second highest output in its history • Fleet diversity across the dispatch curve and fuel types provide flexibility to meet changing market conditions • Bergen 1 & 2 and Linden 1 individually, and the CCGT fleet in total, set generation records in 2014 • Kearny 13 & 14 have shown increasing output in each year since start-up	• Getting the most out of existing fleet • Locational advantage • O&M control programs have delivered a CAGR of 2.6% between 2009 and 2015 • Sites offer competitive advantage for expansion	• Strong regulatory performance • Industry leadership in the changing business environment

SI-SSA-0015-07656

PSEG Power Delivering on priorities

Operational Excellence	• Maximize value of existing generating plants through implementation of the Operational Excellence Model (OEM) • Workforce engagement and development	• OEM implemented and achieving measures • Resource sharing program between Nuclear & Fossil initiated
Financial Strength	• Deliver on Business Plan Commitments • Maintain competitive markets and improve constituent communication on issues important to Power	• Exceeded earnings guidance in 2014 • Ongoing effort in key markets showing success • Successful court outcome against subsidized generation
Disciplined Investment	• Successfully complete the Advanced Gas Path (AGP) uprates • Seek new opportunities in target markets (PJM, ISO-NE, NYISO) • Develop our renewables business (solar) • Maintain new nuclear option by successfully managing the Early Site Permit (ESP) process	• Accelerated schedule for AGP to maximize opportunity • LIPA contract for fuel and generation dispatch began January 1, 2015 • Solar Source's portfolio is 123 MW_{DC} • Nuclear ESP is expected in 2016 • New build Keys CCGT targeted in-service 2018 in Maryland

SI-SSA-0015-07657

PSEG Power met 2014's challenges

Storm and weather challenges	+	Market challenges	=	Value delivered
• All of the generation sites affected by SuperStorm Sandy were restored to service by mid-2014, with ongoing repairs • Cold weather extremes created a challenging operating environment, but also presented opportunities		• Transmission (outages and build outs) and gas markets resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by economy		• Expedited return from storm outages, restored margin opportunities • High availability when needed • Flexibility of portfolio captured real-time basis opportunities • Captured value through coal/gas switching, unit flexibility • Management of gas assets benefited customers and fleet • Achieved fuel cost savings

SI-SSA-0015-07658

PSEG Power exceeded 2014's earnings guidance

2014 PSEG Power Operating Earnings*
($ Millions)

Over $60M of additional value gained from:

- Weather, basis volatility
- Fuel flexibility
- Lower gas cost
- Spark/dark spread

*EXCLUDES IMPACTS FROM STORM RECOVERY COSTS.
SEE SLIDE A FOR ITEMS EXCLUDED FROM NET INCOME TO RECONCILE TO OPERATING EARNINGS.

SI-SSA-0015-07659

PSEG Power has generating assets

in three competitive markets

- Assets located near load centers
- Low cost portfolio
  - Fuel flexibility with gas cost advantage
- Positioned to benefit from volatility in real-time markets
- Readiness for capacity performance (CP) in PJM
- Fleet positioned to maintain diversity and efficiency after HEDD
- Sites suitable for expansion

SI-SSA-0015-07660

Power's PJM assets along the dispatch curve reduce the risk of serving full requirement load contracts and can take advantage of volatile market conditions

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape
- Readiness for Capacity Performance (CP)
- Keys CCGT to be added to dispatch in 2018E

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel capability at 87% of load following and peaking units

SI-SSA-0015-07661

PSEG Power positioned to maintain diversity and efficiency after a realignment of the fleet following HEDD retirements

Objective 2015 → 2017

- Maintain fuel diversity
- Maintain load-serving capability
- Maintain low cost structure
- Improve environmental & heat rate profiles
- Complete
  - Peach Bottom (PB) uprate
  - Advanced Gas Path (AGP)

Fuel Diversity

Energy Produced

E=ESTIMATE

PSEG Power's fleet is expected to see improvement in heat rate and decline in emissions

- AGP (Advanced Gas Path) investments
- Other Efficiency improvements
- HEDD retirements

SI-SSA-0015-07663

PSEG

E=ESTIMATE

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing

SI-SSA-0015-07664

PSEG Power Nuclear is a critical element of our success

Hope Creek

- Operated by PSEG Nuclear
- PSEG Ownership: 100%
- Technology: Boiling Water Reactor
- Total Capacity: 1,178 MW
- Owned Capacity: 1,178 MW
- License Expiration: 2046
- Next Refueling
  - Fall 2016

Salem Units 1 and 2

- Operated by PSEG Nuclear
- PSEG Ownership: 57%
- Technology: Pressurized Water Reactor
- Total Capacity: 2,307 MW
- Owned Capacity: 1,324 MW
- License Expiration: 2036 and 2040
- Next Refueling
  - Unit 1 – Spring 2016
  - Unit 2 -- Fall 2015

Peach Bottom Units 2 and 3

- Operated by Exelon
- PSEG Ownership: 50%
- Technology: Boiling Water Reactor
- Total Capacity: 2,242 MW
- Owned Capacity: 1,121 MW
- License Expiration: 2033 and 2034
- Next Refueling
  - Unit 2 - Spring 2016
  - Unit 3 - Fall 2015
- Uprate: 130 MW (PS Share)
  - Unit 2 - March 2015
  - Unit 3 - 2016

SI-SSA-0015-07665

PSEG Power Nuclear has competitive advantages

- Continued strong nuclear operations
- Nuclear excellence program
- Top quartile of cost performance/MWh
  - Brought security services in-house
- Significant earnings contributor
- Recruitment of the best new and experienced talent, and attractive training program
- Fukushima action plan in response to NRC staff review
  - FLEX* plan submitted with implementation underway
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

*STRATEGY KNOWN AS THE "DIVERSE AND FLEXIBLE MITIGATION CAPABILITY" OR FLEX, ADDRESSES RECOMMENDATIONS OF THE NUCLEAR REGULATORY COMMISSION'S FUKUSHIMA TASK FORCE.

SI-SSA-0015-07666

Power's nuclear fleet is well positioned

with significantly lower-than-average US cost structure

*SOURCE: ELECTRIC UTILITY COST GROUP.
** SOURCE: PSEG NUCLEAR.

SI-SSA-0015-07667

PSEG Power's focus on costs

has resulted in moderate increase in O&M for seven years

Cost control actions taken:	
• Fossil plant assessment • CCGT material condition assessment • Vendor contract renegotiations • Nuclear security services brought in-house to control costs	• Nuclear maintenance productivity study • Nuclear outage efficiency initiative • Materials management

*EXCLUDES IMPACTS FROM STORM RECOVERY COSTS. E=ESTIMATE

SI-SSA-0015-07668

PSEG Power's Fossil Fleet has shown improvement in performance

Fossil Generation

Coal Generation

Peaking Start Success*

- Fossil Generation rebounded with market
- Peaking Units maintain high start success
- Record output from Kearny 13 & 14 peakers

Combined Cycle Generation

- Combined Cycle Generation set record
- Bergen AGP uprate project scheduled for 2015

PSEG POWER
ER&T

SI-SSA-0015-07681

PSEG

We make things work for you.

Market Review: 2014 was influenced by extremes in weather highlighting the importance of winter

Q1: Periods of extreme cold temperatures resulted in high gas prices, significant basis differentials, and higher energy demand.

Q3: A cooler than normal summer, combined with increased supply of gas, reduced energy prices and basis.

SI-SSA-0015-07682

Market Review: PSEG's extensive gas asset portfolio gives unparalleled access to Marcellus Shale gas

Power's Gas for Generation in 2014

- PSEG Power maintains a robust portfolio of pipeline and storage assets in the Mid-Atlantic
- PSEG Power's gas for generation was ~100 BCF in 2014, of which >60% was supplied by Shale gas
- PSEG Power procured over 400 BCF in 2014 with ~75% going to PSE&G's utility gas customers
- When gas is surplus to customer needs, PSEG Power sells surplus to others; margins from such sales benefit PSE&G gas customers and PSEG Power

SI-SSA-0015-07683

Market Review: Winter Z6 gas prices retain seasonal volatility; spark spreads have continued to be robust in PJM

2015 YTD Z6

2015-2018 Z6

PJM West vs. PS Zone Spark Spreads (2013-2018)

Market Review: New pipelines will move significant quantities of Marcellus gas out of the region by 2018

Historical and Expected Marcellus Production

Pipeline capacity grows significantly by 2018

New pipeline investment is expected to increase takeaway capacity from the low cost Marcellus/Utica shale and reduce regional surpluses and increase gas prices by 2018

SI-SSA-0015-07685

Power Basis in Eastern PJM: Expected to be volatile but positive on an annual basis with winter pricing driving value

Electric Basis will remain positive overall and stabilize within 3 years due to:

- Export of ~18 bcf/day of gas which will significantly strengthen regional gas prices
- Easing of transmission constraints in Virginia/Maryland
- Construction of significant new gas-fired generation in VA/MD

ANNUAL FORWARD BASIS TO PJM-WEST AS OF DECEMBER 31, 2014.

SI-SSA-0015-07686

Regulatory Framework: Significant reforms already implemented and new rules being promulgated to improve energy and capacity market designs

	ISSUE /POLICY	OUTCOME
PJM	CAPACITY	• Higher payments for enhanced reliability (Capacity Performance)
	DEMAND RESPONSE RULES	• Stricter rules for eligibility and deployment
	ENERGY PRICE FORMATION	• PJM and FERC forcing improvements to energy price formation; higher caps
ISO-NE	CAPACITY	• Higher prices in recent auction better reflect tight supply conditions • Implementation of sloping demand curve in FCA 9 • Zonal demand curves expected in FCA 10
	ENERGY	• Demand response required to participate in Day Ahead markets • Implemented hourly offers/real time reoffers • Reserve market prices better reflect scarcity prices • 5 minute interval LMP settlements expected Q1 2016
NYISO	CAPACITY	• New Capacity Zone (LHV) leads to more accurate price signals
	ENERGY	• Improvement in price formation during reserve shortage conditions
FEDERAL	DEMAND RESPONSE	• EPSA VS. FERC and national implications; US Supreme Court will hear case
	ENVIRONMENTAL REGULATIONS	• HEDD, CPP, HAPS/MACT will lead to tightening of supply in 2015+ timeframe

SI-SSA-0015-07687

PJM Capacity Performance Proposal: aims to increase electric supply reliability

- **Capacity performance (CP)** product places emphasis on reliability, with robust performance standards, imposition of higher penalty structure and enhanced opportunities for cost recovery to encourage reliability
- **Generator performance/flexibility is key** objective for units with secure fuel supply capable of meeting more stringent operating standards
- **Elimination of 2.5% holdback offsetting weak demand growth**, making all capacity resources annual products in end state, net CONE bidding safe harbor, and the change in the demand curve (VRR) support price formation and improve resource adequacy

SI-SSA-0015-07688

Capacity Performance: >90% of PSEG's PJM capacity meets the new capacity performance standards with minimal to moderate investment

How does our fleet stack up?*

CP Compliant Assets**

SI-SSA-0015-07689

PSEG

* EXCLUDES 205MW OF PUMPED STORAGE.
** KEYS 755 MW CCGT UNIT EXPECTED TO BE CP COMPLIANT IN 2018

Northeast Portfolio: New York and New England

New England (972 MW)

- Small but dynamic market
- Significant improvement in market construct
- High volatility due to extreme (winter) weather conditions
- Significant siting and permitting challenges
- Gas pipeline infrastructure poses supply challenges/opportunity

New York (774 MW)

- Single state ISO
- Investment in new lateral to connect to the Dominion pipeline at Bethlehem Energy Center (BEC) allows for access to fuel supply from Marcellus
- Long Island Power Authority Management Contract

SI-SSA-0015-07690

Northeast Portfolio: Expanding our footprint with PSEG Long Island

PSEG Power acting as an agent for LIPA began January 2015

- Performing ISO bidding for LIPA's 6,000 MWs of generation/tolls
- Procuring natural gas and oil for the majority of these assets
- Scheduling two DC transmission cables (ISO-NE and PJM) into Long Island
- Entering into financial hedges to reduce LIPA customer's price volatility

This relationship has provided PSEG Power:

- Additional experience in Eastern NY and Connecticut markets
- Bigger natural gas footprint
- Fee-based services contract

SI-SSA-0015-07691

Capacity Market Pricing: PJM's capacity market is transitioning to recognize operating performance as well as locational value

RPM Auction Results					
($/MW-day)	2013 / 2014*	2014 / 2015*	2015 / 2016*	2016 / 2017*	2017 / 2018

PSEG FINANCIAL REVIEW & OUTLOOK

SI-SSA-0015-07696

PSEG

We make things work for you.

Strong financial position to support our business initiatives

2014 Financial Position

- ✓ Strong 2014 earnings growth
- ✓ Exceeded earnings guidance
- ✓ Executed major PSE&G capital program
- ✓ Strong balance sheet with no long term Parent debt
- ✓ Solid credit metrics

2015 and Beyond

- ✓ Third year of anticipated positive earnings growth in 2015
- ✓ Controlled O&M growth
- ✓ Balance Sheet and Cash Flow support investment program without equity issuance
- ✓ Substantial additional investment capacity
- ✓ Growth in PSE&G investments with contemporaneous/formula rate returns and new Power investment
- ✓ Consistent and strong cash flow from both Power and PSE&G
- ✓ Potential for accelerated and sustainable dividend growth

SI-SSA-0015-07704

Substantial internal cash generation

supports our planned growth capital program and potential investment opportunities without the need for equity

PSEG 2015 - 2019E Sources and Uses

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$260M FROM 2015-2019
(2) OTHER CASH FLOW INCLUDES PSEG LI, HOLDINGS NET CASH FLOW, INVESTED CASH, AND PARENT SHORT-TERM DEBT
(3) POWER CASH INVESTMENT INCLUDES NUCLEAR FUEL AND EMISSION PURCHASES. DOES NOT REFLECT $825 - $875 MILLION KEYS INVESTMENT ANNOUNCED ON JUNE 17, 2015. E = ESTIMATE.

SI-SSA-0015-07705

Power's key credit metric remains strong

providing opportunity for incremental investment*

- Increased contribution to earnings from the more stable regulated business
- Power's annual Cash From Operations and Funds From Operations each average ~$1.4B over the 2015 to 2017 period supported by:
  - Capacity Revenues
  - Hedged Generation
  - O&M Control
- Financial strength can be used to pursue future growth in both businesses beyond current plans

SI-SSA-0015-07706

*DOES NOT REFLECT $825 - $875 MILLION KEYS INVESTMENT ANNOUNCED ON JUNE 17, 2015. E= ESTIMATE

Substantial Investment Capacity to pursue additional growth without the need for equity

SI-SSA-0015-07712

PSEG Summary

- Our 2014 earnings of $2.76 exceeded our revised operating earnings guidance of $2.60 - $2.75 per share
- Continued third year of anticipated positive earnings trend in 2015 with operating earnings guidance of $2.75 to $2.95 per share
- Continued 5th straight year of expected double digit, 5 year growth in rate base
- Anticipated high single digit earnings growth at PSE&G on three-year basis from 2014 to 2017, driven by transmission investments and planned programs
- Power's continued focus on operational excellence, market expertise and financial strength delivers value in current price environment
- Strong Balance Sheet and Cash Flow support PSE&G's capital program and Power's new investment opportunity without the need for equity
- Our $0.08 per share dividend increase is consistent with our long history of returning cash to the shareholder through the common dividend, with potential for consistent and sustainable growth

Dividend *fact* sheet 2015

NYSE: PEG

PSEG Dividends – 108 Years and Counting

PSEG is continuing its remarkable record of paying common dividends. The year 2015 represents the 108th consecutive year PSEG or its predecessor company will be paying dividends to the holders of its common stock. PSEG has paid dividends each year since 1907 – a record matched only by General Electric and Exxon Mobil.

The Board of Directors of PSEG declared an increase in the common stock dividend on February 17, 2015. The Board increased the quarterly dividend to 39 cents per share from 37 cents per share. The indicated annual common dividend rate is $1.56 per share for 2015, a 5.4% increase from the prior $1.48 per share level.

In addition to investing in long-term growth opportunities, returning cash to our shareholders remains a top priority and underscores our commitment to a disciplined approach to capital allocation.

PSEG's dividend payment history has also been accompanied by growth in the dividend. The recently approved change results in a compound annual rate of growth in the dividend of 3.4% over the past decade, and marks the 11th dividend increase in the last 12 years. With this latest change, we have meaningfully increased the rate of growth in the dividend. We see the potential for our shareholders to continue to benefit from consistent and sustainable growth in the dividend given our business mix, continued positive cash flow from our generation business and our strong balance sheet. All future changes in the common dividend are subject to approval by the Board of Directors.

PSEG Annual Dividend Rate

	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015E
Payout Ratio*	63%	66%	43%	44%	43%	44%	50%	58%	56%	54%	55%E

*The 2015 payout ratio is based on the mid-point of PSEG's 2015 operating earnings guidance of $2.75 - $2.95 per share. Payout Ratio = percent of income paid to shareholders as common dividends. **Indicative annual rate for 2015.

Dividend *fact* sheet 2016

NYSE: PEG

PSEG Dividends – 109Years and Counting

PSEG is continuing its remarkable record of paying common dividends. The year 2016 represents the 109th consecutive year PSEG or its predecessor company will be paying dividends to the holders of its common stock. PSEG has paid dividends each year since 1907 – a record matched by very few companies.

The Board of Directors of PSEG declared an increase in the common stock dividend on February 16, 2016. The Board increased the quarterly dividend to 41 cents per share from 39 cents per share. The indicative annual common dividend rate is $1.64 per share for 2016, a 5.1% increase from the prior $1.56 per share level.

We are pleased to be able to increase the cash return to our shareholders. In addition to investing in long-term growth opportunities, returning cash to our shareholders remains a top priority and underscores our commitment to a disciplined approach to capital allocation. This latest change is in line with the 5% growth in the dividend in 2015 and results in a compound annual rate of growth in the dividend of 3.7% over the past decade, and marks the 12th dividend increase in the last 13 years.

The dividend is supported by our business mix, continued positive cash flow from our generation business and our strong balance sheet, which are expected to yield the opportunity for consistent and sustainable dividend growth. All future changes in the common dividend are subject to approval by the Board of Directors.

PSEG Dividends – 110 Years and Counting

PSEG is continuing its remarkable record of paying common dividends. The year 2017 represents the 110th consecutive year PSEG or its predecessor company will be paying dividends to the holders of its common stock. PSEG has paid dividends each year since 1907 -- a record matched by very few companies.

The Board of Directors of PSEG declared an increase in the common stock dividend on February 21, 2017. The Board raised the quarterly dividend to 43 cents per share from 41 cents per share. The indicative annual common dividend rate is $1.72 per share for 2017. This represents a 4.9% increase over the prior $1.64 per share level, and results in a compound annual rate of growth in the dividend of 3.9% over the past decade. This year's increase also marks the 13th dividend increase in the last 14 years.

We are pleased to be able to increase the cash return to our shareholders. In addition to investing in long-term growth opportunities, returning cash to our shareholders remains a top priority and underscores our commitment to a disciplined approach to capital allocation. "This latest increase is supported by our business mix and our strong balance sheet, which are expected to support consistent and sustanable growth in the dividend." said Ralph Izzo, PSEG chairman, president and chief executive officer.

All future dividend payments, and any changes thereto, are subject to approval by the Board of Directors.

PSEG Annual Dividend Rate

10-Year Rate of Growth: 3.9%

	2007	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017E

PSEG – Our 111th Year of Paying a Common Dividend

PSEG is continuing its remarkable record of paying common dividends. PSEG has paid dividends each year since 1907 – a record matched by very few companies. In addition to investing in long-term growth opportunities, returning cash to our shareholders remains a top priority and underscores our commitment to a disciplined approach to capital allocation.

In early 2018 the Board of Directors of PSEG raised the quarterly dividend to 45 cents per share from 43 cents per share. The indicative annual common dividend rate is $1.80 per share for 2018. This represents a 4.7% increase over the prior $1.72 per share level, and results in a compound annual rate of growth in the dividend of 4.6% over the past five years.

"We are pleased to be able to continue PSEG's long history of paying a common dividend to the holders of our common stock. This latest increase represents the 14th increase in the common dividend in the past 15 years making this our 111th consecutive year of paying a common dividend to shareholders. Our strong balance sheet and business mix are expected to support consistent and sustainable growth in the common dividend." said Ralph Izzo, PSEG chairman, president and chief executive officer.

All future dividend payments, and any changes thereto, are subject to approval by the Board of Directors.

Dividend *fact*sheet 2013

NYSE: PEG

PSEG Dividends – 106 Years and Counting

PSEG is continuing its remarkable record of paying common dividends. The year 2013 represents the 106th consecutive year PSEG or its predecessor company will be paying dividends to the holders of its common stock. PSEG has paid dividends each year since 1907 – a record matched only by General Electric and Exxon Mobil.

The Board of Directors of PSEG declared an increase in the common stock dividend on February 19, 2013. The Board increased the quarterly dividend to 36.0 cents per share from 35.5 cents per share. The indicated annual common dividend rate is $1.44 per share.

The Board's action is consistent with the company's dividend payout policy that pays out a greater percentage of earnings as dividends, with an expectation for future dividend growth.

PSEG's dividend payment history has been accompanied by growth in the dividend. The recent approved change results in a compound annual rate of growth in the dividend of 2.9% over the past decade, and the 9th annual increase in the last 10 years. All future common dividends are subject to Board approval.

	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013*
Payout Ratio	62%	70%	63%	66%	43%	44%	43%	44%	50%	58%	61%*
Yield	5.6%	4.8%	3.8%	3.5%	2.8%	3.3%	4.3%	4.3%	4.2%	4.6%	4.5%*

*2013 yield calculation based on PSEG stock price as of February 21, 2013; 2013 payout ratio based on the mid–point of 2013 operating earnings guidance.
Payout Ratio = percent of income paid to shareholders as common dividends.
Yield = annual dividend as a percent of the year–end or dated stock price.

PRESENTATION

Ralph Izzo - *Public Service Enterprise Group Inc. - Chairman, President & CEO*

Okay, well, thank you and good morning. Thanks for joining us here. I think we are the last house on the block, so you really had to want to be here, to arrive at this room. So it's greatly appreciated.

I'm Ralph Izzo, Chairman, President and CEO of PSEG. I am joined today by Caroline Dorsa, our Executive Vice President and CFO, as well as Kathleen Lally and Carlotta Chan, our Vice President and Manager of Investor Relations, and Kevin Quinn, our Vice President of Finance at PSEG Power. They are here to help me with any questions that I might not be able to give an accurate answer on my own.

So we will begin by just referring you to our forward-looking statement. I'm obviously not going to read this. As well as our note on some of the statistics that I will present you with today are not of the GAAP nature and are more, we think, representative of the ongoing financial picture of the Company, but therefore deviate somewhat from our GAAP numbers.

In terms of our major thesis, the story really here has three parts to it. Part number one is a very, very strong financial condition to PSEG. Part number two is that we are making use of that strong financial position to continue the growth story at the utility.

And part number three is that we continue to demonstrate the many locational advantages of PSEG Power. And I will describe all of that in more detail in the ensuing slides.

If I just take a look at some of the numbers posted here, you can see a $10 billion-plus capital program at PSEG. That is inclusive of known programs and one program that is not fully baked just yet, but we have filed for, that I will refer to in a moment as Energy Strong.

In addition to the unique size of the investment program at PSE&G, I must emphasize that nearly 80% of that capital improvement program at PSE&G is something that receives what I will call contemporaneous recovery mechanisms that are divorced from the traditional regulatory lag that one would associate with regulated utilities.

At PSEG Power, our traditional locational advantages that you are accustomed to hearing us speak about pertain primarily to capacity prices and basis differentials in energy markets. And while all of that remains true today, we have had a new locational advantage that has appeared in the form of basis differentials pertaining to our cost of goods sold, specifically in our access to Marcellus and Utica shale gas, and the lower-cost gas that we are able to feed into our largest -- our combined cycle fleet, which is the largest combined cycle fleet in PJM.

And lastly, the story of de-risking PSEG Energy Holdings continues, as well as the modest growth to its PPA-supported renewable portfolio continues. And we will talk about bit about each one of these in turn.

So while no one can ever be proud of a 15% decline in earnings per share that we have experienced from 2009 to 2012, we are guiding in 2013 to $2.40 to $2.55 a share, which at the midpoint would be about a 1% to 2% increase in earnings. We are particularly proud of the fact that we have managed that earnings profile in light of an over 50% decline in power prices.

And the way we have done that has been very, very simple. It has been a religious fervor around O&M control. It has been a disciplined approach to investing in the utility while managing to keep the customer bill flat to declining.

THOMSON REUTERS

SI-SSA-0015-07741

And while we have had that religious fervor around O&M control, we have managed to maintain and improve our operations, as witnessed here by our forced outage rate on our combined cycle fleet. And all the time not only continuing the track record of over 100 years of paying a dividend each and every year, but actually growing that dividend at slightly over 2% over the past five and ten years.

So it is really hard to believe that one year ago today when I stood before you, I asked how many of you were PSE&G customers, and then I sheepishly asked how many of you had power back in your homes. I'm not going to ask that question today because it had better be every one of you who is a PSEG customer has power back in your home. And we will stop talking about Sandy eventually.

I remind you of this not because I am a masochist in any way, shape or form. But I won't go through the numbers. It is the motivation behind the one program that I alluded to a moment ago that we do not have resolution on just yet, although we are feeling quite confident that we will gain resolution of this.

So the numbers that are listed here are for the $3.9 billion program that we call Energy Strong over a 10-year period. Let me again remind you, however, that we have filed for a five-year program seeking $2.6 billion in approvals. And while much more can be done than the $3.9 billion over ten years or the $2.6 billion over five years, we are looking at the cost-benefit associated with each of these components of the program.

And, at some point, the dollars per customer benefit does begin to turn over and flatten. Or, I guess, depending on what you plot on the Y axis versus the X axis, it begins to go up faster than it should.

So in addition to the distribution level investments which are the $2.6 billion and $3.9 billion number that I referred to, there's a $1.5 billion spend in transmission hardening that also applies over the 10-year period that we are in discussion with the regulators over.

The support for this has been unlike any support I've seen for any other program PSE&G has proposed. We have 74 towns in eight counties that have issued resolutions. This is not just running into a mayor or a County official at a local sporting event or at a cocktail party and saying, gee, do you like this idea? And then saying, attaboy, go for it.

This is governing bodies passing resolutions and saying this needs to be done. It's by no means independent of the fact that the last three major storms we have experienced in PSEG have been at or around election day. And mayors only know too well the challenges that their residents feel when they live without electricity for several days and how people turn to them for help and they then, in turn, of course turn to us.

In addition to local officials being supportive, we have had just about every major labor union in New Jersey come out in support. Certainly, all of the construction and blue-collar labor unions -- we have had the New Jersey Chamber of Commerce, the Commerce and Industry Association of New Jersey, the Hospital Association of New Jersey. And the list just goes on and on and on.

So the question is not if this is needed; it's what is the size of the program, what should be the design of the program. And a fully litigated outcome would probably result in a decision end of March/early April. A settlement decision could advance that by couple months and we certainly fully expect and are working towards a settlement decision on this program.

Notwithstanding the importance of Energy Strong to the reliability and resiliency of our grid, in the regulated utilities still the number one component of the capital program is in our transmission investments. It remains our largest.

Here we list our five biggest transmission projects and the allowed ROEs granted to them by FERC. The story here summarizes -- and in fact construction is underway for each of these projects. It is on schedule for each one of these projects. And as you can see, they will all be online in the June 2014 to June 2015 timeframe.

Just a great story in terms of our construction efforts, our project management efforts. All the permits are in hand and we are doing everything from helicopter installation of transmission towers to right-of-way expansion and tree removal. And the nature of the construction activities is everywhere in between that as well.

THOMSON REUTERS

SI-SSA-0015-07742

All of the impacts to wholesale power markets -- these are reliability projects. But there are impacts to wholesale power markets -- is it safe to say are fully factored into the PJM RPM auctions that have taken place already, just given the in-service dates of these, any transfer capability that results from them. And they are sizable in the case of Susquehanna-Roseland, given the fact that the in-service date, the last in-service date is June 15, that would have been factored into the base residual auction of May of 2012.

As you add all of that up, the combination of Energy Strong and transmission and various other programs that we have filed for, among them our solar-for-all extension program, what you see is that the utility rate base growth continues at about 8%-plus. And that is the basis upon which we continue to confidently forecast to our investors that we will have double-digit earnings growth at the utility, solely on the basis of already approved programs. That the Energy Strong programs, if they were approved in their entirety, would take that rate base growth from the 8% level to more of a 12% compounded annual growth rate.

It obviously continues to double-digit earnings growth. It's just a different double digit at that point, and we are not more specific than that, at this point in time.

Looking ahead, then, switching gears a bit and looking at PSEG Power, this is one of my favorite slides. It doesn't quite get the same enthusiastic response from others that I seem to want to encourage, though. And let me tell you why I love this slide.

You have three pie charts in front of you. If you replay this presentation I've given now for seven years, the pie chart on the left and the pie chart on the far right don't change. We have a blend of assets that have quite a diversity of fuel and a diversity of technology. By technology I mean base load, load following your peaking.

What changes is the pie chart in the middle, which is which one is called upon to run. So the nuclear piece tends to be over 50%. It has been as low as 52%. Here we are showing 57%.

And that is really just a function of a refueling outage duration and the type of work that has to be done in the refueling outage. But we have run now our nuclear plants at greater than 90% capacity factors for eight years. It's something that we are quite proud of.

I would like to get that number even higher, but nuclear safety comes before production. So we are pushing the limits of capacity factor in our nuclear fleets. The energy expansion that we tend to get from our nuclear fleet more comes from nuclear uprates than better operations, just expanding the potential output from those plants.

But what changes is the label on the other two pieces of that pie. In years past, the orange part would have been coal at 30% and gas at 10%. And now it's natural gas at the 30%-plus and coal at that 11%. So diversity of assets and the flexibility of the assets just allows us to be successful in any price environment for any fuel. And that's something we are quite proud of in terms of the diversity of the fleet.

The other part of the advantage and the diversity of the fleet -- so let me talk about the diversity of the fleet from the technology point of view, the peaking and the load following, is really reflected in this slide. So we have historically enjoyed a locational advantage that is most visible in the electric basis differentials between PJM West and our part of the service of the PJM zone.

That double-digit basis differential -- it used to be a number, he says wistfully, of about $20 per megawatt hour. And now it's more of a number of about $3 to $4 a megawatt hour, if you look at that forward price curve.

Well, we don't hedge 100% of our portfolio. As a matter of fact, we are substantially open for our load following and peaking units. So what we've plotted here is 12 years of data where we take the monthly average of the day-ahead basis differential.

Now, what causes this kind of volatility in basis differentials? Well, it could be a transmission line that is taken out of service, either planned or unplanned. It could be a refueling outage that goes two days longer than expected.

THOMSON REUTERS

SI-SSA-0015-07743

It could be 5 degrees warmer than planned or 5 degrees cooler than normal weather. It's a myriad of conditions, which virtually guarantees some volatility. The drivers may change from year to year and from month to month.

But what you see is that, while there are deviations around the forward price curve reduction of a $3 basis differential, some negative deviations around that, and negative would be bad for us, by and large there's an upward bias, and a very positive bias from our point of view. And the diversity of our fleets allows us to capture this positive bias.

I always alarm some of my colleagues by threatening to try to take the area under that curve to actually quantify this. But whether or not that's useful in predicting the future is probably a little bit doubtful. But our locational advantage to a positive basis differential continues, both as we look in the rearview mirror and as we look out the windshield of driving this car known as the PSEG Power fleet.

The new basis, the new locational advantage that we are getting a lot of questions about and that we want to make sure everyone understands is described here. This is born out of our access to low-cost natural gas coming from the Marcellus and Utica Shale regions.

So for a long time now, the better part of 15 years, PSEG Power has had contracts that allow us to access on the order of 0.6 BCF a day of natural gas coming from the Western regions. In addition to that, we have contracts that allow us to access about 0.7 BCF a day coming out of the more traditional Gulf regions from the area southwest of us.

We also have contracts that allow us to store about 72 BCF, which translates into a daily throughput of about 0.9 BCF a day. And we have all of this capability to both transmit gas over pipelines and to store it because PSEG Power is responsible for serving the PSE&G retail gas customer. And so that is historic fact and we do that quite well.

There is no cross subsidization. The customer pays PSEG power for providing that service. We spread some of our fixed cost.

And then the benefit to PSEG Power has been that after meeting the needs of those customers at a very low cost way, then PSEG Power is able to sell any additional capacity from those pipes to others that are off the PSE&G system, and share the profits associated with those off-system sales roughly 70-30, 75-25 with the majority going to the PSE&G customer.

We have been doing that for many years. It has been a great advantage to the PSE&G customer. It has also been a profit-making venture for PSEG Power. We have never broken those numbers out separately.

But in general, those two things are the types of things that have contributed to, for example, 39% reduction in the PSEG customer's gas bill since 2009 and, more recently, a 33% reduction in the November and December 2013 bill of the PSE&G customer. So, really good news for the PSEG customer as well as some profitable -- we are getting some thumbs-up from PSEG customers; that's great.

I know this is a webcast. Those of you who can see it, trust me. I'm not making it up. But a little good news for the customer and some profit-sharing for the PSEG Power investor.

The new phenomenon is not the existence of this capability. The new phenomenon is the amount of supply coming out of the region with respect to the capability to bring that supply to market. And the amount of gas coming out has exceeded the capability of bringing that to market.

As a result, those of us who have contracts and access to the supply -- and we are, we believe, the single biggest, we are not the majority but we are the single biggest customer of, in particular, the Leidy pipe -- have gotten a good deal. We have gotten this gas at a low-cost. And in fact we have enjoyed a basis differential of about $1 to $1.50 per BCF that started appearing in June of this year and it grew throughout the third quarter.

And even though we are required to serve the residential customer first and foremost, and then the off-system sales secondly, there isn't much demand for natural gas in the third quarter when the demand for electricity is peaking. And so we are getting Marcellus Leidy gas hub pricing and burning it in combined cycle natural gas turbines that are primarily using zone 6 natural gas. So that basis differential is something that is then completely to the benefit of PSEG Power.

THOMSON REUTERS

SI-SSA-0015-07744

However, the volume of what you can do -- that varies depending on the time of year. So you can expect in December and January and February, PSEG Power will continue to serve the residential gas customer, who will be burning a lot of gas to heat their home and therefore will not have a lot of that gas for its power plants. And we'll be buying zone 6 type gas or at least we will see that basis differential skinny down.

The good news is, if there's no access to gas because the customer is using a lot, that means we are probably selling a lot of electricity because the fan on the blower unit of the heating system is spinning a lot. So when demand for natural gas goes up, typically the demand for electricity goes up, too. So that is a right way for PSEG Power.

And to the extent that winter doesn't show up the way it did not show up in 2012, then demand for natural gas will go down. Demand for electricity will go down. But the cost of goods sold benefits to PSEG Power will go up.

So in terms of how you think about this benefit throughout the year, it's always there. It's just difficult to quantify throughout the year because of the weather dependency of gas demand.

So there's this new effect. Now the question is how long can we expect it to persist. And what we have been saying to our investors is, well, we run our business on the basis of the forward price curve.

We don't think we are smarter than the market, so we simply direct you to -- one particular case could be Bloomberg. Take a look at where the Leidy basis differential is. And what you would see is that according to the market reports, that $1.20 looks like it will persist at least into 2016.

We do not hedge our gas plants out that far. We stay open -- I know I've said that about half a dozen times. But we would venture a guess that it is probably fairly thinly traded that far out into the future. But suffice to say that market is predicting that this benefit to us will persist for at least three more years.

And the reason for that is that that benefit is likely to decrease as infrastructure gets built. And infrastructure doesn't get built overnight. It's a challenging proposition to build pipelines that go across multiple states, in particular the last few miles of this region.

So with that in mind we have taken a look at what that means for our natural gas fleet. And we are announcing at this meeting that we are making some investments consistent with the way in which we have been making investments in the past at PSEG power. So these are small relative to what we are doing at the utility, but they are incremental additions to existing power plants.

For the most part what you have heard us speak about in the past few years have been incremental additions to our nuclear fleet. And in fact we are continuing, along with Exelon, to add a few hundred megawatts to our Peach Bottom units that we co-own with them. And we completed, as you may recall, in 2012 some small peaking plants which in aggregate, though, added up to 400 megawatts of natural gas peakers.

But this year what we're going to begin is a four-year process of expanding the output at our combined cycle units. And these are improvements to the hot gas path of those units. It will be all of our GE units.

And there will be three benefits from this. Benefit number one is 150 megawatts of additional output, 110 megawatts of which will have operational characteristics that are similar to our combined cycle units' load following capability. And 40 megawatts of which, while they are on the combined cycle units, will have more operational features that resemble our peaking plants.

So there will just be some energy margin from that and some capacity margin from that as we bid that into the incremental auctions at PJM as well as the base residual auction at PGM.

The second benefit is the entire power plant, not just the up rate, will have a heat rate improvement of about 1%, 1.2%. And the third benefit is that it allows us to extend the time between major maintenance outages at these plants.

THOMSON REUTERS

SI-SSA-0015-07745

So when we looked at those three benefits we decided that it was worth $120 million of investment to achieve that. So, continued incremental growth at Power, once again nowhere near the growth at the utility, but definitely value-enhancing from a shareholder perspective.

So as we take a look at the total PSEG capital spending program, what you see is that 85% on the left pie chart is oriented to growth. And 15% of the $7.5 billion is oriented to environmental maintenance or more generic maintenance programs.

And if you look at it by Company, what you see is that over 80%, 85% is at the regulated utility. And as I mentioned a moment ago, of that 85%, 80% gets contemporaneous return treatment.

And these numbers on these pie charts are without Energy Strong. So this is inclusive of our recently approved solar program, but they are exclusive of the Energy Strong numbers that we hope to get resolution of sometime within the first quarter of next year.

Take a look at where we are in 2013. These are the same numbers, obviously, we reported on our third-quarter call -- very strong performance at PSEG Power, both with respect to where we initially guided and with respect to last year, largely driven by two phenomena.

Number one I have already talked about, which is the gas basis differential coming out of the Leidy hub. And number two being some very, very strong performance at Power coming from some significant blowout and basis differentials in zone 6 pricing for natural gas that benefited us, given our access to natural gas supply in the winter months.

The utility is right on target to achieve what we have promised, namely the double-digit earnings growth. This compare versus 2012 may not look like double-digit earnings growth for the first three quarters, but I will remind you that that $0.89 a share at the utility last year has included in it a benefit of about $0.05 or $0.06, was it not, Caroline, on the tax advantage?

Caroline Dorsa - *Public Service Enterprise Group Inc. - EVP, CFO*

$0.06.

Ralph Izzo - *Public Service Enterprise Group Inc. - Chairman, President & CEO*

$0.06 a share from a one-time tax benefit that we included in operating earnings last year. And even with that one-time benefit, PSE&G will outperform last year by double-digit.

And PSEG Holdings are much below last year, but that is just a result of an asset sale that we have not replicated this year. So we are guiding each subsidiary at the levels that we show here. So you could see the utility now is approaching that half of the overall earnings of the Company.

We did increase our outlook for guidance this year from $2.25 to $2.50, to $2.40 to $2.55. And we did narrow the utility earnings guidance, just given the fact that we now have only just the weather variability of December that one would question at this point in time.

As we look to -- as I reported to you, what we did to get from 2008 to 2012, as we look to 2015, and we will offer our guidance for 2014 in February of next year, as we have traditionally done for the past few years -- some things to highlight.

Continued discipline around O&M. These are the same numbers we reported in our March investor conference. It is safe to say that we will refresh that O&M number when we get to February-March of next year.

One of the factors that we have been asked about and we have been making sure that we disclose to all is that a not inconsequential part of O&M is our pension expense. We do not smooth pension. And if you look at our 10-K and all of our disclosures, that assumptions around pension were about a 4.5% discount rate on calculating the PBO and an assumed 8%, 8.5% return on assets in the trust.

THOMSON REUTERS

SI-SSA-0015-07746

We are 70% invested in equities. Suffice to say that our performance has been consistent with that of the market, which is well north of that 8%. And interest rates currently are north of that 4.5%. So we would expect a decrease in our pension expense next year that could positively influence that prior forecast of 2.2% O&M growth.

We just want to signal that without giving a number. We will give that number, as I said, in our investor conferences certainly in March, if not in our call in February, more likely in our investor conference in March.

The other thing that I want to highlight here is the size of the transmission investment. We have been at transmission investments for years now. Our transmission capital program this year will be $1.5 billion.

We have grown transmission from something that was $800 million in the rate base to something that was $2.5 billion and 28% of rate base in 2012. It will be fully 40% of rate base by 2015 on the basis of already approved programs.

So we have people moving dirt, digging holes, tightening bolts. And the result of that work will get us this $5 billion component and 40% of the full utility rate base.

On top of that, while we control O&M we expect to make further improvements in our forced outage rate at our combined cycle units. We expect to increase output from our nuclear generation. Part of that is driven by the up rate at Hope Creek, as I said before. Squeezing higher capacity factors is not going to be the bigger component at this point in time.

And we will, by 2015, being in our second year of managing the Long Island Power Authority distribution and transmission system. So we do expect to see that $0.03 to $0.04 a share from managing those assets as well as managing their supply.

So the aggressive utility growth, the modest investments in Power talked about here in this slide. And all of that, all of that can be financed without the need for outside new equity.

So we have the balance sheet, we have the borrowing capacity to make all this happen without the need for new equity. We show you two scenarios here, both of them summarizing three years of investment. On the left are existing approved programs.

You can see here for now the first time PSE&G will actually be a bigger cash generator then PSEG Power. However, PSE&G's need for the cash is much greater than PSEG Power. So power is still a contributor to the PSE&G earnings growth.

On the right side we basically include the Energy Strong program as well as part of the $1.5 billion in expansion and transmission that is associated with the Energy Strong program. And there you see the same pattern as on the left side of the slide, just larger numbers. Right? So PSE&G is an even bigger cash generator than PSEG Power but its capital investment needs are even larger.

So we have the growth. We have the ability to finance the growth. And the icing on the cake, if you will allow me to use that analogy, is that we can look at all of this and still forecast confidence in the ability to sustain and modestly grow the dividend. We have enjoyed a 2% to 3% growth in the dividend over the past five and ten years. And we believe that we can continue to do that into the future, even with the capital program at the utility.

So $6.3 billion to $7.5 billion in CapEx at the utility, 150 megawatts expansion of our gas fleet, when 150-megawatt expansion of our nuclear fleet, no new equity; power at FFO to debt levels, even with the $7.5 billion in utility capital growth of about 40% on average. Our internal targets are to be 35% to preserve that BBB+ rating and room to grow, on a sustainable basis, the utility dividend.

So that's the summary in numbers. The summary in words is here. It really is the same thing as how I began the presentation, which is making use of that financial strength to meet the needs of our customers in the form of resiliency of the grid, to meet the needs of the state in terms of its public policy objectives in the form of renewable power, and to use the strong cash flow of power to seek out incremental growth opportunities

THOMSON REUTERS

SI-SSA-0015-07747

that are value-creating for our shareholders, all the while recognizing that a strong financial position serves us well and can continue to support that dividend growth.

So I've been given the ten-minute sign. So we will open up for questions in the remaining probably eight minutes that we have. And Judy does have a microphone. If there are questions, I would ask you to just wait till she reaches you. We have a question over there.

QUESTIONS AND ANSWERS

Unidentified Audience Member

I have a question about the uprate at Peach Bottom. I know that is a partnership undertaking. I know it's not a steam turbine generator job.

But are there any kind of lessons learned off of Crystal River and San Onofre for even the most humble improvements to a nuclear power plant that could be discussed in respect of Peach Bottom?

Ralph Izzo - *Public Service Enterprise Group Inc. - Chairman, President & CEO*

So I have enormous respect for my colleagues at those companies. But I had to hold onto the podium when you mentioned us in the same breath as those. So there's always lessons to be learned.

I'm on the NPO board and dutifully go to every meeting to make sure that I hear about what's going on at other units. NPO is great about publishing what is called operating experience that our team at our nuclear plants -- I make sure that they analyze and study.

But to my knowledge, the two primary areas through which we act to expand output are, number one, it's a paper exercise in understanding the rich margins that are available to us that allow us to run the plants at higher outputs. So that's not touching any hardware.

And, number two, to the extent that we do touch hardware, and in this case we will be touching hardware, it's all on the steam side of the plant. It's not on the reactor side of the plant. So if you want more detailed information of that, the days of me pretending to be an engineer and a scientist are long past.

We will get you more information. But no, one should not mention those three power plants in the same question. Please don't ever do that again. But thank you. So, apologies to Lynn Good and to Ted Craver; they run fine companies.

Okay. So I thank you for joining us. We really hope you -- you are sharing our good news story. We think we have a really positive story to tell, one with not only a proud past but a very, very optimistic future. Thanks and enjoy the rest of your day.

Forward Looking Statement

Certain of the matters discussed in this communication about us and our subsidiaries future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient coverage or recover proceeds of insurance on such matters,
- increases in competition in energy supply markets as well as competition from certain rate-based transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology, such as distributed generation and microgrids, and resultant changes in customer usage patterns, including energy efficiency and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws. The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. Slides A and B at the end of this presentation include a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

PSE&G's Energy Strong Capital Program addresses new reality

- New ten-year, $3.9 Billion Infrastructure Program filed February 2013 with the NJBPU to strengthen PSE&G's distribution system focusing on hardening and resiliency
- Plan to invest an additional $1.5 Billion in transmission grid over the ten-year period
- The 10-year Energy Strong proposal includes:
  - ✓ Protecting 40 utility installations from severe storms (**$1.7 Billion**)
  - ✓ Making the electric grid smarter and easier to repair (**$460 Million**)
  - ✓ Adding backup distribution lines and system redundancies (**$550 Million**)
  - ✓ Undergrounding 20 miles of overhead distribution lines (**$60 Million**)
  - ✓ Modernizing the gas distribution system (**$1.2 Billion**)
- The proposed filing creates ~5,800 jobs and stimulates economic activity for New Jersey businesses

SI-SSA-0015-07760

74 local NJ towns and 8 counties support

- 74 municipalities and eight counties (Bergen, Essex, Hudson, Mercer, Passaic, Somerset, Union and Middlesex) have approved resolutions in support of Energy Strong, PSE&G's infrastructure proposal to improve and fortify its electric and gas distribution systems

- PSE&G is seeking BPU approval to implement the first five years of the Energy Strong proposal, an investment of $2.6 Billion

- The Energy Strong proposal is currently being evaluated by the NJ Board of Public Utilities

Balance Sheet Strengthened

PSEG has reduced risk

SI-SSA-0015-07764

PSEG Year to Date 2013 - Highlights

- **Operating Earnings of $2.09 vs. $2.03 per share for YTD 2012**
  - ✓ Delivered solid results in Q3 driven by Power's locational value, and PSE&G's continuing investment in transmission
  - ✓ Raised 2013 full–year, operating earnings guidance from $2.25 - $2.50 to **$2.40 - $2.55**, per share
- **Executing on operational goals**
  - ✓ Power met summer demand using diverse fleet
  - ✓ Continued control of O&M supports full-year expectations
- **Executing on capital program**
  - ✓ Transmission program of $3.4 billion, including construction of 5 major transmission projects, continues on schedule and on budget
  - ✓ Review of Energy Strong proposal underway by NJBPU
  - ✓ 74 NJ municipalities and 8 county governments have passed resolutions in support of the Energy Strong infrastructure proposal
- **Market developments**
  - ✓ US District Courts in NJ and MD rendered decisions supportive of competitive markets and FERC's rate-setting authority
  - ✓ New LIPA agreement will broaden and extend original agreement when fully executed

SI-SSA-0015-07765

Strength in YTD operating earnings supports increase in 2013 operating earnings guidance

Based on our performance year-to-date, we have raised guidance for full year operating earnings from $2.25-$2.50 to $2.40-$2.55 per share

PSEG Operating Earnings

- 100% recovery of prudently incurred costs due to abandonment

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-07789

State policy imperatives have been redefined by Superstorm Sandy

Storm report issued by NJBPU focusing on:

- Preparedness Efforts
- Communications
- Restoration and Response
- Post Event Analysis
- Underlying Infrastructure Issues

Storm Deferral Filings:

- On December 19, 2012 the NJBPU granted a PSE&G request for general authority to defer storm restoration costs, thereby making such costs potentially recoverable in future rate filings
- On February 20, 2013, at its open public meeting, the BPU voted that the recovery of all such storm restoration costs would be reviewed in a generic (multi-utility) proceeding*

SI-SSA-0015-07790

PSEG

* NJBPU proceeding on storm recovery is currently in discovery phase.

We have also responded with a plan focused on infrastructure hardening and resiliency

- PSE&G filed a petition on February 20, 2013, with the NJBPU seeking approval for the Energy Strong Program (ES) which will harden electric and gas distribution infrastructure and increase the resiliency of the electric distribution system
- The filing complements the NJBPU's recently issued order requiring all Electric Distribution Companies to take specific actions to improve preparedness and response to major storms
- ES program represents a potential investment of approximately $3.9 billion over the next 10 years. PSE&G has asked for initial funding approval of $2.6 billion during the first five years
- Additional Transmission investment of approximately $1.5 billion would be included in future FERC Formula Rate filings

SI-SSA-0015-07791

Lower commodity costs and expiration of certain transition charges are expected to offset the impact to customer bills

*FOR THE TYPICAL COMBINED ELECTRIC & GAS RESIDENTIAL CUSTOMER, 2018 BGS (INCLUDING TRANSMISSION) / BGSS, AS WELL AS SBC, WNC, RAC AND DISTRIBUTION RATES HELD CONSTANT AS OF THE ES FILING DATE (FEB-2013). RATES RELATED TO ELECTRIC RESTRUCTURING: SECURITIZATION (STC), NON-UTILITY GENERATION CHARGE (NGC), & TRANSITIONAL ENERGY FACILITIES ASSESSMENT (TEFA), ARE REDUCED TO ZERO BY 2018. THE RGGI RECOVERY CHARGE (RRC), SOLAR PILOT RECOVERY CHARGE (SPRC), AND CAPITAL ECONOMIC STIMULUS INFRASTRUCTURE INVESTMENT PROGRAM (CIP I) AND THE CIP EXTENSION (CIP II) BILL IMPACTS ARE INCLUDED IN THEIR RESPECTIVE GAS & ELECTRIC BARS AND FORECASTED BASED UPON MAR-2013 ESTIMATES. THE BILL IMPACTS FOR ES PROGRAM BASED UPON THE PROPOSED FILING AND S4AEXT/SL3 IMPACTS ARE BASED UPON THE BPU APPROVED PROGRAM.

PSEG POWER

PSEG

We make things work for you.

SI-SSA-0015-07796

PSEG Power strategy

Focused on safety performance, unit reliability, competitive cost structure with control of maintenance costs, achieving operational excellence, and supporting market rules to maintain a level playing field

SI-SSA-0015-07797

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus

Fleet Diversity/Efficiency Focus

- Fleet diversity across the dispatch curve and fuel types provides flexibility
- Nuclear units continue to achieve strong operational results and are well positioned for the future
- Peach Bottom steam path retrofit completed
- Fossil fleet is suited for market dynamics
- CCGT achieved record output in 2012
- Installed 400 MW new peaking capacity in 2012

Financial/Economic Focus

- O&M cost control programs have delivered
- Sites offering competitive advantage suited for expansion

Regulatory Focus

- Strong regulatory performance
- Industry leadership in the changing regulatory environment

SI-SSA-0015-07798

PSEG Power delivered in 2012

Storm and weather challenges	Market challenges	Value delivered
• Superstorm Sandy impacted our generating sites • Warm winter put pressure on demand and pricing for both electricity and gas • Hot summer weather created challenging operating environment	• Unit outages and transmission outages resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by weather and economy	• Cost control • Lower dispatch and fuel cost • Captured value through coal/gas switching, unit flexibility • Improved unit availability • Coal & oil sales optimized inventory • Expedited return from storm outages, restored margin opportunities • Optimized unit dispatch across fleet during storm recovery

SI-SSA-0015-07799

PSEG Power has generating assets

in three competitive markets

- Low cost portfolio
- Fuel flexibility
- Assets near loads
- Poised to benefit in real time markets
- Fleet will maintain diversity and efficiency in 2016 after HEDD
- Most sites suitable for expansion

SI-SSA-0015-07800

PSEG Power Nuclear fleet is a critical element of success

Hope Creek	Salem Units 1 and 2	Peach Bottom Units 2 and 3

• Operated by PSEG Nuclear
• PSEG Ownership: 100%
• Technology: Boiling Water Reactor
• Total Capacity: 1,174 MW
• Owned Capacity: 1,174 MW
• License Expiration: 2046
• Next Refueling
  • Spring 2015
	• Operated by PSEG Nuclear
	• PSEG Ownership: 57%, Exelon – 43%
	• Technology: Pressurized Water Reactor
	• Total Capacity: 2,326 MW
	• Owned Capacity: 1,335 MW
	• License Expiration: 2036 and 2040
	• Next Refueling
	  • Unit 1 – Fall 2014
	  • Unit 2 – Spring 2014
		• Operated by Exelon
		• PSEG Ownership: 50%
		• Technology: Boiling Water Reactor
		• Total Capacity: 2,245 MW
		• Owned Capacity: 1,123 MW
		• License Expiration: 2033 and 2034
		• Next Refueling
		  • Unit 2 – Fall 2014
		  • Unit 3 – Fall 2015

SI-SSA-0015-07801

PSEG Power Nuclear is core to the fleet and has competitive advantages

- Continued strong nuclear operations – eight consecutive years of >90% capacity factor
- Significant earnings contributor
- Top quartile of cost performance/MWh
- One third new staff, recruitment of the best new and experienced talent and attractive training program
- Developing Fukushima action plan in response to NRC staff review
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

SI-SSA-0015-07802

PSEG Power's Fossil Fleet availability has shown steady improvement

EFORd improvement resulted in over 200 MW of additional capacity available

EFORp improvement and availability at peak demand times has resulted in performance payments in each of the last four years

SI-SSA-0015-07803

PSEG Power improvements achieved in combined cycle fleet efficiency

Actions Taken to Create Value	
• Heat rate improvement program • Operational Excellence Model	• Training programs • Unit testing initiative • Outage work to restore efficiency

SI-SSA-0015-07804

Superstorm Sandy affected the fleet;

when the load returned, Power was ready

SI-SSA-0015-07805

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- Power is well positioned for HAPS

SI-SSA-0015-07806

PSEG Power's focus on costs has resulted in moderate increase in O&M for six years

Cost control actions taken:	
• Coal assessment • CCGT material condition assessment • Contract renegotiation	• Material management • Nuclear maintenance productivity study • Nuclear outage efficiency initiative

SI-SSA-0015-07807

* INCLUDES IMPACTS FROM STORM RECOVERY COSTS AND POTENTIAL RELATED INSURANCE PROCEEDS.
E = ESTIMATE.

PSEG Power is well positioned

to grow the fleet when market conditions dictate

Available locations		Our sites possess infrastructure advantages
• Bergen • Burlington • Essex • Edison • Kearny	• Hudson • Linden • Sewaren • Bridgeport Harbor	• Electric Interconnection • Gas Pipeline Access • Sites/Space • Emissions

SI-SSA-0015-07808

Investing in Power to expand CCGT capacity

and improve efficiency

PSEG Power - CCGT Uprate Project
○ Over 2014–2018, retrofit Bergen, Linden and BEC (GE CCGTs) with Advanced Gas Path (AGP) components ○ Expand Power's CCGT fleet, one of the largest gas-fired portfolios in PJM, with incremental base and peaking MWs ○ Potential project investment of ~$120 million over the 5-year period

AGP Project Benefits
✓ Expands CCGT capacity by over 150 MWs: Base MW's increase by 3.5% (112MW) with an additional 40 MWs of peak-firing capability ✓ Increases Efficiency - Combined Cycle (CC) heat rate improvement ~ 1.2% ✓ Extends maintenance outage cycles and upgrades technology

SI-SSA-0015-07809

PSEG Power will maintain diversity and efficiency after a realignment of the fleet in 2016

Objective
2012 → 2016E

- Maintain fuel diversity
- Maintain load serving capability
- Improve heat rate of the fleet by 6%
- Maintain low cost structure
- Environmental improvement

Fuel Diversity
13,226 MW 11,200 MW

Energy Produced
52.5 TWh 52-54 TWh

PSEG POWER
ER&T

SI-SSA-0015-07814

PSEG

We make things work for you.

PSEG Power
ER&T strategy

Focused on optimizing the value of its asset portfolio and providing outstanding service to our customers, while prudently managing risk

SI-SSA-0015-07815

Diversified assets and flexible dispatch

High performing, base load nuclear assets	3,632 MW
Fuel advantaged, base load coal plants in PA	776 MW
Flexible combined cycle fleet	3,176 MW
Well leveraged intermediate & peaking assets	5,642 MW

Integrated trading and dispatch capability around fleet

SI-SSA-0015-07816

Fleet capacity has been advanced by:

Improved Heat Rate capability

Trading acumen to execute fuel switching opportunities

Reduced O&M and increased start-up success

Capturing new products opportunity with minimal investment

SI-SSA-0015-07817

Spark spread replaces dark spread as major value driver

- Spark spread has risen above dark spread in PJM markets
- Power's gas units operating at record throughput
- Gas operation provides much more operational flexibility
- Enhances the ability of trading organization to capture volatility

SI-SSA-0015-07818

2013 BGS Auction Results for PSE&G Zone

BGS sales account for about a third of our forward portfolio of hedges

SI-SSA-0015-07819

BGS PRICES REFLECT PSE&G ZONE; RESULTS FOR 2011-2013 ARE THE NEW BLENDED PRICES BEGINNING JUNE 1, 2013.

Our hedging mix has changed with the market but still captures the fleet's locational advantage

- 3 Year forward BGS sales comprise smaller percentage of Power's hedges
- Other full requirement load deals help capture additional locational and load shape premium

SI-SSA-0015-07820

NOTE: PERCENTAGES REPRESENT HEDGED VOLUMES IN PLACE AFTER BGS AUCTION.

Hedging strategy designed to protect gross margin and leverage the portfolio

Ratable Hedging on Base Load:

- 3 year ratable hedge tactics
- 3 year PJM hedge of capacity (not included in table)
- Load following sales (such as BGS) have strong correlation to our units for hedging basis and load shaping premium

Dynamic Hedging on Intermediate Coal, Combined Cycle and Peaking:

- Position fleet to take advantage of market volatility
- Gas and load-following fleet left open until prompt year to capture volatility
- Use all trading products to capture option value of assets and benefit from market dislocations

		Oct-Dec 2013	2014	2015
Base Load (Nuclear and Base Load Coal)	Volume TWh	8	35	35
	% Hedged	100%	100%	55-60%
	Price $/MWh	$50	$48	$48
Intermediate Coal, Combined Cycle, Peaking	Volume TWh	5	18	17
	% Hedged	30-35%	5-10%	0%
	Price $/MWh	$50	$48	$48
Total	Volume TWh	13-14	53-55	52-54
	% Hedged	70-75%	65-70%	35-40%
	Price $/MWh	$50	$48	$48

HEDGE PERCENTAGES AND PRICES AS OF SEPTEMBER 30, 2013. REVENUES OF FULL REQUIREMENT LOAD DEALS BASED ON CONTRACT PRICE, INCLUDING RENEWABLE ENERGY CREDITS, ANCILLARY, AND TRANSMISSION COMPONENTS BUT EXCLUDING CAPACITY. HEDGES INCLUDE POSITIONS WITH MTM ACCOUNTING TREATMENT AND OPTIONS.

SI-SSA-0015-07821

PSEG's locational advantage

and electric basis

- Basis (PS Zone to PJM West) will continue to trend downward for forward sales
- Volatility may remain significant in the prompt periods
- Power maintains sufficient length to participate in upside volatility as well as a valuable 250MW transmission position into NYC
- Basis will continue to have a positive impact on PSEG Power profitability

SI-SSA-0015-07822

*AS OF OCTOBER 31, 2013.

PSEG's locational advantage

PSEG Pipeline and Storage Capacity

- PSEG is well positioned to realize supply cost advantages from the shale deposits in PA and OH
- The majority of Power's pipeline capacity goes through the shale regions or emanates from locations in the region
- The lowest cost supplies have come from the Tennessee 300 line in northeast PA and the Transco Leidy line in central PA
- Power also has significant Texas Eastern capacity in southwest PA, the next region to develop
- Availability of a robust gas portfolio of storage and pipeline capacity primarily benefits PSE&G's gas customers and then Power, as conditions permit
- Power buys approximately 350BCF/year of gas

SI-SSA-0015-07823

Access to lower cost shale supply

an advantage for PSE&G's gas customers and Power's CCGT portfolio

SI-SSA-0015-07824

PSEG FINANCIAL REVIEW & OUTLOOK

SI-SSA-0015-07834

PSEG

We make things work for you.

Strong financial position to support our business initiatives

Financial Position

- ✓ Achieved Earnings Guidance
- ✓ Stable Dividend and Opportunity for Growth
- ✓ Strong Balance Sheet
- ✓ Regulated Growth Opportunity without Equity Issuance
- ✓ Solid Credit Ratings
- ✓ O&M Controlled
- ✓ Well Funded Pension

SI-SSA-0015-07835

In 2012, PSE&G executed its capital program, Power generated significant free cash flow and PSEG increased its shareholder dividend

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$216 MILLION.

SI-SSA-0015-07836

Our capital investment options can result in as much as $5.4B of utility growth investment through 2015

SI-SSA-0015-07837

All scenarios can be financed without new equity

SI-SSA-0015-07838

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$725M FROM 2013-2015 EMP: ENERGY MASTER PLAN

E = ESTIMATE

PSE&G's capital spending drives regulated earnings growth with a potential future rate base of up to ~$12.6B

2013 – 2015E Rate Base Growth

SI-SSA-0015-07839

Power's credit metrics are expected to remain strong

SI-SSA-0015-07840

Using PSEG's balance sheet strength

to finance growth in the regulated enterprise without equity issuance

PSEG Total Capitalization

2012

2015E*

* E = ESTIMATE; INCLUDES THE FOLLOWING PROPOSED FILINGS: EE4A, ENERGY STRONG (ES) AND TRANSMISSION HARDENING AND BPU APPROVED SPENDING ON SOLAR.

SI-SSA-0015-07841

Our investment programs are affordable, helped by the expiration of known charges by 2017, which lower the average residential customer bill by ~ 8.7% based on today's current bill

PSE&G Securitization & NUG Impacts ($Millions)

Funded Ratio	82%	84%	83%	>85%	>90%	>90%

SI-SSA-0015-07844

Opportunity for modest and sustainable

dividend increases consistent with stable regulated growth and cash generation outlook at PSEG Power

SI-SSA-0015-07845

PSEG Summary

- Raised 2013 full-year operating earnings guidance to $2.40 - $2.55 per share – based on financial results year-to-date
- Double digit operating earnings growth at PSE&G starting in 2013, and continuing through 2015 driven by transmission investments and approved programs
- Power's continued focus on operational excellence, market expertise and financial strength reduces risk in low price environment
- Strong Balance Sheet and Cash Flow support full capital program without the need for equity
- Long history of returning cash to the shareholder through the common dividend, with opportunity for future growth

PSE&G provides high reliability at below average cost which creates superior value to customers

SAIDI = SYSTEM AVERAGE INTERRUPTION DURATION INDEX, A MEASURE OF AVERAGE OUTAGE DURATION FOR ALL CUSTOMERS SERVED.

PSE&G prioritizes public safety

while maintaining value to customers

LEAK RESPONSE RATE = PERCENTAGE OF UTILITY RESPONSES TO REPORTED LEAKS WITHIN ONE HOUR.

SI-SSA-0015-07853

Formula rates for transmission make the process more predictable with contemporaneous returns

	Transmission (Federal)	Distribution Base Rate Case (State)
Current ROE	• 11.68% base • 12.93% with incentives on Susquehanna-Roseland • 11.93% with incentives on Northeast Grid	• 10.3%
Volatility of Returns	• Low – prospective recovery with annual true-ups for over/under recovery	• Higher – performance impacted positively/negatively by cost management, weather, customer demands, etc.
Process	• Formula – The rate template and specific elements like ROE are predetermined with annual updates and true ups	• Litigated case with each element (depreciation, ROE, O&M levels, Rate Base) scrutinized and settled
Intervenors	• State consumer advocates usually participate	• State consumer advocates • Large customers • Other parties affected by the case, e.g. Solar Developers
Test Year	• PSE&G has fully **forecasted** test year for both Capital and O&M	• **Historical** test year with pro-forma adjustments for known and measurable items, e.g. wage escalation
Time to resolve	• Annual Formula updates are filed in October with January 1 effective date	• Typically settled within 12-15 months

SI-SSA-0015-07854

New Jersey Board of Public Utilities (BPU)

- The Board of Public Utilities consists of five commissioners appointed by the Governor. These appointees are confirmed by the NJ Senate for six-year, staggered terms. The Governor appoints one of the five to serve as Commission President.

  Currently, the commissioners are:

  - Robert M. Hanna, Commission President
  - Jeanne M. Fox
  - Joseph L. Fiordaliso
  - Mary-Anna Holden
  - Dianne Solomon

- Stefanie Brand, Director of the N.J. Division of Rate Counsel

SI-SSA-0015-07855

Slow economic recovery in NJ is constraining growth in all market sectors

Modest residential growth limited by housing market inactivity and the slow economic recovery

Consumer spending is trending with the slow economic recovery and impacting growth in the commercial sector

Industrial sales growth continues to be constrained by slow economic recovery

2013 - 2015
Projected Sales Growth – Gas*

2013 – 2015
Projected Sales Growth – Electric*

*WEATHER NORMALIZED ESTIMATED ANNUAL GROWTH PER YEAR OVER FORECAST PERIOD; PROJECTED SALES GROWTH FOR 2013-2015 GAS INCLUDES ONLY FIRM SALES.

SI-SSA-0015-07856

Key economic indicators forecast renewed growth over the 2012 to 2015 timeframe

The New Jersey economy increased by 0.3% annually from 2010 to 2012 and is anticipated to grow 2.3% per year from 2012 to 2015

New Jersey total non-farm employment increased by 0.6% annually from 2010 to 2012 and is expected to grow 1.4% per year from 2012 to 2015

Real personal income in New Jersey increased by 1.4% annually from 2010 to 2012 and is expected to increase 2.5% per year from 2012 to 2015

Single family housing starts declined by 2.6% annually from 2010 to 2012 and are expected to increase ~24% per year from 2012 to 2015

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, capacity market design, transmission planning and cost allocation rules, including how transmission projects are planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as competition for certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies, and
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-07866

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. The last slides in this presentation include a list of items excluded from Net Income to reconcile to Operating Earnings, with a reference to those slides included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2013.
PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT, PSEG LONG ISLAND AND ENERGY HOLDINGS ACTIVITY.
SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS.

Delivering on commitments and pursuing opportunities for growth

Operational Excellence	• Power: Record 2013 output at Linden CCGT and Salem 2; nuclear capacity factor greater than 90% for 9th straight year • PSE&G: Mid-Atlantic Reliability Award (12th consecutive year) • PSEG Long Island: Went "live" on January 1, 2014 • PSEG: Cost-control benefits continue
Financial Strength	• Strong cash flows supported credit rating increases • Pension fully funded • Dividend increased
Disciplined Investment	• PSE&G ✓ Transmission capital program execution and growth ✓ Energy Strong infrastructure program underway ✓ Solar 4 All Extension and Solar Loan III programs • Power: Investments to enhance the fleet's competitiveness – 130 MW Nuclear uprate, 150 MW CCGT uprate and efficiency improvement

SI-SSA-0015-07871

Operating Earnings Mix

Long term investment program has driven increased earnings contribution from stable, regulated business

Power's diverse fuel mix and dispatch flexibility continues to generate earnings and free cash flow

PSE&G's investment in transmission has diversified its asset base and, coupled with other investments and cost controls, supported compound annual earnings growth of ~18% over 2009 – 2013

SI-SSA-0015-07872

Maintaining a robust capital program focused on growth

PSEG 2009 - 2013 Capital Spending $11.3 Billion	PSEG 2014 - 2018E Capital Spending $13.1 Billion

NOTE: POWER 2009–2013 ACTUALS ARE RESTATED TO INCLUDE SOLAR CAPITAL SPEND. POWER CAPITAL SPENDING EXCLUDES NUCLEAR FUEL. E=ESTIMATE

SI-SSA-0015-07873

PSEG's business profile has been transformed through significant growth in utility capital spending, and we have consistently identified attractive opportunities for additional investment

SI-SSA-0015-07874

Energy Strong Agreement recognizes benefits of system investments

- Energy Strong Agreement reached with all parties
  - ✓ Agreement recognizes the benefits of system investments that prevent or shorten outages
  - ✓ Supports $1.22 billion capital program over several years on reasonable terms: $1 billion recovered through accelerated, rate recovery mechanism
    - $820 million Electric
    - $400 million Gas
  - ✓ Allows PSE&G to earn a 9.75% ROE on the $1 billion recovered on accelerated basis
  - ✓ Requires PSE&G to file a base rate case by November 2017
  - ✓ Approved by the NJBPU in May 2014
- Over 100 New Jersey municipalities supported Energy Strong
- Energy Strong agreement clears path for PSE&G to begin the initial phase of this robust capital program

SI-SSA-0015-07875

PSEG Power – Value-advantaged through asset diversity, fuel flexibility, location and installed environmental controls

PSEG – Year to Date 2014 Highlights

- **Operating Earnings YTD up 9% to $2.27 per share from $2.09 for YTD 2013**
  - ✓ PSE&G on track to record double-digit growth in earnings on expanded capital investment program
  - ✓ PSEG Power expected to earn at upper level of expectations for the full year
  - ✓ Narrowed 2014 full–year, operating earnings guidance to $2.60-$2.75 per share, from $2.55-$2.75 per share prior

- **Executing on our capital program**
  - ✓ Replacement of PSE&G's gas cast-iron pipe underway as part of $1.22 billion Energy Strong capital program
  - ✓ Major transmission projects under $6.8 billion capital program are on-time and on-budget

- **Market developments**
  - ✓ PJM proposed changes to its Reliability Price Mechanism, Demand Curve Adjustment and pending Demand Response (DR) issues supportive of price formation

SI-SSA-0015-07877

PSEG – 2014 Another Year of Growth

2014 operating earnings guidance narrowed; forecast full-year at upper end of range, assuming normal weather and unit operations for rest of year

SI-SSA-0015-07878

Balance Sheet Strength

2009 – 2013: Reduced risk profile and transformed business mix

- Invested $8.4 billion in PSE&G
- Improved credit ratings
- Monetized and de-risked Holdings' portfolio

2014 – Forward: Strong cash flows and increasingly regulated business mix fully support:

- PSE&G's $11.3 billion approved investment program through 2018
- Consistent and sustainable dividend growth
- Additional investment capacity to deploy in opportunities beyond those in the current capital plan
- No need to issue equity

SI-SSA-0015-07879

Investment opportunities exceeding $1 billion

Focused on providing our customers with access to low-cost gas
and cost-effective technologies that reduce emissions
as they also improve system reliability

Potential Investment	Description	Amount
Bridgeport Harbor Station	New 450 MW CCGT Unit	$500 -- $700
PSEG -- Long Island	Utility 2.0 Energy Efficiency Filing	$200 -- $345
Artificial Island	FERC 1000 Project*	$250 -- $300
PennEast Pipeline	Equity Interest	$100 -- $120
PSE&G Energy Efficiency	Program Extension	$100 -- $100
Total		$1,150-$1,565

*Artificial Island Project includes amount for related compensator which has been assigned to PSE&G.

SI-SSA-0015-07880

Energy Strong Agreement supports customers' needs in the aftermath of Superstorm Sandy

- Settled with NJBPU Staff and all other parties in May 2014 for $1.22 billion; approved by the NJBPU in May 2014
- Program addresses system resiliency and hardening by:
  - ✓ $620 million to raise, relocate or protect 29 switching and substations that were damaged by water in recent storms
  - ✓ $350 million to replace and modernize 250 miles of low-pressure, cast iron gas mains in or near flood areas
  - ✓ $100 million to create redundancy in the electric system, reducing outages when damage occurs
  - ✓ $100 million to deploy smart grid technologies to better monitor system operations to increase our ability to more swiftly deploy repair teams
  - ✓ $50 million to protect five natural gas metering stations and a liquefied natural gas station affected by Sandy or located in flood zones

SI-SSA-0015-07891

Over 70% of PSE&G's $11.3 billion investment program will be recovered through contemporaneous mechanisms

PSE&G TRANSMISSION

PSEG

We make things work for you.

SI-SSA-0015-07894

Transmission has delivered, and has grown to represent ~36% of rate base

Transmission represented ~36% of rate base at YE 2013 up from ~15% at YE 2009

SI-SSA-0015-07895

PSE&G's existing major transmission

investment program remains on schedule and on budget

Major Transmission Projects

Project Roster	Approved ROE	Inclusion of CWIP in Rate Base	100% Recovery of Costs Due to Abandonment	Project Estimate Up To ($ Millions)	Expected In-service Date
Susquehanna-Roseland	12.93%	✓	✓	$790	June 2014 / June 2015
Northeast Grid Reliability	11.93%	✓	✓	$907	June 2015
North Central Reliability	11.68%	✓	✓	$390	Completed
Burlington–Camden 230kV	11.68%	✓	✓	$399	Completed
Mickleton–Gloucester–Camden 230kV	11.68%	✓	✓	$435	June 2015
Bergen—Linden Corridor 345kV	11.68%	✓	✓	$1,200	June 2018

SI-SSA-0015-07896

Susquehanna-Roseland consists of constructing 150 miles of 500kV circuit (46 miles in NJ) with two new 500kV GIS switching stations at Roseland and Hopatcong

Project Estimate Up To*	Through Year-end 2013	Expected In-service Date
$790M	$661M	Phase 1 – **Completed** Phase 2 – June 2015

- PJM RTEP project b0489
- ROE of 12.93% (including 1.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Improves reliability and reduces congestion

Project Status: The eastern part of line from Hopatcong to Roseland, NJ in service April 2014; NJ construction planned to be completed in Q3 2014. PA portion outside plant construction in progress. Western portion in NJ and the PA portion is planned to go in service June 2015.

SI-SSA-0015-07897

*PROJECT IS SHARED WITH PPL. PROJECT ESTIMATE REPRESENTS PSE&G'S CONSTRUCTION RESPONSIBILITY FOR THE NJ PORTION.

Northeast Grid Reliability consists of upgrading approximately 50 overhead circuit miles of 138kV transmission line to 230kV, constructing ~18 miles of new underground 230kV lines, and converting/upgrading 12 existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$907M	$228M	June 2015

- PJM RTEP project b1304
- ROE of 11.93% (including 0.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment
- Project estimate has increased ~$12M associated with hardening related scope changes as a result of Superstorm Sandy

Customer Benefit: Improves reliability and increases transfer capability

Project Status: Nearing completion of engineering/design and licensing/permitting phase. Outside and inside plant construction are in progress

SI-SSA-0015-07898

North Central Reliability consists of upgrading 55 circuit miles of 138kV transmission line to 230kV, and converting six existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$390M	$349M	Completed

- PJM RTEP project b1154
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Improves power quality and increases transfer capability

Project Status: In service April 2014

SI-SSA-0015-07899

Burlington-Camden 230kV consists of upgrading 37 circuit miles (30 miles of overhead and 7 miles of underground) of 138kV transmission line to 230kV, converting the existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$399M	$301M	Completed

- PJM RTEP project b1156
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Addresses voltage reliability and increases transfer capability

Project Status: In service April 2014

SI-SSA-0015-07900

Mickleton-Gloucester-Camden 230kV

consists of upgrading 10 circuit miles of overhead transmission, installing ~16 circuit miles of new 230kV underground, 10 circuit miles of new 230kV overhead, and modifications/upgrades at five existing stations

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$435M	$122M	June 2015

- PJM RTEP project b1398
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Addresses thermal reliability and increases transfer capability

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-07901

Bergen-Linden Corridor is a recently approved project which will provide a double-circuit 345kV line to maintain reliability

Project Estimate Up To	Through Year-end 2013	Expected Completion Date
$1,200M	-	June 2018

- PJM RTEP project b2436
- 30 miles of underground cable
  - New ~ 23 miles
  - Reconductor (Upgrade of 138 to 345) ~7 miles
- 13 miles of double circuit overhead conductor (replacing double circuit 138 with double circuit 345)
- 11 station upgrades to 345kV

Customer Benefit: Addresses thermal and short-circuit reliability

Project Status: Engineering

SI-SSA-0015-07902

Planned transmission spend of $6.8 billion

is driven by PJM reliability projects, 69kV conversions and life-cycle replacement projects

PSEG LONG ISLAND

PSEG

We make things work for you.

SI-SSA-0015-07907

PSEG was selected to operate Long Island Power Authority's (LIPA) electric transmission and distribution system for 12 years starting in 2014

- Pursuant to the Operating Services Agreement (OSA), all expenses and capital costs to operate the system are pre-funded by LIPA and passed through to their customers
- Compensation consists of a fixed fee and an incentive fee
  - Fixed compensation fee for 2014 with scheduled increases in 2015 and 2016
  - Starting in 2015 PSEG Energy Resources and Trading (ER&T) begins managing fuel/energy contracts
  - PSEG Long Island expected to contribute $0.03 to operating earnings in 2014 increasing to $0.07 per share in 2016 including contribution at ER&T
- Potential for an 8-year extension of the OSA

SI-SSA-0015-07908

PSEG Long Island commenced operations

on January 1, 2014

Key elements of Operating Services Agreement

Increased PSEG scope and control	Use of PSEG brand as PSEG Long Island	3-Year rate freeze (2013-2015)
Performance metrics	NY Department of Public Service oversight	Utility 2.0 – Expanded program filed ~$345 million

Early performance

Successful transition to PSEG Long Island	Improved stakeholder communications	Achieving reliability and customer satisfaction metrics

SI-SSA-0015-07909

PSEG POWER

PSEG

We make things work for you.

SI-SSA-0015-07910

PSEG Power strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-07911

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus Fleet Diversity/Efficiency Focus	Financial/Economic Focus	Regulatory Focus
• Nuclear units operated at over 90% capacity factors for the 9th consecutive year through 2013 • Fleet diversity across the dispatch curve and fuel types provide flexibility to meet changing conditions • Linden CCGT and Salem 2 nuclear unit achieved record output in 2013	• "Getting the most out of existing fleet" • Locational advantage • O&M control programs have delivered a CAGR of 1.6% between 2009 and 2014 • Sites offer competitive advantage for expansion	• Strong regulatory performance • Industry leadership in the changing business environment

SI-SSA-0015-07912

PSEG Power Delivering on priorities

Operational Excellence	• Maximize value of existing generating plants through implementation of the Operational Excellence Model (OEM) • Workforce engagement and development	• OEM implemented and achieving measures • Resource sharing program initiated
Financial Strength	• Deliver on Business Plan Commitments • Maintain competitive markets and improve constituent communication on issues important to Power	• Exceeded earnings guidance in 2013 • Ongoing effort in key markets showing success • Successful court outcome against subsidized generation
Disciplined Investment	• Successfully complete the Advanced Gas Path (AGP) uprates • Seek new opportunities in target markets (PJM, ISO-NE, NYISO) • Develop our renewables business (solar) • Maintain new nuclear option by successfully managing the Early Site Permit (ESP) process	• Accelerated schedule for AGP to maximize opportunity • LIPA contract for fuel and generation dispatch • Completed 19 MW solar project, 4 MW project under construction, established robust pipeline • Nuclear ESP is expected in 2015

SI-SSA-0015-07913

PSEG Power met 2013 challenges

Storm and weather challenges	+	Market challenges	=	Value delivered
• SuperStorm Sandy impacted our generating sites • Cold and hot weather extremes created challenging operating environment, but also presented opportunities		• Unit outages and planned transmission outages resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by economy		• Optimized unit dispatch across fleet during storm recovery • Expedited return from storm outages, restored margin opportunities • High availability when needed • Achieved fuel cost savings • Captured value through coal/gas switching, unit flexibility • Coal & oil sales optimized inventory • Flexibility of portfolio captured real-time basis opportunities

SI-SSA-0015-07914

PSEG Power exceeded 2013's earnings guidance

OPERATING EARNINGS FOR PSEG POWER IN 2013; SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. *ASSETS TRANSFERRED TO POWER AT YEAR-END 2013.

SI-SSA-0015-07915

PSEG Power has generating assets

in three competitive markets

- Assets near loads
- Low cost portfolio
- Fuel flexibility with gas cost advantage
- Poised to benefit from volatility in real-time markets
- Fleet will maintain diversity and efficiency after HEDD
- Most sites suitable for expansion

SI-SSA-0015-07916

PSEG Power will maintain diversity and efficiency after a realignment of the fleet due to HEDD

Objective 2013 → 2017

- Maintain fuel diversity
- Maintain load-serving capability
- Maintain low cost structure
- Environmental improvement
- Peach Bottom (PB) uprate
- Advanced Gas Path (AGP)
- Kalaeloa and Solar transfer adds ~200MW of capacity

Fuel Diversity

Energy Produced

E=ESTIMATE

SI-SSA-0015-07917

Power's PJM assets along the dispatch curve reduce the risk of serving full requirement load contracts and can take advantage of volatile market conditions

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel flexibility for >60% of fleet

SI-SSA-0015-07918

PSEG Power Nuclear is a critical element of our success

Hope Creek	Salem Units 1 and 2	Peach Bottom Units 2 and 3
• Operated by PSEG Nuclear • PSEG Ownership: 100% • Technology: Boiling Water Reactor • Total Capacity: 1,178 MW • Owned Capacity: 1,178 MW • License Expiration: 2046 • Next Refueling ➢ Spring 2015	• Operated by PSEG Nuclear • PSEG Ownership: 57% • Technology: Pressurized Water Reactor • Total Capacity: 2,365 MW • Owned Capacity: 1,358 MW • License Expiration: 2036 and 2040 • Next Refueling ➢ Unit 1 – Spring 2016 ➢ Unit 2 -- Fall 2015	• Operated by Exelon • PSEG Ownership: 50% • Technology: Boiling Water Reactor • Total Capacity: 2,251 MW • Owned Capacity: 1,125 MW • License Expiration: 2033 and 2034 • Next Refueling ➢ Unit 2 – Spring 2016 ➢ Unit 3 – Fall 2015 • Uprate: 130 MW (PS Share) Unit 2 - 2015/Unit 3 - 2016

SI-SSA-0015-07919

PSEG Power Nuclear is core to the fleet and has competitive advantages

- Continued strong nuclear operations: nine consecutive years of >90% capacity factor through 2013
- Significant earnings contributor
- Top quartile of cost performance/MWh
- One third new staff, recruitment of the best new and experienced talent, and attractive training program
- Fukushima action plan in response to NRC staff review
  - FLEX* plan submitted with implementation starting with Fall outage
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

SI-SSA-0015-07920

*STRATEGY KNOWN AS THE "DIVERSE AND FLEXIBLE MITIGATION CAPABILITY" OR FLEX, ADDRESSES RECOMMENDATIONS OF THE NUCLEAR REGULATORY COMMISSION'S FUKUSHIMA TASK FORCE.

SI-SSA-0015-07921

PSEG Power's Fossil Fleet Performance

has shown improvement

- Fossil Capacity Factor rebounded with market
- Peaking Units maintain high start success

- Coal EFORp improving
- CC EFORp less than 1% in 2013
- Consistent recipient of EFORp payments

SI-SSA-0015-07922

PSEG

*LM6000 AND 7EA UNITS

PSEG Power improvements achieved in combined cycle fleet efficiency

Combined Cycle Operating Heat Rate

Actions Taken to Create Value

- Operational Excellence Model
- Training programs
- Unit testing initiative
- Outage work to restore efficiency
- Second gas line at BEC

- Heat rate improvement 2008-2013 translates to meaningful fuel savings at current market prices

- Advanced Gas Path (AGP) investments 2014 through 2018 to provide additional fuel savings

SI-SSA-0015-07923

Investing to expand CCGT capacity and improve efficiency

PSEG Power - CCGT Uprate Project

- Expand Power's CCGT fleet, one of the largest gas-fired portfolios in PJM, with incremental base and peaking MWs
- Retrofit Bergen, Linden and BEC with Advanced Gas Path (AGP) components at cost of ~$120M over 2014 - 2018

AGP Project Benefits

- ✓ CCGT capacity uprates of ~150 MW:
  - Linden (63 MW – Completed)
  - Bergen (31 MW – 2015)
  - BEC (58 MW – 2017-2018)
- ✓ Increases Efficiency - Combined Cycle (CC) heat rate improvement ~ 1.2%
- ✓ Upgrades technology and extends maintenance outage cycles

SI-SSA-0015-07924

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing
- Cost control through testing coordination program

SI-SSA-0015-07925

PSEG Power's capital expenditures for environmental requirements are essentially complete*

PSEG Solar Source owns ~110 MW

of solar facilities with long term contracted revenues*

Hackettstown (Mars)
New Jersey (2 MW)
COD September 2009
Thin film panels – fixed tilt
Investment $13 million
15 year PPA with Mars, Inc.

Queen Creek
Arizona (25 MW)
COD October 2012
Polycrystalline - single axis tracker
Investment $79 million
20 year PPA with SRP

Wyandot
Ohio (12 MW)
COD May 2010
Thin film panels – fixed tilt
Investment $45 million
20 year PPA with AEP

Milford
Delaware (15 MW)
COD December 2012
Polycrystalline - fixed tilt
Investment $49 million
20 year PPA with DEMEC

JEA
Florida (15 MW)
COD September 2010
Thin film panels – fixed tilt
Investment $59 million
30 year PPA with JEA

Badger I
Arizona (19 MW)
COD November 2013
Polycrystalline - single axis tracker
Investment $50 million
30 year PPA with APS

Shasta A & B
California (4 MW)
COD March 2014
Polycrystalline - single axis tracker
Investment $13 million
20 year PPAs with PG&E

Whitcomb
Vermont (4 MW)
COD October 2014
Polycrystalline - single axis tracker
Investment $10 million
25 year PPA with VT Electric Power Producers, Inc.

In Construction
Texas (13 MW)
COD Year-End 2014E
Polycrystalline - single axis tracker
Investment $22 million
30 year PPA with El Paso Electric

SI-SSA-0015-07929

Portfolio Management Strategy

Optimize value of assets

Manage risk vs. reward

Directly engage with regulatory agencies

SI-SSA-0015-07930

PSEG Power: Enjoys real and sustainable advantages in the merchant generation space

Market Review

- Gas, Power, Spark Spreads
- Regulatory construct

PSEG's Competitive Advantage

- Fuel flexibility
- Heat Rate diversity
- Access to Marcellus Shale gas
- Asset flexibility

PSEG's Sustainable Advantage

- Positive cash-flow hedging into the long-term
- Robust capacity market pricing in most concentrated load pocket in US
- Long-term access to discounted Marcellus gas

SI-SSA-0015-07931

Market Review: Long-term fundamentals remain sound

- Environmental restrictions may tighten market
- Insufficient gas infrastructure continues to place upward pressure on fuel prices during seasonal peaks
- Market liquidity remains weak beyond 2015

SI-SSA-0015-07932

F=FORWARDS AS OF 8/13/2014, 2014F INCLUDES HISTORY AND FORWARDS

Market Review: New generation in PJM not keeping pace with coal retirements

Cumulative Generation Retirements*

Forecast Reserve Margin (PJM January 2014)

- PJM forecasts a declining Reserve Margin through 2018, which may improve forward prices
- Brattle estimates energy prices could rise at least $3-4/MWh from today's prices

SI-SSA-0015-07933

PSEG

*PJM AS OF FEBRUARY 20, 2014
SOURCE OF CHART DATA: PJM

Competitive Advantage: Heat Rate Diversity & Flexible Dispatch

SI-SSA-0015-07934

Competitive/Sustainable Advantage:

PSEG expanding supply of low-cost Marcellus gas

Proposed PennEast Pipeline Project

- PSEG plans to invest $100 - $120 million in the to-be-constructed PennEast Pipeline, a 105.5 mile pipeline that would bring gas from eastern Pennsylvania to New Jersey
- PSEG ER&T would contract for approximately 125mmcf/day of PennEast's 1 bcf/day capacity under a 15-year contract; other project sponsors have committed to offtake ~500mmcf/day
- PSEG and its customers would benefit from the displacement of higher-cost, Gulf Coast gas supply
- Targeted in-service date is November 2017

SI-SSA-0015-07935

Industry infrastructure build through 2018

to meet demand growth

New investment will increase pipeline takeaway capacity from low-cost Marcellus and Utica shale basins to meet demand in the South and Midwest

SI-SSA-0015-07936

Sustainable Advantage: Forward power curves indicate PSEG Zone retains premium price

Growing importance of the winter peak has influenced PJM reliability planning … with supportive implications for price formation

SI-SSA-0015-07937

PSEG

* MARKET AS OF OCTOBER 22, 2014. SOURCE: ICE/BROKER QUOTES.

Competitive Advantage: PSEG's extensive gas asset portfolio gives unparalleled access to Marcellus Shale gas

SI-SSA-0015-07938

Competitive Advantage: ~25% of Power's gas for generation comes from Marcellus

- Our combined cycle and peaking assets have been able to take advantage of locational gas price volatility driven by production and logistical constraints
- Lower cost shale supply provides additional savings during periods of lower residential gas demand

SI-SSA-0015-07939

PSEG

*AS OF 8/13/2014

Competitive Advantage: Locational advantage from short term basis volatility

PS Zone Annual Basis to PJM-W

PS Zone Day Ahead On Peak Monthly Basis to PJM-W

PS Zone Real Time On Peak Hourly Basis to PJM-W

- Annual basis benefits baseload units
- Intermediate units flexible to seasonal opportunities
- Combined Cycle and Peaking units positioned to optimize daily and hourly volatility

SI-SSA-0015-07940

ANNUAL FORWARD (F) BASIS TO PJM-WEST AS OF 8/13/2014. 2014F INCLUDES HISTORY AND FORWARDS.

Sustainable Advantage: BGS Auction provides excellent opportunity to forward hedge our generation

BGS sales account for about a quarter of our forward portfolio of hedges

SI-SSA-0015-07941

$/MWH; BGS PRICES REFLECT PSE&G ZONE; RESULTS FOR 2012-2014 ARE THE NEW BLENDED PRICES BEGINNING JUNE 1, 2014.

Sustainable Advantage: Hedging strategy designed to protect gross margin while leveraging the portfolio

		Oct-Dec 2014	2015	2016
Base Load (Nuclear and Base Load Coal)	Volume TWh	8	36	36
	% Hedged	100%	100%	55-60%
	Price $/MWh	$49	$50	$49

PJM Capacity Performance Proposal:
aims to increase electric supply reliability

- **Capacity performance (CP)** proposal places **emphasis on reliability** given observed outages during times of extreme weather stress and anticipated retirements; Imposition of higher penalty structure to **encourage availability**

- **Generator availability/flexibility is key** objective for units with secure fuel supply capable of meeting operating standards

- **Elimination of 2.5% holdback**, making all capacity resources annual products, net CONE bidding safe harbor, and the change in the demand curve (VRR) support price formation and improve resource adequacy

December 2014
PJM Expected to File
Final CP Proposal

February 2015
Expected FERC Response
to PJM CP Proposal

May 2015
RPM Auction for
2018/2019 Capacity Year

SI-SSA-0015-07944

PSEG Power's Value Proposition

- Well-positioned fleet of merchant generating assets concentrated in PJM market
- Advantaged by low cost structure, fuel diversity and dispatch flexibility
- Low environmental capital requirements
- Capacity uprates to enhance value of nuclear and combined cycle stations
- Consistent hedging strategy recognizes asset flexibility
- Continue to meet commitments and to provide free cash flow

SI-SSA-0015-07945

PSEG FINANCIAL REVIEW & OUTLOOK

PSEG

We make things work for you.

SI-SSA-0015-07946

Strong financial position to support our business initiatives

2013 Financial Position

- ✓ Exceeded upwardly revised 2013 earnings guidance
- ✓ Pension fully funded
- ✓ Strong balance sheet and upgraded credit ratings

2014 and Beyond

- ✓ Continued positive earnings trend in 2014
- ✓ Controlled O&M growth
- ✓ Balance Sheet and Cash Flow support investments without equity issuance
- ✓ Growth in PSE&G investments with contemporaneous returns
- ✓ Diversified Power assets with a balanced hedge profile
- ✓ Growth in PSE&G Cash from Operations, with continued significant Cash from Operations/FFO at Power
- ✓ Increased Dividend by $0.04 to indicative annual rate of $1.48 for 2014
- ✓ Opportunity for consistent and sustainable dividend growth

SI-SSA-0015-07947

Exceeded upwardly revised guidance

in both businesses

PSEG Operating Earnings		
$ Millions (except EPS)	**2012**	**2013**
PSE&G	$528	$612
PSEG Power	$663	$710
Other	$45	($13)
Operating Earnings	$1,236	$1,309
*Operating EPS**	**$2.44**	**$2.58**

Upwardly Revised Earnings Guidance (Nov 2013)	**$2.40 - $2.55**
Earnings Guidance (Feb 2013)	**$2.25 - $2.50**

*SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS.

NOTE: 2012 OPERATING EARNINGS RE-STATED FOR TRANSFER OF ASSETS FROM PSEG HOLDINGS TO PSEG POWER.

SI-SSA-0015-07948

In 2013, PSE&G invested over $2B, using $1.4B of internally generated cash flow and debt, while maintaining its capital structure

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$220 MILLION.

SI-SSA-0015-07949

In 2013, Power's Free Cash Flow supported PSE&G's capital program and shareholder dividend

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$220 MILLION.
(2) OTHER CASH FLOW INCLUDES HOLDINGS NET CASH FLOW AND PARENT CASH.

SI-SSA-0015-07950

PSEG growth spend, including Energy Strong, of ~$6.4B represents ~76% of total investment

E = ESTIMATE; CAPITAL INCLUDES AFUDC AND IDC.

SI-SSA-0015-07951

PSE&G's Capital Program drives double-digit growth in rate base and earnings over the 2013 to 2016 period

SI-SSA-0015-07952

PSE&G's Cash from Operations and Power's Free Cash Flow support growth investments without the need for new equity

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$500M FROM 2014-2016
(2) OTHER CASH FLOW INCLUDES PSEG LI, HOLDINGS NET CASH FLOW, CASH, AND SHORT TERM DEBT
E = ESTIMATE

SI-SSA-0015-07953

Power's key credit metric supports incremental investment opportunities

- Increased contribution to earnings from the more stable regulated business allows us to reset Power's FFO/Debt threshold from 35% to 30%, providing additional financial flexibility
- Power's annual Cash From Operations and Funds From Operations each average ~$1.1B over the 2014 to 2016 period supported by:
  - Capacity Revenues
  - Hedged Generation
  - O&M Control
- Financial strength can be used to pursue future growth in both businesses beyond current plans

SI-SSA-0015-07954

Pension: Our Long Term Asset allocation strategy resulted in a ~17% increase in pension assets during 2013

PBO Funded Ratio	83%			Fully Funded Pension →	106%

SI-SSA-0015-07955

Our Pension Management is expected to result in pension income in 2014 and over the planning horizon

Dan Cregg *Public Service Enterprise Group Incorporated - EVP & CFO*

PRESENTATION

Ralph Izzo ***- Public Service Enterprise Group Incorporated - Chairman, President & CEO***

Good morning everyone. Thanks for joining us. I'm Ralph Izzo, Chairman, President and CEO of PSEG.

I'm joined today by seated up front with me here is Dan Cregg, our Executive Vice President and Chief Financial Officer. Also in the audience are Kathleen Lally and Carlota Chen, our Vice President and Manager of Investor Relations, who will also be available to answer any questions you might have.

So as is usually the case I will begin with our forward-looking statements just of course cautioning you that some of what I'll be talking about are predictions. I won't read it for you in detail. And also I'll talking a little bit about operating earnings which are not GAAP numbers and we do have a reconciliation for you in the back of the presentation.

So I'll start with an overview of the Company. For those of you who are a little less familiar with Public Service Enterprise Group we consist primarily of two operating companies, Public Service Electric & Gas which is a regulated electric and gas transmission and distribution system serving New Jersey. It's the largest regulated utility in New Jersey.

Primary characteristic that I'll feature and describe for you today is a pretty ambitious $12 billion capital program in the next five years that will result in a compound annual growth rate of its regulated rate base of approximately 11%. I post here for you some numbers in terms of how we ended the year 2014 which are available for your reading.

Operating alongside PSE&G is PSEG Power, our unregulated competitive generation business. Its hallmark and value proposition is its advantaged environmental and geographic location as well as an asset mix, a portfolio of assets that are characterized by fuel diversity and technological diversity. By that I mean a combination of peaking load following and highly reliable baseload generation.

As I look at the strategy we've deployed over the past few years it really does begin with our employees. By setting clear expectations, making sure they have the ability to succeed and explain why we do the things that we do we produce a very engaged workforce focused purely on two words: operational excellence.

And that excellence is demanded whether it's in our nuclear plants, our fossil plants, our field operations in the utility or our support functions, IT, accounting and a whole myriad of others. We absolutely believe and we've demonstrated that with that operational excellence comes solid financial performance. With that solid financial performance comes the opportunity to redeploy capital in a disciplined manner.

The result of that strategy has been three years of earnings growth, earnings per share growth, an increased rate of growth of our dividend and what we believe is a best-in-class utility growth story as well as an increased competitiveness of our fossil fleet through the expansion of some of our combined cycle gas turbines and more recently plans to build new combined cycle gas turbines.

As I take a look at the capital program both past, present and future, you'll see that over the past five years we deployed a little over $12 billion in capital, approximately 78% of that at the utility with the lion's share of the utility investment in transmission. A significance of that is that the transmission investment is FERC regulated and recovered through a formula rate proceeding which minimizes the degree of regulatory lag. We basically file for our rates in October and three months later in January those rates are made actual for us subject to prudency review of course but not subject to ROE review.

THOMSON REUTERS

SI-SSA-0015-07979

As we look ahead for the next five years we've expanded that capital program by about 20% for both the utility and PSEG Power. And you can see the utility capital program now approaching $12 billion, still with the lion's share being in transmission of about 60% and power now having some growth opportunities as well that I will go into in a few moments, mostly in the form of new gas-fired power capability.

Approximately 70% of the utility's capital program receives some form of contemporaneous return. So the 60% due to transmission and an additional 10% through various clauses that have been negotiated with the state of New Jersey through regulatory proceedings. The remaining 30% of the utility capital program is modestly in excess of depreciation and the result of which means that we have very little capital that's deployed that's subject to regulatory lag.

The most recent approval that we received in the form of a contemporaneous return mechanism in New Jersey, I need to qualify that. The most recent program that we have come to an agreement with the staff on and we expect to have approved in six days next Monday is on the board of public utility docket is a gas system modernization program which has been approved for $900 million in expenditures over the next three years.

PSE&G has what we believe is the largest cast-iron main system in the nation. It is a low-pressure system so safety is not the issue; however, chronic leaks, methane emissions, contribution to greenhouse gases and simply excessive O&M expense associated with needing to repair those leaks warrant the replacement of the system.

At a $300 million per year run rate it will take 30 years to replace the system. So it's an ongoing program. It's one which we've had three prior approvals for special clause/track of recovery, this being the most recent one.

And as is listed here the return mechanism is identical to what we had in an energy strong filing that we received approval for in May 2014. And in this particular case we are being allowed a return on equity of 9.75%.

A little over $600 million of the $900 million will be subject to that clause and tracker return. And a little bit over $250 million is expected to be recovered through a standard base rate case that we must file no later than November 2017. And that had been planned for the prior year and half.

If I look at the utilities overall capital program, this is a $12.6 billion that I referred to two slides ago, you can see at the bottom of each bar chart is a significant amount of transmission investment. Just above that is a combination of some special clause mechanisms but mostly maintenance capital on the gas and electric distribution system inclusive of some modest amount of new business. Above that is our Energy Strong tracker mechanism which for those of you who don't recall Energy Strong was born out of the consequences of Superstorm Sandy and a recognition that many of our legacy assets were built in industrial areas which were low-lying areas with respect to possible flood and storm surge consequences and needed to be either elevated or protected from future events.

The piece above the lighter shaded blue is our new gas system modernization program which you see is scheduled to start January 1 of 2016 and then run for three years. And we've been quite active at PSE&G in some nontraditional programs which are largely a combination of rooftop solar, grid connected solar and energy efficiency. Just prior to the approval of the $900 million for the gas program we received approval for a $95 million energy efficiency program inclusive of the opportunity to recover fixed costs associated with the distribution system and the lack of throughput resulting from an energy efficiency program.

I will point out that as has often been the case in the past this six-year profile, current year plus five future years, has been pretty consistent over the last eight years. It just keeps shifting out in terms of the expectations for future growth. That's not a guarantee that we'll continue to add 20% to the capital program with each annual revision of the five-year plan.

However, I do think that one should expect that the out years where there's a forecasted decline is really more reflective of the fact that it's difficult to predict what the needs will be out there. But suffice to say in a fairly mature infrastructure such as ours infrastructure replacement for preservation of reliability is something that is likely to continue.

If I switch over now to PSEG Power you can see that we had some good news in terms of market design and market rules. The best example of that has been the most recent capacity auction run by PJM, otherwise known as the RPMBRA for reliability pricing model based residual auction, in which PJM has modified the rules whereby the penalties for an asset that has is the recipient of capacity revenues are great much increased if the capacity asset does not perform at critical points in time. The risk premium associated with that greater penalty was reflected in a fairly robust price realized by market participants inclusive of PSEG Power.

THOMSON REUTERS

SI-SSA-0015-07980

We're also encouraged by the fact that FERC is now giving much-needed attention to the issue, not so much prevalent in capacity markets but in energy markets, around price formation. And this is merely the fact that there have been a substantial number of cases where for reliability's sake units have been dispatched with specific uplift payments that have not been available to all market participants.

And we believe this is part of the well discussed in well-known hidden money problem that FERC is stepping up to address. And I'm sure you're all aware of the ongoing interest at the Supreme Court of the United States revolving the proper location for the regulation of demand response where most recent court decisions have we believe correctly suggested that these are retail services and not the purview of FERC and therefore more than likely not eligible for wholesale power capacity or energy pricing opportunities.

In addition to just those kind of progressive or positive outcomes in terms of market design we've had some good news specific to PSEG Power. We have been adding capacity at our Hope Creek and Peach Bottom nuclear units. We have been adding capacity at our existing combined cycle units, notably Linden, Bergen and we'll do Bethlehem Energy Center I believe in the coming year and a half.

And most recently we've announced the acquisition of a to-be-built plant in Prince George County, Maryland known as the Keys Energy Center as well as having cleared in the most recent PJM auction a new combined cycle unit known as the Sewaren unit in Woodbridge, New Jersey. So some combination of recent brownfield site newbuilds, primarily in the form of simple cycle gas turbines at Carbon and Carney, these uprates at our nuclear plants and the planned construction at Keys and at Sewaren have taken an already competitive fleet and truly enhanced its competitive position, particularly with access to low-cost Marcellus Shale gas.

A little bit more color on the 1,300 megawatts of combined cycle gas turbine plant for Maryland and New Jersey, the Keys facility is 755 megawatts. Expect it to be in operation in 2018.

The Sewaren facility is 540 megawatts. That will replace an existing 560 megawatts of an old steam unit at the Sewaren site which quite candidly was not a candidate for bidding into a CP type market just given the age and the reliability of the unit. So these two plants will both be quite efficient units with heat rates in the 6,500 to 6,700 BTU per kWh and therefore jump pretty much to the front of the dispatch queue.

As we look at earnings for this year we recently adjusted the lower end of our guidance and took it up $0.05. We're now forecasting earnings in 2015 of $2.85 to $2.95. If one were simply to look at the midpoint of that earnings range you would see a third year of consecutive growth in earnings per share.

In addition to the earnings growth that we've realized you see a continued growth in the proportion of the earnings coming from the regulated utility. And with the capital program designed as I've tried to describe to you you should continue to expect an increase in the regulated component of the total earnings of the Company. In addition to being a solid earnings producer PSEG Power enjoys a very healthy free cash flow component which is used to provide the equity needs of the utility in its $12 billion-plus capital program over the next five years.

With that I'm going to turn the podium over to Dan Cregg. And then I will rejoin Dan later on for any questions you might have.

Dan Cregg - ***Public Service Enterprise Group Incorporated - EVP & CFO***

Thank you, Ralph, and good morning. I will touch a little bit on some of the financial aspects of the business in my remarks and I will start with our operating earnings.

So our recent earnings call we reported earnings year to date of $2.41 versus $2.27 in the year-ago period. So about a 6% increase. And I'll touch more on the individual Company contributions to that in a slide in a minute but what that means from a year-end operating earnings forecast is the following.

For PSE&G we see an increase. So we were previously at $760 million to $775 million of operating earnings and that number has been increased to $785 million to $805 million of operating earnings at year-end.

And Power has slid down to the lower end of its prior range. And their current year-end guidance is $620 million to $650 million of operating earnings for the year.

THOMSON REUTERS

SI-SSA-0015-07981

And as Ralph mentioned we're at $2.85 to $2.95 of operating earnings for PSEG, the parent company. And that's an increase from where we were earlier in the year as Ralph mentioned.

Related to the capital program it's been a pretty busy year for identifying opportunities. And Ralph talked about the major elements that we see on both sides of the business, both on our gas system as well as at Power. So I won't go further into those.

Further down the slide other elements worth mentioning and repeating here are PJM's capacity performance market. So first time we've had that change in the market at PJM, it's been a long-standing capacity market but more rigorous expectations.

And I think that it was a well done auction completed in August of this year. And I think there was both discipline on the market generator side as well as a good structure that was put in place.

And also the FERC note around price formation more to come there. But I think really good focus on the energy side of the business. So good to see both the capacity side and the energy side being addressed and improved as we walk forward.

Last point here is the reliability one award for PSE&G. So this is the 14th straight year that PSE&G has been named the most reliable utility in the Mid-Atlantic region. Something we're very proud of and the result of a lot of good hard work from the people at the utility side of the business.

So a little more color on the results year to date and I'll start on the left-hand side at the utility. $0.13 increase year over year and the first piece that you see there is transmission. You previously saw from Ralph's slide all the CapEx that has gone into that business and the continued investment there worked its way into our earnings stream through that $0.10 of earnings that we saw through the first three quarters of the year.

A big important part of growth program. And it has served us well and has been a pretty consistent provider of earnings increases over the year.

Next both on the electric and gas side we have seen increases in volumes of demand, adding $0.07 throughout the year. Some of that weather and some of it the programs that Ralph talked about as well coming through from an earnings perspective.

On the O&M side we see about $0.03 of downdraft, about $0.01 a quarter for pension. So that is a most entirely the pension expense going through the utility side of the business, we'll see something similar on the Power side. And then finally that last item, a $0.01 down, that's just the absence of an uptick from last year related to taxes.

Moving over to the Power side a $0.01 to the good, $0.22 of recontracting and lower cost to serve. So gas prices coming down, some of our hedges coming into play have increased our results by $0.22, largely offset if you go down that column a little bit by a 21% reduction in capacity.

Now recall in PJM where most of our assets are that capacity market is a three-year forward market. So we know three years in advance what those prices are going to be. So this impact that you see here is the effect of prices that have come through as we've gone year over year in the auction and frankly an uplift that we've have seen in the prior period coming back to more regular capacity prices.

Beyond that some help from gas sendout in the winter and some higher volumes in the summer helped us to the tune of $0.06 and then the O&M I mentioned a little bit about the pension earlier. Some of that is pension coming through roughly half and then the other is mainly outage timing. So some of our nuclear outages can bridge different quarters depending upon the timing of that outage, so we would expect to see that reverse out as we go to the fourth quarter and that is not an uptick in a run rate O&M spend. And then finally just $0.01 on D&A.

So moving on to the balance sheet I think if you look at this slide it tries to lay out two different timeframes. And during the 2010 to 2014 timeframe we talk about transforming our business mix and I might say even that simplifying our business mix. So we had some non-core assets at our energy holdings portfolio, those have been monetized and we put $12.6 billion to work towards investments.

At the same time we were able to improve our credit ratings and during a low price environment increase the dividend. So a little bit of a simplification of the business over that timeframe which sets us up for the bottom of the slide where we talk about the following five years. So continue dividend growth; if you look at 2015, I'll talk a little bit more about the dividend that we saw there. And Ralph showed in those pie charts is a $15.6 billion investment program that we are embarking on through 2019.

So good growth opportunities for the business and the financial capacity to support further expansion. I'll touch on that on the next couple of slides.

THOMSON REUTERS

SI-SSA-0015-07982

This slide here is a five-year look at sources and uses. So if I start on the left-hand side of this page the cash from ops at the utility has eclipsed Power's cash from ops as you take a look at where we've been. And that's not because of Power's cash from ops going down, that's because the utility's cash from ops coming up. So a good answer in that regard.

Ralph talked about the contemporaneous return we have on the utility side of the business. So 70% of that capital that we're putting to work is providing a return on a contemporaneous or near contemporaneous basis either from transmission or from the clause recovery mechanisms that are in place. So real important for the utility from that perspective when you look at cash from ops that it's getting a return on its investments on a fairly quick basis.

On the debt side you see on the bottom of the left-hand side PSE&G's net debt. So that just supports the growth that we're seeing at PSE&G and again think about that regulatory cap structure, 51.2% equity on the PSE&G side of the business. So we will match the 48.8% debt with that 51.2% and we will have the debt issuances that you see there.

And then blast at Power you see a slice in the middle of parent long-term debt. So we currently do not have parent long-term debt but would intend to move in that direction in the future. Power seeing incremental investment opportunities will have more of a use for its cash. So the opportunity to invest at the parent level and the investment capacity that I'll talk about again in just a second is there to help the business as a whole.

And on the right-hand side you can see the strong investment opportunities that we have in place for both companies. And at the top very, very important is our dividend allocation that we will make to our shareholders.

So I'll back talk a little bit about the source of funding. And we'll start on the power side of the business and take a look at Power's credit metrics.

So we seek to maintain a floor of FFO to debt of 30% at the Power business. That's consistent with the ratings that we have.

And as you can see from the bars on the left-hand side here we have comfortably exceeded that in each of the last couple of years. And the last bar shows that from 2015 to 2017 we would intend to be at roughly 50% FFO to debt. So still comfortable margin there, and that's derived from a $1.6 billion funds from operation at the Power part of the business. So Power, very good cash generator and very strong credit metrics.

What that means from an investment capacity standpoint is that there is incremental headroom above our credit stats that we can utilize at the Power level. And so looking at the blue bar on the left-hand side you can see that with a 50% current FFO to debt forecasted for the next three years and with a 30% floor we have incremental headroom and that headroom shows up on the right side of this graph in the green bar. So room to invest on the Power side and debt capacity to do so.

Also at the Power side on the parent side of the business a similar phenomenon happens as well. So FFO to debt at 27% at the parent is compared to a minimum threshold given the regulatory mix that we have as well as the credit ratings that we have.

So more room at the parent to borrow as well to create investment capacity and that manifests itself on the right-hand side in the gray bar. So all in all if you look on the right-hand side about $2 billion of investment capacity that we see coming out of the excess headroom that we have. Layering that in it could be spent on the Power side of the business and that really is on a dollar for dollar basis.

But recall at the utility I talked about roughly a 50/50 cap structure. So that funding can be used at the utility as equity and utility and that equity can and will be matched by borrowing at the utility to maintain that cap structure. So to the extent that the funding is used at the utility it's a two-for-one ratio that would increase that investment capacity further.

So in summary what we see is another year of growth in 2015. Operating earnings guidance as you can see on the bottom of the slide began the year $2.75 to $2.95 and we've pulled a nickel off the bottom of that range twice. So we stand today at $2.85 to $2.95 which would be the third year of operating earnings growth for the Company.

Another slide that we wanted to talk about as we look forward into 2016 is a sensitivity of different elements that can impact the business. And as you go across the top of the slide these are a lot of sensitivities that we have shown in the past. There is not a lot of information here.

THOMSON REUTERS

SI-SSA-0015-07983

Just trying to give an indication as to what different elements would mean from either a market change or from incremental investment at the utility. I will call your attention just to the bottom for a second as we get to this time of year and we think about the pension expense moving from year-to-year and different companies have different exposures in that regard. With us we did a calculation in the third quarter and we look at our year-over-year pension expense and we estimated somewhere in the range based upon that third quarter timeframe of about a $0.02 to $0.03 increase on the pension expense.

You can see three elements of building blocks if you will that will impact that expense. One is return that we will see from the pension funds, the second is the discount rate that we would use in discounting the liability that we have and the third is a series of actuarial assumptions that come into play as well.

So that actuarial assumption looks like it will add about $0.02 to the good year over year. But again thinking about the third quarter and where the financial markets are we saw a downturn in our returns. So for every 1% of a change in our return on our investment base is about $0.01 down and the discount rate is $0.01 up for about every 15 basis point change.

So the sum of those at the third quarter resulted in about a $0.02 to $0.03 downdraft. We've seen some improvement as we've gone through the years since then but obviously that discount rate and those returns will all be finalized at year-end. And we'll manage all of that against the backdrop of a larger O&M program.

And last but by no means least the dividend. So you can see we've had a growing dividend over the last number of years and we're currently at $1.56. It's a very, very important part of our value proposition to our shareholders and I think what we've said here is exactly what we need to say, it's a consistent, sustainable dividend growth given contributions from both sides of the business.

We've overlaid here for you the utility EPS, just to give a frame of reference it is by no means the only thing we look at in determining that the dividend is going to be for next year. By taking a look at what the green line shows we were about at a payout ratio that's equivalent to our utility earnings and about 854% payout ratio across all of enterprise.

So a host of factors goes into that look every year. As we move into February of this year with our Board of Directors we will discuss what our dividend will be on a go-forward basis. But we anticipate consistent and sustainable dividend growth.

And with that I think we will open up to questions.

Ralph Izzo - ***Public Service Enterprise Group Incorporated - Chairman, President & CEO***

I think we have another few minutes available. So if there are any questions, Dan and I would be happy to try and answer them.

I believe we also have the slideshow available for folks in terms of booklets that can be handed. Out and we do have some thicker books if folks want more detail in the rear. Yes, there's a question here.

QUESTION AND ANSWER

Unidentified Audience Member

Yes, Ralph, how do you think about the investment decision to buy new assets in Power? And will you look to buy additional assets in Power and what type of geographic focus will you have?

Ralph Izzo - ***Public Service Enterprise Group Incorporated - Chairman, President & CEO***

Yes, thanks, Frank. So we have consistently looked for purchasing existing or newbuild opportunities. We deploy the same valuation technique. We don't have a price curve for newbuild and a price curve for existing assets.

THOMSON REUTERS

SI-SSA-0015-07984

There are some differences obviously, typically the new assets have a better heat rate and therefore a lower operating cost and they have a longer life so there's a few years of value creation when you do the discounted cash flow calculation. But I think what was unique in terms of our ability to succeed in making the Keys acquisition versus our consistent inability to succeed in making other acquisitions is it was probably a smaller pool of competitors given that there was construction risk associated with this. And whether it's our transmission program or our uprates at the nuclear units or our simple cycle gas turbine builds we have a lot of confidence in our team's ability to manage the construction.

The interest in the Keys facility was a long-standing interest that we've had in having an asset in the PJM West region to give us a little bit more flexibility in managing basis risk differentials between the PS zone and PJM West. That has been an evolving relationship over the past five years from the heady days of the 2008 era where PS enjoyed a $20 to $25 basis differential to now on an annualized basis it looks kind of flat. But that's a very misleading characterization because as you know in the winter it tends to blow out positive and then in the other nine months of the year it gets somewhat negative.

So Keys will give us an opportunity to have a physical presence in PJM West, actually geographically located in Maryland but somehow that gets scooped into PJM West and we like that portfolio management aspect of it. We've been looking to purchase assets down there. I think we hit on this one because of the construction risk did not intimidate us the way it may have intimidated others.

Sewaren is quite a different story. That's a case where there isn't enough duct tape in the world that could have kept the old unit viable for the new CP market. So we were faced with a retirement there.

You're familiar with the PS zone which is where Sewaren it is. It's a fairly tight zone. Extracting 560 megawatts would have tightened that zone further.

When we ran the numbers we said wow, attractive regional spark spreads due to Marcellus gas, nice capacity prices, somebody is going to build here. That will cannibalize some of our older combined cycle units.

It's one of those pills that you have to just say, okay, who's going to do the cannibalizing, somebody else or us, and we said it's going to be us. So in general though we're not fans of introducing new supply given paltry demand growth that we see but these were two special situations that made sense.

We have been public about the fact that we bid and did not succeed at building a new unit at Bridgeport. We will bid that new unit again in February. That's really born out of the fact that you have some supply retirements in the New England region.

Unidentified Audience Member

Ralph, you in talking about Power during your presentation you talked about potential rule changes that you would like and I put that in the category of divinely to be wished for. I assume that there are some things in the same category as far as the DPU is concerned and the rate case that you won't file for another two years. And I wonder if you could elaborate overall because predicting ahead is something that you all are known for and have done very successfully?

Ralph Izzo *- Public Service Enterprise Group Incorporated - Chairman, President & CEO*

Thank you. So in Power's case as you correctly pointed out it's capacity markets and price formation. Feel pretty good about capacity markets, price formation yet to be determined.

In the case of the utility there is a very clear direction we'd like to encourage regulators to head. As I think about the three things that have huge financial and operational implications at the utility it's capital deployment, load growth and O&M.

The reality is load growth is going to be less than half a percent. We're a very service economy-oriented part of the nation, highly mature service territory. There's only so many additions you can put on a house, so load growth combined with appliance efficiencies and various other things is going to be modest.

THOMSON REUTERS

SI-SSA-0015-07985

I am so proud of our team's O&M cost control. But their ability to keep that O&M cost control to 1% to 2% is probably a best-in-class type of thing we can do on a compound annual rate which means your load growth is not going to make up for your O&M growth which means you have to go in four rate cases depending upon what you do with your capital.

We're not a believer in shrinking the rate base. We have an aging infrastructure that needs reinvestment in order to preserve the reliability people are accustomed to. So I'd like to get to a future where we simply agree in advance, we will come in for a rate case every seven years, every five years, that will make up for the disconnect between rate, between load growth and O&M.

But in the intervening years we're not going to deploy capital and let it be subject to a seven-year lag. What we like to do is have programmatic approval of where we would deploy capital and then have trackers applied to it. So everybody has predictability and there's so many benefits to that, not only from an investment point of view but from a workforce point of view.

And we have a 30-year gas pipe replacement challenge ahead of us getting approved 18 months at a time. It's been approved four times but even though it's been approved four times we use contractors, we're not training people to become permanent employees. We're not training kids in community colleges; even though they could have a 30-year career doing this, when you're getting yes every 18 months we're just not willing to make that kind of long-term commitment to people.

So I think if you have trackers that say okay, during these five years here are the things we want you to do, raise your substations, replace your gas pipe, improve your SCADA, all those things are reliability focused, every five years you're coming in here so we're going to take a closer look, maybe every year we will take a light look through some sort of performance standards. And I just think you enhance your predictability, you enhance our ability to invest in people and everyone's better off. So that's the kind of discussion we want to have with regulators.

Unidentified Audience Member

It's always good to hear a little bit about regulation. I'm a former chair of the Pennsylvania commission. I want to make sure I understood the good news.

Did you just say that you were going to come in about every five years which is good? And second did I also understand you to say that returns on equity are somewhere in the 9.7%, 9.8% range in New Jersey?

Ralph Izzo - ***Public Service Enterprise Group Incorporated - Chairman, President & CEO***

So our most recent rate case was 2010, so our base allowed return is 10.3%. But as interest rates had come down from that time as we went in for separate clauses the allowed return we agreed to for those clauses varied from the 10.3%. So we have a couple of clauses that are at 10% and the most recent one was at 9.75%.

Unidentified Audience Member

I think you more or less answered what my next question was going to be. Just as a follow-up on what you divinely hope for in the next few years, 9.75% as interest rates climb will probably climb or should probably climb. Do you think that the Board is likely to recognize that or is there something you can do to have them recognize that?

Ralph Izzo - ***Public Service Enterprise Group Incorporated - Chairman, President & CEO***

I think the answer to that is yes. Of course we know that there's not a 1 basis point correlation between rising rates and rising allowed ROEs and that's a good thing because if there had been as rates had come down I don't want to conjecture with the ROEs might have done either. So historically we've looked at anywhere from 600 to 800 basis point differential between the 10-year Treasury and allowed ROEs.

THOMSON REUTERS

SI-SSA-0015-07986

So we have to file no later than November 2017 between now and if we did file at the last allowable date rates would be effective January 1 of 2019. I can't predict what's going to happen next week let alone what's going to happen over the next three years.

So I do think that they would recognize an increase in the interest rate environment. I just wouldn't want people to think that the 10-year Treasury just moved 25 basis points so we're guaranteed a 10% ROE right now. I don't think that's the case.

And our hostess is very efficient at flashing all sorts of threatening signs at me in terms of how much time I have. And knowing how long-winded I am with answers we were under five minutes, so I will simply thank you for your participation today and hope to see you soon.

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and transmission planning,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as for transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies, and
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Income from Continuing Operations/Net Income. Operating Earnings exclude gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP.
PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends.

PSEG is presenting Adjusted EBITDA because it provides investors with additional information to compare our business performance to other companies and understand performance trends. Adjusted EBITDA excludes the same items as our Operating Earnings measure as well as income tax expense, interest expense, depreciation and amortization and major maintenance expense costs at Power's fossil generation facilities. This information is not intended to be viewed as an alternative to GAAP information. The last three slides in this presentation (Slides A, B and C) include a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings and Adjusted EBITDA with a reference to that slide included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

PSEG OVERVIEW

Ralph Izzo

CHAIRMAN, PRESIDENT AND CHIEF EXECUTIVE OFFICER

Daniel Cregg

EXECUTIVE VICE PRESIDENT AND CHIEF FINANCIAL OFFICER

PSEG

We make things work for you.

SI-SSA-0015-07991

PSEG's Strategy

Investment program delivering results

Operational Excellence: Maintaining reliability and improving performance as we control costs in low price environment

Financial Strength: Strong financial position supports investment program and dividend growth

Disciplined Investment:
- Balanced business mix
- Robust pipeline of opportunities

Results:
- Project 3rd year of EPS growth
- Increased rate of dividend growth
- Best in class utility growth rate
- Addition of efficient CCGT capacity enhances market position
- Upside potential from power markets

SI-SSA-0015-07992

Two complementary businesses

A stable platform, each with growth opportunities

Electric & Gas Delivery and Transmission	Regional Competitive Generation
Strategy: Investments aligned with public policy and customer needs	**Strategy:** Investment program enhances competitive position with addition of efficient CCGT capacity
Value Proposition: A $12 billion infrastructure program – focused on transmission – produces double-digit rate base growth through 2019	**Value Proposition:** Provides substantial free cash flow in current environment and upside from market rule improvements
2014 Assets $22B Operating Earnings $725M	2014 Assets $12B Operating Earnings $642M

SI-SSA-0015-07993

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2014.
PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT AND PSEG LONG ISLAND ACTIVITY.
SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS.

Delivering on commitments and realizing growth

Operational Excellence	• PSE&G: Mid-Atlantic Reliability Award (14th consecutive year), top ranked among eastern electric and gas utilities in business customer satisfaction • PSEG Power: Record output from combined cycle units • PSEG Long Island: Demonstrated management and integration capability through a successful transition in first year • PSEG: Cost-control benefits continue
Financial Strength	• Updated operating earnings guidance for 2015 to $2.85-$2.95 per share from $2.80-$2.95 per share • Cash flows and business mix support strong credit ratings and ability to fully fund robust investment pipeline without issuing new equity • Increased rate of dividend growth in 2015
Disciplined Investment	• PSE&G ✓ Capital program = double digit rate base growth over 5-year period (2015-2019) with increased investment in Transmission; Electric and Gas distribution; and Gas System Modernization Program • Power: Keys & Sewaren CCGTs, uprates, PennEast Pipeline, and Solar Source

SI-SSA-0015-07994

Robust pipeline of investment opportunities

supports >20% growth in capital spending over the period

PSEG Capital Spending

2010 – 2014: $12.6 Billion | **2015E - 2019E*: $15.6 Billion**

*INCLUDES ALL PLANNED SPENDING. **ENERGY STRONG EXCLUDES RISK AND CONTINGENCY. ***POWER CAPITAL SPENDING EXCLUDES NUCLEAR FUEL. ****INCLUDES PENNEAST PIPELINE EQUITY INVESTMENT OF $0.1B. E=ESTIMATE. DATA AS OF OCTOBER 30, 2015.

SI-SSA-0015-07995

Balance sheet strength supports capital allocation

Timeframe	Actions taken
2010 – 2014: Transformed business mix	• Applied $12.6 billion towards investments • Improved credit ratings • Monetized Energy Holdings' portfolio • Strong balance sheet sustained during period of low power prices, while increasing the dividend
2015 – Forward: Strong financial position supports continued growth	• Increased rate of dividend growth in 2015 • $15.6 billion investment program through 2019 • Gas System Modernization Program settlement of ~ $900 million of capital investment through 2019 • Financial capability supports further expansion of the current capital plan

SI-SSA-0015-07996

PSE&G's investment program

Meeting public policy goals and customer needs

*SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/ NET INCOME TO RECONCILE TO OPERATING EARNINGS.

SI-SSA-0015-07997

Containing customer bills while investing in the system

PSE&G Typical Residential Customer Bills*

- PSE&G customers' combined electric and gas bills declined 23% over the period.
- Low gas prices drove rate decreases; in addition, gas customers received bill credits of ~$400 in total from 2012 through 2014.

SI-SSA-0015-07998

PSEG

*FOR ALL YEARS THE BILLING ASSUMES 7,200 KWH FOR ELECTRIC AND 1,010 THERMS FOR GAS ANNUALLY. E = ESTIMATE

PSE&G's robust capital investment pipeline

drives double-digit rate base growth through 2019

- Planned capital spend supports high single digit earnings growth at PSE&G through 2017
- Transmission expected to grow to >50% of rate base in 2019
- Seeking to broaden platform to expand energy efficiency and other investments

E=ESTIMATE

SI-SSA-0015-07999

PSEG Power increased capital spending

by $1.5 billion with addition of new generating capacity focused on improving efficiency and reliability

SI-SSA-0015-08000

*BASED ON CURRENTLY KNOWN AND QUANTIFIABLE ENVIRONMENTAL REQUIREMENTS. E=ESTIMATE.

Power's fleet has the desired attributes to be successful in today's and tomorrow's market

Economic Drivers	Outlook	Combined Cycle	Nuclear	Scrubbed Coal	Peakers	Renewable
Energy Margins	• Low natural gas and energy prices • Robust portfolio of gas pipeline contracts	✓	✓	✓	n/a	n/a
Capacity Markets	• Tightened rules proposed for capacity performance	✓	✓	✓	✓	n/a
Environmental Regulations	• Tighter air emissions standards	✓	✓	✓	✓	✓
Location	• Assets in well-designed markets, premium regions • Opportunities on brownfield sites	✓	✓	✓	✓	n/a
2015 - PSEG Power Total Capacity 11.8 GW		3.3	3.7	2.4	2.3	0.1
2018 - PSEG Power Total Capacity 12.8 GW *		4.7	3.8	2.4	1.8	0.1

- **Largest nuclear site** in the eastern U.S. and ownership in **large, fully scrubbed coal facilities** at Keystone and Conemaugh provide **economies of scale** that enhance energy margins in current low market, and provide for upside potential if prices improve.
- **Dual fuel peakers** meet reliability criteria in capacity markets and provide option value in energy market. Opportunity exists to repower peakers that do not meet NJ HEDD environmental regulations.
- **Combined cycle units Keys and Sewaren, expected to be operational in 2018,** will enhance emissions performance and have a combined average heat rate of approximately 6,800.

SI-SSA-0015-08001

PSEG

*AS OF AUGUST 2015 APPROXIMATELY 1.3 GW UNDER DEVELOPMENT - KEYS AND SEWAREN CCGT UNITS, WHICH ARE TARGETED TO GO INTO SERVICE IN 2018 ALONG WITH RETIREMENT OF OLDER SEWAREN UNITS

Operating Earnings

Disciplined investment program and focus on operational excellence have supported growth

Power's diverse fuel mix and dispatch flexibility continue to generate strong earnings and free cash flow in low price environment

PSE&G's investment program has driven double digit compound annual earnings growth since 2010

SI-SSA-0015-08002

*SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/ NET INCOME TO RECONCILE TO OPERATING EARNINGS. E=ESTIMATE
** 2015 PERCENTS USE MIDPOINT OF UPDATED EARNINGS GUIDANCE AS OF OCTOBER 30, 2015.

Power – Growing value by improving market rules and developing investment opportunities

Value Source	Opportunities and Actions Taken
Improving rules will better recognize value of our fleet	• PJM's Capacity market – 2014 limits on demand response and August 2015 Capacity Performance auction • Demand response treatment at U.S. Courts / FERC • Energy price formation at FERC • Increasing air quality standards via Federal and State regulations
Our footprint provides growth opportunities	• Nuclear and Combined Cycle plant uprates adding capacity • New build Keys CCGT in SWMAAC* (MD) and Sewaren 7 in EMAAC* • Brownfield expansions at existing sites ➢ New peakers built at New Haven and Kearny sites ➢ Continue to explore further opportunities • PennEast pipeline - equity investment and gas portfolio enhancement • ~152 MW** of utility-scale solar, with significant project pipeline • Continue to seek opportunities to expand the fleet

SI-SSA-0015-08003

PSEG

* SWMAAC = SOUTHWEST MID-ATLANTIC AREA COUNCIL \EMAAC = EASTERN MID-ATLANTIC AREA COUNCIL LOCATIONAL DELIVERABILITY AREA WITHIN PJM.

**PROJECT SIZE IN MEGAWATTS SHOWN IN DC (DIRECT CURRENT), AC EQUIVALENT IS 115 MW.

PSEG Annual Dividend

An increased dividend growth rate with potential for consistent and sustainable growth given our business mix and financial position

	2011	2012	2013	2014	2015E
Payout Ratio	50%	58%	56%	54%	54%*

SI-SSA-0015-08004

SI-SSA-0015-08013

A robust pipeline of Transmission

investments focus on reliability improvements and replacement of aging infrastructure

Project Roster	Approved ROE	Program Description	Estimate Up To ($ Millions)	Expected In-service Date
Northeast Grid Reliability	11.93%	PJM baseline project receiving CWIP in rate base treatment	$975	Jun '15 – Dec '16
Bergen—Linden Corridor 345kV	11.68%	PJM baseline project receiving CWIP in rate base treatment	$1,200	June 2018
PJM Regional Transmission Expansion Plan (RTEP) – multiple projects	11.68%	PJM mandated system reliability projects	$1,900	Various
69kV Upgrade – multiple projects	11.68%	Upgrade of 26kV to 69kV	$1,500	Various
Transmission Lifecycle – multiple projects	11.68%	Replacement of aging infrastructure	$1,100	Various
Transmission Hardening– multiple projects	11.68%	Reliability projects focused on system resiliency	$650	Various
Artificial Island	11.68%	PJM Baseline Project	$110-$130*	2019*

* PJM ESTIMATE

Major Transmission programs focus on reliability and replacing aging infrastructure

- PJM's Regional Transmission Expansion Plan (RTEP) identifies system enhancements needed for reliability
- 69kV system upgrades improve system reliability and provide capacity for future growth
- Transmission Lifecycle is an ongoing program to manage transmission asset life to maintain and improve system integrity and reliability
- Transmission Hardening projects focus on increasing system resiliency

SI-SSA-00015-08015

PSE&G is successfully executing on Energy Strong with ~$440M deployed

Program	Approved	Spend thru Sept 2015
Flood Mitigation	$620M	$83M
Electric Contingency Reconfiguration	$100M	$53M
Electric Advanced Technology	$100M	$42M
Gas Utilization Pressure Cast Iron (UPCI)	$350M	$252M
Gas Metering & Regulating (M&R)	$50M	$7M
TOTAL	$1,220M	$437M

SI-SSA-0015-08016

PSE&G has successfully worked with regulators to develop multiple solutions for New Jersey's energy and economic development goals

RENEWABLES
creative solutions to install solar generation

- Solar Loan I – 2008
- Solar Loan II – 2009
- Solar 4 All – 2009
- Solar Loan III – 2013
- Solar 4 All Ext – 2013

ENERGY EFFICIENCY
assisting customers with controlling energy usage

- Carbon Abatement – 2008
- Demand Response – 2009
- Energy Efficiency (EE) – 2009
- EE Extension – 2011
- EE Extension II – 2015

DISTRIBUTION
improving electric and gas delivery infrastructure

- NJ Capital Infrastructure Program 1 (CIP 1) – 2009
- NJ Capital Infrastructure Program 2 (CIP 2) – 2011
- Energy Strong – 2014

To date we have invested over $2B in the above programs

Over $1B ahead in Energy Strong, Energy Efficiency Ext II and Solar programs

Gas System (GSMP) settlement increases investment by ~$900M through 2019

SI-SSA-0015-08017

Extension of PSE&G's award winning Energy Efficiency program

- Energy Efficiency Extension II approved by the BPU in April 2015 will extend the investment and time frame for three previously approved programs already in the marketplace, allowing PSE&G to factor in lessons learned and balance policy issues
- $95M of rate base investment approved at an ROE of 9.75%
- Extends existing programs, two of which have sizable waiting lists:
  - Hospitals
  - Multifamily
  - Direct install – government, non-profit, and small business
- Allows PSE&G to leverage past investments in people, capabilities, systems and processes

SI-SSA-0015-08018

Settlement reached on Gas System Modernization Program for ~$900 million over three years

- Agreement in principle reached with Staff of the NJBPU and the Division of Rate Counsel
- GSMP is the next phase of a long-term, cast iron and unprotected steel replacement strategy
- Three-year program with total capital investment of $905 million, beginning January 2016
  - ✓ The program provides for investment of $650M recovered through a clause similar to the Energy Strong program – with a 9.75% ROE
  - ✓ Additional capital investment of $255M to be recovered in rate case scheduled to be filed by November 2017

SI-SSA-0015-08019

PSE&G continues to receive contemporaneous/ formula rate recovery on ~70% of its investment program

2010-2014 PSE&G Capital Spending by Recovery Method

$9.8B

2015-2019E PSE&G Capital by Recovery Method

$11.8B

PSEG LONG ISLAND

PSEG

We make things work for you.

SI-SSA-0015-08023

PSEG Long Island is focused on improving customer service and reliability

- Provide best-in-class customer service, including building on our new Call Center Technology platform to better serve our customers
  - According to J.D. Power, in 2014 PSEG Long Island showed the most improvement in overall customer satisfaction of any large electric utility, anywhere in the nation
- Work to maintain industry-leading service reliability
- Improve every aspect of the storm response process
  - Leveraged our new Outage Management System to improve storm logistics and outage coordination
- Contributed $0.02* to PSEG's earnings per share in 2014, as expected

SI-SSA-0015-08024

PSEG

* EXCLUDES THE ENERGY RESOURCES & TRADE CONTRACT, WHICH WILL BE INCLUDED IN PSEG POWER'S RESULTS.

PSEG POWER

SI-SSA-0015-08025

PSEG

We make things work for you.

PSEG Power strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-08026

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus Fleet Diversity/Efficiency Focus	Financial/Economic Focus	Regulatory Focus
• Nuclear units have performed well • Hope Creek recorded its second highest output in its history • Fleet diversity across the dispatch curve and fuel types provide flexibility to meet changing market conditions • Bergen 1 & 2 and Linden 1 individually, and the CCGT fleet in total, set generation records in 2014 • Kearny 13 & 14 have shown increasing output in each year since start-up	• Getting the most out of existing fleet • Locational advantage • O&M control programs have delivered a CAGR of 2.6% between 2009 and 2015 • Sites offer competitive advantage for expansion	• Strong regulatory performance • Industry leadership in the changing business environment

SI-SSA-0015-08027

PSEG Power Delivering on priorities

Operational Excellence	• Maximize value of existing generating plants through implementation of the Operational Excellence Model (OEM) • Workforce engagement and development	• OEM implemented and achieving measures • Resource sharing program between Nuclear & Fossil
Financial Strength	• Deliver on Business Plan Commitments • Maintain competitive markets and improve constituent communication on issues important to Power	• Exceeded earnings guidance in 2014 • Ongoing effort in key markets showing success • Successful court outcome against subsidized generation
Disciplined Investment	• Successfully complete the Advanced Gas Path (AGP) uprates • Seek new opportunities in target markets (PJM, ISO-NE, NYISO) • Develop our renewables business (solar) • Maintain new nuclear option by successfully managing the Early Site Permit (ESP) process	• Accelerated schedule for AGP to maximize opportunity • LIPA contract for fuel and generation dispatch began January 1, 2015 • Solar Source's portfolio is 152 MW_{DC} • Nuclear ESP is expected in 2016 • New build Keys CCGT in Maryland and Sewaren 7 in New Jersey – both targeted in-service 2018

SI-SSA-0015-08028

PSEG Power met 2014's challenges

Storm and weather challenges	+	Market challenges	=	Value delivered
• All of the generation sites affected by SuperStorm Sandy were restored to service by mid-2014, with ongoing repairs • Cold weather extremes created a challenging operating environment, but also presented opportunities		• Transmission (outages and build outs) and gas markets resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by economy		• Expedited return from storm outages, restored margin opportunities • High availability when needed • Flexibility of portfolio captured real-time basis opportunities • Captured value through coal/gas switching, unit flexibility • Management of gas assets benefited customers and fleet • Achieved fuel cost savings

SI-SSA-0015-08029

PSEG Power has generating assets

in three competitive markets

- Assets located near load centers
- Low cost portfolio
  - Fuel flexibility with gas cost advantage
- Positioned to benefit from volatility in real-time markets
- Readiness for capacity performance (CP) in PJM
- Sites suitable for expansion

SI-SSA-0015-08030

PSEG Power value advantaged

by asset diversity, fuel flexibility and location

Energy Produced*

Total GWh: 54,162

- Gas

*YEAR-END 2014 DATA, EXCLUDES SOLAR AND KALAELOA.
**INCLUDES NEW JERSEY UNITS THAT FUEL SWITCH TO GAS.

SI-SSA-0015-08031

Power's PJM assets along the dispatch curve reduce the risk of serving full requirement load contracts and can take advantage of volatile market conditions

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape
- Readiness for Capacity Performance (CP)
- Keys & Sewaren 7 to be added to dispatch in 2018E

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel capability at 87% of load following and peaking units

SI-SSA-0015-08032

PSEG Power will improve diversity and efficiency as we invest in the fleet

Objective 2015 → 2018

- Maintain fuel diversity
- Maintain load-serving capability
- Maintain low cost structure
- Environmental improvement
- Peach Bottom (PB) uprates
- Advanced Gas Path (AGP)
- Combined cycle units Keys and Sewaren 7 operational in 2018

Fuel Diversity

Energy Produced

E=ESTIMATE.

SI-SSA-0015-08033

PSEG Power's fleet will experience heat rate and emissions improvements

- AGP (Advanced Gas Path) investments
- Other Efficiency improvements
- HEDD retirements
- Keys/Sewaren Combined Cycle Development (2018)

E = ESTIMATE

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing

SI-SSA-0015-08035

PSEG Power Nuclear is a critical element of our success

Hope Creek

- Operated by PSEG Nuclear
- PSEG Ownership: 100%
- Technology: Boiling Water Reactor
- Total Capacity: 1,178 MW
- Owned Capacity: 1,178 MW
- License Expiration: 2046
- Next Refueling
  - Fall 2016

Salem Units 1 and 2

- Operated by PSEG Nuclear
- PSEG Ownership: 57%
- Technology: Pressurized Water Reactor
- Total Capacity: 2,307 MW
- Owned Capacity: 1,324 MW
- License Expiration: 2036 and 2040
- Next Refueling
  - Unit 1 – Spring 2016
  - Unit 2 -- Fall 2015

Peach Bottom Units 2 and 3

- Operated by Exelon
- PSEG Ownership: 50%
- Technology: Boiling Water Reactor
- Total Capacity: 2,242 MW
- Owned Capacity: 1,121 MW
- License Expiration: 2033 and 2034
- Next Refueling
  - Unit 2 - Spring 2016
  - Unit 3 - Fall 2015
- Uprate: 130 MW (PS Share)
  - Unit 2 - March 2015
  - Unit 3 - 2016

SI-SSA-0015-08036

PSEG Power Nuclear has competitive advantages

- Continued strong nuclear operations
- Nuclear excellence program
- Top quartile of cost performance/MWh
  - Brought security services in-house
- Significant earnings contributor
- Recruitment of the best new and experienced talent, and attractive training program
- Fukushima action plan in response to NRC staff review
  - FLEX* plan submitted with implementation underway
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

*STRATEGY KNOWN AS THE "DIVERSE AND FLEXIBLE MITIGATION CAPABILITY" OR FLEX, ADDRESSES RECOMMENDATIONS OF THE NUCLEAR REGULATORY COMMISSION'S FUKUSHIMA TASK FORCE.

SI-SSA-0015-08037

PSEG Power initiatives result in

continuing improvement in combined cycle heat rate

*The weighted average Combined Cycle Operating Heat Rate in 2018, with the addition of Sewaren 7 and Keys Energy Center, will be approximately 7,250

SI-SSA-0015-08038

PSEG

E= ESTIMATE.

PSEG Power CCGT/Fossil initiatives

Actions Taken to Create Value

Capacity
- New Keys CCGT 755MW online in 2018 adds geographic diversity to fleet
- Sewaren 7 CCGT 540 MW online in 2018 improves fleet efficiency
- Advanced Gas Path (AGP) investments 2014 through 2018 to provide additional efficient capacity, heat rate improvements
- New lower cost gas line at BEC with Dominion

Performance
- EPRI efficiency initiatives
- GE initiatives for large data analytic
- Consolidation of unit testing
- Auto tuning software

Maintenance
- Ongoing outage efficiency improvement
- Improvements to reliability
- Central fleet monitoring and diagnostic center

SI-SSA-0015-08039

PSEG Power developing 1,300 MW of new, efficient CCGT capacity in MD and NJ

- Construction of 755 MW Keys Energy Center to begin this Fall on a new, natural gas fired power plant in Maryland (SWMAAC*) at an estimated cost of $825 to $875 million
- Power cleared a new 540 MW CCGT unit, Sewaren 7 located in New Jersey (EMAAC*), in the recent 2018/2019 RPM auction; the new unit is expected to cost $625 to $675 million and will replace the older Sewaren units upon completion
- Both Keys and Sewaren 7 are targeted to be in-service in 2018

SI-SSA-0015-08040

PSEG

*SWMAAC = SOUTHWEST/EMAAC = EASTERN MID-ATLANTIC AREA COUNCIL LOCATIONAL DELIVERABILITY AREA WITHIN PJM.

PSEG Power's Growth Investments

Site	Project	Estimate ($ millions)	Benefits	Status
Maryland	Keys 755 MW CCGT	$825 - $875	Geographic diversity within PJM; highly efficient gas fired unit in SWMAAC	2018E
Sewaren	Unit 7, 540 MW CCGT	$625- $675	Improved efficiency and reliability; increase in capacity	2018E
Peach Bottom	Peach Bottom EPU (2014 – 2015)	$417	Increased capacity: 130 MW	PB2 May 2015, PB3 in 2016
Linden/ Bergen/ BEC	**Advanced Gas Path Uprates (AGP):** Linden -- 63 MW Bergen – 31 MW BEC -- 58 MW	$120	Increased capacity and improved heat rate: ~152 MW capacity increase ~1.2% heat rate improvement	**Completed:** Linden (2014) Bergen (2015) **Planned:** BEC 2017/2018E
Various	Interim ISA's*	No cost	Increased capacity: 69 MW	Completed
Eastern PA to Mercer, NJ	PennEast Pipeline	$119	Estimated Earnings in 2019: $13 million	Underway

Total Increased Capacity – 1,132 MW **

SI-SSA-0015-08048

PSEG

We make things work for you.

Market Review: Winter Z6 gas prices retain seasonal volatility; spark spreads have continued to be robust in PJM

2015 YTD Z6

2015-2018 Z6

PJM West vs. PS Zone Spark Spreads (2013-2018)

SI-SSA-0015-08049

Power Basis in Eastern PJM: Expected to be volatile and negative on an annual basis for 2015 and 2016

Electric Basis is negative however it is viewed to be stabilizing and turning back to positive within 2 years due to:

- Export of ~18 bcf/day of gas which will significantly strengthen regional gas prices
- Easing of transmission constraints in Virginia/Maryland
- Construction of significant new gas-fired generation in VA/MD

ANNUAL FORWARD BASIS TO PJM-WEST AS OF OCTOBER 28, 2015.
E = YTD ACTUAL PLUS FORWARD; F = FORWARD

SI-SSA-0015-08050

Market Review: PSEG's extensive gas asset portfolio gives unparalleled access to Marcellus Shale gas

Power's Gas for Generation in 2014

- PSEG Power maintains a robust portfolio of pipeline and storage assets in the Mid-Atlantic
- PSEG Power's gas for generation was ~100 BCF in 2014, of which >60% was supplied by Shale gas
- PSEG Power procured over 400 BCF in 2014 with ~75% going to PSE&G's utility gas customers
- When gas is surplus to customer needs, PSEG Power sells surplus to others; margins from such sales benefit PSE&G gas customers and PSEG Power

SI-SSA-0015-08051

Market Review: New pipelines will move significant quantities of Marcellus gas out of the region by 2018

Historical and Expected Marcellus Production

Pipeline capacity grows significantly by 2018

New pipeline investment is expected to increase takeaway capacity from the low cost Marcellus/Utica shale and reduce regional surpluses and increase gas prices by 2018

SI-SSA-0015-08052

Northeast Portfolio: New York and New England

New England (972 MW)

- Small but dynamic market
- Significant improvement in market construct
- High volatility due to extreme (winter) weather conditions
- Significant siting and permitting challenges
- Gas pipeline infrastructure poses supply challenges/opportunity

New York (774 MW)

- Single state ISO
- Investment in new lateral to connect to the Dominion pipeline at Bethlehem Energy Center (BEC) allows for access to fuel supply from Marcellus
- Long Island Power Authority Fuel Management Contract

SI-SSA-0015-08053

Northeast Portfolio: Expanding our footprint with PSEG Long Island

PSEG Power acting as an agent for LIPA began January 2015

- Performing ISO bidding for LIPA's 6,000 MWs of generation/tolls
- Procuring natural gas and oil for the majority of these assets
- Scheduling two DC transmission cables (ISO-NE and PJM) into Long Island
- Entering into financial hedges to reduce LIPA customer's price volatility

This relationship has provided PSEG Power:

- Additional experience in Eastern NY and Connecticut markets
- Bigger natural gas footprint
- Fee-based services contract

SI-SSA-0015-08054

Capacity Market Pricing: ~98% of Power's PJM fleet that cleared the 2018/2019 RPM auction met the new CP standards

RPM – Auction Results				
Delivery Year	2015 / 2016*	2016 / 2017*+	2017 / 2018+	2018 / 2019
Power's Average Prices*($/MW-day)	$168	$172	$177	**$215**
RTO Prices ($/MW-day)	$136	$59	$120	$165/$150 (CP/Base)
Power's Cleared Capacity (MW)	8,750	8,700	8,700	**8,650**
PJM Capacity Revenues ($ Millions)				
Calendar Year	2016	2017	2018	Through 5/31/19
Capacity Revenues	$542	$555	$631	$281

… Recent capacity auctions provide for growth in capacity revenue into 2019

2018/2019 RPM Auction Highlights

- Cleared new 540 MW Sewaren 7 CCGT
- CP reflects cost to meet new performance obligation
- EMAAC separated
- CP construct favors portfolio approach

SI-SSA-0015-08057

Regulatory Framework: Significant reforms implemented and new rules being promulgated to improve energy and capacity market designs

	ISSUE /POLICY	OUTCOME
PJM	CAPACITY	• Higher payments for enhanced reliability (Capacity Performance) • Tighter performance obligations for Demand Response

	ENERGY	• FERC directed improvements to energy price formation:
		  • 5 minute settlement (FERC Notice of Proposed Rulemaking)
		  • Developing day-ahead hourly offers/real-time reoffers in Q4 2016

ISO-NE	CAPACITY	• Implemented two settlement capacity market (Pay for Performance) • Higher prices in recent auction better reflect tight supply conditions in concert with implementation of sloped demand curve in FCA 9 • Supply and demand near equilibrium • Zonal demand curves expected in FCA 11
	ENERGY	• Implemented day-ahead hourly offers/real-time reoffers in Q4 2014 • Reserve market prices better reflect scarcity prices • 5 minute settlement expected implementation Q1 2017
NYISO	CAPACITY	• New Capacity Zone (LHV) leads to more accurate price signals • FERC directed NYISO to develop RMR Rules in place of NYPSC rules
	ENERGY	• Improvement in price formation during reserve shortage conditions
FEDERAL	DEMAND RESPONSE	• *FERC v. EPSA* before Supreme Court and national implications • DC Circuit RICE NESHAPs decision affecting diesel engines pending
	CAPACITY	• Supreme Court to review Maryland subsidized generation case
	ENVIRONMENTAL REGULATIONS	• HEDD, CPP, HAPS/MACT will lead to tightening of supply in 2015+ timeframe

SI-SSA-0015-08058

PSEG Power's Value Proposition

- Re-positioning fleet to improve efficiency and reliability in attractive markets
- Advantaged by low cost structure, fuel diversity and dispatch flexibility
- Value add from strong gas supply capability
- Significant drive by regulatory bodies to improve market constructs
- Low capital requirements to meet enhanced performance standards
- Organic growth opportunities to increase nuclear and combined cycle generation
- Hedging strategy is responsive to changing market dynamics, providing attractive returns and free cash flow

SI-SSA-0015-08059

PSEG FINANCIAL REVIEW & OUTLOOK

SI-SSA-0015-08060

PSEG

We make things work for you.

Strong financial position to support our business initiatives

2014 Financial Position

- ✓ Strong 2014 earnings growth
- ✓ Exceeded earnings guidance
- ✓ Executed major PSE&G capital program
- ✓ Strong balance sheet with no long term Parent debt
- ✓ Solid credit metrics

2015 and Beyond

- ✓ Third year of anticipated positive earnings growth in 2015
- ✓ Controlled O&M growth
- ✓ Balance Sheet and Cash Flow support investment program without equity issuance
- ✓ Substantial additional investment capacity
- ✓ Growth in PSE&G investments with contemporaneous/formula rate returns and new Power investment
- ✓ Consistent and strong cash flow from both Power and PSE&G
- ✓ Potential for consistent and sustainable dividend growth

Potential for consistent and sustainable

dividend growth given significant contribution from regulated earnings and Power's strong free cash flow

Payout Ratio	50%	58%	56%	54%	54% (1)

(1) THE 2015 PAYOUT RATIO IS BASED ON THE MIDPOINT OF PSEG'S 2015 UPDATED OPERATING EARNINGS GUIDANCE OF $2.85-$2.95E PER SHARE. SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. E= ESTIMATE.

SI-SSA-0015-08070

PSEG Summary

- Continued third year of anticipated positive earnings trend in 2015 with updated operating earnings guidance of $2.85 to $2.95 per share
- Continued 5th straight year of expected double digit, 5-year growth in rate base
- Anticipated high single digit earnings growth at PSE&G on a three-year basis from 2014 to 2017, driven by transmission investments and planned programs
- Power's continued focus on operational excellence, market expertise and financial strength delivers value in current price environment
- Power realigning its portfolio with new, efficient CCGT investments in MD and NJ
- Strong Balance Sheet and Cash Flow support PSE&G's capital program and Power's new investment opportunities without the need for equity
- Our $0.08 per share dividend increase for 2015 is consistent with our long history of returning cash to the shareholder through the common dividend, with potential for consistent and sustainable growth

MANAGEMENT DISCUSSION SECTION

Ralph Izzo

Good morning, everyone. Hopefully, you're here to listen to presentation by Public Service Enterprise Group. I'll begin with our forward-looking statement, which I won't read here in detail but it obviously has the usual guidance around some of the cautionary statements regarding some of the information we'll be displaying as predictive in nature nor will I read here our GAAP disclaimer. Some of the data we'll be presenting does not conform to GAAP, but we do believe is helpful and complementary in illustrating the financial performance of the company.

I am Ralph Izzo, the Chairman, President and CEO of Public Service Enterprise Group. I'm joined on the stage by Dan Cregg, our Chief Financial Officer and Executive Vice President. In the audience with me are Kathleen Lally and Carlotta Chan of our Investor Relations Department. And again, thank you for being with us this morning.

For those of you who are less familiar with PSEG, we operate with two primary subsidiaries. On your left, you will see a little dialogue box describing Public Service Electric and Gas. It's a regulated combination electric and gas utility thus the name at the risk of being a bit trivial. Operating in New Jersey with over 2 million electric customers, a little under 2 million gas customers. The financial data you see recorded there is accurate for 2015.

The hallmark of PSE&G is a very robust capital program, which I'll describe in a little further detail in a moment that seeks to replace an aging infrastructure with a quality of service consistent with the high regard in which we've been held by our customers for over 100 years.

To the right, we have brief description of PSEG Power, a regional independent power business – merchant power business with primary operations in New Jersey and Pennsylvania. Once again, I will describe in a moment with some plant operations in Connecticut and New York State as well. Power is over 50% nuclear in its operations. So, we do consider ourselves to be a nuclear power company.

Our operating strategy has been the same for as long as one can remember. It all begins with an engaged workforce. We fully realize that the equipment which we operate is common throughout the industry. We think that the unique aspect of our company is all related to the quality of our employees, their training, their commitment to our customers, our shareholders, and other stakeholders. So, no one can be in front of me for more than 30 seconds without them hearing me mutter the two words, operational excellence. It's our fervent belief that if we provide safe, reliable, economic and environmentally-friendly energy services, that yields an outcome of – a desirable outcome for our investors. Good husbanding of those resources yields a financially strong entity. And by financial strength, our definition is the ability to not only produce the results that our shareholders expect today, but produce an outcome that allows us to invest wisely in the future.

And some of those wise investments, we'll go through in a moment but we have had successive years of growth in operating earnings, which is one of the non-GAAP measures I alluded to a moment ago. And over 100-year history of paying dividends every year, a recent history of dividend growth of 5% for the past couple of years, close to 4% for the last 10 years. And candidly, some improvements in our power production fleet that will give us a fleet that has enviable environmental profile and enviable efficiency profile.

Bloomberg Transcript

If I take a look at the capital program that we expect and compare it to the capital program that we've just finished, you can see here an illustration of a $14 billion capital program in the prior five years heavily, heavily weighted towards the utility. In fact, about 78% of the capital program were utility investments; 70% of that, which received contemporaneous return treatments either at the FERC or at the New Jersey Board of Public Utilities.

That $14 billion program is now morphing into a $16 billion capital program for the next five years, and a 78% spending at the utility is now 74% spending of utility. So, a strategy that has been pretty consistent for the prior five years and remains consistent for the next five years of heavy organic growth at our regulated entity. The 70% contemporaneous return expectations persists out into the future as well, largely driven by the single-biggest component of the program being transmission investment.

Let's break down some of these components in a little more detail now going forward. You can see this large portfolio of projects in transmission are primarily born out of a process at PJM known as the Regional Transmission Expansion Program (sic) [Regional Transmission Expansion Plan) (05:12), most often referred to as RTEP, by people familiar with PJM governance.

The RTEP process is PJM's annual look over the next 10 to 15 years at the reliability requirements of the bulk power system across the PJM region given the competitive nature of generation in the PJM region and the absence of the traditional integrated planning for transmission and generation in that region.

Every year, there are new requirements that come forward to account for unexpected retirements, unexpected new build that may come out of the various PJM wholesale power market mechanisms that encourage either retirement or new build. So transmission has been and continues to be the single largest component of the utility capital program going forward.

Second to that would be our investments in electric distribution. New Jersey, like many other states, has an increasingly electrified customer base, which is to say that despite the absence of load growth, our load growth numbers have typically been on the weather-adjusted basis low-single digit tenth of a percent, so 0.1 percentage. Given the vagaries of weather normalization, one could say that's pretty close to zero obviously.

Nonetheless, the reliance on electricity is spiraling upward, thus the need for ever increasing reliability and in fact bridging over from reliability to resiliency, where resiliency to us simply means having blue sky reliability on stormy occasions.

This was never more apparent coming out of Superstorm Sandy which is, hard to believe, four years ago just last week. And that has resulted in infrastructure improvements, storm hardening throughout our electric system. The program that we launched two-and-a-half years ago to do this was known as Energy Strong. We will see a continuation of that that we will refer to us Electric System Modernization Program.

So, these are a combination of Board of Public Utility approved capital improvement programs that receive tracker treatment in addition to our base spending in maintenance capital. We just recently filed with the New Jersey Board of Public Utilities a special project for $270 million substation improvement to serve one particular customer, the New Jersey Transit, which is the public transportation system in the State of New Jersey.

So, in addition to the transmission build-out for bulk system reliability, the electric distribution build-out for storm hardening and electric resiliency, we have some increased investment opportunities in our gas distribution business in addition to the normal base spending that's associated with service connection and new load.

We have a major undertaking in the area of cast iron main replacement. PSE&G has the largest cast iron main and bare steel system in the nation that comes along with being one of the oldest and largest gas utilities in the nation.

At our current investment rate in our Gas System Modernization Program of $300 million a year, our needs would last for the next 30 years before we would be able to fully replace the cast iron and bare steel system.

And we recently, last year, received approval for a three-year contemporaneous return clause recovery mechanism in that program. And our expectations are that since we've asked permission for special trackers on this type of program

final

four times and received approvals four times, that this program will continue out into the future.

Lastly, New Jersey's Energy Master Plan, a policy document that guides energy policy in the State of New Jersey is ambitious in its aspirations for solar energy, as well as energy efficiency. We have been an active participant in that. We have invested over $700 million in regulated solar projects, and we're recently able to achieve an agreement with third parties and interveners in a filing we had made for an additional 33 megawatts or $80 million of solar investment dedicated to sites that are characterized as brownfields. Brownfields would be inclusive of landfills or old industrial sites that are underutilized.

Last year, we received an additional approval for $95 million in energy efficiency projects geared primarily towards hospitals, multi-family dwellings, low-income housing opportunities. So, the utility capital program as you can see is rather comprehensive, in dollars is primarily driven by the top part of this slide, the transmission, electric and gas distribution components. But in terms of policy implications and non-traditional services, there's a small complementary piece as well that we would expect to continue.

The growth rate in the utility rate base is known to be 8% per year for the next five years, with the potential for close to 10%. To go from that 8% to 10% would require $2 billion in additional investment over the forecasted numbers that you saw earlier. And over the last few weeks, we announced $650 million of opportunities that are fairly visible to us and are in front of the BPU today for approval, making up fully one-third of the additional $2 billion in opportunity set that we anticipate realizing over this period.

The story is somewhat different at PSEG Power. Over the near term, we are seizing on some investment opportunities in the construction of some combined-cycle units that I'll describe more fully in a moment, but Power's opportunity set is one that we would view looking forward as more in the potential of acquisition. However, we are historically conservative in our offerings for asset acquisitions and have, I like to boast, about a 96% failure rate in our ability to consummate transactions. But that's a good thing. That just means that we're not the victim of the winner's curse. It's probably not a bad thing, given the slow growth in demand and equally slow growth – slow decline in supply stack that many of us have anticipating would occur at a faster pace.

So we typically show a slide like this for the utility where the headline is: don't believe it, because the out-years, which show a decline in capital spending, are always gets filled in. This slide, however, for Power should have as a headline: you should believe this. Because what it illustrates clearly is that 2018, we begin a restoration of Power's role as a free cash flow generator, able to feed the equity needs of the utility, and in 2019 that it becomes a very robust free cash flow generator feeding the equity needs of the utility.

The slide is just ever so slightly out-of-date because we just recently announced the closing – that we will be closing two coal units that we operate in New Jersey. They are referred to as the Mercer and Hudson units. So, in the out-years of this chart, in 2019 and 2020, there's about $100 million each year of capital that was intended for those units that will now not be spent. So you can see Power's capital needs in 2019 and 2020 look to be just south of $300 million per year and a business that's generating in the neighborhood of a $1 billion plus in funds from operations. So, a tremendous free cash flow generator to meet the equity needs of the utility.

In the short term, however, Power is in a construction mode, replacing some aging assets in Bridgeport, Connecticut and in Sewaren, New Jersey. Sewaren is a subzone of the Township of Woodbridge, New Jersey with highly efficient combined-cycle gas turbines. And a wholly new construction program in Maryland at the Keys Energy Center, which has some attractiveness to us, not so much for its replacement value, because it's not replacing anything here, but this part of PJM is a load pocket with some fairly strong growth and also allows us to do a better job of managing our portfolio, given the fact that the PJM West zone is the liquid hub and we are lacking in assets around that liquid hub. Most of our assets are in PJM East, but Keys will give us an ability to better manage the portfolio and hedge profile of our system of plants.

Most importantly, however, the combination of the construction of these three units and the closing of the Hudson and Mercer units really continues the transformation of the PSEG Power fleet. What we're trying to illustrate here is if you take a snapshot of our fleet in 2015 and what we expect it to look like in 2020, on the left side of this chart, the pies are

final
Bloomberg Transcript
Bloomberg

a little bit misleading. The change in nameplate capacity is a little less than 2%. So the vagaries of PowerPoint here, yielding a bigger pie, one should not take literally.

You can see, however, the shift in the fuel of choice that's being used, going from one pie to the next. So the slight increase in capacity of 2% is very different when one moves to the right of the slide and takes a look at the energy output that's expected from the fleet, which is nearly 20%, and this just reflects the fact that we will have 5,000 megawatts of combined-cycle gas turbines with an average heat rate of 7,200 Btus per kWh. That will be complemented by an existing nuclear fleet that for 10 of the last 11 years has run at a capacity factor north of 90%. That's 3,500 megawatts of nuclear, spread across the Salem, Hope Creek, and Peach Bottom units, four of which are co-owned by us and Exelon, complemented by about 3,000 megawatts of peaking capacity at an average heat rate of a little north of 9,000 Btus per kWh, anchored by some pretty efficient units that we've newly built in New Haven, Connecticut and Kearny, New Jersey.

So we're positioning Power not as a larger fleet – once again, the reason for that is because demand is not growing – but as a far more efficient, cleaner, and flexible fleet, which we are convinced will meet the demands of a very competitive, challenging marketplace going on into the future.

Beyond the capital program, the ability to control O&M is something we obsess about every day. It's a byproduct and an offshoot of having that engaged workforce I spoke about before. You can see here that Power's O&Ms had some years of slightly up and slightly down. But over the last six years, the compound annual growth rate has been zero.

The puts and takes are a function of whether or not our 100% owned Hope Creek unit is in a refueling outage that might lead to a slightly up year in O&M, whether or not there's an absence of major maintenance at some of our fossil fleets that would result in a down year in O&M. But overall, very good cost control at the Power business.

You can see similar strong cost control at the Electric and Gas distribution business, an annual CAGR of 1.5%. There's a misleading 10% CAGR on the transmission business. It's misleading for two reasons. Number one, when you start at zero, it doesn't take much to have a high percentage growth rate. But also, given the very strong capital program in the transmission business, obviously, for system stability, when one is doing work at one transmission location, there is related work that has to take place at another transmission switching station. That related work is not capital work. That becomes O&M work, and that drives the O&M expense. However, given the FERC formula rate treatment that we receive, we are able to earn our allowed return across the transmission business in each of these years.

So the robust capital program at Power and at the Utility coupled with the strong O&M cost control yields a set of financial credit metrics that we are quite proud of. Our emphasis is on maintaining strong investment grade credit ratings across all three entities: the parent, the merchant business, and the utility. Our minimum thresholds in our key measures are FFO to debt.

As you can see here, we set that target at PSEG Power at 30%. Over the next three years, the average will be somewhere in the mid-40%s. At the parent, given our current mix of about two-thirds, 60% to 66% regulated earnings and the balance unregulated earnings, we think our parent FFO to debt ratio can remain anywhere from the high teens and above and it currently is in the low 20%s.

What that implies is that we have additional investment capacity just through the debt markets that Power are somewhere in the neighborhood north of $1 billion and at the parent north of $1.5 billion. Given the regulated capital structure of the utility and given the predominance of utility type investments, the utility itself has access to the debt markets. Our allowed equity ratio is, just think of it as 50% debt, 50% equity. So, this $2.5-ish billion additional investment capacity in terms of debt yields a $5 billion unutilized investment capacity at the utility on top of the numbers I've already spoken about.

The strength in the balance sheet, the growth in the utility, the efficiency of the Power fleet gives us confidence to continue speaking about our growth that we've not only experienced but expect to experience. You can see here the transition that we've undergone over the past five years, not only have we grown our operating earnings, but the utility has grown as a percentage of that operating earnings. So the utility is the primary earnings driver of the business today, as I mentioned a moment ago. If one is just to look at the midpoint of our guidance, the utility would be slightly more

final

final

than 60% of the earnings of the company.

This combination of factors, the increasing importance of the utility, the expectation of future growth of the utility, the continued O&M control, the efficiency of the Power fleet allows us to continue to embrace a dividend guidance that is qualitative and not formulaic, that speaks about the opportunity for meaningful and sustainable growth in that dividend. Here, you see the utility earnings now north of the dividend payout ratio this year of $1.64 on an indicative basis. Of course, our Board of Directors determines this on a quarterly basis and it's solely at their discretion.

So, hopefully, in summation, what you've heard me say is that we have a truly stable platform in terms of the combination of a regulated utility making up the majority of our earnings, a PSEG Power business, and an efficient, highly liquid power market at PJM, one which through the combination of our hedging of energy contracts and our combination of participation in PJM capacity auctions gives clear visibility to the next three years of top line revenue streams at Power business.

We are of the opinion that PSE&G certainly through its service history and its customer satisfaction scores and growth profile would be ranked certainly among top-tiered growth and performing utilities throughout the nation. Power's fleet, the combination of nuclear, and combined-cycle natural gas turbines make it not only efficient and clean from today's standpoint, but well-positioned for a future of carbon constraints. And the balance sheet continues to support growth across these businesses, sustains the dividend, and gives us the opportunity for further investments that we fully expect to identify in the months and years to come.

So, with that, I'll stop. I think we have plenty of time for questions if I'm not mistaken. That was certainly our intent. And I'll join Dan at the table and be open to your questions. Thank you.

Q&A

<Q>: [ph] It's working, Dan (22:39). Ralph, given your excellent outline of where things are and what you're looking for, bring to mind the fact that the earlier presentation that I went through this morning was by FirstEnergy, they're going to have some nuclear plants that will be available that they'd like to dispose them. Will you have a look at those? Do you believe that there's a price for everything? And at the right price, yes, you could look?

<A - Ralph Izzo>: Thanks, [ph] Karl (23:12). So, I guess, there's kind of two answers to that. One is you're absolutely right. At the right price, things can be of interest. But second is I've got a lot of respect for FirstEnergy. They have a long history of successfully operating nuclear plants and if they think economically they're not supportable, it sort of – it stretches my imagination to wonder how we could do anything different to make them economically viable. So, I would think that's a low probability event that we would be able to do something different than they could.

On the broader topic of nuclear, separate and apart from FirstEnergy, as you know, this is a challenge across competitive markets, and my only hope is that the nation realizes this is extraordinarily shortsighted to sacrifice what is, without question, one of our cleanest sources of energy from not only a carbon point of view but from traditional pollutant point of view and the short-term dislocation being caused by natural gas, compounded by the subsidization of renewables is something we're going to greatly regret if we don't start pricing some of the externalities associated with nuclear into those plants.

We are not in the same position with some of these challenged plants just because of the location, the size of our plants. The location has a twofold benefit for us. Number one, we have better pricing. And number two, we don't have the same pressure from renewables. But nonetheless we are out there shoulder-to-shoulder with people like Exelon and FirstEnergy saying: policymakers better figure this out because it doesn't make sense to have negative dispatch prices caused by wind, shutting down nuclear plants only to be replaced by natural gas. It's just policy insanity.

So I thank you for the question. But, no, my guess would be that we would have limited interest in those assets only because I think FirstEnergy is a good company. And if they can't make them work, I don't how somebody else could.

<Q>: Given the strength of the balance sheet, could you comment on the types of investments that might be attractive opportunities going forward?

Bloomberg Transcript

<A - Ralph Izzo>: Yes. So, I mean, our primary emphasis is going to be continuing to grow the regulated utility. If you just think about the Gas System Modernization Program, which we have just about universal acceptance in New Jersey needs to be done, we're pushing the run rate from $300 million a year up to $400 million a year. We think that's probably going to be the natural limit for the foreseeable future. That will take us from a 30-year program to maybe a 25-year program, 20-year program. By the time we're done with that, the pipe that we laid 40 years ago will need some replacing, right?

So, our growth story in utilities is not about load growth. It's about an aging infrastructure that people rely on every day that just constantly needs refreshment. The value of being a combination utility is that even while we're doing this major overhaul of the infrastructure, we're lowering bills. Now, this is water, it's not vodka. The reason why I'm able to say that is because as gas prices have come down as a combination utility, we're able to lower the bill while making these investments in the utility.

So, my prediction is that we'll continue to have the vast majority of our investment in the utility. But as I said a moment ago, we'll keep poking at existing power plants to see whether or not they fit into our portfolio. I don't want to overstate the likelihood of being successful there, thus the 96% failure rate. But I don't want to have one land in our lap and then have people say, well, you never mention that, so.

<Q>: With regard to your plans for growth in transmission investment, is there a limit to future needs in PJM? And we noticed in the RTEP process, things keep getting pulled out of the RTEP, pull – are pushed further out because of declining power demand or changing directions of flows or whatever?

<A - Ralph Izzo>: Yes. And we are seeing a decline in the big projects, right? So we had a period of time in the past decades where some major, major projects needed to be built to debottleneck the East/West flows of the powers and that worked. I mean, it helped free up some congestion. It was done for reliability. But obviously, electrons don't follow paths because of reliability or economic conditions. They follow path because of Dr. Kirchhoff of years ago. So most of the big projects have decreased. We have one that remains. It's corrective seam issue between PJM East and New York ISO.

However, I will remind you that long gone are the days when utility engineers looked at load distribution, transmission and generation in one fell swoop. And given the slow-moving nature of load changes and given their ability to control where generation was built and where it was it was retired, you can have a fairly stagnant transmission system that would meet the reliability needs.

PJM did not know we were going to retire Mercer and Hudson until literally two weeks ago. Nobody knew that developer A, B, and C was going to build a combined-cycle gas turbine in RTO, six months ago. So as PJM addresses these changes, these major perturbations in the bulk power system, there's an ongoing need for projects. They're just not as big as they were before. So, I don't see the need for transmission going away, but I do see it as sort of more isolated programs than I do see kind of the mega projects that are going to decongest major systems.

A big part of that program also, if I might go on just for another moment or two is in an effort to enhance reliability, which I think we've been successful at. We're upgrading our 26kV loop system, which is a distribution level system to a 69kV system. So, we're still anticipating a very robust transmission program.

<Q>: Yes, [ph] Barry (29:03).

<Q>: Well, about one year from now, there'll be an election in New Jersey for Governor, and what would you like to see in terms of policy changes that would come in with the new administration that might create the opportunities for investment in energy beyond what is now allowed by the current policies?

<A - Ralph Izzo>: I can't think of any changes that I'd like to see, [ph] Barry (29:32), in terms of the areas in which we've been allowed to invest. We've been upgrading our traditional infrastructure and we've been allowed to participate at very active level in some non-traditional areas, in solar and in energy efficiency.

SI-SSA-0015-08093

The one policy change – so in terms of areas of investment, no change. I think we've been welcomed into all areas that we've asked to be allowed to participate in. The policy change I'd like to see is, the duration of the programs that receive approval. So, I'll refer to the gas system program as hopefully with a little bit of humor.

It's a 30-year program. We'd like a 30-year approval. The regulatory [indiscernible] (30:15), stop whining, you've come in four times and we've said year four times. And I turn back and say yeah, but the first two times you said yes, for 18 months, the last two times you said yes for 36 months. And they say, well, you should be very confident that we'll say yes the next time. And I say yeah, there's a difference between confidence and certainty. So, unfortunately, they win. So, what I'd like to see is changes in the duration of the program, but I don't think we've been denied any opportunities in terms of where we can invest.

The banter is not quite that pleasant when it actually takes place.

<Q>: What are the prospects for PSEG Long Island.

<A - Ralph Izzo>: Yes. So, there's really two dimensions for PSEG Long Island. We thought there could be a third, but I'll get to that in a moment. Number one is, we operate their transmission and electric system. And that's under a contract. It's a 12-year contract. It has, I think, another nine years to run. And secondly, we dispatch the generation fleet, as well as contract with other generation.

In my opinion, both are going exceedingly well. They've gone far beyond my expectations in terms of how well we've performed. In the former case, we had 21 performance metrics we needed to meet as part of the contract. We've consistently met 18 and 19 of them, which resulting in slight bonus payments. It's a modest bonus payment. And in the case of managing the generation and their fuel supply, we've been able to pass on strong savings to them as a result of that.

So, I think we've done well. We're the student. The teacher would be the Long Island Power Authority. They give us the grade and I think they've been happy. That's contributing about $0.07 a share. It's indexed to inflation, so it will creep up over the course of next nine years.

The part that's been a disappointment, quite candidly, there was a vague reference in the contract to our ability to participate in something called Utility 2.0. It was not defined in terms of what it would be. We had hoped it would be a very ambitious program of kind of distributed generation energy efficiency that we could deploy our own capital.

But we've not been able to come to an agreement with life about what that really means. They would like to see us sort of manage other people's efforts in that area and our response is no, that's not what the core contract was. If you want us to do it as opposed to manage others, then here's what we'd like to do. So, it's unfortunate I think, but it doesn't keep me awake at night.

That's what I like. We're a very clear company, no confusing questions. Everyone's good. So we'll give back the balance of our time. Thank you all very much for joining us today.

Forward-Looking Statements

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or ongoing low pricing of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulations, including market structures and transmission planning,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators, including prudency reviews, disallowances and changes in authorized returns,
- any deterioration in our credit quality or the credit quality of our counterparties,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations or increase the cost of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- delays or unforeseen cost escalations in our construction and development activities, or the inability to recover the carrying amount of our assets,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- increases in competition in energy supply markets as well as for transmission projects,
- changes in technology, such as distributed generation, storage and micro grids, and greater reliance on these technologies,
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover insurance proceeds with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- economic recessions,
- an inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce, and
- changes in the credit quality and the ability of lessees to meet their obligations under our domestic leveraged leases.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws. The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-08096

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Net Income. Operating Earnings exclude gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and material one-time items. Adjusted EBITDA excludes the same items as our Operating Earnings measure as well as income tax expense, interest expense, depreciation and amortization and major maintenance expense costs at Power's fossil generation facilities. The last two slides in this presentation (Slides A and B) include a list of items excluded from Net Income to reconcile to Operating Earnings and Adjusted EBITDA with a reference to that slide included on each of the slides where the non-GAAP information appears.

Management uses Operating Earnings in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results. Management believes Adjusted EBITDA is useful to investors and other users of our financial statements in evaluating operating performance because it provides them with an additional tool to compare business performance across companies and across periods. Management also believes that Adjusted EBITDA is widely used by investors to measure operating performance without regard to items such as income tax expense, interest expense, depreciation and amortization and major maintenance expense at Power's fossil generation facilities, which can vary substantially from company to company depending upon, among other things, the book value of assets, capital structure, whether assets were constructed or acquired and accounting methods. Adjusted EBITDA also allows investors and other users to assess the underlying financial performance of our fleet before management's decision to deploy capital. The presentation of Operating Earnings and Adjusted EBITDA is intended to complement, and should not be considered an alternative to, the presentation of Net Income, which is an indicator of financial performance determined in accordance with GAAP. In addition, Operating Earnings and Adjusted EBITDA as presented in this release may not be comparable to similarly titled measures used by other companies.

Due to the forward looking nature of Operating Earnings and Adjusted EBITDA guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility.

From time to time, PSEG, PSE&G and Power release important information via postings on their corporate website at http://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. The "Email Alerts" link at http://investor.pseg.com may be used to enroll to receive automatic email alerts and /or Really Simple Syndication (RSS) feeds regarding new postings. PSEG STRATEGY: GROWING A HIGH-QUALITY, LOW-RISK ENERGY INFRASTRUCTURE COMPANY

Ralph Izzo

CHAIRMAN, PRESIDENT AND CHIEF EXECUTIVE OFFICER

Daniel Cregg

EXECUTIVE VICE PRESIDENT AND CHIEF FINANCIAL OFFICER

SI-SSA-0015-08098

PSEG

We make things work for you.

Two strong businesses

A stable platform, each with growth opportunities

PSEG

PSE&G

PSEG Power LLC

Electric & Gas Delivery and Transmission	Regional Competitive Generation
Strategy: Investments aligned with public policy and customer needs **Value Proposition:** A ~$12 billion infrastructure program producing high single digit rate base growth through 2020	**Strategy:** Investment program enhances competitive position with addition of efficient, clean, reliable CCGT capacity **Value Proposition:** Provides substantial free cash flow in current environment and upside from market rule improvements
2015 Assets $24B Net Income $787M Operating Earnings* (non-GAAP) $787M	2015 Assets $12B Net Income $856M Operating Earnings* (non-GAAP) $653M

SI-SSA-0015-08099

ASSETS AND NET INCOME ARE FOR THE YEAR ENDED 12/31/2015. PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT AND PSEG LONG ISLAND ACTIVITY. *SEE SLIDE A FOR ITEMS EXCLUDED FROM NET INCOME TO RECONCILE TO OPERATING EARNINGS (NON-GAAP).

PSEG's Strategy

Investment program delivering results

Operational Excellence: Maintaining reliability and improving performance as we control costs in low price environment

Financial Strength: Strong financial position supports investment program and dividend growth

Disciplined Investment:
- Balanced business mix
- Robust pipeline of opportunities

Results:
- 3rd year of Operating EPS* growth
- Continued dividend growth
- Best in class utility growth rate
- Addition of efficient CCGT capacity enhances market position

SI-SSA-0015-08100

* SECOND YEAR OF NET INCOME EPS GROWTH.

Delivering on commitments and realizing growth

Operational Excellence	• PSE&G: ReliabilityOne Mid-Atlantic Region's Most Reliable Electric Utility (14th consecutive year), Electric Light & Power's 2015 Utility of the Year, ReliabilityOne Outstanding Outage Response Time and Outstanding Customer Engagement • PSEG Power: Record output from combined cycle units • PSEG Long Island: Improved customer service and reliability while managing costs • PSEG: Cost-control benefits continue
Financial Strength	• Operating Earnings (non-GAAP) for 2015 at upper end of guidance range • Cash flows and business mix support strong credit ratings and ability to fully fund robust investment pipeline without issuing new equity • Increased dividend in 2015
Disciplined Investment	• PSE&G capital program drives continued rate base growth over the 5-year period (2016-2020) with increased investment in Transmission, Energy Strong, Gas System Modernization Program, and Electric and Gas distribution • Power capital program focusing on growth investments including Keys, Sewaren and Bridgeport Harbor, Nuclear and Fossil uprates, PennEast Pipeline, and Solar Source

SI-SSA-0015-08101

Focus on building a reliable, efficient, clean energy infrastructure

2011 → 2012 → 2013 → 2014 → 2015

Selected Accomplishments

2011
- Expanded investment programs focused on infrastructure upgrades, energy efficiency, and major transmission projects*
- Sale of Texas generating assets
- Nuclear license extensions and uprates

2012
- Award winning Superstorm Sandy storm response restoring 2.1M customers
- Final federal approval for Susquehanna-Roseland transmission project
- 400 MW of new peaker capacity**

2013
- Expanded Solar investment
- 90% nuclear capacity factor for 9th straight year
- Record output from Linden CCGT and Salem 2 Nuclear Unit

2014
- Energy Strong program approved
- Advanced Gas Path uprates (through 2018)
- PSEG Long Island management contract effective

2015
- Gas System Modernization Project (GSMP) and Energy Efficiency Extension II approved
- New generation build starts Power fleet transformation
- Solar Source portfolio reaches 277 MW_{DC}***

← Cost Control →

SI-SSA-0015-08102

PSEG

* INVESTMENT CONTINUED FOR SUSQUEHANNA-ROSELAND, BURLINGTON-CAMDEN, NORTH CENTRAL RELIABILITY, AND STARTED FOR NORTHEAST GRID AND MICKLETON-GLOUCESTER. ** KEARNY AND NEW HAVEN. *** AS OF MARCH 2016.

Growth in capital spending aligned with customer needs

PSEG Capital Spending

2011 – 2015: ~$14.3 Billion | **2016E – 2020E*: ~$16.0 Billion**

*INCLUDES ALL PLANNED SPENDING. **POWER CAPITAL SPENDING EXCLUDES NUCLEAR FUEL. ***INCLUDES PENNEAST PIPELINE EQUITY INVESTMENT OF $0.1B. E=ESTIMATE. DOES NOT REFLECT EARLY RETIREMENT OF HUDSON AND MERCER IN MID-2017 AND $600M OF RECENT PSE&G CAPITAL SPENDING ADDITIONS AS OF OCTOBER 31, 2016.

SI-SSA-0015-08103

Building an efficient, clean, reliable energy platform

Timeframe	Actions taken
2011 – 2015: Transformed business mix	• Applied ~$14.3 billion towards investments • Improved credit ratings • Monetized Energy Holdings' portfolio • Strong balance sheet sustained during period of low power prices, while increasing the dividend
2016 – Forward: Strong financial position supports continued growth	• Continued dividend growth in 2016 • ~$16 billion investment program through 2020 • Utility investments focused on improving reliability and replacing aging infrastructure • Continued investment in reliable and efficient energy infrastructure at Power • Financial capability supports further expansion of the current capital plan

SI-SSA-0015-08104

PSE&G's investment program

Meeting public policy goals and customer needs

SI-SSA-0015-08105

PSEG

* DISTRIBUTION RATE BASE INCLUDES SOLAR AND ENERGY EFFICIENCY

Managing the total costs to customers while investing in the system

PSE&G Typical Residential Customer Bills*

- PSE&G customers' combined electric and gas bills declined 28% over the period
- Low gas prices and elimination of transition charges drove rate decreases

SI-SSA-0015-08106

PSEG

*FOR ALL YEARS THE BILLING ASSUMES 7,200 KWH FOR ELECTRIC AND 1,010 THERMS FOR GAS ANNUALLY. E = ESTIMATE

Transforming Power's fleet to maintain strong market position

Economic Drivers	Outlook	Combined Cycle	Nuclear	Scrubbed Coal	Peakers	Renewable
Energy Margins	• Low natural gas and energy prices • Robust portfolio of gas pipeline contracts	✓	✓	✓	n/a	n/a
Capacity Markets	• Tightened rules proposed for capacity performance	✓	✓	✓	✓	n/a
Environmental Regulations	• Tighter air emissions standards	✓	✓	✓	✓	✓
Location	• Assets in well-designed markets, premium regions • Opportunities on brownfield sites	✓	✓	✓	✓	n/a
2016 - PSEG Power Total Capacity 11.9 GW		3.3	3.7	2.4	2.3	0.2
2019 - PSEG Power Total Capacity 12 GW *		5.0	3.8	1.2	1.8	0.2

- **Largest nuclear site** in the eastern U.S. and ownership in **large, fully scrubbed coal facilities** at Keystone and Conemaugh provide **economies of scale** that enhance energy margins in current low market, and provide for upside potential if prices improve
- **Dual fuel peakers** meet reliability criteria in capacity markets and provide option value in energy market. Opportunity exists to repower peakers that do not meet NJ HEDD environmental regulations
- **Combined cycle units Keys and Sewaren expected to be operational in 2018, and Bridgeport 5 expected to be operational in 2019,** will enhance emissions performance and have a combined average heat rate of approximately 6,600

SI-SSA-0015-08107

PSEG

*AS OF FEBRUARY 2016 APPROXIMATELY 1.8 GW OF CCGT GENERATION UNDER DEVELOPMENT – KEYS, SEWAREN 7 AND BRIDGEPORT HARBOR 5 , WHICH ARE TARGETED TO GO INTO SERVICE IN 2018/2019 ALONG WITH RETIREMENT OF OLDER SEWAREN UNITS. REFLECTS ANNOUNCED EARLY RETIREMENT OF HUDSON AND MERCER IN MID-2017.

Disciplined investment program and focus on operational excellence have supported growth

Power's diverse fuel mix and dispatch flexibility continue to generate strong earnings and free cash flow in low price environment

PSE&G's investment program has resulted in an increased contribution to PSEG's results

SI-SSA-0015-08108

PSEG Annual Dividend

An increased dividend with potential for **consistent** and **sustainable** growth given our business mix and financial position

	2012	2013	2014	2015	2016E
Payout Ratio	58%	56%	54%	54%	57%*

*2016E PAYOUT RATIO REFLECTS THE MIDPOINT OF 2016 OPERATING EARNINGS (NON-GAAP) GUIDANCE AS OF OCTOBER 31, 2016. E = ESTIMATE

SI-SSA-0015-08109

Focus areas over the business plan horizon

PSE&G

- **Operational excellence and cost control**
- **Capital program execution** – Transmission, Energy Strong and GSMP program
- **Regulatory framework** – Advocate for regulatory framework that provides support for long-term infrastructure programs
- **Continue to develop incremental growth opportunities**

PSEG Power

- **Operational excellence and cost control**
- **Timely and on budget construction of new growth opportunities** – Keys Energy Center, Sewaren 7 and Bridgeport Harbor
- **Strong performance at Nuclear and Fossil** to maximize fleet value in dynamic markets
- **Advocacy of constructive market rules** - Capacity markets and environmental regulations

PSEG Long Island

- **Continue execution** – Achievement of performance metrics

SI-SSA-0015-08110

PSEG's Value Proposition

- A stable platform with predictable earnings and a robust investment pipeline
- PSE&G – Top tier utility performance and growth profile
- PSEG Power – Efficient, low-cost, clean fleet advantaged by asset diversity, fuel mix and location
- Strong balance sheet – Supports stable credit rating, growth objectives and the potential for consistent and sustainable dividend growth

PSE&G strategy

Building a sustainable platform that balances reliability, customer rates and public policy to ensure growth at reasonable returns

SI-SSA-0015-08114

PSE&G's focus on meeting customer reliability and policy objectives are key to our investment strategy

2011	2012	2013	2014	2015

Selected Accomplishments

2011
- NJ Capital Infrastructure Program 2
- Energy Efficiency extension
- Major Transmission capital projects*
- Hurricane Irene/ October Snowstorm
- Mid-Atlantic ReliabilityOne Award

2012
- Hurricane Sandy storm response (2.1M customers restored)
- Transmission: Final federal approval for Susquehanna-Roseland (S-R) project
- National ReliabilityOne Excellence Award
- Mid-Atlantic ReliabilityOne Award
- EEI's Emergency Response Award

2013
- Solar Loan III
- Solar 4 All Extension
- Energy Strong program filed
- Mid-Atlantic ReliabilityOne Award
- Award for Outstanding Response to a Major Event

2014
- Energy Strong approved
- Transmission: North Central Reliability and Burlington-Camden projects placed in-service
- Bergen-Linden Corridor Upgrade project investment started
- Mid-Atlantic ReliabilityOne Award

2015
- Gas System Modernization Project (GSMP)
- Energy Efficiency Extension II
- Transmission: S-R and Mickleton-Gloucester projects placed in-service
- Mid-Atlantic ReliabilityOne Award
- Recognized for customer satisfaction by J.D. Power for both large electric and gas business service in the East

← Cost Control →

* INVESTMENT CONTINUED FOR SUSQUEHANNA-ROSELAND, BURLINGTON-CAMDEN, NORTH CENTRAL RELIABILITY, AND STARTED FOR NORTHEAST GRID AND MICKLETON-GLOUCESTER

SI-SSA-0015-08115

Building on our track record

Operational Excellence

- Strong reliability record, with plans for further improvement
- Cost control efforts

Financial Strength

- Meeting or exceeding earnings targets
- Maintain solid investment grade credit ratings

Disciplined Investment

- 14 investment programs approved over past seven years
  - ✓ Infrastructure focused
  - ✓ Policy alignment – across administrations – Solar, EE and other
- Win-Win: Job creation, environment benefits, low commodity prices, low interest costs, labor availability, federal tax benefits

SI-SSA-0015-08116

Operational Excellence

Reliability and Customer Service

- Named most reliable electric utility in the Mid-Atlantic region for 14th consecutive year
- Recognized by PA Consulting with the Outstanding Customer Engagement and Outstanding Outage Response Time awards
- Named 2015 Utility of the Year by Electric Light & Power Magazine
- Received Star of Energy Efficiency Award

SI-SSA-0015-08117

Achieved ~11% annual net income growth

over the past four years through implementation of supportive rate mechanisms on our expanded capital program and cost control

SI-SSA-0015-08118

Receive contemporaneous recovery on over 70% of our investments

2011-2015 PSE&G Capital Spending by Recovery Method

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-08136

Focus on transforming Power's portfolio with reliable, efficient, and cleaner energy infrastructure

2011	2012	2013	2014	2015

Selected Accomplishments

2011
- Hope Creek set annual output record
- Nuclear license extensions and uprates achieved

2012
- Peach Bottom 3 set annual output record
- Additional 400 MW of new peaker capacity at Kearny and New Haven
- Superstorm Sandy recovery initiated

2013
- Record annual output from Linden CCGT and Salem 2 Nuclear Unit
- 90% + nuclear capacity factor for 9th straight year
- Bethlehem Energy Center, 2nd gas pipeline connection added

2014
- Record annual output from Bergen CCGT
- PennEast pipeline investment
- CCGT Advanced Gas Path (AGP) uprate investment completed at Linden 1 & 2, 63 MW
- Established PSEG Long Island fuel management operations for 2015 start-up

2015
- Record CCGT fleet annual output
- Continued growth in fleet with 1,300 MW new CCGT's announced
  - Keys
  - Sewaren 7
- Prepared successful bid for 485 MW Bridgeport Harbor 5
- Projects Completed:
  - Peach Bottom EPU, 130 MW
  - Bergen 2 AGP uprate, 31 MW
- HEDD retirement
- Solar portfolio reaches 277 MW_{DC} as of March 2016

Cost Control

Power investing $2 billion of capital in new capacity

E=ESTIMATE. DATA AS OF MARCH 2016. DOES NOT REFLECT CAPITAL SPENDING REDUCTION OF ~$200 MILLION OVER THE PERIOD RELATED TO ANNOUNCED EARLY RETIREMENT OF HUDSON AND MERCER IN MID-2017,

PSEG Power has generating assets in three competitive markets

- Assets located near load
- Low cost portfolio with gas cost advantage
- Positioned to benefit from volatility in real-time markets
- Fleet meets new capacity performance standards
- 1,800 MW of new CCGT capacity under construction in PJM and ISO-NE

SI-SSA-0015-08140

PSEG Power developing 1,800 MW of new, efficient CCGT capacity in MD, NJ and CT

- Constructing the 755 MW CCGT Keys Energy Center in Maryland (SWMAAC*) at an estimated cost of $825 to $875 million
- Constructing a new 540 MW CCGT unit, Sewaren in New Jersey (EMAAC*) at a cost of $625 to $675 million which will replace older Sewaren units
- Constructing a new 485 MW CCGT unit, Bridgeport Harbor 5 (ISO NE), at a cost of $525 to $575 million
- Both Keys and Sewaren 7 are targeted to be in-service in 2018 and Bridgeport Harbor 5 in 2019
- Expanding civic stewardship roles and programs in neighboring communities

*SWMAAC = SOUTHWEST/EMAAC = EASTERN MID-ATLANTIC AREA COUNCIL
LOCATIONAL DELIVERABILITY AREA WITHIN PJM.

SI-SSA-0015-08141

Power's fleet to be transformed with focus on new investment and improvement in efficiency

Projected Fleet Comparison 2015 to 2020E

1 REFLECTS ANNOUNCED EARLY RETIREMENT OF HUDSON AND MERCER UNITS IN MID-2017.
**2015 COAL INCLUDES NEW JERSEY UNITS THAT FUEL SWITCH TO GAS.
ALL PERIODS EXCLUDE SOLAR AND KALAELOA E= ESTIMATE.

PSEG Power's fossil fleet expected to see improvements in efficiency

- AGP (Advanced Gas Path) investments
- CCGT material condition assessment
- Unit testing and testing coordination initiatives
- HEDD (2015) and Hudson/Mercer (mid-2017) retirements
- Keys/Sewaren Combined Cycle Development (2018)
- Bridgeport Harbor 5 Combined Cycle Development (2019)
- Heat Rate improvement converts to potential savings of $60-$65M in fuel expense (assuming $3/MB gas price)

SI-SSA-0015-08143

E = ESTIMATE

PSEG Power's fossil fleet …

Continued improvement in emissions profile

Expected to reduce its carbon footprint

- Mercury reduced 80% across the timeframe above
- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing
- With the addition of new units, emissions continue to improve

- Carbon emission rates are steadily approaching EPA national pollution standards for new and reconstructed natural gas combined cycle (1,000 lbs CO2/MWh-gross)

SI-SSA-0015-08144

E = ESTIMATE. REFLECTS ANNOUNCED EARLY RETIREMENT OF HUDSON AND MERCER UNITS IN MID-2017

Nuclear is a critical element of our success

Hope Creek

- Operated by PSEG Nuclear

Eastern PA to Mercer, NJ	PennEast Pipeline	$123	Estimated Earnings in 2019: $13 million	Underway
Various	6 Solar Projects	$241	2016/2017E increase renewable capacity by 136 MW_{DC}/105 MW_{AC}	2016/2017E

Total New Capacity – 2,200 MW

SI-SSA-0015-08146

PSEG

E = ESTIMATE AS OF MARCH 31, 2016.

A position in renewable energy – Power's Solar Source

Solar Source portfolio

- Utility scale solar projects in 12 states in operation or under construction
- Long-term PPA's with creditworthy counterparties
- Lump sum, full wrap EPC* agreements

Asset Optimization

- Maintain high equipment availability
- Minimize operating expenses
- Seek additional revenue streams

SI-SSA-0015-08147

* EPC = ENGINEERING PROCUREMENT & CONSTRUCTION. E = ESTIMATE.

PSEG Power has other attractive sources of revenues to round out a robust portfolio

Gas Asset Optimization

- Large wholesale provider to PSE&G and others
  - Storage capacity of approximately 75 Bcf (in the Gulf and market regions)
  - Firm transportation of 1.3 Bcf/day on seven pipelines
- Off-system sales margins shared with residential customers
- Commercial & Industrial gas sales

Ancillary Services – Black start, reactive power, area regulation

LIPA fuel and energy dispatch management – Began management of 10-year contract in 2015

Kalaeloa, HI – 50% equity interest in a 208 MW combined cycle oil unit

New Haven Peakers – 129 MW, rate based contract with ISO-NE

SI-SSA-0015-08148

PSEG Power has demonstrated ability to control O&M

Cost control actions taken:

- Fossil plant assessment
- CCGT material condition assessment
- Vendor contract renegotiations
- Nuclear security services brought in-house to control costs
- Nuclear maintenance productivity study
- Nuclear outage efficiency initiative
- Materials management
- Nuclear excellence initiative
- Nuclear staff – Right sizing

*EXCLUDES IMPACTS FROM STORM RECOVERY COSTS AND IMPAIRMENTS RELATED TO HUDSON/MERCER RETIREMENT.

Power's 2016 guidance range

adjusted to incorporate year-to-date results

SI-SSA-0015-08150

*SEE SLIDE B FOR ITEMS EXCLUDED FROM NET INCOME TO RECONCILE TO OPERATING EARNINGS (NON_GAAP).
E = ESTIMATE. UPDATED AS OF OCTOBER 31, 2016.

PSEG Power – Delivering on priorities

Operational Excellence

- Fuel and technology-diverse fleet produced 55 TWh, 2% higher than 2014
- Nuclear capacity factor exceeded 90% in 2015; output of 30 TWh, close to 30.3 TWh is third best ever, record set in 2009
- Production records set at BEC, Linden and the CCGT fleet in total; Kearny 13 & 14 CTs
- Successful implementation of LIPA contract for fuel / generation dispatch.

Financial Strength

- Achieved earnings guidance in 2015
- Cost control programs held O&M to a 0.8% CAGR between 2011 and 2016
- Successful ongoing effort to influence outcomes in key markets showing success, e.g., price formation

Disciplined Investment

- Completed Peach Bottom EPU and AGP at Bergen 2; AGP planned for BEC in 2017/2018
- Repositioning the fleet with three new CCGTs:
  - Keys (2018)
  - Sewaren 7 (2018)
  - Bridgeport Harbor 5 (2019)
- Solar Source's portfolio is 277 MW_{DC}

Market Review: YTD 2016 impacted by weather but forward gas and electric prices retain seasonal volatility

SOURCE: PSEG POWER DATA
FORWARDS AS OF OCTOBER 31, 2016

Market Review: PSEG's extensive gas asset portfolio provides unparalleled access to Marcellus Shale gas

- PSEG Power maintains a robust portfolio of pipeline and storage assets in the Mid-Atlantic
- Marcellus Shale gas production reached 18.8 BCF/day in 2015
- PSEG Power procured over 423 BCF in 2015 with approximately 50% going to PSE&G's utility gas customers
- PSEG Power's gas for generation was 150 BCF in 2015, of which >75% was supplied by Northeast Shale gas
- Severe financial stress among the natural gas producer industry is expected to reduce production growth until gas prices rebalance to higher levels
- Investment in the PennEast pipeline expected to provide more access to Marcellus for PSEG

SI-SSA-0015-08154

Market Review: Completion of new pipeline infrastructure expected to move significant quantities of Marcellus gas out of the region by 2018

Pipeline capacity grows significantly by 2018

- Significant amount of new pipelines have already been built and more are in the advanced planning and development stage through 2018
- Gas production and pipeline takeaway capacity estimated to reach equilibrium in 2018 timeframe based on new pipeline development
- More pipelines expected to be built post-2018
- Regulatory and environmental threats to timelines

SI-SSA-0015-08155

Regulatory Framework: Market structures are evolving to appropriately recognize value of reliable, diverse and clean dispatchable generation.

	ISSUE /POLICY	OUTCOME
PJM	CAPACITY	• Higher payments for enhanced reliability (Capacity Performance); first purely CP capacity auction to be held in May 2017
	ENERGY PRICE FORMATION	• FERC is driving ISO's to improve their pricing constructs and rules – five minute settlements and shortage pricing improvements are on the horizon
	DEMAND RESPONSE RULES	• Stricter rules for eligibility and deployment following full deployment of Capacity Performance expected to limit participation in capacity markets
	STATE INTERVENTION	• Efforts in Ohio to subsidize uneconomic resources met with significant opposition and led to FERC finding that affiliate abuse standards would apply • PJM commenced process to develop rules for integrating public policy driven resources that would protect competitive markets; PJM also has commenced study to determine value of fuel diversity
ISO-NE	CAPACITY	• Zonal demand curves approved by FERC for FCA 11 • Nuclear and coal under pressure; closure of Pilgrim and Vermont Yankee • New initiative to incorporate state carbon goals in wholesale markets consistent with competitive outcomes
	ENERGY	• Proposed gas pipelines are stalled • Significant rule changes to improve price formation – five minute settlement and fast start pricing
NYISO	CAPACITY	• Retirement of upstate coal plants tighten market • NYPSC develops a clean energy standard that retains upstate nuclear and recognizes the value of zero emissions
	ENERGY	• Improvement in price formation during reserve shortage conditions
FEDERAL	ENVIRONMENTAL REGULATIONS	• CPP rules stayed by SCOTUS; oral argument before D.C. Circuit scheduled for September 27, 2016 • Some states will still prepare implementation plans for 2020+ timeframe • CSAPR update rule cuts ozone season NOx emissions

SI-SSA-0015-08157

PSEG Power's Portfolio: New York and New England

New York (757 MW)

- Single state ISO
- Multiple gas supplies to BEC gives fuel flexibility and access to Marcellus
- Long Island Power Authority Management Contract

New England (976 MW plus 485 MW new build)

- Small but dynamic market
- Significant improvement in market construct
- Ongoing potential for volatility in extreme (winter) weather conditions
- PSEG Bridgeport Coal plant retirement in 2021
- Gas pipeline infrastructure poses supply challenges/opportunity

+INCLUDES 485 MW NEW BUILD
*SUMMER INSTALLED GENERATING CAPACITY AS OF DECEMBER 31,2015

HEDGES INCLUDE POSITIONS WITH MTM ACCOUNTING TREATMENT AND OPTIONS.

SI-SSA-0015-08161

PSEG Power's Value Proposition

Low cost fleet	Advantaged locations	Investing to grow

- Well-positioned fleet of merchant generating assets in attractive markets
- Portfolio transformed with addition of 1,800 MWs of new efficient CCGT
- Announced early retirement of Hudson and Mercer in mid-2017 expected to improve cash flow and return profile
- Low capital requirements to meet capacity performance standards
- Growth in fast-growing DC area
- Hedging strategy has capably protected value of assets in declining price environment providing attractive returns and free cash flow

PSEG FINANCIAL REVIEW & OUTLOOK

Daniel Cregg
EXECUTIVE VICE PRESIDENT AND
CHIEF FINANCIAL OFFICER

PSEG
We make things work for you.

SI-SSA-0015-08164

Strong financial position demonstrated by 2015 results

	2015 Financial Position
Financial Results	✓ Delivered strong 2015 earnings ✓ Increased regulated earnings mix
Investment	✓ Executed major PSE&G capital program ✓ Added new Power growth investments
Cash Flow and Credit Metrics	✓ Produced growing PSE&G cash from operations ✓ Generated significant Power free cash flow ✓ Maintained strong credit metrics
Dividends	✓ Provided a 5% or $0.08 per share dividend increase

SI-SSA-0015-08165

A higher regulated earnings mix due to growth in PSE&G earnings with a significant contribution from Power

PSEG Results

E = ESTIMATE. POWER EARNINGS SENSITIVITIES UPDATED FOR DECEMBER 31, 2015 PRICE CURVES.
PSE&G DISTRIBUTION ROE SENSITIVITIES EXCLUDE ENERGY STRONG AND GSMP.

PSEG Summary

- 2015 Operating Earnings (non-GAAP) were at the upper end of our upwardly revised guidance
- Forecast high single-digit rate base growth at PSE&G on five year basis from 2015 to 2020, driven by investment in transmission and approved programs
- Power's investment program and continued focus on operational excellence with financial strength delivers value in current price environment
- Strong Balance Sheet and Cash Flow support current capital program and investment in new opportunities without the need for equity
- Our indicative $0.08 dividend per share increase for 2016 is consistent with our long history of returning cash to the shareholder through the common dividend, with opportunity for consistent and sustainable growth

SI-SSA-0015-08186

PSEG Financial Highlights

Updating full-year 2016 Operating Earnings (non-GAAP) guidance to $2.80 - $2.95 from $2.80 - $3.00 per share

- ✓ Strong third quarter results were not sufficient to offset the lack of a winter
- ✓ Focused on meeting customer needs for clean, reliable, efficient delivery of energy

Infrastructure Spend

- ✓ PSE&G capital spending for 2016 expected to top $3 billion
- ✓ Keys, Sewaren and Bridgeport Harbor CCGT construction is on schedule and on budget
- ✓ PSE&G has identified more than $600 million year to date of additional infrastructure spend over the current capital spending plan of $12 billion in the 2016-2020 period

Financial position remains strong

- ✓ Positive cash from Power and increasing cash flow from operations at PSE&G supports dividend growth and funds capital spending program without the need to issue equity
- ✓ Debt as a percentage of capitalization was 45% at September 30
- ✓ Announced retirement of Hudson and Mercer generating stations (totaling ~1,250 MW) planned for mid-2017 expected to improve Power's cash flow and return profile

MANAGEMENT DISCUSSION SECTION

Ralph Izzo

So I'm Ralph Izzo – Brandenburg gets away with all the time -- so I'm Ralph Izzo, President and CEO of PSEG. I'm joined today by Dan Cregg, our CFO; Kathleen Lally and Carlotta Chan – who is here somewhere, she's gone to get some handouts I think – of our Investor Relations department.

In front of presentation material are both our forward-looking Safe Harbor statements, as well as our GAAP disclaimer. We'll obviously be talking about some projections looking out into the future, which we believe to be correct, but can't guarantee, and we will describe some of our financial statements in terms of parameters that we think are more indicative of ongoing operations, but do not comport with GAAP.

And for those of you who are less familiar with PSEG, we have two principal operating subsidiaries, a regulated electric and gas distribution and transmission business in New Jersey – I'll give you little more details in a moment – as well as a PJM-centric merchant power generation business.

The primary characteristics of the two companies are; for PSE&G, a substantial aging infrastructure replacement program that allows us to grow the rate base in the past at low double digits, in the future at high single digits, just given the size of the overall rate base increase; and for PSEG Power, a fuel diverse fleet that is well-positioned in many dimensions, is well-positioned from an environmental point of view, well-positioned from a geographic point of view, and well-positioned from a technology and efficiency point of view.

Now for a little more detail on the utility. We run north-south corridor of Central New Jersey. That is the primary industrial corridor of the state. Having said that, as you can see, the load both through electric and gas businesses are characterized by the commercial and residential sector; the electric side having the commercial sector dominate, on the gas side having the residential sector dominate. Little more than 2 million customers on the electric business and a little less than 2 million customers in the gas business. De minimis load growth, the growth of the business is completely decoupled from the growth in number of customers or the growth in sales. At the risk of repetition, it is driven by an aging infrastructure that is in desperate need of replacement. Even though it's a single state utility, it's important to recognize that it is by jurisdictional, nearly half of the rate base is FERC regulated through a formulaic transmission approach.

As we step into power, you could see here pictorially that the vast majority of the assets are located in Eastern PJM. We have a piece of some base load coal plants in Western PJM, as well as a new construction going on in Maryland, which qualifies, believe it or not, as Western PJM. Some isolated assets in Southwestern Connecticut as part of New England ISO and just outside of Albany, New York as part of the New York ISO.

Lots of activity on the regulatory and policy front that merits your attention. First of all, we will be going in for a base rate case proceeding in New Jersey. The filing deadline is December 1 of this year. That will be our first base rate proceeding in seven years. Our last base rate case was 2010. In the intervening years, however, we've had a substantial amount of construction in our transmission business, which as I said is subject to FERC formula rates on an annual true-up basis.

Bloomberg Transcript

And we've had a significant amount of investment in our distribution business subject to trackers and various clause mechanisms, which you see highlighted here in the middle of the page and something that we will continue to do going forward. We have proposed and filed with the Board of Public Utilities an expansion of a gas pipe replacement program. We are in possession of the largest cast iron gas pipe maintenance system in the United States. It is at a low utilization pressure, so it's not a safety issue. However, cast iron and bare steel pipe does tend to be more vulnerable to cracks and fissures, which then incur – which results in a release of methane, which is a 30x to 35x contributor to greenhouse gas effect, as well as a problem from a point of view of O&M and nuisance odors that need attention.

The current spending level in our gas program is about $300 million to $400 million per year, which would take us about 30 years to replace all the cast iron main that is in our system. So we've proposed to the Board of Public Utilities that we accelerate that program to a 20-year timeframe by investing a little over $500 million a year over the next five years.

We recently were granted approval by the BPU to continue some incremental expansion of some energy efficiency work we've undertaken in the state targeted at lower income and public good. Public good we typically define as hospitals, schools, government buildings. And we will also expand some efforts that we began about three years ago to reinforce and harden our electrical system and distribution system to make it a bit more resilient in the wake of some significant storm events that we experienced five and six years ago in the form of Superstorm Sandy, Hurricane Irene, and something that we call the Halloween snowstorm that occurred between Hurricane Irene and Superstorm Sandy.

At the time we had proposed a $3.9 billion program to take the affected assets and physically elevate them or protect them from water infiltration. We proposed that for a 10-year period, but then actually filed only for $2.6 billion program for a five-year period and were granted $1.2 billion for three years, so we're just going back to finish up that program. We'll drop a few items that we thought were necessary when we originally filed and add a few items that we've learned since then would be money better spent.

On an ongoing basis, given the fact that we have had repeated success working with the Board of Public Utility staff on these various trackers and clauses, and I think to the tune of 14 over the past seven or eight years, we've both sort of fatigued each other and the board staff has recognized that perhaps it would be much better to come up with a template that would be used regardless of whether it's a gas or an electric infrastructure enhancement program to institutionalize the recovery mechanism, as well as the duration of the programs and the method by which the allowed ROEs would be determined.

That rule was proposed this past summer. We modeled our Gas System Modernization Program and the expansion of prior efforts on that proposed rule. We expect it to be made final – it being the proposed rule – to be made final in December and we will follow quickly on the heels of that with our Energy Strong too modeled after the final rule, which we don't expect to be materially different than the proposed rule.

Outside of the utility, there's a lot going on in regulatory and policy space as it pertains to the imperfections in the market, imperfections in the market that are resulting in uplift payments, out of market payments to preserve the reliability of the system. PJM, in particular, has had to dispatch the system, first and foremost, with an eye towards reliability, but that does result in some occasional payments that are referred to as uplift payments that are out of market – others have called this price formation and price transparency – that we hope to see put into effect in the near-term, certainly within calendar year 2018, that are fuel indifferent, that will make the market more efficient, and a more accurate reflection of the way in which the system is operated and will benefit all generators, ourselves, who have a blend of fuels, as well as any other participant in the PJM market.

Separate, and apart from that, specific to nuclear and base load power, we are engaged in conversations both with DOE and New Jersey to recognize the market imperfections that fail to compensate for various externalities. The externalities in particular that are the subject of conversation nowadays are the externalities associated with long-term fuel diversity, that the current market design [ph] will not (08:17) point towards in terms of ongoing new investment in assets and premature retirement of existing assets.

Bloomberg

So going back to the utility, a slide that we often show people once a year, slide that we show once a year and have done so for many years in the past is what we expect our capital program to be in the next five years. And the capital program always looks like it's going to decline and it tends to lead folks to ask the question, well, when will it end. And despite our best efforts to try to remind people that, the only limiting function on the replacement of an aging infrastructure base is what the customer can afford to pay, and the aging infrastructures constantly need a replacement.

So what we show in these five bars that anticipate what our spend will be going out to the future and we try to point out that the reason why the front year is higher, is because that's where we have the greatest visibility toward, right, so the out years we just know less about, and therefore it tends to drop off.

The line you see is what we thought the five bars look like in the prior year, and this is a slide that we've been able show for 10 years now, but the years on the bottom just change, right, so the pattern is always the same. We learn more as the year – as the calendar rolls forward. And as a result, based on what we know, we had predicted in March that we would have about a 7% percent CAGR growth in our rate base. And then we indicated at that time that there were things that we were working on that could take those blue and orange bars and add some additional necessary investments in the form of this great crosshatch. That had to do with a continuation of the gas program, as I've pointed out before, the current run rate would take 30 years to replace the gas and the incomplete efforts that related to Energy Strong, and in fact move that from a 7% growth rate to a 9% growth rate.

Well, in the ensuing eight months from March to today, we have, as I've mentioned, both filed a Gas System Modernization Program and intend to file an electric system enhancement. That give us a greater degree of confidence when coupled to the Board of Public Utility proposed rule for clause recovery mechanisms that will be much closer to the 9% than the rule to the 7% and fill in these crosshatch regions going forward.

So as I think back five years and I think to the current look ahead of five years, the lion's share of our efforts have been in core infrastructure, enhancing the transmission system for reliability, strengthening the electric distribution system from the point of view of storm hardening, strengthening the gas system from the point of view of old technology that – it was in need of replacement.

What that's left available to us, which we have not really spent much time on and are not in the current five year plan, are significant investments in what you often hear described as utility of the future. What is that more specifically? Advanced metering infrastructure, electric vehicle charging station support, micro-grids, battery storage and things that like, right? Important stuff. I'm not denigrating it in any way, shape, or form, but not an area of emphasis for us, and one that we will begin to engage in at some minimal level in the coming few years to begin to prepare ourselves to when we have the bulk of the aging infrastructure work behind us to position the asset base and the infrastructure more for that utility of the future.

Taken in sum, what that means is that the capital program has a robust future going out for many, many years to come, with again a limiting function being making sure that we don't unduly burden the customer. We are the beneficiary of having a PSE&G, and E&G, of course, stands for electric and gas. And the reduction in gas prices over the past 10 years are such that our total bill for a customer is 28% below where it was 10 years ago.

And, in fact, even with this 9% growth rate in the rate base for the next five years and some high-single-digit estimate of that continuation, we could find ourselves in a position where over a 20-year period, customers rates would be flat in nominal terms, having of course gone down, and then back up. So in a low interest rate environment, with a declining total bill, this is a critical time and opportunity to seize for necessary infrastructure improvements and we've had a great partnership with our regulators in doing so.

Moving from the utility over to PSEG Power. We are in the middle of a construction program, whereby we will be completing 1,800 megawatts of highly efficient natural gas combined cycles, one in Connecticut, one in New Jersey, one in Maryland. The Maryland and New Jersey facilities are due to come online this June, as in June of 2018. The Connecticut facility in June of 2019. All projects are on schedule, on budget.

And what it will do is substantially shift the makeup of the fleet. Coupled to some retirements you'll see on the left side, that the overall number of megawatts we will have in play and during this transition won't change much. But as you

final
Bloomberg Transcript
Bloomberg
SI-SSA-0015-08196

look to the right side, you will see a significant increase in the amount of energy that we put out, because the three units that we're building will be fairly low on the dispatch curve. And therefore, we do believe will be dispatched quite frequently, thereby increasing our expected energy output by well over 10%. And you'll see, as a result of them being primarily – exclusively natural gas, that they will eat into some of that nuclear output. That's not to say that the nuclear plants will run less often. It just means that as the denominator grows, most of that growth in the denominator will come from growth in the gas component of the numerator, and therefore increase the overall gas component of our output.

We have great access to Marcellus shale gas, and therefore enjoy some regional spark spreads that are more robust than one might calculate if one were to look at the Henry Hub price for natural gas. So highly a clean fleet and a well-positioned fleet, and one that we expect to be a significant contributor to the energy market and a significant recipient of energy margins.

Now that expansion program for power, that capital program for power – I shouldn't describe it as an expansion, because as I just said a moment ago, we have been retiring units that are not high in the dispatch queue and not meaningful contributors to the bottom line. That capital program will come to an end in 2019 and we will be more in a maintenance capital mode, which is a run rate of closer to $200 million a year. And what that will mean is that power will resume the position it had prior to this initiation of this capital program, which has been going on for a couple of years now, as a significant generator of cash for the utility's insatiable appetite for cash.

So power shown here on the left in terms of its capital program, you could see that coming down by $1 billion per year. And on the right – we're just repeating the slide I showed a moment ago, which is the utility's capital program going forward. So internally generated cash will be a significant part of the equity requirements of the utility.

As I take a look now at how well we've managed our O&M expense, we try to separate each of the major functions of the company here. And you could see that at the distribution level and at the power level, we've done, I think, a good job of maintaining fairly flat O&M expense. The large number at the transmission level is driven by the fact that inevitably when you have a massive capital program – and if you recall the slides I showed you just a moment ago, transmission was the single biggest component of the utility capital program. But whenever you have that kind of a large capital program in transmission, there is a lot of associated O&M work that goes along with that. It's always – reliability is always foremost in our thinking. We need to make sure that the system configuration is such that it can tolerate various perturbations, requires active field work on the part of our transmission team to make sure that we're switching lines in and out to support that capital work.

We pay careful attention to that transmission O&M, but the good news from a shareholder perspective is it is fully incorporated into our annual formula rate and all other parts of components of O&M we do an aggressive job of keeping a lid on them, both in terms of meeting the needs of our customers and our shareholders.

If I take a look at the strength of the balance sheet and our credit metrics, they remain strong. So you have an ambitious utility infrastructure replacement program and you have a fair amount of internal cash generation. The balance of the equity needs of the utility are achieved through the debt capacity of the parent and the power business. In addition to the 9% growth rate in the rate base that we have a high degree of confidence in, we have an additional incremental debt capacity that's shown here of about $3.5 billion to $4 billion, closer to the $3.5 billion than to the $4 billion, both at power and at the parent. That debt capacity becomes the equity that the utility needs – the utility has some separate debt capacity and it's roughly regulated at 50/50 debt/equity split. So therefore the standalone utility capability for additional financing would be double this amount.

Now, it's important that we point out something here that is common to the industry about – and we've talked about it for a few years, but we want to make it really explicit. We always give a three-year look ahead, and the three-year look ahead is 2017, 2018, and 2019. Now, what's significant about those three years, that is different from 2020 is that all other things being equal, so no comment on the possibility of tax reform and the various provisions that may or may not survive the current versions that have been put forth, is the expiration of bonus depreciation. And currently that bonus depreciation has been generating about $300 million a year in FFO for us.

final
Bloomberg Transcript
Bloomberg
SI-SSA-0015-08197

If you just take at the parent level an 18% or a high-teens ratio of FFO to debt that that could support, that would result in a diminution of about $1.5 billion to $2 billion of debt capacity after 2019. So, just given that our stub year happens to coincide with the end of that bonus depreciation, we didn't think it was fair to leave you with the absence of information about what happens in 2020, which is probably a cut in half of the excess debt capacity available to the company, right? So we are still in an excess capacity situation, but it will be one that goes from 3.5-plus billion to something less than $2 billion with the expiration of bonus depreciation, all else being equal, assuming no change in the tax bill or current situation.

So still a strong balance sheet, still 2 times that amount available for utility investment, above and beyond the 9% growth rate in the rate base. And during the Q&A, since I just exhausted my knowledge of what all that means, Dan will be [ph] happy to answer (19:31). Did I do that okay, Dan?

Daniel J. Cregg

Perfect.

Ralph Izzo

Okay. But did he look like he was in pain while I was speaking?

[indiscernible] (19:38)

<<[0052TC-E Ralph Izzo]??

Thank you. I've been CEO long enough [ph] where (19:41) I can admit these things.

We are reaffirming our guidance for the year, right, somewhere between $2.80 and $3 a share. Here we just show you a little bit of our recent history. You see a combination of factors; one, some modest growth in the parent company earnings, flattening over the past two years as a result of declines in power prices. But equally important, you could see that even as the parent company earnings grew, the disproportionate growth in the utility earnings becoming an increasingly significant part of the overall mix of earnings that we put forth. And this year, just taking the midpoint of the guidance for both companies, the utility will be fully two-thirds of the overall earnings of PSEG.

That has a couple of ramifications, obviously, in terms of the predictability and stability of those earnings and the potential for future growth driven by this 9% CAGR. Here what we show you in the green line is the utility earnings growth, and in the blue bar the growth in the dividend, which isn't growing in recent years at about 5% a year. And you can see that, given the visibility to the utility rate base growth, we had confidence in growing the dividend, and now, in fact, the utility growth continues to outstrip the growth rate of the dividend and more than covers the dividend for us, which leads us to a dividend policy which is illustrative of the fact that there are multiple factors that we consider when thinking about the dividend, where are our earnings coming from, what are the cash needs of the business, where are we in the power cycle, what are our competitors doing. But it allows us to basically signal to you that we do think we have the opportunity for consistency and sustainability of this ongoing dividend growth that you've seen in the past few years.

So in sum, we have a stable platform. There's plenty of opportunities for investment and growth in the business. Most of that – about 80% of it is targeted at the utility. As the capital growth program in power comes down, that number will be even bigger than 80% in terms of the utility, where power begins to go into a maintenance capital mode. I think we've had a great partnership with our regulators in New Jersey. We do things that matter to them and they are a good proxy for things that matter to our customers. We're doing well. At our last quarterly call we talked about the fact that a $3.4 billion capital program in the utility this year has become a $3.1 billion capital program, largely because some of the work we plan to do, we've done better than we even thought we could do it. That doesn't mean that $300 million of work evaporated. It just means $300 million of work will be shifted into other things that need to be done.

Power has a great fleet. It has the largest, I believe, combined cycle fleet in PJM. Its aggregate heat rate will be close to 7,000 Btus per kWh. It's a highly efficient fleet, a very strong nuclear program that we think is going to get some recognition for some attributes that the market does not recognize today, and therefore we'll sustain that fleet into the future. We have, I think, one of three companies that can boast about 110-year record of paying the dividend each year for over a century. That balance sheet carries us into the future with the current program without the need for additional equity and the opportunity for further expansion.

So I think I'll stop there. I've tried to leave about 15 minutes for questions and, hopefully, answers, and we're ready for you. Yeah.

Q&A

<Q>: I came in late, so I apologize [indiscernible] (23:09). But could you just help me with [indiscernible] (23:12)?

<A - Ralph Izzo>: Yeah, sure. So we've been talking to people about kind of a range of four possible outcomes as it pertains to the DOE NOPR, and the FERC reaction to it. At the book-end, one is that FERC simply says, oh boy, you're right, we will take that. And the other book-end is FERC says, you're imagining things, there is no problem here. We think both are unlikely. And, in fact, probably zero chance.

Now, that's significant, because while most people are predicting the former, that FERC won't take the NOPR as is. I think in large measure, even though FERC has not said that there's no problem, they've been acting as if it's not a big deal, right? I mean, the [indiscernible] (23:57) rule, price formation, those have been going on for years now, depending upon how you define the start three or four years. And even though FERC was being deliberate, I do think that DOE's action has created a sense of urgency that something needs to be done. So more than likely, our belief, with no more information than you possess, is that one of two things will happen, and I'll take them in order of increasing likelihood.

We proposed that FERC take what DOE has proposed and implement it on an interim basis. And we point to the fact that fully – close to a third of the assets in PJM right now are on cost of service regulation, and they do not create havoc in the marketplace at all. That putting at risk premature [indiscernible] (24:47) in cost of service regulation would also not put the market at risk. And then FERC should enter into a parallel process, take hold the process to design mechanisms, whereby fuel diversity is explicitly recognized as an externality that has a value. And we've also put forward proposals to how to do that. It could be either an energy price, scarcity payment for fuels that are not dominating the supply stack, or it could be traunching of the capacity market to explicitly require different clearing prices in [ph] capacity (25:19) markets for fuel diversity.

So interim cost of service regulations [ph] take hold of (25:24) process for market mechanisms that recognize fuel diversity. Another possibility is simply to recognize that PJM has said, hey, there are some things that we do right now that are inconsistent with price being the determinant of what runs, namely these uplift payments for inflexible units that I mentioned a moment ago. And FERC can declare victory by simply saying, yeah, we know about that, we've been working on that for a few years. So, therefore, every RTO tell us what you've done to improve price formation, and what else you need to do, and therefore call the RTOs in. That can allow RTOs to say we don't have an issue, and it can allow PJM to confirm that they do have an issue. Get that fixed. Various folks have modeled that and have come up with their estimates of what that would mean in terms of around the clock energy prices. And then in parallel to correcting for those out of market uplift payments, initiate a stakeholder process to explicitly recognize fuel diversity, because price formation is independent of fuel. And so either of those two scenarios, we think, are possibilities and we'll know a little better on December 11 when FERC is due to respond. Yes?

<Q>: [indiscernible] (26:38-26:49)

<A - Ralph Izzo>: Yeah. So, when you're 110-year old company, you don't wear a party stripe, right, you wear a yellow stripe, and you go right down the middle of the road. And I think every governor I've worked with, and my predecessors told me the same thing, understands that we can't move out wires. So, as New Jersey goes, so goes our T&D expenses business, right? So we are a great partner.

final
Bloomberg Transcript
Bloomberg
SI-SSA-0015-08199

I mean, that does tend to mean that you're never in the inner circle, because you're not there in the early days when primary battles are going on, but you're there for them once they achieve office. So we have fully briefed both candidates for governor about what we think is smart and maybe not the brightest thing to do in terms of energy policy, and what matters and what doesn't matter, and both have been great supporters throughout the campaign – energy has not been a dominant issue – about the importance of an aging infrastructure and replacing that, the importance of job creation that results from that, both are very careful to talk about the affordability of the state of New Jersey. One is a little bit more green emphasis than the other. One is little bit more emphasis on affordability than the other. So at the end of today, we'll see who we're going to work with for the next four to eight years, and we'll work with them just fine. Our relationship with the governor has been terrific. He's been a big champion of infrastructure replacement, has been a big champion of clean air, hasn't been a major proponent of concerns over carbon. And that's okay. I mean, nuclear power doesn't emit NOx, doesn't emit SO2, doesn't emit mercury, and so therefore he's been a big supporter of nuclear even in the absence of concern over carbon.

<Q>: [indiscernible] (28:25-28:32)

<A - Ralph Izzo>: Yeah. So nuclear will benefit, as will oil generation, from fixing the flaws associated with price formation, Fast Track, things of that nature. In PJM East, it's important to realize that nuclear challenges that relate to inflexible units have nothing to do with wind. They have more to do with the fact that they are all – that there's a behavior at PJM that requires dispatch of some slow to ramp units that often results in uplift payments that are not reflected in the locational marginal price because of the way in which the tariff is designed in PJM. There's a white paper in the PJM published that's like six or seven pages long, very readable, very understandable that I did not just give great justice to. But that has nothing to do with the attributes of nuclear.

In New Jersey, our plants constitute 40% of the energy used in New Jersey, about 45% of the energy generated in New Jersey. The absence of those plants, we believe, does several things. First of all, just the way in which PJM dispatches, you don't have to be an economist to know that when you remove 40% of supply and you dispatch on a least cost basis, and you don't change demand, prices go up. Our estimates are about $400 million a year.

Number two, if you replace those plants with the current PJM dispatch, which is a blend of gas and coal, and you simply say, what does a pound of NOx cost, what does a pound of SO2 cost, what does a pound of mercury cost, you result in about $150 million a year of environmental impact.

Number three, you emit 15 million more tons of carbon if you do not replace the units with the current dispatch, but you're replacing with the most efficient natural gas combined-cycle units you can, so we're being very generous there. Now if you think carbon's worth zero, then that's not a big deal. If you think carbon is worth $30, that's $450 million a year, and you pick your number and do the arithmetic and it's pretty straightforward.

Number three, we employ 1,500 people at those plants. It's the second poorest county in the state of New Jersey. That's full time people. When you include refueling outages, it's closer to 3,000. If you make some estimates about what it costs to provide the food to the plants, the dry cask storage to the plants, various other things, you can get a number closer to 5,000. So pick your assumptions, it's definitely 1,500, it could be as much as 5,000. That results in sales tax, payroll taxes of anywhere from $150 million to $180 million, because of the range of number of people.

And last, but by no means least, if you replace those plants with natural gas, you would have 97% of your electricity coming from natural gas. You should worry about that, not because there's a meteor that's going to hit the natural gas plants or it's going to disrupt anything in Ohio that has to do with shale, but we as a combination of electric and gas utility during the polar vortex had to curtail gas to customers. That was with 40% of the electricity in state being generated by nuclear power.

If you don't have nuclear power, we will be doing a lot more than curtailing interruptible customers. You will basically be choosing between heating a home or illuminating a home. That's because you don't want to build an interstate pipeline capability for a polar vortex. It's not necessary, it's expensive, there's no need to do that. And candidly, I would say this right now, it's socially unacceptable to do that.

final

Bloomberg
SI-SSA-0015-08200

Similarly, a very well run, well managed – I'm not going to name them – interstate pipeline company had an issue with an East-West pipeline last year. Fortunately that issue occurred between the months of April and November. If it had gone past November, and we run into a cold spell, we would have been faced with the same issue. So those are two episodes of operational limitations that occurred in the past three years, and again at the risk of being flip, have nothing to do with some bizarre set of circumstances that will never ever happen again that would lead you to be concerned about 97% asset concentration in terms of natural gas powered electricity.

So with all of that in mind, we have simply begun a conversation in the state to say, did you know, if these plants aren't earning the cost of capital, we have a fiduciary responsibility to shut them down. That's a problem for New Jersey, and we've been real clear. We've retired 4,000 megawatts of power plants in the past few years. It wasn't a headline, it wasn't winding, it just needed to be done. Nobody noticed, nobody cared. This one people will notice, people will care. So we're trying to avoid that situation. And we've gotten great response in terms of the concerns about seeing those plants go away. [ph] Yes, Nick (32:54).

<Q>: Hi. Ralph, I guess you've made a very convincing argument about why you need [indiscernible] (33:01), so I appreciate that.

<A - Ralph Izzo>: Correction of the flaws in the market. We have to get the terminology right.

<Q>: Thanks. The future of the [indiscernible] (33:15) seems to be somewhat out of fashion these days [indiscernible] (33:23-33:29) given it's running by itself, but there is not so much growth opportunity there, [indiscernible] (33:37), how do you see that could be separated out or that could be sold to somebody or keep it intact?

<A - Ralph Izzo>: Yeah. So I remember when I took this job 10 years ago, people used to tell me about the fact that you've got these two businesses and they don't belong together. You've got this wonderful power business and this hideous slow-growing utility, why don't you get rid of it? And now people say, you've got these two companies that don't belong together, you've got this wonderful growing utility and this hideous power business.

Okay. Now having said that, I do think that given the amount of uncertainty in the regulatory world and in the marketplace, now is not a good time to be thinking about separating the companies, right? You can't have a conversation as a corporate citizen say, hey, these nuclear plants matter to you and expect people to wonder, well, who is it that I'm going to be speaking to the day after tomorrow. That's just – that's not fair to policymakers and we wouldn't do that.

Similarly, with price formation discussions with DOE NOPR, I don't know what the right valuation of these plants are. And while we're more than willing to earn our compensation by managing risk, I don't think we get paid to gamble. So to simply say, well, who knows what these things are worth, let me just sell them now and see what I can get on what basis.

Now over the long-term, as I've been quoted and as I still believe, the opportunity to grow the power business is inconsistent with keeping it inside an integrated company and we're not making buggy whips in power, we're making electricity, and as far as I can tell people like that and want more of that. But people seem to worry about it, where is capital going to be deployed, and is it in the slow steady grower called the utility. If you consider high single-digit slow, maybe not. Or is it in this more cyclical business called power that has a different investment profile. And I think over time that those are different investors and we will have to recognize that, but over the near-term I don't think that makes any sense. 5 minutes, thank you. Yes.

<Q>: [indiscernible] (35:40)

<A - Ralph Izzo>: About 6,500 Btus per kWh.

<Q>: Pardon?

<A - Ralph Izzo>: 6,500 Btus per kWh. Wow, I can actually give an answer in one sentence. I didn't think I could do that. [ph] Carl (35:59)?

final

<Q>: Ralph, [indiscernible] (36:01) your ability to work with regulators, which you have done very well over the last 10 years, I guess, [indiscernible] (36:11) is it too early to say is there any names being floated for anybody [indiscernible] (36:17) or any of the critical positions like environmental or whatever.

<A - Ralph Izzo>: Oh, yeah, it is definitely too early to say.

<Q>: Okay. Do you think the campaigns are focusing [ph] on it at all (36:31)?

<A - Ralph Izzo>: Again, as I said, because we go down that yellow stripe in the middle of the road, we're not on the inside of any campaign to know that. We have in the past been asked to put forward a list of candidates. I've often wondered whether or not they ask us to do that so as they avoid those names. I almost had two questions in a row where I gave a one sentence answer, [ph] Carl (36:57), then you followed up. Yes.

<Q>: [indiscernible] (37:04-37:09)

<A - Ralph Izzo>: Absolutely. I'll tell you, knowing where we are today in LIPA and what we've achieved, if you had asked me four years ago when we began that to sort of set my aspirations for what the team could do and someone had [ph] touched (37:21) me, would you like to do this, I would say, sure, of course, I'd like to do that, I'd also like to pitch for the New York Yankees, but that's not likely to happen at this point in my life.

So the team has just done fabulous work there. I think we have an operating services agreement that has – it varies between 22 and 24 measures that we have to hit. We hit all but one or two of them every year. We've gone from literally dead last in J.D. Power to now being just, I think, one position out of the median company in terms of customer satisfaction. The team has done a fabulous job and the employees have responded well to us. It's been a very rewarding experience. I wish there were more of those opportunities out there, but they're not obvious to us.

Ralph Izzo

I'm going to just take one more question which – of course, whenever you say that there's never another question. But I'll say it anyway. We have time for one more question. Works like a charm every time. Thank you for joining us.

PSEG Investor Summary

2017 EEI FINANCIAL CONFERENCE
ORLANDO, FL • NOVEMBER 5-7, 2017

SI-SSA-0015-08203

We have the
energy
to make things better
... for you, for our investors
and for our stakeholders.

PSEG

We make things work for you.

Forward-Looking Statements

Certain of the matters discussed in this presentation about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K. These factors include, but are not limited to:

- fluctuations in wholesale power and natural gas markets, including the potential impacts on the economic viability of our generation units;
- our ability to obtain adequate fuel supply;
- any inability to manage our energy obligations with available supply;
- increases in competition in wholesale energy and capacity markets;
- changes in technology related to energy generation, distribution and consumption and customer usage patterns;
- economic downturns;
- third party credit risk relating to our sale of generation output and purchase of fuel;
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements;
- changes in state and federal legislation and regulations;
- the impact of pending rate case proceedings;
- regulatory, financial, environmental, health and safety risks associated with our ownership and operation of nuclear facilities;
- adverse changes in energy industry laws, policies and regulations, including market structures and transmission planning;
- changes in federal and state environmental regulations and enforcement;
- delays in receipt of, or an inability to receive, necessary licenses and permits;
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry;
- changes in tax laws and regulations;
- the impact of our holding company structure on our ability to meet our corporate funding needs, service debt and pay dividends;
- lack of growth or slower growth in the number of customers or changes in customer demand;
- any inability of Power to meet its commitments under forward sale obligations;
- reliance on transmission facilities that we do not own or control and the impact on our ability to maintain adequate transmission capacity;
- any inability to successfully develop or construct generation, transmission and distribution projects;
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers;
- our inability to exercise control over the operations of generation facilities in which we do not maintain a controlling interest;
- any inability to maintain sufficient liquidity;
- any inability to realize anticipated tax benefits or retain tax credits;
- challenges associated with recruitment and/or retention of key executives and a qualified workforce;
- the impact of our covenants in our debt instruments on our operations; and
- the impact of acts of terrorism, cybersecurity attacks or intrusions.

All of the forward-looking statements made in this presentation are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business, prospects, financial condition, results of operations or cash flows. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this presentation apply only as of the date of this presentation. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even in light of new information or future events, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this presentation are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-08204

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Net Income. Non-GAAP Operating Earnings exclude the impact of returns (losses) associated with the Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting and material one-time items. Non-GAAP Adjusted EBITDA excludes the same items as our non-GAAP Operating Earnings measure as well as income tax expense, interest expense and depreciation and amortization. The last two slides in this presentation (Slides A and B) include a list of items excluded from Net Income/(Loss) to reconcile to non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA with a reference to those slides included on each of the slides where the non-GAAP information appears.

Management uses non-GAAP Operating Earnings in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results. Management believes non-GAAP Adjusted EBITDA is useful to investors and other users of our financial statements in evaluating operating performance because it provides them with an additional tool to compare business performance across companies and across periods. Management also believes that non-GAAP Adjusted EBITDA is widely used by investors to measure operating performance without regard to items such as income tax expense, interest expense and depreciation and amortization, which can vary substantially from company to company depending upon, among other things, the book value of assets, capital structure and whether assets were constructed or acquired. Non-GAAP Adjusted EBITDA also allows investors and other users to assess the underlying financial performance of our fleet before management's decision to deploy capital. The presentation of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA is intended to complement, and should not be considered an alternative to, the presentation of Net Income, which is an indicator of financial performance determined in accordance with GAAP. In addition, non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA as presented in this release may not be comparable to similarly titled measures used by other companies.

Due to the forward looking nature of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility.

These materials and other financial releases can be found on the PSEG website at www.pseg.com, under the Investors tab. From time to time, PSEG, PSE&G and PSEG Power release important information via postings on their corporate website at http://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. PSEG STRATEGY: GROWING A HIGH-QUALITY, FINANCIALLY SOUND ENERGY INFRASTRUCTURE COMPANY

Ralph Izzo

CHAIRMAN, PRESIDENT AND CHIEF EXECUTIVE OFFICER

Dan Cregg

EXECUTIVE VICE PRESIDENT AND CHIEF FINANCIAL OFFICER

SI-SSA-0015-08206

PSEG

We make things work for you.

Two strong businesses

A stable platform, each with growth opportunities

PSEG

PSE&G	PSEG Power LLC
Electric & Gas Delivery and Transmission	**Regional Competitive Generation**
Strategy: Investments aligned with public policy and customer needs **Value Proposition:** A $12 - $14 billion infrastructure program with opportunities to expand, producing high single digit rate base growth through 2021	**Strategy:** Investment program enhances competitive position with addition of efficient, clean, reliable CCGT capacity **Value Proposition:** Provides substantial free cash flow and upside from market rule improvements
2016 — Assets $26B Net Income $889M	2016 — Assets $12B Net Income $18M Non-GAAP Operating Earnings* $514M

SI-SSA-0015-08207

ASSETS AND NET INCOME ARE FOR THE YEAR ENDED 12/31/2016. PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO ENTERPRISE / OTHER ACTIVITY. *SEE SLIDE A FOR A RECONCILIATION OF NET INCOME TO NON-GAAP OPERATING EARNINGS AND SLIDE B FOR RECONCILIATIONS FOR PSEG POWER AND ENTERPRISE/OTHER.

PSE&G – New Jersey's largest:

- Electric and Gas Distribution utility
- Transmission business
- Investor in renewables and energy efficiency
- Appliance service provider

	Electric	Gas
Customers Growth (2012 – 2016)	2.2 Million 0.5%	1.8 Million 0.4%
2016 Electric and Gas Sales	41,580 GWh	2,360M Therms*
Projected Annual Sales Growth (2017 – 2019)**	0.3%	0.7%
Sales Mix (2016)		
Residential	33%	59%
Commercial	58%	37%
Industrial	9%	4%

PSE&G 2016 Rate Base

SI-SSA-0015-08208

PSEG

* GAS FIRM SALES ONLY.
** ESTIMATED ANNUAL GROWTH PER YEAR, ASSUMES NORMAL WEATHER.

Power has generating assets in three competitive markets

- Major assets located near key load centers
- Constructing three new, highly efficient combined-cycle units
- Positioned to benefit from market volatility
- Additional generation assets:
  - Solar (349 MW_{DC}/275 MW_{AC})
  - Kalaeloa, HI (104 MW)

SI-SSA-0015-08209

*HUDSON AND MERCER GENERATING STATIONS WERE RETIRED AS OF JUNE 1, 2017.

Regulatory and Policy initiatives drive long-term value creation

NJ Distribution Base Rate Proceeding

- Agreed to delay rate review filing by one month to no later than December 1, 2017

Long-Term Infrastructure Investment Platform

- In July, PSE&G filed for a 5-year, $2.7 billion extension of the Gas System Modernization Program (GSMP2)
- In October, the BPU approved $69 million of PSE&G's request to extend its investment in Energy Efficiency (EE)
- A final BPU decision on the Infrastructure Investment Program (IIP) providing for 5-year investment programs is expected by year-end
- PSE&G preparing a multi-year extension filing for Energy Strong in coming months
- PSE&G developing a large, multi-year EE investment program to bring benefits to more customers

Preserve the Value of Nuclear Supply

- Advocating for legislative strategy to recognize the value of nuclear energy under terms and conditions that provide proper incentives for long-term operation

Ensure Federal Regulatory and Policy Framework

- FERC/PJM considering DOE Notice of Proposed Rulemaking (NOPR) issues of Price Formation and fuel-secure resource preservation

SI-SSA-0015-08210

PSE&G's investment program provides for 7%–9% growth in rate base

E = ESTIMATE.

SI-SSA-0015-08211

Baseline programs yield 7% compound annual growth in rate base

SI-SSA-0015-08212

PSEG

E = ESTIMATE. CAGR = COMPOUND ANNUAL GROWTH RATE. INCLUDES AFUDC. DATA AS OF OCTOBER 31, 2017

Expansion/Extension of PSE&G's existing

baseline programs yield increasing confidence in ~9% rate base CAGR

E = ESTIMATE. CAGR = COMPOUND ANNUAL GROWTH RATE. INCLUDES AFUDC. DATA AS OF OCTOBER 31, 2017.

PSE&G's capital spending drives high single-digit growth in rate base

E = ESTIMATE.

SI-SSA-0015-08214

PSE&G Investment Evolution: System needs, customer expectations and public policy objectives drive need for continued and increasing Distribution investments

2012 - 2016

Infrastructure Clauses focused on hardening and resiliency

Solar 4 All and Solar loans

Energy Efficiency

2017-2021E

Complete hardening, begin system modernization expand efficiency program

Transition from Energy Strong to Life cycle and automation work

Accelerate GSMP

Solar landfills

Extend and broaden Energy Efficiency

Utility of the Future

Electric Infrastructure

Life cycle programs, distribution automation, EV Charging

Gas Infrastructure

GSMP Acceleration and Resiliency

CNG Charging

Distributed energy resources

Solar 4 All, Microgrids, Batteries, Fuel Cells

Energy Efficiency

Hospitals, Municipalities, Universities, Low Income Programs, EE for All (Residential, Small C&I), AMI, Bill Education

Utility of the Future represents potential investment opportunity to sustain annual rate base growth into the next decade

SI-SSA-0015-08215

Power's fleet is being **transformed** with focus on improvement in efficiency

Projected Fleet Comparison 2016 to 2021E

2021E Fuel Diversity[1]
Total MW: 11,900

2016 Fuel Diversity
Total MW: 11,577

2021E Energy Produced[1]
Total GWh: 61,000

2016 Energy Produced
Total GWh: 51,510

- Gas
- Nuclear
- Coal**
- Oil
- Pumped Storage

Energy Produced increases by >18%

[1] REFLECTS RETIREMENT OF HUDSON AND MERCER UNITS ON JUNE 1, 2017.
ALL PERIODS EXCLUDE SOLAR (257 MW_{AC}) CAPACITY AND KALAELOA (104 MW) CAPACITY / ENERGY PRODUCED.
**2016 COAL INCLUDES NEW JERSEY UNITS THAT FUEL SWITCH TO GAS. E= ESTIMATE.

Capacity Markets provide a solid and continuing revenue stream

PJM's RPM Auction Results*					
Delivery Year	2016/2017	2017/2018	2018/2019	2019/2020	2020/2021
Power's Average Prices ($/MW-day)	$172	$177	$215	$116	$174

SI-SSA-0015-08226

Distribution Base Rate Case Filing Assumptions

- Test year – July 1, 2017 through June 30, 2018 (with certain pro forma adjustments)
- ROE request of 10.3%
- Capitalization structure includes 54% equity component
- O&M and sales are roughly flat to last rate case eight years ago
- Mid-single digit requested increase relative to overall *revenue*
- Return of and on incremental rate base not recovered through clauses
  - $255M of GSMP Stipulated Base;
  - ~$100M Energy Strong above $1B in clause;
  - Capital investments above depreciation levels;
  - New Business
- Seeking decoupling of revenues from sales volumes
  - Aligning with State, environmental and customer interests
  - Supporting larger energy efficiency programs
- Anticipate new rates effective October 2018

Overall rates, even after consideration of the expected mid-single digit request, would remain >10% lower than they were in 2010

SI-SSA-0015-08227

PSE&G: Energy Efficiency Approval and GSMP II Filing Support Long-term Regulatory and Policy Objectives

PSE&G's recent filing to extend its Gas System Modernization Program (GSMP) and the recent approval of its proposed extension of the Energy Efficiency investment program reinforce PSE&G's commitment to provide clean, reliable energy for its customers

Gas System Modernization Program II

In July, PSE&G filed for a 5-year extension of the GSMP which would accelerate the pace of replacement of its aging cast iron and unprotected steel mains and associated service. PSE&G is proposing to invest approximately $540 million per year, or up to $2.7 billion, over the 5-year program beginning in 2019. The filing is consistent with the draft regulations that the BPU issued in June regarding Infrastructure Investment Programs.

Energy Efficiency

The BPU has approved PSE&G's agreement with BPU Staff and Rate Counsel to extend its investment in Energy Efficiency. Under the agreement, PSE&G would invest $69 million in energy efficiency equipment for hospitals, multi-family housing and other sectors and a residential energy efficiency offering for smart thermostats and data analytics. The agreement represents more than 90% of PSE&G's request.

MANAGEMENT DISCUSSION SECTION

Ralph Izzo

So you're at the Public Service Enterprise Group presentation, just to make sure you're in the place you want to be. I refer you to our forward-looking statements as well as our GAAP disclaimer. We will be making some projections and we will use the methodology that we think better reflects the ongoing financial condition of the company.

I am Ralph Izzo, the Chairman, President and CEO of PSEG. I'm joined today with three of my colleagues Dan Cregg, our Executive Vice President and Chief Financial Officer; Carlotta Chan, who's in-charge of our Investor Relations; and Brian Reighn also from our Investor Relations Group. And each of us will be available to answer your questions as they arise.

So some highlights that we'll spend a little more time on during the course of the presentation, but the major theme here is a long history of success and a long-term view of how to manage the company going forward. Each of these particular items will come up during the course of the conversation, so I won't dwell on them here, but it is an over 100 year – over a century of success in various operational as well as financial measures.

So those of you who are less familiar with Public Service Enterprise Group, we have two principal operating subsidiaries. About two-thirds of the company's earnings comes from our regulated utility, it's an electric and gas utility in New Jersey. Its primary area of focus is an aging infrastructure investment program that has allowed us to grow the rate base over the past decade by low double-digits and over the next five years expects to invest between $12 billion and $16 billion to continue an 8% to 10% growth rate in that rate base, down from the prior 12% to 13% as the rate base has expanded.

PSEG Power, making up the bulk of the remaining one-third of the earnings of the company, characterized by a highly efficient natural gas fleet of approximately 7,200 average heat rate, producing a little bit under half of the electricity of power and then a low cost nuclear fleet of about 3,500 megawatts, producing a little bit over half of the remaining output from power. So we're well-positioned fleet from the point of view of economic efficiency, of environmental footprint as well as geographic location being primarily in Eastern PJM.

Another minute or two on the utility, we basically serve the north, south, central corridor of the State of New Jersey. A little bit over 2 million electric customers, a little bit under 2 million gas customers, essentially zero load growth over the past few years, modestly up in gas, modestly down in electric. So, load growth is not the correlating factor to the utility's growth. At the risk of repeating myself, it's all about an aging infrastructure replacement that is the primary impetus behind the past decade and future five years of growth, with the additional caveat now of an interest and an excitement around the Clean Energy Future being resurrected in New Jersey with the incoming new Governor Murphy administration.

Also worthy of note is the pie chart in the lower right hand corner. As you can see, we are approximately one-half transmission rate base and, therefore, FERC formula rate regulated, with the other half the distribution component being New Jersey Board of Public Utilities regulated.

A fairly busy year and a somewhat successful year from the point of view of 2018, our first base rate case in eight years having been successfully concluded just this past month successfully from the point of view of we didn't get everything

Bloomberg Transcript

we wanted and our regulators didn't get everything that perhaps they may have wanted. A 9.6% allowed return on equity and a 54% equity ratio being the highlights of that rate case outcome. We also received approval for a Gas System Modernization Plan. We have the dubious distinction of owning the largest cast-iron gas main system in America. It is fortunately a low pressure, low utilization pressure system and just sort of represents both an O&M and public nuisance from the point of view of occasional breaks and cracks that require correction.

At our current pace of expenditure, under the GSMP II, forgive me for using the acronym, but it just makes it easier, it will take us anywhere from 20 to 25 years to fully replace that program. That's a $400 million a year spend. In addition, legislation was enacted that preserves the life of our nuclear fleet by recognizing both their environmental benefits through a zero-emission credit as well as the fuel diversity they provide the state in terms of minimizing our exclusive dependence on natural gas. Also this year, the passage of Clean Energy legislation, which creates a framework for the utility to participate in a whole range of beyond-the-meter services, which we had been participating in, in the past, but now gives an explicit mandate, things like energy storage, energy efficiency and the like and we'll talk a little bit more about that Clean Energy Future program as we continue.

To be sure, some activity underway at FERC as it pertains to PJM capacity markets. There too, while there's no question that there's some uncertainty associated with that. We do believe that given the stated objectives of FERC in redesigning the capacity market that we are extremely well-positioned: number one, through the elimination of, to the extent that exists, price suppression on unsubsidized units that could potentially – should potentially support and help our fossil fleet; and number two, through FERC's stated desire to not interfere with state's abilities to designate various technologies in particular as it pertains to carbon limitations and continue to support the operation of those technologies, which should benefit our nuclear fleet.

Let's spend a little bit of time talking about that 8% to 10% growth rate in the rate base of the utility. What do you see here is the rate base for transmission at the bottom half of the bar and the rate base for distribution the green part of the bar. Those are approved and existing programs. The projects are in engineering, they're in design, they're in construction and that produces the 8% growth rate. The additional potential for 2% is if the two filings that we have made this year, one for something called Energy Strong II, which brilliantly follows on the heels of Energy Strong I, which was completed just this past year, which is an attempt to harden and make more resilient our electric grid. We have filed for $2.5 billion over the next five years. Here we show the first three years of that five-year program. And on top of that, our Clean Energy programs that I referred to briefly a moment ago, which is $3.6 billion filing for the next six years. Here we show the first three years of that.

If the as-filed programs are approved in the as-filed condition, the first three years of them would produce the 10% growth rate. That 10% growth rate could be achievable in other ways by either additional transmission projects, additional distribution projects, or even if the programs are not fully approved, if the first three years of the as-filed programs are approved, that 10% would be real. So somewhere between 8% and 10%.

My favorite slide of the whole deck, one that I'll spend a few minutes on, the stacked solid colored bars reflect known and approved capital programs that contribute – that provides the 8% growth in rate base. So here we break that out in terms of transmission, electric and gas distribution and Clean Energy. So that would be the solid bars. And if you look at the tops of the solid bars, you see a roughly $12-plus billion program that is declining over the five years.

We have shown this graph every year for the past 11 to 12 years. We don't have to change it at all except for the numbers on the Y axis and the years on the X axis. To emphasize that point, if you look at that dark line that's on the bottom, that's somewhat short, that shows years three, four and five of what would have been the solid bars that I showed two years ago in 2016. So you see the same declining pattern.

The equally dark line, but I think it's black if you look close to it, our years two, three, four and five of what the tops of the solid bars would have been in 2017, same declining pattern, but about $0.5 billion higher in each year. If we were not to show stacked bars but instead were to simply show you a solid line, for the current solid bars you could see that it is the same declining pattern but about $300 million higher in each year.

So every year we talk about the declining capital program and every year we come back and show you the increased capital program. And it suffices to say that the crosshatched region on top are the two current filings Energy Strong II and Clean Energy Future. We will not get 100% of what we request, even though we think every penny of it is worth doing. To the extent that we get some of it, it is very likely that I will repeat the last three minutes of this presentation when I speak to you next year.

So notwithstanding the growth in the rate base, the emphasis has shifted. So some of the transmission projects we did five years ago were all about decongesting and making more reliable the East-West Interchange and PJM East. Now we are spending more money not so much on big transmission projects, but on hardening the transmission system, replacing literally 70-year-old assets, 60-year-old assets to make sure they're more reliable. Prior five years, we spent a fair amount of money in building some small peakers in our generation fleet one in Connecticut, one in New Jersey and in the last year and then into the next year, we've built a few combined cycles. That program will wind down and we will deemphasize our construction in the generation fleet.

We have spent a fair amount of money the prior five years on distribution resiliency. That will continue in the current five years and we are just beginning to ramp up our Clean Energy spending. We had spent about $700 million in solar over the past 10 years, $400 million on energy efficiency over the past 10 years. But if you just look at that Clean Energy filing, $3.6 billion over the next six years, you can see an order of magnitude shift in that emphasis.

Let me spend a little bit of time again on the base rate case settlement. So, the $17.5 billion rate base, about half of that, as I mentioned a moment ago, a little bit more than half of that, $9.5 billion is in distribution. The last five settled cases in New Jersey have yielded a 9.6% allowed ROE. That was the ROE we settled for. We were given a 54% equity layer, which also applies to our transmission system as a result of that being the capital structure of the single legal entity known as PSE&G. But through the miracles of tax reform, we are actually able to improve our earnings while lowering the customer bill by $13 million. And Dan during the Q&A can walk you through the deferred tax impacts of tax reform as well as some of the flow-back issues that allowed us to both increase the earnings of the company and lower customer bills.

At the conclusion of this case, our customers' bills, not their rates, but the bill for the average residential customer is 30% lower than what it was 10 years ago in nominal dollars and 40% lower if you were to escalate for the Consumer Price Index. I have to remind customers of that every so often because they don't seem to recall what their bill was back in 2008.

Energy Strong program, by way of reminder, back in the 2011, 2012 timeframe, we had some very strange events. We had a snowstorm in New Jersey around Halloween then the subsequent August we had Hurricane Irene, not such an unusual event. But then October 28, 2012, we had Superstorm Sandy and that resulted in literally a resetting of the Federal Emergency Management Agency maps for where the flood plains reside. New Jersey being an old industrial state where electrification followed the industrialization of the state, primarily in transportation corridor, in the old days transportation corridors were rivers and rail lines. Those happened to be coincidental with low-lying areas and flood-prone areas. We have a lot of assets that were susceptible to floods not just from rain, but from tidal surges.

At that time, we went to the Board of Public Utilities and said to fix those assets that were affected by each of those three events. I'm not predicting any future climate change calamities, but just to fix what was affected will cost us $3.9 billion and we need to spend that over the next 10 years. The Board of Public Utilities said here – we then asked for $2.6 billion over five years. The Board of Public Utilities said you're right, something needs to be done. Here's $1.2 billion and get it done in the next three or four years. And by the way, we're going to assign somebody to monitor your activity. I think with complete pride on behalf of our employees, I can say that that monitor gave us an A-plus on our report card. We did the work that we thought would take $1.2 billion and used only $1 billion and now we've gone back and said $3.9 billion minus $1.2 billion is not $2.7 billion, it's $2.5 billion. And by the way, we think we can do a few more things here and a few less things there, but [ph] give us the second-half of energy shown (00:14:20) given how well we did.

You can see a before and after picture here of a particular switching station that was modified as a result of Energy Strong. And if you can't see the detail, I'd encourage you to pick up one of the slides in the back. It's pretty impressive

how different the facility is both in terms of just being lifted off the ground and being protected from inclement weather.

The partnership for Clean Energy Future, as I mentioned a moment ago, really comes on the heels of Clean Energy legislation that was enacted and signed into law by Governor Murphy in May of this past year. The primary component of that is an energy efficiency program that seeks to reduce electricity demand by 2% per year and gas demand by 0.75% per year. The legislation clearly articulates that those ought to be the targets for the electric and gas utilities in the state and the BPU should enact rules that allow us to recover the costs for running the program, to recover the investment of the equipment we put in, to earn a return on the investments we put in as well as to recover the loss revenues from the foregone sales as a result of the energy efficiency.

So the legislative language we are very supportive of. The actual rules to implement that is something that will be discussed during the course of the Clean Energy Future filing. Theoretically, the laws are written in a way where the Board of Public Utilities has 180 days to act on that after they've deemed the application complete. This is webcast, but nonetheless [ph] I will guard on a limb (00:15:50) and remind the Board of Public Utilities that today is the 30-day expiration of the clock for completeness. It's a three-hour time zone, I wish I was speaking at 1:00 PM instead of 9:00 AM, but nonetheless hopefully that application will be deemed complete. Even if it's not, we will work with the staff to get them the information they need. So, that's the [indiscernible] (00:16:10) of the $2.5 billion.

If you look at New Jersey from the point of view of conditions that blend it to be a place for electric vehicle penetration, third highest per capita income in the nation, among the worst air quality, densely populated state, short travel distance, high traffic congestion. Nonetheless, we lag – I think we're 48th in the state in electric vehicle charging stations. So all we've said here is we recognize it's not a natural monopoly service, but there is a strong mismatch between how much electric vehicle penetration should exist in New Jersey and how much does exist in New Jersey. Let us help you get the market started. Similarly, if one were to look at the Governor's articulated and then legislated goals for energy storage, a target of 600 megawatts of energy storage by the year 2021, which is about 26 months away. And we are proposing to do 35 megawatts of that once again to get the market underway.

And last but by no means least, in the latter years of the six-year filing to install about 2 million smart meters and to move forward where New Jersey has lagged the rest of the nation. I believe I've seen estimates of 50% to 60% of the nation now has smart meters and we do not have any appreciable number of those in New Jersey and to provide the data analytics to really improve the customer experience from a point of view of affordability, from a point of view of energy efficiency and a whole variety of basic daily operational services – outage detection, remote reconnect and disconnect and things of the sort.

Moving over to Power, we show here the location of our assets on the left hand side in terms of our fossil and nuclear fleet. On the right hand side, we also have about 400 megawatts DC of solar farms, sprinkled around I think 15 or 16 states. The largest installation is somewhere in the low 50 megawatt range, the smallest installation being a couple of megawatts. So we don't do rooftop, we don't do large scale installations, all of them are supported by long-term power purchase agreements, which creditworthy counterparties usually [ph] end up at (00:18:22) utility. As you can see, our fossil and nuclear fleet is in PJM East with one power plant in New York ISO and then one power plant in [ph] NEPOOL (00:18:32) in the Bridgeport area.

The fleet is undergoing quite a transformation. The charts on the left are the nameplate capacity of our assets. So, as you can see that we are primarily a gas fleet in terms of the blue being slightly larger than the orange, which is the nuclear component in terms of nameplate capacity. But as we step forward in time, the completion of three combined cycle gas turbines, one in Maryland, one in Connecticut, one in New Jersey will further expand the gas nameplate capacity of that fleet.

But more importantly, in terms of the output of the fleet, the lower right shows you that we are predominantly a nuclear generator, nowadays close to 60% of the output. However, given any efficiency of the new combined cycle fleet that we are just finishing the construction of, two of them actually finished, one will be complete in June, you see quite a bit of an increase in the amount of output from natural gas. The small piece of coal that remains is our partial ownership of a mine mouth coal facility in Western Pennsylvania known as Keystone Conemaugh. I think we own about 25%, 27%

final
Bloomberg Transcript
Bloomberg
SI-SSA-0015-08235

of that, something like that.

If we look at Power's capital construction program, as I mentioned a moment ago, we just finished the construction of two combined cycle units this past year, one in New Jersey, one in Maryland. We will finish the third and final piece of that construction program in Bridgeport, Connecticut by June of next year. That will take Power's capital construction program down to a maintenance level of about $200 million a year, freeing up $800 million of funds from operation to be available as free cash flow over to the insatiable appetite of the utility to improve the aging infrastructure that we talked about a few minutes ago.

So that capital program in the utility can be performed without the need for additional equity. It is internally self-funded plus the debt capacity of the utility. So the equity needs of the utility is provided by the internal cash flow generation, the debt capacity of Power and then the 46% debt component of the utility capital structure as its own debt capacity.

O&M has been something that we pay attention to every day, every week, every month, every year. We can never come to EEI, I am almost sad, but – I can't actually cross that line to actually being said and announce a major cost reduction program. We obsessed over this all the time. Dan got to fly out here in economy plus seating next to a service dog that evidently [ph] shed (00:21:07) all over, his eyes are still red from doing that. I had one analyst scold me over the fact that we put Dan in that seat. I said I don't feel sorry for him. He builds character. I had the same seat coming up, but without the service dog. I have nothing against service dogs. I know I'm going to get in trouble for joking about that, but that's a true story. I've completely forgotten what I wanted to tell you about that. That wasn't part [indiscernible] (00:21:31) the fact that O&M over these five years at the parent level has decreased by about a little less than 0.5% per year. Yet we did manage to give people on average a 3% wage increases, we did manage on average to invest a tremendous amount of money in capital construction at the utility.

That's significant because when you're doing that amount of work at the utility, there is a fair amount of O&M that goes along with it, right. You can't start working on the system and take substations at a service without being dispatching people to other substations to make sure the system is in a stable configuration. So the capital program does incur a fair amount of [ph] volume (00:22:07). So that just means that we found ways to save money in other areas.

If I take a look at the current condition of the balance sheet, our cash metrics, what we find is that we tend to pick minimum thresholds that would keep the company at a solid investment-grade credit rating. For us, that's typically BBB+. So with the capital program, as I've described, with our expectations for dividend growth, which I'll speak to in a moment, without the need for additional equity, we still have about $1.4 billion in unutilized debt capacity. And what that means if we were to do something in the unregulated business, that debt capacity equals the investment capacity. However, that capital program that I described to you a moment ago, 90% is targeted towards the utility. That ratio has gone anywhere from 80% to 90% over the next five years whenever you look back in time, right. So if you look back in time and then look forward five years, we spent between 80% and 90% on the utility and that will continue to be the overwhelmingly majority part of our capital program.

With that in mind, that $1.4 billion in debt capacity could yield an additional $2.8 billion in utility investment – that being the equity component and then the utility being able to access the debt markets on its own. So we have a pretty strong 8% to 10% rate base growth, we have some fairly solid credit metrics and we have additional capability for further investment, never with the need to issue additional equity.

We just recently narrowed our guidance without changing the midpoint, so I believe we're now at $3.05 to $3.10 a share. Over the last five years, we've been growing earnings at 4%. The utility's double-digit growth being offset by the recontracting of Power and therefore the decline in profitability in merchant generation business.

We have paid a dividend every year for 111 years and that – we didn't do that by occasionally cutting it down to $0.01 a year and no cheap shots intended there. But nonetheless, you do see that the utility more than covers the dividend and the utility growth rate more than covers the growth rate in the dividend, therefore, further increasing the security of that dividend. We don't give a formulaic guidance in terms of dividend policy. We do offer these qualitative words that you can fairly easily translate into what you've seen recently is what you should expect to continue to see certainly over the predictable near term. So that's that opportunity for consistent and sustainable dividend growth.

final
Bloomberg Transcript

The value proposition hasn't changed. We run the business by obsessing over operational excellence. Being named to the Dow Jones Sustainability Index for 11 years in a row, being the most reliable electric utility in the Mid-Atlantic region 17 years in a row, a series of accolades that range from diversity and inclusion to being in the Forbes' Most Trustworthy Lister, some such crazy designation I don't even know what to call it. But that operational excellence is what leads to very strong regulatory relations and therefore solid financial performance and then we invest that money wisely in things that are consistent with public policy or meet the needs of our customers, even if it's not yet quite reflected in public policy, all the while making sure that that financial strength is intact.

If there is a takeaway from this EEI Meeting that we're sharing with investors, and I'd like to share with you today, it's summarized here, it talks about the recent regulatory derisking that's undertaken. It talks about the fleet in terms of the merchant generation de-risking that's taken place both in terms of the expanded geographic footprint by putting an actual asset at the PJM West Hub in Maryland and in terms of improving the overall heat rate of the fleet while all the time looking at what is possible for the future in terms of now moving down to the smaller projects in transmission, accelerating the gas pipe replacement, finishing the distribution hardening, moving into a Cleaner Energy Future and all the while protecting the strength of that balance sheet.

So, with that, I do believe I've left more than enough time for some questions. I'm not getting the nasty card from the back that says your time is up. So Dan and I are here to answer any questions you might have. Thank you.

Q&A

<A - Ralph Izzo>: We have a question here.

<Q>: I don't need the mic. I'm loud. I loved your comments. Great story. [ph] We can see (00:26:41) growth nationwide in renewables [indiscernible] (00:26:45)

<A - Ralph Izzo>: Yeah. Yeah, I do. I mean, most states are following some sort of renewable portfolio standard. I think it's a sub-optimal approach. We're a company that explicitly has said climate change is real and the preferred approach would be a national price on carbon, preferably economy-wide, but certainly industry-wide and then let the market pick and choose the best approach for achieving those outcomes. The way in which you get the price on carbon are many and varied. You can do a carbon tax, you can do cap and trade, you can do a variety of things. But there are some regions of the country that will survive the decrease in the ITC and the elimination of the PTC. There are some areas of the country that will not and you'll have to rely on the renewable portfolio standard to achieve continued investment.

New Jersey has opted to do most of its in-state renewables through rooftop solar. It's been a very expensive way to do renewables. The Solar Renewable Energy Credit, which is the regulated subsidy [ph] stream (00:27:53) that is on top of the investment tax credit and on top of net metering, nowadays trades [ph] for $220 (00:27:59) a megawatt-hour in New Jersey. That's a pretty steep price for an SREC.

So I do see it continuing. The technology is getting better. There are some parts of the nation where it's already competitive – wind in the Greater Plains, solar in the Southwest, but there are other parts that I think will slow down in the absence of any kind of robust renewable portfolio [indiscernible] (00:28:19). It's funny how a question that simply merits a yes or no can be stretched out for five minutes.

<Q>: Thanks. I know in the last rate cases, the decoupling didn't go through, so you're going to apply to get that.

<A - Ralph Izzo>: Yeah.

<Q>: What's the importance there? Are you conservation or efficiency or is it rooftop solar or why is it so important to you guys?

<A - Ralph Izzo>: Yeah. So decoupling is important to us as a foundation for the energy efficiency filing. So energy efficiency, as you know – we're not trying to do signal processing of refrigeration consumption of electricity, right. We're trying to get people to replace their light bulbs, their thermostats, their HVAC systems. So there is a significant

final
Bloomberg Transcript
Bloomberg

component. It varies by customer class and you can think of it as 30% to 50% of what a customer pay us [ph] then is (00:29:10) a fixed cost. So to the extent that we can help customers by helping them avoid consumption, we can eliminate our variable costs, that could be customer savings, but we don't want to lose the fixed cost recovery. So decoupling would help us avoid that fixed cost recovery. One could go in for frequent rate cases, but for a short-lived asset, the regulatory lag associated with a frequent rate case would be such that you would really underachieve the allowed return on that light bulb investment.

So what we said to the regulators back when we filed the rate case is we are going to file a Clean Energy program in the not too distant future and we won't be able to do it without a recovery of that fixed cost component. 28 other states do it by decoupling, why don't we be number 29. We essentially have it in natural gas in New Jersey. So we put it as part of the base rate case knowing full well that that was not the optimal forum for discussion of decoupling, but hoping that we could do something proactively. Therefore, we were willing to settle and concede that we would not decouple in the base rate case knowing that the Clean Energy filing would bring a whole different set of parties into the discussion who had much deeper experience, knowledge and candidly support for decoupling. And that's where it more naturally resides. So that will be the policy debate that will take place.

To us, energy efficiency is a quadruple when you can literally improve the environment, you can allow the shareholder to earn some money, you can lower the customer bill and candidly these are low skill jobs that you can now employ people that perhaps have long-term unemployment challenges. If everyone is willing to accept a quarter of the pie, everyone can win. But if somebody wants a half of the pie and the other people have to have a third each, I think I did my fractions right, then there are some losers and we're just trying to set the stage for that.

<Q>: [indiscernible] (00:31:18)

<A - Ralph Izzo>: Yeah, [ph] Frank (00:31:21). So the Long Island business I believe is doing fabulously well. So we are the operators of the Long Island Power Authority's electric distribution and transmission system. We have a12-year contract. We're just about to begin year five. Our J.D. Power scores are greatly improving. But more important than that, my sister-in-law who lives on Long Island who's legally insane, who I adore and otherwise I wouldn't say that, is telling me that her service is better. So that seems to be going fabulously well. We have a great team out there that's doing a good job in storm response. Now candidly, in all fairness to our predecessor operator, we've not been challenged by Superstorm Sandy, we've not been challenged by Hurricane Irene. So it's easier to perform well under less dire circumstances.

We have something called an operating services agreement, which fixes the fee that we get paid for operating that system. And then it's varied over time, but typically about 30 operating statistics that we have to achieve and we get bonuses if we achieve a certain percentage and we get penalized if we achieve a smaller percentage. And every year of the first four years of the contract, we've achieved bonuses. I think this year we're literally on track to hit 20 out of the 30 metrics. So I think that's going quite well. Anyone here who live on Long Island? How is it going, [ph] Helen (00:32:43), don't tell me you have an outage last week.

<Q>: [ph] We had a fewer hours (00:32:47).

<A - Ralph Izzo>: That's good. Thank you. I literally used to get Newsday clippings from my sister-in-law like the first month that we were out there. I was like I begged my brother tell her to stop please, I'm not coming out there to fix this.

Okay. Well, I don't see other hands. Oh, I see one hand there.

<Q>: [indiscernible] (00:33:10-00:33:17)

<A - Ralph Izzo>: Yeah. No, so New Jersey has one of the most diverse populations in the nation. And I fundamentally don't understand why any business would say to itself, I really want to recruit from only half this population. We're 85% male. Or I'd only want to recruit from 45% of the population. We're 80% Caucasian. So, to me, whether it's suppliers, whether it's labor, one needs to make available to oneself 100% of what is out there. So we are actively going to schools that have a highly diverse population to try to attract a diverse set of engineers. We have a

final
Bloomberg Transcript

Chief Diversity Officer who's got me as part of the CEO network. I think Thursday I'm going to a meeting to learn better what others are doing.

If you look at our Board of Directors, it's fairly diverse. Our officer core is not diverse. I've not penetrated that level. The tension is I believe that employees want to get promotional opportunities. And so that's right. I have a bias towards promoting from within, oh, that pipeline is not diverse. So that means to improve your diversity, you have to recruit from these schools, you have to change the look of the leadership on the top that then takes away opportunities from people from within. So that's the constant balance that we undergo.

We have created an innumerable amount of employee business resource groups to create forums where people, whether it's alternate lifestyle, whether it's LBGT, whether it's disability, whether it's [indiscernible] (00:34:59) can meet together and work together and provide a shared support network for each other. So, not only do I think it's a business imperative, I also think it's the right thing to do. So, to the extent that we can allow our diverse population who are there today they feel good about the place. That enhances our prospect to attract and recruit people into the future. But we really have no choice. One-third of our employees are related to each other. So that's both a blessing and a curse, right, I mean, it's a blessing when I go to union meetings and they start swearing at me and saying, hey, what I do wrong and I say, well, then why is it that you have your nephew working here [indiscernible] (00:35:41). So it's a multifaceted challenge, but one that is front and center for us.

I'm getting the yellow card. Yes, [ph] Helen (00:35:48).

<Q>: [indiscernible] (00:35:50-00:35:59)

<A - Ralph Izzo>: No. I love all my children. We pruned assets in many different places over many years. We had big assets in South America, we had some sociopolitical challenges that we weren't the best at managing. We had some assets in Texas that seemed to be subject to low barriers to entry and short commodity cycle. So, no, I think we've done the pruning that we want to do. I would say that there are some parts of the business that have more uncertainty and difficulty in terms of explaining than other parts of the business. I mean, try to have a conversation about the reliability, pricing model and capacity reform for subsidized plants and not have people their hair catch fire and then [indiscernible] (00:36:53) But, no, I mean, I think what we do is we just make sure that we retire inefficient units and we build efficient units and we put them in places where we think the demand will grow strong. So I think we've done the pruning that we wanted to do.

What do you think?

<Q>: [indiscernible] (00:37:14)

<A - Ralph Izzo>: Are you business class going back? Are you?

<Q>: [indiscernible] (00:37:18)

Ralph Izzo

Thank you for joining us, everyone.

MANAGEMENT DISCUSSION SECTION

Ralph Izzo

So you're at the Public Service Enterprise Group presentation, just to make sure you're in the place you want to be. I refer you to our forward-looking statements as well as our GAAP disclaimer. We will be making some projections and we will use the methodology that we think better reflects the ongoing financial condition of the company.

I am Ralph Izzo, the Chairman, President and CEO of PSEG. I'm joined today with three of my colleagues Dan Cregg, our Executive Vice President and Chief Financial Officer; Carlotta Chan, who's in-charge of our Investor Relations; and Brian Reighn also from our Investor Relations Group. And each of us will be available to answer your questions as they arise.

So some highlights that we'll spend a little more time on during the course of the presentation, but the major theme here is a long history of success and a long-term view of how to manage the company going forward. Each of these particular items will come up during the course of the conversation, so I won't dwell on them here, but it is an over 100 year – over a century of success in various operational as well as financial measures.

So those of you who are less familiar with Public Service Enterprise Group, we have two principal operating subsidiaries. About two-thirds of the company's earnings comes from our regulated utility, it's an electric and gas utility in New Jersey. Its primary area of focus is an aging infrastructure investment program that has allowed us to grow the rate base over the past decade by low double-digits and over the next five years expects to invest between $12 billion and $16 billion to continue an 8% to 10% growth rate in that rate base, down from the prior 12% to 13% as the rate base has expanded.

PSEG Power, making up the bulk of the remaining one-third of the earnings of the company, characterized by a highly efficient natural gas fleet of approximately 7,200 average heat rate, producing a little bit under half of the electricity of power and then a low cost nuclear fleet of about 3,500 megawatts, producing a little bit over half of the remaining output from power. So we're well-positioned fleet from the point of view of economic efficiency, of environmental footprint as well as geographic location being primarily in Eastern PJM.

Another minute or two on the utility, we basically serve the north, south, central corridor of the State of New Jersey. A little bit over 2 million electric customers, a little bit under 2 million gas customers, essentially zero load growth over the past few years, modestly up in gas, modestly down in electric. So, load growth is not the correlating factor to the utility's growth. At the risk of repeating myself, it's all about an aging infrastructure replacement that is the primary impetus behind the past decade and future five years of growth, with the additional caveat now of an interest and an excitement around the Clean Energy Future being resurrected in New Jersey with the incoming new Governor Murphy administration.

Also worthy of note is the pie chart in the lower right hand corner. As you can see, we are approximately one-half transmission rate base and, therefore, FERC formula rate regulated, with the other half the distribution component being New Jersey Board of Public Utilities regulated.

A fairly busy year and a somewhat successful year from the point of view of 2018, our first base rate case in eight years having been successfully concluded just this past month successfully from the point of view of we didn't get everything

Bloomberg Transcript

we wanted and our regulators didn't get everything that perhaps they may have wanted. A 9.6% allowed return on equity and a 54% equity ratio being the highlights of that rate case outcome. We also received approval for a Gas System Modernization Plan. We have the dubious distinction of owning the largest cast-iron gas main system in America. It is fortunately a low pressure, low utilization pressure system and just sort of represents both an O&M and public nuisance from the point of view of occasional breaks and cracks that require correction.

At our current pace of expenditure, under the GSMP II, forgive me for using the acronym, but it just makes it easier, it will take us anywhere from 20 to 25 years to fully replace that program. That's a $400 million a year spend. In addition, legislation was enacted that preserves the life of our nuclear fleet by recognizing both their environmental benefits through a zero-emission credit as well as the fuel diversity they provide the state in terms of minimizing our exclusive dependence on natural gas. Also this year, the passage of Clean Energy legislation, which creates a framework for the utility to participate in a whole range of beyond-the-meter services, which we had been participating in, in the past, but now gives an explicit mandate, things like energy storage, energy efficiency and the like and we'll talk a little bit more about that Clean Energy Future program as we continue.

To be sure, some activity underway at FERC as it pertains to PJM capacity markets. There too, while there's no question that there's some uncertainty associated with that. We do believe that given the stated objectives of FERC in redesigning the capacity market that we are extremely well-positioned: number one, through the elimination of, to the extent that exists, price suppression on unsubsidized units that could potentially – should potentially support and help our fossil fleet; and number two, through FERC's stated desire to not interfere with state's abilities to designate various technologies in particular as it pertains to carbon limitations and continue to support the operation of those technologies, which should benefit our nuclear fleet.

Let's spend a little bit of time talking about that 8% to 10% growth rate in the rate base of the utility. What do you see here is the rate base for transmission at the bottom half of the bar and the rate base for distribution the green part of the bar. Those are approved and existing programs. The projects are in engineering, they're in design, they're in construction and that produces the 8% growth rate. The additional potential for 2% is if the two filings that we have made this year, one for something called Energy Strong II, which brilliantly follows on the heels of Energy Strong I, which was completed just this past year, which is an attempt to harden and make more resilient our electric grid. We have filed for $2.5 billion over the next five years. Here we show the first three years of that five-year program. And on top of that, our Clean Energy programs that I referred to briefly a moment ago, which is $3.6 billion filing for the next six years. Here we show the first three years of that.

If the as-filed programs are approved in the as-filed condition, the first three years of them would produce the 10% growth rate. That 10% growth rate could be achievable in other ways by either additional transmission projects, additional distribution projects, or even if the programs are not fully approved, if the first three years of the as-filed programs are approved, that 10% would be real. So somewhere between 8% and 10%.

My favorite slide of the whole deck, one that I'll spend a few minutes on, the stacked solid colored bars reflect known and approved capital programs that contribute – that provides the 8% growth in rate base. So here we break that out in terms of transmission, electric and gas distribution and Clean Energy. So that would be the solid bars. And if you look at the tops of the solid bars, you see a roughly $12-plus billion program that is declining over the five years.

We have shown this graph every year for the past 11 to 12 years. We don't have to change it at all except for the numbers on the Y axis and the years on the X axis. To emphasize that point, if you look at that dark line that's on the bottom, that's somewhat short, that shows years three, four and five of what would have been the solid bars that I showed two years ago in 2016. So you see the same declining pattern.

The equally dark line, but I think it's black if you look close to it, our years two, three, four and five of what the tops of the solid bars would have been in 2017, same declining pattern, but about $0.5 billion higher in each year. If we were not to show stacked bars but instead were to simply show you a solid line, for the current solid bars you could see that it is the same declining pattern but about $300 million higher in each year.

final

Bloomberg
SI-SSA-0015-08242

So every year we talk about the declining capital program and every year we come back and show you the increased capital program. And it suffices to say that the crosshatched region on top are the two current filings Energy Strong II and Clean Energy Future. We will not get 100% of what we request, even though we think every penny of it is worth doing. To the extent that we get some of it, it is very likely that I will repeat the last three minutes of this presentation when I speak to you next year.

So notwithstanding the growth in the rate base, the emphasis has shifted. So some of the transmission projects we did five years ago were all about decongesting and making more reliable the East-West Interchange and PJM East. Now we are spending more money not so much on big transmission projects, but on hardening the transmission system, replacing literally 70-year-old assets, 60-year-old assets to make sure they're more reliable. Prior five years, we spent a fair amount of money in building some small peakers in our generation fleet one in Connecticut, one in New Jersey and in the last year and then into the next year, we've built a few combined cycles. That program will wind down and we will deemphasize our construction in the generation fleet.

We have spent a fair amount of money the prior five years on distribution resiliency. That will continue in the current five years and we are just beginning to ramp up our Clean Energy spending. We had spent about $700 million in solar over the past 10 years, $400 million on energy efficiency over the past 10 years. But if you just look at that Clean Energy filing, $3.6 billion over the next six years, you can see an order of magnitude shift in that emphasis.

Let me spend a little bit of time again on the base rate case settlement. So, the $17.5 billion rate base, about half of that, as I mentioned a moment ago, a little bit more than half of that, $9.5 billion is in distribution. The last five settled cases in New Jersey have yielded a 9.6% allowed ROE. That was the ROE we settled for. We were given a 54% equity layer, which also applies to our transmission system as a result of that being the capital structure of the single legal entity known as PSE&G. But through the miracles of tax reform, we are actually able to improve our earnings while lowering the customer bill by $13 million. And Dan during the Q&A can walk you through the deferred tax impacts of tax reform as well as some of the flow-back issues that allowed us to both increase the earnings of the company and lower customer bills.

At the conclusion of this case, our customers' bills, not their rates, but the bill for the average residential customer is 30% lower than what it was 10 years ago in nominal dollars and 40% lower if you were to escalate for the Consumer Price Index. I have to remind customers of that every so often because they don't seem to recall what their bill was back in 2008.

Energy Strong program, by way of reminder, back in the 2011, 2012 timeframe, we had some very strange events. We had a snowstorm in New Jersey around Halloween then the subsequent August we had Hurricane Irene, not such an unusual event. But then October 28, 2012, we had Superstorm Sandy and that resulted in literally a resetting of the Federal Emergency Management Agency maps for where the flood plains reside. New Jersey being an old industrial state where electrification followed the industrialization of the state, primarily in transportation corridor, in the old days transportation corridors were rivers and rail lines. Those happened to be coincidental with low-lying areas and flood-prone areas. We have a lot of assets that were susceptible to floods not just from rain, but from tidal surges.

At that time, we went to the Board of Public Utilities and said to fix those assets that were affected by each of those three events. I'm not predicting any future climate change calamities, but just to fix what was affected will cost us $3.9 billion and we need to spend that over the next 10 years. The Board of Public Utilities said here – we then asked for $2.6 billion over five years. The Board of Public Utilities said you're right, something needs to be done. Here's $1.2 billion and get it done in the next three or four years. And by the way, we're going to assign somebody to monitor your activity. I think with complete pride on behalf of our employees, I can say that that monitor gave us an A-plus on our report card. We did the work that we thought would take $1.2 billion and used only $1 billion and now we've gone back and said $3.9 billion minus $1.2 billion is not $2.7 billion, it's $2.5 billion. And by the way, we think we can do a few more things here and a few less things there, but [ph] give us the second-half of energy shown (00:14:20) given how well we did.

You can see a before and after picture here of a particular switching station that was modified as a result of Energy Strong. And if you can't see the detail, I'd encourage you to pick up one of the slides in the back. It's pretty impressive

final
Bloomberg Transcript

how different the facility is both in terms of just being lifted off the ground and being protected from inclement weather.

The partnership for Clean Energy Future, as I mentioned a moment ago, really comes on the heels of Clean Energy legislation that was enacted and signed into law by Governor Murphy in May of this past year. The primary component of that is an energy efficiency program that seeks to reduce electricity demand by 2% per year and gas demand by 0.75% per year. The legislation clearly articulates that those ought to be the targets for the electric and gas utilities in the state and the BPU should enact rules that allow us to recover the costs for running the program, to recover the investment of the equipment we put in, to earn a return on the investments we put in as well as to recover the loss revenues from the foregone sales as a result of the energy efficiency.

So the legislative language we are very supportive of. The actual rules to implement that is something that will be discussed during the course of the Clean Energy Future filing. Theoretically, the laws are written in a way where the Board of Public Utilities has 180 days to act on that after they've deemed the application complete. This is webcast, but nonetheless [ph] I will guard on a limb (00:15:50) and remind the Board of Public Utilities that today is the 30-day expiration of the clock for completeness. It's a three-hour time zone, I wish I was speaking at 1:00 PM instead of 9:00 AM, but nonetheless hopefully that application will be deemed complete. Even if it's not, we will work with the staff to get them the information they need. So, that's the [indiscernible] (00:16:10) of the $2.5 billion.

If you look at New Jersey from the point of view of conditions that blend it to be a place for electric vehicle penetration, third highest per capita income in the nation, among the worst air quality, densely populated state, short travel distance, high traffic congestion. Nonetheless, we lag – I think we're 48th in the state in electric vehicle charging stations. So all we've said here is we recognize it's not a natural monopoly service, but there is a strong mismatch between how much electric vehicle penetration should exist in New Jersey and how much does exist in New Jersey. Let us help you get the market started. Similarly, if one were to look at the Governor's articulated and then legislated goals for energy storage, a target of 600 megawatts of energy storage by the year 2021, which is about 26 months away. And we are proposing to do 35 megawatts of that once again to get the market underway.

And last but by no means least, in the latter years of the six-year filing to install about 2 million smart meters and to move forward where New Jersey has lagged the rest of the nation. I believe I've seen estimates of 50% to 60% of the nation now has smart meters and we do not have any appreciable number of those in New Jersey and to provide the data analytics to really improve the customer experience from a point of view of affordability, from a point of view of energy efficiency and a whole variety of basic daily operational services – outage detection, remote reconnect and disconnect and things of the sort.

Moving over to Power, we show here the location of our assets on the left hand side in terms of our fossil and nuclear fleet. On the right hand side, we also have about 400 megawatts DC of solar farms, sprinkled around I think 15 or 16 states. The largest installation is somewhere in the low 50 megawatt range, the smallest installation being a couple of megawatts. So we don't do rooftop, we don't do large scale installations, all of them are supported by long-term power purchase agreements, which creditworthy counterparties usually [ph] end up at (00:18:22) utility. As you can see, our fossil and nuclear fleet is in PJM East with one power plant in New York ISO and then one power plant in [ph] NEPOOL (00:18:32) in the Bridgeport area.

The fleet is undergoing quite a transformation. The charts on the left are the nameplate capacity of our assets. So, as you can see that we are primarily a gas fleet in terms of the blue being slightly larger than the orange, which is the nuclear component in terms of nameplate capacity. But as we step forward in time, the completion of three combined cycle gas turbines, one in Maryland, one in Connecticut, one in New Jersey will further expand the gas nameplate capacity of that fleet.

But more importantly, in terms of the output of the fleet, the lower right shows you that we are predominantly a nuclear generator, nowadays close to 60% of the output. However, given any efficiency of the new combined cycle fleet that we are just finishing the construction of, two of them actually finished, one will be complete in June, you see quite a bit of an increase in the amount of output from natural gas. The small piece of coal that remains is our partial ownership of a mine mouth coal facility in Western Pennsylvania known as Keystone Conemaugh. I think we own about 25%, 27%

final
Bloomberg Transcript
Bloomberg
SI-SSA-0015-08244

of that, something like that.

If we look at Power's capital construction program, as I mentioned a moment ago, we just finished the construction of two combined cycle units this past year, one in New Jersey, one in Maryland. We will finish the third and final piece of that construction program in Bridgeport, Connecticut by June of next year. That will take Power's capital construction program down to a maintenance level of about $200 million a year, freeing up $800 million of funds from operation to be available as free cash flow over to the insatiable appetite of the utility to improve the aging infrastructure that we talked about a few minutes ago.

So that capital program in the utility can be performed without the need for additional equity. It is internally self-funded plus the debt capacity of the utility. So the equity needs of the utility is provided by the internal cash flow generation, the debt capacity of Power and then the 46% debt component of the utility capital structure as its own debt capacity.

O&M has been something that we pay attention to every day, every week, every month, every year. We can never come to EEI, I am almost sad, but – I can't actually cross that line to actually being said and announce a major cost reduction program. We obsessed over this all the time. Dan got to fly out here in economy plus seating next to a service dog that evidently [ph] shed (00:21:07) all over, his eyes are still red from doing that. I had one analyst scold me over the fact that we put Dan in that seat. I said I don't feel sorry for him. He builds character. I had the same seat coming up, but without the service dog. I have nothing against service dogs. I know I'm going to get in trouble for joking about that, but that's a true story. I've completely forgotten what I wanted to tell you about that. That wasn't part [indiscernible] (00:21:31) the fact that O&M over these five years at the parent level has decreased by about a little less than 0.5% per year. Yet we did manage to give people on average a 3% wage increases, we did manage on average to invest a tremendous amount of money in capital construction at the utility.

That's significant because when you're doing that amount of work at the utility, there is a fair amount of O&M that goes along with it, right. You can't start working on the system and take substations at a service without being dispatching people to other substations to make sure the system is in a stable configuration. So the capital program does incur a fair amount of [ph] volume (00:22:07). So that just means that we found ways to save money in other areas.

If I take a look at the current condition of the balance sheet, our cash metrics, what we find is that we tend to pick minimum thresholds that would keep the company at a solid investment-grade credit rating. For us, that's typically BBB+. So with the capital program, as I've described, with our expectations for dividend growth, which I'll speak to in a moment, without the need for additional equity, we still have about $1.4 billion in unutilized debt capacity. And what that means if we were to do something in the unregulated business, that debt capacity equals the investment capacity. However, that capital program that I described to you a moment ago, 90% is targeted towards the utility. That ratio has gone anywhere from 80% to 90% over the next five years whenever you look back in time, right. So if you look back in time and then look forward five years, we spent between 80% and 90% on the utility and that will continue to be the overwhelmingly majority part of our capital program.

With that in mind, that $1.4 billion in debt capacity could yield an additional $2.8 billion in utility investment – that being the equity component and then the utility being able to access the debt markets on its own. So we have a pretty strong 8% to 10% rate base growth, we have some fairly solid credit metrics and we have additional capability for further investment, never with the need to issue additional equity.

We just recently narrowed our guidance without changing the midpoint, so I believe we're now at $3.05 to $3.10 a share. Over the last five years, we've been growing earnings at 4%. The utility's double-digit growth being offset by the recontracting of Power and therefore the decline in profitability in merchant generation business.

We have paid a dividend every year for 111 years and that – we didn't do that by occasionally cutting it down to $0.01 a year and no cheap shots intended there. But nonetheless, you do see that the utility more than covers the dividend and the utility growth rate more than covers the growth rate in the dividend, therefore, further increasing the security of that dividend. We don't give a formulaic guidance in terms of dividend policy. We do offer these qualitative words that you can fairly easily translate into what you've seen recently is what you should expect to continue to see certainly over the predictable near term. So that's that opportunity for consistent and sustainable dividend growth.

Bloomberg

The value proposition hasn't changed. We run the business by obsessing over operational excellence. Being named to the Dow Jones Sustainability Index for 11 years in a row, being the most reliable electric utility in the Mid-Atlantic region 17 years in a row, a series of accolades that range from diversity and inclusion to being in the Forbes' Most Trustworthy Lister, some such crazy designation I don't even know what to call it. But that operational excellence is what leads to very strong regulatory relations and therefore solid financial performance and then we invest that money wisely in things that are consistent with public policy or meet the needs of our customers, even if it's not yet quite reflected in public policy, all the while making sure that that financial strength is intact.

If there is a takeaway from this EEI Meeting that we're sharing with investors, and I'd like to share with you today, it's summarized here, it talks about the recent regulatory derisking that's undertaken. It talks about the fleet in terms of the merchant generation de-risking that's taken place both in terms of the expanded geographic footprint by putting an actual asset at the PJM West Hub in Maryland and in terms of improving the overall heat rate of the fleet while all the time looking at what is possible for the future in terms of now moving down to the smaller projects in transmission, accelerating the gas pipe replacement, finishing the distribution hardening, moving into a Cleaner Energy Future and all the while protecting the strength of that balance sheet.

So, with that, I do believe I've left more than enough time for some questions. I'm not getting the nasty card from the back that says your time is up. So Dan and I are here to answer any questions you might have. Thank you.

Q&A

<A - Ralph Izzo>: We have a question here.

<Q>: I don't need the mic. I'm loud. I loved your comments. Great story. [ph] We can see (00:26:41) growth nationwide in renewables [indiscernible] (00:26:45)

<A - Ralph Izzo>: Yeah. Yeah, I do. I mean, most states are following some sort of renewable portfolio standard. I think it's a sub-optimal approach. We're a company that explicitly has said climate change is real and the preferred approach would be a national price on carbon, preferably economy-wide, but certainly industry-wide and then let the market pick and choose the best approach for achieving those outcomes. The way in which you get the price on carbon are many and varied. You can do a carbon tax, you can do cap and trade, you can do a variety of things. But there are some regions of the country that will survive the decrease in the ITC and the elimination of the PTC. There are some areas of the country that will not and you'll have to rely on the renewable portfolio standard to achieve continued investment.

New Jersey has opted to do most of its in-state renewables through rooftop solar. It's been a very expensive way to do renewables. The Solar Renewable Energy Credit, which is the regulated subsidy [ph] stream (00:27:53) that is on top of the investment tax credit and on top of net metering, nowadays trades [ph] for $220 (00:27:59) a megawatt-hour in New Jersey. That's a pretty steep price for an SREC.

So I do see it continuing. The technology is getting better. There are some parts of the nation where it's already competitive – wind in the Greater Plains, solar in the Southwest, but there are other parts that I think will slow down in the absence of any kind of robust renewable portfolio [indiscernible] (00:28:19). It's funny how a question that simply merits a yes or no can be stretched out for five minutes.

<Q>: Thanks. I know in the last rate cases, the decoupling didn't go through, so you're going to apply to get that.

<A - Ralph Izzo>: Yeah.

<Q>: What's the importance there? Are you conservation or efficiency or is it rooftop solar or why is it so important to you guys?

<A - Ralph Izzo>: Yeah. So decoupling is important to us as a foundation for the energy efficiency filing. So energy efficiency, as you know – we're not trying to do signal processing of refrigeration consumption of electricity, right. We're trying to get people to replace their light bulbs, their thermostats, their HVAC systems. So there is a significant

final
Bloomberg Transcript
Bloomberg
SI-SSA-0015-08246

component. It varies by customer class and you can think of it as 30% to 50% of what a customer pay us [ph] then is (00:29:10) a fixed cost. So to the extent that we can help customers by helping them avoid consumption, we can eliminate our variable costs, that could be customer savings, but we don't want to lose the fixed cost recovery. So decoupling would help us avoid that fixed cost recovery. One could go in for frequent rate cases, but for a short-lived asset, the regulatory lag associated with a frequent rate case would be such that you would really underachieve the allowed return on that light bulb investment.

So what we said to the regulators back when we filed the rate case is we are going to file a Clean Energy program in the not too distant future and we won't be able to do it without a recovery of that fixed cost component. 28 other states do it by decoupling, why don't we be number 29. We essentially have it in natural gas in New Jersey. So we put it as part of the base rate case knowing full well that that was not the optimal forum for discussion of decoupling, but hoping that we could do something proactively. Therefore, we were willing to settle and concede that we would not decouple in the base rate case knowing that the Clean Energy filing would bring a whole different set of parties into the discussion who had much deeper experience, knowledge and candidly support for decoupling. And that's where it more naturally resides. So that will be the policy debate that will take place.

To us, energy efficiency is a quadruple when you can literally improve the environment, you can allow the shareholder to earn some money, you can lower the customer bill and candidly these are low skill jobs that you can now employ people that perhaps have long-term unemployment challenges. If everyone is willing to accept a quarter of the pie, everyone can win. But if somebody wants a half of the pie and the other people have to have a third each, I think I did my fractions right, then there are some losers and we're just trying to set the stage for that.

<Q>: [indiscernible] (00:31:18)

<A - Ralph Izzo>: Yeah, [ph] Frank (00:31:21). So the Long Island business I believe is doing fabulously well. So we are the operators of the Long Island Power Authority's electric distribution and transmission system. We have a12-year contract. We're just about to begin year five. Our J.D. Power scores are greatly improving. But more important than that, my sister-in-law who lives on Long Island who's legally insane, who I adore and otherwise I wouldn't say that, is telling me that her service is better. So that seems to be going fabulously well. We have a great team out there that's doing a good job in storm response. Now candidly, in all fairness to our predecessor operator, we've not been challenged by Superstorm Sandy, we've not been challenged by Hurricane Irene. So it's easier to perform well under less dire circumstances.

We have something called an operating services agreement, which fixes the fee that we get paid for operating that system. And then it's varied over time, but typically about 30 operating statistics that we have to achieve and we get bonuses if we achieve a certain percentage and we get penalized if we achieve a smaller percentage. And every year of the first four years of the contract, we've achieved bonuses. I think this year we're literally on track to hit 20 out of the 30 metrics. So I think that's going quite well. Anyone here who live on Long Island? How is it going, [ph] Helen (00:32:43), don't tell me you have an outage last week.

<Q>: [ph] We had a fewer hours (00:32:47).

<A - Ralph Izzo>: That's good. Thank you. I literally used to get Newsday clippings from my sister-in-law like the first month that we were out there. I was like I begged my brother tell her to stop please, I'm not coming out there to fix this.

Okay. Well, I don't see other hands. Oh, I see one hand there.

<Q>: [indiscernible] (00:33:10-00:33:17)

<A - Ralph Izzo>: Yeah. No, so New Jersey has one of the most diverse populations in the nation. And I fundamentally don't understand why any business would say to itself, I really want to recruit from only half this population. We're 85% male. Or I'd only want to recruit from 45% of the population. We're 80% Caucasian. So, to me, whether it's suppliers, whether it's labor, one needs to make available to oneself 100% of what is out there. So we are actively going to schools that have a highly diverse population to try to attract a diverse set of engineers. We have a

final

Bloomberg
SI-SSA-0015-08247

Chief Diversity Officer who's got me as part of the CEO network. I think Thursday I'm going to a meeting to learn better what others are doing.

If you look at our Board of Directors, it's fairly diverse. Our officer core is not diverse. I've not penetrated that level. The tension is I believe that employees want to get promotional opportunities. And so that's right. I have a bias towards promoting from within, oh, that pipeline is not diverse. So that means to improve your diversity, you have to recruit from these schools, you have to change the look of the leadership on the top that then takes away opportunities from people from within. So that's the constant balance that we undergo.

We have created an innumerable amount of employee business resource groups to create forums where people, whether it's alternate lifestyle, whether it's LBGT, whether it's disability, whether it's [indiscernible] (00:34:59) can meet together and work together and provide a shared support network for each other. So, not only do I think it's a business imperative, I also think it's the right thing to do. So, to the extent that we can allow our diverse population who are there today they feel good about the place. That enhances our prospect to attract and recruit people into the future. But we really have no choice. One-third of our employees are related to each other. So that's both a blessing and a curse, right, I mean, it's a blessing when I go to union meetings and they start swearing at me and saying, hey, what I do wrong and I say, well, then why is it that you have your nephew working here [indiscernible] (00:35:41). So it's a multifaceted challenge, but one that is front and center for us.

I'm getting the yellow card. Yes, [ph] Helen (00:35:48).

<Q>: [indiscernible] (00:35:50-00:35:59)

<A - Ralph Izzo>: No. I love all my children. We pruned assets in many different places over many years. We had big assets in South America, we had some sociopolitical challenges that we weren't the best at managing. We had some assets in Texas that seemed to be subject to low barriers to entry and short commodity cycle. So, no, I think we've done the pruning that we want to do. I would say that there are some parts of the business that have more uncertainty and difficulty in terms of explaining than other parts of the business. I mean, try to have a conversation about the reliability, pricing model and capacity reform for subsidized plants and not have people their hair catch fire and then [indiscernible] (00:36:53) But, no, I mean, I think what we do is we just make sure that we retire inefficient units and we build efficient units and we put them in places where we think the demand will grow strong. So I think we've done the pruning that we wanted to do.

What do you think?

<Q>: [indiscernible] (00:37:14)

<A - Ralph Izzo>: Are you business class going back? Are you?

<Q>: [indiscernible] (00:37:18)

Ralph Izzo

Thank you for joining us, everyone.

Forward-Looking Statements

Certain of the matters discussed in this presentation about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K. These factors include, but are not limited to:

- fluctuations in wholesale power and natural gas markets, including the potential impacts on the economic viability of our generation units;
- our ability to obtain adequate fuel supply;
- any inability to manage our energy obligations with available supply;
- increases in competition in wholesale energy and capacity markets;
- changes in technology related to energy generation, distribution and consumption and customer usage patterns;
- economic downturns;
- third-party credit risk relating to our sale of generation output and purchase of fuel;
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements;
- changes in state and federal legislation and regulations, and PSE&G's ability to recover costs and earn returns on authorized investments;
- the impact of pending and any future rate case proceedings;
- risks associated with our ownership and operation of nuclear facilities, including regulatory risks, such as compliance with the Atomic Energy Act and trade control, environmental and other regulations, as well as financial, environmental and health and safety risks;
- adverse changes in energy industry laws, policies and regulations, including market structures and transmission planning;
- changes in federal and state environmental regulations and enforcement;
- delays in receipt of, or an inability to receive, necessary licenses and permits;
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry;
- changes in tax laws and regulations;
- the impact of our holding company structure on our ability to meet our corporate funding needs, service debt and pay dividends;
- lack of growth or slower growth in the number of customers or changes in customer demand;
- any inability of Power to meet its commitments under forward sale obligations;
- reliance on transmission facilities that we do not own or control and the impact on our ability to maintain adequate transmission capacity;
- any inability to successfully develop or construct generation, transmission and distribution projects;
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers;
- our inability to exercise control over the operations of generation facilities in which we do not maintain a controlling interest;
- any inability to recover the carrying amount of our long-lived assets and leveraged leases;
- any inability to maintain sufficient liquidity;
- any inability to realize anticipated tax benefits or retain tax credits;
- challenges associated with recruitment and/or retention of key executives and a qualified workforce;
- the impact of our covenants in our debt instruments on our operations; and
- the impact of acts of terrorism, cybersecurity attacks or intrusions.

All of the forward-looking statements made in this presentation are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business, prospects, financial condition, results of operations or cash flows. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this presentation apply only as of the date of their date. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even in light of new information or future events, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this presentation are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-08251

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Net Income. Non-GAAP Operating Earnings exclude the impact of returns (losses) associated with the Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting and material one-time items. Non-GAAP Adjusted EBITDA excludes the same items as our non-GAAP Operating Earnings measure as well as income tax expense, interest expense and depreciation and amortization. The last three slides in this presentation (Slides A, B and C) include a list of items excluded from Net Income/(Loss) to reconcile to non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA with a reference to those slides included on each of the slides where the non-GAAP information appears.

Management uses non-GAAP Operating Earnings in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results. Management believes non-GAAP Adjusted EBITDA is useful to investors and other users of our financial statements in evaluating operating performance because it provides them with an additional tool to compare business performance across companies and across periods. Management also believes that non-GAAP Adjusted EBITDA is widely used by investors to measure operating performance without regard to items such as income tax expense, interest expense and depreciation and amortization, which can vary substantially from company to company depending upon, among other things, the book value of assets, capital structure and whether assets were constructed or acquired. Non-GAAP Adjusted EBITDA also allows investors and other users to assess the underlying financial performance of our fleet before management's decision to deploy capital. The presentation of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA is intended to complement, and should not be considered an alternative to, the presentation of Net Income, which is an indicator of financial performance determined in accordance with GAAP. In addition, non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA as presented in this release may not be comparable to similarly titled measures used by other companies. Guidance provided herein is as of October 30, 2018.

Due to the forward looking nature of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility.

These materials and other financial releases can be found on the PSEG website at https://investor.pseg.com. From time to time, PSEG, PSE&G and PSEG Power release important information via postings on their corporate website at https://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. The "email alerts" link at https://investor.pseg.com may be used to enroll to receive automatic email alerts and/or really simple syndication (RSS) feeds regarding new postings at https://investor.pseg.com/rss.

$12B-$16B investment program focused on grid modernization, reliability and clean energy

HASHED PORTION OF THE CHART REPRESENTS EXTENSION OF ENERGY STRONG (ES2) AND CLEAN ENERGY FUTURE (CEF) FILINGS
5 YEAR CAPITAL SPEND FORECAST UPDATED FOR CLEAN ENERGY FUTURE PROGRAM FILINGS. E = ESTIMATE.

SI-SSA-0015-08259

PSEG's future direction aligned with customer needs and NJ's Clean Energy agenda

2012 - 2017	2018 – 2022	Utility of the Future
Transmission expansion Storm hardening and resiliency New peaking generation and generation uprates Regulated & Unregulated Renewables	Upgrade aging infrastructure and Transmission Storm hardening and resiliency New, efficient CCGTs Clean Energy Legislation • Expanded Energy Efficiency • EV Infrastructure • Energy Storage • Energy Cloud – AMI Regulated & Unregulated Renewables	Clean Energy Legislation • Expanded Energy Efficiency • EV infrastructure • Battery storage Greater use of technology to enhance 2-way customer communication Regulated Renewables

SI-SSA-0015-08260

Distribution Rate Case Settlement Approved

- New rates went into effect November 1, 2018
- Bill impact is generally <1% per rate class. Combined, typical residential electric & gas customer bills are ~30% lower versus 2008 in nominal dollars

Key Terms

- ROE of 9.6%; 54% equity ratio
- Rate Base of $9.5B: $5.5B Electric and $4.0B Gas
- Base revenues include recovery of deferred storm costs (~$50M/year)
- Tax Adjustment Clause – Two tax items flowed back to customers, with a return on the portion related to rate base:
  1. Excess deferred taxes – Unprotected over five years; Protected via ARAM
  2. 'Safe Harbor Adjusted Repair Deduction' (SHARE) - Ongoing and 1/3 of historic balance
- Rate design changes:
  - Higher monthly fixed service charges for electric and gas bring us in line with other NJ utilities
  - Decoupling/lost revenues to be addressed in CEF filings

Annual Revenue Impact ($ Millions)	Electric	Gas	Total
Base Revenue	$89	$123	$212
Tax Adjustment Clause	(80)	(145)	(225)
Net Revenue Change	$9	$(22)	$(13)

SI-SSA-0015-08261

PSEG

ARAM = AVERAGE RATE ASSUMPTION METHOD
ROE = RETURN ON EQUITY.

Energy Strong Program Filing

PSE&G filed its Energy Strong II infrastructure program (ES2) in June which seeks to invest $2.5 billion, over a five-year period to further strengthen the utility's electric and gas systems to better withstand storms, increase reliability and significantly enhance resiliency

Before

Electric:

- ✓ Provide flood mitigation for 16 stations within FEMA designated flood zones
- ✓ Rebuild 15 outdoor stations (most are pre-1956 vintage) in need of replacement
- ✓ Upgrade ~475 circuit miles
- ✓ Harden and increase redundancy/resiliency through circuit reconfiguration
- ✓ Modernize grid with an advanced distribution management system (ADMS) and fiber/mesh communication network

Gas:

- ✓ Improve the resiliency of PSE&G's gas distribution system to protect against potential interstate gas pipeline supply curtailments
- ✓ Rebuild and modernize seven gas Metering and Regulation stations

After

SI-SSA-0015-08262

Partnership for a Clean Energy Future:

~$3.6 Billion investment program to provide cost-effective and innovative solutions supporting NJ's clean energy goals

- **Energy Efficiency**: Residential and C&I programs to lower energy bills and combat climate change
  - Savings support 2% electric and 0.75% gas savings consistent with NJ Clean Energy Legislation
  - Customer benefits exceed costs
- **Electric Vehicles**: "Smart" electric vehicle infrastructure: residential, workplace, multi-family, travel corridors
- **Energy Storage**: Utility-scale systems to defer traditional distribution investment, enable additional solar, and enhance critical infrastructure resiliency
- **Energy Cloud: AMI:** Accelerated roll-out of 2.2 million electric meters and supporting infrastructure. Compelling customer benefits

Program Investment	$ Billions
Energy Efficiency	$2.5
Electric Vehicles	$0.3
Energy Storage	$0.1
Energy Cloud – AMI	$0.7
Investment Total	$3.6

- 6-year investment program starting in 2019
- Seeking contemporaneous recovery
- Contingent on approval of lost revenue recovery mechanism

SI-SSA-0015-08263

Power's generating assets mainly located in three competitive markets

Power Ventures assets:

- Solar (414 MW_{DC}/325 MW_{AC})
- Kalaeloa, HI (104 MW)

- Major assets located near key load centers
- Completing construction program of three new, highly efficient combined-cycle units
- Positioned to benefit from market volatility

Recent market dynamics have included spark spread compression and negative east-west electric basis differentials

2018 gas prices rose more than electric prices, compressing spark spreads

2018 electric price increases in PS Zone have not kept pace with PJM's Western Hub

These impacts, plus a decline of ~1 TWh from our forecasted generation, impacted Power's margins

SI-SSA-0015-08268

Power's free cash flow improves as construction program ends

Manageable Pension and OPEB Expense

Pension & OPEB expense details will be updated at year-end and managed as part of overall O&M

- The estimated decrease in expense includes an approximate reduction of $60 million due to the adoption of a new accounting standard in 2018 which no longer allows the capitalization of non-service components of Pension and OPEB costs (credits)

E = ESTIMATE.

SI-SSA-0015-08270

PSEG has controlled O&M

Cost Control Actions

- Continued focus on vendors to ensure maximum value
- Regular organizational refinement to streamline processes
- Managed Pension & OPEB Expense
- Retirement of un-economic generating plants
- 'Best practices' teams focused on improving performance while managing costs

1) EXCLUDES REGULATORY BALANCING ACCOUNT ITEMS AND NUCLEAR ARO ACCRETION EXPENSE ; INCLUDES THE IMPACT OF THE CHANGE IN PENSION ACCOUNTING STANDARDS. E = ESTIMATE.

SI-SSA-0015-08271

Solid credit metrics support additional investment capacity

Average Funds From Operations/Debt 2019E – 2021E

	Power	PSEG
Estimate	Low - Forties	~20%
Minimum Threshold	30%	High - Teens

Total Incremental Debt Capacity 2019E – 2021E (PSEG and Power)

Incremental capacity invested in PSE&G would be matched with utility debt

PSEG Value Proposition

- PSE&G – Delivering on promise for rate base growth through disciplined investment, customer satisfaction and safety
- PSEG Power – Efficient, low-cost, clean fleet advantaged by asset diversity, fuel mix and location
- Focus on providing strong, sustainable returns of invested capital through operational excellence, regulatory and legislative mechanisms
- 111-year record of paying common dividends with opportunity for consistent, sustainable growth

SI-SSA-0015-08275

NOTE: PSEG 5 YEAR CAPITAL SPEND FORECAST UPDATED FOR CLEAN ENERGY FUTURE PROGRAM FILINGS

PSEG 2018 EEI Meeting Takeaways

Enhanced Stability, Risk Mitigated

Regulatory & Policy Focus De-risks/Presents Opportunities

- Base distribution rate case completed; GSMP II approved; IIP adopted
- ZEC law aims to preserve nuclear; Clean Energy law cites lost revenues
- Power fleet efficiency & geographic diversity improved with new CCGTs
- Capacity market stability through May 2022

Regulated Growth Plan In Place

Among Highest Regulated Growth Rates

- Rate Base CAGR at 8%-10% (2018-2022) fueled by GSMP I and II, ES I and II, CEF filings, and transmission investment
- At Power, NJ ZECs and PJM Price Formation reforms pending
- Clean Energy Law has investable potential

Financial Strength

Financial Strength Remains Intact

- Stable credit metrics (FFO/Debt, credit ratings) enabling accelerated return of excess deferred taxes will also increase rate base
- Higher 54% equity ratio at PSE&G coming out of rate case
- No new equity needed to finance 2018-2022 capital plan
- Dividend policy: Opportunity for consistent & sustainable growth

PSEG EXECUTIVE PROFILES

SI-SSA-0015-08281

PSEG

We make things work for you.

Ralph Izzo

CHAIRMAN, PRESIDENT AND CHIEF EXECUTIVE OFFICER

PUBLIC SERVICE ENTERPRISE GROUP INCORPORATED

Ralph Izzo was elected chairman and chief executive officer of Public Service Enterprise Group Incorporated (PSEG) in April 2007. He was named the company's president and chief operating officer and a member of the board of directors of PSEG in October 2006. Previously, Mr. Izzo was president and chief operating officer of Public Service Electric and Gas Company (PSE&G).

Since joining PSE&G in 1992, Mr. Izzo was elected to several executive positions within PSEG's family of companies, including PSE&G senior vice president – utility operations; PSE&G vice president – appliance service; PSEG vice president - corporate planning; and PSE&G vice president - electric ventures. In these capacities, he broadened his experience in the areas of general management, strategic planning and finance.

Mr. Izzo is a well-known leader within the utility industry, as well as the public policy arena. He is frequently asked to testify before Congress and speak to organizations on matters pertaining to national energy policy.

Mr. Izzo's career began as a research scientist at the Princeton Plasma Physics Laboratory, performing numerical simulations of fusion energy experiments. He has published or presented more than 35 papers on magnetohydrodynamic modeling. Mr. Izzo received his Bachelor of Science and Master of Science degrees in mechanical engineering and his Doctor of Philosophy degree in applied physics from Columbia University.

He also received a Master of Business Administration degree, with a concentration in finance, from the Rutgers Graduate School of Management. He is listed in numerous editions of Who's Who and has been the recipient of national fellowships and awards. Mr. Izzo has received honorary degrees from the New Jersey Institute of Technology (Doctor of Science), Thomas Edison State University (Doctor of Humane Letters), Bloomfield College (Doctor of Humane Letters), Rutgers University (Doctor of Humane Letters) and Raritan Valley Community College (Associate of Science).

Mr. Izzo is on the board of directors for the New Jersey Chamber of Commerce, the Edison Electric Institute (EEI), the Nuclear Energy Institute (NEI) and the New Jersey Performing Arts Center. He also is on the advisory board for the University of Pennsylvania's School of Engineering and Applied Sciences Mechanical Engineering and Applied Mechanics Department, a member of the Board of Trustees of the Peddie School and Princeton University's Andlinger Center for Energy and the Environment Advisory Council, as well as a member of the Visiting Committee for the Department of Nuclear Engineering at Massachusetts Institute of Technology and the CEO Action for Diversity and Inclusion. Mr. Izzo is a former member of the Columbia University School of Engineering Board of Visitors. In addition, he is a former chair of the Rutgers University Board of Governors and the New Jersey Chamber of Commerce.

SI-SSA-0015-08282

Daniel J. Cregg

EXECUTIVE VICE PRESIDENT AND CHIEF FINANCIAL OFFICER

PUBLIC SERVICE ENTERPRISE GROUP INCORPORATED, PUBLIC SERVICE ELECTRIC AND GAS COMPANY, PSEG POWER LLC AND PSEG SERVICES CORPORATION

Daniel J. Cregg was named executive vice president and chief financial officer for Public Service Enterprise Group Incorporated (PSEG) and its subsidiaries in October 2015.

Mr. Cregg is responsible for all financial functions, including Internal Audit Services, Investor Relations and Corporate Development. Given the array of financial instruments which serve as the primary means of selling wholesale energy to customers, Mr. Cregg also has responsibility for the Risk Management function, which provides independent oversight of the PSEG Power trading organization. In addition to finance, Mr. Cregg is responsible for the Strategy and Planning function. He is a member of PSEG's Executive Officer Group.

Prior to his current position, Mr. Cregg was vice president – finance for PSE&G, a role he assumed in June 2013. In 2006, Mr. Cregg was named vice president – finance for PSEG Power. In that capacity and in previous financial roles for Power, Mr. Cregg held leadership positions related to financial reporting and forecasting, investor communications, financings, rating agency interactions, external reporting, cash forecasting, financial valuations, competitive intelligence, and fundamental market modeling, with critical responsibilities in Power's development and strategic planning activities.

Previously, Mr. Cregg was director of PSEG corporate development. He joined PSEG in 1991 with overall responsibility for tax planning, strategy and compliance for PSEG Energy Holdings, including domestic and international tax structuring work for PSEG Global and PSEG Resources.

Before joining PSEG, Mr. Cregg spent five years with the accounting and consulting firm of Deloitte and Touche, providing consulting services to a wide range of clients with an emphasis on the energy industry.

Mr. Cregg holds a Master of Business Administration degree from the Wharton School of the University of Pennsylvania and is a graduate of Lehigh University, where he received a bachelor's degree in accounting.

Mr. Cregg was named NJBIZ 2018 CFO of the Year.

Evercore ISI – Investor Meetings

PALM BEACH, FL – JANUARY 8-9, 2015

PSEG

We make things work for you.

We have the
energy
to make things better
... for you, for our investors
and for our stakeholders.

SI-SSA-0015-08287

Market Review: Long-term fundamentals remain sound

- Environmental restrictions may tighten market
- Insufficient gas infrastructure continues to place upward pressure on fuel prices during seasonal peaks
- Market liquidity remains weak beyond 2015

SI-SSA-0015-08288

F = FORWARDS AS OF DECEMBER 17, 2014, 2014F INCLUDES HISTORY AND FORWARDS

Sustainable Advantage: Forward power curves indicate PSEG Zone retains premium price

Growing importance of the winter peak has influenced PJM reliability planning … with supportive implications for price formation

SI-SSA-0015-08289

PSEG

* MARKET AS OF DECEMBER 17, 2014
SOURCE: ICE/BROKER QUOTES

Competitive Advantage: In 2014, ~40% of Power's gas for generation comes from Marcellus

- Our combined cycle and peaking assets have been able to take advantage of locational gas price volatility driven by production and logistical constraints
- Lower cost shale supply provides additional savings during periods of lower residential gas demand

SI-SSA-0015-08290

PSEG

* AS OF DECEMBER 17, 2014

Competitive Advantage: Locational advantage from short term basis volatility

PS Zone On Peak Annual Basis to PJM-W

PS Zone Day Ahead On Peak Monthly Basis to PJM-W

PS Zone Real Time On Peak Hourly Basis to PJM-W

- Annual basis benefits baseload units
- Intermediate units flexible to seasonal opportunities
- Combined Cycle and Peaking units positioned to optimize daily and hourly volatility

SI-SSA-0015-08291

PSEG

ANNUAL FORWARD (F) BASIS TO PJM-WEST AS OF DECEMBER 17, 2014, 2014F INCLUDES HISTORY AND FORWARDS.

PSEG's longer-term outlook is influenced by Power's hedge position ~~and increased investment at PSE&G~~

Sensitivities derived from typical annual market variability*	Segment EPS Drivers 2015E	2016E
Each $0.75/mcf Change in Natural Gas	$0.00-$0.02	$0.07-$0.10
Each $2/MWh Change in Spark Spread	$0.05	$0.05
Each $5/MWh Change in Dark Spread	$0.02	$0.04
Each 1% Change in Nuclear Capacity Factor	$0.01	$0.01

Each $100 Million of Incremental Investment	$0.01	$0.01
Each 1% Change in Sales		
Electric	$0.01	$0.01
Gas	$0.01	$0.01
Each 1% Change in O&M	$0.01	$0.01
Each 10 bp Change in ROE	$0.01	$0.01

Forward-Looking Statements

Certain of the matters discussed in this presentation about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K. These factors include, but are not limited to:

- fluctuations in wholesale power and natural gas markets, including the potential impacts on the economic viability of our generation units;
- our ability to obtain adequate fuel supply;
- any inability to manage our energy obligations with available supply;
- increases in competition in wholesale energy and capacity markets;
- changes in technology related to energy generation, distribution and consumption and customer usage patterns;
- economic downturns;
- third party credit risk relating to our sale of generation output and purchase of fuel;
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements;
- changes in state and federal legislation and regulations;
- the impact of pending rate case proceedings;
- regulatory, financial, environmental, health and safety risks associated with our ownership and operation of nuclear facilities;
- adverse changes in energy industry laws, policies and regulations, including market structures and transmission planning;
- changes in federal and state environmental regulations and enforcement;
- delays in receipt of, or an inability to receive, necessary licenses and permits;
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry;
- changes in tax laws and regulations;
- the impact of our holding company structure on our ability to meet our corporate funding needs, service debt and pay dividends;
- lack of growth or slower growth in the number of customers or changes in customer demand;
- any inability of Power to meet its commitments under forward sale obligations;
- reliance on transmission facilities that we do not own or control and the impact on our ability to maintain adequate transmission capacity;
- any inability to successfully develop or construct generation, transmission and distribution projects;
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers;
- our inability to exercise control over the operations of generation facilities in which we do not maintain a controlling interest;
- any inability to maintain sufficient liquidity;
- any inability to realize anticipated tax benefits or retain tax credits;
- challenges associated with recruitment and/or retention of key executives and a qualified workforce;
- the impact of our covenants in our debt instruments on our operations; and
- the impact of acts of terrorism, cybersecurity attacks or intrusions.

All of the forward-looking statements made in this presentation are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business, prospects, financial condition, results of operations or cash flows. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this presentation apply only as of the date of this presentation. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even in light of new information or future events, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this presentation are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Net Income. Non-GAAP Operating Earnings exclude the impact of returns (losses) associated with the Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting and material one-time items. Non-GAAP Adjusted EBITDA excludes the same items as our non-GAAP Operating Earnings measure as well as income tax expense, interest expense and depreciation and amortization. The last two slides in this presentation (Slides A and B) include a list of items excluded from Net Income/(Loss) to reconcile to non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA with a reference to those slides included on each of the slides where the non-GAAP information appears.

Management uses non-GAAP Operating Earnings in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results. Management believes non-GAAP Adjusted EBITDA is useful to investors and other users of our financial statements in evaluating operating performance because it provides them with an additional tool to compare business performance across companies and across periods. Management also believes that non-GAAP Adjusted EBITDA is widely used by investors to measure operating performance without regard to items such as income tax expense, interest expense and depreciation and amortization, which can vary substantially from company to company depending upon, among other things, the book value of assets, capital structure and whether assets were constructed or acquired. Non-GAAP Adjusted EBITDA also allows investors and other users to assess the underlying financial performance of our fleet before management's decision to deploy capital. The presentation of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA is intended to complement, and should not be considered an alternative to, the presentation of Net Income, which is an indicator of financial performance determined in accordance with GAAP. In addition, non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA as presented in this release may not be comparable to similarly titled measures used by other companies.

Due to the forward looking nature of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility. Guidance included herein is as of November 5, 2017.

These materials and other financial releases can be found on the PSEG website at www.pseg.com, under the Investors tab. From time to time, PSEG, PSE&G and PSEG Power release important information via postings on their corporate website at http://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. PSEG

* GAS FIRM SALES ONLY.
** ESTIMATED ANNUAL GROWTH PER YEAR, ASSUMES NORMAL WEATHER.

Power has generating assets in three competitive markets

- Major assets located near key load centers
- Constructing three new, highly efficient combined-cycle units
- Positioned to benefit from market volatility
- Additional generation assets:
  - Solar (349 MW_{DC}/275 MW_{AC})
  - Kalaeloa, HI (104 MW)

SI-SSA-0015-08299

*HUDSON AND MERCER GENERATING STATIONS WERE RETIRED AS OF JUNE 1, 2017.

Regulatory and Policy initiatives drive long-term value creation

NJ Distribution Base Rate Proceeding

- Agreed to delay rate review filing to no later than February 1, 2018

Long-Term Infrastructure Investment Platform Approved by BPU in December 2017

- In July, PSE&G filed for a 5-year, $2.7 billion extension of the Gas System Modernization Program (GSMP2)
- In October, the BPU approved $69 million of PSE&G's request to extend its investment in Energy Efficiency (EE)
- PSE&G preparing a multi-year extension filing for Energy Strong
- PSE&G developing a large, multi-year EE investment program to bring benefits to more customers

Preserve the Value of Nuclear Supply

- Advocating for legislative strategy to recognize the value of nuclear energy under terms and conditions that provide proper incentives for long-term operation

Ensure Federal Regulatory and Policy Framework

- PJM considering issues of Price Formation reform
- FERC opened a NOPR on grid resiliency

Tax Cuts and Jobs Act: PSEG well positioned

given positive non-utility contribution to earnings and a strong balance sheet

Federal Tax Reform	PSE&G	PSEG Power	Enterprise/Other
Reduction of Corporate Tax Rate to 21%	Customer rates lowered with reduction in tax rate Return of excess deferred tax liability – impact on cash and rate base growth dependent on payback period Estimated excess deferred tax balance of ~ $1.8 – $2.2 Billion	After-tax earnings and cash flow increase One-time non-cash earnings benefit from reduction in deferred tax liability to be reflected in 2017 GAAP results: ~ $530 -- $650 Million	After-tax earnings and cash flow increase One-time non-cash earnings benefit from reduction in deferred tax liability to be reflected in 2017 GAAP results: ~ $130 – $180 Million
Expensing of Capital Expenditures	Bonus depreciation eliminated post 2017; rate base growth increases relative to prior tax regime	100% expensing -- cash flow increases	
Interest Disallowance Rule 30% limitation based on tax- EBITDA	Not applicable	Well positioned given low debt balance	Well positioned given low debt balance
		Allocation of Interest expense between businesses has yet to be defined	

Our estimates and analysis are preliminary. The SEC has provided companies one year to finalize 2017 accounting requirements. Accordingly, further adjustments in 2018 may be required.

SI-SSA-0015-08311

2017 Operating Earnings Guidance – PSE&G expected to contribute 66% of operating earnings

PSEG

*SEE SLIDES A AND B FOR ITEMS EXCLUDED FROM NET INCOME/(LOSS) TO RECONCILE TO OPERATING EARNINGS (NON-GAAP) FOR PSEG, PSEG POWER AND PSEG ENTERPRISE/OTHER.

Distribution Base Rate Case Filing Assumptions

- Test year – July 1, 2017 through June 30, 2018 (with certain pro forma adjustments)
- ROE request of 10.3%
- Capitalization structure includes 54% equity component
- O&M and sales are roughly flat to last rate case eight years ago
- Low-single digit requested increase relative to overall revenue
- Return of and on incremental rate base not recovered through clauses
  - $255M of GSMP Stipulated Base;
  - ~$100M Energy Strong above $1B in clause;
  - Capital investments above depreciation levels;
  - New Business
- Seeking decoupling of revenues from sales volumes
  - Aligning with State, environmental and customer interests
  - Supporting larger energy efficiency programs
- Anticipate new rates effective October 2018

Overall rates, even after consideration of the expected low-single digit request, would remain >15% lower than they were in 2010

SI-SSA-0015-08318

PSE&G: Energy Efficiency Approval and GSMP II Filing Support Long-term Regulatory and Policy Objectives

PSE&G's recent filing to extend its Gas System Modernization Program (GSMP) and the recent approval of its proposed extension of the Energy Efficiency investment program reinforce PSE&G's commitment to provide clean, reliable energy for its customers

Gas System Modernization Program II

In July, PSE&G filed for a 5-year extension of the GSMP which would accelerate the pace of replacement of its aging cast iron and unprotected steel mains and associated service. PSE&G is proposing to invest approximately $540 million per year, or up to $2.7 billion, over the 5-year program beginning in 2019. The filing is consistent with the draft regulations that the BPU issued in June regarding Infrastructure Investment Programs.

Energy Efficiency

The BPU has approved PSE&G's agreement with BPU Staff and Rate Counsel to extend its investment in Energy Efficiency. Under the agreement, PSE&G would invest $69 million in energy efficiency equipment for hospitals, multi-family housing and other sectors and a residential energy efficiency offering for smart thermostats and data analytics. The agreement represents more than 90% of PSE&G's request.

SI-SSA-0015-08319

With additional pipeline capacity, some price convergence is beginning to appear in the gas markets

While prices indicate some spark spread compression, electric basis for the PSEG Zone has shown improvement in the forward markets since 2016

Forward-Looking Statements

Certain of the matters discussed in this presentation about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K. These factors include, but are not limited to:

- fluctuations in wholesale power and natural gas markets, including the potential impacts on the economic viability of our generation units;
- our ability to obtain adequate fuel supply;
- any inability to manage our energy obligations with available supply;
- increases in competition in wholesale energy and capacity markets;
- changes in technology related to energy generation, distribution and consumption and customer usage patterns;
- economic downturns;
- third party credit risk relating to our sale of generation output and purchase of fuel;
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements;
- changes in state and federal legislation and regulations;
- the impact of pending rate case proceedings;
- regulatory, financial, environmental, health and safety risks associated with our ownership and operation of nuclear facilities;
- adverse changes in energy industry laws, policies and regulations, including market structures and transmission planning;
- changes in federal and state environmental regulations and enforcement;
- delays in receipt of, or an inability to receive, necessary licenses and permits;
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry;
- changes in tax laws and regulations;
- the impact of our holding company structure on our ability to meet our corporate funding needs, service debt and pay dividends;
- lack of growth or slower growth in the number of customers or changes in customer demand;
- any inability of Power to meet its commitments under forward sale obligations;
- reliance on transmission facilities that we do not own or control and the impact on our ability to maintain adequate transmission capacity;
- any inability to successfully develop or construct generation, transmission and distribution projects;
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers;
- our inability to exercise control over the operations of generation facilities in which we do not maintain a controlling interest;
- any inability to maintain sufficient liquidity;
- any inability to realize anticipated tax benefits or retain tax credits;
- challenges associated with recruitment and/or retention of key executives and a qualified workforce;
- the impact of our covenants in our debt instruments on our operations; and
- the impact of acts of terrorism, cybersecurity attacks or intrusions.

All of the forward-looking statements made in this presentation are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business, prospects, financial condition, results of operations or cash flows. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this presentation apply only as of the date of this presentation. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even in light of new information or future events, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this presentation are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Net Income. Non-GAAP Operating Earnings exclude the impact of returns (losses) associated with the Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting and material one-time items. Non-GAAP Adjusted EBITDA excludes the same items as our non-GAAP Operating Earnings measure as well as income tax expense, interest expense and depreciation and amortization. The last two slides in this presentation (Slides A and B) include a list of items excluded from Net Income/(Loss) to reconcile to non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA with a reference to those slides included on each of the slides where the non-GAAP information appears.

Management uses non-GAAP Operating Earnings in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results. Management believes non-GAAP Adjusted EBITDA is useful to investors and other users of our financial statements in evaluating operating performance because it provides them with an additional tool to compare business performance across companies and across periods. Management also believes that non-GAAP Adjusted EBITDA is widely used by investors to measure operating performance without regard to items such as income tax expense, interest expense and depreciation and amortization, which can vary substantially from company to company depending upon, among other things, the book value of assets, capital structure and whether assets were constructed or acquired. Non-GAAP Adjusted EBITDA also allows investors and other users to assess the underlying financial performance of our fleet before management's decision to deploy capital. The presentation of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA is intended to complement, and should not be considered an alternative to, the presentation of Net Income, which is an indicator of financial performance determined in accordance with GAAP. In addition, non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA as presented in this release may not be comparable to similarly titled measures used by other companies.

Due to the forward looking nature of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility. Guidance included herein is as of November 5, 2017.

These materials and other financial releases can be found on the PSEG website at www.pseg.com, under the Investors tab. From time to time, PSEG, PSE&G and PSEG Power release important information via postings on their corporate website at http://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. PSEG

* GAS FIRM SALES ONLY.
** ESTIMATED ANNUAL GROWTH PER YEAR, ASSUMES NORMAL WEATHER.

Power has generating assets in three competitive markets

- Major assets located near key load centers
- Constructing three new, highly efficient combined-cycle units
- Positioned to benefit from market volatility
- Additional generation assets:
  - Solar (349 MW_{DC}/275 MW_{AC})
  - Kalaeloa, HI (104 MW)

SI-SSA-0015-08329

*HUDSON AND MERCER GENERATING STATIONS WERE RETIRED AS OF JUNE 1, 2017.

Regulatory and Policy initiatives drive long-term value creation

NJ Distribution Base Rate Proceeding

- Agreed to delay rate review filing to no later than February 1, 2018

Long-Term Infrastructure Investment Platform Approved by BPU in December 2017

- In July, PSE&G filed for a 5-year, $2.7 billion extension of the Gas System Modernization Program (GSMP2)
- In October, the BPU approved $69 million of PSE&G's request to extend its investment in Energy Efficiency (EE)
- PSE&G preparing a multi-year extension filing for Energy Strong
- PSE&G developing a large, multi-year EE investment program to bring benefits to more customers

Preserve the Value of Nuclear Supply

- Advocating for legislative strategy to recognize the value of nuclear energy under terms and conditions that provide proper incentives for long-term operation

Ensure Federal Regulatory and Policy Framework

- PJM considering issues of Price Formation reform
- FERC opened a NOPR on grid resiliency

SI-SSA-0015-08330

PSE&G's investment program provides for 7%–9% growth in rate base

E = ESTIMATE.

PSEG

*SEE SLIDES A AND B FOR ITEMS EXCLUDED FROM NET INCOME/(LOSS) TO RECONCILE TO OPERATING EARNINGS (NON-GAAP) FOR PSEG, PSEG POWER AND PSEG ENTERPRISE/OTHER.

Distribution Base Rate Case Filing Assumptions

- Test year – July 1, 2017 through June 30, 2018 (with certain pro forma adjustments)
- ROE request of 10.3%
- Capitalization structure includes 54% equity component
- O&M and sales are roughly flat to last rate case eight years ago
- Low-single digit requested increase relative to overall revenue
- Return of and on incremental rate base not recovered through clauses
  - $255M of GSMP Stipulated Base;
  - ~$100M Energy Strong above $1B in clause;
  - Capital investments above depreciation levels;
  - New Business
- Seeking decoupling of revenues from sales volumes
  - Aligning with State, environmental and customer interests
  - Supporting larger energy efficiency programs
- Anticipate new rates effective October 2018

Overall rates, even after consideration of the expected low-single digit request, would remain >15% lower than they were in 2010

SI-SSA-0015-08348

PSE&G: Energy Efficiency Approval and GSMP II Filing Support Long-term Regulatory and Policy Objectives

PSE&G's recent filing to extend its Gas System Modernization Program (GSMP) and the recent approval of its proposed extension of the Energy Efficiency investment program reinforce PSE&G's commitment to provide clean, reliable energy for its customers

Gas System Modernization Program II

In July, PSE&G filed for a 5-year extension of the GSMP which would accelerate the pace of replacement of its aging cast iron and unprotected steel mains and associated service. PSE&G is proposing to invest approximately $540 million per year, or up to $2.7 billion, over the 5-year program beginning in 2019. The filing is consistent with the draft regulations that the BPU issued in June regarding Infrastructure Investment Programs.

Energy Efficiency

The BPU has approved PSE&G's agreement with BPU Staff and Rate Counsel to extend its investment in Energy Efficiency. Under the agreement, PSE&G would invest $69 million in energy efficiency equipment for hospitals, multi-family housing and other sectors and a residential energy efficiency offering for smart thermostats and data analytics. The agreement represents more than 90% of PSE&G's request.

SI-SSA-0015-08349

With additional pipeline capacity, some price convergence is beginning to appear in the gas markets

While prices indicate some spark spread compression, electric basis for the PSEG Zone has shown improvement in the forward markets since 2016

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and transmission planning,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as for transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies, and
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-08354

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Income from Continuing Operations/Net Income. Operating Earnings exclude gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP.
PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends.

PSEG is presenting Adjusted EBITDA because it provides investors with additional information to compare our business performance to other companies and understand performance trends. Adjusted EBITDA excludes the same items as our Operating Earnings measure as well as income tax expense, interest expense, depreciation and amortization and major maintenance expense costs at Power's fossil generation facilities. This information is not intended to be viewed as an alternative to GAAP information. The last three slides in this presentation (Slides A, B and C) include a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings and Adjusted EBITDA with a reference to that slide included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

PSEG OVERVIEW

Ralph Izzo

CHAIRMAN, PRESIDENT AND CHIEF EXECUTIVE OFFICER

Daniel Cregg

EXECUTIVE VICE PRESIDENT AND CHIEF FINANCIAL OFFICER

PSEG

We make things work for you.

SI-SSA-0015-08356

PSEG's Strategy

Investment program delivering results

Operational Excellence: Maintaining reliability and improving performance as we control costs in low price environment

Financial Strength: Strong financial position supports investment program and dividend growth

Disciplined Investment:
- Balanced business mix
- Robust pipeline of opportunities

Results:
- Project 3rd year of EPS growth
- Increased rate of dividend growth
- Best in class utility growth rate
- Addition of efficient CCGT capacity enhances market position
- Upside potential from power markets

SI-SSA-0015-08357

Two complementary businesses

A stable platform, each with growth opportunities

PSEG

PSE&G	PSEG Power LLC
Electric & Gas Delivery and Transmission	**Regional Competitive Generation**
Strategy: Investments aligned with public policy and customer needs **Value Proposition:** A $12 billion infrastructure program – focused on transmission – produces double-digit rate base growth through 2019*	**Strategy:** Investment program enhances competitive position with addition of efficient CCGT capacity **Value Proposition:** Provides substantial free cash flow in current environment and upside from market rule improvements
2014 **Assets $22B** **Operating Earnings $725M**	2014 **Assets $12B** **Operating Earnings $642M**

SI-SSA-0015-08358

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2014.
PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT AND PSEG LONG ISLAND ACTIVITY.

Delivering on commitments and realizing growth

Operational Excellence	• PSE&G: Mid-Atlantic Reliability Award (14th consecutive year), top ranked among eastern electric and gas utilities in business customer satisfaction • PSEG Power: Record output from combined cycle units • PSEG Long Island: Demonstrated management and integration capability through a successful transition in first year • PSEG: Cost-control benefits continue
Financial Strength	• Updated operating earnings guidance for 2015 to $2.85-$2.95 per share from $2.80-$2.95 per share • Cash flows and business mix support strong credit ratings and ability to fully fund robust investment pipeline without issuing new equity • Increased rate of dividend growth in 2015
Disciplined Investment	• PSE&G ✓ Capital program = double digit rate base growth over 5-year period (2015-2019) with increased investment in Transmission; Electric and Gas distribution; and Gas System Modernization Program • Power: Keys & Sewaren CCGTs, uprates, PennEast Pipeline, and Solar Source

SI-SSA-0015-08359

Robust pipeline of investment opportunities

supports >20% growth in capital spending over the period

PSEG Capital Spending

2010 – 2014: $12.6 Billion | **2015E - 2019E*: $15.6 Billion**

*INCLUDES ALL PLANNED SPENDING. **ENERGY STRONG EXCLUDES RISK AND CONTINGENCY. ***POWER CAPITAL SPENDING EXCLUDES NUCLEAR FUEL. ****INCLUDES PENNEAST PIPELINE EQUITY INVESTMENT OF $0.1B. E=ESTIMATE. DATA AS OF OCTOBER 30, 2015.

SI-SSA-0015-08360

Balance sheet strength supports capital allocation

Timeframe	Actions taken
2010 – 2014: Transformed business mix	• Applied $12.6 billion towards investments • Improved credit ratings • Monetized Energy Holdings' portfolio • Strong balance sheet sustained during period of low power prices, while increasing the dividend
2015 – Forward: Strong financial position supports continued growth	• Increased rate of dividend growth in 2015 • $15.6 billion investment program through 2019 • Gas System Modernization Program settlement of ~ $900 million of capital investment through 2019 • Financial capability supports further expansion of the current capital plan

SI-SSA-0015-08361

PSE&G's investment program

Meeting public policy goals and customer needs

*SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/ NET INCOME TO RECONCILE TO OPERATING EARNINGS.

SI-SSA-0015-08362

Containing customer bills while investing in the system

PSE&G Typical Residential Customer Bills*

- PSE&G customers' combined electric and gas bills declined 23% over the period.
- Low gas prices drove rate decreases; in addition, gas customers received bill credits of ~$400 in total from 2012 through 2014.

SI-SSA-0015-08363

PSEG

*FOR ALL YEARS THE BILLING ASSUMES 7,200 KWH FOR ELECTRIC AND 1,010 THERMS FOR GAS ANNUALLY. E = ESTIMATE

PSE&G's robust capital investment pipeline

drives double-digit rate base growth through 2019*

- Planned capital spend supports high single digit earnings growth at PSE&G through 2017
- Transmission expected to grow to >50% of rate base in 2019
- Seeking to broaden platform to expand energy efficiency and other investments

*PRIOR TO BONUS DEPRECIATION. E = ESTIMATE

SI-SSA-0015-08364

PSEG Power increased capital spending

by $1.5 billion with addition of new generating capacity focused on improving efficiency and reliability

SI-SSA-0015-08365

*BASED ON CURRENTLY KNOWN AND QUANTIFIABLE ENVIRONMENTAL REQUIREMENTS. E=ESTIMATE.

Power's fleet has the desired attributes to be successful in today's and tomorrow's market

Economic Drivers	Outlook	Combined Cycle	Nuclear	Scrubbed Coal	Peakers	Renewable
Energy Margins	• Low natural gas and energy prices • Robust portfolio of gas pipeline contracts	✓	✓	✓	n/a	n/a
Capacity Markets	• Tightened rules proposed for capacity performance	✓	✓	✓	✓	n/a
Environmental Regulations	• Tighter air emissions standards	✓	✓	✓	✓	✓
Location	• Assets in well-designed markets, premium regions • Opportunities on brownfield sites	✓	✓	✓	✓	n/a
2015 - PSEG Power Total Capacity 11.8 GW		3.3	3.7	2.4	2.3	0.1
2018 - PSEG Power Total Capacity 12.8 GW *		4.7	3.8	2.4	1.8	0.1

- **Largest nuclear site** in the eastern U.S. and ownership in **large, fully scrubbed coal facilities** at Keystone and Conemaugh provide **economies of scale** that enhance energy margins in current low market, and provide for upside potential if prices improve.
- **Dual fuel peakers** meet reliability criteria in capacity markets and provide option value in energy market. Opportunity exists to repower peakers that do not meet NJ HEDD environmental regulations.
- **Combined cycle units Keys and Sewaren, expected to be operational in 2018,** will enhance emissions performance and have a combined average heat rate of approximately 6,800.

SI-SSA-0015-08366

PSEG

*AS OF AUGUST 2015 APPROXIMATELY 1.3 GW UNDER DEVELOPMENT - KEYS AND SEWAREN CCGT UNITS, WHICH ARE TARGETED TO GO INTO SERVICE IN 2018 ALONG WITH RETIREMENT OF OLDER SEWAREN UNITS

Operating Earnings

Disciplined investment program and focus on operational excellence have supported growth

Power's diverse fuel mix and dispatch flexibility continue to generate strong earnings and free cash flow in low price environment

PSE&G's investment program has driven double digit compound annual earnings growth since 2010

SI-SSA-0015-08367

*SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/ NET INCOME TO RECONCILE TO OPERATING EARNINGS. E=ESTIMATE
** 2015 PERCENTS USE MIDPOINT OF UPDATED EARNINGS GUIDANCE AS OF OCTOBER 30, 2015.

Power – Growing value by improving market rules and developing investment opportunities

Value Source	Opportunities and Actions Taken
Improving rules will better recognize value of our fleet	• PJM's Capacity market – 2014 limits on demand response and August 2015 Capacity Performance auction • Demand response treatment at U.S. Courts / FERC • Energy price formation at FERC • Increasing air quality standards via Federal and State regulations
Our footprint provides growth opportunities	• Nuclear and Combined Cycle plant uprates adding capacity • New build Keys CCGT in SWMAAC* (MD) and Sewaren 7 in EMAAC* • Brownfield expansions at existing sites ➢ New peakers built at New Haven and Kearny sites ➢ Continue to explore further opportunities • PennEast pipeline - equity investment and gas portfolio enhancement • ~152 MW** of utility-scale solar, with significant project pipeline • Continue to seek opportunities to expand the fleet

SI-SSA-0015-08368

PSEG

* SWMAAC = SOUTHWEST MID-ATLANTIC AREA COUNCIL \EMAAC = EASTERN MID-ATLANTIC AREA COUNCIL LOCATIONAL DELIVERABILITY AREA WITHIN PJM.

**PROJECT SIZE IN MEGAWATTS SHOWN IN DC (DIRECT CURRENT), AC EQUIVALENT IS 115 MW.

PSEG Annual Dividend

An increased dividend growth rate with potential for consistent and sustainable growth given our business mix and financial position

	2011	2012	2013	2014	2015E
Payout Ratio	50%	58%	56%	54%	54%*

Focus areas over business plan horizon

PSE&G

- **Operational excellence and cost control**
- **Capital program execution** – Transmission, Energy Strong and GSMP program
- **Regulatory framework**
- **Continue to develop incremental growth opportunities**

PSEG Power

- **Operational excellence and cost control**
- **Timely construction of new growth opportunities** – Keys Energy Center CCGT in SWMAAC* and Sewaren 7 CCGT in EMAAC* Zones
- **Strong performance at Nuclear and Fossil** to maximize fleet value in dynamic markets
- **Monitor and shape market rules** - Capacity markets and environmental regulations

PSEG Long Island

- **Continue execution** – Integration and achievement of performance metrics

SI-SSA-0015-08370

*SWMAAC = SOUTHWEST MID-ATLANTIC AREA COUNCIL/EMAAC = EASTERN MID-ATLANTIC AREA COUNCIL LOCATIONAL DELIVERABILITY AREA WITHIN PJM.

PSEG's Value Proposition

- A stable platform with predictable earnings and a robust investment pipeline
- PSE&G – Best in class utility performance and growth profile
- PSEG Power – Repositioning fleet to enhance efficiency and reliability in the current market environment
- Strong balance sheet – Supports strong credit rating, growth objectives and the potential for consistent and sustainable dividend growth

Mickleton–Gloucester–Camden 230kV	11.68%	✓	✓	$435	Completed

SI-SSA-0015-08378

A robust pipeline of Transmission

investments focus on reliability improvements and replacement of aging infrastructure

Project Roster	Approved ROE	Program Description	Estimate Up To ($ Millions)	Expected In-service Date
Northeast Grid Reliability	11.93%	PJM baseline project receiving CWIP in rate base treatment	$975	Jun '15 – Dec '16
Bergen—Linden Corridor 345kV	11.68%	PJM baseline project receiving CWIP in rate base treatment	$1,200	June 2018
PJM Regional Transmission Expansion Plan (RTEP) – multiple projects	11.68%	PJM mandated system reliability projects	$1,900	Various
69kV Upgrade – multiple projects	11.68%	Upgrade of 26kV to 69kV	$1,500	Various
Transmission Lifecycle – multiple projects	11.68%	Replacement of aging infrastructure	$1,100	Various
Transmission Hardening– multiple projects	11.68%	Reliability projects focused on system resiliency	$650	Various
Artificial Island	11.68%	PJM Baseline Project	$110-$130*	2019*

* PJM ESTIMATE

SI-SSA-0015-08379

Major Transmission programs focus on reliability and replacing aging infrastructure

- PJM's Regional Transmission Expansion Plan (RTEP) identifies system enhancements needed for reliability
- 69kV system upgrades improve system reliability and provide capacity for future growth
- Transmission Lifecycle is an ongoing program to manage transmission asset life to maintain and improve system integrity and reliability
- Transmission Hardening projects focus on increasing system resiliency

SI-SSA-00015-08380

PSE&G is successfully executing on Energy Strong with ~$440M deployed

Program	Approved	Spend thru Sept 2015
Flood Mitigation	$620M	$83M
Electric Contingency Reconfiguration	$100M	$53M
Electric Advanced Technology	$100M	$42M
Gas Utilization Pressure Cast Iron (UPCI)	$350M	$252M
Gas Metering & Regulating (M&R)	$50M	$7M
TOTAL	$1,220M	$437M

SI-SSA-0015-08381

PSE&G has successfully worked with regulators to develop multiple solutions for New Jersey's energy and economic development goals

RENEWABLES
creative solutions to install solar generation

- Solar Loan I – 2008
- Solar Loan II – 2009
- Solar 4 All – 2009
- Solar Loan III – 2013
- Solar 4 All Ext – 2013

ENERGY EFFICIENCY
assisting customers with controlling energy usage

- Carbon Abatement – 2008
- Demand Response – 2009
- Energy Efficiency (EE) – 2009
- EE Extension – 2011
- EE Extension II – 2015

DISTRIBUTION
improving electric and gas delivery infrastructure

- NJ Capital Infrastructure Program 1 (CIP 1) – 2009
- NJ Capital Infrastructure Program 2 (CIP 2) – 2011
- Energy Strong – 2014

To date we have invested over $2B in the above programs

Over $1B ahead in Energy Strong, Energy Efficiency Ext II and Solar programs

Gas System (GSMP) settlement increases investment by ~$900M through 2019

SI-SSA-0015-08382

Extension of PSE&G's award winning Energy Efficiency program

- Energy Efficiency Extension II approved by the BPU in April 2015 will extend the investment and time frame for three previously approved programs already in the marketplace, allowing PSE&G to factor in lessons learned and balance policy issues
- $95M of rate base investment approved at an ROE of 9.75%
- Extends existing programs, two of which have sizable waiting lists:
  - Hospitals
  - Multifamily
  - Direct install – government, non-profit, and small business
- Allows PSE&G to leverage past investments in people, capabilities, systems and processes

SI-SSA-0015-08383

Settlement reached on Gas System Modernization Program for ~$900 million over three years

- Agreement in principle reached with Staff of the NJBPU and the Division of Rate Counsel
- GSMP is the next phase of a long-term, cast iron and unprotected steel replacement strategy
- Three-year program with total capital investment of $905 million, beginning January 2016
  - ✓ The program provides for investment of $650M recovered through a clause similar to the Energy Strong program – with a 9.75% ROE
  - ✓ Additional capital investment of $255M to be recovered in rate case scheduled to be filed by November 2017

SI-SSA-0015-08384

PSE&G continues to receive contemporaneous/ formula rate recovery on ~70% of its investment program

2010-2014 PSE&G Capital Spending by Recovery Method

$9.8B

2015-2019E PSE&G Capital by Recovery Method

$11.8B

Clause Recovery Mechanisms
- Energy Strong / GSMP / Infrastructure / Solar / Energy Efficiency

FERC Formula Rates
- Transmission

Traditional Recovery Mechanisms
- Distribution Base Rates

SI-SSA-0015-08385

PSEG

E = ESTIMATE. DATA AS OF SEPTEMBER 2015.

PSE&G has controlled costs

through process improvements and will continue to drive future efficiencies

Cost control actions taken:

- PSE&G is utilizing the Lean Six Sigma discipline to achieve costs savings and process improvements
- Conducted organizational reviews resulting in streamlining of processes through restructuring
- Continued focus on vendor and inventory practices ensuring maximum value
- Successful management of pension

E=ESTIMATE

SI-SSA-0015-08386

PSE&G's 2015 operating earnings

expected to benefit from increased investment in Transmission

SI-SSA-0015-08387

PSEG LONG ISLAND

PSEG

We make things work for you.

SI-SSA-0015-08388

PSEG Long Island is focused on improving customer service and reliability

- Provide best-in-class customer service, including building on our new Call Center Technology platform to better serve our customers
  - According to J.D. Power, in 2014 PSEG Long Island showed the most improvement in overall customer satisfaction of any large electric utility, anywhere in the nation
- Work to maintain industry-leading service reliability
- Improve every aspect of the storm response process
  - Leveraged our new Outage Management System to improve storm logistics and outage coordination
- Contributed $0.02* to PSEG's earnings per share in 2014, as expected

SI-SSA-0015-08389

* EXCLUDES THE ENERGY RESOURCES & TRADE CONTRACT, WHICH WILL BE INCLUDED IN PSEG POWER'S RESULTS.

PSEG POWER

PSEG

We make things work for you.

SI-SSA-0015-08390

PSEG Power strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-08391

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus Fleet Diversity/Efficiency Focus	Financial/Economic Focus	Regulatory Focus
• Nuclear units have performed well • Hope Creek recorded its second highest output in its history • Fleet diversity across the dispatch curve and fuel types provide flexibility to meet changing market conditions • Bergen 1 & 2 and Linden 1 individually, and the CCGT fleet in total, set generation records in 2014 • Kearny 13 & 14 have shown increasing output in each year since start-up	• Getting the most out of existing fleet • Locational advantage • O&M control programs have delivered a CAGR of 2.6% between 2009 and 2015 • Sites offer competitive advantage for expansion	• Strong regulatory performance • Industry leadership in the changing business environment

SI-SSA-0015-08392

PSEG Power Delivering on priorities

Operational Excellence	• Maximize value of existing generating plants through implementation of the Operational Excellence Model (OEM) • Workforce engagement and development	• OEM implemented and achieving measures • Resource sharing program between Nuclear & Fossil
Financial Strength	• Deliver on Business Plan Commitments • Maintain competitive markets and improve constituent communication on issues important to Power	• Exceeded earnings guidance in 2014 • Ongoing effort in key markets showing success • Successful court outcome against subsidized generation
Disciplined Investment	• Successfully complete the Advanced Gas Path (AGP) uprates • Seek new opportunities in target markets (PJM, ISO-NE, NYISO) • Develop our renewables business (solar) • Maintain new nuclear option by successfully managing the Early Site Permit (ESP) process	• Accelerated schedule for AGP to maximize opportunity • LIPA contract for fuel and generation dispatch began January 1, 2015 • Solar Source's portfolio is 215 MW_{DC} • Nuclear ESP is expected in 2016 • New build Keys CCGT in Maryland and Sewaren 7 in New Jersey – both targeted in-service 2018

SI-SSA-0015-08393

PSEG Power has generating assets

in three competitive markets

- Assets located near load centers
- Low cost portfolio
  - Fuel flexibility with gas cost advantage
- Positioned to benefit from volatility in real-time markets
- Readiness for capacity performance (CP) in PJM
- Sites suitable for expansion

SI-SSA-0015-08394

PSEG Power value advantaged

by asset diversity, fuel flexibility and location

Energy Produced*

Total GWh: 54,162

- Gas
- Pumped Storage
- Nuclear
- Oil
- Coal**

Energy Market Served*

Total MW: 13,146

- Load Following
- Peaking
- Base load

Fuel Diversity*

Total MW: 13,146

- Gas
- Pumped Storage
- Nuclear
- Oil
- Coal**

*YEAR-END 2014 DATA, EXCLUDES SOLAR AND KALAELOA.
**INCLUDES NEW JERSEY UNITS THAT FUEL SWITCH TO GAS.

SI-SSA-0015-08395

Power's PJM assets along the dispatch curve reduce the risk of serving full requirement load contracts and can take advantage of volatile market conditions

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape
- Readiness for Capacity Performance (CP)
- Keys & Sewaren 7 to be added to dispatch in 2018E

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel capability at 87% of load following and peaking units

SI-SSA-0015-08396

PSEG Power will improve diversity and efficiency as we invest in the fleet

Objective 2015 → 2018

- Maintain fuel diversity
- Maintain load-serving capability
- Maintain low cost structure
- Environmental improvement
- Peach Bottom (PB) uprates
- Advanced Gas Path (AGP)
- Combined cycle units Keys and Sewaren 7 operational in 2018

Fuel Diversity

Energy Produced

E=ESTIMATE.

PSEG Power's fleet will experience heat rate and emissions improvements

- AGP (Advanced Gas Path) investments
- Other Efficiency improvements
- HEDD retirements
- Keys/Sewaren Combined Cycle Development (2018)

SI-SSA-0015-08398

E = ESTIMATE

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing

SI-SSA-0015-08399

PSEG Power Nuclear is a critical element of our success

Hope Creek

- Operated by PSEG Nuclear
- PSEG Ownership: 100%
- Technology: Boiling Water Reactor
- Total Capacity: 1,178 MW
- Owned Capacity: 1,178 MW
- License Expiration: 2046
- Next Refueling
  - Fall 2016

Salem Units 1 and 2

- Operated by PSEG Nuclear
- PSEG Ownership: 57%
- Technology: Pressurized Water Reactor
- Total Capacity: 2,307 MW
- Owned Capacity: 1,324 MW
- License Expiration: 2036 and 2040
- Next Refueling
  - Unit 1 – Spring 2016
  - Unit 2 -- Fall 2015

Peach Bottom Units 2 and 3

- Operated by Exelon
- PSEG Ownership: 50%
- Technology: Boiling Water Reactor
- Total Capacity: 2,242 MW
- Owned Capacity: 1,121 MW
- License Expiration: 2033 and 2034
- Next Refueling
  - Unit 2 - Spring 2016
  - Unit 3 - Fall 2015
- Uprate: 130 MW (PS Share)
  - Unit 2 - March 2015
  - Unit 3 - 2016

SI-SSA-0015-08400

PSEG Power Nuclear has competitive advantages

- Continued strong nuclear operations
- Nuclear excellence program
- Top quartile of cost performance/MWh
  - Brought security services in-house
- Significant earnings contributor
- Recruitment of the best new and experienced talent, and attractive training program
- Fukushima action plan in response to NRC staff review
  - FLEX* plan submitted with implementation underway
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

*STRATEGY KNOWN AS THE "DIVERSE AND FLEXIBLE MITIGATION CAPABILITY" OR FLEX, ADDRESSES RECOMMENDATIONS OF THE NUCLEAR REGULATORY COMMISSION'S FUKUSHIMA TASK FORCE.

SI-SSA-0015-08401

PSEG Power initiatives result in

continuing improvement in combined cycle heat rate

*The weighted average Combined Cycle Operating Heat Rate in 2018, with the addition of Sewaren 7 and Keys Energy Center, will be approximately 7,250

SI-SSA-0015-08402

PSEG

E= ESTIMATE.

PSEG Power CCGT/Fossil initiatives

Actions Taken to Create Value

Capacity
- New Keys CCGT 755MW online in 2018 adds geographic diversity to fleet
- Sewaren 7 CCGT 540 MW online in 2018 improves fleet efficiency
- Advanced Gas Path (AGP) investments 2014 through 2018 to provide additional efficient capacity, heat rate improvements
- New lower cost gas line at BEC with Dominion

Performance
- EPRI efficiency initiatives
- GE initiatives for large data analytic
- Consolidation of unit testing
- Auto tuning software

Maintenance
- Ongoing outage efficiency improvement
- Improvements to reliability
- Central fleet monitoring and diagnostic center

SI-SSA-0015-08403

PSEG Power developing 1,300 MW of new, efficient CCGT capacity in MD and NJ

- Construction of 755 MW Keys Energy Center to begin this Fall on a new, natural gas fired power plant in Maryland (SWMAAC*) at an estimated cost of $825 to $875 million
- Power cleared a new 540 MW CCGT unit, Sewaren 7 located in New Jersey (EMAAC*), in the recent 2018/2019 RPM auction; the new unit is expected to cost $625 to $675 million and will replace the older Sewaren units upon completion
- Both Keys and Sewaren 7 are targeted to be in-service in 2018

SI-SSA-0015-08404

PSEG

*SWMAAC = SOUTHWEST/EMAAC = EASTERN MID-ATLANTIC AREA COUNCIL LOCATIONAL DELIVERABILITY AREA WITHIN PJM.

PSEG Power's Growth Investments

Site	Project	Estimate ($ millions)	Benefits	Status
Maryland	Keys 755 MW CCGT	$825 - $875	Geographic diversity within PJM; highly efficient gas fired unit in SWMAAC	2018E
Sewaren	Unit 7, 540 MW CCGT	$625- $675	Improved efficiency and reliability; increase in capacity	2018E
Peach Bottom	Peach Bottom EPU (2014 – 2015)	$417	Increased capacity: 130 MW	PB2 May 2015, PB3 in 2016

PSEG Power has other attractive sources of revenues to round out a robust portfolio, in addition to energy and capacity

Gas Asset Optimization

- Large wholesale provider to PSE&G and others
  - Storage capacity of approximately 75 Bcf (in the Gulf and market regions)
  - Firm transportation of 1.3 Bcf/day on seven pipelines
- Off-system sales margins shared with residential customers
- Commercial & Industrial customers (C&I)
- Weather and price volatility

Ancillary Services

LIPA fuel and energy dispatch management

SI-SSA-0015-08407

PSEG Power is an established leader

within the industry

INPO

- National Nuclear Accrediting Board

NEI

- Communications Advisory Committee
- Board of Directors
- Board of Directors Executive Committee
- Emergency Preparedness Working Group
- Security Working Group
- Fukushima Response Steering Committee
- Joint Information System Task Force
- Nuclear Strategic Issues Advisory Committee Steering Group

PSEG

We make things work for you.

Market Review: Winter Z6 gas prices retain seasonal volatility; spark spreads have continued to be robust in PJM

2015 YTD Z6

2015-2018 Z6

PJM West vs. PS Zone Spark Spreads (2013-2018)

SI-SSA-0015-08413

Power Basis in Eastern PJM: Expected to be volatile and negative on an annual basis over the near term

Electric Basis is negative however it is viewed to be stabilizing and reverting within the next several years due to:

- Export of ~18 bcf/day of gas which will significantly strengthen regional gas prices
- Easing of transmission constraints in Virginia/Maryland
- Construction of significant new gas-fired generation in VA/MD

ANNUAL FORWARD BASIS TO PJM-WEST AS OF DECEMBER 24, 2015.
E = YTD ACTUAL PLUS FORWARD; F = FORWARD

SI-SSA-0015-08414

Market Review: PSEG's extensive gas asset portfolio gives unparalleled access to Marcellus Shale gas

Power's Gas for Generation in 2014

- PSEG Power maintains a robust portfolio of pipeline and storage assets in the Mid-Atlantic
- PSEG Power's gas for generation was ~100 BCF in 2014, of which >60% was supplied by Shale gas
- PSEG Power procured over 400 BCF in 2014 with ~75% going to PSE&G's utility gas customers
- When gas is surplus to customer needs, PSEG Power sells surplus to others; margins from such sales benefit PSE&G gas customers and PSEG Power

SI-SSA-0015-08415

Market Review: New pipelines will move significant quantities of Marcellus gas out of the region by 2018

Historical and Expected Marcellus Production

Pipeline capacity grows significantly by 2018

New pipeline investment is expected to increase takeaway capacity from the low cost Marcellus/Utica shale and reduce regional surpluses and increase gas prices by 2018

SI-SSA-0015-08416

Northeast Portfolio: New York and New England

New England (972 MW)

- Small but dynamic market
- Significant improvement in market construct
- High volatility due to extreme (winter) weather conditions
- Significant siting and permitting challenges
- Gas pipeline infrastructure poses supply challenges/opportunity

New York (774 MW)

- Single state ISO
- Investment in new lateral to connect to the Dominion pipeline at Bethlehem Energy Center (BEC) allows for access to fuel supply from Marcellus
- Long Island Power Authority Fuel Management Contract

SI-SSA-0015-08417

Northeast Portfolio: Expanding our footprint with PSEG Long Island

PSEG Power acting as an agent for LIPA began January 2015

- Performing ISO bidding for LIPA's 6,000 MWs of generation/tolls
- Procuring natural gas and oil for the majority of these assets
- Scheduling two DC transmission cables (ISO-NE and PJM) into Long Island
- Entering into financial hedges to reduce LIPA customer's price volatility

This relationship has provided PSEG Power:

- Additional experience in Eastern NY and Connecticut markets
- Bigger natural gas footprint
- Fee-based services contract

SI-SSA-0015-08418

Capacity Market Pricing: ~98% of Power's PJM fleet that cleared the 2018/2019 RPM auction met the new CP standards

RPM – Auction Results				
Delivery Year	2015 / 2016*	2016 / 2017*+	2017 / 2018+	2018 / 2019

SI-SSA-0015-08421

Regulatory Framework: Significant reforms implemented and new rules being promulgated to improve energy and capacity market designs

	ISSUE /POLICY	OUTCOME
PJM	CAPACITY	• Higher payments for enhanced reliability (Capacity Performance) • Tighter performance obligations for Demand Response

	ENERGY	• FERC directed improvements to energy price formation:
		  • 5 minute settlement (FERC Notice of Proposed Rulemaking)
		  • Developing day-ahead hourly offers/real-time reoffers in Q4 2016

ISO-NE	CAPACITY	• Implemented two settlement capacity market (Pay for Performance) • Higher prices in recent auction better reflect tight supply conditions in concert with implementation of sloped demand curve in FCA 9 • Supply and demand near equilibrium • Zonal demand curves expected in FCA 11
	ENERGY	• Implemented day-ahead hourly offers/real-time reoffers in Q4 2014 • Reserve market prices better reflect scarcity prices • 5 minute settlement expected implementation Q1 2017
NYISO	CAPACITY	• New Capacity Zone (LHV) leads to more accurate price signals • FERC directed NYISO to develop RMR Rules in place of NYPSC rules
	ENERGY	• Improvement in price formation during reserve shortage conditions
FEDERAL	DEMAND RESPONSE	• *FERC v. EPSA* before Supreme Court and national implications • DC Circuit RICE NESHAPs decision affecting diesel engines pending
	CAPACITY	• Supreme Court to review Maryland subsidized generation case
	ENVIRONMENTAL REGULATIONS	• HEDD, CPP, HAPS/MACT will lead to tightening of supply in 2015+ timeframe

SI-SSA-0015-08422

PSEG Power's Value Proposition

- Re-positioning fleet to improve efficiency and reliability in attractive markets
- Advantaged by low cost structure, fuel diversity and dispatch flexibility
- Value add from strong gas supply capability
- Significant drive by regulatory bodies to improve market constructs
- Low capital requirements to meet enhanced performance standards
- Organic growth opportunities to increase nuclear and combined cycle generation
- Hedging strategy is responsive to changing market dynamics, providing attractive returns and free cash flow

SI-SSA-0015-08423

PSEG FINANCIAL REVIEW & OUTLOOK

SI-SSA-0015-08424

PSEG

We make things work for you.

Strong financial position to support our business initiatives

2014 Financial Position

- ✓ Strong 2014 earnings growth
- ✓ Exceeded earnings guidance
- ✓ Executed major PSE&G capital program
- ✓ Strong balance sheet with no long term Parent debt
- ✓ Solid credit metrics

2015 and Beyond

- ✓ Third year of anticipated positive earnings growth in 2015
- ✓ Controlled O&M growth
- ✓ Balance Sheet and Cash Flow support investment program without equity issuance
- ✓ Substantial additional investment capacity
- ✓ Growth in PSE&G investments with contemporaneous/formula rate returns and new Power investment
- ✓ Consistent and strong cash flow from both Power and PSE&G
- ✓ Potential for consistent and sustainable dividend growth

PSEG 2015 pension expense of $55M based on YE 2014 discount rate of 4.2% and 2015 expected rate of return on pension assets of 8%. As of 9/30/15, pension expense in 2016 was estimated to increase by $0.02-$0.03 per share. This will be updated at YE and managed as part of overall O&M.

SI-SSA-0015-08433

Potential for consistent and sustainable

dividend growth given significant contribution from regulated earnings and Power's strong free cash flow

Payout Ratio	50%	58%	56%	54%	54% (1)

SI-SSA-0015-08434

PSEG

(1) THE 2015 PAYOUT RATIO IS BASED ON THE MIDPOINT OF PSEG'S 2015 UPDATED OPERATING EARNINGS GUIDANCE OF $2.85-$2.95E PER SHARE. SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. E= ESTIMATE.

PSEG Summary

- Continued third year of anticipated positive earnings trend in 2015 with updated operating earnings guidance of $2.85 to $2.95 per share
- Continued 5th straight year of expected double digit, 5-year growth in rate base
- Anticipated high single digit earnings growth at PSE&G on a three-year basis from 2014 to 2017, driven by transmission investments and planned programs
- Power's continued focus on operational excellence, market expertise and financial strength delivers value in current price environment
- Power realigning its portfolio with new, efficient CCGT investments in MD and NJ
- Strong Balance Sheet and Cash Flow support PSE&G's capital program and Power's new investment opportunities without the need for equity
- Our $0.08 per share dividend increase for 2015 is consistent with our long history of returning cash to the shareholder through the common dividend, with potential for consistent and sustainable growth

Forward-Looking Statement

Certain of the matters discussed in this report about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words “anticipate,” “intend,” “estimate,” “believe,” “expect,” “plan,” “should,” “hypothetical,” “potential,” “forecast,” “project,” variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC), including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, capacity market design, transmission planning and cost allocation rules, including how transmission projects are planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations and enforcement that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to manage our energy obligations, available supply and risks,
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry,
- any deterioration in our credit quality or the credit quality of our counterparties,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to obtain sufficient insurance coverage or recover proceeds of insurance with respect to such events,
- acts of terrorism, cybersecurity attacks or intrusions that could adversely impact our businesses,
- increases in competition in energy supply markets as well as competition for certain transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements,
- changes in technology, such as distributed generation and micro grids, and greater reliance on these technologies, and
- changes in customer behaviors, including increases in energy efficiency, net-metering and demand response.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-08453

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. The last slides in this presentation include a list of items excluded from Net Income to reconcile to Operating Earnings, with a reference to those slides included on each of the slides where the non-GAAP information appears.

These materials and other financial releases can be found on the pseg.com website under the investor tab, or at http://investor.pseg.com/

PSEG's Strategy – delivering results

Our businesses' focus on cost-effective, reliable operations yields strong cash flow

We are funding growth-oriented investments aligned with customer needs and state energy policies

We are enhancing the competitiveness of our environmentally well-positioned generation business

The results of our financial strategy support a credit profile capable of meeting our corporate objectives and providing sustained dividend growth for our shareholders

SI-SSA-0015-08456

Two complementary businesses

Strong asset platform, performing well and positioned for the future

PSEG

PSE&G	PSEG Power LLC
Electric & Gas Delivery and Transmission	**Regional Competitive Generation**
Strategy: Positioned to meet customers' needs as we respond to state and federal energy policy and economic growth objectives **Value Proposition:** An $11.3 billion infrastructure program – focused on transmission – that is expected to produce double-digit rate base growth through 2016	**Strategy:** Fuel diverse fleet is geographically and environmentally well positioned, with investments to enhance competitiveness **Value Proposition:** Provides substantial free cash flow in current environment and poised for price recovery
2013 — Assets $20B Operating Earnings $612M	2013 — Assets $12B Operating Earnings $710M

SI-SSA-0015-08457

ASSETS AND OPERATING EARNINGS ARE FOR THE YEAR ENDED 12/31/2013.
PSE&G AND POWER DO NOT ADD TO TOTAL DUE TO PARENT, PSEG LONG ISLAND AND ENERGY HOLDINGS ACTIVITY.
SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS.

Delivering on commitments and pursuing opportunities for growth

Operational Excellence	• Power: Record 2013 output at Linden CCGT and Salem 2; nuclear capacity factor greater than 90% for 9th straight year • PSE&G: Mid-Atlantic Reliability Award (12th consecutive year) • PSEG Long Island: Went "live" on January 1, 2014 • PSEG: Cost-control benefits continue
Financial Strength	• Strong cash flows supported credit rating increases • Pension fully funded • Dividend increased
Disciplined Investment	• PSE&G ✓ Transmission capital program execution and growth ✓ Energy Strong infrastructure program underway ✓ Solar 4 All Extension and Solar Loan III programs • Power: Investments to enhance the fleet's competitiveness – 130 MW Nuclear uprate, 150 MW CCGT uprate and efficiency improvement

SI-SSA-0015-08458

Operating Earnings Mix

Long term investment program has driven increased earnings contribution from stable, regulated business

Power's diverse fuel mix and dispatch flexibility continues to generate earnings and free cash flow

PSE&G's investment in transmission has diversified its asset base and, coupled with other investments and cost controls, supported compound annual earnings growth of ~18% over 2009 – 2013

PSEG's business profile has been transformed

through significant growth in utility capital spending, and we have consistently identified attractive opportunities for additional investment

SI-SSA-0015-08461

Energy Strong Agreement recognizes benefits of system investments

- **Energy Strong Agreement reached with all parties**
  - ✓ Agreement recognizes the benefits of system investments that prevent or shorten outages
  - ✓ Supports $1.22 billion capital program over several years on reasonable terms: $1 billion recovered through accelerated, rate recovery mechanism
    - $820 million Electric
    - $400 million Gas
  - ✓ Allows PSE&G to earn a 9.75% ROE on the $1 billion recovered on accelerated basis
  - ✓ Requires PSE&G to file a base rate case by November 2017
  - ✓ Approved by the NJBPU in May 2014
- **Over 100 New Jersey municipalities supported Energy Strong**
- **Energy Strong agreement clears path for PSE&G to begin the initial phase of this robust capital program**

SI-SSA-0015-08462

PSEG Power – Value-advantaged through asset diversity, fuel flexibility, location and installed environmental controls

SI-SSA-0015-08463

PSEG – Year to Date 2014 Highlights

- **Operating Earnings YTD up 9% to $2.27 per share from $2.09 for YTD 2013**
  - ✓ PSE&G on track to record double-digit growth in earnings on expanded capital investment program
  - ✓ PSEG Power expected to earn at upper level of expectations for the full year
  - ✓ Narrowed 2014 full–year, operating earnings guidance to $2.60-$2.75 per share, from $2.55-$2.75 per share prior

- **Executing on our capital program**
  - ✓ Replacement of PSE&G's gas cast-iron pipe underway as part of $1.22 billion Energy Strong capital program
  - ✓ Major transmission projects under $6.8 billion capital program are on-time and on-budget

- **Market developments**
  - ✓ PJM proposed changes to its Reliability Price Mechanism, Demand Curve Adjustment and pending Demand Response (DR) issues supportive of price formation

SI-SSA-0015-08464

PSEG – 2014 Another Year of Growth

2014 operating earnings guidance narrowed; forecast full-year at upper end of range, assuming normal weather and unit operations for rest of year

SI-SSA-0015-08465

SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. E = ESTIMATE.

Balance Sheet Strength

2009 – 2013: Reduced risk profile and transformed business mix

- Invested $8.4 billion in PSE&G
- Improved credit ratings
- Monetized and de-risked Holdings' portfolio

2014 – Forward: Strong cash flows and increasingly regulated business mix fully support:

- PSE&G's $11.3 billion approved investment program through 2018
- Opportunity for consistent and sustainable dividend growth
- Additional investment capacity to deploy in opportunities beyond those in the current capital plan
- No need to issue equity

SI-SSA-0015-08466

Investment opportunities exceeding $1 billion

Focused on providing our customers with access to low-cost gas and cost-effective technologies that reduce emissions as they also improve system reliability

Potential Investment	Description	Amount ($ Millions)
Bridgeport Harbor Station	New 450 MW CCGT Unit	$500 -- $700
PSEG -- Long Island	Utility 2.0 Energy Efficiency Filing	$200 -- $345
Artificial Island	FERC 1000 Project*	$250 -- $300
PennEast Pipeline	Equity Interest	$100 -- $120
PSE&G Energy Efficiency	Program Extension	$100 -- $100
Total		$1,150-$1,565

*Artificial Island Project includes amount for related compensator which has been assigned to PSE&G.

SI-SSA-0015-08467

PSEG Annual Dividend – A long history of growth and returning cash to shareholders with a financial position that provides opportunity for consistent and sustained growth

SI-SSA-0015-08473

PSE&G's operating earnings grew ~18%

per year over the 5-year period with increased investment, cost control and supportive rate mechanisms

*SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS.

SI-SSA-0015-08474

PSE&G's rate base has grown ~9% annualized with investment focused on meeting customers' requirements

Growth in rate base is driven by investments with constructive recovery mechanisms

SI-SSA-0015-08475

Successfully worked with regulators

to develop multiple solutions for New Jersey's energy and economic development goals

RENEWABLES
creative solutions to install solar generation: $0.7B

- Solar Loan I – 2008
- Solar Loan II – 2009
- Solar 4 All – 2009
- Solar Loan III – 2013
- Solar 4 All Ext – 2013

ENERGY EFFICIENCY
assisting customers with controlling energy usage: $0.3B

- Carbon Abatement – 2008
- Energy Efficiency – 2009
- Demand Response – 2009
- Energy Efficiency Ext – 2011

DISTRIBUTION
improving electric and gas delivery infrastructure: $1.0B

- NJ Capital Infrastructure Program 1 (CIP 1) – 2009
- NJ Capital Infrastructure Program 2 (CIP 2) – 2011
- Energy Strong – 2014

Invested ~$2.0B through 2013

Plan to invest additional ~$1.6B through 2018 in approved programs

Filed for Energy Efficiency Extension II in August 2014 for ~$100 million

SI-SSA-0015-08476

NOTE: SPENDING THROUGH 2013 UNLESS INDICATED OTHERWISE

A 60% increase to $11.3 billion, in our 5-year investment program, including Energy Strong

PSE&G's Capital Expenditures

2013-2017E
$7.0 Billion

2014-2018E
$11.3 Billion

Distribution Energy Strong Solar/Energy Efficiency Transmission

SI-SSA-0015-08477

Energy Strong Agreement supports customers' needs in the aftermath of Superstorm Sandy

- Settled with NJBPU Staff and all other parties in May 2014 for $1.22 billion; approved by the NJBPU in May 2014
- Program addresses system resiliency and hardening by:
  - ✓ $620 million to raise, relocate or protect 29 switching and substations that were damaged by water in recent storms
  - ✓ $350 million to replace and modernize 250 miles of low-pressure, cast iron gas mains in or near flood areas
  - ✓ $100 million to create redundancy in the electric system, reducing outages when damage occurs
  - ✓ $100 million to deploy smart grid technologies to better monitor system operations to increase our ability to more swiftly deploy repair teams
  - ✓ $50 million to protect five natural gas metering stations and a liquefied natural gas station affected by Sandy or located in flood zones

SI-SSA-0015-08478

Over 70% of PSE&G's $11.3 billion investment program will be recovered through contemporaneous mechanisms

2014-2018E PSE&G Capital Spending by Recovery Method

$11.3 Billion

Clause Recovery Mechanisms

SI-SSA-0015-08483

Susquehanna-Roseland consists of constructing 150 miles of 500kV circuit (46 miles in NJ) with two new 500kV GIS switching stations at Roseland and Hopatcong

Project Estimate Up To*	Through Year-end 2013	Expected In-service Date
$790M	$661M	Phase 1 – **Completed** Phase 2 – June 2015

- PJM RTEP project b0489
- ROE of 12.93% (including 1.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Improves reliability and reduces congestion

Project Status: The eastern part of line from Hopatcong to Roseland, NJ in service April 2014; NJ construction planned to be completed in Q3 2014. PA portion outside plant construction in progress. Western portion in NJ and the PA portion is planned to go in service June 2015.

SI-SSA-0015-08484

*PROJECT IS SHARED WITH PPL. PROJECT ESTIMATE REPRESENTS PSE&G'S CONSTRUCTION RESPONSIBILITY FOR THE NJ PORTION.

Northeast Grid Reliability consists of upgrading approximately 50 overhead circuit miles of 138kV transmission line to 230kV, constructing ~18 miles of new underground 230kV lines, and converting/upgrading 12 existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$907M	$228M	Jun - Dec 2015

- PJM RTEP project b1304
- ROE of 11.93% (including 0.25% incentive)
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment
- Project estimate has increased ~$12M associated with hardening related scope changes as a result of Superstorm Sandy

Customer Benefit: Improves reliability and increases transfer capability

Project Status: Nearing completion of engineering/design and licensing/permitting phase. Outside and inside plant construction are in progress

SI-SSA-0015-08485

North Central Reliability consists of upgrading 55 circuit miles of 138kV transmission line to 230kV, and converting six existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$390M	$349M	Completed

- PJM RTEP project b1154
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Improves power quality and increases transfer capability

Project Status: In service April 2014

SI-SSA-0015-08486

Burlington-Camden 230kV consists of upgrading 37 circuit miles (30 miles of overhead and 7 miles of underground) of 138kV transmission line to 230kV, converting the existing stations to 230kV operation

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$399M	$301M	Completed

- PJM RTEP project b1156
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Addresses voltage reliability and increases transfer capability

Project Status: In service April 2014

SI-SSA-0015-08487

Mickleton-Gloucester-Camden 230kV

consists of upgrading 10 circuit miles of overhead transmission, installing ~16 circuit miles of new 230kV underground, 10 circuit miles of new 230kV overhead, and modifications/upgrades at five existing stations

Project Estimate Up To	Through Year-end 2013	Expected In-service Date
$435M	$122M	June 2015

- PJM RTEP project b1398
- ROE of 11.68%
- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Customer Benefit: Addresses thermal reliability and increases transfer capability

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-08488

Bergen-Linden Corridor is a recently approved project which will provide a double-circuit 345kV line to maintain reliability

Project Estimate Up To	Through Year-end 2013	Expected Completion Date
$1,200M	-	June 2018

- PJM RTEP project b2436
- 30 miles of underground cable
  - New ~ 23 miles
  - Reconductor (Upgrade of 138 to 345) ~7 miles
- 13 miles of double circuit overhead conductor (replacing double circuit 138 with double circuit 345)
- 11 station upgrades to 345kV

Customer Benefit: Addresses thermal and short-circuit reliability

Project Status: Engineering

SI-SSA-0015-08489

Planned transmission spend of $6.8 billion

is driven by PJM reliability projects, 69kV conversions and life-cycle replacement projects

E= ESTIMATE. DATA AS OF MARCH 31, 2014.

SI-SSA-0015-08490

PSE&G's processes and culture are the foundation for project execution success

People

- Diverse, well-rounded team
- Culture with a focus for on-time, on-scope and on-budget execution
- Successful recruitment, development and retention strategies
- Strong unions and supplier relationships

Process

- Cradle to grave project execution organization
- Processes designed to be scalable, repeatable and improvable
- Emphasis on best practices and lessons learned sharing
- Improvements driven by performance metric management

Environment

- Collaborative relationship with regulatory agencies
- Innovative design and construction practices to minimize environmental impacts
- Robust environmental compliance system

SI-SSA-0015-08491

PSE&G's demonstrated ability to successfully execute large projects leaves us well positioned to pursue new opportunities

- Future RTEP as identified by PJM
- Near-term participation in RTO competitive open planning windows
  - PJM
  - MISO
  - NYISO
- Participating in competitive solicitations under FERC 1000 -- Artificial Island recommendation

SI-SSA-0015-08492

PSE&G's 2014 operating earnings

to benefit from increased investment in transmission and on-going cost control

PSEG LONG ISLAND

PSEG

We make things work for you.

SI-SSA-0015-08494

PSEG was selected to operate Long Island Power Authority's (LIPA) electric transmission and distribution system for 12 years starting in 2014

- Pursuant to the Operating Services Agreement (OSA), all expenses and capital costs to operate the system are pre-funded by LIPA and passed through to their customers
- Compensation consists of a fixed fee and an incentive fee
  - Fixed compensation fee for 2014 with scheduled increases in 2015 and 2016
  - Starting in 2015 PSEG Energy Resources and Trading (ER&T) begins managing fuel/energy contracts
  - PSEG Long Island expected to contribute $0.03 to operating earnings in 2014 increasing to $0.07 per share in 2016 including contribution at ER&T
- Potential for an 8-year extension of the OSA

SI-SSA-0015-08495

PSEG Long Island commenced operations

on January 1, 2014

Key elements of Operating Services Agreement

Increased PSEG scope and control	Use of PSEG brand as PSEG Long Island	3-Year rate freeze (2013-2015)
Performance metrics	NY Department of Public Service oversight	Utility 2.0 – Expanded program filed ~$345 million

Early performance

Successful transition to PSEG Long Island	Improved stakeholder communications	Achieving reliability and customer satisfaction metrics

SI-SSA-0015-08496

PSEG POWER

SI-SSA-0015-08497

PSEG

We make things work for you.

PSEG Power strategy

Excellence in operating our units safely, reliably, cost-competitively and in an environmentally, responsible manner

SI-SSA-0015-08498

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus Fleet Diversity/Efficiency Focus	Financial/Economic Focus	Regulatory Focus
• Nuclear units operated at over 90% capacity factors for the 9th consecutive year through 2013 • Fleet diversity across the dispatch curve and fuel types provide flexibility to meet changing conditions • Linden CCGT and Salem 2 nuclear unit achieved record output in 2013	• "Getting the most out of existing fleet" • Locational advantage • O&M control programs have delivered a CAGR of 1.6% between 2009 and 2014 • Sites offer competitive advantage for expansion	• Strong regulatory performance • Industry leadership in the changing business environment

SI-SSA-0015-08499

PSEG Power Delivering on priorities

Operational Excellence	• Maximize value of existing generating plants through implementation of the Operational Excellence Model (OEM) • Workforce engagement and development	• OEM implemented and achieving measures • Resource sharing program initiated
Financial Strength	• Deliver on Business Plan Commitments • Maintain competitive markets and improve constituent communication on issues important to Power	• Exceeded earnings guidance in 2013 • Ongoing effort in key markets showing success • Successful court outcome against subsidized generation
Disciplined Investment	• Successfully complete the Advanced Gas Path (AGP) uprates • Seek new opportunities in target markets (PJM, ISO-NE, NYISO) • Develop our renewables business (solar) • Maintain new nuclear option by successfully managing the Early Site Permit (ESP) process	• Accelerated schedule for AGP to maximize opportunity • LIPA contract for fuel and generation dispatch begins January 2015 • New 13 MW Rockfish solar project announced, established robust pipeline • Nuclear ESP is expected in 2015

SI-SSA-0015-08500

PSEG Power met 2013 challenges

Storm and weather challenges	+	Market challenges	=	Value delivered
• SuperStorm Sandy impacted our generating sites • Cold and hot weather extremes created challenging operating environment, but also presented opportunities		• Unit outages and planned transmission outages resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by economy		• Optimized unit dispatch across fleet during storm recovery • Expedited return from storm outages, restored margin opportunities • High availability when needed • Achieved fuel cost savings • Captured value through coal/gas switching, unit flexibility • Coal & oil sales optimized inventory • Flexibility of portfolio captured real-time basis opportunities

SI-SSA-0015-08501

PSEG Power exceeded 2013's earnings guidance

OPERATING EARNINGS FOR PSEG POWER IN 2013; SEE SLIDE A FOR ITEMS EXCLUDED FROM INCOME FROM CONTINUING OPERATIONS/NET INCOME TO RECONCILE TO OPERATING EARNINGS. *ASSETS TRANSFERRED TO POWER AT YEAR-END 2013.

SI-SSA-0015-08502

PSEG Power has generating assets

in three competitive markets

- Assets near loads
- Low cost portfolio
- Fuel flexibility with gas cost advantage
- Poised to benefit from volatility in real-time markets
- Fleet will maintain diversity and efficiency after HEDD
- Most sites suitable for expansion

SI-SSA-0015-08503

PSEG Power will maintain diversity and efficiency after a realignment of the fleet due to HEDD

Objective 2013 → 2017

- Maintain fuel diversity
- Maintain load-serving capability
- Maintain low cost structure
- Environmental improvement
- Peach Bottom (PB) uprate
- Advanced Gas Path (AGP)
- Kalaeloa and Solar transfer adds ~200MW of capacity

Fuel Diversity

Energy Produced

E=ESTIMATE.

SI-SSA-0015-08504

Power's PJM assets along the dispatch curve reduce the risk of serving full requirement load contracts and can take advantage of volatile market conditions

	Base Load Units	Load Following Units	Peaking Units
Energy Revenue	X	X	X
Capacity Revenue	X	X	X
Ancillary Revenue		X	X
Dual Fuel		X	X

- Base Load ensures cash flow certainty
- Load Following provides ability to serve load shape

- Peaking takes advantage of real-time prices and reduces operational risk
- Dual fuel flexibility for >60% of fleet

SI-SSA-0015-08505

PSEG Power Nuclear is a critical element of our success

Hope Creek	Salem Units 1 and 2	Peach Bottom Units 2 and 3
• Operated by PSEG Nuclear • PSEG Ownership: 100% • Technology: Boiling Water Reactor • Total Capacity: 1,178 MW • Owned Capacity: 1,178 MW • License Expiration: 2046 • Next Refueling ➢ Spring 2015	• Operated by PSEG Nuclear • PSEG Ownership: 57% • Technology: Pressurized Water Reactor • Total Capacity: 2,365 MW • Owned Capacity: 1,358 MW • License Expiration: 2036 and 2040 • Next Refueling ➢ Unit 1 – Spring 2016 ➢ Unit 2 -- Fall 2015	• Operated by Exelon • PSEG Ownership: 50% • Technology: Boiling Water Reactor • Total Capacity: 2,251 MW • Owned Capacity: 1,125 MW • License Expiration: 2033 and 2034 • Next Refueling ➢ Unit 2 – Spring 2016 ➢ Unit 3 – Fall 2015 • Uprate: 130 MW (PS Share) Unit 2 - 2015/Unit 3 - 2016

SI-SSA-0015-08506

PSEG Power Nuclear is core to the fleet and has competitive advantages

- Continued strong nuclear operations: nine consecutive years of >90% capacity factor through 2013
- Significant earnings contributor
- Top quartile of cost performance/MWh
- One third new staff, recruitment of the best new and experienced talent, and attractive training program
- Fukushima action plan in response to NRC staff review
  - FLEX* plan submitted with implementation starting with Fall outage
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

SI-SSA-0015-08507

*STRATEGY KNOWN AS THE "DIVERSE AND FLEXIBLE MITIGATION CAPABILITY" OR FLEX, ADDRESSES RECOMMENDATIONS OF THE NUCLEAR REGULATORY COMMISSION'S FUKUSHIMA TASK FORCE.

Power's nuclear fleet is well positioned

with significantly lower-than-average US cost structure

*SOURCE: ELECTRIC UTILITY COST GROUP
** SOURCE: PSEG NUCLEAR

SI-SSA-0015-08508

PSEG Power's Fossil Fleet Performance

has shown improvement

- Fossil Capacity Factor rebounded with market
- Peaking Units maintain high start success

- Coal EFORp improving
- CC EFORp less than 1% in 2013
- Consistent recipient of EFORp payments

SI-SSA-0015-08509

PSEG

*LM6000 AND 7EA UNITS

PSEG Power improvements achieved in combined cycle fleet efficiency

Combined Cycle Operating Heat Rate

Actions Taken to Create Value

- Operational Excellence Model
- Training programs
- Unit testing initiative
- Outage work to restore efficiency
- Second gas line at BEC

- Heat rate improvement 2008-2013 translates to meaningful fuel savings at current market prices

- Advanced Gas Path (AGP) investments 2014 through 2018 to provide additional fuel savings

SI-SSA-0015-08510

*E= ESTIMATE.

Investing to expand CCGT capacity and improve efficiency

PSEG Power - CCGT Uprate Project

- Expand Power's CCGT fleet, one of the largest gas-fired portfolios in PJM, with incremental base and peaking MWs
- Retrofit Bergen, Linden and BEC with Advanced Gas Path (AGP) components at cost of ~$120M over 2014 - 2018

AGP Project Benefits

- ✓ CCGT capacity uprates of ~150 MW:
  - Linden (63 MW – Completed)
  - Bergen (31 MW – 2015)
  - BEC (58 MW – 2017-2018)
- ✓ Increases Efficiency - Combined Cycle (CC) heat rate improvement ~ 1.2%
- ✓ Upgrades technology and extends maintenance outage cycles

SI-SSA-0015-08511

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- More efficient testing and improved operational flexibility through utilization of Continuous Emission Monitoring System testing
- Cost control through testing coordination program

SI-SSA-0015-08512

PSEG Power's capital expenditures for environmental requirements are essentially complete*

*BASED ON CURRENTLY KNOWN AND QUANTIFIABLE ENVIRONMENTAL REQUIREMENTS. E=ESTIMATE. DATA AS OF MARCH 31, 2014.

PSEG Power: Enjoys real and sustainable advantages in the merchant generation space

Market Review

- Gas, Power, Spark Spreads
- Regulatory construct

PSEG's Competitive Advantage

- Fuel flexibility
- Heat Rate diversity
- Access to Marcellus Shale gas
- Asset flexibility

PSEG's Sustainable Advantage

- Positive cash-flow hedging into the long-term
- Robust capacity market pricing in most concentrated load pocket in US
- Long-term access to discounted Marcellus gas

SI-SSA-0015-08518

Market Review: Long-term fundamentals remain sound

NYMEX Natural Gas Price

PJM West RTC

PJM West Spark Spreads

- Market influenced by increased gas supply and capacity retirements
- Insufficient gas infrastructure continues to place upward pressure on fuel prices during seasonal peaks
- Market liquidity remains weak beyond 2015

SI-SSA-0015-08519

PSEG

F = FORWARDS AS OF DECEMBER 17, 2014; 2014F INCLUDES HISTORY AND FORWARDS.

Market Review: New generation in PJM not keeping pace with coal retirements

Cumulative Generation Retirements*

Forecast Reserve Margin (PJM October 2014)

- PJM forecasts a declining Reserve Margin through 2018, which may improve forward prices
- Brattle estimates energy prices could rise at least $3-4/MWh from today's prices

SI-SSA-0015-08520

PSEG

*PJM AS OF DECEMBER 23, 2014
SOURCE OF CHART DATA: PJM

Competitive Advantage: Heat Rate Diversity & Flexible Dispatch

SI-SSA-0015-08521

Competitive/Sustainable Advantage:

PSEG expanding supply of low-cost Marcellus gas

Proposed PennEast Pipeline Project

- PSEG plans to invest $100 - $120 million in the to-be-constructed PennEast Pipeline, a 105.5 mile pipeline that would bring gas from eastern Pennsylvania to New Jersey
- PSEG ER&T would contract for approximately 125mmcf/day of PennEast's 1 bcf/day capacity under a 15-year contract; other project sponsors have committed to offtake ~500mmcf/day
- PSEG and its customers would benefit from the displacement of higher-cost, Gulf Coast gas supply
- Targeted in-service date is November 2017

SI-SSA-0015-08522

Industry infrastructure build through 2018

to meet demand growth

New investment will increase pipeline takeaway capacity from low-cost Marcellus and Utica shale basins to meet demand in the South and Midwest

SI-SSA-0015-08523

Sustainable Advantage: Forward power curves indicate PSEG Zone retains premium price

Growing importance of the winter peak has influenced PJM reliability planning … with supportive implications for price formation

SI-SSA-0015-08524

PSEG

* MARKET AS OF DECEMBER 17, 2014
SOURCE: ICE/BROKER QUOTES

Competitive Advantage: PSEG's extensive gas asset portfolio gives unparalleled access to Marcellus Shale gas

SI-SSA-0015-08525

Competitive Advantage: In 2014, ~40% of Power's gas for generation comes from Marcellus

- Our Combined Cycle and Peaking assets have been able to take advantage of locational gas price volatility driven by production and logistical constraints
- Lower cost shale supply provides additional savings during periods of lower residential gas demand

SI-SSA-0015-08526

PSEG

* AS OF DECEMBER 17, 2014

Competitive Advantage: Locational advantage from short term basis volatility

PS Zone On Peak Annual Basis to PJM-W

PS Zone Day Ahead On Peak Monthly Basis to PJM-W

PS Zone Real Time On Peak Hourly Basis to PJM-W

- Annual basis benefits baseload units
- Intermediate units flexible to seasonal opportunities
- Combined Cycle and Peaking units positioned to optimize daily and hourly volatility

SI-SSA-0015-08527

PSEG

ANNUAL FORWARD (F) BASIS TO PJM-WEST AS OF DECEMBER 17, 2014, 2014F INCLUDES HISTORY AND FORWARDS.

SI-SSA-0015-08531

PSEG Power's Value Proposition

- Well-positioned fleet of merchant generating assets concentrated in PJM market
- Advantaged by low cost structure, fuel diversity and dispatch flexibility
- Low environmental capital requirements
- Capacity uprates to enhance value of nuclear and combined cycle stations
- Consistent hedging strategy recognizes asset flexibility
- Continue to meet commitments and to provide free cash flow

SI-SSA-0015-08532

PSEG FINANCIAL REVIEW & OUTLOOK

PSEG

We make things work for you.

SI-SSA-0015-08533

Strong financial position to support our business initiatives

2013 Financial Position

- ✓ Exceeded upwardly revised 2013 earnings guidance
- ✓ Pension fully funded
- ✓ Strong balance sheet and upgraded credit ratings

2014 and Beyond

- ✓ Continued positive earnings trend in 2014
- ✓ Controlled O&M growth
- ✓ Balance Sheet and Cash Flow support investments without equity issuance
- ✓ Growth in PSE&G investments with contemporaneous returns
- ✓ Diversified Power assets with a balanced hedge profile
- ✓ Growth in PSE&G Cash from Operations, with continued significant Cash from Operations/FFO at Power
- ✓ Increased Dividend by $0.04 to annual rate of $1.48 per share for 2014
- ✓ Opportunity for consistent and sustainable dividend growth

E = ESTIMATE. DATA AS OF MARCH 31, 2014.

PSE&G's Cash from Operations and Power's Free Cash Flow support growth investments without the need for new equity

(1) PSE&G CASH FROM OPERATIONS ADJUSTS FOR SECURITIZATION PRINCIPAL REPAYMENTS OF ~$500M FROM 2014-2016
(2) OTHER CASH FLOW INCLUDES PSEG LI, HOLDINGS NET CASH FLOW, CASH, AND SHORT TERM DEBT
E = ESTIMATE. DATA AS OF MARCH 31, 2014.

SI-SSA-0015-08540

Power's key credit metric supports incremental investment opportunities

- Increased contribution to earnings from the more stable regulated business allows us to reset Power's FFO/Debt threshold from 35% to 30%, providing additional financial flexibility
- Power's annual Cash From Operations and Funds From Operations each average ~$1.1B over the 2014 to 2016 period supported by:
  - Capacity Revenues
  - Hedged Generation
  - O&M Control
- Financial strength can be used to pursue future growth in both businesses beyond current plans

SI-SSA-0015-08541

E = ESTIMATE. DATA AS OF MARCH 31, 2014.

Pension: Our Long Term Asset allocation strategy resulted in a ~17% increase in pension assets during 2013

PBO Funded Ratio	83%	Fully Funded Pension →	106%

Forward Looking Statement

Readers are cautioned that statements contained in this presentation about our future performance, including future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical, are forward-looking statements for purposes of the safe harbor provisions under The Private Securities Litigation Reform Act of 1995. When used herein, the words “anticipate”, “intend”, “estimate”, “believe”, “expect”, “plan”, “should”, “hypothetical”, “potential”, “forecast”, “project”, variations of such words and similar expressions are intended to identify forward-looking statements. Although we believe that our expectations are based on reasonable assumptions, they are subject to risks and uncertainties and we can give no assurance they will be achieved. The results or developments projected or predicted in these statements may differ materially from what may actually occur. Factors which could cause results or events to differ from current expectations include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units, delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers,
- increase in competition in energy supply markets as well as competition for certain rate-based transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and changes in technology and customer usage patterns.

For further information, please refer to our Annual Report on Form 10-K, including Item 1A. Risk Factors, and subsequent reports on Form 10-Q and Form 8-K filed with the Securities and Exchange Commission. These documents address in further detail our business, industry issues and other factors that could cause actual results to differ materially from those indicated in this presentation. In addition, any forward-looking statements included herein represent our estimates only as of today and should not be relied upon as representing our estimates as of any subsequent date. While we may elect to update forward-looking statements from time to time

SI-SSA-0015-08566

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. The last slide in this presentation includes a list of items excluded from Income from Continuing Operations to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

SI-SSA-0015-08570

PSEG – 2012 Highlights

2012 Earnings in-line with guidance

- Achieved operating earnings of $2.44 per share, at the high end of guidance range of $2.25-$2.50, including storm-related costs at PSE&G
- PSE&G represented 43% of consolidated operating earnings with growth in transmission

Operational excellence

- Record output from CCGTs, continued strong production from Nuclear, and Power's control of O&M supported results
- PSE&G recognized for reliability: National ReliabilityOne Excellence Award, Mid-Atlantic Reliability Award, and Award for Outstanding Response to a Major Outage Event; as well as EEI's Emergency Response Award
- Restored service to 2.1 million customers in a two-week period of time in the aftermath of Superstorm Sandy and the Nor'easter that followed
- Extension of major labor contracts

PSEG disciplined capital investment

- Key regulatory approvals received for major transmission projects
- BPU decisions pending on Solar4All Extension and Solar Loan III
- Power added 400 MW of new peakers in time to respond to summer demand
- Holdings added 40 MW of new solar capacity

SuperStorm Sandy met by an exceptional response

The storm affected PSE&G and Power

2.1 million **PSE&G** customer restorations (2X Hurricane Irene and 3X the October '11 Snowstorm) ● 96 Electric Substations Damaged (39% of the total) ● 14 Switching Stations Affected (33% of total) ● 51 of 154 Transmission Lines Interrupted (33% of total) ● 2,427 Utility Poles Replaced or Repaired ● 48,000 Trees Removed or Trimmed ● ~4,200 mutual aid or contract workers brought in to assist restoration efforts

PSEG Power's assets were stress tested by SuperStorm Sandy, but when the load returned in the days following, Power's assets were available

PSE&G's Energy Strong Capital Program addresses new reality

- New $3.9 Billion Infrastructure Program filed with the NJBPU to strengthen PSE&G's electric and gas system focusing on hardening and resiliency
- Plan to invest an additional $1.5 Billion in Transmission grid over the ten-year period
- PSE&G's Infrastructure proposal includes:
  - Protecting 40 utility installations from severe storms (**$1.7 Billion**)
  - Making the electric grid smarter and easier to repair (**$454 Million**)
  - Adding backup distribution lines and system redundancies (**$415 Million**)
  - Undergrounding 20 miles of overhead distribution lines (**$60 Million**)
  - Modernizing the gas distribution system (**$1.1 Billion**)
- Better protection for homes and businesses during severe weather and improved day to day system reliability
- Proposed filing creates ~5,800 jobs and stimulates economic activity for New Jersey businesses

- 100% recovery of prudently incurred costs due to abandonment

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-08605

State policy imperatives have been redefined by SuperStorm Sandy

Storm report issued by NJBPU focusing on:

- Preparedness Efforts
- Communications
- Restoration and Response
- Post Event Analysis
- Underlying Infrastructure Issues

Storm Deferral Filings:

- On December 19, 2012 the Board granted a PSE&G request for general authority to defer storm restoration costs, thereby making such costs potentially recoverable in future rate filings
- On February 20, 2013, at its open public meeting, the Board voted that the recovery of all such storm restoration costs would be reviewed in a generic (multi-utility) proceeding

SI-SSA-0015-08606

We have also responded with a plan focused on infrastructure hardening and resiliency

- PSE&G filed a petition on February 20, 2013, with the NJBPU seeking approval for the Energy Strong Program (ES) which will harden electric and gas distribution infrastructure and increase the resiliency of the electric distribution system
- The filing complements the NJBPU's recently issued order requiring all Electric Distribution Companies to take specific actions to improve preparedness and response to major storms
- ES program represents a potential investment of approximately $3.9 billion over the next 10 years. PSE&G has asked for initial funding approval of $2.6 billion during the first five years
- Additional Transmission investment of approximately $1.5 billion would be included in future FERC Formula Rate filings

SI-SSA-0015-08607

PSE&G is continuing to provide solutions to assist New Jersey in achieving its EMP goals

Solar 4 All extension (S4Ae)*

- Filed July 2012
- Investment up to $690 million and 136 MW
- The program will assist the state in developing solar for underserved market segments by installing solar systems on landfills, brownfields and other underutilized land

Solar Loan III (SL3)*

- Filed July 2012
- Investment up to $193 million and 97 MW
- The program will assist the state in meeting its solar policy objective by providing loans to solar developers and generation owners focused on residential, small non-residential and large non-residential customers

Energy Efficiency 4 All (EE4A)

- Investment up to $470 million
- The program will target four residential and three commercial and industrial segments
- To be filed

SI-SSA-0015-08608

Lower commodity costs and expiration of certain transition charges are expected to fully offset the impact to customer bills

*2018 BGS/BGSS RATES AS WELL AS SBC AND DISTRIBUTION RATES HELD CONSTANT AT CURRENT 2013 RATES. RATES RELATED TO ELECTRIC RESTRUCTURING: SECURITIZATION (STC), NON-UTILITY GENERATION CHARGE (NGC), & TRANSITIONAL ENERGY FACILITIES ASSESSMENT (TEFA), ARE REDUCED TO ZERO BY 2018. THE RGGI RECOVERY CHARGE (RRC), SOLAR PILOT RECOVERY CHARGE (SPRC), AND CAPITAL ECONOMIC STIMULUS INFRASTRUCTURE INVESTMENT PROGRAM EXTENSION (CIP II) BILL IMPACTS ARE INCLUDED IN THEIR RESPECTIVE GAS AND ELECTRIC BARS AND FORECASTED IN 2018 BASED UPON LATEST ESTIMATE. THE 2018 BILL IMPACTS OF ES, EE4ALL, AND S4AEXT/SL3 IMPACTS ARE BASED UPON CURRENT ESTIMATES.

LONG ISLAND POWER AUTHORITY

SI-SSA-0015-08611

LIPA T&D management contract

In December 2011, the Long Island Power Authority (LIPA) selected PSEG to manage its electric transmission and distribution system for 10 years starting in 2014

- Reasons for selecting PSEG included:
- Proven technical capabilities and track record of top quartile customer service and reliability
  - Commitment to cost control and investment optimization
  - Corporate culture of transparency and data-driven decision making
  - Transition activities on-track – successfully achieving all milestones through February 2013

- Evaluating impact of SuperStorm Sandy and recent LIPA management changes on the overall schedule and transition

Successful management of the LIPA transmission and distribution system may lead to additional growth opportunities

PSEG Power strategy

Focused on safety performance, unit reliability, competitive cost structure with control of maintenance costs, achieving operational excellence, and supporting market rules to maintain a level playing field

SI-SSA-0015-08621

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus

Fleet Diversity/Efficiency Focus

- Fleet diversity across the dispatch curve and fuel types provides flexibility
- Nuclear units continue to achieve strong operational results and are well positioned for the future
- Peach Bottom steam path retrofit completed
- Fossil fleet is suited for market dynamics
- CCGT achieved record output in 2012
- Installed 400 MW new peaking capacity in 2012

Financial/Economic Focus

- O&M cost control programs have delivered
- Sites offering competitive advantage suited for expansion

Regulatory Focus

- Strong regulatory performance
- Industry leadership in the changing regulatory environment

SI-SSA-0015-08622

PSEG Power delivered in 2012

Storm and weather challenges	Market challenges	Value delivered
• SuperStorm Sandy impacted our generating sites • Warm winter put pressure on demand and pricing for both electricity and gas • Hot summer weather created challenging operating environment	• Unit outages and transmission outages resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by weather and economy	• Cost control • Lower dispatch and fuel cost • Captured value through coal/gas switching, unit flexibility • Improved unit availability • Coal & oil sales optimized inventory • Expedited return from storm outages, restored margin opportunities • Optimized unit dispatch across fleet during storm recovery

SI-SSA-0015-08623

PSEG Power has generating assets

in three competitive markets

- Low cost portfolio
- Fuel flexibility
- Assets near loads
- Poised to benefit in real time markets
- Fleet will maintain diversity and efficiency in 2016 after HEDD
- Most sites suitable for expansion

SI-SSA-0015-08624

PSEG Power Nuclear fleet is a critical element of success

Hope Creek	Salem Units 1 and 2	Peach Bottom Units 2 and 3

• Operated by PSEG Nuclear
• PSEG Ownership: 100%
• Technology: Boiling Water Reactor

• Owned Capacity: 1,174 MW
• License Expiration: 2046
• Next Refueling
  • Fall 2013
	• Operated by PSEG Nuclear
	• PSEG Ownership: 57%, Exelon – 43%
	• Technology: Pressurized Water Reactor
	• Total Capacity: 2,326 MW
	• Owned Capacity: 1,335 MW
	• License Expiration: 2036 and 2040
	• Next Refueling
	  • Unit 1 -- Spring 2013
	  • Unit 2 – Spring 2014
		• Operated by Exelon
		• PSEG Ownership: 50%
		• Technology: Boiling Water Reactor
		• Total Capacity: 2,245 MW
		• Owned Capacity: 1,123 MW
		• License Expiration: 2033 and 2034
		• Next Refueling
		  • Unit 2 – Fall 2014
		  • Unit 3 – Fall 2013

SI-SSA-0015-08625

PSEG Power Nuclear is core to the fleet and has competitive advantages

- Continued strong nuclear operations – eight consecutive years of >90% capacity factor
- Significant earnings contributor
- Top quartile of cost performance/MWh
- One third new staff, recruitment of the best new and experienced talent and attractive training program
- Developing Fukushima action plan in response to NRC staff review
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

SI-SSA-0015-08626

PSEG Power's Fossil Fleet availability has shown steady improvement

EFORd improvement resulted in over 200 MW of additional capacity available

EFORp improvement and availability at peak demand times has resulted in performance payments in each of the last four years

SI-SSA-0015-08627

PSEG Power improvements achieved in combined cycle fleet efficiency

Actions Taken to Create Value	
• Heat rate improvement program • Operational Excellence Model	• Training programs • Unit testing initiative • Outage work to restore efficiency

SI-SSA-0015-08628

SuperStorm Sandy affected the fleet;

when the load returned, Power was ready

SI-SSA-0015-08629

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- Power is well positioned for HAPS

SI-SSA-0015-08630

PSEG Power's focus on costs has resulted in moderate increase in O&M for six years

Cost control actions taken:	
• Coal assessment • CCGT material condition assessment • Contract renegotiation	• Material management • Nuclear maintenance productivity study • Nuclear outage efficiency initiative

SI-SSA-0015-08631

* INCLUDES IMPACTS FROM STORM RECOVERY COSTS AND POTENTIAL RELATED INSURANCE PROCEEDS.
E = ESTIMATE.

PSEG Power is well positioned for growth in the fleet when market conditions dictate

Available locations		Our sites possess infrastructure advantages
• Bergen • Burlington • Essex • Edison • Kearny	• Hudson • Linden • Sewaren • Bridgeport Harbor	• Electric Interconnection • Gas Pipeline Access • Sites/Space • Emissions

SI-SSA-0015-08632

PSEG Power will maintain diversity and efficiency after a realignment of the fleet in 2016

Objective
2012 → 2016E

- Maintain fuel diversity
- Maintain load serving capability
- Improve fleet heat rate by 6%
- Maintain low cost structure
- Environmental improvement

SI-SSA-0015-08637

Diversified assets and flexible dispatch

High performing, baseload nuclear assets	3,632 MW
Fuel advantaged, baseload coal plants in PA	776 MW
Flexible combined cycle fleet	3,176 MW
Well leveraged intermediate & peaking assets	5,642 MW

Integrated trading and dispatch capability around fleet

SI-SSA-0015-08638

Fleet capacity has been advanced by:

Improved Heat Rate capability

Trading acumen to execute fuel switching opportunities

Reduced O&M and increased start-up success

Capturing new products opportunity with minimal investment

SI-SSA-0015-08639

Spark spread replaces dark spread as major value driver

- Spark spread has risen above dark spread in PJM markets
- Power's gas units operating at record throughput
- Gas operation provides much more operational flexibility
- Enhances the ability of trading organization to capture volatility

SI-SSA-0015-08640

2013 BGS Auction Results for PSE&G Zone

BGS sales account for about a third of our forward portfolio of hedges

SI-SSA-0015-08641

BGS PRICES REFLECT PSE&G ZONE; RESULTS FOR 2011-2013 WILL BE THE NEW BLENDED PRICES BEGINNING JUNE 1, 2013.

Our hedging mix has changed with the market but still captures the fleet's locational advantage

- 3 Year forward BGS sales comprise smaller percentage of Power's hedges
- Other full requirement load deals help capture additional locational and load shape premium

SI-SSA-0015-08642

NOTE: PERCENTAGES REPRESENT HEDGED VOLUMES IN PLACE AFTER BGS AUCTION.

Hedging strategy designed to protect gross margin and leverage the portfolio

Ratable Hedging on Baseload:

- 3 year ratable hedge tactics
- 3 year PJM hedge of capacity (not included in table)
- Load following sales (such as BGS) have strong correlation to our units for hedging basis and load shaping premium

Dynamic Hedging on Intermediate Coal, Combined Cycle and Peaking:

- Position fleet to take advantage of market volatility
- Gas and load-following fleet left open until prompt year to capture volatility
- Use all trading products to capture option value of assets and benefit from market dislocations

		2013	2014	2015
Baseload (Nuclear and Baseload Coal)	Volume TWh	35	35	35
	% Hedged	100%	80-85%	40-45%
	Price $/MWh	$50	$49	$51
Intermediate Coal, Combined Cycle, Peaking	Volume TWh	20	19	18
	% Hedged	30-35%	0%	0%
	Price $/MWh	$50	$49	$51
TOTAL	Volume TWh	53-55	53-55	52-54
	% Hedged	75-80%	50-60%	25-30%
	Price $/MWh	$50	$49	$51

SI-SSA-0015-08643

PSEG

* HEDGE PERCENTAGES AND PRICES AS OF FEBRUARY 11, 2013. REVENUES OF FULL REQUIREMENT LOAD DEALS BASED ON CONTRACT PRICE, INCLUDING RENEWABLE ENERGY CREDITS, ANCILLARY, AND TRANSMISSION COMPONENTS BUT EXCLUDING CAPACITY. HEDGES INCLUDE POSITIONS WITH MTM ACCOUNTING TREATMENT AND OPTIONS.

PSEG's locational advantage

and electric basis

- Basis (PS Zone to PJM West) will continue to trend downward for forward sales
- Volatility will remain significant in the prompt periods (especially summer/winter)
- Power maintains sufficient length to participate in upside volatility as well as a valuable 250MW transmission position into NYC
- Basis will continue to have a positive impact on PSEG Power profitability

SI-SSA-0015-08644

*AS OF FEBRUARY 14, 2013.

PSEG's locational advantage

and gas basis

- Lower cost supplies of shale gas have been beneficial to both PSE&G customers and PSEG Power
- Over 50% of our available pipeline capacity can access market area supplies of shale gas
- Power's generating units sit in close proximity to the Marcellus fairway
- Power buys approximately 350BCF/year of gas
- We have been able to arbitrage gas values from South to North and East to West using our storage and pipeline capacity

SI-SSA-0015-08645

PJM's capacity market continues to recognize locational value of our fleet

$/MW-day	2012 / 2013	2013 / 2014	2014 / 2015	2015 / 2016
Power's Average Prices	$153	$244	$162	$167
Rest of Pool Prices	$16	$28	$126	$136
Power's Capacity (MW)	10,400	10,600	10,300	9,000

2016/2017 RPM Auction Influenced By:

- Updated Demand Curve
- Environmental Retirements
- Minimum Offer Price Rule
- Updated Transfer Capabilities
- New Build/Cost of New Entry
- Demand Response

SI-SSA-0015-08646

Reserve margins in PJM declining with retirements

Generation Deactivation Notifications

Source: PJM TEAC, 1/10/2013

- PJM Pending Deactivation Requests of 12,634 MW as of January 22, 2013
- Approximately 4,000 MW of additional owner announced retirements in PJM through next auction

Forecast Reserve Margin (PJM January 2013)

- PJM forecasts a declining Reserve Margin through 2017

SI-SSA-0015-08647

Regulatory Advocacy

	ISSUE /POLICY	HOW ADDRESSED?
PJM	MOPR	Sufficiency/Exceptions before FERC and courts
	DEMAND RESPONSE RULES	Performance/eligibility/compensation issues before courts, FERC, and PJM stakeholder process
	ANCILLARY/ENERGY	Regulation/Black-start modifications under consideration in PJM stakeholder process before FERC
NYISO	CAPACITY	Jurisdictional dispute at FERC over retirement decisions; Impact of PSC approved Reliability Must Run arrangement on markets
NEPOOL	FCM	Market design issues pending at Court of Appeals, FERC and ISO-NE stakeholder process
FEDERAL	Gas/Electric Coordination	Participation in ISO/FERC/Industry forums

Current Issues

- PJM RPM rules for Capacity Markets
- PJM Energy/Ancillary Services Market
- New England Capacity Markets
- New York Energy Markets
- Trade Associations and ISO/RTO activities

Recent Rulings

- FERC approval of Cost of New Entry (CONE)
- PJM Area Regulation rules
- EPA RICE/NESHAPS rules
- FERC ruling imposing DR must offer requirement in ISO-NE

Opportunity for modest and sustainable

dividend increases consistent with stable regulated growth and cash generation outlook at PSEG Power

SI-SSA-0015-08664

PSEG Summary

- Operating Earnings Guidance for 2013 of $2.25 - $2.50 per share with earnings mix shifting to 50% regulated
- Double digit operating earnings growth at PSE&G starting in 2013, and continuing through 2015 driven by transmission investments and approved programs
- Power's continued focus on operational excellence, market expertise and financial strength reduces risk in low price environment
- Strong Balance Sheet and Cash Flow support full capital program without the need for equity
- Long history of returning cash to the shareholder through the common dividend, with opportunity for further growth

PSE&G provides high reliability at below average cost which creates superior value to customers

SAIDI = SYSTEM AVERAGE INTERRUPTION DURATION INDEX, A MEASURE OF AVERAGE OUTAGE DURATION FOR ALL CUSTOMERS SERVED.

SI-SSA-0015-08669

PSE&G prioritizes public safety

while maintaining value to customers

LEAK RESPONSE RATE = PERCENTAGE OF UTILITY RESPONSES TO REPORTED LEAKS WITHIN ONE HOUR.

SI-SSA-0015-08670

Formula rates for transmission make the process more predictable with contemporaneous returns

	Transmission (Federal)	Distribution Base Rate Case (State)
Current ROE	• 11.68% base • 12.93% with incentives on Susquehanna-Roseland • 11.93% with incentives on Northeast Grid	• 10.3%
Volatility of Returns	• Low – prospective recovery with annual true-ups for over/under recovery	• Higher – performance impacted positively/negatively by cost management, weather, customer demands, etc.
Process	• Formula – The rate template and specific elements like ROE are predetermined with annual updates and true ups	• Litigated case with each element (depreciation, ROE, O&M levels, Rate Base) scrutinized and settled
Intervenors	• State consumer advocates usually participate	• State consumer advocates • Large customers • Other parties affected by the case, e.g. Solar Developers
Test Year	• PSE&G has fully **forecasted** test year for both Capital and O&M	• **Historical** test year with pro-forma adjustments for known and measurable items, e.g. wage escalation
Time to resolve	• Annual Formula updates are filed in October with January 1 effective date	• Typically settled within 12-15 months

SI-SSA-0015-08671

New Jersey Board of Public Utilities (BPU)

- The Board of Public Utilities consists of five commissioners appointed by the Governor. These appointees are confirmed by the NJ Senate for six-year, staggered terms. The Governor appoints one of the five to serve as Commission President. Currently, the commissioners are:
  - Robert M. Hanna, Commission President
  - Jeanne M. Fox
  - Joseph L. Fiordaliso
  - Mary-Anna Holden
- Stefanie Brand, Director of the Division of Rate Counsel

SI-SSA-0015-08672

Slow economic recovery in NJ is constraining growth in all market sectors

Modest residential growth limited by housing market inactivity and the slow economic recovery

Consumer spending is trending with the slow economic recovery and impacting growth in the commercial sector

Industrial sales growth continues to be constrained by slow economic recovery

2013 - 2015 Projected Sales
Growth – Gas*

2013 - 2015 Projected
Sales Growth – Electric*

SI-SSA-0015-08673

* WEATHER NORMALIZED ESTIMATED ANNUAL GROWTH PER YEAR OVER FORECAST PERIOD

Key economic indicators forecast renewed growth over the 2012 to 2015 timeframe

The New Jersey economy increased by 0.3% annually from 2010 to 2012 and is anticipated to grow 2.3% per year from 2012 to 2015

New Jersey total non-farm employment increased by 0.6% annually from 2010 to 2012 and is expected to grow 1.4% per year from 2012 to 2015

Real personal income in New Jersey increased by 1.4% annually from 2010 to 2012 and is expected to increase 2.5% per year from 2012 to 2015

Single family housing starts declined by 2.6% annually from 2010 to 2012 and are expected to increase ~24% per year from 2012 to 2015

Forward-Looking Statements

Certain of the matters discussed in this presentation about our and our subsidiaries' future performance, including, without limitation, future revenues, earnings, strategies, prospects, consequences and all other statements that are not purely historical constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in filings we make with the United States Securities and Exchange Commission (SEC) including our Annual Report on Form 10-K and subsequent reports on Form 10-Q and Form 8-K and available on our website: http://www.pseg.com. These factors include, but are not limited to:

- fluctuations in wholesale power and natural gas markets, including the potential impacts on the economic viability of our generation units;
- our ability to obtain adequate fuel supply;
- any inability to manage our energy obligations with available supply;
- increases in competition in wholesale energy and capacity markets;
- changes in technology related to energy generation, distribution and consumption and customer usage patterns;
- economic downturns;
- third party credit risk relating to our sale of generation output and purchase of fuel;
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements;
- changes in state and federal legislation and regulations;
- the impact of pending rate case proceedings;
- regulatory, financial, environmental, health and safety risks associated with our ownership and operation of nuclear facilities;
- adverse changes in energy industry laws, policies and regulations, including market structures and transmission planning;
- changes in federal and state environmental regulations and enforcement;
- delays in receipt of, or an inability to receive, necessary licenses and permits;
- adverse outcomes of any legal, regulatory or other proceeding, settlement, investigation or claim applicable to us and/or the energy industry;
- changes in tax laws and regulations;
- the impact of our holding company structure on our ability to meet our corporate funding needs, service debt and pay dividends;
- lack of growth or slower growth in the number of customers or changes in customer demand;
- any inability of Power to meet its commitments under forward sale obligations;
- reliance on transmission facilities that we do not own or control and the impact on our ability to maintain adequate transmission capacity;
- any inability to successfully develop or construct generation, transmission and distribution projects;
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers;
- our inability to exercise control over the operations of generation facilities in which we do not maintain a controlling interest;
- any inability to maintain sufficient liquidity;
- any inability to realize anticipated tax benefits or retain tax credits;
- challenges associated with recruitment and/or retention of key executives and a qualified workforce;
- the impact of our covenants in our debt instruments on our operations; and
- the impact of acts of terrorism, cybersecurity attacks or intrusions.

All of the forward-looking statements made in this presentation are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business, prospects, financial condition, results of operations or cash flows. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this presentation apply only as of the date of this presentation. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even in light of new information or future events, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this presentation are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-08683

GAAP Disclaimer

PSEG presents Operating Earnings and Adjusted Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) in addition to its Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings and Adjusted EBITDA are non-GAAP financial measures that differ from Net Income. Non-GAAP Operating Earnings exclude the impact of returns (losses) associated with the Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting and material one-time items. Non-GAAP Adjusted EBITDA excludes the same items as our non-GAAP Operating Earnings measure as well as income tax expense, interest expense and depreciation and amortization. The last two slides in this presentation (Slides A and B) include a list of items excluded from Net Income to reconcile to non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA with a reference to those slides included on each of the slides where the non-GAAP information appears.

Management uses non-GAAP Operating Earnings in its internal analysis, and in communications with investors and analysts, as a consistent measure for comparing PSEG's financial performance to previous financial results. Management believes non-GAAP Adjusted EBITDA is useful to investors and other users of our financial statements in evaluating operating performance because it provides them with an additional tool to compare business performance across companies and across periods. Management also believes that non-GAAP Adjusted EBITDA is widely used by investors to measure operating performance without regard to items such as income tax expense, interest expense and depreciation and amortization, which can vary substantially from company to company depending upon, among other things, the book value of assets, capital structure and whether assets were constructed or acquired. Non-GAAP Adjusted EBITDA also allows investors and other users to assess the underlying financial performance of our fleet before management's decision to deploy capital. The presentation of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA is intended to complement, and should not be considered an alternative to, the presentation of Net Income, which is an indicator of financial performance determined in accordance with GAAP. In addition, non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA as presented in this release may not be comparable to similarly titled measures used by other companies.

Due to the forward looking nature of non-GAAP Operating Earnings and non-GAAP Adjusted EBITDA guidance, PSEG is unable to reconcile these non-GAAP financial measures to the most directly comparable GAAP financial measure. Management is unable to project certain reconciling items, in particular MTM and NDT gains (losses), for future periods due to market volatility.

These materials and other financial releases can be found on the PSEG website at www.pseg.com , under the Investors tab. From time to time, PSEG, PSE&G and PSEG Power release important information via postings on their corporate website at http://investor.pseg.com. Investors and other interested parties are encouraged to visit the corporate website to review new postings. The "email alerts" link at http://investor.pseg.com may be used to enroll to receive automatic email alerts and/or really simple syndication (RSS) feeds regarding new postings at http://investor.pseg.com/rss .

* GAS FIRM SALES ONLY.
** ESTIMATED ANNUAL GROWTH PER YEAR, ASSUMES NORMAL WEATHER.

Power has generating assets in three competitive markets

- Major assets located near key load centers
- Constructing three new, efficient combined-cycle units
- Positioned to benefit from market volatility
- Additional generation assets:
  - Solar (326 MW_{DC}/257 MW_{AC})
  - Kalaeloa, HI (104 MW)

SI-SSA-0015-08688

PSEG

*POWER ANNOUNCED RETIREMENTS OF HUDSON AND MERCER GENERATING STATIONS AS OF JUNE 1, 2017.

Delivering on commitments and realizing growth

Operational Excellence	• PSE&G: 15 consecutive years of recognition as the most reliable utility in the Mid-Atlantic region • PSEG Power: Lowest CCGT EFORd in last 5 years, while moving the fleet towards improved efficiency and environmental position • PSEG Long Island: Improved customer service and reliability while managing costs • PSEG: Maintaining focus on efficiency, resiliency, and customer satisfaction
Financial Strength	• Non-GAAP Operating Earnings for 2016 at midpoint of original guidance range and upper end of revised guidance range • Cash flows and business mix support strong credit ratings and ability to fully fund robust investment pipeline without issuing new equity • Increased dividend in February 2017 – 13th increase in last 14 years
Disciplined Investment	• PSE&G capital program drives continued rate base growth over the 5-year period (2017-2021) with increased investment in Gas System Modernization Program, Electric and Gas distribution, and Energy Efficiency • Potential for additional investments in Renewables, Expanded Energy Efficiency and integration of Infrastructure with Customer Access • Power capital program focusing on growth investments including Keys Energy Center, Sewaren and Bridgeport Harbor

SI-SSA-0015-08689

PSEG Regulatory and Policy focus

on mechanisms that provide customers clean, affordable, resilient energy supply

NJ Distribution Base Rate Proceeding

- True-up data from 2010 base rate case for known changes in customers usage, taxes, O&M and investments

Long-Term Infrastructure Investment Platform

- Seek extension of existing infrastructure programs, e.g., GSMP, and broaden investment platform

Preserve the Value of Nuclear Supply

- Pursuing legislative strategy to recognize the value of nuclear energy under terms and conditions that are affordable for customers and provide the proper incentives for long-term operation

Ensure Federal Regulatory and Policy Framework

- Advocate for rules that preserve benefits of competitive markets while also recognizing the value of clean energy, supply diversity and grid reliability

PSEG

(1) POWER EXCLUDES IMPACTS FROM STORM RECOVERY COSTS AND THE HUDSON / MERCER EARLY RETIREMENT WRITE-DOWN, DISTRIBUTION EXCLUDES ELECTRIC AND GAS BAD DEBT. E = ESTIMATE.

Strong financial position driven by PSE&G with meaningful contribution from Power

	2016 Financial Position
Earnings	✓ Delivered on 2016 guidance under challenging conditions ✓ Increased PSE&G earnings contribution
Investment	✓ Executed major PSE&G capital program balanced between Transmission and Distribution ✓ Focused on optimizing Power's generation portfolio
Cash Flow and Credit Metrics	✓ Produced stable and strong PSE&G cash from operations ✓ Generated significant cash flow at Power to fund growth investments ✓ Maintained strong credit metrics
Dividends	✓ Increased common dividend by 5% or $0.08 per share

SI-SSA-0015-08702

2017 Federal Tax Reform – PSEG is well positioned

Given positive non-utility contribution to earnings and a strong balance sheet, PSEG is well positioned for potential tax reform

Assumption	PSE&G	PSEG Power	PSEG Parent
Reduction of Corporate Tax Rate	Customer rates lowered with reduction in tax rate Return of excess deferred tax liability – impact on cash and rate base growth dependent on payback period	After-tax earnings and cash flow increase One-time non-cash earnings benefit from reduction in deferred tax liability	After-tax earnings and cash flow improve
100% Expensing of Capital Expenditures	Impact on rate base growth comparable to existing bonus depreciation rules	Cash flow improves	
Elimination of Deductibility of Interest Expense and Border Adjustment Tax	Change in cost anticipated to be passed through to customers	Well positioned given low debt balance Uncertainty on Border Adjustment Tax	Well positioned given low debt balance

SI-SSA-0015-08703

Opportunity for meaningful and sustainable dividend growth

SI-SSA-0015-08704

PSEG Summary

- 2016 Operating Earnings (non-GAAP) at upper end of revised guidance of $2.80 - $2.95 per share
- PSE&G capital spending provides high single-digit rate base growth for foreseeable future balanced between Transmission and Distribution
- Power expected to generate significant free cash flow following CCGT construction program and transformation to a more efficient generation fleet
- Strong balance sheet and cash flow support current capital program and new investment opportunities without the need for equity
- Our indicative $0.08 dividend per share increase for 2017 demonstrates meaningful and sustainable dividend growth given significant contribution from PSE&G earnings and Power's strong financial profile

SI-SSA-0015-08705

PSEG's Value Proposition

- A stable platform with a robust investment pipeline providing opportunity for growth
- PSE&G – Delivering on promise for rate base growth through disciplined investment, customer satisfaction and safety
- PSEG Power – Efficient, low-cost, clean fleet advantaged by asset diversity, fuel mix and location
- Focus on providing strong, sustainable returns of invested capital through operational excellence, regulatory and legislative mechanisms
- Strong balance sheet – Financial strength supported by stable credit rating and investment profile supporting the potential for consistent and sustainable dividend growth

Forward Looking Statement

Certain of the matters discussed in this report constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast," "project," variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in Item 1. Financial Statements—Note 9. Commitments and Contingent Liabilities, Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations, and other factors discussed in filings we make with the United States Securities and Exchange Commission (SEC). These factors include, but are not limited to:

- adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,
- adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,
- any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,
- changes in federal and state environmental regulations that could increase our costs or limit our operations,
- changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,
- actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,
- any inability to balance our energy obligations, available supply and risks,
- any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases,
- availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs,
- changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,
- delays in receipt of necessary permits and approvals for our construction and development activities,
- delays or unforeseen cost escalations in our construction and development activities,
- any inability to achieve, or continue to sustain, our expected levels of operating performance,
- any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to sufficiently obtain coverage or recover proceeds of insurance on such matters,
- increases in competition in energy supply markets as well as competition for certain rate-based transmission projects,
- any inability to realize anticipated tax benefits or retain tax credits,
- challenges associated with recruitment and/or retention of a qualified workforce,
- adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and
- changes in technology and customer usage patterns.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws. The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

SI-SSA-0015-08711

GAAP Disclaimer

PSEG presents Operating Earnings in addition to its Income from Continuing Operations/Net Income reported in accordance with accounting principles generally accepted in the United States (GAAP). Operating Earnings is a non-GAAP financial measure that differs from Net Income because it excludes gains or losses associated with Nuclear Decommissioning Trust (NDT), Mark-to-Market (MTM) accounting, and other material one-time items. PSEG presents Operating Earnings because management believes that it is appropriate for investors to consider results excluding these items in addition to the results reported in accordance with GAAP. PSEG believes that the non-GAAP financial measure of Operating Earnings provides a consistent and comparable measure of performance of its businesses to help shareholders understand performance trends. This information is not intended to be viewed as an alternative to GAAP information. Slides A and B at the end of this presentation include a list of items excluded from Income from Continuing Operations/Net Income to reconcile to Operating Earnings, with a reference to that slide included on each of the slides where the non-GAAP information appears.

SI-SSA-0015-08715

PSEG – 2012 Highlights

2012 Earnings in-line with guidance

- Achieved operating earnings of $2.44 per share, at the high end of guidance range of $2.25-$2.50, including storm-related costs at PSE&G
- PSE&G represented 43% of consolidated operating earnings with growth in transmission

Operational excellence

- Record output from CCGTs, continued strong production from Nuclear, and Power's control of O&M supported results
- PSE&G recognized for reliability: National ReliabilityOne Excellence Award, Mid-Atlantic Reliability Award, and Award for Outstanding Response to a Major Outage Event; as well as EEI's Emergency Response Award
- Restored service to 2.1 million customers in a two-week period of time in the aftermath of Superstorm Sandy and the Nor'easter that followed
- Extension of major labor contracts

PSEG disciplined capital investment

- Key regulatory approvals received for major transmission projects
- BPU decisions pending on Solar4All Extension and Solar Loan III*
- Power added 400 MW of new peakers in time to respond to summer demand
- Holdings added 40 MW of new solar capacity

SI-SSA-0015-08716

* In May 2013, the NJBPU approved the Solar Agreement reached with BPU Staff and other parties; see slide 36 for details.

PSEG First Half 2013 Highlights

Maintaining 2013 operating earnings guidance of $2.25 - $2.50 per share

- Based on financial results to date, we expect operating earnings for the full year to be at the upper end of our guidance range assuming normal weather and unit operations
- Focused on maintaining operating efficiency and customer reliability
- PSE&G's operating earnings expected to grow at double-digit rate in 2013, and provide ~50% of consolidated operating earnings

Executing PSE&G's existing $3.4 billion Transmission capital spending program on schedule – fueling double-digit growth in PSE&G operating earnings through 2015, based on approved programs

PSE&G pursuing Energy Strong, its $3.9 billion, ten-year infrastructure spending program to strengthen electric and gas distribution, communications, and customer reliability and resiliency. In addition, PSE&G plans to invest $1.5 billion during this time-frame to harden its Transmission system

Financial position remains strong

- Positive cash from Power and increasing cash flow from PSE&G supports opportunity for dividend growth and funds capital spending program without the need to issue equity
- Debt as a percentage of capital was 41.2% at June 30, 2013

Long history of returning cash to the shareholder through the common dividend, with opportunity for future growth

Superstorm Sandy met by an exceptional response

The storm affected PSE&G and Power

2.1 million **PSE&G** customer restorations (2X Hurricane Irene and 3X the October '11 Snowstorm) ● 96 Electric Substations Damaged (39% of the total) ● 14 Switching Stations Affected (33% of total) ● 51 of 154 Transmission Lines Interrupted (33% of total) ● 2,427 Utility Poles Replaced or Repaired ● 48,000 Trees Removed or Trimmed ● ~4,200 mutual aid or contract workers brought in to assist restoration efforts

PSEG Power's assets were stress tested by Superstorm Sandy, but when the load returned in the days following, Power's assets were available

PSE&G's Energy Strong Capital Program addresses new reality

- New ten-year, $3.9 Billion Infrastructure Program filed with the NJBPU to strengthen PSE&G's distribution system focusing on hardening and resiliency
- Plan to invest an additional $1.5 Billion in transmission grid over the ten-year period
- Energy Strong proposal includes:
  - ✓ Protecting 40 utility installations from severe storms (**$1.7 Billion**)
  - ✓ Making the electric grid smarter and easier to repair (**$454 Million**)
  - ✓ Adding backup distribution lines and system redundancies (**$415 Million**)
  - ✓ Undergrounding 20 miles of overhead distribution lines (**$60 Million**)
  - ✓ Modernizing the gas distribution system (**$1.1 Billion**)

- Better protection for homes and businesses during severe weather and improved day to day system reliability
- Proposed filing creates ~5,800 jobs and stimulates economic activity for New Jersey businesses

SI-SSA-0015-08726

55 local NJ towns and 5 counties support

- 55 municipalities and five counties (Bergen, Hudson, Mercer, Passaic and Somerset) have approved resolutions in support of Energy Strong, PSE&G's infrastructure proposal to improve and fortify its electric and gas distribution systems
- The Energy Strong proposal is currently being evaluated by the NJ Board of Public Utilities
- Public hearings are scheduled for September and October 2013

SI-SSA-0015-08727

- 100% CWIP in rate base during development
- 100% recovery of prudently incurred costs due to abandonment

Project Status: Major permitting & siting complete, outside and inside plant construction in progress

SI-SSA-0015-08754

State policy imperatives have been redefined by Superstorm Sandy

Storm report issued by NJBPU focusing on:

- Preparedness Efforts
- Communications
- Restoration and Response
- Post Event Analysis
- Underlying Infrastructure Issues

Storm Deferral Filings:

- On December 19, 2012 the Board granted a PSE&G request for general authority to defer storm restoration costs, thereby making such costs potentially recoverable in future rate filings
- On February 20, 2013, at its open public meeting, the Board voted that the recovery of all such storm restoration costs would be reviewed in a generic (multi-utility) proceeding

SI-SSA-0015-08755

We have also responded with a plan focused on infrastructure hardening and resiliency

- PSE&G filed a petition on February 20, 2013, with the NJBPU seeking approval for the Energy Strong Program (ES) which will harden electric and gas distribution infrastructure and increase the resiliency of the electric distribution system
- The filing complements the NJBPU's recently issued order requiring all Electric Distribution Companies to take specific actions to improve preparedness and response to major storms
- ES program represents a potential investment of approximately $3.9 billion over the next 10 years. PSE&G has asked for initial funding approval of $2.6 billion during the first five years
- Additional Transmission investment of approximately $1.5 billion would be included in future FERC Formula Rate filings

SI-SSA-0015-08756

Lower commodity costs and expiration of certain transition charges are expected to fully offset the impact to customer bills

*2018 BGS/BGSS RATES AS WELL AS SBC AND DISTRIBUTION RATES HELD CONSTANT AT CURRENT 2013 RATES. RATES RELATED TO ELECTRIC RESTRUCTURING: SECURITIZATION (STC), NON-UTILITY GENERATION CHARGE (NGC), & TRANSITIONAL ENERGY FACILITIES ASSESSMENT (TEFA), ARE REDUCED TO ZERO BY 2018. THE RGGI RECOVERY CHARGE (RRC), SOLAR PILOT RECOVERY CHARGE (SPRC), AND CAPITAL ECONOMIC STIMULUS INFRASTRUCTURE INVESTMENT PROGRAM EXTENSION (CIP II) BILL IMPACTS ARE INCLUDED IN THEIR RESPECTIVE GAS AND ELECTRIC BARS AND FORECASTED IN 2018 BASED UPON LATEST ESTIMATE. THE 2018 BILL IMPACTS OF ES, EE4ALL, AND S4AEXT/SL3 IMPACTS ARE BASED UPON CURRENT ESTIMATES AS OF MARCH 31, 2013.

LONG ISLAND POWER AUTHORITY

SI-SSA-0015-08759

PSEG

LIPA T&D management contract

In December 2011, the Long Island Power Authority (LIPA) selected PSEG to manage its electric transmission and distribution system for 10 years starting in 2014

- Reasons for selecting PSEG included:
- Proven technical capabilities and track record of top quartile customer service and reliability
  - ✓ Commitment to cost control and investment optimization
  - ✓ Corporate culture of transparency and data-driven decision making
  - ✓ Transition activities on-track – successfully achieving all milestones through February 2013

- Evaluating impact of Superstorm Sandy and recent LIPA management changes on the overall schedule and transition

Successful management of the LIPA transmission and distribution system may lead to additional growth opportunities

Focused on safety performance, unit reliability, competitive cost structure with control of maintenance costs, achieving operational excellence, and supporting market rules to maintain a level playing field

SI-SSA-0015-08769

PSEG Power creating value by responding to changing markets and regulations

Safety/Environmental Focus

Fleet Diversity/Efficiency Focus

- Fleet diversity across the dispatch curve and fuel types provides flexibility
- Nuclear units continue to achieve strong operational results and are well positioned for the future
- Peach Bottom steam path retrofit completed
- Fossil fleet is suited for market dynamics
- CCGT achieved record output in 2012
- Installed 400 MW new peaking capacity in 2012

Financial/Economic Focus

- O&M cost control programs have delivered
- Sites offering competitive advantage suited for expansion

Regulatory Focus

- Strong regulatory performance
- Industry leadership in the changing regulatory environment

SI-SSA-0015-08770

PSEG Power delivered in 2012

Storm and weather challenges	Market challenges	Value delivered
• Superstorm Sandy impacted our generating sites • Warm winter put pressure on demand and pricing for both electricity and gas • Hot summer weather created challenging operating environment	• Unit outages and transmission outages resulted in pressure on basis • Lower gas cost impacted dark spread pressuring coal unit dispatch • Load impacted by weather and economy	• Cost control • Lower dispatch and fuel cost • Captured value through coal/gas switching, unit flexibility • Improved unit availability • Coal & oil sales optimized inventory • Expedited return from storm outages, restored margin opportunities • Optimized unit dispatch across fleet during storm recovery

SI-SSA-0015-08771

PSEG Power has generating assets

in three competitive markets

- Low cost portfolio
- Fuel flexibility
- Assets near loads
- Poised to benefit in real time markets
- Fleet will maintain diversity and efficiency in 2016 after HEDD
- Most sites suitable for expansion

SI-SSA-0015-08772

PSEG Power Nuclear fleet is a critical element of success

Hope Creek	Salem Units 1 and 2	Peach Bottom Units 2 and 3

• Operated by PSEG Nuclear

	• Total Capacity: 2,326 MW
	• Owned Capacity: 1,335 MW
	• License Expiration: 2036 and 2040
	• Next Refueling
	  • Unit 1 – Fall 2014
	  • Unit 2 – Spring 2014
		• Operated by Exelon
		• PSEG Ownership: 50%
		• Technology: Boiling Water Reactor
		• Total Capacity: 2,245 MW
		• Owned Capacity: 1,123 MW
		• License Expiration: 2033 and 2034
		• Next Refueling
		  • Unit 2 – Fall 2014
		  • Unit 3 – Fall 2013

SI-SSA-0015-08773

PSEG Power Nuclear is core to the fleet and has competitive advantages

- Continued strong nuclear operations – eight consecutive years of >90% capacity factor
- Significant earnings contributor
- Top quartile of cost performance/MWh
- One third new staff, recruitment of the best new and experienced talent and attractive training program
- Developing Fukushima action plan in response to NRC staff review
- Peach Bottom extended power uprate, 130 MW Power's share, scheduled in service 2015/2016
- Active and influential participation at INPO, NEI, EPRI, USA Alliance

SI-SSA-0015-08774

PSEG Power's Fossil Fleet availability has shown steady improvement

EFORd improvement resulted in over 200 MW of additional capacity available

EFORp improvement and availability at peak demand times has resulted in performance payments in each of the last four years

SI-SSA-0015-08775

PSEG Power improvements achieved in combined cycle fleet efficiency

Actions Taken to Create Value	
• Heat rate improvement program • Operational Excellence Model	• Training programs • Unit testing initiative • Outage work to restore efficiency

SI-SSA-0015-08776

Superstorm Sandy affected the fleet;

when the load returned, Power was ready

SI-SSA-0015-08777

PSEG Power's fleet is among the lowest emitting in the industry

- Mercury reduced 80% across the timeframe above
- Power is well positioned for HAPS

SI-SSA-0015-08778

PSEG Power's focus on costs has resulted in moderate increase in O&M for six years

Cost control actions taken:	
• Coal assessment • CCGT material condition assessment • Contract renegotiation	• Material management • Nuclear maintenance productivity study • Nuclear outage efficiency initiative

SI-SSA-0015-08779

PSEG

* INCLUDES IMPACTS FROM STORM RECOVERY COSTS AND POTENTIAL RELATED INSURANCE PROCEEDS.
E = ESTIMATE.

PSEG Power is well positioned for growth in the fleet when market conditions dictate

Available locations		Our sites possess infrastructure advantages
• Bergen • Burlington • Essex • Edison • Kearny	• Hudson • Linden • Sewaren • Bridgeport Harbor	• Electric Interconnection • Gas Pipeline Access • Sites/Space • Emissions

SI-SSA-0015-08780

PSEG Power will maintain diversity and efficiency after a realignment of the fleet in 2016

Objective
2012 → 2016E

- Maintain fuel diversity
- Maintain load serving capability
- Improve fleet heat rate by 6%
- Maintain low cost structure
- Environmental improvement

Fuel Diversity
13,226 MW 11,200 MW

Energy Produced
52.5 TWh 52-54 TWh

PSEG POWER
ER&T

PSEG

We make things work for you.

SI-SSA-0015-08784

PSEG Power
ER&T strategy

Focused on optimizing the value of its asset portfolio and providing outstanding service to our customers, while prudently managing risk

SI-SSA-0015-08785

Diversified assets and flexible dispatch

High performing, base load nuclear assets	3,632 MW
Fuel advantaged, base load coal plants in PA	776 MW
Flexible combined cycle fleet	3,176 MW
Well leveraged intermediate & peaking assets	5,642 MW

Integrated trading and dispatch capability around fleet

SI-SSA-0015-08786

Fleet capacity has been advanced by:

Improved Heat Rate capability

Trading acumen to execute fuel switching opportunities

Reduced O&M and increased start-up success

Capturing new products opportunity with minimal investment

SI-SSA-0015-08787

Spark spread replaces dark spread as major value driver

- Spark spread has risen above dark spread in PJM markets
- Power's gas units operating at record throughput
- Gas operation provides much more operational flexibility
- Enhances the ability of trading organization to capture volatility

SI-SSA-0015-08788

2013 BGS Auction Results for PSE&G Zone

BGS sales account for about a third of our forward portfolio of hedges

SI-SSA-0015-08789

BGS PRICES REFLECT PSE&G ZONE; RESULTS FOR 2011-2013 ARE THE NEW BLENDED PRICES BEGINNING JUNE 1, 2013.

Our hedging mix has changed with the market but still captures the fleet's locational advantage

- 3 Year forward BGS sales comprise smaller percentage of Power's hedges
- Other full requirement load deals help capture additional locational and load shape premium

SI-SSA-0015-08790

NOTE: PERCENTAGES REPRESENT HEDGED VOLUMES IN PLACE AFTER BGS AUCTION.

Hedging strategy designed to protect gross margin and leverage the portfolio

Ratable Hedging on Base Load:

- 3 year ratable hedge tactics
- 3 year PJM hedge of capacity (not included in table)
- Load following sales (such as BGS) have strong correlation to our units for hedging basis and load shaping premium

Dynamic Hedging on Intermediate Coal, Combined Cycle and Peaking:

- Position fleet to take advantage of market volatility
- Gas and load-following fleet left open until prompt year to capture volatility
- Use all trading products to capture option value of assets and benefit from market dislocations

		Jul-Dec 2013	2014	2015
Base Load (Nuclear and Base Load Coal)	Volume TWh	17	35	35
	% Hedged	100%	90-95%	50-55%
	Price $/MWh	$51	$49	$49
Intermediate Coal, Combined Cycle, Peaking	Volume TWh	11	18	17
	% Hedged	30-35%	0%	0%
	Price $/MWh	$51	$49	$49
Total	Volume TWh	26-28	53-55	52-54
	% Hedged	70-75%	55-60%	30-35%
	Price $/MWh	$51	$49	$49

HEDGE PERCENTAGES AND PRICES AS OF JUNE 28, 2013. REVENUES OF FULL REQUIREMENT LOAD DEALS BASED ON CONTRACT PRICE, INCLUDING RENEWABLE ENERGY CREDITS, ANCILLARY, AND TRANSMISSION COMPONENTS BUT EXCLUDING CAPACITY. HEDGES INCLUDE POSITIONS WITH MTM ACCOUNTING TREATMENT AND OPTIONS.

SI-SSA-0015-08791

PSEG's locational advantage

and electric basis

- Basis (PS Zone to PJM West) will continue to trend downward for forward sales
- Volatility will remain significant in the prompt periods (especially summer/winter)
- Power maintains sufficient length to participate in upside volatility as well as a valuable 250MW transmission position into NYC
- Basis will continue to have a positive impact on PSEG Power profitability

SI-SSA-0015-08792

*AS OF MAY 15, 2013.

PSEG's locational advantage

and gas basis

- Lower cost supplies of shale gas have been beneficial to both PSE&G customers and PSEG Power
- Over 50% of our available pipeline capacity can access market area supplies of shale gas
- Power's generating units sit in close proximity to the Marcellus fairway
- Power buys approximately 350BCF/year of gas
- We have been able to arbitrage gas values from South to North and East to West using our storage and pipeline capacity

SI-SSA-0015-08793

PJM's capacity market continues to recognize locational value of our fleet

$/MW-Day	2012 / 2013	2013 / 2014	2014 / 2015	2015 / 2016	2016 / 2017
Power's Average Price	$153	$244	$162	$167	$166
PS Zone					$219
EMAAC	$140	$245	$137	$167	$119
RTO	$16	$28	$126	$136	$59
Power's Capacity (MW)	10,400	10,600	10,300	9,000	8,637*

*PSEG Power's cleared megawatts split between PS Zone and EMAAC.

2016/2017 RPM Auction Influenced By:

- New Build and Higher Imports
- Updated Transfer Capabilities
- Updated Demand Curve
- Environmental Retirements
- Minimum Offer Price Rule
- Lower Demand Response

SI-SSA-0015-08794

Reserve margins in PJM declining with retirements

Generation Deactivation Notifications

Source: PJM TEAC, 1/10/2013

- PJM Pending Deactivation Requests of 12,634 MW as of January 22, 2013
- Approximately 4,000 MW of additional owner announced retirements in PJM through next auction

Forecast Reserve Margin (PJM January 2013)

- PJM forecasts a declining Reserve Margin through 2017

SI-SSA-0015-08795

Regulatory Advocacy

	ISSUE /POLICY	HOW ADDRESSED?
PJM	MOPR	Sufficiency/Exceptions before FERC and courts

dividend increases consistent with stable regulated growth and cash generation outlook at PSEG Power

SI-SSA-0015-08812

PSEG Summary

- Maintaining 2013 operating earnings guidance of $2.25 - $2.50 per share -- based on financial results to date, we expect operating earnings for the full year to be at the upper end of our guidance range assuming normal weather and unit operations
- Double digit operating earnings growth at PSE&G starting in 2013, and continuing through 2015 driven by transmission investments and approved programs
- Power's continued focus on operational excellence, market expertise and financial strength reduces risk in low price environment
- Strong Balance Sheet and Cash Flow support full capital program without the need for equity
- Long history of returning cash to the shareholder through the common dividend, with opportunity for future growth

PSE&G provides high reliability at below average cost which creates superior value to customers

SAIDI = SYSTEM AVERAGE INTERRUPTION DURATION INDEX, A MEASURE OF AVERAGE OUTAGE DURATION FOR ALL CUSTOMERS SERVED.

SI-SSA-0015-08817

PSE&G prioritizes public safety

while maintaining value to customers

LEAK RESPONSE RATE = PERCENTAGE OF UTILITY RESPONSES TO REPORTED LEAKS WITHIN ONE HOUR.

SI-SSA-0015-08818

Formula rates for transmission make the process more predictable with contemporaneous returns

	Transmission (Federal)	Distribution Base Rate Case (State)
Current ROE	• 11.68% base • 12.93% with incentives on Susquehanna-Roseland • 11.93% with incentives on Northeast Grid	• 10.3%
Volatility of Returns	• Low – prospective recovery with annual true-ups for over/under recovery	• Higher – performance impacted positively/negatively by cost management, weather, customer demands, etc.
Process	• Formula – The rate template and specific elements like ROE are predetermined with annual updates and true ups	• Litigated case with each element (depreciation, ROE, O&M levels, Rate Base) scrutinized and settled
Intervenors	• State consumer advocates usually participate	• State consumer advocates • Large customers • Other parties affected by the case, e.g. Solar Developers
Test Year	• PSE&G has fully **forecasted** test year for both Capital and O&M	• **Historical** test year with pro-forma adjustments for known and measurable items, e.g. wage escalation
Time to resolve	• Annual Formula updates are filed in October with January 1 effective date	• Typically settled within 12-15 months

SI-SSA-0015-08819

New Jersey Board of Public Utilities (BPU)

- The Board of Public Utilities consists of five commissioners appointed by the Governor. These appointees are confirmed by the NJ Senate for six-year, staggered terms. The Governor appoints one of the five to serve as Commission President.

  Currently, the commissioners are:

  - Robert M. Hanna, Commission President
  - Jeanne M. Fox
  - Joseph L. Fiordaliso
  - Mary-Anna Holden
  - Dianne Solomon

- Stefanie Brand, Director of the N.J. Division of Rate Counsel

SI-SSA-0015-08820

Slow economic recovery in NJ is constraining growth in all market sectors

Modest residential growth limited by housing market inactivity and the slow economic recovery

Consumer spending is trending with the slow economic recovery and impacting growth in the commercial sector

Industrial sales growth continues to be constrained by slow economic recovery

2013 - 2015 Projected Sales
Growth – Gas*

2013 - 2015 Projected
Sales Growth – Electric*

SI-SSA-0015-08821

* WEATHER NORMALIZED ESTIMATED ANNUAL GROWTH PER YEAR OVER FORECAST PERIOD

Key economic indicators forecast renewed growth over the 2012 to 2015 timeframe

The New Jersey economy increased by 0.3% annually from 2010 to 2012 and is anticipated to grow 2.3% per year from 2012 to 2015

New Jersey total non-farm employment increased by 0.6% annually from 2010 to 2012 and is expected to grow 1.4% per year from 2012 to 2015

Real personal income in New Jersey increased by 1.4% annually from 2010 to 2012 and is expected to increase 2.5% per year from 2012 to 2015

Single family housing starts declined by 2.6% annually from 2010 to 2012 and are expected to increase ~24% per year from 2012 to 2015
