STATE OF NEW JERSEY BOARD OF PUBLIC UTILITIES

In the Matter of the Petition of Public Service Electric and Gas Company for Approval of the Next Phase of the Gas System Modernization Program and Associated Cost Recovery Mechanism ("GSMP II")

BPU Docket No. GR17070776

PUBLIC SERVICE ELECTRIC AND GAS COMPANY REBUTTAL TESTIMONY OF STEPHEN SWETZ SENIOR DIRECTOR – CORPORATE RATES AND REVENUE REQUIREMENTS

February 15, 2018

PUBLIC SERVICE ELECTRIC AND GAS COMPANY REBUTTAL TESTIMONY OF STEVEN SWETZ

1 Q. Please state your name, affiliation and business address.

A. My name is Stephen Swetz and I am the Senior Director – Corporate Rates and
Revenue Requirements for PSEG Services Corporation. My principal place of business is 80
Park Plaza, Newark, New Jersey 07102. My professional experience and responsibilities are
described in Schedule SS-GSMPII, which was submitted in connection with my direct
testimony.

7 Q. Have you testified previously in this proceeding?

A. Yes. On July 27, 2017, on behalf of Public Service Electric & Gas Company
("PSE&G" or "Company"), I submitted direct testimony in support of PSE&G's Petition
requesting that the New Jersey Board of Public Utilities ("BPU" or "Board") approve
PSE&G's proposed Gas System Modernization Program II ("GSMP II" or "Program").

12 Q. What was the purpose of your direct testimony in this proceeding?

A. In my direct testimony I provided the details for the calculation of GSMP II's revenue
requirements, the associated cost recovery methodology and rate design for the GSMP II
Petition filed with the Board. My direct testimony also provided detailed schedules setting
forth the projected revenue requirements, rates and bill impacts over the expected Program
life.

1 Q. What is the purpose of your rebuttal testimony?

A. In my rebuttal testimony, I respond to certain assertions in the direct testimony of
Rate Counsel witnesses' Andrea C. Crane and David E. Dismukes, dated January 19, 2018. I
also provide updated Schedules incorporating the effect of the recent reduction to the federal
corporate income tax rate to the projected revenue requirements, rates and bill impacts over
the expected Program life.

7 Q. Please summarize your rebuttal testimony.

8 A. The recommendations in Ms. Crane's and Dr. Dismukes' testimony that the Board 9 deny PSE&G's GSMP II Petition, or that it approve a significantly smaller program than that 10 proposed, should be rejected. Contrary to the assertions of Rate Counsel's witnesses, 11 PSE&G has demonstrated that GSMP II program, as proposed, is a reasonable and prudent 12 continuation of the GSMP I approved by the Board in Docket No. GR15030272 on 13 November 16, 2015. Moreover, GSMP II is consistent with the Board's recently adopted 14 Infrastructure Investment and Recovery ("IIR") regulations (N.J.A.C. 14:3-2A), and will 15 enable the Company to timely complete important infrastructure replacements and upgrades 16 that are in the best interest of customers and the State.

17 Regarding Ms. Crane's testimony, I explain that Ms. Crane's recommendation that 18 the Board not adopt GSMP II is inconsistent with the Board's recent regulation encouraging 19 infrastructure replacement programs such as GSMP II. I further explain that Ms. Crane's 20 assertion that the GSMP II improperly benefits shareholders by "shifting risk to ratepayers" 21 is unfounded. Rather, GSMP II will benefit PSE&G customers while providing PSE&G *an* 22 *opportunity* to earn its fair rate of return authorized by the Board.

- 2 -

Regarding Dr. Dismukes' testimony, I respond to Dr. Dismukes' recommendations to
 modify GSMP II and I explain that Dr. Dismukes' net economic benefits analysis is seriously
 flawed because it fails to account for all of the benefits derived through the replacement of
 essential utility infrastructure.

5 Q. What is your response to Ms. Crane's assertion that for the GSMP II program 6 the Board should adopt the rate of return recommended by Rate Counsel 7 Witness O'Donnell?

8 In my direct testimony, I recommended that for GSMP II, the Company's initial cost A. 9 of capital for the Program be based on the return of equity ("ROE"), long-term debt rate and 10 capital structure approved in the Solar 4 All Extension II filing in Docket No. EO16050412, 11 which was the most recent new program approved for the Company by the Board on 12 November 30, 2016. I further recommend that the cost of capital be modified to match the 13 Company's cost of capital approved by Board in the Company's "next base rate case." Since 14 the filing of GSMP II, the Company on January 12, 2018, filed a base rate case. In order to 15 eliminate the administrative inefficiency associated with litigating the cost of capital in this 16 matter while it is being litigated in the base rate case, I recommend that for the GSMP II 17 case, the Board utilize the rate of return decided in the base rate case. Because the first rate 18 roll-in for GSMP II is anticipated to be filed in December 2019, the Board will have likely 19 decided the base rate case well in advance of the first GSMP II roll-in. If for some reason the 20 Board determines that it will decide rate of return in this proceeding, the Board should adopt 21 the rate of return recommended by PSE&G witness Ann Bulkley in her rebuttal testimony.

- 3 -

1Q.Ms. Crane asserts that because the GSMP II proposal does not have a "hard2cap" on program expenditures that the Company is asking the BPU is to write a3"blank check" for the program. Can you please comment?

A. The Company is not asking the Board to authorize a "blank check" for GSMP II.
Rather, GSMP II sets forth an estimated dollar amount of investment and specific types of
investments that are to be included in the Program. All the investments made by PSE&G
during the Program will be subject to a prudency review by the Board in a future base rate
case proceeding. As a result, all the investments made in the Board approved GSMP II will
be subject to careful scrutiny, examination and review by the Board and interested parties.

10Q.Can you please comment on the concerns expressed by Ms. Crane relating to the11recently adopted Infrastructure Investment and Recovery ("IIR") regulations?

Ms. Crane notes that Rate Counsel has "concerns" about the Board's use of 12 A. 13 accelerated infrastructure investment recovery mechanisms. (Crane Direct p. 16) Rate 14 Counsel's position is not surprising given Rate Counsel's criticism of the IIR regulation when it was proposed by the Board.¹ However, while Ms. Crane is critical of the Board's 15 16 IIR regulation because it uses a rate recovery clause, she readily acknowledges the 17 "proliferation" of utility commission authorized clause recovery mechanisms such as the IIR 18 regulation. While Rate Counsel may not like the IIR regulation, it is clear from the adoption 19 of the regulation the Board has determined the use of the IIR recovery mechanism to 20 encourage accelerated infrastructure is appropriate. Despite the recent adoption of the IIR, 21 Ms. Crane asserts many of the same unsuccessful arguments that were made in opposition to 22 the IIR during the rulemaking process, such as the use of a clause cost recovery mechanism 23 is single issue ratemaking and "the BPU should move away from single-issue ratemaking and

¹ See Rate Counsel Comments filed on May 12, 2017, and October 6, 2017, in connection with the proposed IIR rule.

1 return to base rate cases as the vehicle for establishing rates for New Jersey ratepayers."

2 (Crane Direct p. 25)

Q. Do you agree with Ms. Crane's assertion that clause rate recovery mechanisms, such as the mechanism authorized in the IIR, transfers risk from utility shareholders to ratepayers?

A. No. The rate recovery mechanism in GSMP II enables shareholders to experience a
more timely recovery on investment than otherwise would occur. Thus, the use of a cost
recovery clause generally enables a company to realize a return that is closer to its authorized
rate of return. A more timely return on prudently incurred investment that is providing
service to customers does not result in the shifting of risk to ratepayers.

11Q.Ms. Crane states that "to the extent PSE&G accelerates investment related to12infrastructure replacement, shareholders can expect higher earnings, even if an13accelerated cost recovery mechanism is not adopted." Do you agree?

14 A. No. If it were true that every dollar spent on infrastructure was a benefit to 15 shareholders regardless of whether it is recovered through an accelerated cost recovery 16 mechanism or through base rates, every utility in the State would likely invest as much as it 17 prudently could to maximize earnings. The reality is that as investment is placed into 18 service, a utility company will incur depreciation expense and interest expense to fund the 19 investment with zero incremental revenue. Until that investment is recognized in rates, 20 earnings will decrease, not increase. Therefore, not only will shareholders see no financial 21 benefit from their investment until it is recognized in rates, the investment will actually result 22 in reduced earnings.

1	The foregoing concept is depicted in the table below that shows, regardless of the									
2	mechanism used to roll investment into rates, until the investment is rolled into rates, the									
3	Company will experience negative earnings on that investment. To evaluate the impact the									
4	GSMP II Program will have on earnings, I developed an income statement and balance sheet									
5	for the Program. The revenues are the cumulative revenue requirement for each rate									
6	adjustment, shaped annually based on net therm sales per month. The expenses are the									
7	depreciation expense, interest expense and income taxes incurred as plant is placed into									
8	service. The table below shows the earnings impact on GSMP II investment being recovered									
9	under the following four scenarios:									

10 1. The Company's position as filed with semi-annual roll-ins ("Scenario 1");

112.Ms. Crane's second recommendation that if accelerated recovery is approved,12it be done with annual rate adjustments at Rate Counsel Witness O'Donnell's13recommended weighted average cost of capital ("Scenario 2");

143.Same as Scenario 2 except includes the impact of \$85 million in stipulated15base as recommended by Ms. Crane ("Scenario 3"); and

4. Ms. Crane's recommendation for recovery of Program costs through base rate cases, assuming a 27 month lag between rates ("Scenario 4").

-	Earnings (\$000)								
	2019	2020	2021	2022	2023	2024			
Cumulative Investment	361,275	902,574	1,444,886	1,986,831	2,540,171	2,681,899			
Scenario 1: As-Filed	(2,526)	1,214	31,122	57,631	84,335	112,237			
Scenario 2: Annual Roll-ins ¹	(2,526)	2,392	23,180	49,105	75,520	110,816			
Scenario 3: Annual Roll-ins w/ Stip Base ²	(3,382)	48	19,062	43,250	67,965	102,154			
Scenario 4: Rate Case recovery ³	(2,526)	(11,456)	17,368	26,440	62,547	91,184			

¹ Assumes annual roll-ins based on Plant In-Service as of October 31st for rates effective February 1st.

 2 Same as Annual Base roll-in except factors in the lag on the proposed \$85 million in incremental Stipulated Base.

³ Assumes rate case result every 27 months based on rate base as of 24 months.

18

16

Under each of the scenarios, negative earnings result in the first year as interest costs are incurred to finance the capital expenditures, and as depreciation costs grow as projects are placed in service. Concurrently, no revenues are realized due to the delay of the first rate adjustment to meet the 10% of investment cap required under the IIR regulations. Earnings increase thereafter as investment is recognized in rates under the Company's filed position and the annual roll-in recommendation, but generate an even greater loss under the base rate case scenario.

8 9 10

O.

Even in the rate case recovery scenario, the Company is generating positive earnings in total through 2024. Doesn't that mean the Program is beneficial to shareholders regardless of the recovery mechanism as Ms. Crane suggests?

A. 11 Ms. Crane is correct that once recognized in rates, shareholders will see an increase in 12 earnings from the GSMP II investment. However, she is not considering the level of the rate 13 of return on that investment. Regulatory lag on recovery of investment has a significant 14 impact on the Company's actual return on equity ("ROE"). Even with semi-annual rate 15 adjustments as proposed by the Company, the Company will not achieve its requested ROE 16 before the conclusion of its next base rate case (proposed under GSMP II to be filed by no 17 later than December 31, 2023) at which time all GSMP II investment will be reset as part of 18 utility rate base.

19Q.What would be the impact on the Company's actual ROE if the Company were20to recover its GSMP II investment with an average regulatory lag of 27 months?

A. Ms. Crane's recommendation to only allow recovery through a base rate case (where
she assumes a 27 month lag) would result in an ROE through 2024materially below the ROE
of 9% recommended by Rate Counsel's own witness, Kevin O'Donnell. Utilizing the annual

1	rate adjustments she recommends if GSMP II is approved in some form, the Company would
2	have a negative ROE for the first two years, followed by returns materially under any
3	acceptable level. And that return does not even factor in the impact of the \$85 million of
4	additional annual base spend Ms. Crane also recommends. The regulatory lag on the \$85
5	million of additional annual base spend would further reduce the ROE for the Program by
6	another almost 2% annually. In each case, the return of the Program does not reach the
7	allowed ROE during these years. The gap is most significant in the annual roll-ins and base
8	rate case approaches cited by Rate Counsel. This is in direct opposition of the BPU's IIR
9	policy goal of creating "a rate recovery mechanism that encourages and supports necessary
10	accelerated construction, installation, and rehabilitation of certain utility plants and
11	equipment." ² The table below shows a comparison of the annual ROEs through 2024 based
12	upon (1) the cost recovery mechanism proposed by the Company; (2) annual rate
13	adjustments, (3) annual rate adjustments with stipulated base, and (4) base rate recovery as
14	recommended by Ms. Crane.

	Return on Equity						
_	2019	2020	2021	2022	2023	2024	
Scenario 1: As-Filed	-4.0%	0.4%	5.9%	7.5%	8.4%	9.5%	
Scenario 2: Annual Roll-ins ¹	-4.0%	0.9%	4.4%	6.4%	7.5%	9.4%	
Scenario 3: Annual Roll-ins w/ Stip Base ²	-4.1%	0.0%	3.1%	4.8%	5.8%	7.5%	
Scenario 4: Rate Case recovery ³	-4.0%	-4.2%	3.3%	3.4%	6.2%	7.8%	

¹ Assumes annual roll-ins based on Plant In-Service as of October 31st for rates effective February 1st.

³ Assumes rate case result every 27 months based on rate base as of 24 months.

² Same as Annual Base roll-in except factors in the lag on the proposed \$85 million in incremental Stipulated Base.

² IIR, *N.J.A.C.* 14:3-2A.1(b)

1Q.Could implementing the GSMP II Program as proposed with base rate recovery2as Ms. Crane suggests impact the Company's credit metrics and ability to raise3debt cost-effectively?

4 A. Yes. Rating agencies consider both qualitative (business) risk and quantitative 5 (financial) risk in their assessments. Overall, undertaking GSMP II absent a clause-type cost 6 recovery mechanism would be viewed negatively. Further, Rate Counsel's proposals to 7 further delay providing revenue for this Program, to lower the Company's ROE on Program 8 investment, and to lower the capital structure would each exacerbate this impact. Based on a 9 quantitative (financial) risk assessment, we would be negatively impacted due to one of the 10 most important credit metrics, Funds From Operations ("FFO") divided by our debt. The 11 regulatory lag associated with realizing revenues from these investments would lead to lower 12 FFO (including increased interest expense) and higher debt (to finance the capital 13 expenditures).

Based on their qualitative (business) risk assessment, this would be a negative change in the regulatory framework due to an increase in regulatory lag. Perhaps, most importantly, the rating agencies would view a decision to undertake GSMP II without a mechanism to promptly recover invested capital as an imprudent financial policy decision by management.

18

0.

Is Mrs. Crane's proposal aligned with the IIR recently approved by the BPU?

A. No. The BPU issued the IIR to provide financial incentive for utilities to work on necessary infrastructure replacement programs. Such an incentive – which is simply *an opportunity* (not a guarantee as Ms. Crane suggests) to commence earning a return on investment sooner than having to wait until a base rate case – is critical to long-term infrastructure replacement programs such as GSMP II. Rate Counsel's proposal flies in the

- 9 -

face of State policy. Rather than encouraging infrastructure investment programs as the IIR expressly is intended to do, Rate Counsel is seeking to harm utilities' financial condition and undermine the purpose of the IIR by, among other things, delaying revenue recognition, reducing ROEs, reducing the equity in the Company's capital structure, reducing the duration of the Program, and requiring an earlier base rate case. Rate Counsel is effectively proposing to undo the policy that the BPU just adopted.

Q. Ms. Crane states that "GSMP II is essentially risk-free to shareholders." Do you agree?

9 A. No. The Company bears the same risks for the work conducted under the GSMP II 10 Program as it does for work that is recovered from a base rate proceeding. Installing mains 11 for example will have the same operational and prudency risk regardless of whether it is done 12 through base rates or the GSMP II Program. Further, the rate design for all GSMP rate 13 adjustments is the same as approved in the Company's last base rate case, so the recovery 14 risk is even the same. The only difference the GSMP II accelerated recovery provides from 15 investments recovered through a base rate case is a financial incentive to accelerate 16 investment by reducing regulatory lag.

17 18 19

Q. Is Ms. Crane's recommendation that if the Board adopts an accelerated infrastructure program, it should adopt a program that contains elements similar to GSMP I, consistent with the Board's IIR regulation?

A. No. Ms. Crane's alternative recommendation essentially ignores the Board's adoption of the IIR regulation. For example, she contends that, despite the Board's approval of the IIR regulation, the Board should move away from the use of clause recovery mechanisms and revert to base rate proceedings. (Crane Direct, p. 26) Further, her

1 suggested revisions to GSMP II seek to impose requirements on GSMP II that go well 2 beyond the infrastructure plan requirements carefully developed by the Board in the IIR 3 regulation. For example, she recommends that: (i) GSMP II be limited to three years even 4 though the IIR regulation contemplates programs of up to five (5) years; (ii) the Company be required to incur incremental annual base spending at about 39%³ of the annual program 5 spend rather than the 10% requirement in the IIR regulation; (iii) the GSMP II annual rate 6 7 increase impact not be permitted to exceed 2% annually despite that the IIR regulation 8 contains no cap requirements, and (iv) the Company be prohibited from implementing a rate 9 roll-in if its earnings exceed the most recently authorized ROE even though the IIR 10 regulation only prohibits such roll-ins where the ROE exceeds the authorized ROE by 50 11 basis points.

Q. Ms. Crane suggests that the Board impose an annual 2% cap on increases under GSMP II. Can you comment on her recommendation?

A. Because natural gas bills are down approximately 50% from 2010, now is a prudent time to proceed with the accelerated replacement of aging infrastructure. It is unnecessary to impose such a cap given the decreased level of gas bills. Indeed, after the implementation of the five (5) year GSMP II program, and assuming gas supply prices remain level, the average residential customer gas bills will still be about 30% lower than the 2010 bill. In addition, a percentage cap has the inverse desired effect of reducing investment when bills are lower and increasing investments when bills are higher.

³ \$85 million stipulated base / \$217 million of annual program spend.

Q. Can you please comment on Dr. Dismukes' assertion that the Company's GSMP II proposal does not comply with the requirements of the IIR regulation?

3 While Dr. Dismukes is correct that the Company filed GSMP II prior to the Board's Α. 4 adoption of the IIR regulations, his claim that the Company's GSMP II filing is not 5 consistent with the requirements of the IIR regulation is not correct. For example, he asserts 6 that the proposed Program lacks a detailed budget, a description of project objectives, and 7 details on in-service dates (Dismukes Direct p. 13). His claim is without basis because 8 GSMP II addresses all of these subjects to the extent required: (i) budget information is 9 provided in Mr. Miller's testimony, Attachment 1, Schedules WEM-GSMP II - 3 and WEM-10 GSMP II - 4; (ii) the project purposes and objectives are discussed at length throughout Mr. 11 Miller's testimony (Attachment 1), and (iii) estimated in-service dates and projected roll-ins 12 of investment are discussed in Mr. Miller's and Mr. Swetz's testimony. (See Attachment 1, 13 Schedule WEM-GSMPII-4 and Schedule SS-GSMPII-3).

Q. Can you please comment on Dr. Dismukes' contention that the Company has not provided a "cost benefits" analysis?

16 A. The GSMP II Petition and supporting testimony set forth in detail the estimated costs 17 of the Program and the resulting benefits. The benefits of the GSMP II Program, which are 18 discussed in Mr. Miller's testimony, are substantial. The benefits discussed by Mr. Miller 19 include: (i) improved long term safety and reliability of the gas delivery system; (ii) reduction 20 of high cost emergency replacements; (iii) reduction of unplanned outages; (iv) outside 21 access to service shut-off valves at meter sets; (v) greater application of service line excess 22 flow valves; (vi) reduced greenhouse gas emissions; (vii) increased ability to use higher-23 efficiency and other appliances; (viii) reduced operating and maintenance ("O&M") costs,

1 and (x) avoided capital costs. (Attachment 1, Miller Direct pp. 66-74)

I

It is important to emphasize that the replacement of mains and services will enhance the safety and reliability of the system through the use of more modern materials and construction. The GSMP II program focuses on replacing outdated, aging infrastructure that requires replacement to sustain the gas delivery system. These are necessary expenditures to ensure the long-term continuation of uninterrupted, safe and adequate service to customers.

And, doing that now when bills are so much lower than they were earlier this decade, when the need for emission reduction is clear, financing costs are still near historic lows, corporate tax rates are at historic lows, and the potential for positive employment and economic development impacts all align to make now the right time to accelerate this needed work.

Q. Can you comment on Dr. Dismukes claim that the GSMP II program will result in negative net economic benefits?

In his testimony Dr. Dismukes presents the results of what he describes as a "net 14 A. 15 economic benefits analysis" based on the use of "the IMPLAN" model. (Dismukes Direct p. 16 43). It should be noted, Dr. Dismukes has acknowledged that for every infrastructure 17 program by a regulated public utility that he has analyzed using the IMPLAN model, he has concluded that the infrastructure program results in a negative economic benefit.⁴ The 18 19 analysis purports to compare the positive economic impacts associated with GSMP II 20 construction expenditures and energy savings to the negative economic impacts associated 21 with rate increases. Dr. Dismukes states that he uses the proprietary "IMPLAN economic

⁴ See Rate Counsel discovery response to PSE&G-RC-DD-18, appended as Attachment 1.

plan modeling software" to estimate "multiplier effects" of the construction spending, energy savings and the rate impacts associated with the system replacement and upgrade from GSMP II, resulting in calculated direct, indirect and induced impacts of the Program's "costs and benefits" to the New Jersey economy (Dismukes Direct p. 43-44). Dr. Dismukes concludes that the estimated negative economic impact from the rate increase would be greater than the positive economic impact from program construction expenditures, resulting in an overall or net negative economic impact on the State.

8 **Q.**

Do you agree with Dr. Dismukes' economic impact analysis?

9 A. No. Dr. Dismukes analysis contains a fundamental flaw because it does not consider 10 all of the benefits that are expected to be produced by the necessary replacement of aging gas 11 supply infrastructure. While Dr. Dismukes' appears to use IMPLAN model analysis to 12 estimate the impact of the cost to ratepayers of the GSMP II Program the benefits he takes 13 into account are limited to operations and maintenance reductions, capital cost reductions, 14 and economic benefit from reduced leaks and greenhouse gas emissions.⁵

15 Q. Can you further explain why you disagree with Dr. Dismukes' analysis?

A. Yes. Dr. Dismukes' analysis fails to consider all of the positive, long-term benefits resulting from the wide-scale replacement of aging gas system infrastructure. Dr. Dismukes' analysis ignores that the overall purpose of a long-term infrastructure replacement program is to ensure that the utility system will continue to provide safe, reliable, essential services to commercial, industrial and residential customers. The utility gas delivery system is an

⁵ Further, as shown in the revised Schedules submitted with this testimony, the costs of the Program have been materially reduced as a result of the impacts of Federal Tax reform. Such cost reductions should be taken into account when analyzing the economic impact of the Program.

essential component of the State's economy. Dr. Dismukes' analysis is fatally flawed because it fails to recognize that the replacement of necessary infrastructure is critical to the continued provision of gas service which is crucial to State's economy and the welfare of the citizens and businesses of the State.

5 It is not surprising that Dr. Dismukes' evaluation, solely based on GSMP II 6 construction expenditures, a few other calculated benefits, and rate impacts, without taking 7 into account all the benefits of a replaced system, would lead the conclusion that he put forth. 8 Further, infrastructure programs that improve safety should not be evaluated based on 9 cost benefit analyses basis. As such, it is reasonable to conclude that the IMPLAN model 10 and the related analysis conducted by Dr. Dismukes are not appropriate means of evaluating 11 the overall benefits of an infrastructure program, such as the Program proposed by the 12 Company.

Q. Have you been able to been able to examine the IMPLAN model analysis utilized by Dr. Dismukes?

15 Not in a material way. While PSE&G in discovery was provided various workpapers A. 16 of Dr. Dismukes, Rate Counsel did not provide a copy of the IMPLAN model. The 17 Company requested that Rate Counsel provide the specific IMPLAN model used by Dr. 18 Dismukes. Rate Counsel failed to provide the IMPLAN model analysis based on the assertion that the IMPLAN model is proprietary.⁶ Our review of Dr. Dismukes' workpapers 19 20 enabled us to see certain output information that Dr. Dismukes used from the IMPLAN 21 model in connection with his analysis. However, because the parties have not been provided

⁶ See Rate Counsel discovery response to PSE&G-RC-DD-3, appended as Attachment 2.

the IMPLAN model itself, PSE&G and the Board are unable to examine the specific assumptions and formulas used in the IMPLAN model to produce its results. Had PSE&G been provided a copy of the IMPLAN model we could have examined it and provided further insight to the Board regarding the model's possible infirmities and its mis-application to GSMP II.

Q. Does the recently passed the Tax Cuts and Jobs Act of 2017 ("TCJA"), Public
Law No. 115-97, ("Tax Act") have any impact on the revenue requirements and
rate impacts resulting from GSMP II?

9 A. Yes. Attached to my rebuttal testimony is a revised revenue requirement schedule 10 incorporating the 21% federal income tax rate (replacing the 35% utilized in the Company's 11 initial filing) and eliminating bonus depreciation, which the Company included at 30% for 12 2019 in accordance with the tax regulations at the time of the initial filing. As a result of the 13 Tax Act, the annual average impact of the Program decreases from approximately 4% per 14 year to 3.4% per year to the typical gas heating residential customer.

- 15 Q. Does this conclude your testimony?
- 16 A. Yes.

Gas Rate Design (Proof of Revenue by Rate Class)

Explanation of Format

The summary provides by rate schedule the Annualized Weather Normalized (all customers assumed to be on BGSS) revenue based on current tariff rates and the proposed initial rate change. The detailed rate design by rate schedule follows the summary page. The pages presented in Schedule SS-GSMPII-4 are the 9 relevant pages from the complete rate change workpapers from the Company's 2009 Gas Base Rate Case and have been appropriately modified per my testimony to reflect this GSMPII roll-in.

Annualized Weather Normalized (all customers assumed to be on BGSS) and the Proposed Detailed Rate Design.

In the detailed rate design pages, all the components are separated into Delivery and Supply. In addition to the Distribution components of Delivery, also included in the schedule are lines for Balancing, Societal Benefits Charge, Realignment Adjustment Charge, Margin Adjustment Charge, Weather Normalization Charge, GPRC Recovery Charge, CIP 1 Capital Adjustment Charges (CAC), Miscellaneous items, and Unbilled Revenue.

Column (1) shows the annualized weather normalized billing units. Column (2) shows present Delivery rates (without Sales and Use Tax, SUT) effective February 1, 2018. The commodity rates in the Column (2) reflect the 2012 class-weighted averages (BGSS-RSG uses the rate as of 1/1/2018). Column (3) presents annualized revenue assuming all customers are provided service under their applicable BGSS provision. Column (4) repeats the billing units of Column (1). Column (5) shows the proposed rates without SUT that result in the proposed revenues shown in Column (6). Columns (7) and (8) show the proposed base rate revenue increase, in thousands of dollars and percent increase, respectively, for each of the billing unit blocks. The proposed tariff charges (with and without SUT) are provided on pages 1 and 2 of Schedule SS-GSMPII-5.

IN THE MATTER OF THE PETITION OF PUBLIC SERVICE ELECTRIC AND GAS COMPANY FOR APPROVAL OF THE NEXT PHASE OF THE GAS SYSTEM MODERNIZATION PROGRAM AND ASSOCIATED COST RECOVERY MECHANISM ("GSMP II")

BPU DOCKET NO.: GR17070776

DIVISION OF RATE COUNSEL RESPONSES TO

PSE&G DISCOVERY REQUESTS

Witness: David E. Dismukes, Ph.D.

PSE&G-RC-DD-18

- a. Identify and provide copies of all testimony by Dr. Dismukes in which he conducted a net economic benefits analysis using the IMPLAN model for a utility infrastructure program and the analysis resulted in a net positive economic benefit.
- b. Identify and provide copies of all testimony provided by Dr. Dismukes in which he conducted a net economic benefits analysis using the IMPLAN model analysis.

RESPONSE:

- a. Dr. Dismukes cannot identify any prior testimony addressing the economic impacts of energy infrastructure development that would lead to positive net economic benefits since all of his prior expert positions on these matters were usually conditioned on faulty utility program design proposals. Yet, even in these proceedings, Dr. Dismukes typically made alternative recommendations in his expert testimony that would correct many of the faulty program design components much like he has done in his alternative recommendations in this proceeding. Dr. Dismukes also notes that he has conducted a number of energy infrastructure economic impact studies that have shown positive net economic benefits for energy infrastructure proposals made by non-regulated energy companies that were not seeking a guaranteed return of their project costs from their customers. For example, see Dr. Dismukes most recent economic impact analysis of the Bayou Bridge pipeline that was provided as an attachment in response to PSE&G-RC-DD-26, Attachment "The Potential Economic Impacts of the Bayou Bridge Pipeline FINAL 02-07-2017.pdf". See also, "Analysis of the Economic Impacts Associated with Oil and Gas Activities on State Leases.pdf" and "Economic Impact of the Proposed Lake Charles Gasification Project (2007).pdf" provided in response to PSE&G-RC-DD-26.
- b. Please see the attached files. Please note the attachments are being provided in CD format only.

PSE&G DISCOVERY REQUESTS

Witness: David E. Dismukes, PH.D

PSE&G- RC- DD-3

a) Provide an electronic, executable copy of the IMPLAN model referenced on page 44 of the Direct Testimony.

RESPONSE:

The economic impact analysis created using IMPLAN data referenced in the Direct Testimony of Dr. Dismukes is provided in response to **PSE&G-RC-DD-1** and includes data for all sectors used to calculate economic impacts. IMPLAN is proprietary software available for purchase from www.implan.com.

b) Provide a copy of the user manual, or instructions, for the IMPLAN model.

RESPONSE:

The IMPLAN user guide and knowledge base are available at <u>https://implanhelp.zendesk.com/hc/en-us</u>.

c) Provide an electronic copy of the source code for the IMPLAN model.

RESPONSE:

IMPLAN is proprietary software available for purchase from <u>www.implan.com</u>. As such, the source code is not available. Source data and methodology is available at <u>https://implanhelp.zendesk.com/hc/en-us/categories/115001500888-Data-Sources-and-Methodology</u>.
