

Reading Your Bi-Directional Meter

Dear PSE&G Customer:

Congratulations on your recent decision to go green and install a solar system! Here are some simple instructions on how to read your new bi-directional meter. Your new meter consists of two channels, 100 and 101. Channel 100 measures the amount of electricity delivered to your home when you're consuming more than your system is producing. Channel 101 measures the amount of electricity sent by your solar system to the grid when your system is generating more electricity than your home is consuming.

If you have any questions about your solar system, please refer them to your solar installer. If they are unable to assist you, feel free to contact our Net Metering Department at 1-800-436-7734.

Sincerely,

PSE&G Net Meter Department
